PREFACE TO THE FOURTEENTH EDITION

It has been just two years since the thirteenth edition of the Dictionary appeared. During that time the Editorial Staff has revised the volume thoroughly and extensively. Many definitions have been rewritten to bring the terminology in accord with the latest accepted ideas. Over two thousand new words have been added. No effort has been spared to keep the volume fully up-to-date.

The illustrative features have been greatly enlarged in this edition. Over one hundred new cuts have been added with a view to elucidating definitions and emphasizing points that can be well shown in the form of clear cut line drawings.

May, 1927.

PREFACE

The aim of the author of this work has been to produce, in a volume of convenient size, an up-to-date medical dictionary, sufficiently full for the varied requirements of all classes of medical men. Physicians and students have long felt the need of such a work. The book does not claim to be an encyclopedia: it is a dictionary, a concise and convenient word-book, aiming to furnish full definitions of the terms of medicine and kindred branches, and such collateral information as medical men generally would be likely to look for. The author has sought a middle course between the large, unwieldy lexicon and the abridged students' dictionary, avoiding the disadvantages of each.

Special attention has been given to the wording of definitions, with the intention of making them clear, concise, and yet sufficiently complete. Under the more important headings a considerable amount of collateral descriptive matter has been included. For instance, under each drug are given its composition, sources, properties, uses, and dose; under the more important diseases, an account of their etiology, symptoms, etc.; under the principal organs, a description of their structure and function.

Besides the ordinary dictionary matter, it has seemed desirable to include a large amount of information arranged in tabular form. In addition to the usual anatomic and clinical tables, there will be found specially prepared tables of Tests, Stains and Staining Methods, Methods of Treatment, etc., which, it is believed, will prove of distinct value.

In the arrangement of matter, convenience of consultation has been sought. To this end all phrases consisting of a noun and its qualifying word have been defined under the principal noun: thus, Lateral Sclerosis will be found under Sclerosis; Basifacial Axis, under Axis; Bartholin's Duct, under Duct, etc.

The important features of pronunciation and derivation have received the most careful attention. The system used for expressing the sounds is extremely simple, and yet it indicates with accuracy the exact pronunciation of the words.

The illustrations of the book have been chosen for their practical value in aiding the text, rather than for their pictorial beauty, the intention being to show to the eye what could be only imperfectly described in words.

A special effort has been made to produce a volume of attractive appearance and convenient size, such as a man would want to keep on his desk for constant reference. By the use of a large page with a compact but clear typography it has been possible to furnish an unusually large amount of matter in a volume of handy size.

KEY TO THE PRONUNCIATION

Vowels and consonants have their ordinary English sounds.

Vowels are distinguished as short or long by the fact that a short vowel is followed by a consonant, while a long vowel is not. A vowel followed by a consonant has the short sound; as dom, in ab-dom'in-al. A vowel which is not followed by a consonant has the long sound, as do, in ab-do'men.

AMERICAN ILLUSTRATED

MEDICAL DICTIONARY

Α.

- A. Symbol for argon; also abbreviation for accommodation, acetum, Angstrom unit, anode, anterior, and axial.
- a. 1 An abbreviation for accommodation, ampere, anode, anterior, aqua, water, and arteria. 2. Symbol for total acidity.
- a- or an-.
 1. A prefix signifying without or not: used chiefly in words of Greek origin.
 2. A prefix from the Latin, implying separation.
- a. The first letter of the Greek alphabet. See alpha.
- AA, aa [Gr. ἀνά of each] An abbreviation used in prescription-writing, and signifying " of each."
- aaa. Abbreviation for amalgama, amalgam.
- **ā a ā disease.** Chlorosis ægyptiaca, the hookworm infection of the Ebers Papyrus (Joachim); also thought to be bilharziosis, since the hieroglyph is a phallus (Pfister).
- **Aaron of Alexandria** (a'ron). A physician who lived in the first half of the seventh century. He wrote medical works in the Syriac language, all of which are lost except fragments preserved by Rhazes.
- **Aaron's sign** (ār'onz) [Charles D. Aaron, American physician, born 1866]. See under sign.
- aasmus (a-as'mus) [Gr.]. Asthma.
- aatharilal (ah-ath-ar'il-al) [Arabic "bird's foot"].
 A North African umbelliferous plant used in leprosy.
- A. B. Abbreviation for L. Ar'tium Baccalau'reus, Bachelor of Arts; also for axiobuccal.
- **ab.** A Latin preposition meaning from: often used as a prefix.
- abaca (ab'ak-ah). Manila hemp; also Mu'sa texti'-lis, a plant of the Philippines, which produces it.
- abactio (ab-ak'she-o) [L.]. Induced abortion.
- abactus venter (ab-ak'tus ven'ter) [L.]. Induced abortion.
- Abadie's sign (ah-bah-dēz') [1. J. M. Abadie, ophthalmologist in Paris, born 1842. 2. Charles Jean Marie Abadie, a contemporary physician in Bordeaux]. See under sign.
- **abaissement** (ah-bās-maw') [Fr.]. 1. A lowering or a depressing. 2. Couching.
- abalienated (ab-āl'yen-a-ted). Mentally deranged. abaliena'tio men'tis [L.]. Mental derangement; insanity.
- abalienation (ab-āl-yen-a'shun) [L. abaliena'tio]. Mental derangement.
- **Abano** (ab-a'no), **Pietro di**. A physician and astrologer, 1250-1316, professor of medicine in the University of Padua. Also known as *Petrus A ponus*.

ABBOTT'S METHOD

- **abanon** (ab'an-on). A proprietary magnesium phosphotartrate: used as a mild laxative.
- abaptiston (ab-ap-tis'ton) [Gr. α priv + βάπτιστος plunged]. A trephine so shaped that it will not penetrate the brain.
- abarthrosis (ab-ar-thro'sis) [L. ab from + arthro'sis]. Same as diarthrosis.
- abarticular (ab-ar-tik'u-lar). Not affecting a joint; remote from a joint.
- abarticulation (ab-ar-tik-u-la'shun) [L. ab from + articula'tio joint]. 1 A dislocation. 2. Same as diarthrosis.
- abasia (ah-ba'ze-ah) [Gr. a priv. + βάσις step]. Inability to walk from a defect of coordination. a.-asta'sia, loss of power to stand or to walk because of aboulic ideas (P. Blocq, 1888). a. atac'tica, abasia characterized by uncertainty of movement. choreic a., a form due to chorea of the legs. paralytic a., a form due to paralysis, the legs giving away under the weight of the body. paroxysmal trepidant a., abasia-astasia caused by spastic stiffening of the legs on attempting to stand. spastic a. Same as paroxysmal trepidant a. trembling a., a. trep'idans, abasia due to trembling of the legs.
- abasic (ah-ba'-ik). Pertaining to abasia.
- **abasin** (ab'as-in). Acetylbrom-diethyl-acetylcar-bamid, used as a sedative.
- abatage, abattage (ah-bah-tahzh') [Fr.]. Slaughter of animals.
- abatardissement (ah-bah-tar-dēz-mon') [Fr.]. Deterioration of a race or breed.
- abate (ab-āt'). To lessen or decrease.
- abatement (ab-āt'ment). A decrease in the severity of a pain or a symptom.
- abatic (ab-at'ik). Same as abasic.
- abattoir (ab-at-wah') [Fr.]. A slaughter-house.
- abaxial, abaxile (ab-aks'e-al, ab aks'il) [L. ab away from + ax's axis]. Not situated in the axis of the body or of a particular part or organ.
- Abbé's condenser or illuminator (ah-bēz')
 [Ernst Abbé, German physicist, 1840-1905]. See condenser.
- Abbe's rings (ab'ez) [Robert Abbe, New York surgeon, born 1851]. See ring. A's stringmethod. See string-method, under treatment.
- Abbé-Zeiss counting-cell. See Thoma-Zeiss.
- Abbot's paste (ab'uts) [William Abbot, an English physician, born 1831]. See under gaste.
- Abbott's method (ab'ots). 1. [Alexander C. Abbott, bacter'(ologist in Philadelphia, born 1860]. See under staining methods, table of. 2. [Edville Gerhardt Abbott, surgeon in Portland, Maine]. See under method.

abbreviated (ab-re've-a-ted). Shortened.

A. B. C. Abbreviation for axiobuccocervical.

A. B. C. liniment. See liniment.

A. B. C. method or process. Deodorization of sewage by the addition of alumina, blood, and charcoal.

Abd-el-Malek (abd-el-mah'lek). A Mohammedan physician, born at Basra, about 740 A. D.

Abderhalden's reaction (ahb'der-hal-dens) [Emil Abderhalden, German chemist, born 1877]. See reaction.

abdom. Abbreviation for abdomen

abdomen (ab-do'men) [L., from ab'dere to hide]. That portion of the body which lies between the thorax and the pelvis It consists of a cavity (abdominal cavity) separated by the diaphragm from the thoracic cavity, and lined with a serous membrane, the peritoneum. This cavity contains the viscera, and is inclosed by a wall (abdominal wall or parietes) formed by the abdominal muscles, vertebral column, and ilium. It is divided into nine regions by four imaginary lines, of which two pass horizontally around the body (the upper at the level of the cartilages of the ninth ribs, the lower at the top of the crest of the ilium), and two extend vertically on each side of the body from the cartilage of the eighth rib to the center of Poupart's ligament. These regions are Three upper—left hypochondriac, epigastric, right hypochondriac; three middle -left lumbar, umbilical, right lumbar; three lower-left inguinal, hypogastric, right inguinal. accordion a., a nervous pseudotympany; swelling of the abdomen, due neither to distention with gas nor to a tumor, and appearing and disappearing rapidly. acute a., any acute condition within the abdomen demanding immediate operation. boat-shaped a. See scaphoid a carinate a. Same as scaphoid a. navicular a., scaphoid abdomen. a. ob'stipum, congenital shortness of the rectus abdominis muscle. pendulous a., a relaxed condition of the abdominal walls sca**phoid a.**, an abdomen whose anterior wall is hollowed out seen in children with cerebral disease.

abdominal (ab-dom'in-al) [L. abdomina'lis]. Pertaining to the abdomen.

(ab-dom"in-o-an-te're-or). abdomino-anterior With the belly forward (noting a position of the fetus in utero).

abdominocentesis (ab-dom"in-o-sen-te'sis) [abdomen + Gr. κέντησις puncture | Paracentesis of the abdomen.

abdominocystic (ab-dom"in-o-sis'tik) Pertaining to the abdomen and bladder.

abdominogenital (ab-dom"in-o-jen'it-al). Pertaining to the abdomen and the reproductive organs

abdominohysterectomy (ab-dom"in-o-his-ter-Hysterectomy performed through an ek'to-me). abdominal incision.

abdominohysterotomy (ab-dom"in-o-his-ter-ot'o-me). Hysterotomy performed through an abdominal incision.

abdominoposterior (ab-dom"in-o-pos-te're-or). Having the belly turned backward (noting a position of the fetus in utero).

abdominoscopy (ab-dom''in-os'ko-pe) [L. abdo'-men belly + Gr. σκοπεῖν to inspect]. Inspection or examination of the abdomen; particularly direct examination of the abdominal organs by endoscopy.

abdominoscrotal (ab-dom''in-o-skro'tal). Pertaining to the abdomen and scrotum.

abdominothoracic (ab-dom"in-o-tho-ras'ik). Pertaining to the abdomen and thorax.

abdominous (ab-dom'in-us) Having a large belly. abdomino-uterotomy (ab-dom"in-o-u-ter-ot'ome). See abdominohysterectomy.

abdominovaginal (ab-dom"in-o-vaj'in-al). Pertaining to the abdomen and the vagina; as, a. palpaabdominovesical (ab-dom"in-o-ves'ik-al). Pertaining to the abdomen and bladder.

abduce (ab-doos'). To draw away; abduct.

abducens (ab-du'senz) [L. "drawing away"]. 1. The external rectus muscle of the eye 2. The sixth cranial nerve. **a. labio'rum.** See a. oris. **a. oc'uli**, the external rectus muscle of the eye. a. o'ris, the levator anguli oris muscle.

abducent (ab-du'sent) [L. abdu'cens]. Abducting. or effecting a separation.

abduct (ab-dukt') [L. ab from + du' cere to draw]. To draw away from the median line or from a neighboring part or limb.

abduction (ab-duk'shun) [L. ab from + du'ccre to lead]. The withdrawal of a part from the axis of the body, the act of turning outward, the act of abducting or state of being abducted.

abductor (ab-duk'tor) [L] An abducent muscle or nerve. See muscles, table of.

Abe's culture-medium. See under culturemedium.

Abée's support (ab'āz) [Abée, a contemporary physician in Nauheim]. See support.

Abel's bacillus (ah'belz). Bacterium ozana.

Abelen's reaction or test (ab'el-enz) See under reaction

Abenquefit (ab-en-kwe'fit). An Arab physician in Toledo, 997-1070.

abenteric (ab-en-ter'ik). Situated in a part other than the intestine; as, a typhus.

abepithymia (ab-ep-e-thim'e-ah) [L. ab off + Gr. έπιθυμία desire]. Paralysis of the solar plexus.

Abercrombie's degeneration (ab'er-krom-bez) [John Abercrombie, Scotch physician, 1780-1844]. See degeneration

Abernethy's fascia, operation, sarcoma, etc. (ab'er-ne-thez) [John Abernethy, English surgeon and anatomist, 1764-1831]. See fascia, operation, sarcoma.

aberrans (ab-er'anz) [L]. The vas aberrans aberrant (ab-er'ant) [L aber'rans; ab from + erra're to wander]. Wandering or deviating from the usual or normal course

aberratio (ab-er-a'she-o). Latin for aberration lac'tis, metastasis of milk secretion a. tes'tis, situation of the testis in a part distant from the path which it takes in normal descent

aberration (ab-er-a'shun) [L ab from + erra're to wander]. 1. Deviation from the usual course. 2. A disordered state of the intellect. 3. Imperfect refraction or focalization in a lens. matic a., an unequal refraction of differently colored rays, producing a blurred image dioptric a. Same as spheric a. distantial a., a blurring of vision due to distance. lateral a., deviation of a ray from the focus measured upon line perpendicular to the axis at the focus. longitudinal a., deviation of a ray from the focus measured on the axis. mental a., unmental a., unsoundness of mind, especially one that is not sufficient to constitute insanity. meridional a., the variation of refractive power in different portions of the same meridian of a lens. newtonian a. Same as chromatic a spheric a., the imperfect focalization of a convex lens, due to the fact that the rays from the periphery come to a focus sooner than the others.

aberrometer (ab-er-om'et-er) [aberration + Gr. μέτρον measure]. An instrument for measuring errors in delicate experiments or observations.

abevacuation (ab-e-vak-u-a'shun) [L. ab from + evacuatio an emptying]. 1. Evacuation that is abnormal in respect of either excess or deficiency. 2. Metastasis.

abeyance (ab-a'ans). A suspension of function or of action; a state of suspended activity.

A. B. G. Abbreviation for axiobuccogingival.

Abies (a'be-ēz) [L. "fir"]. A genus of coniferous trees, including the firs and spruces. A. bal-

19

sam'ea, balsam-fir, affords Canada balsam (terebin'thina canaden'sis). A. canaden'sis, the hemlock tree, yields Canada pitch (pix canaden'sis), the astringent extract of hemlock, and the volatile oil of hemlock. Dose of fluidextract (Gcddes), 5-10 min. (0.333-0.666 c.c.); of liquid extract (B. P.), 15-40 min. (1-2 666 c.c.); of glycerinum abietis (B. P), 60-120 min. (4-8 c.c.). A. excel'-sa, Norway spruce, affords Burgundy pitch (pix burgun'dica).

abietate (ab-i'et-āt) A salt of abietic acid.

abietene (ab-i'et-ēn). See heptane.

abietic acid (ab-i-ct'ik). See under acid. a. a. anhydrid, the principal constituent of rosin.

abietin (ab-i'et-in) A resin, C₅₃H₇₆O₈, from various species of fir and pine.

abietite (ab-i'ct-īt) A sugar, C₀H₈O₃, from A'bies pectina'ta, the silver fir of Europe.

abijon (ab'i-jon). A proprietary sterile milk in ampules for injection in non-specific protein therapy.

abiochemistry (ab"i-o-kem'is-tre) [Gr. a neg + βlos life + chemistry]. Inorganic chemistry as distinguished from the chemistry of vital processes.

abiogenesis (ab"i-o-jen'es-is) [Gr. α priv. + βlos life + γένεσις generation] The hypothetic production of life from matter not alive; spontaneous generation.

abiogenetic, abiogenous (ab"i-o-jen-et'ik, ab-i-oj'en-us) Pertaining to, or marked by, spontaneous generation.

abiologic (ah"i-o-loj'ik) [Gr. α priv. + βlos life
 + λόγος treatise] Not pertaining to biology.

abiology (ah-bi-ol'o-je). The study of non-living things, anorganology.

abionarce (ab-i-o-nar'se) [Gr. α neg + β los life + ν άρκη stupor]. Inactivity due to infirmity.

abionergy (ab-i-on'er-je) [Gr α priv. + βlos life + ξργον work]. See abiotrophy.

abiophysiology (ah"i-o-fiz-e-ol'o-je) [Gr ἄβιος lifeless + physiology]. The study of inorganic processes in living organisms.

abiosis (ab-i-o'sis) [Gr a neg. $+ \beta los$ life]. Absence or deficiency of life.

abiotic (ab-i-ot'ik). Incapable of living; antagonistic to life.

abiotrophia (ab-i-o-tro'fe-ah). Abiotrophy.

abiotrophy (ab-i-ot'ro-fe) [Gr. a neg $+ \beta los$ life $+ \tau \rho o \varphi \dot{\eta}$ nutrition] Trophic failure; degeneration or failure of vitality resulting in loss of specific resistance, etc. Called also abionergy and hypotrophy.

abirritant (ab-ir'ıt-ant) [L. ab from + ir'rilans irritating]. Dimunishing or relieving irritation; soothing.

abirritation (ab-ir-it-a'shun) [L. abirrita'tio]. Diminished responsiveness to stimulation atony.

abirritative (ab-ir'it-a-tiv). Reducing irritability, soothing.

abiuret (ah-bi-u'ret) [Gr. a not + biuret]. Not giving the biuret reaction.

A. B. L. Abbreviation for axiobuccolingual.

ablactation (ab-lak-ta'shun) [L. ablacta'tio, from ab from + lacta're to give milk] The weaning of a child or the cessation of milk secretion

ablastemic (ah-blas-tem'ik) [Gr. α priv. + βλάστη-μα a shoot] Not concerned with germination.
 ablate (ab-lāt') [L. abla'tus removed]. To remove,

ablate (ab-lāt') [L. abla'tus removed]. To remove, especially by cutting.

ablatio (ab-la'she-o) [L.]. Ablation. a. placen'tæ, premature detachment of a normal placenta.
a. ret'inæ, detachment of the retina.

ablation (ab-la'shun) [L. abla'tio]. Removal of a part, especially by cutting

ablepharia, ablepharon (ah-blef-a're-ah, ah-blef-ar-on) [Gr. α priv + βλέφαρον eyelid]. Total or partial absence of the cyelids.

ablepharous (ah-blef'ar-us) [Gr. α priv. + βλέφαρον eyelid]. Having no eyelids.

ablephary (ah-blef'ar-e). Same as ablepharia.

ablepsia (ah-blep'se-ah) [Gr. α priv. + βλέπειν to see]. Lack or loss of sight; blindness.

ablepsy (ah-blep'se). Same as ablepsia.

abluent (ab'lu-ent) [L ab from + lu'ens washing].

1. Detergent or cleansing. 2. A cleansing agent.

ablution (ab lu'shun) [L. ablu'tio a washing]. The act of washing or cleansing.

abman (ab'man) [L. ab from + ma'nus hand]. Anything which is believed to act as a carrier for maneflluvium.

abmortal (ab-mor'tal). Situated or directed away from a dead or injured part.

abnerval (ab-ner'val). Passing from a nerve to and through a muscle said of electric currents.

abneural (ab-nu'ral) [L. ab away from + Gr. νεθρον nerve] Distant from the central nervous system; ventral

abnormal (ab-nor'mal) [L. ab from + nor'ma rule]. Not normal; contrary to the usual structure or condition.

abnormality, abnormity (ab-nor-mal'it-e, ab-nor'mit-e). 1. The quality or fact of being abnormal. 2. A malformation.

abocclusion (ab-ok-lu'zhun). The relation of the teeth of a dentition in which the mandibular teeth are not in contact with the maxillary teeth.

aboiement (ah-bwah-maw') [Fr.]. The utterance of barking sounds.

abomasitis (ab-o-mas-i'tis). Inflammation of the abomasum.

abomasum, abomasus (ab-o-ma'sum, ab-o-ma'sus) [L. ab from + oma'sum paunch]. The fourth stomach of a ruminant animal.

aborad (ab-o'rad). In an aboral direction.

aboral (ab-o'ral). Opposite to, or remote from, the mouth.

abort (ab-ort') [L. abor'tus abortive]. r. To miscarry.
2. To bring to an end before full development.
3. An abortion.

aborticide (ab-or'tis-īd) [L. abor'tus abortion + ca'dere to kill]. 1. The killing of a fetus within the uterus. 2. An agent which causes abortion and kills the fetus

abortient (ab-or'shent) [L. ab from + ori'ri to grow]. Same as abortifacient.

abortifacient (ab-or-tif-a'shent) [L. abor'tio abortion + fa'eere to make] 1. Causing abortion. 2.
 An agent which causes abortion.

abortin (ab-or'tin). A glycerin extract of the Bacterium abortum, prepared and used as is tuberculin, but in the diagnosis of contagious abortion of cattle.
 a. reaction or test. See under test.

abortion (ab-or'shun) [L. abor'tio] 1. The expulsion of the fetus before it is viable. 2. Premature stoppage of a morbid or a natural process. accidental a., that which is due to accident. ampullar a., a variety of tubal abortion occurring from the ampulla of the oviduct. artificial a., induced a., that which is brought on purposely. contagious a., an infectious disease of cows resulting in abortion, and thought to be caused by the Bang bacillus. Called also warping. criminal a., that which is not necessary for therapeutic reasons. embryonic a., that which occurs before the fourth month. fetal a., that which takes place after the fourth month. habitual a., that which is repeated in successive pregnancies. incomplete a., that which is folinduced a., lowed by retention of the placenta. induced a., abortion brought on intentionally. inevitable a., the condition in which expulsion of the fetus has progressed to such a point that the abortion cannot he prevented. infectious a. Same as contagious a. justifiable a., abortion induced to save the life of the mother. missed a., one in which the

fetus or embryo is dead, but not expelled for two weeks. **ovular a.**, that which occurs within the first three weeks. **spontaneous a.**, abortion occurring naturally. **therapeutic a.**, abortion occurring naturally. therapeutic a., abortion induced to save the life of the mother. threatened a., the appearance of signs of the premature expulsion of the fetus. tubal a., rupture of an extra-uterine pregnancy through the fimbriated extremity of the fallopian tube.

abortionist (ab-or'shun-ist). One who makes a business of producing criminal abortions.

abortive (ab-or'tiv) [L. aborti'vus]. 1. Prematurely born; incompletely developed. 2. Effecting an abortion, abortifacient.

abortus (ab-or'tus) [L.]. An aborted fetus; abortion.

abouchement (ah-boosh-maw') [Fr.]. The termination of a vessel in a larger one.

ab-oukine. The native name in Gaboon of frambesia.

aboulia, aboulomania. See abulia, abulomania. abrachia (ah-bra'ke-ah) [Gr. α priv. + βραχίων arm]. The condition of being without arms. See abulia, abulomania.

abrachiocephalia (ah-bra"ke-o-sef-a'le-ah) [Gr. a priv. + Boaxlwv arm + κεφαλή head]. A monstrosity characterized by absence of arms and head.

(ah-bra"ke-o-sef'al-us). abrachiocephalus monster fetus without arms or head.

abrachius (ah-bra'ke-us). [See abrachia] A fetus born without arms.

abradant (ab-ra'dant). Anything which produces abrasion.

abrade (ab-rād'). To rub away the external covering or layer of a part.

Abrahams' sign (a'brah-hamz) [Robert Abrahams, New York physician, born 1864]. See under sign. Abrami's disease (ah-brahm'ēz). See Widal-Abrami disease, under disease.

Abrams' reflex, treatment (a'bramz) [Albert Abrams, physician in San Francisco, 1864-1924]. See under reflex and treatment.

abra'sio cor'neæ. A rubbing off of the superficial layers of the cornea.

abrasion (ab-ra'zhun) [L. abra'sio]. 1. A rubbing or scraping off. 2. A spot rubbed bare of skin or mucous membrane 3 In dentistry, the mechanical wearing away of tooth substance.

abrasive (ab-ra'siv). Causing abrasion; a substance used for abrading.

abrastol (ab-ras'tol). Same as asaprol.

abrazine (ab-ra'zin). A proprietary preparation used for abrading in dentistry.

abreaction (ab-re-ak'shun) [L. ab away + reaction]. The process of working off a disagreeable experience by living through it again in speech and action in the presence of the psychanalyst. Called also psychocatharsis and catharsis.

abrin (a'brin). A very poisonous principle or phytotovin from the seeds of jequirity, A'brus precato'rius.

abrism (a'brizm). Poisoning by jequirity.

Abroma (ab-ro'mah) [L.]. A genus of sterculiaceous trees. A. augus'ta, of southern Asia, affords a viscid juice serviceable in dysmenorrhea. Dose of fresh root, ½ dr (2 gm).

abrotanum (ab-rot'an-um) [L.; Gr. ἀβρότονον]. plant, Arlemis' ia abrol'anum, southernwood, or lad's love: a tonic, stimulant, vulnerary, and vermifuge. Dose of fluidextract, 10-20 min. (0.666-1.333 c.c.). See Arlemisia.

abrotin (ab'ro-tin). A crystalline alkaloid, C21H22-NO, from Artemisia abrotanum

abrup'tio placen'tes. Premature detachment of the placenta.

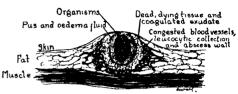

Abrus (a'brus) [L.; Gr. ἀβρος delicate]. A genus of leguminous plants. A. precato'rius, or jequirity, has poisonous seeds: the infusion is strongly irri-

tant to the eyes, and is used in granular ophthalmia. See jequirity.

A. B. S. pill. See under pill

Abs. feb. Abbreviation for L. absen'te feb're, when fever is absent.

abscess (ab'ses) [L. absces'sus a going away]. A localized collection of pus in a cavity formed by the disintegration of tissues. acute a., hot a.,

Abscess diagram of tissue changes (Woolf).

one which runs a relatively short course, producing some fever and a painful local inflammation. alveolar a., inflammation of the alveolus of the gum with cellular necrosis and pus-formation. Called also dento-alveolar a. amebic a., amobic a., a suppurative hepatitis caused by Entamaba (Locschia) histolytica. Called also hepatic a. and entamebic a. anorectal a., abscess of the cellulo-adipose tissue near the anus. apical a., an abscess situated at the apex of the root of a tooth. arthrifluent a., a wandering abscess which has its point of origin in a diseased joint. atheromatous a., an area of softening in the wall of a blood-vessel occurring as a result of sclerotic endarteritis. bartholinian a., an abscess of Bartholin's gland. Bezold's a. See von Bezold's a. bicameral a., one which has two chambers or pockets. biliary a., abscess of the gall bladder. blind a. See pri-apical a. and dental granuloma, under granuloma Brodie's a., a tubercular inflammation and ulceration of the head of a bone, especially of the tibia. bursal a., one occurring in a bursa canalicular a mammary abscess communicating with a milk-duct carniform a., a hard sarcoma of a joint. caseous a., one that contains cheesy matter. cerebral a., an abscess in the brain substance. chronic a. Same as cold a. circumtonsillar a., quinsy. cold a., one of comparatively slow development with little with little evidence of inflammation. **congestive a.**, an abscess which, because of the resistance of the tissues, cannot gather, but forms at a point distant from the seat of inflammation. constitutional a., one that results from a general disease, like pyemia, tuberculosis, or erysipelas. critical a., one that appears to mark or determine a crisis. Delpech's a., rapidly developing abscess with great prostration, but little fever. dental a., an alveolar abscess. dento-alveolar a., an abscess at the apex of the root of a tooth, due to death of the pulp.

diffuse a., one the pus of which, or a part of it, is widely diffused in the surrounding tissues

Douglas's a., an abscess in rounding tissues Douglas's pouch Douglas's pouch dry a., one which disappears without pointing or breaking. Dubois's a., abscess of the thymus in congenital syphilis. embolic a., one formed in the clot of an embolus entamebic a. See amebic a fecal a., stercoraceous a., one which communicates with the large intestine and contains feces. rial a., an abscess caused by filaria. fixation a., an abscess produced artificially (as by the injection of turpentine) for the purpose of attracting and fixing at the site of the abscess the bacteria of an acute infection. **Fochier's a.** Same as fixation a. fungal a., abscess caused by a fungus, such as Nocardia. gangrenous a., one attended with gangrene of the surrounding parts gas a., tympanitic a., one which contains gas. gingival a., a parietal abscess situated in the cemental gingiva or in gingival tissue overlying a periclasial pocket. gravitation a., gravity a., an abscess

in which the pus migrates or gravitates to a lower or deeper portion of the body. helminthic a., abscess caused by a worm, such as filaria or ascaris. hemorrhagic a., one which contains blood. hepatic a., abscess of the liver. See amebic a. hypostatic a. See wandering a. idiopathic a. one due to local causes. ischiorectal a., one seated in the ischiorectal fossa. lacrimal a., an abscess in the areolar tissue around the lacrimal sac. lacunar a., an abscess in the lacunæ of the urethra lumbar a., an abscess of the lumbar region a psoas abscess mammary a., abscess of the mammary gland. marginal a., abscess near the orifice of the anus. mastoid a., suppuration within the cells of the mastoid portion of the temperature of the master of the poral bone mediastinal a., suppuration in the mediastinum. metastatic a. See *embolic* a. miliary a., one of a set of small multiple abscesses. milk a., an abscess of the mammary gland during lactation. multiple a., one of a set of many abscesses usually accompanying pyemia. mural a., an abscess in the abdominal wall after laparotomy. **nocardial a.**, an abscess caused by species of Nocardia. **ossifluent a.**, an abscess dependent on a breaking down of bone tissue. Paget's a., an abscess recurring about the residue of a former abscess; a residual abscess. parametric a., parametritic a., an abscess between the folds of the broad ligament of the uterus. paranephric a., paranephritic a., an abscess in the tissues around the kidney. parietal a., a periodontal abscess originating in the periodontal tissue at some point other than the pulpal fora-men **peri-apical a.**, an abscess at the apex of the root of a tooth; a blind abscess. A periodontal abscess arising from the dental pulp. pericemental a., a parietal abscess situated in the pericemental tissue which has undergone no previous loss of continuity and which is not an extension of a periclasial pocket. peridental a. Same as periodontal a. perinephric a., perinephritic a., an abscess in the tissues immediately around the kidney. **periodontal a.,** an infection of the periodontal tissue, whose inflammatory exudate drains elsewhere than through the gingival crevice. It includes peri-apical and parietal abscesses **peripleuritic a.**, an abscess beneath the parietal pleura. **periproctic a.**, an abscess in the arcolar tissue around the rectum. **perito**neal a., an encysted mass of exudate in peritonitis. peritonsillar a., quinsy. phlegmonous a., one associated with an inflammation scated in the connective tissues **postcecal a.,** an abscess sometimes occurring in appendicitis. **post-ty**phoid a., a chronic abscess following typhoid fever. Pott's a., Pott's disease of the hip. primary a., one formed at the seat of a pyogenic infection. **protozoal a.**, abscess caused by a protozoan. **psoas a.**, one which arises **psoas a.,** one which arises from disease of the lumbar or lower dorsal vertebrae, the pus descending in the sheath of the psoas muscle. pulmonary a., an abscess of the lungs. pyemic a., a constitutional abscess due to pyemia. residual a., one seated near the residue of a former inflammation. retroperitoneal a. Same as subpritoneal a. retropharyngeal a., a suppurative inflammation of the lymph-nodes in the posterior and lateral walls of the pharynx. root a., dental granuloma, a mass of granulation tissue on the root of a tooth forming a focus of infection. scrofulous a., strumous a., one due to the tubercle bacillus. septal a., an abscess at the proximal surface of the root of a tooth. serous a. Same as periostitis albuminosa. shirt-stud a., a superficial abscess connected with a deeper one by a passage. **splenic a.**, an abscess of the spleen. stercoraceous a., stercoral a., an abscess containing feces. sterile a., an abscess which contains no microorganisms. stitch a., one which develops at or near a stitch or suture. streptococcal a., an abscess caused by streptococci. subaponeurotic a., an abscess beneath an aponeurosis or fascia. subdiaphragmatic

a., an abscess beneath the diaphragm. submammary a., an abscess beneath the mammary gland subperitoneal a., an abscess between the parietal peritoneum and the abdominal wall. subphrenic a., an abscess beneath the diaphragm. suprahepatic a., an abscess ituated in the suspandance between the subpared to the subpa pensory ligament between the liver and the diaphragm. thecal a., an abscess in the sheath of a tendon. tonsillar a., acute suppurative tonsillitis or quinsy. **traumatic a.**, an abscess provoked by injury. **tropical a.**, an abscess of the liver due to long residence in a tropical climate. tympanitic a., an abscess that contains gas. tympanocervical a., an abscess arising in the tympanum and extending to the neck. urinary a., an abscess caused by extravasation of urine. urinous a., one which contains pus mixed with urine. verminous a., one which contains insect larvæ or other animal parasites. von Bezold's a., abscess resulting from a mastoiditis by perforation of the mastoid wall, with extension into the digastric fossa, and thence to the tissues of the lateral aspect of the neck. wandering a., one that burrows in the tissues and finally points at a considerable distance from the place where it started.

abscess-root. The root of the Greek valerian, Polemo'nium rep'tans: stimulant, alterative, and expectorant. Dose of fluidextract, ½-2 dr. (1.85-7.4 c.c.).

abscissa (ab-sis'ah), pl. abscissæ [L., from ab away + scin'dere to cut]. Any one of a set of transverse lines cutting vertical ones (ordinates), to show in a diagram the relations of a series of parts.

abscission (ab-sish'un) [L. ab from + scin'dere to cut]. Removal by cutting. corneal a., excision of the prominence of the cornea in staphyloma.

absconsio (ab-skon'se-o), pl. absconsio'nes [L.]. The cavity of a bone receiving and concealing the head of another bone.

absinthe (ab'sinth or abb sant') [Fr]. A liqueur containing oil of wormwood. See absinthium.

absinthin (ab-sin'thin). A poisonous bitter principle, $C_{20}H_{20}O_{11}$ from wormwood (absinthium).

absinthism (ab-sin'thizm) A diseased condition, like alcoholism, due to continued use of absinthe.

absinthium (ab-sin'the-um) [L; Gr. ἀψίνθιον]. Wormwood: the leaves and tops of Artemis'ia absin'thium. It is a gastric tonic, cardiac stimulant, and anthelmintic. Dose of infusion, ½-r fluidounce (15-30 c.c.). oil of a., the volatile oil of wormwood, or Artemis'ia absin'thium.

absinthol (ab-sin'thol) [L. absin'thium wormwood + o'leum oil]. A liquid camphor, C₁₀H₁₀O, from oil of wormwood.

absolute (ab'so-lūt) [L absolu'tus, from absol'vere to set loose] Free from limitations; unlimited; uncombined. a. alcohol, etc. See alcohol, etc.

absorbefacient (ab-sor-be-fa'shent) [L. absorbe're to absorb + fa'cere to make]. 1. Causing or promoting absorption. 2. A medicine or an agent that promotes absorption.

absorbent (ab-sor'bent) [L. absor'bens, from ab away + sorbe're to suck].
1. Sucking up, or taking up by suction.
2. A lacteal, lymphatic, or other absorbing vessel.
3. A medicine or dressing that promotes absorption.

absorptiometer (ab-sorp-she-om'et-er) [absorption + Gr. μέτρον measure]. A device for measuring the layer of liquid absorbed between two glass plates: used as a hematoscope.

absorption (ab-sorp'shun) [L. absorp'tio]. The taking up of fluids or other substances by the skin. mucous surfaces, or absorbent vessels. disjunctive a., the process by which a slough separates from healthy tissue by the absorption of the thin layer of the latter, which is in direct contact with the necrosed portion. interstitial a., removal of waste matter by the absorbent system. pathologic a., pathological a., the absorp

tion into the blood of any bodily excretion or morbid product, such as the bile, pus, etc.

absorptive (ab-sorp'tiv). Capable of absorbing. Abst., Abstr. Abstract.

abstergent (ab-ster'jent) [L. absterge're to cleanse].
r. Cleansing or purifying.
2. A cleansing application or medicine.

abstract (ab'strakt) [L. abstrac'tum, from abstra'here to draw off]. A powder made from a drug
or its fluidextract with milk-sugar, and brought
to twice the strength of the original drug or extract.

abstraction (ab-strak'shun) [L abstrac'tio]. 1. The withdrawal of any ingredient from a compound.
2. The letting of blood.

abterminal (ab-ter'min-al) [L. ab from + ter'minus end]. Moving from the terminus toward the center: said of electric currents in muscular substance.

abulia (ah-bu'le-ah) [Gr. α neg. + βουλή will]. Loss or deficiency of will-power. **cyclic a.**, abulia occurring periodically.

abulic (ah-bu'lik). Affected with or pertaining to abulia.

Abulkasim (ah-bool-kas'im). The most famous Arabic writer upon surgery. He is supposed to have practised medicine in Cordova and to have died about 1110 A.D. He wrote a comprehensive work upon medicine and surgery in 30 parts, entitled "Altasrif."

Abulkasis (ah-bool-kas'is). See Abulkasim.

abulomania (ah-bu-lo-ma'ne-ah) [abulia + Gr. μανία madness]. Mental disorder characterized by weakness of 'he will or indecision of character.

abutment (ab-ut'ment). A supporting structure to sustain lateral pressure; applied in dentistry to the anchorage tooth for a bridge.

Abwehrfermente (ahb-vār'ſehr-men-te) [Ger.]. Protective ferments. See under *ferment*.

A. C. Abbreviation for air conduction, alternating current, anodal closure, and axiocervical.

a. c. Abbreviation for L. an'te ci'bum, before meals.

a-c., A-C. Abbreviation for auriculocarotid and atriocarotid.
 a-c. interval. See under interval.

acacanthrax (ak-ak-an'thraks) [Gr. ἄκακος not bad + anthrax]. Non-specific anthrax.

Acacia (ak-a'she-ah) [L.; Gr. ἀκακία]. A genus of leguminous trees of many species, some of which produce gum arabic and others catechu. A. anthelmin'tica. See mussanın

acacia (ak-a'shah). Gum arabic, a dry, gummy exudate from the stems and branches of A. sen'egal and other species: it is used in preparing mucilage and in pharmacy as a vehicle. It is serviceable as a demulcent. Its official preparation is the mucilage (mucilago acaciæ): used mainly as a vehicle

acalculia (ah-kal-ku'le-ah). Inability to do mathematical calculations.

Acalypha (ak-al'if-ah) [L., from Gr. ἀκαλῦψής uncovered]. A genus of euphorbiaceous plants, many of which are actively medicinal. A. in'dica, an herb of southern Asia, is purgative, emetic, and antiarthritic. Dose of fluidextract, 10-60 min. (0.666-4 c.c.). The juice (succus acalyphæ) is given to infants in doses of 60 min. (4 c.c.).

acampsia (ah-kamp'se-ah) [Gr. α neg. + κάμπτειν to bend]. Rigidity or inflexibility of a part or of a joint.

acanthaceous (a-kan-tha'shus) [Gr. ἄκανθα thorn]. Bearing prickles.

Acanthap'sis sul'cipes. A bug related to *Lamus* and thought to be the transmitter of a form of endemic goiter in tropical Africa.

acanthesthesia (ak-an-thes-the'se-ah) [Gr. ἄκανθα thorn + αἴσθησις sensation]. Perverted sensibility with a feeling as of a sharp point.

Acan'thia lectula'ria. The bedbug. See Cimex.

acanthion (ak-an'the-on) [Gr. "little thorn"]. A point at the base of the anterior nasal spine.

Acanthobdellidea (ak-an"tho-bdel-id'e-ah). An order of the class Hirudinea, characterized by the presence of spines on the surface of the body.

Acanthocephala (ak-an-tho-sef'al-ah) [Gr. ἄκανθα spine $+ \kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head]. An order of nematode animal parasites, the thorn-head worms, so-called because of the proboscis which projects anteriorly, and is covered with thorn-like recurved spines for attachment to the host. There are two important genera, Gigantorhynchus and Echinorhynchus.

acanthocephaliasis (ak-an"tho-sef-al-i'as-is). Infestation with any species of the order Acanthocephala.

Acanthocheilonema per'stans (ak-an-to-ki-lo-ne'mah). A filarial nematode up to 80 mm. long found in Africa so abundantly that in some parts 90 per cent. of the people are infected. The adult forms live mostly in the connective tissue of the mesentery, behind the peritoneum and in the capsule of the kidney, while the larval forms are in the peripheral blood. It is not known to cause any symptoms. Formerly called Filaria perstans.

acanthokeratodermia (ak-an"tho-ker-at-o-der'-me-ah) [Gr. ἄκαν0α prickle + κέρας horn + δέρμα skin]. Hyperkeratosis

acantholysis (ak-an-thol'is-is) [Gr. ἄκανθα prickle + λύσις a loosening]. Atrophy and detachment of the prickle layer of the skin (Auspitz).

acanthoma (ak-an-tho'mah), pl acantho'mata [Gr. ἄκανθα prickle + ομα tumor]. A tumor or excessive local development of the stratum granulosum of the skin. a. adenoi'des cys'ticum, a condition marked by edema of the sweat-glands. a. alveola'ris, epitheloma a. inguina'le. See papilloma inguinale tropicum. a. verruco'sa seborrho'ica, semle warts.

acanthopelvis, acanthopelyx (ak-an-tho-pel'vis, ak-an-thop'e-lix) [Gr. ἄκανθα spine + πέλυξ pelvis]. A pelvis with the crest of the pubes very sharp.

Acanthophace'tus reticula'tus. A small fish of Barbadoes which is very efficient in destroying mosquito larvæ called also millions.

acanthosis (ak-an-tho'sis) [Gr. ἄκανθα spine]. Any disease of the prickle-cell layer of the skin. a. nig'ricans, general and abnormal pigmentation of the skin with papillary growths (Pollitzer and Janovsky, 1800). See keratosis nigricans.

acapnia (ah-kap'ne-ah) [Gr α neg. + καπνόs smoke]. Λ condition of diminished carbon dioxid in the blood.

acapnial (ah-kap'ne-al). Marked by acapnia.

acardia (ah-kar'de-ah) [Gr α priv. + καρδία heart].
Congenital absence of the heart.

acardiac (ah-kar'de-ak). [See acardia.] 1. Having no heart. 2. An acardiacus.

acardiacus (ah-kar-dē'ak-us) [L.]. An acardiac monster-fetus. a. amor'phus, a. an'ceps, a monster with a rudimentary head, extremities, and heart

acardiohemia (ah-kar"de-o-he'me-ah) [Gr. α neg. + καρδία heart + αἷμα blood]. Lack of blood in the heart.

acardionervia (ah-kar"de-o-ner've-ah) [Gr. α neg. + καρδία heart + L. ner'vus nerve]. Lack of nerve stimulus to the heart.

acardiotrophia (ah-kar"de-o-tro'fe-ah) [Gr. α neg. $+ \kappa \alpha \rho \delta l \alpha$ heart $+ \tau \rho o \varphi \dot{\eta}$ nutrition]. Atrophy of the heart.

acardius (ah-kar'de-us) [Gr. α neg. + καρδία heart]. A fetal monster without a heart.

acarian (ak-a're-an). Pertaining to the acarids or mites.

acariasis (ak-ar-i'as-is). [See Acarus] An infestation with mites. See mile. chorioptic a. See Chorioptes. demodectic a., infection of the

hair-follicles with the mite Dem'odex folliculo'rum. It affects man, dogs, horses, cattle, and sheep. In animals it is also called follicular mange. psoroptic a., infestation with mites which deposit their eggs on the skin of the host and produce scabs, e. g., Psoroptes. pulmonary a., a disease of monkeys produced by mites which live in the lungs of the host. sarcoptic a., an infestation of mites of species which burrow into the skin producing channels in which their eggs are deposited, e. g., Surcoptes. See scabies.

acaricide (ak-ar'is-id) [L. ac'arus mite + cæ'dere to slay. 1. Destructive to mites. 2. An agent that destroys mites.

acaridan (ak'ar-id, ak-ar'id-an). [See acarid. Acarus. Any mite or tick of the family Acaridæ, or order Acarma.

Acaridæ (ak-ar'id-e). A family belonging to the order Acarma.

acaridan (ak ar'id-an). See acarid.

acaridiasis (ak-ar-id-i'as-is). Acariasis.

Acarina (ak-ar-i'nah). An order of the class Arachnida, including the ticks and mites.

acarinosis (ak-ar-in-o'sis). Any disease caused by acari, acariasis,

acarodermatitis (ak"ar-o-der-mat-i'tis). Any skin inflammation caused by acari. a. urticarioi'des, straw-itch. See under itch.

acaroid resin. See resin.

acarophobia (ak-ar-o-fo'be-ah) [Gr. ἄκαρι a mite + Insane fear of the itch, or imaginary φόβος fearl. affection with that disease.

acarotoxic (ak-ar-o-tok'sik). Destructive to mites. Acartomyia (ah kar-to-mi'e-ah). A genus of Culicine mosquitos

Acarus (ak'ar-us), pl. ac'ari [L.; Gr. ἄκαρι a mite].

Λ genus of small, insect-like animals, often ectoparasitic, and called mites They cause itch, mange, and other skin diseases. A. folliculo'-rum. See Demodex. A. hor'dei, the barley bug, a mite which burrows under the skin of man. A. scabi'ei. See Sarcoptes.

acarus (ak'ar-us). A mite.

acatalepsia, acatalepsy (ah-kat-al-ep'se-ah, ahkat'al ep-se) [Gr. a priv. + καταληψις comprehension]. i. Lack of understanding. 2. Uncertainty.

acataleptic (ah-kat-al-ep'tik). 1. Mentally defi-2. Doubtful or uncertain.

acatamathesia (ah-kat-am-ath-c'ze-ah) [Gr. α priv. $+ \kappa \alpha \tau \alpha \mu \dot{\alpha} \theta \eta \sigma \iota s$ understanding]. Loss or impairment of the power to understand speech; also impairment of any one of the perceptive faculties, due to a central lesion.

acataphasia (ah-kat-af-a'ze-ah) [Gr. a neg. + κατάφασις orderly utterance] Inability to express one's thoughts in a connected manner, due to a central lesion.

acatastasia (ah-kat-as-ta'se-ah) [Gr. α neg. + κατάστασις stability]. Irregularity; variation from the normal.

acatastatic (ah-kat-as-tat'ik). Irregular; varying from the normal

acathectic (ak-ath-ek'tik) [Gr. α neg. + κάθεξις a retention]. Characterized by failure of the normal retention of the secretions.

acathisia (ah-kath-is'e-ah) See akathisia.

acaudal, acaudate (ah-kaw'dal, ah-kaw'dāt) [Gr.

α priv. + L. cau'da tail]. Having no tail.

acauline (ah-kaw'līn) [Gr α neg. + L. cau'lis stem]. Having no stem: a term applied to certain

acaulinosis (ah-kaw-lin-o'sis). A mycotic disease characterized by an erythematous eruption with purulent discharges and crusts: due to Acaulium Vagnoli-Lutatii.

Acaulium (ah kaw'le um). A genus of fungi. See

ACC. Abbreviation for anodal closure contraction.

Acc. Abbreviation for accommodation.

accelerans (ak-sel'er-anz) [L. "hastening"]. nerve stimulation of which hastens the heart's

accelerant (ak-sel'er-ant). A catalyzer.

acceleration (ak-sel-er a'shun) [L. accelera'tio; from ad to + ce'ler swift]. A quickening, as of the pulse-rate or respiration.

accelerator (ak-sel'er-a-tor) [L. "hastener"].

Any nerve or muscle which hastens the performance of a function. a. uri'nse. See muscles, table of.

accentuation (ak-sen-tshu-a'shun) [L. accen'tus accent]. Increased loudness or distinctness.

accentuator (ak-sen'tshu-a-tor). A which deepens or intensifies the action of a tissue

acceptor (ak-sep'tor). A substance which unites with another substance; specifically a substance which will absorb the active oxygen formed during the oxidation of other substances which will not unite with oxygen in the absence of the acceptor. In the correlated and simultaneous processes of oxidation and reduction which occur anaerobically in the tissues of the body the hydrogen a. is the substance which is reduced and the oxygen a. is the substance which is oxidized.

accessiflexor (ak-ses'if-lek-sor). Any accessory flexor muscle.

accessorius (ak-ses-o're-us) [L. "supplementary"]. See muscles, table of. a. willis'ii, the spinal accessory nerve.

accessory (ak-ses'or-e) [L. accesso'rius]. Supplementary or affording aid to another similar and generally more important organ.

accidentalism (ak-sid-en'tal-izm). The theory of medicine that attends only the symptoms of disease, ignoring the etiology and pathology.

accipiter (ak-sip'it-er) [L. "hawk"]. A bandage with tails like the talons of a hawk. A facial

accladiosis (ak-lad-e-o'sis). An ulcerative condition of the skin produced by infection with the fungus Accladium.

Acclad'ium castella'ni. A fungus infesting the skin of natives in Ceylon.

acclimatation, acclimation, acclimatization (ak-li-mat-a'shun, ak-li-ma'shun, ak-li-mat-iz-a'-The process of becoming accustomed to a new climate, soil, and conditions.

accommodation (ak-om-o-da'shun) [L. accommoda're to fit to]. Adjustment, especially that of the eye for various distances. absolute a., the accommodation of either eye separately. binocular a., the convergence of the two eyes so as to bring the image of the object seen upon each retina. excessive a., accommodation of the eye which is persistently above the normal. histologic a., a group of changes in the morphology and function of cells following changed conditions. negative a., adjustment of the eye for long distances by relaxation. positive a., adjustment of the eye for short distances by contraction. relative a., the accommodation which can be exercised independently of convergence. subnormal a., insufficient power of accommodation of the eye.

accommodative (ak-om'o-da-tiv). Pertaining to, of the nature of, or affecting accommodation.

accouchement (ah-koosh-maw') [Fr.]. Delivery in childbed; confinement. a. force (ah-koosh-maw for-sa'), forcible delivery with the hand or by instruments.

accoucheur (ah-koosh-er') [Fr.]. One skilled in midwifery; an obstetrician.

accoucheuse (ah-koosh-ez') [Fr]. A midwife.

accrementition (ak-re-men-tish'un) [L. ad to + cres'cere to grow]. Growth or increase by the addition of similar tissue.

accretion (ak-re'shun) [L. ad to + cres'cere to grow]. I. The addition of nutrient particles to

a tissue. 2. The adherence of parts naturally separate. 3. A mass of foreign matter which has accumulated in a cavity. salivary calculus a., a deposit on the teeth of mineral matter from the saliva.

accumulator (ak-u'mu-la-tor). An apparatus for collecting and storing electricity.

acedia (ah-se'de-ah) [Gr. α neg. $+ \kappa \hat{\eta} \delta o_{S}$ care]. A mental disorder characterized by apathy and melancholy.

acelomate, accelomate (ah-se'lo-māt). Not having a celom or body cavity.

A. C. E. mixture. An anesthetic mixture of r part of alcohol, 2 of chloroform, and 3 of ether.

acenesthesia (ah-sen-es-the'ze-ah) [Gr. a neg. + cenesthesia]. Abolition of the sense of well being, seen in melancholia and hypochondriasis.

acentric (ah-sen'trik) [Gr. ἄκεντρος not centric].
Not originating in a nerve-center, peripheric.

aceognosia (as-e-og-no'se-ah) [Gr. ἄκος remedy + γνωσις knowledge]. Knowledge of remedies.

aceology (as-e-ol'o-je). Same as acology.

acephalia, acephalism. acephaly (ah-sef-a'le-ah, ah-sef'al-izm, ah-sef'al-e) [Gr. α neg. + κεφαλή head]. Absence of the head.

acephalobrachia (ah-sef"al-o-bra'ke-ah) [Gr. α neg. $+ \kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head $+ \beta \rho \alpha \chi l \omega \nu$ arm]. Congenital absence of the head and arms.

acephalobrachius (ah-set"al-o-bra'ke-us). A monster or teratism with neither head nor arms.

acephalocardia (ah-sef"al-o-kar'de-ah) [Gr. α priv. + κεφαλή head + καρδία heart]. Absence of the head and heart.

acephalocardius (ah-sef"al-o-kar'de-us) A monster or teratism with neither head nor heart.

acephalochiria (ah-sef"al-o-ki're-ah) [Gr. α neg + $\kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head + $\chi \epsilon l \rho$ hand]. Absence of the head and hands,

acephalochirus (ah-sef"al-o-ki'rus). A monsterfetus or teratism with neither head nor hands.

acephalocyst (ah-sef'al-o-sist) [Gr. α neg. + $\kappa \epsilon \varphi \alpha \lambda \eta$ head + $\kappa b \sigma \tau \iota s$ cyst]. A headless, bag-like hydatid filled with a liquid, it being one of the stages of the existence of a sterile cestoid worm (Laennec, 1804).

acephalocystis racemosa (ah-sef''al-o-sis'tis rase-mo'sah). A hydatid mole of the uterus.

acephalogaster (ah-sef"al-o-gas'ter) [Gr. a priv. $+ \kappa \epsilon \varphi a \lambda \dot{\eta}$ head $+ \gamma a \sigma \tau \dot{\eta} \rho$ belly]. A fetus that lacks the head, chest, and upper part of the abdomen.

acephalopodia (ah-sef"al-o-po'de-ah) [Gr. a priv. + κεφαλή head + πούς foot]. Absence of the head and feet.

acephalopodius (ah-sef"al-o-po'de-us). A teratic fetus with neither head nor feet.

acephalorachia (ah-sef"al-o-ra'ke-ah) [Gr. α priv. + κεφαλή head + ῥάχις spinel. Absence of the head and spinal column.

acephalostomia (ah-sef"al-o-sto'me-ah) [Gr. α priv $+ \kappa \epsilon \varphi a \lambda \dot{\eta}$ head $+ \sigma \tau \delta \mu a$ mouth]. A form of monstrosity characterized by absence of the head, and a kind of mouth on the superior aspect.

acephalostomus (ah-sef-al-os'to-mus). A monster-fetus characterized by acephalostomia.

acephalothoracia (ah-sef'al-o-tho-ra'se-ah) [Gr. α priv. + κεφαλή head + θώραξ thorax]. Absence of the head and chest.

acephalothorus (ah-sef"al-o-tho'rus). A monster-fetus with neither head nor thorax.

acephalous (ah-sef'al-us). Without a head.

acephalus (ah-sel'al-us), pl. aceph'dū [Gr. α without + κεραλή head]. A headless mouster a. dibra'chius, an acephalus with both upper limbs more or less undeveloped. a. di'pus, an acephalus with lower limbs more or less undeveloped. a. monobra'chius, an acephalus with only one upper limb. a. mon'opus, an acephalus with only one lower limb. a. paraceph'alus, a monster with a defective skull and no brain. a. sym'pus, an acephalus with fusion of the two lower limbs.

aceratosis (ah-ser-at-o'sis) [Gr. α without $+ \kappa \acute{e} \rho \alpha s$ horn]. Deficiency of the horny tissue.

acerdol (as'er-dol). A compound, MnO₂K₂KOH, used as a disinfectant.

acervuline (as-er'vu-lin) [L. acer'vulus little heap]. Aggregated, like certain glands.

acervuloma (as-er-vu-lo'mah) [L. acer'vulus little heap + Gr. ομα tumor]. Same as psammoma.

acervulus (as-er'vu-lus) pl., acer'vuli [L. dim. of acer'vus a heap]. Bram-sand; or, more exactly, the mass of sabulous matter which lies near the pineal body. Called also acervulus cerebri.

acescence (as-es'ens) [L. aces'cere to become sour].

1. Sourness. 2. The process of becoming sour.

acescent (as-es'ent). Somewhat or slightly acid.

acesodyne (as-es'o-dīn) [Gr. ἀκεστός healing] Anodyne; allaying pain.

acestoma (as-es-to'mah) [Gr. ἀκεστός healed + ομα tumor] A mass of granulations.

acetabular (as-et-ab'u-lar). Pertaining to the acetabulum

acetabulum (as-et-ab'u-lum) [L. "vinegar-cruet," from ace'tum vinegar]. The rounded cavity in the innominate bone which receives the head of the femur. Called also cotyloid cavity.

acetal (as'et-al). Diethylacetal; a colorless liquid, C₂H₄(OC₂H₅)₂, formed by the incomplete oxidation of alcohol under the action of platinum black. It is hypnotic. Dose, r-3 dr. (4-12 c.c.).

acetaldehyd (as-et-al'de-hid). Acetic aldehyd See aldehyd

acetamid (as-et-am'id). A white, crystalline substance, CH₃CONH₂.

acetamido-antipyrin (as-et-am''id-o-an-te-pi'-rin). A yellow, crystalline compound, said to be a useful antipyretic in the same dose as antipyrin.

acetamidosalol (as-et-am"id-o-sa'lol). Salophen. acetaminol (as-et-am'm-ol). A white, crystalline substance, C₁₆H₂₄NO₄, used in the treatment of pulmonary tuberculosis.

acetanilid (as et-an'il-id) [acetic + anilin]. A white, crystalline, sublimable solid, phenylacetamid, C₆H₃,NH OC.CH₃, produced by combining glacial acetic acid with anilin. It forms lustrous white plates, has a burning taste, is odorless, and is greasy to the touch. It is analgesic and anti-pyretic, and is used in neuralgia and rheumatism. Dose, 2-10 gr. (0.133 o 666 gm). Called also antilebrin. ammoniated a., a mixture of acetanilid, ammonium carbonate, sodium bicarbonate, and sugar of milk. methylated a. See maretin. monobromated a. See antisepsin.

acetannin (as-et-an'in). Same as tannigen.

acetarct (as'et-arkt). An extract made with acetic acid instead of alcohol as a menstruum.

acetarsone (as-et-ar'son). Same as storarsol.

acetate (as'et-āt). Any salt of acetic acid.

acetbromanilid (as-et-bro-man'il-id). Same as antisepsin.

acetenyl (as-c'ten-il). The group—C

CH, when it occurs in organic compounds.

aceteugenol (as-et-u'ge-nol). One of the products in the transformation of eugenol into vanillin.

acethemin, acethemin (as-et-he'min). A preparation of hemin, $C_3(H_3/O_4N_4ClFe$, derived from the coloring-matter of the blood.

acetic (as-e'tik). Pertaining to vinegar or its acid; sour. a. acid. See under acid. a. anhydrid. See under anhydrid.

aceticoceptor (as-e"tik-o-sep'tor). A ceptor or side chain having specific affinity for the acetic-acid radical.

- acetimeter (as-et-im'et-er) [L. ace'tum vinegar + Gr. μέτρον measure]. An apparatus for measuring the acetic acid in a fluid.
- acetin (as'et-in). A glyceryl acetate.
- Acetobacter (as-e-to-bak'ter). A genus of bacterial organisms. They are aerobic, rod-shaped cells capable of securing their energy by the oxidation of alcohol to acetic acid. A. ace'ti, the species which causes cider or wine to change to vinegar It is aerobic, and forms a zoogleal mass, the "mother of vinegar," on the surface
- acetol (as'et-ol). 1. An alcohol, hydroxyacetone, CH₃-CO CH₂OH, isomeric with lactic aldehyd. 2. A proprietary toothache remedy.
- acetolase (as-et'o-lās). A ferment which converts alcohol into acetic acid.
- **acetoluid** (as-et-ol'u-id). An antipyretic, $C_0H_{11}NO$, resembling acetamlid.
- acetometer (as-et-om'et-er) [L. ace'tum vinegar + met'rum measure]. An instrument for determining the percentage of acetic acid in solution.
- acetomorphin (as"et-o mor'fin). Heroin.
- acetonal (as-et'o-nal) Aluminum and sodium acetate, $\Lambda l_2(OH)_2(C_2H_3O_2)_5Na$.
- acetonasthma (as-e-ton-as'mah) Asthma accompanied with acetonuria and probably due to it, and marked by headache, vomiting, restlessness, and amaurosis.
- acetone (as'et-ōn) [acetic + ketone]. 1. Dimethyl ketone, CH₂CO CH₃, a colorless liquid having a pleasant ethereal odor 1t has been found in small quantities in normal urine and occurs in larger amounts in diabetic urine. It is acrid and inflammable, and is used as an anesthetic and anthelmintic. Dose, 15-20 min (0 02-1 23 cc). 2. Any member of the series to which the normal or typical acetone belongs a. bodies. See under body. a. bromoform. See brometone. a. chloroform. See chloretone. a. diethylsulphone. See sulphonal.
- acetonemia (as-et-o-ne'me-ah) [acetone + Gr. alμa blood]. The presence of acetone bodies in the blood
- acetonglycosuria (as"et-ōn-gli-ko-su're-ah). Gly-cosuria following acetone poisoning.
- acetonitrate (as"et-o-ni'trāt) A compound of a base with acetic and nitric acids.
- acetonitril (as-et-o-ni'tril). Methyl cyanid, CH₃CN, a colorless liquid.
- acetonoresorcin, acetonoresorcinol (as-ct-o"no-rc-sor'sin, as-et-o"no-rc-sor'sin-ol) A crystalline substance containing two molecules of resorcinol and one of acetone
- acetonum (as-et-o'num) Latin for acctone
- **acetonuria** (as et-o-nu're-ah) Excess of acetone bodies in the urine. It occurs in diabetes, fever, carcinoma, and digestive disorders.
- aceto-orthotoluid (as et"o-or-tho-to'lu-id). See
 acetorthotoluid.
- acetoparatoluid (as"et-o-par-a-tol'u-id). See acct-
- acetophenetidin (as"et-o-fen-et'id-in). See phenacetin.
- acetophenone (as-et-o-fe'nôn). Hypnone, methyl phenyl ketone, C_bH₃COCH₃, a pungent fluid, sometimes used as a hypnotic and as an antiseptic Dose, 1-5 min. (o o6-o 3 c.c.).
- acetophenone-ortho-oxyquinolin (as-et-o-fe"-non-or-tho-oks-e-kwin'o-lin). A hypnotic and anti-neuralgic compound
- acetophenonephenetidin (as-et-o-fe"nōn-fen-et'-id-in) Same as malarin.
- acetopyrin (as-et-o-pi'rin) A white crystalline compound of antipyrin and acetosalicylic acid: used in rheumatism and neuralgia. Dose, 5-10 gr. (0.333-0.65 gm.).

- acetorthotoluid (as-et-or-tho-tol'u-id). A color-less, crystalline compound, C_nH₄(CH₃)NHCO-CH₃, used as an antipyretic, like acetanilid. Dosc, 2-5 gr. (0.1-0.3 gm.).
- acetosoluble (as-et-o-sol'u-bl). Soluble in acetic acid
- acetous (as-e'tus) [L. aceto'sus]. Pertaining to, producing, or resembling vinegar.
- acetozone (as et'o-zōn) Benzoylacetylperoxid, C₆-H₅ CO O₂ OC CH₆, a crystalline compound soluble in alcohol, oils, and ether. It is used as an external and internal germicide and antiseptic, and as a dusting-powder and ointment. Dose, 3-5 gr. (02-033 gm.). Called also benzozone.
- acetparaminosalol (as-et-par-am"in-o-sal'ol). Salophen
- acetparaphenetidin (as ct-par-ah-fen-ct'id-in). Same as phenacetin.
- acetparatoluid (as"et-par-a-tol"u-id) A colorless, crystalline compound, C₀II₄(CII₄)NH.COCH₃, used as an antipyretic. Dose, 15-30 gr. (1-2 gm.).
- acetphenetidin (as-et-fe-net'id-m). The official name for phenacetin (q. v.).
- acetract (as'e-trakt) An extract of a drug made with a menstruum containing acetic acid.
- **acetral** (as'et-ral). A proprietary mouth-wash containing aluminum acetate.
- acet-theocin-sodium (as-et-the-o-sin-so'de-um) A proprietary diuretic, theophyllin sodium acetate, NaC₇H₇O₂N₄ + CH₃.CO ONa, used in dropsy. Dose, 5-7 gr (o 33-0.5 gm.).
- acettoluid (as et tol'u-id) See acetoluid.
- acetum (as-e'tum), pl ace'ta [L]. 1. Vinegar. 2. A medicinal solution of a drug in vinegar. a. aromat'icum, aromatic vinegar (N. F), an aromatized preparation of dilute acetic acid and alcohol. a. canthar'idis, vinegar of cantharides a rubefacient and vesicant for external use. a. ipecacuan'ha, vinegar of ipecacuanha. Dose, 10-30 min. (0.606-2 c.c.) a. lobe'lia, vinegar of lobelia Dose, 5-30 min. (0.333 c c c). a. o'pii, vinegar of opium soporific and anodyne. Dose, 5-20 min. (0.333-1.333 c.c.). a. sanguina'riæ, vinegar of blood-root. Dose, 10-30 min (0.666 2 c c.). a. scil'læ (U. S. P), vinegar of squill (q v.). Dose, 10-30 min. (0.666 2 c c.).
- acetyl (as'et-il) [acetic + Gr κλη matter] A radical, CH₃ CO, ā combining form (as in esters) of acetic acid a. chlorid, a colorless liquid, CH₃-CO CI, used as a reagent. a. dioxid, a thick liquid (C₂H₃O)₂O₂, a powerful oxidizing agent. a. peroxid, a powerful oxidizing substance, CH₂-COOOH, not yet isolated
- acetylarsenate (as"ct-il-ar'sc-nāt). Same as arsacetin
- **acetylation** (as e-til a'shun). The chemical union of a compound with acetic acid.
- acetylatoxyl (as"et-il-at-ok'sil). See arsacetin.
- acetylcholin (as et-il-ko'lin) A combination of acetic acid and cholin occurring in ergot and possessing extremely poisonous properties.
- acetylene (as-et'il-ēn). A colorless gas, ethine, C₂H₂, with a garlic-like odor. It is formed by the action of water on calcium carbide and burns with a brilliant white flame. It has been used in the treatment of cancer; recently it has been employed as a general anesthetic. a. dichlorid. Same as dioform
- **acetylization** (as-et"il-iz-a'shun). The introduction of the acetyl radical into an organic compound.
- acetyl-methyl carbinol (as"et-il-meth-il-kar'-bin ol) A keto-isomer of aldol, CH₄ CHOH CO CH₃, which is formed from glucose by certain bacteria and which is detected in a broth culture of bacteria by the Vosges-Proskauer reaction.
- acetylphenylhydrazin (as"et-il-fen-il-hi-dra'zin). See byrodin.

acetylsalicylamid (as"ct-il-sal-is-il-am'id). An antirheumatic in white crystals, CII₃.CO.O.C₆H₄.-CO.NH₂.

acetylsalicylic acid. See aspirin.

acetyltannin (as-et-il-tan'in). See tannigen.

acetylthymol (as-et-il-thi'mol). Thymol acetate, $C_{12}H_{10}O_2$, a colorless liquid, used as an antiseptic.

achalasia (ah-kal-a'ze-ah) [Gr. a neg. + χάλασις relaxation]. I ailure to relax on the part of a bodily opening, such as a sphincter or the esophagus.

ache (āk). A continuous, fixed pain.

acheilia (ah-ki'le-ah) [Gr α without $+ \chi \epsilon \hat{\imath} \lambda os$ lip]. Congenital absence of one or both lips.

acheilous (ah-ki'lus). Having no lips.

acheiria (ah-kı're-ah) [Gr. α priv. + χείρ hand]. Congenital absence of one or both hands.

acheirus (ah-ki'rus) [L.]. A fetus or person born without hands.

achibromin (ak-e-bro'min). Monobromisovaleryl-glycolurea, a crystalline compound used like the alkali bromids. Dose, 5-15 grains (0 3-1 gm.).

Achillea (ak-il-e'ah) [L; Gr. ἀχίλλεια]. A genus of composite-flowered plants. A. millefo'lium, milfoil, or yarrow, is a good bitter and stimulant tonic. Dose of the extractive, 1-3 dr. (4-12 gm.); of the volatile oil, 5-15 min. (0 333-1 c.c.).

achillein (ak-il-e'in). A glucosid, $C_{20}H_{18}N_2O_{15}$, from yarrow (*Achillea*): antiperiodic. Dose, 16–60 gr. (1 03–4 gm.).

Achilles' tendon (ak-il'ēz). See under tendon.

Achillini (ak-il-e'ne), **Alessandro**. A celebrated physician and philosopher, born at Bologna in 1463; died, 1512. He left several works on anatomy.

achillobursitis (ak-il''o-ber-si'tis). Inflammation and thickening of the bursas about the Achilles tendon, especially of the bursa in front of it.

achillodynia (ak-il-o-din'e-ah) [Achilles' tendon + Gr. ὁδύνη pain]. Pain in the Achilles tendon.

achillorrhaphy (ak-il-or'af-e) [Achilles' tendon + Gr. $\dot{\rho}a\varphi\dot{\eta}$ suture]. The operation of suturing the Achilles tendon.

achillotomy, achillotenotomy (ak-il-ot'o-me, ak-il"o-ten-ot'o-me) [Gr. 'Αχιλλεύs Achilles + τένων tendon + τομή cut] Surgical division of the Achilles tendon. **plastic a.**, elongation of the Achilles tendon by plastic operation.

achiria (ah-ki're-ah). See acheiria.

achirus (ah-kı'rus). See acheirus.

Achlea (ak'le-ah). A genus of fungi which form molds on certain fish and insects

achlorhydria (ah-klor-hid're-ah) [Gr. α neg. + chlorhydria]. Absence of hydrochloric acid from the gastric secretions. **a.-apepsia**, absence of the digestive secretions of the stomach

achlorids, achlorides (ah-klo'rids). Salts which are not chlorids.

achloropsia (ah-klo-rop'se-ah) [Gr. α neg. + $\chi\lambda\omega\rho\delta$ s green + $\delta\psi\iota$ s vision]. Inability to distinguish green tints.

achlys (ak'lis) [Gr. άχλψs mist]. A mild corneal opacity (Himly).

acholia (ah-ko'le-ah) [Gr. α priv. + χολή bile]. Lack or absence of the secretion of bile.

acholic (ah-kol'ik). Free from bile.

acholuria (ak-o-lu're-ah) [Gr. a priv. + χολή bile + οὖρον urine]. Absence of bile-pigment from the urine.

acholuric (ak-o-lu'rik). Having no bile in the

achondroplasia, achondroplasty (ah-kon-dropla'se-ah, ah-kon'dro-plas-te) [Gr. α priv. + $\chi \delta \nu \delta \rho$ os cartilage + $\pi \lambda \dot{\alpha} \sigma \sigma \epsilon \nu$ to form]. Defect in the formation of cartilage at the epiphyses of the

long bones, producing a form of dwarfism: sometimes seen in rickets. It is also called chondro-dystrophia fatalis and fetal rickets.

achondroplastic (ah-kon-dro-plas'tik). Pertaining to or affected with achondroplasia.

achordal (ah-kor'dal) Not connected with or developed from the notochord.

achoresis (ak-o-re'sis) [Gr. α priv. + χωρεῖν to make room]. Diminution of the capacity of a hollow organ.

Achorion (ak-o'reon) [L dim. of Gr. ἄχωρ dandruff]. A genus of fungi much resembling Trichophyton, but with longer filaments. A. quinckca'num, the species which causes mouse favus. schænlei'nii. the species which favus in causes man. Other spe-

Achorion (Rivas)

cies occasionally found in man and in animals are: A arloin'gi, A. gyp'seum, A. keratoph'agus, A. leber'tii.

achreocythemia (ah kre-o-si-the'me-ah). See achroiocythemia.

achroacyte (ah-kro'as-īt). A lymphocyte.

achroacytosis (ah-kro-as-it-o'sis) [Gr. α priv. + $\chi \rho \dot{\alpha}$ color $+ \kappa \dot{\nu} \tau \sigma$ cell]. Excessive development of the colorless or lymph-cells, as in Mikulicz's disease (q v.).

achroglobin (ak ro-glo'bin). A respiratory pigment found in certain invertebrates.

achroin (ak-ro'in). A proprietary urinary antiseptic. Dose, 4 gr. (o 26 gm.).

achroiocythemia (ah-kroi"o-si-the'me-ah) [Gr. $\ddot{a}\chi\rho\alpha\sigma\sigma$ colorless $+\kappa\dot{\nu}\tau\sigma\sigma$ cell $+a\ddot{\iota}\mu\alpha$ blood]. Deficiency or lack of hemoglobin in the red blood-corpuscles

achroma (ah-kro'mah) [Gr. α priv. $+ \chi \rho \hat{\omega} \mu \alpha$ color]. Absence of color or of normal pigmentation.

achromacyte (ah-kro'mas-īt) [Gr ἄχρωμος color-less + κύτος cell]. A decolorized red blood-corpuscle.

achromasia (ah-kro-ma'se-ah) [Gr. ἄχρωμος color-less]. 1 Lack of normal pigmentation of the skin. 2. Absence of the usual staining reaction from a tissue or cell.

achromate (ah-kro'māt). A person who is color-

achromatic (ah-kro-mat'ik) [Gr. a priv. + χρωματικός pertaining to color]. r. Producing no discoloration, also staining with difficulty. 2. Containing achromatin 3. Color-blind.

achromatin (ah-kro'mat-in) [Gr. α priv. + χρῶμα color]. The faintly staining substance forming the nuclear sap, linin, and nuclear membrane of the nucleus of a cell

achromatinic (ah-kro-mat-in'ik). Pertaining to or containing achromatin.

achromatism (ah-kro'mat-izm). The absence or correction of chromatic aberration; the condition of being achromatic.

achromatistous (ah-kro-mat-is'tus). Deficient in pigment or coloring-matter.

achromatize (ah-kro'mat-iz). To render achromatic.

achromatocyte (ah-kro-mat'o-sit) [Gr. α priv. + $\chi \rho \hat{\omega} \mu \alpha$ color + $\kappa b \tau \sigma s$ cell]. A decolorized erythrocyte.

achromatolysis (ah-kro-mat-ol'is-is) [achromatin + Gr. λύσις dissolution] Disorganization of the achromatin of a cell Called also plasmolysis.

achromatophil (ah-kro-mat'o-fil) [Gr. a priv. + χρωμα color + φιλεῦν to love]. 1. Having no affinity for stains. 2. An organism or tissue element that does not stain easily.

achromatopsia (ah-kro-mat-op'se-ah) [Gr. α priv. + χρωμα color + δψις sight]. Lack of power to perceive color; total color-blindness.

achromatosis (ah-kro-mat-o'sis) [Gr. α priv. + χρῶμα color]. Deficiency of pigmentation in the tissues.

achromatous (ah-kro'mat-us). Having no color; colorless.

achromaturia (ah-kro-mat-u're-ah) [Gr. α priv. χρωμα color + οὐρον urine]. A colorless state of the urine.

achromia (ah-kro'me-ah) [Gr. ἄχρωμος colorless]. Absence of normal color.

achromic (ah-kro'mik). Characterized by absence or the disappearance of color; colorless.

achromin (ak-ro'min). Same as achromatin.

Achromobacter (ah-kro'mo-bak-ter). A genus of Bacteriaceæ, they are saprophytic and form no pigment

achromoderma, achromodermia (ah-kro-moder'mah, ah-kro-mo-der'me-ah) [Gr. ἄχρωμος colorless + δέρμα skin]. A colorless state of the skin, leukoderma.

achromophil, achromophilous (ah-kro'mof-il, ah-kro-mol'il-us) [Gr. a neg. + χρωμα color + φιλείν to love]. See achromatophil.

achromotrichia (ah-kro-mo-trik'e-ah) [Gr. ἄχρω- μ os without color + $\theta \rho l \xi$ hair]. Lack of pigment in the hair.

achroöamyloid (ah-kro-o-am'il-oid). Amyloid in its early non-stainable stage.

achroocytosis. See achroacytosis.

achroödextrin (ah-kro-o-dek'strin) [Gr. ἄχροος uncolored + deutrin]. A kind of dextrin not colored by iodin.

achylia, achylosis (ah-ki'le-ah, ah-kil-o'sis) [Gr. a priv. $+ \chi v \lambda \delta s$ chyle]. Absence of the chyle. a. gas'trica, absence of the ferments of the gastric juice (Einhorn, 1892). a. gas'trica hæmorrha'gica, absence of hydrochloric acid from, and presence of occult blood in, the stomach. a. pancreat'ica, absence or deficiency of the pancreatic secretion.

achylous (ah-ki'lus) [Gr. ἄχυλος juiceless]. Deficient in chyle.

achymia, achymosis (ah-ki'me-ah, ak-im-o'sis) [Gr. äxvuos juiceless]. Imperfect or insufficient formation of chyme.

acicular (as-ik'u-lar) [L. acicula'ris]. Shaped like a needle or needle-point.

acid (as'id). 1. [L. a'cidus, from a'cere to be sour.] Sour; having properties opposed to those of the alkalis. 2. [L. a'cidum] Any compound of an electronegative element with one or more hydrogen atoms that are replaceable by electropositive atoms; a compound which, in aqueous solution, undergoes dissociation with the forma-tion of hydrogen ions. The physical properties of acids are a sour taste, the power of turning litmus-paper red, and the ability to neutralize alkalis. Acids are distinguished as binary or hydracids, and ternary or oxyacids: the former contain no oxygen; in the latter the hydrogen is united to the electronegative element by oxygen. The hydracids are distinguished by the prefix hydro-The names of acids end in "ic," except in the case where there are two degrees of oxygenation, when the acid containing the greater amount of oxygen has the termination ic, the one having the lesser amount, the termination -ous. Acids ending in -ic form salts with the termination -ate; those ending in -ous form salts ending in -ite. The salts of hydracids end in -id. Acids are called monobasic, dibasic, tribasic, and tetrabasic, according as they contain one, two, three, or

four replaceable hydrogen atoms. abietic a., a crystalline substance, C44H64O5, from abietin, forming a large part of rosin. abietinic a., an acid resin, $C_{19}H_{28}O_2$, forming about 83 per cent of American rosin. **abietolic a.**, a crystalline acid resin, $C_{20}H_{28}O_2$, forming about 1.5 to 2 per cent. of Chian turpentine. **abric a.**, a crystalline acid, $C_{21}H_{24}N_3O$, from jequirity. **aceric a.**, an acid from the juice of A'cer campes'tre, the European maple. **acetamido-ethyl-salicylic a.** Same as benzacetin. **acetic a.**, a colorless, crystalline acid, CH3.COOH, also called glacial acetic a, the acid of vinegar. It is very poisonous, and acts as a caustic when applied to warts, hypertrophied tissue, etc. Four forms are recognized: the orditissue, etc. Four forms are recognized: the ordinary, the dilute, the stronger, and the glacial. accetic a., anhydrid. See under anhydrid. accetic a., dilute, an aqueous solution containing 6 per cent. of the pure acid. Dose, 60-90 min. (4-6 c.c.) in water. accetic a., glacial, a crystalline form of accetic acid: vesicant and escharotic. acceto-accetic a. Same as diacetic a. accetyleresotinic a. See creasin. accetyl-sali-propionic a. See levalinic a. accetyl-salipropionic a. See levulinic a. acetyl-salicylic a. See aspirin acetyltannic a. See tannigen. aconitic a., a crystalline acid, 1, 2, 3-tricarboxylprophylene, COOH.CH C(COOH)CH2. COOH, from aconite and other plants. acrylic a., any one of a group of organic acids having the formula C₃H₄O₂, and found in animal and vegetable tissues. adenylic a., a mononucleotid made up of adenin, ribose, and phosphoric acid. It is one of the decomposition products of nucleic acid and may be obtained from the thymus gland. adipic a., a crystalline acid, [(CH2)2COOH]2, formed by oxidizing fats with nitric acid. **agaric a.**, **agaricic a.**, a resinous acid, $C_{10}\Pi_{30}(OH)(COOH)_{4-}$, 11H,O, from the fungus *Polyp'orus officina'lis*, or white agaric. It is a white, tasteless powder, useful white again. It is a white, tastess powder, useful in night-sweats. Dose, $\frac{1}{3}-1$ gr. (0 02-0.1 gm). allantic a., a bitter acid from Atlantus excelsa: tonic. alantic a., an acid, $C_{16}Il_{23}O_3$, from In'-ula hele'nium. albuminic a., ferrated, a therapeutic preparation of swine livers in a light brown powder; also, an artificial product of iron and albumin, very similar to the above. **aldepalmitic a.**, an acid, $C_{16}H_{20}O_2$, from cow's butter. **alginic a.**, an organic acid from various species of Algae, the alginate of iron is said to be valuable. **aliphatic a.**, an organic acid with an open carbon chain. **alianic a.**, **allanturic a.**, an acid, glyoxalyl urea, (CO.NH)₂CH.OH, formed along with urea by the action of nitric acid on allantoin. **allophanic a.**, an acid, urea carbonic acid, NH₂CO NH.COOH, not known in the free state. Its amid is biuret. It combines with various substances and makes them less disagreeable to take. **alloxanic a.**, a crystalline acid, NH₂.CO.NH CO.COOH, obtainable from alloxan. alloxyproteic a., a sulphur compound sometimes found in the urine. alluranic a., an acid, CtH4N4O4, derived from alloxan and urea. aloitinic a., a yellow and nearly insoluble substance, C₇H₂N₂O₅, obtainable from aloes. alpha-amino-beta-hydroxypropionic a., serine alpha-glucoheptonic a., an heptahydroxy acid, CH₂OH(CHOII)₆COOH. Its lactone is hedioalpha-hydroxypropionic a. See lactic alpha-oxynaphthoic a., a crystalline acid, OH.C₁₀H₆(OOH, anti-eptic and deodorant: used in wound dressing; probably poisonous if administered by the mouth. **alphatoluic a.**, phenylacetic acid **amalic a.**, a crystalline acid, Carrolland and the resulting acid. (CH₃)₄N₄O₇, formed by the reduction of dimethyl alloxan with hydrogen disulphid. **amic 8.**, any amid of an organic acid. **amido-acetic** a. Same as glycocoll. amidobenzoic a., an acid, NH₂.C₆H₄.COOII, found in urine. amidocaproic a. Same as lewin. amido-ethylsulphonic a. See taurin. amidoformic a. Same as carbanic a. amidohydrocumaric a. Same as tyrosin. amido-isothionic Same Same as amido-oxyphenyltaurin.

propionic a. Same as tyrosin. amidoproprionic a. Same as alanin. amidosuccinic a. Same as asparaginic a. amidothiolactic a. amidothiopropionic a. cystein. amidovalerianic a. Same as homopiperidinic a. amino-acetic a., glycocoll.
aminocaproic a., leucin. aminoglutaric a.,
glutaminic a. aminoguanidine valerianic a. Same as arginine. amino-indole propionic a. Same as tryptophane. amino-isovalerianic a., valin. aminopropionic a., alanin. aminosuccinic a., aspartic a. aminothiopropionic a., cystein. amygdalic a., one formed by the decomposition of amygdalin, the result of boiling with an alkali. anacardic a., a crystalline principle from Anacar'dium occidenta'le: anthelmintic. angelic a., an unsaturated fatty acid, CH₃.CH: C(CH₃).COOH, from the roots of Angelica archangelica: useful in gout, rheumatism, and intermittent fever. Dose, 10-30 gr (0 606-2 gm).

anilinparasulphonic a. Same as sulphanilic a. anisic a., a crystalline acid, CH₂O.C₆H₄-CO2H, from anise and fennel, forming anisates: it is antiseptic and antirheumatic. Dose, 5-10 gr. (o 333-0.666 gm.). anisidin-citric a., an analgesic agent. Dose, 8-15 gr. (0 5-1 gm.). ani-suric a., an acid, C₁₀H₁₁NO₂, in leafy crystal, obtainable from urine after the ingestion of anisic acid. anthranilic a., a crystalline acid, NH2 -C₆H₄ COOH, obtained by oxidizing indigo by boiling it with sodium hydroxid and magnesium dioxid. From it indigo can be made. anticyclic a., a fragrant powdery acid. generally used as an antipyretic. Dose, 780 gr. (0.0066 gm.). **antimonic a.**, antimonium pentoxid, Sb_2O_5 , or, more correctly, antimonium hydroxid, Sb(OH)5 or SbOantimonious a. 1. Antimony trioxid. See antimony oxid. 2. More correctly, antimony hydroxid, HSbO₂. antitartaric a. See mesotartaric a. antoxyproteic a., an organic acid obtained from urine. apocrenic a., an acid, $C_{48}H_{12}O_{24}$, from certain spring-waters and from the soil. aposorbic a., a crystalline acid, C₆H₈O₇, obtained by oxidizing sorbin with HNO3. arabic **a.** Same as arabin. **arabonic a.**, one of the forms of tetra-hydroxy-normal valeric acid, CII2-OH(CHOII)3COOH, formed by the action of bromin-water on arabinose. arachic a., arachidic a., a fatty acid, CH₃(CH₂)₁₆COOH, from the oil of the peanut, Arachis hypogor'a. aristic a., an acid. C₁₈H₁₈NO₇, from serpentaria. aristidic a., a resinous acid, C₁₇H₁₀(CH₁)NO₇ from serpentaria. aristolic a., an acid, C₁₅H₁₃NO₇, from serpentaria. aristolochic a., a volatile acid obtainable from various species of Aristolochia. aromatic a., any one of a group of acids derivable from various balsams and resins and containing the benzene or other ring. ar-sanilic a., a compound, OAs(C₀H₄NII₂)(OII)₂, or arsenic acid in which an hydroxyl group is replaced by an aminobenzene, aminophenol, or anilin group **arsellic a.**, an unsaturated fatty acid, $C_{17}H_{32}O_2$, from cod-liver oil. **ar**senic a., orthoarsenic a., the acid, H₂AsO₄, some of whose salts, called arsenates, are used as medicines. See metarsenic a., pyroarsenic a. arsenous a. r. A monobasic acid, HAsO₂, forming arsenites. 2. Arsenic trioxid, or arsenous anhydrid. See arsenic trioxid. arsinic a., arsenic acid in which two of the hydroxyl groups have been replaced by organic radicals. arsinosalicylic a., a colorless, crystalline substance, used like atoxyl. arsonic a., arsenic acid in which one of the hydroxyl groups is replaced by an organic radical. arylarsonic a., arsonic acid combined with an aryl radical. Its salts are arylarsonates. aseptic a., an antiseptic mixture of boric acid, water, hydrogen dioxid, and salicylic acid. asparaginic a., a dibasic amino-acid, COOH.CH(NH₂).CH₂.COOH, derivable from asparagin, and found in the body as one of the products of pancreatic digestion. aspartic a. Same as asparaginic a. atrolactinic a., a

crystalline acid, phenyl-lactic acid, CH₈.C(C₆H_b)-OH.COOH, from acetophenone. atropic a., phenyl-acrylic acid, CoH₅.C:(CH₂).COOH, isomeric with cinnamic acid; produced by boiling atropin with baryta water. auric a. 1. The acid, Au(HO)3, forming salts called aurates. 2. Less correctly, gold peroxid, Au₂O₂, or auric anhydrid. **avivitellinic a.** [L. a'vıs bird + vıtel'lus], a paranuclein found in ovovitellin. axinic a., an acid, C₁₈H₂₈O₂ from axin azelaic a., an acid, COOH.(CH₂)₇COOH, formed by oxidation of oleic acid. **barbituric a.**, a crystalline substance, CO(NHCO)₂CH₂, malonyl urea. behenic a., a fatty acid, CH3(CH2)20COOH, from ben oil. **benzene-sulphonic a.**, a soluble crystalline substance, $C_6H_6SO_3H$. **benzoboric a.**, a compound used as an antizymotic. benzoic a. [L. acidum benzoicum], a white, crystalline acid, C6-H_bCOOH, from benzoin and other resins and from coal-tar. It is soothing, antiseptic, stimulant, and diuretic. It is used in cystitis, bronchitis, and as an internal and local antiseptic. Its salts are benzoates Dose, 5-15 gr. (0 333-1 gm). benzoyl-amino-acetic acid. See hippuric a. hippuric a. beta-amino-butyric a., an acid, CH3.CII-(NH₂) CH₂ COOH, which causes profound nar-cotism and symptoms resembling coma. **betanaphthol-sulphonic a.**, white pearly scales tinged with red, OH C₁₀H₆ SO₂ OH, used as a test for albumin in the urine; an agent which causes profound narcotism and symptoms resembling diabetic coma. beta-oxybutyric a., an acid, CH₃ CHOH.CH₂.COOH, occurring in diabetic urine and forming one of the acetone bodies. See acidosis. betaphenylpropionic a., a namic-acid derivative in colorless crystals, C₆H₅,-CH2 CH2 COOH. used in tuberculosis Dose, in alcoholic solution (t · 5), 10 min (0 66 c c). **bilianic a.**, an acid, $C_{21}H_{34}O_{8}$, formed by oxidizing dehydrocholalic acid. bilic a., a crystalline acid, C₁₆H₂₂O₆, formed by oxidizing cholic acid with biliverdinic a. 1. Biliverdin. 2. An acid, C₈H₉NO₄, formed by the oxidation of bihverdin. **bioluric a.,** a compound derivable from uric acid. bismuthic a., the monobasic acid, HBiO₃. blattic a., an active diuretic, derivable from cockroaches. It does not affect the heart nor the arterial tension. boheic a., an acid, C7H10O6, found in tea. boric a., boracic a., an acid, H₃BO₃, of which boron is the base. It is a white, crystalline powder, used as an antiseptic and detergent in ulcerations of the skin and mucous membrane: used for the most part in lotions and ointments. Dose, 5-15 gr (0 333-1 gm). **borobenzoic a.,** B(OH)₂ C₆H₄ COOH, occurs in brilliant white needles. **borocitric a.,** a white, crystalline combination of boric and citric acids, employed as a solvent for urates and phosphates. Dose, 5-15 gr. (0.3-1 gm). **borophenylic a.**, a white aromatic powder, C₆H₅OB(OH)₂, used as an antiseptic. **borosalicylic a.**, a white powder, BOH(OC₆H₄COOH)₂, prepared by evaporating a mixture of aqueous solution of boric acid and alcoholic solution of salicylic acid. boswellinic a., a constituent, $C_{32}H_{62}O_4$, of olibanum. botulinic a., an acid found in putrid sausages, believed to consist of allantotoxicon mixed with other substances. **brassic a., brassidic a.,** CH₃.-(CH₂)₇.CH: CH.(CH₂)₁₁.COOH, an isomer of erucic acid produced by treating erucic acid with nitric acid. brenzcatechin sulphuric a., pyrocatechin sulphuric acid, OH Coll OSO2OH, found in the urine after the administration of salicin, hydroquinone, etc. **bromauric a.**, a brownish, crystalline acid, HAuBr₁ + 5H₂O: used in the treatment of syphilis. Dose. gr. (0.0065 gm). brom-phenyl-mercapturic **a.**, a compound, brom-phenyl acetyl-cystein, C₆H₄Br.S.CH₂.CH(NH.CO.CH₃)COOH, found conjugated with glycuronic acid in the urine of dogs fed bromo-benzene. bursic a., bursinic a., a pale yellow astringent agent de-

rived from Capsel'la bursa-pasto'ris, used like ergotin. **butylethylbarbituric a.**, a white crystalline powder, CO(NHCO)₂C(C₂H_b)(C₄H_b): used as a hypnotic like veronal. Dose, 2–8 gr. (o 1–0.4 gm.). Called also butylethylmalonyl urca. butyric a., a rancid, sticky acid, CH₃CH₂CH₂COOH, a product of the putrefaction of protein It is found in butter, sweat, feces, and urine, and in traces in the spleen and in blood. cacodylic a., a crystalline deliquescent solid, dimethyl-arsenic acid, (CH₃)₂ AsO.OH, used the same as sodium cacodylate, (q. v.). **caffeic a.**, a crystalline solid, dihydroxy cinnamic acid, (OH)₂-C₆H₃(CH)₂COOH, obtained from coffee. **caffe**tannic a., a glucosid, C₁₅H₁₈O₈, found in coffee. It is resolvable into glucose and caffeic acid. caffuric a., a crystalline acid, $C_6H_9N_3O_4$, formed by the oxidation of caffein. cahincic a. See cahincin. calumbic a., a yellow, bitter substance, C₂₁H₂₄O₇, from calumba. camphogly-curonic a., C₁₅H₂₄O₈, a combination of glycuronic acid and camphor, found in the urine after the use of camphor. **campholic a.**, a compound, $C_{10}II_{18}O_2$, formed by distilling camphor with alcoholic potash. **camphoric a.**, a colorless, crystalline substance, $C_xH_{14}(COOH)_2$, from the oxidation of camphor. useful in the night-sweats of tuberculosis, in coryza, laryngitis, angina, and as an antiseptic in laryngeal ulcers. Dose, 10-30 gr. (0 666-2 gm). **camphoronic a.,** an anti-eptic compound, C₉H₁₄O₈, in white needles, formed by the oxidation of camphor. **canadinic a.**, an acid resin, C₁₉H_{.34}O₂, soluble in ammonium carbonate, found in Canada turpentine. canadinolic a., an acid resin, C19H30O2, found in Canada turpentine. **canadolic a.**, an acid resm, $C_{19}H_{28}$ - O_2 , found in Canada turpentine **cantharic a.**, a crystalline acid, C10H12O4, derivable from cantharidin. cantharidic a., a dibasic acid, C10-H₁₄O₅, formed by the combination of cantharidin with water. **capric a.**, a crystalline fatty acid, CH₃(CH₂)₅COOH, from butter. **caproic a.**, a fatty acid, CH₃(CH₃)₄COOH, forming caproates. caprylic a., a fatty acid, CH₃(CH₂)₆COOH, from butter it forms caprylates. capsic a., an irritating principle existing in pimenta. carbamic a., a monobasic acid, the mono-amid of carbonic acid, or aminoformic acid, NH2.CO.OH. carbamino-car-Its esters are urethanes. boxylic a., an acid, COOH.NH.CH₂.COOH, formed by CO₂ in the presence of amino-acids and alkalies. carbazotic a. Same as picric a. carbolic a., a colorless, crystalline compound, C6H5-OH, more correctly and known officially as phenol; obtained by the distillation of coal-tar. By the addition of 10 per cent. of water it is converted into a clear liquid with a peculiar odor and a burning It unites with bases, forming salts called carbolates Carbolic acid is a powerful antiseptic, disinfectant, and germicide, and is extremely poisonous. It is used in 3 per cent. solution as a dressing for wounds and ulcers, also in diphtheria, fetid bronchitis, etc., to check fermentation and decom-position. It is also employed as a disinfectant for surgical instruments, for the hands of the operator and the field of operation, and for rooms, drains, etc. Internally it is given in typhoid fever, whooping-cough, and acid dyspepsia. The pure acid is caustic and locally anesthetic. Dose, 1-2 min. (0.065-0.13 cc); carbolic acid water is a 3 per cent. solution; the ointment contains 10 per cent.; the glycerite contains 1 part of acid to 4 parts of glycerol. carbonaphthoic a. oxynaphthoic a. carbonic a. r. An acidulous unstable liquid, H₂CO₃, made by dissolving carbon dioxid in water; it forms carbonates. 2. An incorrect name for carbon dioxid, CO₂ (q. v). **carminic a.**, a brilliant purplish-red solid, dioxymethylalpha-naphtho-quinone, C₁₂H₁₁O₇, from carmine. **carnaubic a.**, an acid, CH₃(CH₂)₂₂COOH, from carnauha wax and also from wool-fat. **carnic a.**, a compound, probably a dipeptid, $C_{10}H_{15}N_3O_5$, formed by the decomposition of carniferrin. It is

found in the muscles in the form of phosphocarnic acid. **caronic a.**, a solid dibasic acid, (CH₃)₂C-(CH.COOH)₂, derived by oxidation from carone. carthamic a., a red stain, $C_{14}H_{16}O_{7}$, from saf-flower. caryophyllic a. Same as eugenol. caseanic a., an acid, $C_9H_{16}N_2O_7$, found in casein. caseinic a., an acid, $C_{12}H_{24}N_2O_6$, found in casein. catechuic a. Same as catechin. catechutan-nic a., a variety of tannic acid from catechu. cathartic a., cathartinic a., a lavative principle from senna. Dose, 4-6 gr. (0.20-0.4 gm). cephalinic a., an unsaturated acid of the linolinic acid series found in cephalin. cephalylphosphoric a., by the loss of neurin, cephalin becomes cephalyl-phosphoric acid. cerebric a., a compound derived from the brain tissue and containing cerebrose. cerebronic a., a fatty acid, $C_{2b}H_{50}O_3$, derived from sphingomyelin. cerotic cerotinic a., a fatty acid, CH₃(CH₂)₂₅ -COOH, from beeswax and other waxes. cetraric a. Same as celvarin. chaulmoogric a., an unsaturated fatty acid, C₆H₇(CH₂)₁₂COOH, from chaulmoogra and hydnocarpus oils. Its ethyl ester is used in the treatment of leprosy. Dose, I c.c. intramuscularly, slowly increased to 6 cc. chelidonic a., a crystalline acid, C₆H₂O₂-(COOH)₂, from Chelido'nium ma'jus. chelidoninic a., succinic acid. chenocholalic a., a compound, C27H44O4, from the bile of the goose. **chenotaurocholic a.**, a crystalline compound, C₂₉H₄₉NSO₆, occurring in the bile of geese. **chino**vic a., a white crystalline powder contained in cinchona bark. chitonic a., an acid, trihydroxymethyl-tetrahydrofurfurane-carboxylic acid, CH₂-OII.CHO(CHOH)2.CH COOH, formed by the oxidation of chitose. chloracetic a., an acid in which the three hydrogen atoms of acetic acid are wholly or partly replaced by chlorin: it occurs, therefore, in three forms, called respectively monochloracetic, dichloracetic, and trichloracetic acid, the more chlorin, the more caustic the acid. All are strongly caustic. **chlorauric a.**, yellow hygroscopic crystals of gold chlorid, AuCl₂.HCl₂-4H₂O, which contain 48 per cent. of metallic gold. **chlorhydric a.** See hydrochloric a. **chloropeptic a.** See peptohydrochloric a. **chloroplatinic a.**, H₂PtCl₆.6H₂O, made by dissolving metallic platinum in pitro hydrochloric acid. metallic platinum in nitro-hydrochloric acid. chloro-sulphonic a., an irritant war smoke, Cl SO₂.OH used in hand grenades. chlorous a., a feebly acid compound, HClO₂, forming salts called chlorites. **cholalic a.**, an acid, $C_{24}H_{40}O_{5}$, from bile-acids. **cholanic a.** 1. The product, $C_{20}H_{29}O_{6}$, of the oxidation of cholalic acid. 2. The product, C24H31O8, of the oxidation of choleic acid. choleic a., a compound, C24H40O4, occurring in bile. choleocamphoric a., a compound, C₁₀-H₁₆O₄, formed by the oxidation of cholalic acid. cholesterinic a., an acid, C8H10O5, obtained by ovidizing cholic acid. cholic a. See cholalic a. cholodinic a., an acid. C₂₄II₃₈O₄, derived from cholic acid. choloidanic a., an acid, C16H24O7, derived from cholic acid. **cholonic a.**, an acid, $C_{2\theta}H_{41}NO_{5}$, formed by dehydration of glycocholic acid. **chondroitic a.**, **chondroitin-sul-phuric a.**, a compound, $C_{1\theta}H_{27}NSO_{17}$, found in cartilage and in the amyloid liver, and due to the decomposition of chondromucoid chromic a. 1. A dibasic acid, H₂CrO₄: its salts are called chromates. 2. Chromium trioxid, CrO3: a crystalline anhydrid used as an escharotic for the removal of warty growths. chrysenic a., a crystalline compound, C₁₇II₁₂O₂. **chrysophanic a.**, a yellow crystalline acid, dioxy-methyl-anthraquinone, CH₃.C₁₄H₃O₂(OH)₂, from senna, rhubarb, certain lichens, etc., and from chrysarobin, whose therapeutic properties it shares. Dose, 1-10 gr. (0.065o.666 gm). cinchomeronic a., pyridin-dicarboxylic acid, C₈H₈N(COOH)₂, formed from cinchonin by exidation. cinchonic a., quinolincarboxylic acid, C₈H₆N(COOH), formed from cinchonin by oxidation. cinnamic a., a white, crystalline acid, phenyl acrylic acid, C₅H₅(CH)₂-

COOH, from cinnamon, storax, the balsams, and etc. It forms citrates: is antiscorbutic, refrigerant, and diuretic. Dose, 10-30 gr (0.666-2 gm.). cocatannic a., a compound found in the leaves of Erythrox'ylon co'ca. colchicinic a., an acid, $C_{16}I_{16}O_{3}$, formed from colchicin by heating it with hydrochloric acid. **comanic a.**, an acid, $C_{6}I_{4}O_{4}$, derived from chelidonic acid. **comenic a.**, a crystalline acid, oxypyrone-carboxylic acid, OH C₅H₂O₂.COOH, from opium. **copaibic a.**, an acid nearly identical with the resin of copaiba; it may be given in doses of 1-5 gr. (0.066-0.333 gm). **coumaric a.**, an acid, oxycinnamic acid, OH.C₆H₄.(CH)₂.COOH, from coumarin, readily convertible into salicylic acid. **coumarilic a.**, a crystalline acid, C9H6O3, from coumarin. crenic a., an acid, C24H12O16, from certain spring-waters and from the soil. **cresosulphuric a.**, a substance, CH₃.C₈H₄.SO₂ OH, found in small quantities in the urine. cresotic a., cresotinic a., an acid, CH₃ C₆H₃(OH).COOH, oxytoluic acid, occurring in three modified forms, ortho-, meta-, and para-: its sodium salt is antipyretic. cresand para: its sodium sait is antipyretic. **Cres- ylic a.** See *cresol.* **croconic a.**, a yellow crystalline acid, CO(CO.C.OH)_{2,3}H₂O. **crotonic a.**, an unsaturated fatty acid, CH_aCH: CH.COOH, found in croton oil. **crotonoleic a.**, an unsaturated fatty acid found in croton oil. It closely resembles ricinoleic acid, but is more irritant. crotonolic a. Same as crotonol. cryptophanic a., an amorphous acid, C₁₀H₁₈O₁₀N₂, said to be found in the urine. cubebic a., a strongly diuretic principle, $C_{13}H_{14}O_7$, from cubeb purgative. **cumic a.**, an acid, $C_6H_4(C_3H_7)COOII$, formed by the oxidation of cuminol. cuminuric a., cumic acid is paired with glycocoll and excreted in the urine as cuminuric acid, (CII₃)₂ CII.-C₆H₄ CO NH.CH₂ COOH. **cyanhydric a.** See hydroyunic a. cyanic a., an acid, N : C.OH, stable at low temperatures has vesicant properties cynurenic a., oxychinolin carbonic acid, C9-H₅N OH.COOH, found in dog's urine, being de-Han OHLOUDI, found in togs time, being actived from protein. **cyanuric a.**, a white crystalline compound, (HCNO)₃ 2H₂O, formed by heating urea. **damalic a.**, C₇H₂O, said to occur in urine. **damaluric a.**, C₇H₁₂O₂, found in human urine and in that of cows. **decoic a.** See an acid Called capric a. dehydrocholalic a., an acid, C24H34- O_5 , formed by the oxidation of cholalic acid. **de-hydrocholeic a.**, an acid, $C_{24}H_{24}O_4$, formed by the oxidation of choleic acid. **dekacrylic a.**, a yellow acid, C₁₀H₁₈O₂, from cork. deoxycholeic **a.**, one of the bile acids. **desoxalic a.**, a crystalline acid, COOH.CHOH.C(OH)(COOH)₂. **desoxycholalic a.**, an acid, $C_{24}H_{40}O_{4}$, formed by the reduction of cholalic acid. **dextrotartaric a.**, ordinary tartaric acid, which turns the plane of pylarization to the right. of polarization to the right diacetic a., aceto-acetic acid, CH₃.CO.CH₂ COOH, one of the acetone bodies occurring in diabetic urine. diacetyltannic a. See tannigen. dialuric a., tartronyl urea; a crystalline acid, CO(NH.CO)₂CH OH, obtainable from alloxan. diamino-acetic a., an acid, CH(NH₂)₂COOH, formed by heating casein in sealed tubes with concentrated hydrochloric acid. diaminocaproic a. Same as lysin. aminovaleric a. See ornithin. diaminotrihydroxydodecanoic a., an amino-acid obtained from casein, C₁₂H₂₈N₂O₅. diazobenzene-sulphonic acid, an aromatic acid, C₆-H₅, N₂, SO₂OH, used in Ehrlich's diazo-reaction. dibromgallic; a. Same as gallobromol. di-bromobarbituric a. See dibromin. di-chloracetic a., CHCl₂.COOH, an acid formed from acetic; acid by substitution. diethylbar-bituric a. Same as veronal. digallic a. Same

diglycoldisalicylic a., a comas *iannic a*. diglycoldisaticytic a., a compound, O(CH₂COOC₆H₄COOH)₂, used like aspirin. **dihydroxystearic a.**, an acid, CH₃(CH₂)₇COOH, obtained by oxidizing oleic acid and found in castor oil. diiodolaricinic a. see frigusin. diiodo-salicylic a., a yellowish-white crystalline powder, OH.C₆H₂I₂.COOH, used as an antipyretic and analgesic in doses of 8-20 gr. (c.5-1.2 gm.). dimethyl-arsenic a. Same as cacodylic a. dimethyl-colchicinic a., an acid, C₁₈H₁₉O₆N, formed from colchicin by heating it with hydrochloric acid. **diolic a.**, an acid, C₁₀-H₁₈O₃.H₂O, produced by boiling diosphenol with alcoholic potash **dioxy-diamino-suberic a.**, an acid, C₈H₁₆N₂O₆, obtained from casein. **dioxy**dioxy-diamino-suberic a., phenylacetic a. See hemogentisic a. dioxy-salicylic a. See gallic a. dithio-aminolactic a. Same as cystein. dithiochloralsalicylic a., a reddish-yellow powder, $S_2C_6H.Cl.OH.COOH$: antiseptic. dithiodiamino-ethylene-lactic a. See cystein. dithio-salicylic a., a light yellowish powder, OH.C.6H2S2.COOH, proposed as a substitute for salicylic acid. **doeglic a.**, an oleic acid, $C_{19}H_{36}O_2$, from doegling oil it is isomeric with jecoleic acid. **draconic a.** See anisic a. durylica., a crystalline compound, trimethylbenzoic acid, (CH₃)₃C₆H₂ COOH elaidica., an unsaturated fatty acid, CH₃(CH₂)₇ CH: CH-(CH₂)₇ COOH, isomeric with oleic acid, and formed by treating the latter with nitrous acid. elaieimic a., a fatty acid from mutton tallow, used in rheumatism and gout. **ellagic a.**, an acid, $C_{14}H_8O_9$, occurring in Oriental bezoars and prepared from gallic acid **embelic a.**, a vermifuge compound, C₉H₁₄O₂, from *Embelia ribes*. **emulcic a.**, an acid derived from the albumin of almonds. **enan**thylic a., a compound formed by the action of nitric acid on fatty substances. eosolic a., acety creosoto-trisulphonic acid, whose salts are calle eosolates. **episaccharic a.,** a saccharic ac obtained when nucleic acid is hydrolyzed with nitric acid. It is the oxidized form of an unknown hexose. ergotic a., a principle contained in ergot. ergotinic a., an acid from ergot, not poisonous when given by the mouth, but toxic if injected through the skin. **erucic a.**, an unsaturated fatty acid, CH₃(CH₂)₇CH: CH(CH₂)₁COOH, isomeric with brassic acid. It exists as a glycerid in a. See under lactic a ethylidene lactic a. See under lactic a ethylidene lactic a. See under lactic a ethylidene lactic a. Get under lactic a. ethyl-sulphonic a., an acid, CH₂ CO₂ OH, found in the urine after the administration of sulphonal. eugenic a. Same as eugenol. excretolic a., excretoleic a., a fatty acid separable from feces. fatty a., any monoacti separation from reces. **126.9 a.**, any monobasic aliphatic acid producible by the oxidation of a primary alcohol, and having the general formula $CnH_{2}nO_{2}$. **fellic a.**, an acid, $C_{23}H_{40}O_{4}$, said to be obtainable from human bile. **ferulic a.**, an acid, methyl-caffeic acid, $CH_{3}OC_{6}H_{3}$. (OH)(CH)₂. COOH, obtained from safetida by precipitation with lead acetate. **fibril a.**, an amorphous, colorless horny compound dissolving in acidified alcohol, contained in the neurofibrils. It stains an intense violet with toluidin blue. See Nissla. filicic a., a tasteless, white, amorphous powder from male fern. It is anthelmintic, but poisonous, and should be used with caution. Dose, 8-15 gr (0.5-1 gm). fluoric a. See hydrofluoric a. fluosilic a. See hydrofluoric a., a colorless pungent liquid, HCOOH, from nettles; derivable from oxalic acid and from glycerin. It is vesica and counterirritant. **frangulic a.**, a yellowis. brown, crystalline substance, C₁₄H₈O₄, from fra gulin; aperient. **fulminic a.**, an unstable a carbyl-oxime, C: N.OH, isomeric with cyanic ac. It has the odor of hydrocyanic acid and is equally as poisonous. Mercury fulminate is used as a detonating agent. fumaric a., an unsaturated dibasic acid, COOH.CH: CH.COOH, isomeric with maleic acid; derived from Island moss. It is isomeric with maleic acid. gadinic a., a fatty acid existing in cod-liver oil. gaidic a., a crys-

talline compound, $C_{16}H_{30}O_2$, from hypogeic acid. galactonic a. Same as lactonic a. galacturonic a., an acid analgous to and isomeric with glycuronic acid, being an oxidized form of galactose, COH.(CHOH)4COOH It is the basic constituent of pectin. Called also pectic a. gallic a. [L. acidum gallıcum], a white crystalline acid, trihydroxy-benzoic acid, (OH)₃C₆H₂.COOH.H₂O, from nutgalls and tannic acid. It is astringent and disinfectant. Dose, 10-30 gr. (0.66-2 gm). gallotannic a., ordinary tannin. gambogic a., a resin, C₂₀H₂₃O₄, obtainable in large quantities from gamboge. **gentiotannic a.**, a variety of tannic acid, $C_{14}H_{10}O_5$, from gentian root. Same as gentionin. gentisinic a., dihydroxy-benzoic acid, (OH)₂C₆H₃.COOH, obtained by melting gentianin with potassium hydroxid. glucic a., a colorless soluble acid formed from cane-sugar by the action of caustic potash. gluconic a., a dextrorotary monobasic acid, CH₂OH₁(CHOH)₄-COOH, obtained by the oxidation of dextrose, cane-sugar, dextrin, starch, or maltose. glucothionic a., a sulphuric acid ester of an unknown carbohydrate isolated from the mammary gland. glutamic a., glutaminic a., a crystalline di-basic amino acid, COOH.(CH₂)₂ CH(NH₂) COOH, obtained by the digestion or hydrolytic decomposition of proteins. **glutaric a.**, normal pyrotartaric acid, CH₂(CH₂.COOH)₂. **glyceric a.**, a taric acid, $CH_2(C\bar{H}_2,COOH)_2$. glyceric a., a dihydroxymonobasic acid formed by the oxidation of glycerol. It is dihydroxy-propionic acid, CH₂-OH,CHOH COOH. **glycero-arsenic a.**, an acid, AsO(OH)₂OC₃H₅(OH)₂. Its salts are glyceroarsenates. **glycero-phosphoric a.**, a pale yellow, oily liquid, H_2PO_4 $C_3H_5(OH)_2 + H_2O$, an acid, certain of whose salts are nerve tonics, and are serviceable in pnosphaturia **glycochoieic a.**, an acid, $C_{26}H_{43}NO_5$, found in bile. **glycocolic a.**, one of the bile acids that yields glycocoll and cholic acid on hydrolysis. **glycollic a.**, an acid, CH₂OH COOH, formed by treating oxalic acid with nascent hydrogen called also oryacetic a. gly**coluric a.**, a crystalline acid, a ureid of glycollic acid, NH₂ CO NH.CH₂ COOH, formed by heating urea with glycocoll called also hydant ic a. and uramino-acetic a. glycosuric a., an acid found in the urine in certain conditions. It causes the urine to turn black on exposure to the air. **glycuronic** a., a compound, CHO.(CH.OH)₄.COOH, found in the urine combined with camphor, chloral, chloroform, and many aromatic bodies, and after division of the renal nerves. glycyrrhizic a. Same as glycyrrhizin. glyoxylic a., a crystalline acid, dihydroxyacetic acid, (OH)₂ CH COOH, used in Hopkins-Cole reaction for tryptophan. granatotannic a., the tannic acid, $C_{20}H_{16}O_{13}$, of pomegranate bark. It is a greenish-yellow, amorphous powder. **guaiacol-carbonic a.**, a patented remedy, $C_0H_3/OH)(OCH_3)COOH + 2H_2O$, a white, crystalline powder. This acid and its salts are antiseptic and antirheumatic. guaiacolsulphonic a. Same as guaiacyl. guaiaconic **a.**, an acid, $C_{20}H_{24}O_5$, from guaiac resin. **guaiaretic a.**, an acid, $C_{20}H_{26}O_4$, from guaiacum. guanylic a., a mononucleotid made up of guanin, phosphoric acid, and a pentose. gummic a., arabin. **gurjunic a.**, a compound, $C_2H_{34}O_4$, from the resin of gurjun balsam. **gymnemic a.**, an acid, $C_{32}H_{55}O_{12}$, from Gymne'ma sylves'tre, a southern Asiatic shrub placed in the mouth, it temporarily abolishes the sense of taste. gynotardiac a., an oily acid, $C_{14}H_{24}O_{2}$, from the seeds of Gynocar'dia odorat'a. antisyphilitic and antirheumatic, sometimes used in liniments. Dose, 13-3 gr. (0.032-0.194 gm). haloid a., an acid wnich contains no oxygen in the molecule, but is composed of hydrogen and a halogen element. helvellic a., the active constituent of the fungus Morchella helvella. It is poisonous, producing symptoms similar to those induced by phallin. hemipinic a., an acid, C₁₀H₁₀O₆, obtained by oxidizing narcotin. hexa-methyleneamin-salicylsulphonic a., a white, crystalline compound,

(CH₂)₆N₄ SO₂OH.C₆H₃.(OH)COOH. used as a urinary antiseptic in doses of 10-20 gr. (0.0-1.3 gm.). hidrolic a., hidrotic a. See sudoric a. hippuric a., a crystallizable acid, benzoyl amino-acetic acid, C₆H₅ CO NH.CH₂.COOH, from the urine of domestic animals; more rarely found in human urine. See Inppurate. hircic a., an acid with a peculiar odor, found in goat's milk. homogentisic a., an acid, dihydroxy-phenyl-acetic acid, (OH)₂C₆H₃.CH₂.COOH, sometimes found in the urine, as in alkaptonuria, and thought to be a product of bacterial action on tyrosin. Called also honder of section action on cytosin. Called also, a crystalline acid, phenyl-aceto-carboxylic acid, COOH C₆H₄.CH₂.COOH, formed by tusing gamboge with caustic potash. homopiperidinic a., an amino-acid, NH₂(CH₂)₄.COOH, found in decomposition and the composition of the composing meat. Called also amino-valcrianic a. humic a., an acid, C₄₀H₁₅O₅, from peat, soil, certain waters, etc. humulotannic a., the tannic acid of hops, $C_{60}H_{18}O_{26}$. hydantoic a. See glycoluric a. hydnocarpic a., an unsaturated tatty acid, $C_5H_7(CH_2)_{10}COOH$, obtained from chaulmoogra and hydnocarpus oils. Its ethyl ester is used in the treatment of leprosy. Dose, r cc intramuscularly, slowly increased to 6 cc hydracrylic a. See under lactic a. hydrazoic a. See triazoic a. hydriodic a. [L. acidum hydrodicum], a gaseous, haloid acid, HI Its aqueous solution and its syrup are used as alteratives. Dose of syrup, ½-3 dr. (2-12 c c.). hydrobromic a., a gaseous, haloid acid, HBr: its 10 per cent. aqueous solution (acidum hydrobromicum dilutum) is used like the bromids. Dose, 3-720 mm. (o 10-7 4 c.c.). hydrocaffeic a., an acid, dihydroxy-phenyl-propionic acid, (OH)₂.-C₆H₃ CH₂ COOH, formed by treating caffeic acid with sodium amalgam. hydrochloric a., a colorless gas, HCl its solution in 68 parts of water (acidum hydrochloricum, U. S. P) is a digestant. The 10 per cent. solution (acidum hydrochloricum dilutum) is exhibited in doses of 3-10 min (0.2action is extribited in dose of 3=16 min (0.25 to 500 cc) **hydrochloroplatinic a.**, reddishbrown, delequescent crystals of H₂PtCl₆ 6H₂O. The salts are chloroplatinates **hydrocinnamic a.**, a balsamic cinnamic acid derivative, betaphenyl-propionic acid, C₆H₅CH₂CH₂COOH, in white needles used in tuberculosis Dose, r=2.5 gr (0.05 0.15 gm). hydrocumaric a., an acid, beta-phenol-propionic acid, OH.C₆H₄ (CH₂)₂-COOH, sometimes found in the urine and derived from the putrefaction of protein hydrocyanic a., a colorless liquid, HCN, extremely poisonous. Its 2 per cent solution (acidum hydrocyanicum dilutum) is a valuable antispasmodic. Dose, 1-5 min. (0.066-0.333 cc) **hydrofluoric a.,** a gascous, haloid acid, HF, extremely poisonous. The gas, much diluted with air, has been used as an in halant in phthisis **hydro-fluo-silicic a., an** acid, H₂SiF₆, formed by passing silicon tetrafluorid into water. hydro-para-cumaric a., an isomer of hydro-cumaric acid, sometimes found in the urine of dogs. hydroquinone-acetic a. See homogentisic a. hydrosulphuric a., an offensive gas, H₂S, much used as a chemic reagent. For tuberculosis, the gas has been prescribed as a rectal injection and for inhalation hydrosulphurous a. See thio-sulphuric a. butyric a. See beta-orybutyric a. See thio-sulphuric a. hydroxyhydraxypentacosanic a. See cerebronic a. hydrakystearic a., a monohydroxy acid, CH₃(CH₂)₇-CHOH(CH₂)₈COOH, found in castor oil. hydrozosophalic a., a toxic agent obtainable from artificial salicylic acid. hydrurilic a., an acid, C₈H₆N₄O_{6.2}H₂O, obtained as the ammonium salt on boiling allovantin with dilute sulphunc acid, hyoglycocholic a., an acid, C₂₇H₄₃NC₅, occurring in the bile of pigs. hyotaurocholic a., an acid, C₂₆H₄₆NSO₆, occurring in pigs' bile in the form of its sodium salt. hypobromous a., the acid, HBrO, forming hypobromites, which are used in testing for urea. hypochlorous a., the compound HClO, a disinfectant and bleaching agent.

Its salts (hypochlorites) are somewhat in use as medicinal agents. hypogeic a., an unsaturated, fatty acid. CH₃(CH₂)₇.CH: CH(CH₂)₅COOH, acid, found in the oil of the peanut, Ar'achis hypoga'a. hyponitrous a., a monobasic acid. HNO. hypophosphorous a., the acid, H₃PO₂, forming hypophosphites. hypophosphorous a., dilute, a 10 per cent. solution of the acid in water: used like the hypophosphites. Dosc, 10-30 min. (0 666-2 cc.). hyposulphurous a., thiosulphuric acid. hypoxanthylic a., any nucleic acid containing hypoxanthin. ich-thulinic a., an acid derived from ichthulin by treating the latter with alkalis. ichthyol-sulphonic a., an ichthyol derivative, which, with its salts (ichthyolsulphonates), is serviceable in skin diseases and in gynecology. Its ammonium salt is commonly prescribed as *ichthyol* (q. v.). Called also *sulphuchtholuc acid*. **igasuric a.**, an acid found in St. Ignatius bean. **indolacetic a.**, a compound occurring in the urine in minute quancities in pathologic conditions of the digestive tract. a decomposition product of tryptophan. indolpropionic a., a decomposition product of tryptophan. indoxylic a., an acid, C₉H₇NO₈, formed by fusing its ethyl ester with caustic soda. doxylsulphonic a., an acid found in the urine as a potassium salt and known as indican (q. v.). inosinic a., a mononucleotid made up of hypoxanthin, ribose, and phosphoric acid. It is one of the decomposition products of nucleic acid and is also found in muscle tissue. iodic a., a monobasic acid, HIO3, its dilute solutions are alterative used hypodermically. iodo-oxyquinolinsul-phonic a. Same as loretin. iodo-phenyl-arsenic a., a proposed substitute for atoxyl. It is similar to atoxyl, but the amino-group has been replaced with iodin, C₆H₄I AsO(OH)₂. iodo**salicylic a.**, an antipyretic, analgesic, and antiseptic compound, OH C_6H_3 I.COOH. Dose, 5-10 ger (o 3--o.0 gm). iodosobenzoic a., an anti-septic agent, C₆H₄(IO)COOH, used like iodo-form iridic a., an acid, C₁₆H₁₂O₅, from orris root isanic a., a crystalline acid, C14H20O2, from isano oil a violent purgative. isethionic a., a thick, liquid, hydroxy-ethyl-sulphonic acid, CH2-(OII).CH₂ SO₂.OII, isomeric with ethyl-sulphuric acid; formed by the action of nitrous acid on taurine. isobilianic a., an acid, C24H34O8, derived along with bilianic acid by the oxidation of dehydrocholalic acid. isobutyl-amino-acetic a. Same as leucin. isobutyric a., an acid, (CH₃)₂CH.COOH, a product of putrefaction of proteid found in the urine. isodialuric a., an acid, CO (NH CO)₂.CHOH, isomeric with dialuric acid and formed from oxyuracil by the action of isopentoic a. See isovalerianic bromin-water. a. isopropyl-amino-acetic a. See valiu. isosaccharic a., an acid, COOH. CH(O).-(CH(OH)) 2 CH COOH, resulting from the oxidation of glucosamin with nitric acid. isosulphocy-anic a., isothiocyanic a., an acid, HNCS, whose salts are isosulphocyanates or isothiocy-nates. isouric a., an acid, NC NH CH (CO.-NH)2CO, formed by the combination of cyanamid and alloxantin and which yields uric acid when boiled with hydrochloric acid. isovalerianic a., an acid. (CH₃)₂CHCH₂COOH, of unpleasant odor, found in cheese, in the sweat of the feet, in the unne f small-pox, in typhus, and in acute yellow atrophs of the liver. Called also isopentoic a. jervic a., an acid, C₁₄H₁₀O_{12.2}H₂O, from Vera'trum al hum. juglandic a., an acid from the bark of Juglans cine'rea, considered to be the same as nucin. kephalophosphoric a. See cephalophosphoric a. **ketostearic a.**, an oxidized form of stearic acid, CH₃(CH₂)₁₁CO(CH₂)₄COOH, found in mushrooms. kinic a. See quinic a. kinotannic a., the tannic acid of kino. krameric a. See ratanhiatannic a. kynurenic a. See cynurenic a. laccie a., a brownish red, crystalline compound, obtained from lac dye. lactic 8., a monobasic acid, hydroxy propionic acid, C2-

H₆O₃, alpha-hydroxy-prepionic acid is known in three stereo-isometre form, (a) Dextro-lactic acid (para-lactic acid), CH₂,CH₂HCHCOOH, called also sarco-lactic acid because a occurs in flesh, can be obtained conveniently from beef extract (b) Levolactic acid, CH2.CHOH COOH, is produced by the fermentation of dextrose by micrococcus acidi levolactici. (i) Inactive, ethylidene, racemic or fermentation lactic acid, CH₂.CHOH.COOH, is the ordinary kind found in sour milk, in the stomach, and in certain fermented foods, such as saur kraut, silage, etc. It is a syrupy fluid and is used as a solvent of the membrane in diphtheria and as a local application in tuberculous ulcers. hydroxy-propionic acid, CHOH.CH₂.COOH called also ethylene-lactic acid, is not found in the body. lactonic a., a crystallizable monobasic acid, CH2-OH.(CHOH)4.COOH, produced by the oxidation of milk-sugar, gum arabic, or galactose lactucic **a.**, a bitter principle from lactucarium. **laricic a.**, **larixinic a.**, a crystallizable acid, $C_{10}H_{10}O_{5}$, from the bark of the European larch called also larixin laricinolic a., an acid resin, $C_{20}H_{30}O_{2}$, found in Venice turpentine. larinolic a., an amorphous acid resin, $C_{18}H_{20}O_{2}$, forming one of the principal constituents of Venice turpentine. lauric a., laurostearic a., a compound, $C_{12}H_{24}$ -O2, from oil of laurel and other oils. leuconic a., a crystalline acid, $C_5O_5 + 4H_2O$, obtained by oxidizing croconic acid. **levotartaric a.**, a form of tartaric acid which turns the plane of polatization to the left. **levulinic a.**, an acid, CH_2COCH_2 - CH_2COOH , or β -acetyl-proponic acid, from the nucleic acid of the thymus gland. It occurs in the form of hygroscopic scales. **lignoceric a.**, an acid, C24H48O2, obtained from kerasin by hydrolysis lig**nulmic a.**, a dark brown, crystalline acid, $C_{54}H_{28}$ - O_{6} , closely allied to ulmic acid. **linoleic a.**, an unos, tosely and $C_{18}H_{22}O_2$. Innolenic a., an unsaturated, fatty acid, $C_{18}H_{20}O_2$, from linseed oil. lithobilic a., an acid derivable from various bile-products. lithofellic a., an acid, $C_{20}H_{30}O_4$, occurring in the intestinal concretions of ruminant animals. lysalbic a., a compound formed by treating egg-albumen with caustic alkali. lysuric a., an acid, C6H12(COC6H5)2N2O2, obtained from maizenic a., a diuretic compound from lysin. the silk of Indian corn (Zea mays). Dose, & gr. (0.008 gm.). maleic a, an unsaturated dibasic acid, (CH COOH)₂. malic a., an acid, hydroxysuccinic acid, COOH.CH₂.CH(OH).COOH, found m unripe and sour apples and in many other fruits. It has been prescribed for scurvy, and its iron salt, ferric malate, has been employed in medicine. malonic a., a crystalline dibasic acid, COOH - CH₂COOH, formed by oxidizing malic acid with chromium trioxid. **mandelic a.**, an acid, phenylglycollic acid, C₆H₅.CHOH.COOH, from oil of bitter almonds—It is one of the constituents of homatropin manganic a., an acid, H₂MnO₄, formed by fusing manganese dioxid with potassium mannitic a., a compound, or sodium hydroxid or Soddin Myddyd Mae Marined ar, a compound, by the action of platinum black mannonic a., a compound, CH₂OH(CHOII)₄ COOH, formed by oxidizing mannose. **margaric a.** 1. An artificial fatty acid, CH₃(CH₂)₁₅ COOH. 2. The incorrect name of a mixture of stearic and palmitic acids. margosic a., an acid derived from the oil of the seeds of the margosa tree. With its salts (margosates) it is used in syphilis. meconic a., a white, crystalline acid, oxypyrome dicarboxylic acid, OH.C₅HO₂(COOH)₂, from opium: feebly narcotic. medullic a., a colorless compound, C₂₀H₄₁-COOH, found in beef-suet and beef-marrow. melanogallic a., an amorphous, tasteless compound, C₆H₄O₂, formed by heating gallic or tannic acid. Called also metagallic a. and gallhumic a. melassic a., a dark colored insoluble acid formed from cane-sugar by the action of caustic potash. meilotic a., an arid, phenol-propionic acid, OH.C. Had CH2/2. COOH, from coumarin. melissic a., a crystalline fatty and, CH. (CH2/28COOH,

33

from beeswax. **mellitic a.**, benzene-hexacar-boxylic acid, $C_6(COOH)_6$. **mercapturic a.**, one of a series of acids formed in the body on the introduction of a hologen derivative of benzol. They are formed by combination with cystein. See bromphenyl mercapturic a. mesitylenic a., $C_0H_3(CH_3)_2COOH$, an oxidized form of mesitylene. mesityluric a., the form in which mesitylene is excreted in the urine combined with glycocoll, C₆H₃(CH₃)₂CO NH CH₂ COOH. **meso-tartaric a.**, an optically inactive form of tartaric acid by called also antitartaric a. mesoxalic a., dihydroxy-malonic acid, (OH)₂C(COOll)₂, an oxidation product of glycerol. meta-gallic a. See pyrogallol. metaphosphoric a., a glassy solid substance. stance, HPO3, soluble in water. used as a test for albumin in the urine. metarsenic a., the acid, HAsO3, which forms metarsenates. meta-sac**charic a.**, a dibasic tetrahydroxy acid formed by the oxidation of manntol It is COOH(CHOH)₄ COOH, and in the tree state passes into a double lactone. metastannic a., there are two metastannic acids from the oxidation of tin; the alphaacid is H₄SnO₄[Sn(OH)₄], the beta-acid is H₂SnO₃-[SnO(OH)₂]. **metatartaric a.**, one of the modifications of tartaric acid produced by heat. **meta**vanadic a. See vanadic a. methionic a., an acid, CH₂(SO₂OH)₂· used in the preparation of ether. methyl-amino-acetic a. Same as sarcosin. methyl-arsinic a., a white, crystalline compound, CH₃.AsO(OH)₂, an organic derivative of arsenic. methylene-hippuric a., a compound readily giving off tormaldehyd. used as an antiseptic. methyl-guanidinacetic a. Same as creatin. methyl-hydan-toic a., an acid, glycoluric acid, NH₂ CO.N-(CH₁).CH₂.COOH, obtained by boiling creatin with barium hydroxid. methyl-phenylquinolincarboxylic a. See paratophan. methylprotocatechuic a., vanillic acid molybdenic a., molybdic a., the acid, H₂MoO₄: used homeopathically. monamino a., monoamino a., an organic acid which contains an NH₂ group. monatomic a., an acid containing one atom of replaceable hydrogen. mono-aminodicarboxylic a., an acid containing one amino group and two carboxyl groups in the molecule. Glutamic acid is an exmono-amino-mono-carboxylic a., an acid having one amino-group and one carboxylgroup in the molecule. Alanin is an example. monobasic a. See monatomic a. monochlor-acetic a., CH₂Cl.COOII. See chloracetic a. moritannic a., the tannic acid of fustic, Mo'rus tincto'ria, C₁₃H₁₀O₆. morphoxylacetic a., a narcotic agent, C₁₇H₁₆NO₃.C.H₂ COOH: narmorphoxylacetic cotic, only one-fiftieth as toxic as morphin. mor**rhuic a.,** an hydroxy acid, $C_9H_{13}O_3N$, found in small quantities in cod-liver oil **mucic a.**, a tetrahydroxy dibasic acid, COOH(CHOH)₄COOH, produced by oxidizing galactose or any carbohydrate containing galactose, such as milk-sugar, agar, galactitol, or the galactans. muconic a., a dibasic acid, COOH.(CH).COOH, found in the urine of dogs that have been given benzene. mu-riatic a., old name for hydrochloric acid. myristic a., an acid, CH₂ (CH₂)₁₂.COOH, found in spermaceti, nutmeg butter, and other fats under the form of myristin. myronic a., a glucosid, C₁₀H₁₉NS₂O₁₀, found in black mustard: this acid, by the myrosin present, is changed into allyl mustard oil, glucose, and potassium sulphate on the addition of water. naphthionic a., a white powder, naphthyl-amino-sulphonic acid, NH₂.C₁₀-16.8020H, used in iodism and nitrite poisoning and in bladder diseases. Dose, 8 gr. (0.5 gm). naphtholcarboxylic a., a white, crystalline substance, C₁₀H₆(OH);CO₂H: antiseptic and antiseptic antiseptic and antiseptic antiseptic antiseptic and antiseptic antiseptic antiseptic antiseptic antiseptic and antiseptic antisepti parasitic. **naphtholdisulphonic a.**, an acid, C₁₀H₅(OH)(SO₂OH)₂, derived from naphthol. **naphtholsulphonic a.**, an acid, C₁₀H₆(OH)SO₂OH, derived from naphthol. **naphthylamin**

sulphonic a. See naphthionic a. nastinic a., a fatty acid of high molecular weight found in nastin. neurostearic a., a fatty acid, C18H86O2, formed by the decomposition of phrenosin, found in cerebral tissue. **nicotinic a.**, an acid, pyridin-carboxylic acid, C₃H₄N(COOH), produced by oxidizing nicotin. **Nissl a.**, a compound occurring along with fibril acid in the neurofibrils. It is soluble in acidified water and in ammonia. See fibril a. nitric a., a colorless liquid, HNO3, extremely caustic and escharotic, decomposing most organic substances, and combining with bases to form nitrates. Official nitric acid contains 68 per cent. of pure acid; dilute nitric acid, 10 per cent.; and crude nitric acid, 61 per cent. Nitric acid is used as a caustic for ulcers, chancres, nasal growths, etc., and in solution of from 1 to 6 per cent. as an astringent and stimulant. It is used internally as a stomachic and hepatic stimulant. Dose, 3-15 min. (0.2-1 c c.). Fuming nitric acid is a brownish liquid giving off a suffocating vapor, and composed of the lower oxids of nitrogen. **nitro-ferro-cyanic** a., a complex cyano-acid, H₂[Fe(NO)Cy₆], formed by the action of nitric acid on potassium ferro-cyanid. It is used as a salt in several tests. nitrocyanid. It is used as a sait in several tests. Intro-hydrochloric a., a yellowish mixture of con-centrated nitric acid, I part, and hydrochloric acid, 4 parts: used in affections of the liver. Dose, I-10 min. (0.066-0.066 c c.), used diluted. Called also nitromuriatic a. nitrohydrochloric a., dilute, a dilution of the preceding in 78 parts of water to the 100. Dose, 5-20 min (0.333-1.333 c.c.). nitromuriatic a. See nitrohydrochloric a. nitroprussic a. See nitro-ferro-cyanic a. nitrous an unstable compound having the formula IINO₂. **nucleic a.**, an acid obtained from nuclein and nucleoproteins. It is a tetranucleotid, i e, it is made up of four mononucleotids (q. v.). It is also a union of phosphoric acid with four glucosids or pentosids in which are the four bases: adenin, guanin, cytosin, and uracil. **nucleinic a.** See nucleic a. **nucleothyminic a.**, a patented yellowish-white powder prepared from the pancreas of the calf or from nucleic acid: used therapeutically. conanthylic a. See enanthylic a. olole a., a colorless, liquid, unsaturated, fatty acid, CH₃-(CH₂)₇CH: CH(CH₂)₇COOH, which is a constituent of most of the common fats and oils. It is insoluble in water, but soluble in alcohol and ether. It forms oleates. **oleophosphoric a.**, a viscid yellow fluid, C₇₈II₁₄₃PO₁₂, occurring in the brain and believed to be a product of the decomposition of lecithin. **opianic a.**, a compound, $C_{10}H_{10}O_{5}$, obtained from narcotin. **organic a.**, any acid the radical of which is a carbon derivative; a compound in which a hydrocarbon radical is united to carboxyl, COOH. **ornithuric a.**, an acid, C₆H₆.CO.NH(CH₂), CH.NII.CO.C₆H₆, or dibenzoylornithin, occurring in the urine of birds fed on benzoic acid. **orotic a.**, an acid, $C_6H_{11}N_2O_{4}$.-2 H_2O , of unknown constitution, found in milk. orsellinic a., a crystalline acid, C₈H₈O₄, from certain lichens. ortho-aminosalicylic a., a grayish powder, C₆H₃(NH₂)(OH)COOH, used in chronic rheumatism. Dose, 3-7 gr. (0.2-0.5 gm.). ortho-arsenic a. See arsenic a. ortho-boric a. See boric a. ortho-oxybenzoic a., salicylic acid. orthophosphoric a., the ordinary phosphoric acid, H₂PO₄. orylic a., an acid, C₁₈H₂₈-O₅N₄, obtained by boiling carniferrin with barytawater. Oshaic a., a principle resembling angelic acid, and found in osha. Osmic a. 1. A dibasic acid, H₂OsO₄, forming salts called osmates. 2. (Incorrectly so called.) The perosmic anhydrid, a crystalline, odorous compound, OsO4, used as a caustic, a stain for fats, and an analgesic remedy. Dose, $\frac{1}{10}$ gr. (0.00108 gm.). For the use of osmic acid as a stain, see stains, table of. oxalic a., a poisonous, crystalline, dibasic acid, (COOH)₂ + 2H2O: used as a disinfectant for the hands of surgeons, in pharmacy, the arts, and as a chemic reagent. Lime is the best antidote for oxalic acid poisoning. Dose for amenorrhea, 1-1 gr. (0.0333-

3

0.048 gm.). **oxaluric a.**, a crystallizable acid. NH₂.CO.NH.CO.COOH, found in healthy urine, oxamic a., it is the mono-amid of oxalic acid; a monobasic crystalline acid, NH2.CO.COOH. oxya., an acid that contains oxygen. oxyacetic a., glycollic acid. **oxyamydalic a., oxyformo-benzoylic a.,** a crystalline compound, parahy-droxyphenylglycolic acid, OH.C₆H₄.CHOH.COOH, sometimes occurring in the urine in acute yellow atrophy of the liver. oxybenzoic a. See salicholic a. oxybutyric a., a poisonous acid, CH₃-CHOHCH₂COOH, sometimes occurring in the urine in diabetes and sometimes in the blood. It frequently occurs in several isomeric forms. oxycarnic a., an acid, C30H41N9O15, derived from carnic acid. oxygen a., an acid whien contains oxygen. oxylic a., an acid, C₁₈H₂₈N₄O₈, from carniferrin. oxymandelic a. Same as oxyamygdalic a. oxynaphthoic a., an acid, alphanaphthol-carboxylic acid, OH.C₁₀H₆.COOH; a naphthylene homologue of salicylic acid. oxynaphthyl-ortho-oxytoluylic a. Same as epicarin. oxyphenylacetic a. See para-oxyphenylacetic a. oxyphenylaminopropionic a. Same as tyrosin. oxypropionic a. See lactic a. oxyproteic a., a nitrogenous substance of unknown constitution, perhaps a peptid, sometimes found in the urine. oxyproteinic a., a compound, occurring in normal urine. oxyprotonic a., an acid formed by oxidizing proteins. Called also oxyprotosulphonic a. oxytoluic a. See cresotinic a. palmitic a., a fatty acid, CH₃(CH₂)₁₄COOH, found in most of the common fats and oils. palmitolic a., an acid, isomeric with linoleic acid (q. v.). parabanic a., a solid acid, CO(NII.CO)₂, derivable from uric acid by oxidation. **paracresotic a.**, an anti-pyretic substance, oxytoluic acid, CH₃.C₆H₃(OH).-COOH. Its sodium salt is an antipyretic: used in rheumatism of children. Dose, 2-120 gr. (0.133-8 gm.). **paraffinic a.**, an acid, C₂₄H₄₈O₂, formed when paraffin is oxidized with strong nitric acid. parahydroxybenzoic a., an acid isomeric with salicylic acid, produced by boiling phenol with carbon tetrachlorid. parahydroxyphenylglycolic a., an acid, OH.C₆H₄.CHOH.COOH, derived from tyrosin by deaminization and oxidation. It is found in the urine at times. **para-iodo-phenyl-arsenic a.**, a colorless crystalline compound, C_0H_4I .AsO(OH)₂. **paralactic a.** See under *lactic a.* **paranucleic a.**, any one of a set of nucleic acids from which no nuclein bases are derivable. para-oxyhydratropic a., an acid, OH.C₆H₄.CH(CH₃).COOH, a constituent of phloretin. para-oxyphenyl-acetic a., an acid, OH C₆H₄.CH₂.COOH, derived from tyrosin by putrefactive changes in the intestines and somepropionic a., an acid, OH.C₆H₄(CH₂)₂COOII, sometimes found in the urine. para-phenol-sul-phonic a., an acid, OH.C₆H₄SO₂OII, produced by heating phenol with sulphuric acid. It is called also sulphocarbolic a. pararosolic a. trihydroxyphenylmethane, CH(C₆H₄OH)₈: used as an indicator. parasaccharic a., a dibasic acid, COOH(CHOH)₄COOH, obtained when glycyrhizic acid is hydrolyzed. It is isomeric with saccharic acid. **paratartaric a**. Same as racemic a. **parillic a**. Same as parillin. **pectic a**. See galacturonic a. **pelargonic a**., a normal fatty acid, CH₃/COOH, found in oil of the garden geranium (pelargonium) and other plants. peptohydrochloric a., the acid supposed to be formed by the combination of pepsin and dilute hydrochloric acid: called also chloropeptic a. and pepsin hydrochloric a. perboric a., an oxidized form of boric acid, HBO_{1.4}H₁O. perchloric a., a volatile colorless fuming liquid, HClO₄, highly caustic and explosing periodic a., a series of caustic and explosive. periodic a., a series of acids are formed by the union of different amounts of water with periodic anhydrid (I₄O₇) varying from HIO₄ to H₇IO₇. **permanganic a.**, a monobasic acid, HMnO₄. Its salts are permanganates.

perosmic a., a yellow, crystalline, acid, anhydrid, OsO₄, with suffocating odor. It is used as an antineuralgic in sciatica, a discutient in tumors, and an antiepileptic. Dose, g_4 gr (0.001 gm.). **per- oxyprotonic s.**, a compound produced by oxidizing oxyprotonic acid. **persulphuric a.**, an oxidized form, H₂S₂O₈, of sulphuric acid. **phenaceturic a.**, a crystalline compound, CH₂.NH₋(CH₂.C₆H₅.CO)COOH, found in the urine of herbivorous animals and sometimes in that of man. phenic a., carbolic acid. phenolsulphonic a., aseptol. phenylacetic a., a crystalline acid, C_0H_0 .CH₂ COOH, formed in the putrefaction of proteins. It is of limited therapeutic use. Dose, 1-3 gr. (0.66-0.2 gm.) phenylamino-Dose, 1-3 gr. (0.66-0.2 gm.) phenylamino-propionic a., one of the amino-acids that are constituents of the protein molecule and that appear when protein is digested or hydrolyzed. It is phenylalanin, C₀H₅CH₂CH(NH₂).COOH. phenylcinchoninic a. See cinchophen. phenylethylbarbituric a., luminal phenylglycolic a. See mandelic a. phenylglycuronic a., a compound of phenol and glycuronic acid, C₆H₆.O.CO.(CHOH) a.CHO, found in the urine after the ingestion of phenol. phenylhydrazinlevulinic a., antithermin phenylic a. See carbolic a. phenylmercapturic a. See bromphenylmercapturic a. phenyloboric a., a white powder, C_bH_b.B(OH)₂, used as a germicide. phenylpropionic a. See hydrogenesis a phenylpropionic a. See hydrogenesis a phenylpropionic a. cinnamic a. phenylsalicylic a., a white powder, C₆H₃(OH)(C₆H₃)COOH used as an antiseptic dusting-powder. phenylsulphonic

a. Same as asceptol. phloretic a. See paraoxyhydratropic a. phocenic a., valerianic acid. phosphocarnic a., an acid consisting of carnic acid united with phosphorus, found in muscle, phoglyceric a. See glycerophosphoric a. phosphomolybdic a., an acid, H₃PO_{4,12}MoO₄ + H₂O, important as being a precipitant for all the alkaloids **phosphoric a.**, a crystalline acid, II₃PO₄, formed by the oxidation of phosphorus. The ordinary phosphoric acid of the pharmacopeia is an 85 per cent. aqueous solutions of the pharmacopeia is an 185 per cent. tion. Dilute phosphoric acid is a 10 per cent. solution. Ditute phosphoric acid is a 10 per cent, souttion. The latter is used in dyspepsia, rickets, caries, and phosphaturia. Dose, 30 min. (2 c c.). See also metaphosphoric a., pyrophosphoric a. phosphoric a., glacial. See metaphosphoric a. phosphorous a., the acid, H₃PO₃, whose salts are called phosphites. phosphotungstic a., an acid, H3PO4.12WO3, used in preparing histologic stains and in testing for ptomains. phrenosinic **a.**, an acid, $C_{28}H_{50}O_3$, obtained from phrenosin by hydrolysis. **phthalic a.**, a crystalline dibasic acid, benzene dicarboxylic acid, $C_6H_4(COOH)_2$, a., a compound, homologous with bilirubin, formed by treating chlorophyl with hydrochloric acid. **physetoleic a.**, an unsaturated acid. C₁₆-H₃₀O₂, from seal oil. **picramic a.**, an acid found in the blood after poisoning with picric acid, forming red granules, free or in the leukocytes It is monamino dinitro phenol, NH₂ C₆H₂(NO₂)₂ OH. **picric a.**, a yellow, crystalline acid, C₆H₂(NO₂)₃ OH. or trinitrophenol, resulting from the action of nitric acid on indigo, salicin, phenol, etc. It is used as a dye, a test, and a fixing agent, as an explosive, and in medicine as an antiperiodic and anthelmintic, and is useful in erysipelas. Dose, 1-5 gr. (0.065-0.333 gm.). Called also carbazotic a. picric-nitric a., an agent used as a fixing agent in histologic work. picropodophyllic a., a resinous acid derivable from podophyllotoxin. picrosulphuric a., a substance used as a fixing agent in histologic work. **pimaric a.,** an acid resin, $C_{20}H_{30}O_2$, soluble in sodium hydroxid solution and forming 8 to 10 per cent. of European turpentine. **pimarinic a.**, an acid resin, C₁₄-H₂₂O₂, soluble in ammonium carbonate solution and forming 6 to 8 per cent. of European turpentine. pimarobic a., an acid resin, C18H26O2, soluble in

ACID

sodium hydroxid solution and forming 48 to 50 per cent. of European turpentine. **piperic a.**, **piperidic a.**, a crystalline unsaturated acid, dioxymethylenylacrylic acid, CH₂O₂ C₆H₃.(CH)₄. COOH, formed when piperin is boiled with alcoholic potassium hydroxid. **pipitzahoic a.,** a golden yellow compound, C₁₅H₁₉(OH)O₂, found in the root of Trixis pipitzahuac. used as a purgative in 3-5 gr. (0.2-0.3 gm) doses. **pivalic a.** See valerianic a. Called also aurum vegetabile. **plas**minic a., an acid obtained by splitting up nucleic acids. It may be decomposed into phosphoric acid and nucleic bases. platinochloric a. See hydrochloroplatinu a. podophyllic a., a principle contained in podophyllum medicinally inert.

polygalic a. Same as polygalin propiolic a.,
an unsaturated fatty acid, CH: C COOH, called also propargylic a. **propionic a.**, an acid, CH₃.CH₂ COOH. found in chyme and in sweat, and one of the products of alcoholic and propionic fermentation. **propionylsalicylic a.**, the salicylic ester of propionic acid, CH₃ CH₂.CO.O. C₆H₄.COOH. It is antirheumatic and antipodagric. protic a., an acid derived from the aibuminous constituents of fish muscle. protocatechuic a., dioxybenzoic acid, (OII)₂C₆H₃.COOH, sometimes found in the urme. prussic a. Same as hydrocyanic a. punicotannic a., the tannic acid of pomegranate root. **purpuric a.**, an imino condensation product of alloxan, CO(NH-CO)₂C.NH.C(NH CO)₂CO, found in the murexid test for uric acid See *ammonium purpurale*. **pyridin-tricarboxylic a.**, an antiseptic, antipyretic, and antispasmodic agent, C₅H₂N(COOH)₃, useful in asthma and in malarial and other fevers. Dose, 2–10 gt. (0 133–0.660 gm). **pyroarsenic a.**, the acid, $H_4\Lambda_{52}O_{7}$, forming pyroarsenates **pyroboric a.**, a dibasic acid, $H_2B_4O_{7}$, obtained by heating boric acid pyrocatechuic a., an acid formerly thought to be concerned in the reaction of alkapton urine. pyrocholesteric a., a compound, C_HII₁₆O₇, formed by the action of potassium dichromate and sulphuric acid on cholalic acid. **pyrocinchonic a.**, an acid, dimethyl maleic acid, (CH₃ C.COOH)₂, known as an anhydrid which is formed when cinchonic acid is heated and by its salts. pyrocitric a. Same as citaconc a. pyrogallic a. See pyrogallol. pyrolidin carboxylic a. See proline. pyroligneous a., a dark brown liquid obtained by the distillation of wood its acid constituent is mainly acetic acid. **pyrophosphoric a.**, a crystalline acid, H₄P₂O₇; its salts are pyrophosphates. **pyroracemic a.**, a colorless liquid, ketonic acid, CH₅CO.CO₂H, with an odor like acetic acid, formed by the dry distillation of racemic or tartaric acid; called also pyruvic a. pyrosulphuric a., an acid, H₂SO₄SO₃, a rotartaric a., an acid, methyl-succinic acid, COOH.CH₂ CII(CH₃)COOH, produced in the dry distillation of tartaric acid. **pyruvic a.** See pyroracemic a. **quercitannic a.**, the tannic acid of oak bark, C₁₇H₁₆O₉, differing in its properties slightly from ordinary tannic acid. **quillac a.**, an acid from commercial saponin It is said to be poisonous when injected hypodermically. **quinal-dinic a.**, a crystalline acid, C₉H₆N(CO₂H). quinic a., an acid. hexa-hydro tetra oxybenzoic acid. C₆II₇(OH)₄COOH, tound in cinchona bark. quininic a., a crystalline acid, C9H5(O.CH3)-N(CO₂H), formed by oxidizing quinin and quinidin. quinotannic a., a variety of tannic acid from cinchona bark. quinovic a., a crystalline substance from cinchona: it is feebly tonic. racemic a., a mixture of dextrotartaric and levotartaric acids. It is optically inactive. ratanhiatannic a., the tannic acid of ratany. Called also krameric a. rheic a. See chrysophanic a. rheotannic a., the tannic acid of rhubarb, C₂₆H₂₆O₁₁. rheumic a., an acid, C20H16O9, derivable from rheotannic acid. **rhodanic a.**, a yellow crystalline cyclic compound, CO.NH CO.S.CH₂, prepared from ammonium dithio-carbamate. ricinoleica.,

an unsaturated oxyacid, CH3(CH2)5.CHOH.CH2.-CH: CH(CH₂)₇.COOH, found as a glycerid in castor oil. It may be the cathartic principle in castor oil. rosacic a., purpurin. rosolic a.

1. Dihydroxyphenylmonohydroxytolylmethane, CH₃.C₆H₃OH.C(C₆H₄OH)₂. 2 A mixture of rosolic and pararosolic acids used as an indicator. ruberythric a., a glucosid found in madder root which on hydrolysis yields alizarin. rufl-gallic a., a brownish, crystalline acid, C₂₄H₈-O₈ + 2H₂O, derived from anthracene. rutic a., a fatty acid, C₁₀H₂₀O₂, whose salts are called a larty acid, Clollagoo, whose sans are called rutates. **sabinenic a.**, an acid, CloH₁₆O₃, derivable from sabinene by oxidation **saccharic a.** I. A dibasic acid, COOH.(CHOH)₄CO.OH, formed by the action of nitric acid on dextrose or carbohydrates containing dextrose. 2. A monobasic acid, C₆H₁₂O₆, or tetraoxycaproic acid, not existing in the free state. **saccharonic a.**, an acid, methyl-trihydroxyglutaric acid, CH₃.C(OH)-(COOH)(CHOH)₂COOH, formed by the oxidation of saccharin (2) with nitric acid. **salicylacetic** a. See salicylo-acetic a. salicylic a., a crystal-line acid, OH.C₆H₄.COOH, made from phenol, from oil of gaultheria, from salicin, etc. It is antipyretic, antiseptic, and antirheumatic, and is used in rheumatism, particularly acute articular rheumatism, neuralgia, sciatica, etc., locally in rheumatic joints, pruritus, eczema, stomatitis, etc., and as an antiseptic. It is dangerous and even fatal in overdoses. Dose, 5-20 gr. (0.333-1.333 gm.). salicylo-acetic a., a compound, C₉H₈O₆, used as an antiseptic. salicylosalicylic a. See diplosal. salicylous a. See salicylic aldehyd, under aldehyd. salicyl-sulphonic a. See sodium sulphosalicylate, under sodium. salicyluric a., an acid, CH2.NH2.CO.O.C6H4 COOH, found in urine after the exhibition of salicylic acid. salolphosphinic a. Same as solvosal. santalinic a., a crystalline compound from oil of sandalwood, produced by oxidation with solution of potassium permanganate. santonic a., the acid, C15H20O4, from santonica. santoninic a., santonin. sarcolactic a. See lactic a. sar-Same as inosinic a. sclerotic a.. cylic a. sclerotinic a., an acid found in ergot, of which it is one of the active principles. It is sometimes used hypodermically as a substitute for ergot. Dose, $\frac{1}{2}$ -1½ gr. (0.033-0.1 gm.). **sebacic a.**, a crystalline dibasic acid, COOH (CH₂)₈.COOH, desebacic a., a rivable from olein and various fixed oils. selenic a., a clear liquid, H₂SeO₄, resembling sulphuric selenious a. 1. An acid, H₂SeO₃, forming selenites. 2. Less correctly, selenium oxid, SeO2. silicic a. 1. An acid of which silicon is the base, forming silicates. It is of several kinds, as orthosilicic acid, H₄SiO₄; metasilicic acid, H₂SiO₃; and parasilicic acid, H₆SiO₆. 2. Less correctly, silica, SiO₂, or silicic anhydrid. **silicotungstic a.**, SiO₂, or silicic anhydrid. **Silicotungstic a.**, an acid, 12WO₃SiO₂ + 2H₂O, in white or yellow crystals: used as a reagent for alkaloids. **sinapinic a.**, an aromatic acid, (CH₃O)₂C₆H₂OH(CH)₂COOH, from the seeds of white mustard. **skatol carboxylic a.**, a compound, C₈H₆-(CH₃)N.COOH, formed during the putrefaction of proteins. **skatoxyl-sulphuric a.**, an acid, C.H.N.O.SO.H. found in the urine in the form C₉H₈N.O SO₃H, found in the urine in the form of its potassium salt. sorbic a., an acid, CH₃.(CH)₄.COOH, found in berries of mountainash. sozoiodolic a. Same as sozoiodol. so-zolic a. Same as aseptal. spermanucleic a., nucleic acid from the spermatozoa of various animals. sphacelinic a., a poisonous substance from ergot. sphingostearic a., a fatty acid, C₁₈H₃₆O₂, probably an isomer of stearic acid obtained from sphingomyelinic acid by hydrolysis. stannic a., a gelatinous compound, H₂SnO₃. stearic a., an acid, CH₃(CH₂)₁₆COOH, from the solid animal fats. stearoleic a., an unsaturated fatty acid, GH₃(CH₂)₆C: C(CH₂)₇COOH, from oleic and elaidic acids. suberic a., a dibasic fatty acid, COOH(CH₂)₆COOH, obtained from cork by boiling it with nitric acid. succinic a.,

an acid, ethylene-dicarboxylic acid, COOH(CH2)2-COOH, from amber, etc.; found in certain hydatid cysts; it is diuretic, antispasmodic, and stimulant. **sudoric a.**, an acid, C₈H₉O₇N, said to exist in perspiration; called also hidrolic a. and hidrolic a. sulphacetic a. Same as aspirin. sulphaminic a., an amino-sulphonic acid, NH₂ SO₂OH, at one time used in the treatment of cholera. Bulphanilic a., a white, crystalline compound, para-amino benzene sulphonic acid, NH₂.C₆H₄.-SO₂.OH.₂H₂O: used in Ehrlich's test for typhoid fever. sulphichthyolic a. See *2chthyolsul*. phonic a. sulphinidigotic a., an acid, C₁₆H₈-(SO₂ OH)₂N₂O₂, produced by the action of sulphuric acid upon indigo blue. sulpho-a., an acid in which oxygen or carbon is replaced by sulphur. sulpho-aminolactic a. Same as cystim. sulphocarbolic a. Same as asceptol. sulphoconjugate a., the compound sulphuric acid formed in the urine after the ingestion of cresol, phenol, etc. **sulphocyanic a.** See thioryanic a. **sulpho-ichthyolic a.** Same as sulpound, CH₃(CH₂)₁₅ CH(SO₂OH).COOH, formed by the action of concentrated sulphuric acid upon oleic acid; called also stearin-sulphuric a. sulphonic a., a compound of SO.OH, with another radical, especially a hydrocarbon. sulphoricinic a., an acid derived from castor oil by the action of sulphuric acid. sulphoricinoleic a., an acid formed by treating castor cilibits as having acid sulphospharia sulpho oil with sulphuric acid. sulphosalicylic a. See sodium sulphosalicylate, under sodium. sulphovinic a., ethyl-sulphuric acid, C₂H₇ HSO₄, formed by the action of sulphuric acid in alcohol sulphuric a., an oily, highly caustic, and poisonous acid, H₂SO₄. It is used very extensively in chemistry and the arts; of value in lead-colic, nightsweats, etc, and as an astringent in diarrhea and Aromatic sulphuric acid contains 20 parts of the acid to 60 of alcohol, with aromatics. Dose, 5-15 min. (033,3-1 c.c.). Concentrated sulphuric acid contains 93 to 98 per cent. of pure acid. Dilute sulphuric acid contains 10 to 15 per cent. of pure acid. Dose, 5-20 min. (0.33-1.25 c.c.). sulphuric a., fuming. See pyrosulphuric a. sulphurous a. 1. A dibasic acid, H₂SO₃, produced by combining sulphurous anhydrid, a gas, SO₂, with water. Its salts are called sulphites It is a bleaching agent, and is used as an antiseptic in fermentative dyspepsia and in skin diseases. Dose, 5-30 min. (0.333-2 c.c) in water. 2. An incorrect name for sulphurous anhydrid, SO₂, a colorless gas: disinfectant and a bleaching agent. sulphydric a. See hydrosulphuric a tannic a., a white or yellowish astringent powder, $C_{14}H_{10}$ O₉, probably a digallic acid; from nutgalls, tanbark, and many other plants. It is valuable as a hemostatic, styptic, and astringent. Dosc, 2-10 gr. (0.13-0.65 gm). **tariric a.,** a complex organic acid, C₁₇H₂₁COOH, from a species of *Pic*ramnia. tartaric a., a white powder from the lees of wine and from various plants, dihydroxy-ethylene-succinic acid, COOH(CHOH)₂-COOH, It is refrigerant and astringent. Dose, 10-40 gr. (0.6-2 6 gm.). It is known in four forms: (a) ordinary or dextro-tartaric acid; (b) levo-tartaric acid, these two are so called because their solutions rotate the plane of polarized light to the right and the left respectively; (c) racemic acid, a mixture of (a) and (b), and hence optically inactive, and (d) mesotartaric acid, optically inactive from internal compensation. tartronic a., a dibasic acid, COOH.CHOH.COOH, produced by the oxidation of glycerol. tauro-carbamic a., the form in which taurin when fed is excreted in the urine. It is taurin paired with carbamic acid: NH₂.CO.NH-COOH. (CH₂)₂.SO₂OH. **taurocholeic a.**, an acid obtained from the bile of the dog and ox. **taurocholic a.**, one of the principal bile acids, C₂₆H₄₆-NSO₇; when hydrolyzed it splits into taurin and cholic acid. **taurylic a.,** a compound, C₇H₁₄O, found in urine. telluric a., an acid, H₂TeO₄.

teracrylic a., an unsaturated acid, CH3(CH2)2CH:-CH.CH₂.COOH. **terebic a.**, a monobasic acid, C₇H₁₀O₄, from oxidizing turpentine. **testicular**nucleic a., an acid derivable from testicular nuclem. tetraboric a. See pyroboric a. tetronuclem. **tetraboric a.** See *pyroboric a.* **tetrodonic a.**, a poisonous acid from various fishes of the genus *Tetrodon* **thapsic a.**, an acid sand to occur in *Thap'sia gargan'ıca.* **thebolactic a.**, the lactic acid found in oppum. **therapic a.**, a member of the oleo-acid group, $C_{17}H_{26}O_{2}$, from codliver oil. **thioaminopropionic a.** See *cystem.* **thiocyanic a.**, an unstable acid, HCNS. It forms salts called thiocyanates or sulphocyanids which give a blood-red color with ferric salts. which give a blood-red color with ferric salts. **thiolactic a.,** an acid, CH₃CH(SH)COOH, derived from keratin. It is also a decomposition product of horn. **thiolinic a.,** a derivative of sulphur and of linseed oil, prescribed in skin discrete the color of the col eases. See thiolin. thiopyruvic a., one of the intermediary products in the metabolism of cystein. **thiosulphuric a.**, a very unstable acid, $H_2S_2O_3$, not known in the free state, but it forms salts called thiosulphates. The sodium salt is the photographers' "hypo." thiuretic a., a colorless or yellowish liquid produced when phosphorous pentoxid acts on acetic acid. It is thioacetic acid, CH₃ CO.SH. thymic a., the residue left after partial acid-hydrolysis of nucleic acid. It is a combination of phosphoric acid, carbohydrate, and pyrimidin bases. **thyminic a.**, an acid formed by the splitting up of thymonucleic acid Sulphuric acid changes it into thymin. thymonucleic a., the nucleic acid obtained from the thymus gland. tiglic a., an unsaturated acid, methyl crotonic acid, CH₃.CH C(CH₃).COOH, found in croton oil toluic a., xylene is oxidized to toluic acid, CH₄.C₆H₄.COOH, paired with glycine, and excreted in the urine as toluric acid. toxicodendric a., a volatile acid from Rhus toxicoden'dron, supposed to be poisonous. tomic a., an acid that has three replaceable acid atoms or groups triazoic a., a strong monobasic acid, NaII, called also hydrazoic or hydronitric acid or azoimid. It is a colorless liquid with an unpleasant odor, it is explosive and forms salts that are called hydrazoates, azides, or trinitrides **trichloracetic a.,** a caustic crystalline substance, CCl₃ COOH, used as an astringent in nasopharyngeal diseases, gonorrhea, etc., as an eschapharyngear diseases, gonorinea, etc., as an escharotic in warts, corns, etc., and as a test for albumn Dose, 2-4 gr (o 13,3 o 266 gm). **trichlor-ethyl-glucuronic a.**, CHCl₂ CHCl.C₆H₉O₇, the conjugated form of chloral hydrate in which form it is excreted in the urine. **tricyanic a.**, a crystalline acid, cyanuric acid, C₃N₃(OH)₃, formed when urea is heated dry. **trihydroxybenzoic** a. See gallic a. trimethylamino-acetic a., a methylated glycocoll, OH(CH₃)₃N.CH₂.COOII. Its anhydrid is betaine. triticonucleic a., the nucleic acid of the wheat embryo. **tropic a.**, a crystalline acid, phenylhydracrylic acid, C₆H₅.-CH(CH₂OH)COOH, obtained from atropin by digesting it with baryta-water. tuberculinic a., a nucleic acid obtained from fat-free tubercle bacilli decomposed by superheated steam, and said to be the toxic principle of the bacilli. tumenol sulphonic a. See under tumenol. ulmic a., a gummy acid, $C_{20}H_{14}O_{6}$, from elm-sap, peat, and other sources umbellic a., dioxycinnamic acid, $(OH)_{2}C_{6}H_{3}(CH)_{2}COOH$. umbelliferic a., an acid derivable from asafetida and other fetid gum-resins. **uramilic a.**, an acid, $C_8H_9N_5O_2$, obtained by treating uramil with sulphuric acid. **uramino-acetic a.**, glycoluric acid. uramino-benzoic a., an acid found in the urine after the ingestion of amino-benzoic acid. last is paired with carbamic acid, giving NH₂.-CO.NH.C₆H₄.COOH. **uric a.**, a crystallizable acid, trioxypurin, C₅H₄N₄O₃, from the urine of man and animals, being one of the products of much products of the pr nuclein metabolism. It is nearly insoluble in water, alcohol, and ether, but soluble in solutions of alkaline salts. It forms a large portion of certain

calculi, and its presence in the blood causes morbid symptoms, among which are those of gout. urine a., tartaric acid. urobenzoic a., hippuric acid. urocanic a., an acid, iminazolyl-acrylic acid, C₃-H₃N₂(CH)₂COOH, found in dogs' urine. urochloralic a., urochloric a., an acid, $C_{14}H_{12}$ - $Cl_{2}O_{12}$ [$C_{7}H_{12}Cl_{2}O_{6}$], found in the urine after the chibition of chloral. uroferric a., a little-known protein (?) substance found in urine uroleucic a., uroleucinic a., a crystalline acid, C9H10Ob, found in the urine in alkaptonuria uroproteic a., a constituent of dogs urine. uroxanic a., an oxidized form of uric acid uvitic a., a crystalline acid, methyl-iso-phthalic acid, CH3 C6-H₃ (COOH)₂, obtained by oxidizing mesitylene. valerianic a., valeric a., an organic acid found in the roots of Valeriana officianalis and Angelica archangelica, and which may be synthesized in various ways. There are four valeric acids. (a) normal valeric acid, CH₃(CH₂)₄COOH, (b) isovaleric acid, (CH₃)₂ CH CH₂ COOH, (c) methylactic acid, CH₃(C₂H₅) CH COOH, and (d) CH₃(C₃H₅) CH COOH, and (d) CH₃(trimethyl-acetic acid (pivalic acid), (CH₃)₃ C - COOH. The salts are medicinal. vanadic a., an acid, HVO3, formed by the oxidation of vanadium. It may cause chronic poisoning in certain industries. **vanillic a.**, an acid, methyl-protocatechuic acid, CH₃ O C₆H₃(OH)COOH, obtained by the oxidation of vanillin. veratric a., a white, crystalline acid, dimethyl-oxybenzoic acid, (CH₃-O)2CtH3.COOH, found in sabadilla seeds. viburnic a., acid from bark of Viburnum prunifolium, identical with valerianic acid (q v). vulpic a., vulpinic a., a yellow, crystalline acid, C₁₀H₁₄O₅, from the lichen, Cetra'ria vulpi'na. xanthic a., an oily liquid, C3H6OS2, with a penetrating odor, formed by the action of sulphuric acid on potassium xanthate. xanthoproteic a., a yellow compound obtained by treating protein with mitric xanthylic a., one of the nucleic acids. **xanthylicnucleic a.**, a nucleic acid which may be made to afford xanthin. **xylic a.**, a crystalline acid, dimethyl-benzoic acid, (CH₃)₂C₆H₃.COOII. **xylidic a.**, a dibasic acid, methyl-iso-phthalic acid, CH₃ C₆H₃ (COOH)₂.

acidalbumin (as-id-al'bu-min). A protein which dissolves in acids and shows an acid reaction.

acidaminuria (as"id-am-in-u're-ah). An excess of amino-acids in the urine

acidemia, acidemia (as-id-e'me-ah) [acid + Gr. alua blood]. Abnormal acidity of the blood, increased hydrogen-ion concentration of the blood.

acid-fast (as'id-fast). Not readily decolorized by acids or other means when stained.

acid-gland. One of the gastric glands which secrete the acid of the gastric juice

acidifiable (as-id'if-i-ab-l). Susceptible of being made acid.

acidimeter (as-id-im'et-er) [L ac'idum acid + Gr. μέτρον measure] An instrument used in performing acidimetry.

acidimetry (as-id-im'et-re) The determination of the amount of free acid in a solution.

acidism, acidismus (as'id-izm, as-id-iz'mus). A condition due to introduction into the body of acids from outside

acidity (as-id'it-e) [L. acid'itas]. The quality of being acid or sour, excess of an acid. a. of the stomach, a condition attended with heartburn, acid eructations, and a feeling of distress in the region of the stomach.

acidol (as'id-ol) Betain hydrochlorid, ClN(CH2)3-CH₂CO₂H, a colorless crystalline compound, employed as a means of administering hydrochloric acid. Dose, 8 gr. (0 5 gm)

ιcidology (as-id-ol'o-je) [Gr. ἀκίς bandage + λόγος treatisel. The science of surgical appliances.

icidophil, acidophile (as-id'o-fil) [L. ac'idum acid + Gr. φιλείν to love). 1. Easily stained by acid dyes, an element or substance that is readily stained with acid dyes. 2. An organism that grows well in highly acid media.

acidophilic, acidophilous (as-id-o-fil'ik, as-idof'il-us). 1. Readily stained with acid dyes. 2. Growing in highly acid media, said of micro-organisms. a. milk. See under milk.

acidosic (as-id-o'sik). Affected with acidosis.

acidosis (as-id-o'sis) Depletion of the alkali reserve of the body, diminution in the reserve sup-ply of fixed bases in the blood and other body tissues. The term was originally introduced by Naunyn to denote a condition of metabolism in which abnormal quantities of acetone bodies $(\beta$ oxybutyric acid, etc) are present in the body; a condition now usually spoken of as ketosis. Several grades of acidosis are called acid intoxication.

acidosteophyte (as-id-os'te-o-fīt) [Gr. άκίς point + οστέον bone + φυτόν plant]. A sharp-pointed osteophyte.

acidotic (as-id-ot'ik). Pertaining to or marked by acidosis.

acid-proof. Same as acid-jast. acidulated, acidulous (as-id'u-la-ted, as-id'ulus). Somewhat sour; rendered somewhat sour.

acidum (as'id-um). Latin for acid.

aciduric (as-id-u'rık) [L. ac'ıdum acid + dura're to endure]. Growing in acid media, but preferring media that are somewhat alkaline said of bacteria.

acidyl (as'id-il). Any acid radical

acidylation (as-id-il-a'shun) Same as acylation.

acies (a'se-ēz) [L "edge"]. Édge, margin, or border. a. thal'ami op'tici, the stria medullaris.

acinesia (as-in-e'ze-ah). See akinesia.

acinetic (as-in-et'1k). Same as akinetic.

acinic (as-in'ık). Pertaining to an acinus or acini.

aciniform (as-in'if-orm) [L a'cinus grape + for'ma form] Shaped like an acinus or grape.

acinitis (as-in-i'tis). Inflammation of the acini of a gland.

acinose, acinous (as'in-ōs, as'in-us) [L. acino'sus grape-like]. 1. Resembling a grape or an acinus. 2 Made up of acini.

a'cini [L "grape"] acinus (as'in-us), pl one of the smallest lobules of a compound gland; also, one of the sac-like dilatations forming the termination of a small passage, as the air-sacs of the lungs.

Acipenser (as-ip-en'ser) A genus of fishes, among which A hu'so, the Russian sturgeon, and other species, furnish isinglass.

acitrin (as-it'rin). A proprietary ethyl ester of phenyl cinchoninic acid. C₆H₆.C₉H₅N.CO.O.C₂H₅. used in treatment of gout.

acladiosis (ak-lad-e-o'sis). An ulcerative dermatomycosis caused by Accladium castellani, occurring in Ceylon, the Malay States and Macedonia, and marked by the formation of roundish or oval ulcers with sharply defined edges and a granulating fundus

acladiotic (ak-lad-e-ot'ik). Caused by Acladium.

Acladium (ak-la'de-um). A genus of fungi causing

aclastic (ak-las'tik) [Gr. a neg. + κλâν to break]. Not refracting.

acleitocardia (ah kli-to-kar'de-ah) [Gr. a priv. $\kappa\lambda\epsilon\iota\sigma\tau\delta$ s closed + $\kappa\alpha\rho\delta\iota\alpha$ heart]. An open condition of the foramen ovale.

aclinic (ah-klin'ik). Having no inclination.

aclusion (ah-klu'zhun) [Gr. a neg. + occlusion]. In dentistry, the opposite of occlusion

acme (ak'me) [Gr ἀκμή point]. The crisis or critical stage of a disease.

acne (ak'ne) [Gr. ἀκμή point]. Any inflammatory disease of the sebaceous glands, especially acne vulgaris, or common acne, a chronic inflammatory disease of the sebaceous glands, occurring

- acoulation (ak-oo-la'le-on) [Gr. ἀκούειν to hear + λαλία speech]. An apparatus for teaching deafmutes to speak.
- acoumeter, acouometer (ak-oo'met-er, ak-ooom'et-et) [Gr ἀκούειν to hear + μέτρον a measure]. An instrument for use in testing the accuracy or acuteness of the hearing.
- acoumetry (ak-oo'met-re). The testing of the acuteness of the sense of hearing.
- **acouophone** (ak'oo-o-fōn) [Gr. ἀκοbειν to hear $+ \varphi \omega \nu \eta$ voice]. An electric appliance for aiding the deaf to hear.
- **acouophonia** (ak-oo-o-fo'ne-ah) [Gr. ἀκούειν to hear + φωνή voice]. Auscultation combined with percussion.
- **acousma** (ak-oos'mah), pl. acous'mata [Gr. ἄκουσμα].

 An auditory hallucination or imaginary sound.
- acousmatagnosis (ak-oos-mat-ag-no'sis) [Gr. ἄκουσμα hearing + α neg. + γνῶσις recognition]. Failure to recognize sounds due to mental disorder, mind-deafness.
- acousmatamnesia (ak-oos-mat-am-ne'ze-ah) [Gr. ἄκουσμα hearing + ἀμνησία forgetfulness]. Failure of the memory to call up the images of sounds.
- **acoustic** (ak oos'tik or ak-ow'stik) [Gr ἀκουστικός]. Pertaining to sound or to the sense of hearing.
- **acousticon** (ak-oo'stik-on). An apparatus for aiding the deaf to hear.
- **acoustics** (ak-oos'tiks or ak-ow'stiks). The science of sounds or of hearing.
- **acoutometer** (ak-oo-tom'et-er). Same as acounter. **ACP**. Abbreviation for anodal closing puture.
- acquired (ak-wi'crd) [L. acqua'rere to obtain]. Not congenital, but obtained after birth.
- acquisitus (ak-wis'it-us) [L]. Acquired.
- acraconitin (ak-rak-on'11-in) [L. ac'ridus acrid + aconi'tum aconite] Same as pseudaconitin.
- acragnosis (ak-rag-no'sis). Acro-agnosis.
- **acral** (ak'ral) [Gr. ἄκρον extremity]. Pertaining to or affecting the extremities.
- acrania (ah-kra'ne-ah) [Gr. α priv. + κρανίον skull] The condition of a monster with a partial or incomplete skull, or with none at all.
- acranial (ah-kra'ne-al). Having no cranium.
- acranius (ah-kra'ne-us) [(ir. α neg. + κρανίον skull]. Λ monster-fetus with no cranium or a very incomplete one.
- acrasia (ah-kra'ze-ah). Lack of self-control; intemperance.
- **acratia** (ah-kra'she-ah) [Gr α neg. + κράτος power| Loss of power or strength.
- acraturesis (ah-krat-u-re'sis) [Gr. ἀκρατής feeble + οὔρησις urination]. Difficult urination due to atony of the bladder.
- Acrel's ganglion (ak'relz) [Olof Acrel, Swedish surgeon, 1717-1807]. See under ganglion.
- **acremoniosis** (ak-re-mo-ne-o'sis) Infection with the fungus *Acremo'nium potro'nu*, producing a state marked by fever and the formation of gumma-like swellings
- acribometer (ak-rıb om'et-er) [Gr. ἀκριβής exact + μέτρον measure]. An instrument for measuring minute objects
- **acrid** (ak'rid) [L. a'cer, a'cris sharp]. Pungent; producing an irritation.
- acridin (ak'rid-in). 1. A pungent-smelling crystalline alkaloid, C₆H₄ CH(N).C₆H₄, from anilin.
 2. Any member of the group of compounds of which ordinary acridin is the type. a. orange, tetramethyl acridin, CH[N(CH₃)₂C₆H₃]₂N.
- acridinium yellow (ak-rid-in'e-um). The dimethyl derivative of acriflavin Its formula is CH(NH₂,C₆H₃,CH₃)₂N(CH₃)Cl.
- acriflavin (ak-rif-la'vin). A brownish-red crystalline acridin dye, the hydrochlorid of diamino-

- methyl-acridinium chlorid, CH(NH₁.C₆H₃)₂N(CH₃)-Cl.HCl.H₂O; a powerful antiseptic and germicide: used in the treatment of wounds in a strength of part in 1000 parts of 0.8 per cent. salt solution. It is also used in the treatment of gonorrhea and in eye, nose, and throat work. This substance was originally prepared by Benda in 1011 for use in trypanosomiasis, and was by him given the name of trypaflavin. It has also been called flavin.
- **acrimony** (ak'rim-o-ne) [L. acrimo'nia]. An acrid quality, property, or condition.
- acrinyl sulphocyanate (ak-ri'nil). An acrid vesicating principle found in white mustard.
- acritical (ah-krit'ik-al) [Gr. α neg. + κρίσις a crisis]. Having no crisis.
- acritochromacy (ah-krit-o-kro'mas-e) [Gr. α neg.+ κρίνειν to judge + χρῶμα color]. Color-blindness.
- acriviolet (ak-re-vi'o-let). A mixture of acriflavin and gentian violet used as an antiseptic in treatment of infection.
- acro-æsthesia (ak"ro-es-the'ze-ah). Sec acro-esthesia.
- acro-agnosis (ak"ro-ag-no'sis) [Gr. ἄκρον extremity + α neg + γνῶσις knowledge]. Lack of sensory recognition of a limb; lack of acragnosis.
- acro-anesthesia (ak"ro-an-es-the'ze-ah) [Gr. ἄκρον extremity + anesthesia]. Anesthesia of the extremities.
- **acro-arthritis** (ak-ro-ar-thri'tis) [Gr. ἄκρον extremity + arthritis]. Arthritis affecting the extremities.
- acro-asphyxia (ak-ro-as-fik'se-ah) [Gr. ἄκρον extremity + asphyxia]. Dead-finger: a cold, pale condition of the fingers and toes, alternating with heat and redness. It is an early symptom of symmetric gangrene (Raynaud's disease).
- **acro-ataxia** (ak"ro-at-ak'se-ah) [Gr. ἄκρος extremity + ataxia]. Ataxia affecting the fingers and toes.
- acroblast (ak'ro-blast) [Gr. ἄκρος extreme + βλαστός germ]. 1. External layer of the mesoblast. 2 Λ body or bodies in the spermatid from which arises the acrosome.
- **acrobystiolith** (ak-ro-bis'te-o-lith) [Gr. ἀκροβυστία prepuce + λίθος stone]. A preputial calculus.
- **acrobystitis** (ak-ro-bis-ti'tis) [Gr. ἀκροβυστία fore-skin + -ιτις]. Inflammation of the prepuce.
- acrocephalia (ak-ro-sef-a'le-ah) [Gr. ἄκρος point + κεψαλή head]. A pointed condition of the top of the head.
- acrocephalic, acrocephalous (ak-ro-sef-al'ik, ak-ro-sef'al-us). Affected with acrocephalia.
- acrocephalosyndactylia (ak-ro-sef"al-o sin-daktil'e-ah) [acrocephalia + syndactylia]. A congenital malformation consisting of a pointed shape of the top of the head and syndactylia of the four extremities. Called also acrosphenosyndactylia and Apert's syndrome.
- acrocephaly (ak-ro-sef'al-e). Same as acrocephalia. acrochordon (ak-ro-kor'don) [Gr. $\delta\kappa\rho\sigma$ extreme $+\chi\rho\rho\delta\eta$ string]. A soft, pendulous growth on the neck or cyclids of old persons.
- acrocinesis (ak-ro-sin-e'sis) [Gr. ἄκρος extreme + κίνησις motion]. Excessive motility; abnormal freedom of movement.
- acrocinetic (ak-ro-sin-et'ik). Affected with acro-
- acrocontracture (ak"ro-kon-trak'tshur) [Gr. ἄκρον extremity + contracture]. Contracture of an extremity; contracture of the hand or the foot.
- acrocyanosis (ak"ro-si-an-o'sis) [Gr. ἄκρον extremity + cyanosis]. Blueness of the hands and feet, probably a hysteric vasomotor phenomenon (Crocq).
- acrodermatitis (ak"ro-der-mat-i'tis) [Gr. ἄκρον extremity + dermatitis]. Dermatitis of the extremities. a. chron'ica atroph'icans, a progressive atrophying dermatitis of the hands and feet progressing slowly upward on the arms and

most frequently on the face, back, and chest. The inflamed glands form either small pink papules, which sometimes surround comedones so as to have black centers, or else pustules or hyper-trophied nodules. adenoid a., disseminated follicular lupus. a. agmina ta, a type of acne varioliformis of the face and forehead showing a marked tendency to abundance and grouping of the eruption. a. al'bida. See milium. a. artificia'lis, that which is due to external irritation. a. atroph'ica. See a. varioliformis. bromin a., acne which is one of the most constant symptoms of bromism. a. cachectico'rum (Hebra), a form which accompanies wasting diseases, and is situated chiefly on the trunk and legs. The lesions are flat and livid and leave scars. a. cilia'ris, acne of the edges of the eyelids. decal'vans. See Quinquaud's disease, under disa. dissemina'ta. Same as a. vulgaris. a. epheb'ica, a form peculiar to adolescence and the stage of puberty. epileptic a., acne in an epileptic subject. It is due sometimes to overdose of bromin compounds, and sometimes to an unknown cause. **a. erythemato'sa.** Same as a. rosacca **a. genera'lis**, acne over the whole surface of the body. **a. hordeola'ris**, acne in which the tubercles are hard, tough, and arranged in rows. a. hypertroph'ica, acne rosacea, with a thickening of the lips and of the sides of the nose. a. indura'ta, acne vulgaris with chronic livid indurations. iodin a., an eruption caused by too free use of iodin compounds. a. keraby too free use of found compounds. a. Late to sa, a form in which a horny plug takes the place of a comedo. lupoid a. Same as a. varialiformis. a. menta gra. See sycosis. a. necrotica, acne varioliformis. pancreatic a., a condition in which the pancreas contains small cysts, caused by distention of the finer divisions of the pancreatic duct. a. papulo'sa, acne vulgaris in which the lesions are papular. a. picea'lis, tar a., a form which attacks workers in tar, or those who are exposed to the vapors of tar. a. puncta'ta, acne in which the lesions are pointed papules, in the centers of which are black-tipped comedones. a. ro'deus, acne varioliformis. a. rosa'cea, a chronic inflammation of the face and nose, generally due to the free use of alcoholic stimulants. Called also gutta rosacea, brandy-nose, rosy-drop, and brandy-face. scorbu tica, a papular eruption in scurvy. **scrofuloso'rum** (Bazin), acne cachecticorum. a. seba'cea, seborrhea. a. sebacée cornée. See keratosis follicularis. a. sim'plex. Same as a. vulgaris tar a. See a picealis. a. tar'si, acne of the sebaceous glands of the eyelids a. telangiecto'des (Kaposi), lupus follicularis dis-seminatus a. urtica'ta (Kaposi), acne with a. variolifor'mis, a somewhat itching patches rare chronic skin eruption, situated about the forehead. The pustules occur in groups, each with a hard central scab, which, when separated, leaves a deep pit. a. vulga'ris, common acne. See acne.

acneform (ak'ne-form). Resembling acne.

acnemia (ak-ne'me-ah) [Gr. a priv. + κνήμη leg]. Atrophy of the calves of the legs.

acnitis (ak-ni'tis). A suppurative skin inflammation which leaves pits like those of acne varioliformis (Barthélemy).

ACO. Abbreviation for anodal closing odor.

acoasma (a-ko-as'mah) [Gr. ἀκονείν to hear]. An auditory hallucination consisting of indefinite sounds.

Acocanthera, Akokanthera (ak-o-kan-the'rah). A genus of apocynaceous plants growing in Africa, several species of which furnish an arrow-poison used by the natives. A. venena'ta furnishes ouabain.

acocantherin (ak-o-kan'ther-in). A poisonous glucosid, C₃₂H₃₀O₁₂, from Acocanthera, resembling digitalis in its action.

accelomate (ah-se'lo-māt). See acelomate.

accenesthesia (ah-sen-es-the'ze-ah). Same as acenesthesia.

acognosia, acognosy (ak-og-no'se-ah, ak-og'no-sē) [Gr. ἄκος cure + γνῶσις knowledge]. Knowledge of or study of remedies.

acoin (ak-o'in). A white, crystalline powder, dipara-anisylmonophenetyl guanidin hydrochlorid, C₂H₅O C₆H₄.N:C(NH C₆H₄.O CH₃)₂.HCl, soluble in 10 parts of water: used as a local anesthetic and bactericide, as an anesthetic by instillation in 0.1-0.3 per cent. solution.

acoinæsthetic (ak-o"in-cs-thet'ik) A proprietary local anesthetic used in veterinary practice.

acoinoil (ak-o'in-oyl). A r per cent. solution of acoin in peanut oil: used as an analyssic in painful eye affections.

acology (ak-ol'o-je) [Gr. ἄκος cure + λόγος treatise]. The science of remedies; therapeutics.

acolous (ak'o-lus) [Gr. α neg. + κῶλον limb]. Having no limbs.

acomatol (ah-ko'mat-ol). A hormone of the pancreas, prepared in Germany.

acomia (ah-ko'me-ah) [Gr. α priv. + κόμη hair]. Baldness; absence or defect of hair.

aconin (ak'o-nin). An alkaloid, $C_{20}H_{30}NO_{11}$, from aconitin; only 2000 part as toxic as aconitin.

aconite (ak'o-nit) [L. aconi'tum; Gr. ἀκόνιτον]. A poisonous drug, the dried tuberous root of Λεοπι'tum napel'lus. It is a cardiac and respiratory sedative, analgesic, diaphoretic, and diuretic. It is used in palpitation of the heart, fevers, tonsillitis, bronchitis, and pneumonia. Dose of the abstract, ½-½ gr. (0016-0033 gm.); of the extract, ½-¼ gr. (001-0022 gm.); of the fluidextract, ½-1 min. (0033-0066 c.c.); of the tincture, 1-5 min (0066-0.333 c.c.), of Fleming's tincture, ½-2 min. (0.044-0133 c.c.)

aconitin (ak-on'it-in) [L. aconiti'na, aconit'ia]. A very poisonous white crystalline alkaloid, $C_{25}H_{25}$ NO₉, the active punciple of aconite Dose, $\frac{1}{200}$ gr. (0 0002 gm.). **Duquesnel's a.**, aconitin nitrate. Dose, $\frac{1}{200}$ gr. (0 0003 gm.).

Aconitum (ak-o ni'tum) [L. (see aconite] 1. A genus of poisonous ranuncum weous herbs. 2. The drug aconite (q v) A. 'e'rox is a highly poisonous East Indian aconite; also its homeopathic preparation A lycov'tonum is a species of aconite; also its homeopathic preparation.

aconuresis (ak-on-u-re'sis) [Gr. ἄκων unwilling + οὔρησις urination]. The involuntary passage of urine.

acoprosis (ah-ko-pro'sis) [Gr. α neg. $+ \kappa \delta \pi \rho \sigma$ excrement]. Absence of fecal matter from the intestine.

acoprous (ah-kop'rus). Having no fecal matter in the intestine.

acopyrin (ak-o-pi'rin). The acetyl salicylate of antipyrin used in neuralgia and headache.

acorea (ah-ko're-ah) [Gr. α priv. + κόρη pupil]. Absence of the pupil of the eye.

acoria (ah-ko're-ah) [Gr. α priv. $+ \kappa \delta \rho \sigma s$ satiety]. Loss of the sensation of satiety; a condition in which the patient never feels that he has enough, although the appetite may not be large.

acorin (ak'o-rin). A bitter glucosid, $C_{30}H_{60}O_{6}$, from calamus. It splits into oil of calamus and sugar.

acormus (ah-kor'mus) [Gr. α priv. $+ \kappa o \rho \mu \delta_5$ trunk]. A monster-fetus with a very rudimentary trunk.

Acorus (ak'o-rus) [L; Gr. ἄκορος]. A genus of araceous plants. See calamus.

acosmia (a-koz'me-ah) [Gr. a priv.; κόσμος order].

1 Ill health. 2. An irregularity in the course of a disease.

Acosta's disease (ah-kos'tah) [José d' Acosta, a Jesuit father who first described it after his travels in Peru in 1590]. Mountain sickness.

acouesthesia (ak-u-cs-the'ze-ah) [Gr. ἀκούειν to hear + αίθησις sensation]. Acoustic sensibility.

40

continuous a., an eczematous eruption confined to the extremities and obstinately resistant to treatment. a. hiema'lis, dermatitis of the extremities occurring in winter. a. per'stans, a form which persistently recurs. a vesiculo'sa trop'ica, dermatitis in which the skin of the fingers becomes glossy and covered with small vesicles.

acrodolichomelia (ak"ro-dol"ik-o-me'le-ah) [Gr. άκρον extremity + δολιχός long + μέλος limb]. Abnormal or disproportionate length of hands and feet.

acrodont (ak'ro-dont) [Gr. ἄκρον extremity όδοῦς tooth]. Having the teeth attached to the edge of the jaws instead of inserted into alveoli: a condition seen in lizards.

acrodynia (ak-ro-din'e-ah) [Gr. ἄκρον extremity + creased sensibility of the soles and palms, with pricking sensations in them and rheumatoid the hands and feet. There is an crythepains in the hands and feet. There is an erythematous eruption, followed by exfoliation and brown pigmentation. It is also called *epidemic* erythema and pedionalgia epidemica

acro-esthesia (ak-ro-es-the'ze-ah) [Gr. ἄκρος ex-treme + αίσθησις sensation]. I Increased sensitiveness. 2. Pain in the extremities.

acrogenous (ak-roj'en-us) [Gr. ἄκρον summit + γενναν to produce]. Increasing by growth at the apex: said of plants.

acrognosis (ak-rog-no'sis) [Gr ἄκρον limb + γνῶσις knowledge]. Sensory recognition of the limbs and of the different portions of each limb in relation to each other; limb knowledge.

acrokinesia (ak-ro-kin-e'ze-ah). See acrocinesis.

acrolein (ak-ro'le-in) [L. ac'er acrid + o'leum oil]. A volatile oily liquid, acrylic aldehyd, CII₂:CII-CHO, from the decomposition of glycerol.

acromania (ak-ro-ma'ne-ah) [Gr. ἄκρος extreme + μανία madness]. Extreme or violent mania.

acromastitis (ak-ro-mas-ti'tis) [Gr ἄκρον point + μαστός mamma]. Inflammation of the nipple.

acromegalia, acromegaly (ak-ro-meg-a'le-ah, ak-ro-meg'al-e) [Gr. $\delta\kappa\rho$ os extremity $+\mu\epsilon\gamma\delta\lambda\eta$

great]. A chronic disease, characterized by enlargement of the bones and soft parts of feet, and face 6). The disease the hands. (Marie, 1886). is associated with overfunction of the pituitary body. Called also Marie's disease.

acromegalo-gigantism (akro-meg"al-o-ji'gan-tizm). Gigantism due to acromegaly developing in the period of life between adolescence and maturity.

acromelalgia (ak"ro-me-lal'je-ah). See erythromelalgia. acromial (ak-ro'me-al). Pertaining to the acromion.

acromicria (ak-ro-mik're-ah) [Gr. ἄκρος extremity + μικρός small].

Abnormal smallness of the hands or fect.

Acromegaly (Marie).

acromikria (ak-ro-mick're-ah). Acromicria.

(ak-ro"me-o-klav-ik'u-lar). acromioclavicular Pertaining to the acromion and clavicle.

acromiocoracoid (ak-ro"me-o-kor'ak-oid). taining to the acromion and the coracoid process.

acromiohumeral (ak-ro"me-o-hu'mer-al). taining to the acromion and humerus.

acromion (ak-ro'me-on) [Gr. ακρον point + ωμος shoulder]. The outward extension of the spine of the scapula, forming the point of the shoulder.

acromioscapular (ak-ro"me-o-skap'u-lar). taining to the acromion and scapula.

acromiothoracic (ak-ro"me-o-tho-ras'ik). Pertaining to the acromion and thorax.

acromphalus (ak-rom'fal-us) [Gr. ἄκρον point + $\delta\mu\varphi\alpha\lambda\delta s$ navel]. 1. Undue prominence of the navel sometimes a sign of the approach of umbilical hernia. 2. The center of the navel.

acromyotonia (ak"ro-mi-o-to'ne-ah) [Gr. ἄκρον extremity + μῶς muscle + τόνος contraction. Contracture of the hand or foot from gunshot wounds (Sicard, 1915).

acromyotonus (ak"ro-mi-ot'o-nus). Acromyotonia.

Acron (a'kron). A celebrated physician of Agrigentum in Sicily, who lived in the fifth century B. C. acronarcotic (ak-ro-nar-kot'ik). Both acrid and

narcotic.

acroneurosis (ak-ro-nu-ro'sis) [Gr. ἄκρον extremity + neurosis]. Any neurosis of the extremities.

acronyx (ak'ro-niks) [Gr. ἄκρον extremity + ὅνυξ nail. An ingrowing nail.

acropachy (ak'ro-pak-e) [Gr ακρον extremity + $\pi \alpha \chi \dot{\nu}$ s thick]. Clubbed finger. See under finger.

acroparalysis (ak-ro-par-al'is-is) [Gr. ἄκρον point + paralysis]. Paralysis of the extremities.

acroparesthesia (ak"ro-par-es-the'ze-ah) ακρον extremity + paresthesia] A disease marked by attacks of tingling, numbness, and stiffness in the extremities, chiefly the fingers, hands, and forcarms Sometimes there is pain, pallor of the skin, or slight cyanosis. Two forms have been described—the simple form (Schultze's type), which tends to end in acrocyanosis, and the vasomotor or angiospastic form (Nothnagel's type), which may end in recovery or go on to gangrene.

acropathology (ak-ro-path-ol'o-je) [Gr. ἄκρον ex-treme + pathology]. 1. The pathology of disease affecting the extremitics. 2 Disease of the extremities.

acropathy (ak-rop'ath-e) [Gr. ἄκρον summit + πάθος disorder]. Any disease of the extremities.

acropetal (ak-rop'et-al) [Gr. ἄκρον summit + L. pet'ere to seek]. Rising toward the summit.

acrophobia (ak-ro-fo'be-ah) [Gr ἄκρον summit + φόβος fear] Morbid dread of being at a great $\varphi \delta \bar{\beta} o s \text{ fear}]$

acrophotodynia (ak"ro-fo-to-din'e-ah). Trophic disorders with neuritis and paresthesia from trenchfoot. See trench-foot, under foot.

acroposthitis (ak-ro-pos-thi'tis) [Gr. ἀκροποσθία prepucel. Inflammation of the prepuce.

acroscleroderma (ak"ro-skle-ro-der'mah). Same as sclerodactylia.

acrose (ah'krōs) [Gr. a neg. + -ose] An optically inactive sugar produced by the action of weak alkali on fermaldehyd.

acrosome (ak'ro-sōm) [Gr. ἄκρον summit + σῶμα body]. The structure forming the extreme anterior end of the spermatozoon, called also apical

acrosphacelus (ak-ro-sfas'el-us) [Gr. ἄκρον summit + σφάκελος gangrene]. Gangrene of the digits; acro-asphyxia.

acrosphenosyndactylia (ak"ro-sfe"no-sin-daktil'-e-ah). See acrocephalosyndactylia.

acrostealgia (ak"ros-te-al'je-ah) [Gr. ἄκρον extremity + δοτέον bone + ἄλγος pain). Neuralgia of the bones of the extremities (Boneau, 1911).

acrosyl (ak'ro-sil). The British name for cresol in soap solution similar to lysol.

acroteric (ak-ro-ter'ik). Pertaining to the periphery or outermost parts (Hutchinson).

acrotic (ah-krot'ik) [Gr. ἄκρος extreme]. 1. Affecting the surface. 2. Characterized by absence or weakness of the pulse. See acrotism.

acrotism (ah'kro-tizm) [Gr. α neg. + κρότος pulse]. Absence or imperceptibility of the pulse.

acrotrophoneurosis (ak"ro-tro-fo-nu-ro'sis). Trophoneurotic disturbance of the extremities.

acrylaldehyd (ak-ril-al'de-hid). Same as acrolein.

ACS. Abbreviation for anodal closing sound.

Actsea (ak-te'ah) [L; Gr. ἀκτῆ elder]. A genus of ranunculaceous plants. A. spica'ta is red cohosh. See Cimicifuga and cohosh.

actinic (ak-tin'ik) [Gr. ἀκτίς ray]. Producing chemic action: used of rays of light beyond the violet of the spectrum.

actinicity (ak-tin-is'it-e). Same as actinism.

actiniform (ak-tin'if-orm) [Gr. ἀκτίς ray]. Formed like a ray, radiate.

actinism (ak'tin-izm) [See actinic.] The chemic property of light or radiant energy.

actinium (ak-tin'e-um) [Gr. ἀκτίς ray] A chemic element obtained in the ore of uranium and having radio-active properties. See table of radio-active elements, p. 994.

actinobacillosis (ak"tin-o-bas-il-o'sis). A disease of domestic animals in South America caused by a bacillus which forms radiating structures in the tissues.

Actinobacil'lus ligniere'si. The micro-organism which causes actmobacillosis. It resembles Actinomyces boyis.

actinochemistry (ak"tin-o-kem'is-trē) [Gr. ἀκτίς ray + chemistry]. Chemistry dealing with action of rays of light.

actinocladothrix (ak"tin-o-klad'o-thriks). The Streptothrix actinomyces.

actinocongestin (ak"tin-o-kon-jes'tin). Richet's name for the toxic principle from the tentacles of certain actinize which, on injection into animals, causes congestion of the viscera.

actinocutitis (ak"tin-o-ku-ti'tis) [Gr. ἀκτls ray + cutitis]. X-ray dermatitis.

actinodermatitis (ak"tin-o-der-ma-ti'tis). X-ray dermatitis

actinodiastase (ak"tin-o-di'as-tās). An enzyme found in the body of cαelenterate animals which performs the intracellular digestion characteristic of these animals.

actinogram (ak-tin'o-gram). Same as skiagram.

actinograph (ak-tin'o-graf) [Gr ἀκτίς ray + γράφειν to write] τ. Same as skiagraph. 2. An instrument for recording variations in the actinic effect of the sun's rays.

actinographema (ak-tin"o-graf-e'mah). Same as skiagram.

actinography (ak-tin-og'raf-e). Same as skiag-raphy

actinology (ak-tin-ol'o-je) [Gr. $\delta \kappa \tau ls$ ray $+ \lambda \delta \gamma os$ treatise] 1. The science of photochemistry; the science of the chemic effects of light. 2 The study of radiant energy.

actinolyte (ak-tin'o-lit). 1. Any substance that is markedly changed by light. 2. An apparatus for concentrating the rays of electric light, or for generating the ultra-violet rays.

actinometer (ak-tin-om'et-er) [Gr. άκτις ray + μέτρον measure]. 1. An instrument for measuring the photochemic power of light. 2. An apparatus for measuring the penetrating power of actinic rays.

actinometry (ak-tin-om'et-re). The measurement of the photochemic power of light.

actinomycelial (ak"tin-o-mi-se'le-al). 1. Pertaining to the mycelium of an actinomyces. 2. Actinomycetic.

Actinomyces (ak-tin-o-mi'sēz) [Gr. ἀκτίς ray + μύκης fungus]. A genus of parasitic fungi having a radiating arrangement of the mycelium. A. bi'-color, found in a case of multiple brain abscess in dogs. A. bo'vis, the ray-fungus, is the cause of actinomycosis. A. farcin'ica. Same as Streptothrix farcinica. A. madu'ræ, a fungus which is

the causative agent in mycetoma or Madura foot.

A. necroph'orus. See Bacillus necrophorus.

Actinomycetaces (ak"tin - o - mi - se ta'se-e). A systematic family of the Actinomycetales. The members are filamentous forms often branched and sometimes forming mycelia. There are four genera Actinobacillus, Leptotrichia, Actinomyces, and Erysipelothrix.

Actinomycetales (ak"tin-o-mi-se-ta'lēs). A systematic order under the class Schizomycetes. The higher bacteria baving cells elongated, frequently filamentous, and with a tendency to the development of branching. There are two families: Actinomycetaceæ and Mycobacteriaceæ.

actinomycetic (ak"tin-o-mi-set'ık). Of, or caused by, actinomyces.

actinomycoma (ak"tin-o-mi-ko'mah) [actinomyces + Gr. -ωμα tumor]. A tumor formed by the action of actinomyces fungus.

actinomycosis (ak"tin-o-mi-ko'sis) [Gr. $\alpha \kappa \tau ls$ ray $+ \mu b \kappa \eta s$ fungus] A chronic infectious disease of cattle, sometimes transmitted to man, caused by $Actinom' \mu es$ bo' cis, and characterized by the formation of lumpy tumors on the jaws and tongue. The disease is attended by loss of strength and weight and by hectic fever, and the fungus may develop in the viscera, bone, and skin, as well as in the mouth and jaws.

actinomycotic (ak"tin-o-mi-kot'ik). Pertaining to or affected with actmomycosis.

actinomycotin (ak"tin-o mi'ko tin). A therapeutic preparation of cultures of Actinomyces, used in treating actinomycosis

actinon (ak'tin-on). See actinium emanation, under emanation.

actineueuritis (ak"tin-o-nu-ri'tis) [Gr. ἀκτίς ray + neuritis]. Neuritis caused by exposure to radioactive rays

actinophor (ak-tin'o-főr) [Gr. ἀκτls ray + φόροs bearing]. A mixture of 3 parts cerium dioxid and 1 part thorium dioxid: used as an x-ray diagnostic.

actinophytosis (ak"tın-o-li-to'sis). Streptotrichosis.

Actinopoda (ak-tin-op'o-dah) [Gr ἀκτίς ray + πούς foot]. A class of Sarcodina distinguished by slender pseudopodia which have axial filaments.

actinopraxis (ak-tin-o-praks'is) [Gr. ἀκτίς ray + πράξις doing]. The diagnostic and therapeutic use of radio-active rays.

actinoscopy (ak-tin-os'ko-pe) [Gr. ἀκτίς ray + σκοπείν to view]. Examination by means of the x-ray

actinostereoscopy (ak"tin-o-ste-re-os'ko-pe).

actinotherapeutics (ak-tin"o-ther-ap-u'tiks). Same as actinotherapy.

actinotherapy (ak"tin-o-ther'ap-e) [Gr. $\dot{\alpha}\kappa\tau is$ ray $+ \theta\epsilon\rho\alpha\pi\epsilon la$ treatment]. Treatment of disease by rays of light, especially actinic or chemic light.

actinotoxemia (ak"tin-o-tok-se'me-ah) [Gr. ἀκτίς ray + toxemia] Toxemia from the tissue destruction caused by ν-rays or other radio-activity.

action (ak'shim) [L. ac'tio] Any function or movement either of any part or organ or of the whole body. after-a., the negative variation of the electric current continuing for a short time in a tetanized muscle. a. of arrest, inhibition. buffer a. See buffer calorigenic a., the specific stimulus given to metabolism by such sub-

stances as thyroxin and adrenalin. **a.-pattern.** See under pattern. reflex a., any involuntary action produced by a stimulus that is conveyed to the nervous system and reflected to the periphery. tampon a. See buffer action.

activate (ak'tiv-āt). To render active.

activation (ak-tiv-a'shun). The act or process of rendering active, as in the purifying of sewage by means of activated sludge.

activator (ak'tiv-a-tor). A substance which renders some other substance active especially an inorganic substance which combines with an inactive enzyme to render it capable of effecting its proper reaction.

active (ak'tiv). Characterized by action; not passive; not expectant.

actol (ak'tol). Silver lactate, CH₃.CHOH.COOAg, a white, tasteless powder, soluble in 20 parts of water. It is used as an antiseptic in infectious diseases, sore throat, gonorrhea, etc., in 2 per cent. solution; also hypodermically in erysipelas in doses of \(\frac{1}{2} \) gr. (0.01 gm.).

acton (ak'ton). Ethyl orthoformate: used in whooping-cough.

actoprotin (ak-to-pro'tin). A proprietary casein preparation for injection in non-specific therapy.

actor (ak'tor). A substance which takes part in both primary and secondary chemical reactions.

actual (ak'chu-al) [L. actua'lis]. Real; not potential.

Actuarius (ak-tu-a're-us), John A Greek physician and writer who lived about the end of the thirteenth century.

acuclosure (ak-u-klo'zhur). Arrest of hemorrhage by means of a needle.

acuesthesia (ak-u-es-the'zc-ah). Acouesthesia.

acufilopressure (ak-u-fi'lo-presh-er) [L. a'cus needle + \(\beta'\) lum thread + \(pressu'ra \) pressure]. A combination of acupressure and ligation.

acuity (ak-u'it-e) [L. acu'itas sharpness]. Acuteness or clearness, especially of the vision.

aculeate (ak-u'le-āt) [L aculca'tus horny]. Covered with sharp points, pointed.

acumeter (ak-oo'met-er). See acoumeter.

acuminate (ak-u'min-āt) [L. acumina'tus]. Sharppointed.

acupressure, acupression (ak'u-presh-er, ak'u-presh-un) [L a'cus needle + pres'sio or pressura pressure]. Compression of a bleeding vessel by inserted needles.

acupuncture (ak-u-punk'tshur) [L. a'cus needle + punctu'ra a prick]. The insertion of needles into a part for the production of counterirritation.

acus (a'kus) [L.]. A needle or needle-like process.

acusector (ak-u-sek'tor) [L. acu with a needle + sec'tere to cut]. Kelly's name for an electric needle used like a scalpel in dividing tissues.

acusticus (ak-us'tik-us) [L.] The auditory nerve. acute (ak-ūt') [L. acu'tus sharp]. 1. Sharp; poignant. 2. Having a short and relatively severe course; not chronic

acutenaculum (ak-u-ten-ak'u-lum) [L.]. See nee-dle-holder.

acutorsion (ak-u-tor'shun) [L. a'cus needle + tor'sio a twisting]. The twisting of an artery with a needle for the control of hemorrhage.

acyanoblepsia (ah-si-an-o-blep'se-ah) [Gr. α priv. + κύανος blue + βλεψία vision]. Inability to distinguish blue tints.

acyanopsia (ah-si-an-op'se-ah). Same as acyanoblepsia.

acyclic (ah-si'klik). In chemistry, having an open-chain structure; aliphatic. See open-chain, under chain.

acyesis (ah-si-e'sis) [Gr. α priv. + κύησις pregnancy]. 1. Sterility in women. 2. Absence of pregnancy.

acykal (ah-si'kal). A compound of silver cyanid and potassium cyanid: used in the treatment of gonorrhea.

acyl (as'il). An organic acid radical.

acylation (as-il-a'shun). The introduction of an acid radical into a compound.

acystia (ah-sis'te-ah) [Gr. α priv. + κύστις bladder]. Absence of the bladder.

acystinervia, acystineuria (ah-sis-tin-er've-ah, ah-sis-tin-u're-ah) [Gr. a neg. + κύστις bladder + L. ner'vus or Gr. νεῦρον nerve]. Lack of nerve stimulus in the bladder.

Acystosporidia (ah-sis"to-spo-rid'e-ah) [Gr. α neg. + κύστις bladder + sporidia]. A group or order of animal parasites nearly related to the Hæmosporidia.

acytotoxin (ah-si-to-toks'in). A toxin in a crystalline form.

A. D. Abbreviation for anodal duration; also au'ris dex'tra, right ear; also axiodistal.

ad. A Latin preposition signifying to: much used as a prefix.

ad., add. Abbreviations for L. ad'de, add, or adde'tur, let there be added: used in writing prescriptions.

A. D. A. Abbreviation for American Dental Association.

adactylia, adactylism (ah-dak-til'e-ah, ah-dak'-til-izm) [Gr. α priv. + δάκτυλος finger]. Congenital absence of fingers or toes.

adactylous (ah-dak'til-us). Lacking fingers or toes, or both.

adalin (ad'al-in). A proprietary name for carbromal adamantine (ad-am-an'tin). Pertaining to the enamel of the teeth.

adamantinocarcinoma (ad-am-an"tin-o-kar-sin-o'mah). An adamantinoma which has become malignant.

adamantinoma (ad"am-an-tin-o'mah). A tumor developing within the alveolar border of the jaw from the paradental epithelial remains of the enamel organ. Called also cystadenoma adamantinum and epithelioma adamantunum.

adamantoblast (ad-am-an'to-blast) [adamant + Gr. βλαστός germ] An enamel-cell; one of the cells from which the enamel of the teeth is developed. Called also ameloblast.

adamantoblastoma (ad-am-an"to-blas-to'mah). Any tumor arising from the enamel organ.

adamantoma (ad-am-an-to'mah). Same as ad-amantinoma.

Adami's theory (ad-am'ēz) [John George *Adami*, Canadian pathologist, 1861-1926] See under theory.

Adamkiewicz's reaction (ah-dam-ke'viks) [Albert Adamkiewicz, pathologist of Vienna, 1850-1921]. See under reaction.

adamon (ad'am-ōn). Borneol dibromdihydrocinnamate. A sedative preparation used like the bromids.

Adam's apple. The projection at the forepart of the neck formed by the thyroid cartilage

Adams' operation, saw (ad'amz). 1. [William Adams, English surgeon, born 1820] See operation, saw. 2 [Sir William Adams, British surgeon, 1760–1829.] See operation.

Adams-Stokes' disease. See under disease.

Adansonia (ad-an-so'ne-ah) [after Michel Adanson, 1727–1806, French naturalist]. A genus of sterculiaceous trees. A. digita'ta is the baobab, a huge tree of Africa; found also in India; the leaves are febrifugal.

adaptation (ad-ap-ta'shun) [L. adapta're to fit].

1. The normal power of the eye to adjust itself to variations in the intensity of light. 2. Same as immunization. 3. The fitness of an organism for its environment, or the process by which it becomes fit. a.-product. See reaction substance, under

- substance. retinal a., the complete adjustment of the eyes to the surrounding illumination.
- adapter (ad-ap'ter). A device for connecting various parts of surgical instruments to one another.
- adaptometer (ad-ap-tom'et-er) [adaptation + Gr. μέτρον measure]. An instrument for measuring the time required for retinal adaptation.
- **ADC.** Abbreviation for anodal duration contraction. **A. D. C.** Abbreviation for axiodistocervical.
- adde (ad'e). Latin for "add."
- Ad. def. an. Abbreviation for L. ad defectio'nem an'imi, to fainting.
- Ad. deliq. Abbreviation for L ad deli'quium, to fainting.
- Ad. 2 vic. Abbreviation of L. ad du'as vi'ces, at two times, for two doses.
- Ad. grat. acid. Abbreviation for L. ad gra'tum acidita'tem, to an agreeable sourness.
- addephagia, adephagia (ad-ef-a'je-ah) [Gr. ἄδδην, ἄδην enough + φαγείν to eat]. 1. Gluttony. 2. Insatiable hunger.
- addict (ad'ikt). One who is given up to a habit, especially a drug habit.
- **addiction** (ad-ik'shun). The state of being given up to some habit, as a drug-habit. **drug a.,** habitual use of a drug; pharmacopsychosis.
- addiment (ad'im-ent). Same as complement.
- addisonism (ad'is-on-izm). A group of symptoms in pulmonary tuberculosis consisting of pigmentation and debility, but falling short of those of Addison's disease.
- Addison's anemia, disease, keloid, etc. (ad'isonz) [Thomas Addison, English physician, 1793–1860]. See under anemia, disease, keloid, etc.
- **Addison's planes** (ad'is-onz) [Christopher Addison, English anatomist, born 1869]. See under blane.
- **Addison-Biermer anemia.** Pernicious anemia. See under anemia.
- adducens oculi (ad-u'senz ok'u-li) [L.]. The internal rectus muscle of the eye. See rectus internus in muscles, table of.
- adducent (ad-u'sent). Performing adduction.
- **adduct** (ad-ukt') [L. addu'cere to draw toward]. To draw toward a center or toward a median line.
- **adduction** (ad-uk'shun). The act of drawing toward a center or toward a median line.
- adductor (ad-uk'tor) [L]. Any adducting muscle. See in muscles, table of.
- adelomorphous (ad-el-o-mor'fus) [Gr. ἄδηλος not evident $+ \mu \rho \rho \varphi \dot{\eta}$ form]. Not having a clearly defined form. See *cell*.
- adelphotaxy (ad-el'fo-taks-e) [Gr. $\delta\delta\epsilon\lambda\varphi\delta s$ brother $+\tau \dot{\alpha}\xi\iota s$ arrangement]. The assumption by certain motile cells of a definite position and arrangement.
- adenalgia (ad-en-al'je-ah) [Gr. άδήν gland + ἄλγος pain]. Pain in a gland.
- adenase (ad'en-ās) [Gr. ἀδήν gland + -ase]. An enzyme occurring in the spleen, pancreas, and liver, which converts adenin into hypoxanthin.
- adenasthenia (ad-en-as-the'ne-ah) [Gr. ἀδήν gland + α priv. + σθένος strength]. Deficient glandular activity.
 a. gas'trica, deficient glandular secretion in the stomach.
- adendric, adendritic (ah-den'drik, ah-den-drit'ik) [Gr. α neg. + δένδρον tree]. Having no dendrons.
- adenectomy (ad-en-ek'to me) [Gr. άδήν gland + ἐκτομή excision].
 1. Surgical removal of a gland.
 2. Excision of adenoid growths.
- adenectopia (ad-en-ek-to'pe-ah) [Gr. ἀδήν gland + ἔκτοπος displaced]. Malposition or displacement of a gland.

- adenemphraxis (ad-en-em-fraks'is) [Gr. ἀδήν gland + ἔμφραξις stoppage]. Glandular obstruction.
- adenia (ad-e'ne-ah) [Gr. ἀδήν gland]. 1. A chronic affection marked by great enlargement of the lymphatic glands. See lymphoma. 2. Same as pseudoleukemia. leukemic a., adenia with a leukemic state of the blood.
- adeniform (ad-en'if-orm) [Gr. ἀδήν gland + L. for'ma shape]. Resembling a gland.
- adenin (ad'en-in) [Gr. $\delta\delta\dot{\eta}\nu$ gland). A white crystalline base, 6-amino-purin, $C_5H_5N_5$, found in various animal and vegetable tissues. It is one of the decomposition products of nuclein and may be found in the urine. Adenin is non-poisonous, and occurs in the form of pearly crystals. **8.** hypoxanthin, a leukomain, $C_5H_5N_5 + C_4H_4$ N₄O, being a compound of adenin and hypoxanthin.
- adenitis (ad-en-i'tis) [Gr. ἀδήν gland]. Inflammation of a gland. acute epidemic infectious a. See glandular fever, under fever.
- adenization (ad-en-iz-a'shun) [Gr. άδήν gland].

 The assumption of an abnormal gland-like appearance; adenoid degeneration.
- adeno- [Gr. ἀδήν gland]. A prefix denoting relation to a gland or to glands.
- adeno-acanthoma (ad"en-o-ak-an-tho'mah). A tumor composed of glandular and squamous elements: called also adenocancroid.
- adenoblast (ad'en-o-blast) [Gr. ἀδήν gland + βλαστός germ]. 1. Any cell with a glandular or secretory function. 2. Any embryonic cell whence gland tissue is derived.
- adenocancroid (ad"en-o-kang'kroid). Adeno-
- adenocarcinoma (ad"en-o-kar-sin-o'mah). A carcinoma in which the cells are arranged in the form of glands; a malignant adenoma.
- adenocele (ad'en-o-sēl) [Gr. ἀδήν gland + κήλη tumor]. An adenomatous cystic tumor.
- adenocellulitis (ad"en-o-sel-u-li'tis). Inflammation of a gland and the cellular tissue around it.
- adenochondroma (ad"en-o-kon-dro"mah), pl. adenochondro"mata. Adenoma blended with chondroma.
- adenochondrosarcoma (ad"en-o-kon"dro-sar-ko'mah). A tumor containing the elements of adenoma, chondroma, and sarcoma.
- adenochrome (ad'en-o-krōm). The coloring-matter of suprarenal glands used in gout.
- adenocyst (ad'en-o-sist) [Gr. ἀδήν gland + κύστις bladder]. A cyst developed from rudimentary structures.
- adenocystoma (ad"en-o-sis-to'mah). Adenoma in which the glands are dilated into cysts.
- adenodynia (ad-en-o-din'e-ah) [Gr. ἀδήν gland + δδύνη pain]. Pain in a gland.
- adenofibroma (ad"en-o-fi-bro'mah). A tumor composed of connective tissue containing glandular structures
 a. edemato'des, a nasal polyp in which gland formation is prominent.
- adenofibrosis (ad"en-o-fi-bro'sis). Fibroid degeneration of a gland.
- adenogenous (ad-en-oj'en-us) [Gr. ἀδήν gland + γεν- to produce]. Originating from glandular tissue.
- adenography (ad-en-og'raf-e) [Gr. άδήν gland + γράφειν to write]. A treatise on the glands.
- adenohypersthenia (ad"en-o-hi-per-sthe'ne-ah) [Gr. ἀδήν gland + ὑπέρ over + σθένος strength]. Excessive glandular activity. a. gas'trica, excessive glandular secretion in the stomach.
- adenoid (ad'en-oid) [Gr. ἀδήν gland + είδος form].

 1. Resembling a gland.

 2. In the plural, hypertrophy of the adenoid tissue that normally exists in the nasopharynx of children and is known as the pharyngeal tonsil.
- adenoidectomy (ad-en-oi-dek'to-me) [adenoid + Gr. ἐκτομή excision]. Excision of adenoid growths.

- adenoiditis (ad-en-oi-di'tis). Inflammation of an adenoid.
- adenoids (ad'en-oidz). See adenoid.
- adenoliomyofibroma (ad"en-o-li"o-mi"o-fi-bro'-mah). A liomyofibroma containing adenomatous elements.
- adenolipoma (ad"en-o-lip-o'mah). A glandular tumor made up largely of fatty tissue.
- adenolipomatosis (ad"en-o-lip-o-mat-o'sis). A condition in which multiple lipomata develop in the neck, axilla, and groin.
- adenologaditis (ad''en-o-log-ad-i'tis) [Gr. ἀδήν gland + λογάδες eyes]. 1. Ophthalmia neonatorum. 2. Inflammation of the glands of the eyes and conjunctiva.
- adenology (ad-en-ol'o-je) [Gr. ἀδήν gland + λόγος discourse]. The sum of knowledge with regard to the glands.
- adenolymphitis (ad"en-o-lim-fi'tis). Same as lymphadenitis.
- adenolymphocele (ad"en-o-lim'fo-sēl) [Gr. άδήν gland + lymphocele]. Fatty infiltration along the lines of the lymphatic vessels
- **adenolymphoma** (ad"en-o-lim-fo'mah). Adenoma of a lymph organ.
- adenoma (ad-en-o'mah), pl. adeno'mata or adenom'as [Gr. ἀδήν gland + -ομα tumor]. A benign epithelial tumor with a gland-like structure, ι. e., the cells line gland-like depressions or cavities in the stroma.

 a. adamanti'na, adamantoma. a. alveola're, an adenoma formed on the type of an alveolar gland.

 a. des'truens, a malignant adenoma in the walls of the stomach. a. fibro'sum, fibro-adenoma.

 a. gelatino'sum, colloid goiter. islet a. See insuloma langerhansian a. See insuloma. malignant a., adenocarcinoma. racemose a., an adenoma whose structure resembles that of a racemose gland.

 a. seba'ceum, a neoplastic growth of the face, containing a mass of sebaceous glands and forming a reddish-yellow collection of papules. It is frequently associated with mental deficiency.

 a. sim'plex, simple hyperplasia of a gland

 a. sudorip'arum, adenoma of the sweat-glands; spiradenoma tub'ular a., an adenoma formed on the type of a tubular gland.
- adenomalacia (ad"en-o-mal-a'se-ah) [Gr. ἀδήν gland + μαλακία softness]. Softening of a gland.
- adenomatoid (ad-en-o'mat-oid). Resembling adenoma.
- adenomatome (ad-en-o'mah-tōm) [adenoma + Gr. τομή cut]. A kind of scissors used in removing adenoid and adenomatous growths.
- **adenomatosis** (ad-en-o-mat-o'sis). The condition in which a glandular tissue becomes the seat of exuberant adenomatous growths.
- **adenomycosis** (ad"en-o-mi-ko'sis) [adenoma + mycosis]. An endemic adenomatous disease of Brazil, caused by Adenomyces cruzi (Dias).
- adenomyofibroma (ad"en-o-mi-o-fi-bro'mah). A fibroma containing adenomatous and myomatous tissue.
- adenomyoma (ad"en-o-mi-o'mah) [Gr. ἀδήν gland + μῦς muscle + -ομα tumor]. A tumor presenting the usual structure of muscle-tissue, but containing glandular alveoli of endometrical type; called also endometrioma. a. psammopapilla're, a multiple papillary tumor in the broad ligament described by Pick.
- adenomyometritis (ad"en-o-mi-o-met-ri'tis). Inflammatory hyperplasia of the uterus resembling adenomyoma.
- adenomyosis (ad"en-o-mi-o'sis). The presence of endometrial elements in an abnormal place.
- adenomyositis (ad"en-o-mi-o-si'tis). An inflammatory hypertrophy of the uterus resembling adenomyoma.

- adenomyxoma (ad"en-o-mik-so'mah). A tumor composed of glandular and mucous tissue.
- adenomyxosarcoma (ad"en-o-mik"so-sar-ko'-mah). Myxosarcoma of a gland, or one blended with adenoma.
- adenoneure (ad'en-o-nūr) [Gr. ἀδήν gland + neuron]. A neuron controlling glandular action.
- adenopathy (ad-en-op'ath-e) [Gr $\delta\delta\dot{\eta}\nu$ gland + $\pi\dot{\alpha}\theta$ os disease]. Any disease of the glands, especially of the lymphatic glands.
- adenopharyngitis (ad''en-o-far-in-ji'tis) [Gr. ἀδήν gland + φάρυγξ pharynx + -ιτις inflammation]. Inflammation of the tonsils and pharynx.
- adenophlegmon (ad"en-o-fleg mon) [Gr. ἀδήν gland + phlegmon]. Phlegmonous adenitis.
- adenophthalmia (ad"en-of-thal'me-ah) [Gr. άδήν gland + δφθαλμός eye]. Inflammation of the methomian glands.
- adenosarcoma (ad"en-o-sar-ko'mah) Sarcoma of a gland, or adenoma with sarcomatous elements. embryonal a., a congenital growth of the kidney or suprarenal body of very complex structure, resembling a sarcoma.
- adenosarcorhabdomyoma (ad"en-o-sar"ko-rab"-do-mi-o'mah) [Gr. $\delta\delta\eta\nu$ gland $+ \sigma\delta\rho\xi$ flesh $+ \delta\alpha\beta\delta\sigma$ s rod $+ \mu\theta$ s muscle]. A tumor made up of elements of adenoma, sarcoma, and rhabdomyoma.
- adenosclerosis (ad"en-o-sklē-ro'sis) [Gr. $\dot{a}\delta\dot{\eta}\nu$ gland + $\sigma\kappa\lambda\dot{\eta}\rho\omega\sigma\iota_s$ hardening]. The hardening of a gland.
- adenosin (ad-en'o-sin). A pentosid derived from nucleic acid It is composed of ribose and adenin a.-deaminase, an enzyme which converts adenosin into inosin a.-hydrolase, an enzyme which converts adenosin into adenin and sugar.
- **adenosis** (ad-en-o'sis). Any disease of a gland or set of glands.
- adenotome (ad'en-o-tōm) [Gr ἀδήν gland + τομή cutting]. An instrument for cutting glands.
- adenotomy (ad-en-ot'o-me) [Gr. άδήν gland + τέμνειν to cut].
 1. The anatomy, incision, or dissection of glands.
 2. Excision of adenoids.
- adenotyphus (ad-en-o-ti'fus) [Gr. ἀδήν gland + typhus]. Typhus fever in which the lesions appear chiefly in the mesenteric glands and spleen.
- adenyl (ad'en-il). A radical, C₅H₄N₄, contained in adenin.
- adephagia (ad-e-fa'je-ah). Sec addephagia.
- adeps (ad'eps), gen. ad'ipis [L "lard"] Lard; the U S. P name for the purified internal fat of the abdomen of the hog. It is used in the preparation of ointments.
 a. anseri'nus, goose-grease.
 a. benzoina/tus, benzoinated lard; lard containing I per cent. of benzoin.
 a. lan'æ, woolfat, or lanolin.
 a. lan'æ hydro'sus, hydrous or purified wool-fat
 a. ovi'lus, sheep's suet, or tallow
 a. suil'lus, hogs' lard.
- adermia (ah-der'me-ah) [Gr. α priv. $+\delta\epsilon\rho\mu\alpha$ skin]. Congenital defect or absence of the skin.
- adermogenesis (ah-der-mo-jen'es-is) [Gr. α neg. + δέρμα skin + γένεσις origin]. Imperfect development of the skin.
- Adhatoda (ad-hat'o-dah). A genus of plants. The leaves of A. justi'cia or A. vas'ica are used in asthma, either by smoking in cigarettes or internally in powder or tincture. Dose of powder, 10 gr. (0.65 gm.).
- adhesion (ad-he'zhun) [L. adhæ'sio, from adhæ'rere to stick to]. 1. The abnormal joining of parts to each other. 2 Any band or patch by which parts abnormally cohere. 3. In dentistry the force that retains full upper dentures without vacuum chambers. attic a's, adhesions about the gall-bladder and pyloric region. primary a., healing by the first intention. secondary a., healing by the second intention.

adhesive (ad-he'siv). 1. Sticking or adhering closely.
 2. Characterized by adhesion of contiguous parts.

adhesol (ad-he'sol). A surgical dressing similar to collodion. It contains copal, benzoin, tolu balsam, thyme oil, alpha-naphthol, and ether.

▲dhib. Abbreviation for L. adhiben'dus, to be administered.

adiabatic (ah-di-ab-at'ik). Conducted without the evolution or absorption of heat.

adiactinic (ah-di-ak-tin'ik) [Gr. α neg + διά through + ἀκτίς ray]. Impervious to actinic rays. adiadochocinesia (ah-di-ah-do''ko-sin-e'se-ah). See adiadokocinesis.

adiadokocinesis, adiadokokinesis (ah-di-ah-do-ko-sin-e'sıs, or -kin-e'sıs) [Gr. α neg. + dua-dokokinesis]. Inability to arrest one motor impulse and substitute for it one that is diametrically opposite (Bagnisky).

Adiantum (ad-e-an'tum) [Gr. a priv. + διαίνειν to moisten]. A genus of ferns, popularly called maidenhair: pectoral demulcents.

adiaphoresis (ah-di-af-o-re'sis) [Gr. α neg. + διαφορεῖν to perspire]. Deficiency or absence of the perspiration.

adiaphoretic (ah-di-af-o-ret'ik). Causing suppression or diminution of perspiration.

adiapneustia (ah"di-ap-nūs'te-ah) [Gr. α neg. + διαπνεῦν to breathe through] Absence or diminution of the perspiration; anhidrosis.

adiathermancy (ah-di-ath-er'man se) [Gr. α neg. $+ \delta\iota\dot{\alpha}$ through $+ \theta\epsilon\rho\mu\eta$ heat]. The condition of being impervious to heat-waves.

adiathetic (ah-di-ath-et'ik) Occurring without reference to diathesis or constitutional tendency. adicity (ad-is'it-e). Valence.

adiemorrhysis, adiemorrhysis (ah-di-em-or'isis) [Gr. a neg + διά through + αξμα blood + ρίσις flow]. Stoppage of circulation of blood.

adipectomy (ad-ip-ek'to-me) [L. ad'eps + Gr. έκτομή excision]. The excision of a mass of adipose tissue, as from the abdomen or buttocks.

adipic (ad-ip'ik) [L. ad'eps fat]. Pertaining to fat. adipocele (ad'ip-o-sēl) [L. ad'eps fat + Gr. κήλη hernia]. A herma containing fat or fatty tissue.

adipocellular (ad"ip-o-sel'u-lar). Composed of connective tissue and fat.

adipoceratous (ad''ip-o-ser'at-us). Pertaining to or resembling adipocere.

adipocere (ad'ıp-o-sēr) [L. ad'eps fat + ce'ra wax]. A peculiar waxy substance formed during the decomposition of animal bodies, and seen especially in human bodies buried in moist places. It consists principally of fatty acids and their salts. Called also grave-wax.

adipochrome (ad-ip'o krōm). A hypothetical pigment manufactured directly by the fat of the body, which is increased in some diseases

adipofibroma (ad"ip-o-fib-ro'mah), pl. adipofibro'mata. Adipoma with fibrous elements.

adipogenic, adipogenous (ad-ip-o-jen'ik, ad-ip-oj'en-us) [L. ad'eps fat + gig'ncre to beget]. Producing fat or fatness.

adipohepatic (ad"ip-o-he-pat'ik). Same as adipo-

adipoid (ad'ip-oid) [L. ad'eps fat + Gr. olos form]. Same as lipoid.

adipol (ad'ip-ol). A proprietary mineral-fat preparation.

adipolysis (ad-ip-ol'is-is) [L. ad'eps fat + Gr. λbσιs solution]. The digestion or hydrolysis of fats.

adipolytic (ad-ip-o-lit'ik). Effecting the digestion of fats.

adipoma (ad-ip-o'mah), pl. adipo'mata. Cruveilhier's term for lipoma.

adipometer (ad-ip-om'et-er). An instrument for measuring the thickness of the skin.

adipopexia (ad-ip-o-pek'se-ah). Adipopexis.

adipopexic (ad"ip-o-pek'sik). Fixing or storing fat.

adipopexis (ad-ip'o pek-sis) [adeps fat + Gr. $\pi \hat{\eta} \xi \iota s$ fixation]. The fixation or storing of fats.

adipose (ad'ip-ōs) [L. adipo'sus fatty]. 1. Of a fatty nature; fatty; fat. 2. The fat present in the cells of adipose tissue.

adiposis (ad-ip-o'sis) [L. ad'eps fat]. Obesity or corpulence, an excessive accumulation of fat in the body. 2 Fatty degeneration. a. cerebra'lis, cerebral adiposity. See under adiposity. a. doloro'sa, a disease accompanied by painful localized fatty swellings and by various nerve lesions. The disease is usually seen in women, and may cause death from pulmonary complications. Called also Dercum's disease and paratrophy. a. hepat'ica, fatty infiltration or degeneration of the liver. a. orcha'lis, a condition of marked obesity developing in the course of tumor of the brain and associated with defective genital development. a. tubero'sa sim'plex, a disorder resembling adiposis dolorosa, marked by development in the subcutaneous tissue of fatty masses which are sometimes painful to pressure; called also Anders' disease. a. universa'lis, a deposit of fat generally throughout the body, including the internal organs and ductless glands.

adipositas (ad-ip-os'it-as) [L.]. Fatness. a. cerebra'lis. See cerebral adiposity, under adiposity. a. cor'dis. See fatty heart, 2d def. a. ex vac'uo, fatty atrophy.

adipositis (ad-ip-o-si'tis). Inflammation of the subcutaneous adipose tissue.

adiposity (ad-ip-os'it-e). The state of being fat; fatness, obesity. **cerebral a.**, fatness due to cerebral disease, especially disease of the pituitary body. See *Frohlich's syndrome*, under *syndrome*.

adiposogenital syndrome (ad-ip-o"so-jen-it'al). See Frohlich's syndrome, under syndrome.

adiposuria (ad-ip-o-su're-ah) [L. ad'eps fat + Gr. οὐρον urine]. The occurrence of fat in the urine; lipuria.

adipsia (ah-dip'se-ah) [Gr. α priv. $+ \delta l \psi \alpha$ thirst]. Absence of thirst, or abnormal avoidance of drinking.

aditus (ad'it-us) [L]. An entrance or approach.
a. ad an'trum, the recess which lodges the head
of the malleus and the greater part of the incus.
a. ad aquæduc'tum cer'ebri [B N A], the entrance to the aqueduct of Sylvius a. ad infundib'ulum, the passage from the third ventricle to
the infundibulum cerebri. a. glot'tidis, one of
the openings of the glottis. a. laryn'gis, the aperture of the larynx a. or'bitæ, the orbital opening.

adjustment (ad-just'ment). 1. The mechanism for raising and lowering the tube of a microscope. 2. A chiropractic word for the replacement of a subluxated vertebra for the purpose of relieving pressure on a spinal nerve absolute a., the accommodation of either eye separately.

adjuvant (ad'ju-vant) [L. ad'juvans aiding]. 1. Assisting other remedies. 2. An auxiliary remedy.

ad lib. Abb. of L. ad lib'ilum, at pleasure. adlumidin (ad-lu'mid-in) A crystalline alkaloid,

C₃₀H₂₉NO₉, from Adlu'mina cirrho'sa. adlumin (ad-lu'min). A crystalline alkaloid, OH₁-

C₃₇H₃₄NO₉(OCH₃)₂, from Adlu'mina cirrho'sa.

admaxillary gland (ad-mak'sil-a-re). See gland

admaxillary gland (ad-mak'sil-a-re). See gland. admedial, admedian (ad-me'de-al, ad-me'de-an). Situated near the median plane.

adminiculum (ad-min-ik'u-lum) [L.]. 1. A support. 2. The expansion of fibers extending from the superior pubic ligament to the posterior surface of the linea alba. Called also a. lin'ew al'bw.

admov. Abbreviation for L. admo've, admovea'tur, add, let there be added.

adnata (ad-na'tah). See lunica adnata.

4R

- ad nauseam (ad naw'se-am) [L.]. To the extent of producing nausea.
- **adnephrin** (ad-nef'rin). A preparation similar in all respects to epinephrin.
- **adneural** (ad-nu'ral) [L. ad near + Gr. νεθρον nerve]. Situated near a nerve.
- adnexa (ad-neks'ah) [L. pl]. Appendages or adjunct parts. a. oc'uli, the lacrimal apparatus and other appendages of the eye. a. u'teri, the ovaries and oviducts.
- adnexal (ad-neks'al). Pertaining to adnexa, especially the adnexa uteri.
- adnexitis (ad-neks-i'tis). Inflammation of the adnexa uteri.
- adnexogenesis (ad nex-o-jen'es-is) [adnexa + Gr. γένεσις formation]. The development in the embryo of the adnexa or accessory structures.
- adnexopexy (ad-neks'o-pek-se) [L. adnexa + Gr. πηξις fixation]. The operation of elevating and fixing the fallopian tube and ovary to the abdominal wall.
- **adnexorganogenic** (ad-neks"or-gan-o-jen'ik). Having its origin in the adnexa uteri.
- adolescence (ad-o-les'ens) [L adolescen'tia]. Youth; period between puberty and maturity.
- **adonidin** (ad-on'id-in). A poisonous glucosid, $C_M H_{10} O_0$, from $Ado'nis\ verna'lis$. It is an amorphous powder, and is used as a heart tonic and diuretic not unlike digitalin in its effects. Dose, $\frac{1}{8} \frac{1}{4}$ gr. (0.0075-0.015 gm.).
- **adonin** (ad-o'nin) A glucosid, C₂₀H₄₀O₉, from Ado'nis amuren'sis, a plant of Asia used like adonidin, but in somewhat larger doses.
- Adonis (ad-o'nis) [L.]. A genus of poisonous ranunculaceous plants, natives of Europe, Asia, and Africa. A. astva'lis and A. verna'lis are valuable cardiac stimulants. Dose of fluidextract, 1-2 min. (0.066-0.132 c.c.); of tincture, 10-30 min. (0.06-2 c.c.).
- adonit (ad'o-nit). Adonitol.
- **adonitol** (ad-on'it-ol) A pentahydric alcohol found in *Adonis vernalis* By oxidation it yields ribose.
- **adoral** (ad-o'ral) [L. ad near + os, o'ris mouth]. Near the mouth.
- Ad. pond. om. Abbreviation for L. ad pon'dus om'nuum, to the weight of the whole
- **adralgin** (ad-ral'jin). A local anesthetic containing adrenalin, cocain, and thymol.
- adrenal (ad-re'nal) [L. ad near + ren kidney].
 1. A suprarenal gland. See under gland. 2.
 Situated near the kidney. Marchand's a's, accessory suprarenal bodies in the broad ligament.
- **adrenalectomy** (ad-re-nal-ek'to-me) [adrenal + Gr. ἐκτομή excision]. Excision of the suprarenal bodies.
- adrenalin (ad-ren'al-in). Same as epinephrin. Its hydrochlorid is used locally in a 1:10,000 to 1:1000 solution in conjunctivitis, iritis, coryza, hayfever, etc., and is applied to mucous surfaces before operation to prevent bleeding. It is given internally as a cardiac stimulant and for the relief of asthmatic attacks. Dose, 5-30 min (0.333-2 c.c.).

 a. inhalant. a neutral oily solution of adrenalin chlorid for application to mucous membranes.
- adrenalinemia (ad-ren"al-in-e'me-ah) [adrenalin + Gr. alμa blood]. Presence of adrenalin in the blood.
- adrenalinoscope (ad-re-nal-in'o-skōp) [adrenalin + Gr. σκοπεῖν to see]. An apparatus for detecting the presence of adrenalin in a liquid.
- adrenalinuria (ad-ren"al-in-u're-ah). The presence of adrenalin in the urine.
- adrenalitis, adrenitis (ad-re-nal-i'tis, ad-re-ni'tis). Inflammation of the adrenals.
- adrenalone (ad-ren'al-ōn). A Retone, (HO)₂-C₀H₁COCH₂NHCH₃, obtained by oxidation of an adrenalin derivative.

- adrenin (ad-re'nin). A proprietary preparati from the medulla of the suprarenal gland.
- adreninemia (ad-ren-in-e'me-ah). Adrenalinem adrenochrome (ad-re'no-krōm). A sulphur copound of the suprarenal gland for the intertreatment of skin diseases.
- adrenodont (ad-ren'o-dont). A person showi adrenodontia.
- adrenodontia (ad-ren-o-don'she-ah) [adrenal Gr. δδούς tooth]. Tooth form indicative of ε renal predominance. The canines are large a sharp, and the occlusal surfaces of the teeth have brownish coloration.
- adrenotoxin (ad-ren-o-tok'sin). An antibo produced by injecting an animal with adrer tissue.
- adrenotrope (ad-ren'o-trop). A person exhibiti adrenotropism.
- **adrenotropic** (ad-ren-o-trop'ik). Pertaining to marked by adrenotropism.
- adrenotropism (ad-ren-ot'ro-pizm) [adrenal + ($\tau \rho \sigma \pi \dot{\eta}$ a turning] That type of endocrine contution in which the influence of the adrenals p dominates.
- adrenoxidase (ad-ren-ok'sid-ās). Oxygenized a renal secretion.
- adrenoxin (ad-re-noks'in). A substance suppoto give blood-plasm, its oxidizing powers bei formed in the lungs by combination of oxygwith the internal secretion of the adrenals.
- adrin (ad'rin). Epinephrin hydrate, an active pr ciple of the suprarenal gland: hemostatic a vasomotor stimulant.
- adrue (ad'ru-e). The Cype'rus articula'tus, a gra like plant of the West Indies, with a tonic, an emetic, and anthelmintic root. Dose of flu extract, 10–30 min. (0 666–2 c.c.).
- **adsorption** (ad-sorp'shun) [L. ad to + sor'bere suck]. The concentration of a gas or a substar in solution in a liquid on a surface in contact with the gas or liquid resulting in a relatively high contration of the gas or solution at the surfact This is especially important where the surface increased, as in porous (charcoal) or powdered sistances.
- Adst. feb. Abbreviation for L. abstan'te feb' while fever is present
- adsternal (ad-ster'nal). Situated near the st
- **ADTe.** Symbol for *tetanic contraction*, product by an application of the positive pole with the circuit closed.
- adterminal (ad-ter'min-al). Passing toward t end of a muscle said of an electric current.
- Adv. Abbreviation for L. adver'sum, against.
- **advance** (ad-vans'). To perform the operation advancement on.
- advancement (ad-vans'ment). Surgical detac ment, as of a muscle or tendon, followed by attachment at an advanced point, chiefly operation for strabismus. The round ligamer of the uterus have been sometimes advanced is retrodisplacement. capsular a., the artific attachment of a part of Tenon's capsule in su a way as to draw forward the insertion of ocular muscle. tendon a., advancement appli to a tendon.
- adventitia (ad-ven-tish'e-ah) [L.]. The outer co of an artery. See artery.
- adventitious (ad-ven-tish'us) [L. ad to + veni to come]. 1. Accidental or acquired, not nat ral or hereditary. 2. Found out of the normal usual place
- adynamia (ad-in-a'me-ah) [Gr a priv. + δύνα, might]. Lack or loss of the normal or vital powe adynamic (ad-in-am'ik). Characterized by adyr mia; asthenic.

47

A. E. German abbreviation for antitorin unit.

Aeby's plane (a'bez) [Christoph Theodor Aeby, Swiss anatomist, 1835-1885]. See plane.

æcology (e-kol'o-je). Same as ecology.

Aëdes (a-e'dēz) [Gr. ἀηδής unpleasant]. A genus of mosquitos with broad appressed scales on the head and scutellum. The palpi in the female are short, sparsely tufted, and have three segments of equal length. In the male the palpi are long and tufted. A. ægyp'ti, a species which breeds near houses and transmits yellow fever and dengue. It was formerly known as Stegomyia fasciata. A. sollic'itans, the common salt-marsh mosquito A. spen'ceri, a species found on the Saskatchewan prairies. A. sylves'tris, a species which breeds in the woods in early spring A. tænio-rhyn'chus, a small species resembling A. sollici'tans in appearance and habits

ædœocephalus (ed-e-o-sel'al-us) [Gr. alδοῖα genitals + κεφαλή head]. A monster-fetus with no mouth, nose like a penis, and but one orbit.

ædæology (e-de-ol'o-je). See edeology.

Eg. Abbreviation for L. α' ger α' gro, the patient.

ægagropilus. See egagropilus.

Ægle (e'glē). See bael.

ægophony (e-gof'o-ne). For this and other words beginning with a see egophony, etc.

ælurophobia (e-lu-ro-fo'be-ah) [Gr aĭλουροs cat $+ \varphi \delta \beta$ os fear]. A morbid dread or dislike of cats.

sequator (e-kwa'tor) Equator so. bul'bi oc'uli [B N A], equator of the eyeball, an imaginary line around the eyeball equidistant from the two poles so. len'tis [B N A], the periphery of the lens between the two layers of the zonula ciliaris.

aequum (e'kwum) [L. "equal"] Pirquet's term to represent the amount of food required to maintain weight under a given condition of activity.

aër (a'er) [Gr. ἀήρ air]. Same as atmos

aërarium (a-er-a're-um), pl aera'ria [L.]. An apparatus or arrangement for providing or securing fresh air

aërasthenia (a"er-as-the'ne ah) [Gr ἀήρ air + asthenia] Psychasthenia with loss of self confidence and mental worry, sech in drivers of aeroplanes

aërated (a'er-a-ted) [L. aera'tus] 1 Charged with air. 2. Charged with carbon dioxid

aëration (a er-a'shun) [L. a'er air] 1. The arterialization of the venous blood in the lungs 2. The charging of a liquid with carbon dioxid gas.

aëremia (a er e'me ah) [Gr ἀήρ aur + αἶμα blood]. Caisson disease — See under disease

aërendocardia (a"er-en-do-kar'de-ah) [Gr ἀήρ air + ἔνδον in + καρδία heart]. The presence of gas or air within the heart.

aërenterectasia (a"er-en-ter-ek-ta'ze-ah) [Gr ἀήρ air + ἔντερον intestine + ἔκτασις distention]. Distention of the intestines with air or gas

aërhemoctonia (a"er-hem-ok-to'ne-ah) [Gr. \dot{a} ήρ air + aΙμα blood + κτόνος killing]. Death caused by air in the veins.

aörial (a-e're-al). Pertaining to the air. a. sick-ness, aviators' disease. See under disease.

aëriferous (a-er-if'er-us) [L. a'er air + fer're to bear] Conveying air.

aëriform (a-er'if-orm) [L. a'er + for'ma form]. Like the air; gaseous.

Aërobacter (a-er-o-bak'ter). A genus of Bacteriace found in the intestinal canal of normal animals they produce acetyl-methyl-carbinol.

A. aëro'genes. Same as Bacterium aerogenes.

aërobe (a'er-ob) [Gr. ἀήρ air + βlos life]. A microorganism which can live and grow in the presence of free oxygen. Called also aerobion.

aërobia (a-er-o'be-ah). The plural of aerobion. **facultative a.**, micro-organisms which normally do not grow in the presence of oxygen, but which, under certain circumstances, acquire the power of

living in it. obligate a., organisms which always need oxygen in order to live.

aërobic, aërobiotic (a-er-o'bik, a"er-o-bi-ot'ik). Growing only in air or free oxygen.

aërobion (a-er-o'be-on). Same as aerobe

aërobioscope (a-er-o-bi'o-skōp) [Gr. ἀήρ air + βlos life + σκοπείν to view]. An apparatus for analyzing the bacterial composition of air.

aërobiosis (a"er-o-bi-o'sis). The condition of being aerobiotic.

aërobium (a-er-o'be-um). The singular of aerobia.

aërocele (a'er-o sēl) [Gr. ἀήρ air + κήλη tumor] A tumor formed by air filling an adventitious pouch, such as laryngocele and tracheocele.

aërochir (a'er o kêr). An aëroplane carrying a surgeon and radiologise with their equipment

aërocolia (a"er-o-ko'le-ah). Aerocoly.

aërocolpos (a"e-ro-kol'pos) [Gr ἀήρ air + κόλπος vagina]. Distention of the vagina with gas

aërocoly (a er-o'ko le) [Gr άήρ air + colon]. Distention of the colon with gas

aërocystoscope (a-er-o-sis'to-skop). Same as aero-urethroscope.

aërocystoscopy (a"er-o sis-tos'ko pe) [Gr. ἀήρ air + κύστις bladder + σκοπεῖν to inspect] Examination of the bladder with the aero urethroscope.

aërodermectasia (a"et-o der-mek ta'ze ah) [Gr ἀήρ air + δέρμα skm + ἔκτασις extension]. Subcutaneous or surgical emphysema.

aërodynamics (a''er-o-di-nam'iks) [Gr. ἀήρ air + δύναμις power] The science of gases in motion.

aërogen (a'er-o-jen). An aerogenic or gas-producing bacterium

aërogenesis (a"er o-jen'es is) [Gr ἀήρ air + γένεσις formation] Gas production

aërogenic (a"er o jen'ık). Producing gas

aërohydropathy (a''er-o hi drop'ath-e) [Gr ἀήρ air + ὕδωρ water + πάθος disease]. The therapeutic use of air and water

aërohydrotherapy (a"er o hi dro ther'ap-e) [Gr. $\dot{\alpha}\dot{\eta}\rho$ air + $\ddot{\nu}\delta\omega\rho$ water + $\theta\epsilon\rho\alpha\pi\epsilon\dot{\iota}\alpha$ treatment] The therapeutic use of air and water

aërometer (a-er om'et er) [Gr ἀήρ air + μέτρον measure] An instrument for weighing air or for estimating the density of air

aëromicrobe (a''er-o mi'ktōb) {Gr $d\eta\rho$ air + $\mu\kappa\rho\delta s$ small + βlos lite]. Any aerobic microorganism

aëropathy (a er-op'ath e) [Gr Δήρ air + πάθος discase]. The condition frequently seen in persons exposed to greatly altered vasometric pressure; caisson disease

aëroperitonia (a"er-o per it o'ne ah) [Gr &ήρ air + peritoneum]. Air or gas in the peritoneum.

aërophagy, aërophagia (a-cr-of'aj e, a''er o fa'-je-ah) [Gr. ἀήρ air + φαγεῖν to eat]. Spasmodic swallowing of air, followed by eructations seen in hysteria.

aërophilous (a-er-of'il us) [Gr &ήρ air + φιλεῦν to love] Loving air, requiring air for proper growth; said of bacteria

aërophobia (a er-o fo'be ah) [Gr. ἀήρ air + φόβοs fear] 1 Morbid dread of drafts of air 2 Morbid dread of being up in the air, acrophobia.

aërophore (a'er-o-fōr) [Gr ἀήρ air + φορεῖν to carry]. A device used in inflating with air the lungs of stillborn children.

aërophyte (a'er-o-fit) [Gr άηρ air + φυτόν plant].

An air plant, any microbe or other plant organism that derives its sustenance from the air.

aëroplethysmograph (a"er-o-pleth-iz'mo-graf)
[Gr. άήρ air + πληθυσμός enlargement + γράφειν to record]. An apparatus for registering the amount of air respired.

aëropleuria (a-er-o-plu're-ah) [Gr. άήρ air + πλευρά side]. Same as pneumothorax.

- aëroporotomy (a"er-o-po-rot'o-me) [Gr. Δήρ air + πόροs passage + τομή cutting]. Operation of letting air into the air-passages, as by intubation or tracheotomy.
- aëroscope (a'er-o-skop) [Gr. ἀήρ air + σκοπείν to inspect]. An instrument for the microscopic examination of the air in respect of its purity.
- aërosialophagy (a"er-o-si-al-of'aj-e). See sialo-aerophagy.
- aërosis (a-er-o'sis) [Gr. $\dot{\alpha}\dot{\eta}\rho$ air]. The production of gas in the tissues or organs of the body.
- aërostatics (a-er-o-stat'iks) [Gr. ἀήρ air + στατικόs causing to stand]. The science of gases in equilibrium.
- aërotaxis (a"er-o-taks'is) [(ir ἀήρ air + τάξιs order]. The attractive and repellent influence exercised by oxygen on aërobic and anaërobic bacteria respectively.
- aërotherapeutics, aërotherapy (a"er-o-ther-apu'tiks, a"er-o-ther'ap-e) [Gr ἀήρ air + θεραπεία treatment]. The use of air in treating diseases.
- **aërothermotherapy** (a"er-o-ther"mo-ther'ap-e) [Gr. $\dot{\alpha}\dot{\eta}_{\rho}$ air + $\theta\dot{\epsilon}\rho\mu\eta$ heat + $\theta\epsilon\rho\alpha\pi\dot{\epsilon}\dot{\alpha}$ treatment]. Treatment with currents of hot air.
- aërothorax (a-er-o-tho'raks) [Gr. ἀήρ air + θώραξ chest]. Same as pneumothorax.
- **aërotonometer** (a''er-o-to-nom'et-er) [Gr. ἀήρ air + τόνος tone + μέτρον measure]. An instrument for measuring the tension of the gases in the blood.
- aërotropism (a-er-ot'ro-pizm) [Gr. άήρ air + τρόπος turning]. The growth of organisms toward or away from a supply of air.
- **aërotympanal** (a-er-o-tim'pan-al) [L. a'er air + tym'panum drum]. Performed by the agency of the air and the tympanum.
- aëro-urethroscope (a"er-o-u-rēth'ro-skōp) [Gr. $\dot{a}\dot{\eta}_{D}$ air + urethroscope] A urethroscope by which the urethra is dilated with air before inspection.
- aëro-urethroscopy(a"er-o-u-rēth-ros'ko-pe). The
- use of the aero-urethroscope.

 aërozol (a-er'o-zol). An essential oil containing
- 25 parts of ozone.

 aërteriversion (a-er"ter-iv-er'shun) [Gr. ἀήρ air + τηρεῖν to hold + L. ver'sio turning]. Surgical eversion of the ends of a bleeding artery for the arrest of hemorrhage.
- aërteriverter (a-er"ter-iv-er'ter). An instrument for use in aerteriversion.
- aörtryckosis (a-er-trik-o'sis). Infection with Ba-cillus aertrycke (Bacterium choleræ suis).
- **888-, 80t-.** For words thus beginning, see those beginning es-, et-.
- ****sculapian** (es-ku-la'pe-an). Pertaining to Æsculapius, the god of medicine, or to the art of medicine. ****sculapius**. See under staff.
- **Æs'culus hippocas'tanum.** The horse-chestnut, the bark and seeds of which are antirheumatic and have been used in malaria.
- æsthesioneuro'sis. See esthesioneurosis.
- æt. Abbreviation for L. atas, age.
- æther (e'ther) See ether.
- æthyl (eth'il). Ethyl.
- seth'ylis aminoben'zoas. Ethyl aminobenzoate. seth'ylis chaulmoo'gras. Ethyl chaulmoograte.
- Actius (a-e'she-us). A Greek medical writer who flourished about 500 A.D., the author of a medical work in sixteen books, the Tetrabiblon.
- afebrile (ah-feb'ril). Without symptoms of fever.
- afenil (ah-fen'il). Calcium chlorid urea, CaCl₂-4(NH₂)₂CO, used intramuscularly and intravenously in hay-fever, asthma, and anaphylactic or allergic conditions. Dose, 10 c.c. of 10 per cent. solution.
- afermol (ah-fer'mol) A proprietary serum from the blood of horses, in powdered form, used in treating foul, purulent wounds and ulcers.

- afetal (ah-fe'tal). Without a fetus.
- affect (af-ekt'). A Freudian term for the emotional complex associated with a mental state.
- affection (af-ek'shun) I The mental element common to all states of emotion or feeling. 2. A morbid condition or diseased state.
- affective (af-ek'tiv). Pertaining to a feeling or mental state.
- affectivity (af-ek-tiv'it-e). The affective faculty.
- affectomotor (af-ek-to-mo'tor). Combining emotional disturbance with muscular activity.
- Affenspalte (af'en-spahl-te) [Ger.]. Same as apefissures. See under fissure.
- afferent (af'er-ent) [L. ad to + fer're to carry].

 Centripetal or esodic; conveying from the periphery to the center.
- afferentia (af-er-en'she-ah) [L.]. 1. Any afferent vessels, whether blood- or lymph-vessels. 2. The lymph-vessels in general
- affinity (af-in'it-e) [L. affin'itas relationship]. 1. Inherent likeness or relationship. 2. Chemic attraction. chemic a., the force that unites atoms into molecules. elective a., that force by which a substance chooses or elects to unite with one substance rather than with another. residual a., the force which enables molecules to combine into larger aggregates.
- afflux, affluxion (af'luks, af-luk'shun) [L. afflux'-us, afflux'io] The rush of blood to a part.
- **affusion** (af-u'zhun) [L. affu'sio]. The pouring of water upon a part or upon the body for reducing fever or correcting nervous symptoms.
- afral (af'ral). A crystalline substance used as a preservative for wine, beer, cider, etc.
- African coast fever. See Rhodesian fever, under fever.
- African lethargy (at'rik-an). See Congo trypanosomiasis, under trypanosomiasis.
- afridol (af'rid-ol). Sodium hydroxymercuric toluylate, C₆H₃(CH₂)CO ONa(HgOH), a tasteless white powdet, used in making a soap recommended for disinfecting the hands and for the treatment of parasitic skin diseases
- afrodyn (af'ro-din). A proprietary aphrodisiac, said to be a tincture of muirapuama.
- afsal (af'sal). See urasol.
- aftanin (af'tan-in). A brownish liquid used in veterinary medicine, and said to be an infusion of herbs with glycerin and formaldehyd.
- **after-birth** (af'ter-berth). The structure, consisting of the placenta and membranes, cast from the uterus after the birth of the child.
- after-brain (af'ter-bran). See metence phalon.
- after-cataract (af-ter-kat'ar-akt). See cataract.
- after-discharge. A response to stimulation in a sensory nerve which persists after the stimulus has ceased.
- after-image (al'ter-im-āj). A visual impression lasting after the image proper has ceased to be visible. A positive after-image is one in which the bright parts of the appearance remain bright, the dark parts dark. In a negative after-image the bright parts appear dark and the dark parts bright.
- after-impression (af"ter-im-presh'un). Same as after-sensation.
- **after-movement** (af'ter-moov'ment). Kohnstamm's phenomenon; spontaneous elevation of the arm by idiomuscular contraction after benumbing it by powerful pressure against a rigid object.
- after-pains (af'ter-pānz). The pains felt after the birth of the child, due to the contraction of the uterus.
- after-sensation (af"ter-sen-sa'shun). A sensation lasting after the stimulus that produced it has been removed.
- after-sound (af'ter-sownd). The hearing of sound after the cessation of the vibration that produced it.

after-stain (af'ter-stan). A stain used after another stain for the purpose of producing greater differentiation of details.

after-taste (af'ter-tast). A taste continuing after the substance producing it has been removed.

after-vision (af"ter-vizh'un). The perception of an after-image.

afunction (ah-funk'shun). Loss of function.

Ag. Chemic symbol of silver (argentum).

agalactia (ah-gal-ak'she-ah) [Gr. α neg. + milk]. Absence or failure of the secretion of milk.

agalactous (ah-gal-ak'tus). I Checking the secretion of milk 2. Not nursed, artificially fed.

agal-agal (ah"gal-ah'gal). Same as agar-agar.

agalorrhea (ah-gal-o-re'ah) [Gr. a priv. + γάλα milk + ροία flow]. Absence or arrest of the milk flow.

agamete (ah'gam-ēt) [Gr. α neg $+ \gamma \dot{\alpha} \mu o s$ marriage] An amebula which develops directly into an adult without sexual union.

agamic (ah-gam'ik) [Gr. a neg. + γάμος marriage]. 1. Asexual. 2. Reproducing without impregnation.

agamobium (ag-am-o'be-um) [Gr. α neg. + $\gamma \dot{\alpha} \mu os$ marriage + βios life] The asexual stage in the alternation of generations. Cf. gamobium.

Agamofilaria (ah-gam-o-fil-a're-ah). A genus of nematode parasites only imperfectly known. Species (Λ labia'lis, Λ. georgia'na, Λ. οc'uli, and A. conjuncti'væ) have been found occasionally in ulcerations and tumor formations

agamogenesis (ah-gam-o-jen'es-is) [Gr. a priv. + γάμος marriage + γένεσις birth]. Reproduction without sexual congress.

agamogenetic (ah-gam-o-jen-et'ik). Reproducing

agamogony (ah-gam-og'o-ne) [Gr. α not + γâμοs marriage + γόνοs off-pring] Reproduction without sexual process; schizogony.

Agamonema (ag-am-o-ne'mah) A group of immature and unidentified nematodes from fish, which have been found in urine.

Agomonemato'dum mi'grans. A minute nematode larva found in cases of creeping eruption in the southern United States

agamont (ah'gam-ont) [Gr. α not $+ \gamma \hat{a}\mu$ os marriage $+ \omega \nu$ being] Same as schizont.

agamous (ah'gam-us). Agamic.

agar (ag'ar). Agar-agar; also culture-media solidified with agar-agar (q. v) See also under culture-meæsculin a., nutrient agar containing o 5 per cent. of sodium taurocholate, or per cent of æsculin, and o o5 per cent. of ferric citrate ascitic a. See scrum a ascitic fluid a., trient agar, 600 cc., to which has been added distilled water, 210 cc, ascitic fluid, 90 cc, and nutrose, 6 gm. Ashby's a., a synthetic culturemedium for growing the azotobacter—It contains: mannit 20 gm., dipotassium phosphate 0 2 gm., magnesium sulphate o 2 gm., sodium chlorid o.2 gm., calcium sulphate o 1 gm., calcium carbonate 1 gm., water 1000 c c., and agar agar 15 gm. Avery's sodium oleate a. See sodium oleate a. bile salt a. (MacConkey), an agar culturemedium containing agar-agar 12 per cent, peptone 2 per cent., sodium taurocholate ½ per cent., lactose i per cent, and sufficient neutral red to color it. Biaxall's English proof a. See English proof a. blood a., nutrient agar containing about 10 per cent of citrated blood and used as a bacteriologic culture-medium especially for the gonococcus. **blood a.** (Washbourn), inclined nutrient agar tubes over which fresh sterile blood has been flowed. Braun's fuchsin a. fuchsin a. brilliant green a. (Conradi), a nutrient agar containing 0 00065 per cent. of brilliant green and 0.0065 per cent. of picric acid. brilliant green a. (Krumwiede), a beef-extract agar containing Andrade indicator 1 per cent.,

lactose I per cent., glucose o.I per cent., brilliant green I:350,000 to I:500,000. The reaction should be neutral to Andrade's indicator. brilliant green-bile salt a., a nutrient agar consisting of agar-agar 20 gm., peptone 20 gm, sodium staturocholate 5 gm., lactose 5 gm., brilliant green solution (1:1000) 20 c c., and picric acid (1 per cent. solution) 20 c.c. brilliant green-eosin a., a nutrient agar containing lactose 1 per cent. saccharose 1 per cent, eosin 0.06 per cent., and brilliant green 1:300,000. It is used for isolation of Bacterium typhosum. carbolized a., a nutrient agar containing 0.1 per cent. of phenol. china green a., a nutrient agar containing 15 c c. of a o 2 per cent. solution of china green per liter. **Conradi's brilliant green a.** See liter. brilliant green a Conradi-Drigalski's litmus nutrose a. See litmus nutrose a. dextrose a., nutrient agar containing 2 per cent. of dextrose. Drigalski-Conradi's litmus nutrose a. See litmus nutrose a. egg-albumen a., a mixture of egg-albumen broth 250 c.c., and nutrient agar 600 egg yolk a., a mixture of egg yolk 2 parts, and 1.5 per cent solution of agar-agar 5 parts. Put it under suction and shake for five minutes. E.-M.-B. a. See eosin-methylene-blue a. and Holt-Harris and Traque's E.-M.-B. c. English proof a., the same as French proof agar except that Witte's peptone is used in place of Chassaing's peptone. eosin-methylene-blue a., an agar used for the identification of Bacillus coli. A stock agar is made up containing peptone 10 gm., agaragar 15 gm, dipotassium phosphate 2 gm., and water 1000 c.c. For use, to each 100 c.c. of melted agar add 1 gm. of lactose, 2 c.c. of a 2 per cent. aqueous solution of eosin, and 2 c c. of a 2 per cent. aqueous solution of methylene-blue. Eyre's nutrose a. See nutrose a. Fawcus' brilliant green-bite salt a. See brilliant green-bile salt a. fish gelatin a., fish bouillon solidified with 0.5 per cent of agar-agar and 7 per cent of gelatin.
Flemming's oleic acid a. See oleic acid a.
French mannite a. See French proof a. French proof a., a nutrient agar containing Chassaing's pertone i per cent., agar-agar 1.3 per cent, and maltose or mannite 4 per cent. fuchsin **a.**, a nutrient agar containing 1 pet cent of lactose, 0.01 per cent. of fuchsin, and 0.025 per cent. of sodium sulphite. fuchsin-sulphite a. fuchsin a gelatin a., nutrient bouillon solidified with 10 to 12 per cent. of gelatin and 0 5 per cent. of agar-agar. glucose a. See destrose a. glucose formate a., nutrient agar containing 2 per cent of glucose and 0.4 per cent of sodium formate. glycerin a., nutrient agar containing 6 per cent. of glycerol Guy's citrated blood a. See blood a. haricot a., haricot bouillon solidified with 1½ per cent. of agar-agar. Heiman's serum a. See serum a. Hitchens's a., nutrient agar containing only o.1 per cent. of agar-agar. Holt-Harris and Teague's E.-M.-B. a., to nutrient agar add, just before using, } per cent. of saccharose and ½ per cent. of lactose. Then to each 100 c.c. add 2 c.c. of 2 per cent. eosin solution and 2 c c. of o 5 per cent. of methylene-blue. hydrocele a. See serum a. Kanthack and Stephens's serum See scrum a. Kitasato's glucose formate See glucose formate a. lactose litmus a., nutrient agar containing 2 per cent. of lactose and sufficient litmus to color the medium a bluish-purple color when cool The reaction should be PH 7.5 to 7.8. lead acetate a., nutrient agar containing 0.05 per cent. of basic lead acetate. Paratyphoid A does not change this medium; the other members of the group blacken it. Libman's serum a. See serum a. litmus nutrose a., the same as nutrose agar except that 3 per cent. of agar-agar is used and meat extract is used in place a. See malachite green a. MacConkey's bile sait a. See bile salt a. malachite green a., nutrient agar containing in each liter 10 gm. of dextrose and from 16 to 25 c.c. of a 1 per cent.

solution of malachite green. meat extract a., meat extract bouillon solidified with I per cent. of meat extract boundon solution a., meat infusion boullon solidified with 1 per cent. of agar-agar.

Moor's nitrogen-free a. See nitrogen-free a. nitrogen-free a., a culture-medium containing the following: magnesium sulphate 02 gm., monopotassium acid pho-phate 1 gm., sugar 10 gm, and agar 15 gm in tap-water 1000 c c. nutrient a., nutrient bouillon solidified with 1 per cent. of agar-agar. nutrose a., a nutrient agar containing 25 per cent. of blood-serum, 1 per cent. of nutrose, 1 per cent of lactose, 12 per cent. of litmus solution, and r per cent. of crystal-violet solution (1 1000) plain a. See nutrient a pleuritic a. See serum a. potato a., wash, pare, and slice one potato; boil for one hour; strain; add 10 gm of sugar and water to 1000 c.c; solidify with agar-agar. Russel's double sugar a., nutrient agar containing or per cent. of dextrose, I per cent of lactose, and sufficient litmus to color it Russel's double sugar a. with lead acetate, to nutrient agar add Andrade's indicator i per cent, lactose i per cent., glucose o i per cent, and basic lead acetate 005 per cent. Sabouraud's French mannite a. See French proof a. Sabouraud's French proof a. See French proof a. saccharose-mannitol a., nutrient agar containing I per cent of saccharose, or per cent. of mannitol, and r per cent. of Andrade's indicator. It is used in the study of intestinal bacteria. serum a. (Heiman), a mixture of 1 part of ascitic (pleuritic or hydrocele) fluid with 2 parts of nutrient agar. The latter should be made up with 3 per cent. of agar-agar so as to solidify after diluting with the fluid serum a. (Kanthack and Stephens), ascitic, pleuritic or hydrocele fluid is first heated with 0 2 per cent, of sodium hydroxid and then solidified with 0.5 per cent of agar-agar Either 1 per cent of glucose or \frac{1}{2} per cent of glycerol, or both may be added. serum a. (Libman), two volumes of agar containing 11 per cent. of agar-agar and 2 per cent. of dextrose is mived with one volume of ascitic, pleuritic, or hydrocele fluid. **serum a.** (Wertheimer), equal volumes of double strength nutrient agar and human blood-serum are mixed. **sodium** oleate a., to 100 c c. of a hormone agar is added 5 c c of a 2 per cent, solution of sodium oleate and r c.c. of a red blood-cell suspension in nutrient bouillon. It is used for growing influenza. **starch** a., a beef infusion agar made without either salt or peptone, but containing I per cent. of cornstarch. sulphindigotate a., nutrient agar containing 2 per cent. of glucose and o.1 per cent of sodium sulphindigotate tryp a., a meat infusion agar in which the chopped meat instead of being infused in the refrigerator overnight is digested with trypsin for five or six hours. **urine** a., freshly passed urme solidified with 12 to 2 per cent of agar-agar. Vedder's starch a. See starch a Washbourn's blood a. See blood a. Wassermann's ascitic fluid a. See ascata fluid a. Werbitski's China green a. See China Washbourn's China green a. Wertheimer's serum a. See serum a. whey a., whey obtained by curdling fresh milk with rennet is solidified with 1) to 2 per cent. of agar-agar. wort a., beer-wort solidified with 1 per cent of agar-agar. Wurtz's lactose-litmus **a.** See lactose-litmus a.

**gar-agar (ag"ar-ag'ar) [Singhalese]. A gelatinous galactan prepared from Ceylon moss (Gracilaria Irchenoides) and related East Indian red sea-weeds (Rhodophy-sea). It "dissolves" in boiling water and the colloidal dispersion thus formed has the property of becoming fluid at the boiling-point of water and of solidifying at about 30° C. It is highly resistant to all known digestive enzymes, but easily hydrolyzed by acids. It is extensively used as a solidifying agent in bacteriologic culture-media; it is used in Asia in the preparation of soups and jellies; and because of its indigestibility it is sometimes added to the diet to relieve constipation. phenol-

phthalein a., agar impregnated with 3 per cent. of phenolphthalein to augment its action in relieving constipation.

agaric (ag-ar'ık) [Gr. ἀγαρικόν] 1. Any mushroom; more especially any species of Agar'ıcus.
2. The tinder or punk prepared from dried mushrooms fly a., a poisonous species used like white agaric. larch a., purging a., white a., the Polyp'orus officina'lis, a spongy mass growing on larch trees. It is used to check excessive secretion, as in the night-sweats of phthisis, bronchorthea, and diarrhea. Dose, 3-10 gr (02-065 gm). surgeons' a., the Polyp'orus officina'lis from beech and oak trees—used as a hemostatic.

agaricin (ag-ar'is-in). 1. A poisonous principle, $C_{14}\Pi_{48}O_2$, from white agaric, Polyp'orus officina'lis, useful in the night-sweats of tuberculosis. Dose, $\frac{1}{2}I_1-\frac{1}{6}$ gr (0.0027-0.011 gm). 2 An impure extract of white agaric; used like true agaricin. Dose, $\frac{1}{12}-\frac{1}{6}$ gr. (0.0054-0.011 gm)

Agaricus (ag-ar'ik-us). A genus of mushrooms. See agaric. A. campes'tris, the common edible mushroom. A. musca'rius. See Amanila muscaria.

agastric (ah-gas'trik) [Gr α neg + γαστήρ stomach] Having no alimentary canal

agastroneuria (ah-gas-tro-nu're-ah) [Gr. α neg. + γαστήρ stomach + νεῦρον nerve]. Defective nervous tone in the stomach.

agathin (ag'ath-in) [Gr. ἀγαθός good]. A greenish-white, crystalline compound, C_aH₄(OH)CHN. N(CH₃)C_aH₅, of salicyl and α-methylphenylhydrazone. It is insoluble in water, but soluble in ether and alcohol it is used, like salicylic acid, in neuralgia and rheumatism. Dose, 8–10 gr. (0.52–0.65 gm.). Called also *comin*.

Agathinus (ag-ath-i'aus). A Greek physician who lived in the latter part of the first century. He was a pupil of Athenaus.

Agave (ag-a'vē) [L; Gr. $\&\gamma av\acute{\eta}$ noble]. A genus of amaryllidaceous plants A, america'na and other species afford an alterative, laxative, and diuretic juice, from which pulque (q, v) is prepared in Mexico Dose of fresh juice, 2 fl.oz. (60 c c), of fluidextract, 30-60 min. (2-4 c.c.).

 $\mathbf{Ag}_3\mathbf{C}_6\mathbf{H}_5\mathbf{O}_7$. Silver citrate.

 $\mathbf{AgC}_{3}\mathbf{H}_{5}\mathbf{O}_{3}+\mathbf{H}_{2}\mathbf{O}$. Silver lactate.

Agchylostoma. Same as Ankylostoma.

AgCl. Silver chlorid.

AgCN. Silver cyanid.

age, Binet. Mental age as determined by the Binet tests. mental a., an older person who in test shows only the mental ability of a normal child of ten years is said to have a mental age of ten

agenesia, agenesis (ah-jen-e'se-ah, ah-jen'es-is)
[G1 α priv. + γένεσις generation]. 1. Defective development or absence of parts. 2. Sterility or impotence

agenitalism (ah-jen'it-al-izm). A condition due to lack of the internal secretion of the testicles or ovaries, such as is seen in castrated persons.

agenosomia (ah-jen-o-so'me-ah). Monstrosity of the kind exemplified by the agenosomus.

agenosomus (ah-jen-o-so'mus) [Gr. α priv. + $\gamma \epsilon \nu \nu \hat{\alpha} \nu$ to beget + $\sigma \hat{\omega} \mu \alpha$ hody]. A monster-fetus with no genitals, or rudimentary ones, and eventration of the lower part of the abdomen.

agent (a'jent) [L. a'gens acting]. Any power, principle, or substance capable of acting upon the organism, whether curative, morbinc, or other. bacteriolytic a. See bacteriophage.

ageusia, ageustia (ah-gu'se-ah, ah-gūs'te-ah) [Gr. α neg. $+ \gamma \epsilon \hat{o} \sigma \iota s$ taste]. Lack or absence of the sense of taste.

agger (aj'er) [L. "mound"] An eminence. a. na'si [B N A] [L. "ridge of the nose"], an elevation at the anterior free margin of the middle turbinated bone. a. perpendicula'ris, eminentia fossæ

triangularis. a. val'væ ve'næ, an elevation of the wall of a vein over the site of a valve.

agglomerate, agglomerated (ag-lom'er-āt, ag-lom'er-a-ted) [I. agglomera'tus, from ad together + glo'mus mass]. Crowded into a mass.

agglutinable (ag-lu'tin-ab-l). Capable of agglutination.

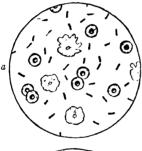

agglutinant (ag-lu'tin-ant) [L. agglut'inans gluing]. 1. Promoting repair by adhesion. 2. A plaster or gluey application which holds parts together during the process of healing. 3. Same as agglutinin.

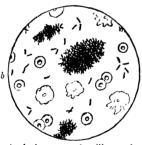

agglutination (ag-lu-tin-a'shun) [L. agglutina'tio].

1. The action of an agglutinant substance. 2. A process of union in the healing of a wound.

3. A phenomenon consisting of the collection into clumps of the cells distributed in a fluid. It is believed to be caused by specific substances called agglutinins, the molecules of which become attached to the cells. The phenomenon is seen when a bacterial culture is treated with serum immunized against the particular organism. Called also clumping. See also II utal list, under tests. acid a., the agglutination of micro-organisms at some particular hydrogen-ion concentration. chief a. See chief agglutinin group a., agglutination of various members of a group of biologically related organisms by an agglutinin specific for one of that group. For m-

stance, the specific agglutinin of typhoid baalli may agglutinate other members of the colon-typhoid group, such as B. coli and B. enteritidis ima., mediate healing by the first intention. macroscopic a., agglutinadone in tion test tubes or other containers large enough so that the flocculation and sedimentation of organisms the: can be seen with the unaided eye. mediate a., healing by the formation of plastic material microscopic

Agglutination a Bacilli unagglutinated, b, bacilli agglutinated

a., agglutination so done, usually by means of a hanging drop, that the clumping of the micro-organisms can be observed with the microscope. minor a., part
a. See partial agglutinin, under agglutinin

agglutinative (ag-lu'tin-a-tiv). Same as agglutinant.

agglutinator (ag-lu'tin-a-tor). Something which agglutinates, an agglutinin.

agglutinin (ag-lu'tin-in). An antibody found in an immune serum which when added to a homogeneous suspension of its specific micro-organism causes such a change that the organisms adhere to one another and thus form clumps (Gruber, Durham, 1896). An agglutinin which is specific for any organism is called its chief a, and one common to two or more organisms is known as a coagglutinin or group a. Called also paralysin. Cf. Widal lest, under test. chief a., the specific immune agglutini in the blood of an animal immunized against a disease or micro-organism. It is active at a higher dilution of the blood-serum

than are the partial agglutinins. Called also haupta. and major a. group a., an agglutinin which has a specific action on certain organisms, but which will agglutinate other species as well. haupta. See thet a. immune a., a specific agglutinin found in the blood as a result of recovering from the disease or of having been injected with the micro-organism. major a. See chief a. minor a. See partial a. normal a., a specific agglutinin found in the blood of an animal or of man that has neither had the disease nor been nijected with the causative organism. partial a., an agglutinin present in an agglutinative serum which acts on organisms that are closely related to the specific antigen, but in a lower dilution. Called also minor a, mit-a., neben a., para-agglutinin, and coagglutinin.

agglutinogen (ag-lu-tin'o-jen). 1. The agglutinable substance present in bacteria which, when in troduced into the animal body, stimulates the latter to form agglutinin. 2 The antigen or suspensions of cells used in conducting agglutination tests. a. A, the agglutinogen in the corpus les of blood group II. a. B, the agglutinogen in the corpuscles of blood group III.

agglutinogenic (ag-lu"tin-o-jen'ik). Pertaining to the production of agglutinins, producing agglutinins.

agglutinoid (ag-lu'tin-oid). An agglutinin which is unable to cause agglutination, but can still umte with its agglutinogen.

agglutinophore (ag-lu'tin-o-fōr) [agglutinin + Gr. φορός bearing]. That constituent of an agglutinin to which its agglutinating property is believed to be due.

agglutinoscope (ag-lu-tin'o-skōp) [agglutinin + Gr. σκοπεῖν to view] An apparatus for examining the tubes to ascertain the agglutination in the agglutination reaction.

agglutinum (ag-lu'tin-um). The agglutinable part of a bacıllus

agglutinumoid (ag lu-tin'u-moid). An agglutinin which has been heated, yet still retains its agglutinating power.

agglutogenic (ag-lu-to-jen'ik). Causing the formation of agglutinins.

agglutometer (ag-lu-tom'et-er). An apparatus for performing the Gruber-Widal test without the use of a microscope.

Aggred. feb. Abbreviation for L. aggredien'te feb're, while the fever is coming on.

aggregate, aggregated (ag'reg-āt, ag'reg-a-ted) [L. aggrega'tus, from ad to + grex flock]. Crowded or clustered together.

aggressin (ag res'in). A substance supposed to exist in the body of an infected animal and to increase the virulence or make aggressive the action of the micro-organisms. artificial a., a substance resembling an aggressin found when bacteria undergo autolysis.

aggressivity (ag-res-iv'it-e). The force by which an invading micro-organism strives to maintain itself against the defensive forces of the host.

aghara (ag-hah'rah). A diuretic and astringent compound used in dropsy, diarrhea, dysentery, etc. Dose of infusion, 1½-2 fl oz. (50-60 c.c.).

AgI. Silver iodid.

Agit. vas. Abbreviation for L agita'ta va'se, the vial being shaken.

agitographia (aj'it-o-gra'se-ah) [L. agita're to hurry + Gr. γράφειν to write] Excessive rapidity of writing with unconscious omission of words or parts of words. It is usually associated with agitophasia.

agitophasia (aj"it-o-fa'se-ah) [L agita're to hurry (Gr. + φάσις speech]. Excessive rapidity of speech in which words or syllables are unconsciously omitted or imperfectly uttered.

aglaukopsia (ah-glaw-kop'se-ah) [Gr. α priv. + γλαυκός green + ὄψις vision]. Green-blindness.

aglobulia (ah-glo-bu'le-ah) [Gr. α neg. + L. glo'bu-lus globule]. Decrease in the proportion of red blood-corpuscles.

aglossia (ah-glos'e-ah) [Gr. a priv. + γλῶσσα tongue].
1. Congenital absence of the tongue.
2. Absence of the power of speech.

aglossostomia (ah-glos-o-sto'me-ah) [Gr. α neg. + $\gamma \lambda \hat{\omega} \sigma \sigma \alpha$ tongue + $\sigma \tau \dot{\sigma} \mu \alpha$ mouth]. Absence of the tongue and closure of the mouth.

aglycone (ah-gli'kōn) [Gr α neg. + γλύκοs sweet + ών being]. The non-carbohydrate part of a glucosidic molecule.

agmatin (ag'mat-in). A base, guanidino-butylamin, NH₂ C(NH) NH(CH₂)₁ NH₂, obtained by Kossel (1910) from herring sperm, and found also in ergot. It is the amin formed from arginin by the loss of CO₂.

agmatology (ag-mat-ol'o-je) [Gr. ἀγμός fracture + λόγος treatise]. The sum of what is known regarding fractures.

agmel (ag'mel). A concentrated syrup made from the juice of the century plant, Ag'ave america'na.

agmen (ag'men), pl. ag'mina [L "a crowd"] An aggregation. a. peyeria'num, Peyer's patches

agminate, **agminated** (ag'min-āt, ag'min-a-ted) [L. ag'men a group]. Clustered.

agnail (ag'nāl). See hangnail.

agnate (ag'nāt). In Scotch law, the nearest relative on the father's side of one adjudged insane, and appointed guardian of the same.

agnathia (ag-na'the-ah) [Gr. a neg. + γνάθος jaw]. Congenital absence of a jaw.

Agnew's splint (ag'newz) [David Hayes Agnew, Philadelphia surgeon, 1818–1892]. See under splint

agnin (ag'nin) [L. ag'nus lamb] A wool-fat preparation used as an ointment base.

agnosia (ag-no'se-ah) [Gr. α neg. + γνοσία perception]. Loss of the power to recognize the import of sensory stimuli. The varieties correspond with the several senses and are distinguished as auditory, visual, olfactory, gustatory, and tactile. ideational a., loss of the special associations which make up the idea of an object from its component ideas.

agnus castus (ag'nus kas'tus) [L "chaste lamb"]. The chaste-tree, *Vi'tex ag'nus-cas'tus*: said to be anaphrodisiac. Its present use is chiefly homeopathic.

Ag₂O. Silver oxid.

agomensin (ag-o-men'sin). A preparation containing the lipamin of the corpus luteum: used to stimulate the men-trual flow.

agomphiasis (ag-om-fi'a-sis) [Gr. α neg. $+ \gamma o\mu \varphi los$ tooth]. Looseness of the teeth.

agonad (ag-o'nad) [Gr. α neg. + gonad] A castrated individual.

agonal (ag'o-nal). I. Pertaining to the deathagony. 2. Pertaining to terminal infection.

agoniadin (ag-o-ni'ad-in). A glucosid from *Plume'-ria suc'cuba* used in intermittent fever. Dose, 2-4 gr. (0.13-0.26 gm).

agony (ag'o-ne) [Gr. άγωνία]. 1. Severe pain or extreme suffering 2. The death-struggle.

agopyrin (ag-o-pi'rin). A proprietary remedy for influenza, said to contain salipyrin, ammonium chlorid, and cinchonin sulphate.

agoraphobia (ag-o-raf-o'be-ah) [Gr. $\dot{\alpha}\gamma\rho\rho\dot{\alpha}$ market-place $+ \varphi \dot{\alpha}\beta \sigma$ fear]. A feeling of fear at the thought of being alone in a large open space (Westphal, 1871).

Agostini's reaction or **test** (ag-os-te'nēz). See under *tests*.

agotan (ag'o-tan). A British preparation which is the same as atophan.

agouti (ah-goo'te). A rodent of the genus Dasyprocta, about the size of a rabbit, found in tropical America.

Ag, PO4. Silver phosphate.

agraffe (ag-raf') [Fr]. A clamp-like instrument for keeping together the edges of the wound in operation for harelip

agrammatica (ag-ram-at'ık-ah) Agrammatism.

agrammatism (ag-ram'at-izm) [Gr. ἀγράμματος unlettered]. Inability to utter words in their correct sequence, impairment of the power to speak grammatically and syntactically.

agranulocyte (ah-gran'u-lo-sīt). A non-granular leukocyte.

agranulocytosis (ah-gran"u-lo-si to'sis). Decrease in the granular leukocytes (granulocytes) of the blood. See agranulocytic angina, under angina

agranuloplastic (ah-gran"u-lo-plas'tik) [Gr. α neg. + granule + Gr. $\pi \lambda \dot{\alpha} \sigma \epsilon \iota \nu$ to form]. Forming non-granular cells only; not forming granular cells.

agraphia (ah-graf'e-ah) [Gr. α priv + γράφειν to write] Inability to express thoughts in writing, due to a central lesion absolute a., literal a., loss of the power to form even single letters.
acoustic a., loss of the power of writing from dictation.
a. amnemon'ica, agraphia in which letters and words can be written, but not so arranged as to express any idea. a. atac'tica, absolute agraphia. cere'bral a. Same as mental jargon a., agraphia in which the patient can write, but forms only senseless combinations of letters. literal a., inability to write letters of the alphabet mental a., agraphia due to inability to put thought into phrases. motor a., agraphia due to motor incoordination musical a.. loss of the power to write musical symbols. optic a., agraphia in which the patient cannot copy writing, but can write from dictation. verbal a., ability to form letters, but not able to write words.

agraphic (ah-graf'ık). Pertaining to, affected with, or of the nature of, agraphia.

agremia (ag re'me-ah) [Gr ἄγρα seizure + αἰμα blood] That condition of the blood which characterizes gout

agria (ag'1e-ah) [L; Gr ἄγριος wild]. An obstinate pustular eruption.

agridinium (ag-rid-in'e-um) A dye-stuff used in the treatment of trypanosomiasis.

agrimony (ag'rim-o-ne). The Agrimo'nta cupato'ria, a rosaceous plant astringent and tonic. Dose in substance, 30-60 gr. (2-4 gm); of fluid-extract, 30-120 min. (2-8 c c)

agriothymia (ag-re-o-thim'c-ah) [Gr. ἄγριος wild + θυμός mind]. Insane ferocity.

agrius (a'gre-us) [L. "wild"] Very severe: said of skin eruptions.

agromania (ag-ro-ma'ne-ah) [Gr. ἀγρός field + μανία madness]. Insane passion for solitude or for wandering in the fields.

agronomy (ag-ron'om-e) [Gr $\dot{a}\gamma\rho\dot{o}s$ field + $\nu\dot{o}\mu os$ law]. Rural economy, husbandry.

Agrostem'ma githa'go. Corn-cockle, *Lych'nis* githa'go, a plant whose seeds cause githagism

agrypnia (ah-grip'ne-ah) [Gr. ἄγρυπνος sleepless]. Sleeplessness or insomnia.

agrypnode (ah-grip'nod). Same as agrypnotic.

agrypnotic (ah-grip-not'ik) [Gr. ἀγρυπνοτικός]. 1. Promoting wakefulness. 2. A drug that prevents sleep.

Ag₂S. Silver sulphid.

Ag₂**SO**₄. Silver sulphate.

ague (a'gu) [Fr. aigu sharp]. Malarial fever, or any other severe recurrent symptom of malarial origin. brass-founders' a., a disease of brassfounders, with symptoms like those of malarial fever. brow-a., intermittent neuralgia of one

of the brows. a.-cake, enlargement of the spleen, due to malarial poisoning. catenating a., that which is associated with some other disease. a.-drop, Fowler's solution. dumb-a., ague with no well-marked chill, and with only a slight periodicity. face a., tic douloureux. quartan a., that in which the paroxysms are tic douloureux. seventy-two hours apart. quintan a., that in which the paroxysms are ninety-six hours apart. quotidian a., that in which there is a twentyfour hours' interval between the paroxysms. **shaking a.**, a severe form of malarial paroxysm, beginning with a marked chill. tertian a., that in which the paroxysms are forty-eight hours apart.

aguirin (ag-u'īr-in). Agurin.

agurin (ag'u-rin) A white, odorless powder, C₇H₇-N₄O₂Na + CH₃ CO ONa, soluble in water, formed by the combination of theobromin and sodium acetate, and containing 60 per cent of the former. It is a powerful diuretic. Dose, 15-45 gr. (1-3 gm)

A. G. V. Abbreviation for anilin gentian violet.

ah. The symbol of hypermetropic astigmatism.

Ahlfeld's sign (ahl'felts) [F Ahlfeld, German obstetrician, born 1843]. See under sign.

ahypnia, ahypnosis (ah-hip/ne-ah, ah-hip-no'sis) [Gr. a neg. + ὕπνος sleep]. Morbid wakefulness or insomnia

aichmophobia (āk-mo-fo'be-ah) [Gr. $ai\chi\mu\dot{\eta}$ spearpoint $+ \varphi \dot{\phi} \beta os$ fear]. An insane fear of sharpointed objects.

aïdoitis (a-id-o-i'tis). Same as vulvitis.

Ailantus (a-lan'tus) [L from Malacca name]. A genus of simarubaccous trees. The bark of A glandulo'sa is purgative, tonic, and anthelmintic. Dose of fluidestract, 10-60 min. (0.660-4 cc.); of tincture, 10-120 min. (0.666-8 c.c.); of extract, 4 gr. (0 25 gm).

ailment (al'ment). Any disease or affection of the body.

ailurophobia (i-lu-ro-fo'be-ah) [Gr. αἴλουρος cat + φόβος fear]. Morbid or insane fear of cats (Wier Mitchell).

ainhum (ān'hum, or, Portuguese, īn-yoon') [African] A disease, also called dactylolysis spontanea, thiefly of African countries, in which the little toe, and sometimes other toes, drop off The course of the disease is slow and the cause is unknown.

aiodin (ah-i'o-din) [Gr. α neg. + iodin]. A thyroid extract in the form of an odorless powder which contains only o 4 per cent. of iodin. It is used in myxedema.

air (ār) [L. a'er; Gr. ἀήρ]. The gaseous mixture which makes up the earth's atmosphere. It is an odorless, colorless gas, consisting of about 1 part by volume of oxygen and 4 parts of nitrogen, the proportion varying somewhat according to conditions. It also contains a small amount of carbon dioxid, ammonia, argon, nitrites, and organic matter. alkaline a., free ammonia. alveolar a., the residual air in the vesicles of the lungs complemental a., the air in excess of the tidal air which may be drawn into the lungs by forced inspiration dephlogisticated a., ovygen. fixed a., carbon dioxid. liquid a., air liquefied by great pressure. On evaporation it produces intense cold. Liquid air has been used to produce local anesthesia; also in the treatment of neuralgia and zoster. minimal a., the small amount of air caught in the alveoli of the excised lungs. reserve a. Same as supplemental a. residual a., air that stays in the lungs after the strongest possible expiration. stationary a., that which remains in the lungs during normal respiration. supplemental a., air which may be expelled from the lungs in excess of that normally breathed out. tidal a., the air that is carried to and fro in normal respiration.

air-dressing. Open wound treatment.

air-hunger. See under hunger.

airoform (i'ro-form). See airol.

airol (i'rol). A green antiseptic powder, C₆H₂(OH)₃-CO.O.Bi(I)OH, bismuth oxylodogallate: it is odorless, tasteless, and soluble in water and alcohol, and is used externally as an antiseptic and antigonorrheal in 10 per cent. emulsion or ointment. Called also airoform.

air-sac. See under vac.

Aitken's operation (a'kenz) [John Aitken, surgeon in Edinburgh, died 1790]. See under operation.

Aitken's pill (a'kenz) [Sir William Aitken, Scotch physician, 1825-1892]. See under pill.

ajacin (aj'as-in). A crystalline alkaloid, C₁₅H₂₁NO₄.-H₂O, fron. *Delphinium ajacis*.

ajacol, ajakol (aj-ak'ol). See thanatol.

ajaconin (aj-ak'o-nin). A crystalline alkaloid, C₁₇-H₂₉NO₂, from *Delphinium ajacis*.

ajowan (aj'o-an). A plant of India, Am'mi cop'ticum. The oil from its fruit contains thymol and cymene.

ak-. For words thus beginning see ac-.

akamushi disease (ak-am-oo'she) [Jap. aka red + mushi bug]. See tsutsugamushi disease, under disease.

akanthion (ak-an'the-on). See acanthion.

akaralgia (ak-ar-al'je-ah). A proprietary eliminant remedy containing sorlium sulphate, sodium salicylate, magnesium sulphate, lithium benzoate, and tincture of nux vomica.

akarkine (ak-ar'kīn). A proprietary albuminate of arsenic used in cancer.

akaryota, akaryote (ah-kar e-o'tah, ah-kar'e-ōt) [Gr α neg + κάρυον nucleus]. Non-nucleated cells

akatama (ak-at-am'ah). A form of chronic peripheral neuritis occurring in West Africa. It is marked by swelling, crythema, prickling sensations, burning, numbness, and sometimes excessive sweating.

akatamathesia (ah-kat"am-ath-e'zhe-ah) [Gr. α priv. + καταμάθησις understanding]. Inability to understand.

akatanoesis (ah-kat-ah-no'es-is) [Gr. α priv. + κατανοῦν to understand]. Inability to understand oneself (Heveroch, 1914).

akathisia (ah-kath-iz'e-ah) [Gr. α neg. + καθήσαι to set down]. A psychosis marked by morbid fear of sitting down and resulting inability to sit still; called also acativia and kathisophobia.

aker lampong (ah'ker lam'pong). The native name of a poisonous substance derived from Strychnos maineavi.

akidogalvanocautery (ak"id-o-gal"van-o-kaw-ter-e). Cauterization by the needle electrode.

akidopeirastic (ak"id-o-pi-ras'tik) [Gr. ἀκίς needle + πειραστικός testing]. Pertaining to or characterized by exploratory puncture with a needle.

akinesia, akinesis (ak-in-e'se-ah, ak-in-e'sis) [Gr α neg + κίνησις motion] Absence, loss, or weakness of motor function. a. al'gera, paralysis or voluntary abstinence from motion caused by the intense pain accompanying muscular movements (Moebius). It is often seen in neurasthenic states, a. amnes'tica, loss of the power of movement from disuse

akinetic (ah-kin-et'ik). 1. Affected with akinesia. 2. Diminishing the power of the muscles.

akiyami (ah-ke yah'me) Same as nanukayami.

akoasma (ak-o-as'mah), pl. akoas'mata. See acoasma,

akoin (ak-o'in) Same as acoin.

akoria (ah-ko're ah). See acoria.

akouphone (ak'00-fön). Same as acouophone, akromegaly (ak-ro-meg'al-e). See acromegalia,

akromikria (ak-ro-mik're-ah). Acromicria.

aktol (ak'tol). Same as actol.

Al. The chemic symbol for aluminum.

 A suffix used in forming the names of aldehyds, as chloral.

ala (a'lab), pl. a'la [L. "wing"]. Any wing-like process. a. al'ba media'lis, a white field near the ala cinerea of the fourth ventricle. a. au'ris, the pinna of the ear. a. cine'rea [B N A], an eminence on the floor of the fourth ventricle formed by the dorsal nucleus of the vagus called also vagal eminence, eminentia vagi, and trigonum vagi. a. il'ii, the upper, wing-like portions of a. lob'uli centra'lis [B N A], the ilium. the lateral portion of the central lobe of the cerebellum. a. mag'na, the great wing of the sphenoid. a. na'si, the cartilaginous flap on the outer side of each nostril. a. os'sis il'ium [B NA]. Same as a u'ti. a. par'va, the lesser wing of the sphenoid. a. pon'tis, either of two bands crossing the anterior end of the pyramid just below the pons a. of the sacrum, the broad, flat bones extending outward from the base of the sacrum. a. vespertilio'nis, "bat's wing," the broad ligament of the uterus. a. vo'meris, either of the edges of the groove on the superior border of the vomer.

ala-azar. See kala-azar.

alalia (ah-la'le-ah) [Gr. α neg. $+ \lambda \alpha \lambda \epsilon \hat{\iota} \nu$ to speak]. A defect of, or lack of the power of, speech, due to a local disease of the vocal organs.

alalic (ah-lal'ik). Pertaining to, affected with, or of the nature of alalia.

alangin (al-an'fin). A yellowish, amorphous alkaloid from Alan'gium

Alangium lamarkii (al-an'je-um lam-ar'ke-i). An East Indian plant whose root is emetic, antipyretic, and diuretic: used like ipecac.

alanin (al'an-in). An amino-acid, CH₃.CH(NH₂).-COOH, or aminopropionic acid (Stecker, 1840). **a. mercury**, mercury amino-propionate, [CH₃ -CH(NH₂)COO]₂Hg: used in doses of $\frac{1}{12}$ - $\frac{1}{6}$ gr. (0.005-0.01 gm.).

Al'anson's amputation [Edward Alanson, British surgeon, 1747-1823]. See amputation.

alant-camphor. See helenin.

alantin (al-an'tin). See inulin.

alantol (al-an'tol). An aromatic, oily liquid-C₁₀II₁₆, from elecampane a substitute for creosote in phthisis and bronchitis. Dose, ¹₆-½ min. (0.011-0032 c.c.). Called also inulol.

alanyl-leucin (al"an-il-lu'sin). A dipeptid, CH₃.-CH(NH₂) CO NH(COOH).CH.CH₂.CH(CH₃)₂.

alar (a'lar) [L. ala'ris].1. Pertaining to a wing or ala.2. Pertaining to the armpit; axillary.

alastrim (al-as'trim). Same as amaas.

alastrimic, **alastrinic** (al-as'trim-ik, al-as-trin'-ik). Pertaining to alastrim.

alate (a'lāt) [L. ala'tus winged]. Having wings; winged.

Alaymo (al-i'mo). **Marco Antonio.** A physician and medical writer of Sicily, 1590-1662.

alba (al'bah) [L. "white"]. The white substance of the brain.

albaigin (al-ba'ij-in). A preparation of silver nitrate and gelatose containing 15 per cent silver.

albargin (al-bar'jin). A light yellow powder containing 15 per cent. of silver, combined with a gelatose soluble in hot and in cold water: used in gonorrhea in 0.1 to 0.2 per cent. solution. It is sold in tablets of 3 gr. (0.2 gm.) each.

albargol (al-bar'gol). Same as albargin.

Albarran's test (al-bar-anz') [Joaquin Albarran, Cuban surgeon in Paris, 1860-1012]. See tests.

albation (al-ba'shun) [L. alba're to whiten]. The act of bleaching, or rendering white, as of discolored teeth.

albedo (al-be'do). Latin for whiteness. a. ret'-inse, edema of the retina.

Albee's operation (awl'bez) [Fred. Houdlett Albee, New York surgeon, born 1876]. See operation.

Albers-Schönberg disease [H E. Albers-Schönberg, German roentgenologist, 1865-1921]. Osteosclerosis fragilis.

Albert 102. A spirocheticidal arsenical prepara-

Albert's disease, operation, suture (al'berts) [G. Albert, Austrian surgeon, 1841-1900]. See under disease, operation, suture.

albertan (al'ber-tan). A fine odorless insoluble powder of yellowish-gray color, an aluminium polyphenolate. used as a dusting-powder for wounds in place of iodoform

albicans (al'bik-anz), pl. albican'tia [L]. Either one of the corpora albicantia.

albiduria (al-bid-u're ah) [L. al'bidus, whitish + Gr. οὐρον urine]. The discharge of white or pale urine.

albidus (al'bid-us) [L]. Whitish.

albine (al'ben). The diamidophosphid of egg yolk.

Albini's nodules (al-be'nēz) [Guiseppe Albini, Italian physiologist, born 1830]. See under nodule.

albinic (al-bin'ik). Pertaining to or affected with albinism.

albinism (al'bin-izm) [L. al'bus white] Abnormal, but not pathologic, whiteness of the skin, hair, and eyes, achromodetma. The affection may be either partial or total, in which latter case it is known as albinis'mus universa'lis. This condition is often attended with astigmatism, photophobia, and nystagmus.

albino (al-bi'no). A person affected with albinism.

albinuria (al bin-u're-ah). Same as albiduria.

albiodin (al-bi'o-din) A 12 5 per cent solution of iodin in a glycerin base used like alkaline iodids

albocinereous (al"bo-sin-e"re-us) [L al'bus white + eme"reus gray]. Containing both white and gray matter.

alboferrin (al-bo fer'in). A nutrient preparation of iron, phosphoric acid, and albumin, free from peptones and albumoses.

albolene (al'bo-lēn) [L. al'bus white + o'leum oil] An oily white substance derived from petroleum; used as a base for ointments, salves, etc. Liquid albolene is used in spraying the nose and throat.

albromin (al bro'min). A proprietary local anesthetic.

albuco (al-bu'ko). A proprietary concentrated albumin-milk.

albugin (al'bu-jin). A collective name for the albumins and globulins.

albuginea (al-bu-jin'e-ah) [L. from al'bus white]. A tough, whitish layer of fibrous tissue investing a part; especially a dense white membrane forming the immediate covering of the testicle. Called also tunica albuginea testis a. oc'uli, the sclera.
a. ova'rii, the outer layer of the stroma of the ovary. a. pe'nis, the outer envelop of the corpora cavernosa.

albugineotomy (al-bu-jin-e-ot'o-me) [albuginea + Gr. τομή cutting]. Incision of the tunica albuginea of the testicle done in chronic orchitis.

albugineous (al-bu-jin'e-us) [1. albugin'eus]. Pertaining to or resembling the white of the eyes.

albuginitis (al-bu-jin-i'tis). Inflammation of any one of the albugineous tissues or tunics.

albugo (al-bu'go) [L. from al'bus white]. A white corneal opacity.

albukalin (al-bu-ka'lin). A substance, $C_sH_{10}N_2O_\theta$, found in leukemic blood.

albulactin (al-bu-lak'tin). An easily soluble form of lactalbumin.

albumen (al-bu'men) [L. from al'bus white].

The white of eggs. 2. Old name for albumin. 3.

The nutritive matter stored within a vegetable seed.

albumimeter (al-bu-mim'et-er). Same as albuminimeter.

albumin (al-bu'min) **bumin** (al-bu'min) A simple protein found in nearly every animal and in many vegetable tissues. and characterized by being soluble in water and coagulable by heat. It contains carbon, hydrogen, nitrogen, oxygen, and sulphur, but its exact composition has not yet been determined, although the formula for crystallized albumin has been given as $C_{720}H_{1131}N_{218}S_5O_{248}$ acetosoluble a., a form of albumin soluble in acetic acid, sometimes found in the urine, called also Patcin's a. acid a. albumin altered by the action of an acid alkali a., any albumin which has been treated with an alkalı a. of Bence-Jones. See Bence-Jones protein, under proteir. blood-a. Same as serum-a. caseiniform a., a variety coagulated by acids, but not by heat. circulating a. that which is found in the fluids of the body circulating a., coagulated a., albumin altered by heat or chemic action so as to be insoluble in water, neutral salt solutions, or dilute acid and alkaline solutions derived a., any albumin altered by chemic action. egg-a., a variety derived from eggs and various animal fluids. hematin-a., a preparation of ox-blood rich in iron. muscle a., a variety found in muscle-juice. native a., any albumin normally present in the body. organ a., any albumin derived from or existing in any particular organ. Patein's a. See acetosoluble a. **serum-a.**, a variety found especially in the blood soap a., a combination of soap and albumin which is supposed to constitute the intracellular granules of soap; called also protein fat. a. tannate. See tannalbin. triphenyl a., a preparation of egg albumin and phenol used as a nutrient in bacteriologic study. vegetable a., any al bumin derived from a plant or of vegetable origin

albuminate (al-bu'min-āt). Any compound of albumin with a base or an acid, one of a class of proteins characterized by their solubility in dilute acids or alkalis, and by being insoluble in dilute salt solutions, water, or alcohol, called also derived albumin and derived protein. acid-a's are obtained by the action of a dilute acid on a native protein; alkali-a's, by the action of alkalis on native proteins

albuminaturia (al-bu'min-a-tu're-ah) [albuminate + urine] The presence of an excessive amount of albuminates in the urine

albuminiferous (al-bu-min-il'er-us) [albumin + L-fer're to bear] Producing albumin

albuminimeter (al-bu-min-im'et-er) [albumin + meter] An instrument used in determining the proportion of albumin present, as in the urine.

albuminimetry (al-bu-min-im'et-re) The determination of the proportion of albumin present.

albuminiparous (al-bu-min-ip'ar-us) [albumin + L. par'ere to produce] Producing albumin.

albuminocholia (al-bu"min-o-ko'le-ah) [albumin + Gr. χόλη bile]. The presence of protein in the bile

albuminoid (al-bu'min-oid) [albumin + Gr. είδος form]. 1. Resembling albumin. 2. Same as protein. 3. A member of the scleroproteins. These are simple proteins which are characterized by their insolubility. Examples are keratin, elastin, collagen.

albuminolysin (al"bu-min-ol'is-in) [albumin + lysin]. 1. A lysin which produces disintegration of albumins. 2. Same as sensibilisin.

albuminolysis (al-bu-min-ol'is-is). The splitting up of proteins; proteolysis.

albuminometer (al-bu-min-om'et-er). An al-buminimeter.

albuminone (al-bu'min-ōn) A principle from various albuminoids, soluble in alcohol and not coagulated by heat.

albuminoptysis (al''bu min-op'tis-is) [albumin + Gr. πτύειν to spit]. Presence of albumin in the sputum.

albuminoreaction (al-bu"min-o-re-ak'shun). The reaction of the sputum to tests for albumin; the presence of albumin (positive reaction) indicating pulmonary inflammation

albuminorrhea (al-bu"min-or-e'ah) [albumin + Gr. pola flow] Excessive excretion of albumins.

albuminose (al-bu'min-ōz). Same as albumose.

albuminosis (al-bu-min o'sis). An abnormal increase of the albuminous elements of the blood, or a condition resulting from such an increase.

albuminous (al-bu'min-us). Containing, charged with, or of the nature of, an albumin.

albuminuretic (al-bu"min-u-ret'ik) [albumin + Gr. οὐρητικός diuretic] 1. Causing or aggravating albuminuria. 2. A drug which causes a discharge of albumin in the urine.

albuminuria (al"bu-min-u're-ah) [albumin + Gr. οίρον urine] The presence of albumin in the urine. It indicates either a simple mixture of albuminous matters, as blood, with the urine, or a morbid state of the kidneys, permitting albumin to pass from the blood. **accidental a.** Same as adventitions a. **a. of adolescence**, cyclic albummuria. adventitious a., that which is not due to a kidney disease; pseudo-albuminuria. Bamberger's hematogenic a, albuminuria during the later periods of severe anemia. diac a., that which is caused by valvular disease. colliquative a., albuminuma which is at first mild, but increases suddenly and markedly during convalescence seen in typhoid fever. cyclic a., the appearance, at stated times each day, of a small proportion of albumin in the unne, observed dietetic a., principally in young persons digestive a., albuminuria produced by the use of certain foods emulsion a., albuminuria in which the turbidity does not disappear on filtra-tion heating or adding acid seen in puerperal eclampsia. false a., adventitious albuminuria. febrile a., albuminuria due to fever. functional a., any albuminuria which is not truly pathologic, such as that of pregnancy or of adolescence, called also cyclic, intermittent, and transi-tory albumnuria gouty a., the physiologic albumnuria in old people, with excessive secretion of urea. hematogenous a., hemic a., a variety due to abnormal condition of the blood. intermittent a. Same as cyclic a. intrinsic a. See true a. lordotic a., orthostatic dbuminuria due to lordotic deformity of the spine. mixed a., serous albuminuma occurring concurrently with adventitious albuminuria. nephrogenous a., that caused by renal disease. neurotic a., a variety dependent on nervous diseases. orthostatic a., orthotic a., a variety which passes away on prolonged rest in bed, but comes on again when the patient gets up; called also postural a. palpatory a., temporary a. produced by bimanual palpation of the kidneys paroxysmal a. See cyclic a. physiologic a., the occurrence of albumin in the urine when there is no disease. postural a. See orthostatic a. a. prætuberculo'sa, that occurring in the incipient stage of pulmonary tuberculosis. pseudo-a., adventitious albuminuria. regulatory a., albuminuria or the transitory elimination of albumin after excessive physical exercise, etc. renal a., albummuria due to disease of the kidneys. serous a., true a., that which is characterized by the discharge with the urine of some of the albuminous elements of the blood. transient a. See cyclic a. albuminuric (al"bu-min-u'rik). Pertaining to albuminuria.

albuminurophobia (al-bu"min u-ro-fo'be-ah) [al-buminuria + Gr. φόβος fear]. 1. An exaggerated fear of acquiring albuminuria 2. Overemphasis on the significance of albumin in the urine,

albumoid (al'bu-moid). Same as albuminoid.

albumone (al'hu-mon). A compound resembling proteose, supposed to occur in the blood.

albumoscope (al-bu'mo-skōp) [albumin + Gr. $\sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. An instrument for determining the presence and amount of albumin in the urine.

albumose (al'bu-mōs). Any primary product of the digestion of a protein, differing from albumin in not being coagulable by heat. The albumoses are convertible by further digestion into peptones. See antialbumose, deuteroalbumose, dysclbumose, hemialbumose, heleroalbumose, and protalbumose. Bence-Jones a. See Bence-Jones protein, under protein.

albumosease (al'bu-mōs-ās). An enzyme which splits up albumose.

albumosemia (al"bu-mo-se'me-ah) [albumose + Gr. alμa blood]. Presence of albumose in the blood.

albumosuria (al"bu-mo-su're-ah). The presence of an albumose (protcose) in the urine. Bence-Jones a., the presence of Bence-Jones protein in the urine. See Kahler's disease, under disease. Bradshaw's a. Same as Bence-Jones a. enterogenic a., albumosuria due to intestinal decomposition. hematogenic a., albumosuria due to some intoxication. myelopathic a. See multiple myeloma, under myeloma. pyogenic a., albumosuria due to the absorption of pus-cells or exudate, as in pneumonia, septic processes, etc.

alburn, alburnum (al'bern, al-ber'num) [L. "sap-wood"]. The softer part of the wood of exogenous plants, between the inner bark and the heart-wood. Called also sap-wood.

albusol (al'bu-sol). A proprietary sterile milk in ampules for injection in non-specific protein therapy.

albutannin (al-bu-tan'in). Same as tannalbin.

Alcaligenes (al-kal ij'in-ēz). A genus of Bacteriaceæ found in the intestinal canal of normal animals. They do not ferment carbohydrates or form acetyl-methyl-carbinol. A. militen'sis. Same as Bacterium melitensis. A. fæca'lis. Same as Bacterium fecalis alcaligenes.

alcapton (al-kap'ton). Same as homogentisic acid. alcaptonuria (al-kap-to-nu're-ah). Alkaptonuria. alcarnose (al-kar'nōs). A predigested artificial

food consisting of maltose and albumose.

alcarsin (al-kar'sin). Cacodyl oxid, a poisonous

brown liquid which ignites spontaneously on exposure to air: called also Cadet's fuming liquid.

Alcock's canal (al'koks) [Thomas Alcock, English

anatomist, 1784–1833]. See under canal.

alcogel (al'ko-jel). The gel form of an alcosol.

alcohol (al'ko-hol) [Arabic al-koh'l something subtle]. 1. Ethyl hydrate, C₂H₂OH, a colorless, volatile liquid, of aromatic odor, distilled from various products of vinous fermentation. It is used internally as a cardiac stimulant in debilitating diseases, such as diphtheria, typhoid fever, and the like. It is also used locally as an antiseptic and astringent, and for the preservation of anatomic and biologic specimens. In large doses alcohol is a narcotic poison, producing in-toxication with muscular incoordination, delir-ium, and coma. The alcohol of the pharmacopeia contains 92.3 per cent. by weight or about 94 9 per cent. by volume of absolute alcohol, and the dilute alcohol, 41.5 per cent. by weight or about 48.9 per cent. by volume. 2. Any one of a class of organic compounds formed from the hydrocarbons by the substitution of one or more hydroxyl groups for an equal number of hydrogen atoms, the term is extended to various substitution-products which are neutral in reaction and which contain one or more of the alcohol groups. They are distinguished as monacid or monatomic, diacid or diatomic, triacid or triatomic, according as they contain one, two, or three hydroxyl groups. absolute a., that which contains not over 1 per cent. by weight

of water. allyl a., a colorless, pungent, inflammable alcohol, hydroxypropylene, CH₂ CH.CH₂-OH. amyl a., amylic a., fusel oil, C₅H₁₁OH, obtained from corn-whisky and potato-whisky. It is poisonous and somewhat hypnotic has beer used in mental disorders and to relieve the cough of phthisis. Dose, 15-75 min. (1-5 c c.). **anisy**: **a.,** an alcohol, paramethyoxy-benzyl alcohol, C_8 H₁₀O₂, in pungent, shining prisms. **aromatic a**. any fatty alcohol in which a hydrocarbon of the phenyl series replaces a part of the hydrogen of the alcohol radical. **benzyl a.**, a colorless oily liquid, C₆H₅.CH₂.OH, phenylcarbinol or phenylmethylalcohol, occurring in balsam of Peru, balsam of Tolu, and styrax; it has local anesthetic properties. butyl a., a clear liquid, C₄H₉OH, from the molasses of beets. four isomeric forms are known camphyl a., borneol, or Borneo camphor. car**nauly13**., a constituent of carnauba wax and of wool-fat. **caustic a.**, sodium ethylate. **cery13**., a fatty alcohol, CH₃(CH₂)₂₄CH₂OH, from Chinese wool. **cety1 a.**, a fatty alcohol, C₁₆H₃₄O, from spermaceti cinnamyl a. See styron de-hydrated a., absolute alcohol. denatured a., alcohol to which have been added certain materials, such as methyl alcohol, benzin, or pyridin, which render it unfit for a beverage or for medicinal purposes, but do not prevent its use for industrial purposes. **deodorized a.**, one that contains 92 5 per cent. of absolute alcohol, and is free from fusel oil (amyl alcohol) and organic impurities. diacid a., diatomic a., any alcohol containing two by-droxyl groups. diluted a., a liquid containing 41.5 per cent by weight, or 48 o per cent by volume, of absolute alcohol. ethyl a., ethylic a., ordinary alcohol. fatty a., any hydrate of a hydrocarbon derived from the paraffin series. glyceryl a., glycyl a., glycerin. isoamyl a., the amyl alcohol of fermentation. It is poisonous. **isopropyl a.,** dimethyl carbinol, CH₃.CHOH.-CH₃, a homolog of ethyl alcohol, isomeric with normal propyl alcohol, a by-product of the petroleum and natural gas industry. ketone a., an alcohol which contains the ketone (carbonyl) group. methyl a., methylic a., wood-spirit, CH4O. monacid a., monatomic a., any alcohol conhoracted at, included the standard and the hydrocarbon. **phenyl-ethyl a.**, hydroxy-ethylbenzene, C₆H₅ CH₂ CH₂ OH, a local anesthetic. **phenylic a.** Same as *phenol* **polyglucosic a.**, an alcohol having the formula C₆nH₁₀n + 2O₂n. primary, secondary, tertiary a., one formed by the replacement of one, two, or three hydrogen atoms in carbinol with alkyls The primary alcohol tertiary is *CHO propyl a., a colorless liquid, CH₃.CH₂.CH₂.OH. unsaturated that is derived from unsaturated alkylens. wood a., methyl alcohol.

alcoholase (al'ko-ho-lās). A ferment which converts lactic acid into alcohol.

alcoholic (al-ko-hol'ık) [L alcohol'icus]. Pertaining to or containing alcohol.

alcoholism (al'ko-hol-izm) Alcohol poisoning: the morbid effect of excess in alcoholic drinks.
 acute
 a., drunkenness, or the temporary disturbance caused by excessive use of alcohol.
 chronic a., the state induced by repeated and long-continued excess in the use of alcohol

alcoholistation, alcoholization (al"ko-hol-ista'shun, al"ko-hol-iz-a'shun). Treatment by application or injection of alcohol.

alcoholize (al'ko-hol-iz).
t. To treat with alcohol.
2. To transform into alcohol.
3. To transform into a subtle powder.

alcoholomania (al"ko-hol-o-ma'ne ah) [alcohol + Gr. μανία mania]. Maniacal craving for intoxication by alcoholic beverages.

alcoholometer (al-ko-hol-om'et-er) [alcohol + Gr.

μέτρον measure]. An instrument for finding the percentage of alcohol in any substance.

alcoholophilia (al"ko-hol-o-fil'e-ah) [alcohol + Gr. φιλεῖν to love]. A morbid appetite for alcoholic drinks.

alcoholuria (al"ko-hol-u're-ah). The presence of alcohol in the urine.

alcoholysis (al-ko-hol'is-is) [alcohol + Gr. λύσις dissolution]. A process analogous to hydrolysis, but in which alcohol takes the place of water.

alcosol (al'ko-sol). A colloid solution with alcohol as the dispersion agent.

alcresol (al-kre'sol). A proprietary solution of cresylic acid used as an antiseptic.

alcresta emetin, a. ipecac (al-kres'tah). See emetin and ipecac.

aldamin (al-dam'in). A name given by Loele to the stable oxi lases.

aldehyd, aldehyde (al'de-hid) [L. al'cohol dehydra'tus dehydrated alcohol] 1. Any one of a large class of substances derived from the primary alcohols by oxidation and containing the group -CHO. 2. Acetic aldehyd. acetic a., a volatile liquid, CH₃ CHO, with a peculiar pungent odor. found in freshly distilled spirits, produces profound narcosis, and deleterious after-effects anesthetic and antiseptic properties, and produces narcosis when inhaled. **amylic a.** Same as valeral. **anisic a.**, a volatile oil, methoxyben-zaldehyd, CH₃ O C₆H₄.COH, obtainable from oil of anise and other volatile oils. benzoic a. See benzaldehyd butylic a., a substance, isobutylaldehyd, (CH₃)₂CH CHO. cinnamic a., a colorless aldehyd, C₀H₀(CH)₂COH, obtained from oil of cinnamon. Dose, ½-2 min. (0025-01 cc) cumic a., an aromatic volatile oil, paraisopropylbenzaldehyd, C₃H₇,C₆H₄,COH, from several essential oils. **formic a.** See *formaldehyd*. **glycollic a.** See *diose*. **salicylic a.**, a fragrant, colorless liquid, C₆H₄OH CHO, soluble in water, from volatile oil of species of Spiraa. It is diuretic and antiseptic. Dose, $1\frac{1}{2}-7\frac{1}{2}$ min. (0 1-0 5 c.c.). **valeric a.**, a colorless liquid, isovaleric aldehyd, (CH₃)₂CH.CH₂.CHO, having a pungent apple-like odor

aldehydase (al-de-hr'dās). A ferment from the liver which oxidizes certain aldehyds into their corresponding acids.

alder (awl'der) See Alnus. black a. See Prinos. aldin (al'din). An aldehyd base. See base.

aldohexose (al-do-hev'ōs). A hexose which is an aldehyd derivative, any one of a class of sugars which contain six carbon atoms and an aldehyd group, as glucose, mannose.

aldol (al'dol). Beta oxybutyric aldehyd, CH₃.CH-(OH).CH₂ CHO, a liquid having hypnotic properties.

aldopentose (al-do-pen'tōs). Any one of a class of sugars which contain five carbon atoms and an aldehyd group, as arabinose.

aldose (al'dōs). A sugar containing an aldehyd group.

aldosid, aldoside (al'do-sīd). A glucosid which on hydrolysis yields an aldose sugar.

aldoxim, aldoxime (al-doks'im). A compound formed by the union of an aldehyd with hydroxylamin

alecithal (al-es'ith-al) [Gr. α neg. $+\lambda \epsilon \kappa \iota \theta os$ yolk]. Having no yolk or only a small amount of yolk evenly distributed throughout the protoplasm, as in the ova of the mammals and many of the invertebrates

Alectoro'bius talaje. The chinche; a tick common in Mexico and Central and South America. It is a great pest, as it bites at night and suppuration often results

alembic (al-em'bik) [Arabic al the + Gr. ἄμβιξ cup]. A retort with a removable cap formerly used by chemists.

alembroth (al-em'broth). A compound, (NH₄-Cl)₂H₂Cl₂ + ₂H₂O, of mercuric and ammonum chlorids. It is used as an antiseptic dressing.

alemmal (ah-lem'al) [Gr. α neg. + λέμμα sheath]. Having no neurilemma said of a nerve-fiber.

Aleppo boil, A. button, A. evil. See button.

aletocyte (al-e'to-sit) [Gr. ἀλήτης wanderer + κύτος cell]. A wandering cell.

aletrin (al'et-rin). A concentration prepared from Al'etris farino'sa. Dose, \(\frac{1}{2} - 2 \) gr. (0016-0.133 gm.).

Aletris (al'et-ris) [Gr. ἀλετρίς corn-grinder]. A genus of hemodoraceous plants A. Jarino'sa, of North America, is tonic, anthelmintic, and diuretic used in dysmenorrhea and amenorrhea. Dose of fluidextract, 10 30 min. (0.6-2 c.c.); of tincture, 1-2 dr (4-8 c.c.).

aleucemia, aleucæmia (ah-lu-se'me-ah). See

aleudrin (al-u'drin). A white, crystalline compound, alphadichlorisopropylalcohol carbamate, CH₂Cl.CHO(CO.NH₂).CH₂Cl, analgesic and hypnotic. Dose, 10-20 gr (0.0 1 3 gm).

aleukemia, aleukæmia (ah-lu-ke'me-ah) [Gr. α neg $+\lambda\epsilon\nu\kappa\delta$ s white $+\alpha I\mu\alpha$ blood]. A deficiency in the proportion of polymorphonuclear leukocytes in the blood, aplastic anemia.

aleukemic (ah lu-ke'mik). r. Marked by aleukemia 2 Not marked by leukemia

aleukia (ah-lu'ke-ah) [Gr α neg. + λευκός white].

1 Aleukemia. 2. Absence of blood-platelets. a. hæmorrha/gica, aplastic anemia.

aleukocytic (ah lu-ko si'tik). Showing no leukocytes

aleukocytosis (ah-lu''ko-si-to'sis) [Gr. α neg. + λευκός white + κύτος cell] Deficiency in the proportion of white cells in the blood.

Aleurites (al-u-ri'tes). See candlenut oil, under oil.

Aleuro'bius fari'næ. Same as Tyroglyphus farine.

aleurometer (al-u-rom'et-er) [Gr ἄλευρον flour + μέτρον measure] An instrument for determining the value of flour for bread-making purposes

aleuronat (al-u'ro nat) [Gr ἄλευρον flour]. A kind of albumin used in preparing bread for diabetics

aleuroscope (al-u'ro skop). Same as aleurometer.

Alexander of Tralles. A Greek medical writer of Lydia, born 525 A D. He practised in Rome. He wrote twelve books upon pathology and the therapeutics of internal diseases.

alexanderism (al-ek-zan'der-izm) The insanity of conquest, or an insane belief that one is a great conqueror.

Alexander's crown, gold (al-ek-zan'derz) [Charles L. Alexander, American dentist]. See under crown and gold.

Alexander's operation (al-ek-zan'derz). See under operation.

Alexander-Adams operation [William Alexander, surgeon in Liverpool, James A Adams, surgeon in Glasgow] See under operation.

alexeteric (al-eks et-er'ik) [Gr. ἀλεξητήρ defender]. Good against infection or poison.

alexia (ah-lek'se-ah) [Gr. α neg. + λέξις word]. Word-blindness, inability to read, due to a central lesion. motor a., alexia in which the patient understands what he sees written or printed, but cannot read it aloud. musical a., loss of the ability to read music, music-blindness. optical a., that in which the patient has lost the power to comprehend the significance of what he sees written or printed. Called also sensory a. and visual a.

alexic (al-ek'sik). Having the properties of an alexin.

alexin (al-ek'sin) [Gr. ἀλέξειν to help, to ward off].

1. Same as complement. 2. Any defensive protein (Buchner). As now used the term is synonymous

with complement. a. fixation. See fixation of complement. leukocytic a. See leukin.

alexinic (al-ek-sin'ik). Pertaining to or having the properties of an alexin.

alexipharmac (al-ek-sif-ar'mak) [Gr ἀλέξειν to repel + φάρμακον poison]. 1. Warding off the ill effects of a poison. 2. An antidote or remedy for poisoning.

alexipyretic (al-ek"sip-i-ret'ik) [Gr. ἀλέξειν to ward off + πυρετός fever]. τ. Preventive of fevers 2. A febrifugal medicine.

alexocyte (al-eks'o-sit) [Gr. ἀλέξειν to ward off + κύτος a cell]. A cell of the animal organism secreting alexins. The term was formerly applied to cosmophil cells.

alexofixagen (al-ck-so-fik'saj-en). An antigen which induces the production of complement-fixing antibodies.

alexofixagin (al-ek-so-fik'saj-in). The complement-fixing antibody produced by injecting alexofixagen.

alexofixin (ak-ek-so-fik'sın). Same as alexofixagın.
alformin (al-for'min). A mixture of free formic acid and aluminum formate, Al(HCOO)₂OH· used like aluminum acetate.

Algse (al'je) [L. "seaweeds"]. A group of cryptogamous plants, in which the body is unicellular or consists of a thallus, including the seaweed and many cellular fresh-water plants.

algal (al'gal) Of, pertaining to, or caused by Algae.

alganesthesia (al-gan-es-the'ze-ah) [Gr. ἄλγος pain + anesthesia]. Analgesia

algaroth (al'gar-oth) [from V Algarotti, its inventor, 1710-1764]. Oxychlorid of antimony: emetic and purgative, but little used

algedonic (al-je-don'ık) [Gr ἄλγος pain + ἡδοψή pleasure]. Pertaining to both pleasure and pain.

algeoscopy (al-je-os-ko-pe) [Gr ἄλγος pain + σκοπεῖν to examine] 1. Physical examination by pressure, to ascertain whether such pressure produces pain 2. [L. al/gor cold + Gr. σκοπεῖν to examine] Cryoscopy.

algesia (al-je'ze-ah) [Gr. ἄλγησις pain]. Sensitiveness to pain; hyperesthesia

algesic (al-je'sik). Painful.

algesichronometer (al-je"ze-kro-nom'et-er) [Gr. ἄλγησις pain + χρόνος time + μέτρον measure]. An instrument for recording the time required to produce a paintul impression.

algesimeter (al-je-sim'et-er) [Gr ἄλγησις pain + μέτρον measure] An instrument used in measuring the sensitiveness to pain as produced by pricking with a sharp point **Björnström's a.**, an apparatus for determining the sensitiveness of the skin. **Boas' a.**, an instrument for determining the sensitiveness over the epigastrium.

algesiometer (al-je-se-om'et-er). Same as algesimeter.

algesthesia (al-jes-the'ze-ah). Pain sensibility; algesthesis.

algesthesis (al-jes-the'sis) [Gr. ἄλγος pain + αἴσθησις feeling]. The perception of pain; any painful sensation.

algetic (al-jet'ik). Painful.

algicide (al'jis.īd) [al'ga + L. ca'dere to kill]. Destructive to algae, also a substance which is destructive to algae

algid (al'jid) [L. al'gidus]. Chilly or cold.

algin (al'jin). See alginic acid, under acid.

alginuresis (al-jin-u-re'sis) [Gr ἄλγος pain + οὔρησις urination]. Painful urination.

algioglandular (al"je-o-glan'du-lar). Pertaining to glandular action resulting from painful stimulation.

algiometabolic (al''je-o-met-ab-ol'ik). Pertaining to metabolic changes resulting from painful stimulation

algiomotor (al"je-o-mo'tor). Producing painful movements, such as spasm or dysperistalsis.

algiomuscular (al''je-o-mus'ku-lar). Causing painful muscular movements.

algiovascular (al"je-o-vas'ku-lar). Pertaining to vascular action as the result of painful stimulation

algiron (al'jir-on). A proprietary preparation of algin and iron, used for anemia and chlorosis.

algogenesia (al"go-jen-e'ze-ah) [Gr. άλγος pain + γεννῶν to produce] The condition in which the sight or memory of pain produces pain.

algogenic (al-go-jen'ik). 1. [Gr. ἄλγος pain + γεννῶν to produce.] Causing pain. 2. [L. al'gor cold + Gr. γεννῶν to produce] Producing cold.

algogenin (al-go-jen'in) [L. al'gor cold + Gr. γεννάν to produce]. A substance obtained from fermented animal matter, causing a fall of temperature when injected into animals.

algolagnia (al-go-lag'ne-ah) [Gr. ἄλγος pain + λαγνεία lust]. Abnormal and distorted activity of sexual impulse toward persons of opposite sex with a desire for experiencing or causing pain, including sadism, masochism, etc.

algometer (al-gom'et-er) [Gr. ἄλγος pain + μέτρον measure]. An instrument for testing the sensitiveness of a part to pressure pain.

algopan (al'go-pan). A preparation containing in pure form the total alkaloids of opium.

algophilia (al-go-fil'e-ah). See algophily.

algophily (al-gof'il-e) [Gr. ἀλγος pain + φιλεῖν to love]. Sexual perversion marked by a desire for experiencing pain.

algophobia (al-go-fo'be-ah) [Gr. ἄλγος pain + φόβος dread]. Morbid or insane dread of pain.

algopsychalia (al-go-si-ka'le-ah) [Gr. ἄλγος pain + ψυχή mind]. A condition of melancholia with perverted imaginary perceptions of sounds and sights which cause dread, despair, and inclination to suicide. Called also psychoalgalia.

algor (al'gor) [L]. A chill or rigor, coldness.

algoscopy (al-gos'ko-pe) [L. al'gor cold + Gr. σκοπείν to see]. Same as cryoscopy.

algosis (al-go'sis). Presence of Algæ or fungi in a part of the body.

algovascular (al-go-vas'ku-lar). Same as algio-vascular.

Ali Abbas (ah'le ab'as). A celebrated Persian physician of the latter part of the tenth century. He wrote the "Royal Book" (Al-Maliki), a comprehensive treatise upon medicine.

Ali ben Iza (ah-le ben i'zah). Λ noted Arabic ophthalmologist of the first half of the eleventh century. He wrote "Book of Memoranda for Eyedoctors." He is also known as Jesus Haly.

Ali ben Rodhwan or Rodoam (ah-le ben ro'-dwan, ro'do am). A noted Arabian physician of Egypt (about 1068 A. D.) He wrote a commentary upon the works of Hippocrates and Galen.

Alibert's disease, keloid (al-e-berz') [Jean Louis Alibert, French physician, 1766-1837]. See disease and keloid.

alible (al'ib-l) [L. alib'ilis]. Nutritive; assimilable as a food.

alicyclic (al-i-sīk'lik). Having the properties of both aliphatic and cyclic substances.

alienation (āl-yen-a'shun) [L. aliena'tto]. Insanity or mental derangement.

alienism (āl'yen-izm) [L. alie'nus alien]. The study or treatment of mental disorders.

alienist (āl'yen-ist). An expert in the treatment of insanity

aliform (al'if-orm) [L. a'la wing + for'ma shape]. Shaped like a wing.

aliment (al'im-ent) [L. alimen'tum]. Food, or nutritive material.

alimentary (al-im-en'ta-re). Pertaining to aliment.

- alimentation (al"im-en-ta'shun). The act of giving or receiving nutriment. artificial a., the giving of food or nourishment to persons who cannot take it in the usual way. forced a. r. The feeding of a person against his will. 2. The giving of more food to a person than his appetite calls for. rectal a., the administration of concentrated nourishment by injection into the rectum.
- **alimentology** (al-im-en-tol'o-je). The science of nutrition.
- alimentotherapy (al-im-en-to-ther'ap-e) [aliment + Gr. $\theta\epsilon\rho\alpha\pi\hat{\epsilon}\hat{i}a$ treatment]. Dietetic treatment, treatment by systematic feeding.
- alinasal (al-in-a'sal). Pertaining to the ala nasi alinement (al-in'ment). The line of adjustment of the teeth.
- alinjection (al-in-jek'shun). Repeated injection of alcohol for preserving anatomic specimens.
- aliphatic (al-if-at'ik) [Gr ἀλειφαρ oil] Pertaining to an oil; a term applied to the "open-chain" or fatty series of hydrocarbons. See open chain, under chain.
- alipin (al-i'pin). Same as alypin.
- alismin (al-is'min). An extractive from Alis'ma planta'go, or water plantain: said to be useful in renal disease, epilepsy, and chorea.
- alisphenoid (al-is-fe'noid) [ala + sphenoid]. 1.
 Pertaining to the greater wing of the sphenoid.
 2. A cartilage in the fetus on each side of the basisphenoid. It afterward develops into the greater part of the great wing of the sphenoid.
- alival (al'iv-al). An organic iodin compound containing about 63 per cent, of iodin—used as a substitute for inorganic iodids in doses of 5 grains (0.0324 gm.). It is 3-iodo 1-2-dihydroxypropane, CH₂I.CHOH.CH₂OH.
- alizarin (al-iz'ar-in) [Arabic ala sara extract]. A red, crystalline dye, 1, 2-dihydroxyanthraquinone, C₆H₄(CO)₂C₆H₂(OH)₂, obtained from coal tar and from madder. Its compounds are used as indicators. a. monosulphonate, an indicator with a PH range of 3.7-4.2. a. No. 6. Same as purpurin. a. red, the sodium salt of alharim monosulphonate. a. yellow. See under yellow a. yellow G is an indicator with a PH range of 10.1 to 12.1.
- alizarinopurpurin (al-iz-ar-in-o-pur'pu-rin). Purpurin.
- **alkagen** (al'kaj-en). A proprietary lozenge of bismuth, used as an antacid in hypochlorhydria
- alkalemia (al-kal-e'me-ah) [alkali + Gr αίμα blood]. Decrease of the hydrogen-ion concentration of the blood; a condition in which the reaction of the blood is abnormally alkaline
- alkalescence (al-kal-es'ens). Slight or incipient
- alkalescent (al-kal-es'ent). Having a tendency to alkalinity.
- alkali (al'kal-i) [Arabic al-qaliy potash]. Any one of a class of compounds which form soluble soaps with fatty acids, turn red litmus blue, and form soluble carbonates. They are the hydroxids of potassium, sodium, lithium, rubidium, cesium, and ammonium fats a. albuminate, a substance derived by the action of some alkali on albumin. a. blue. See under blue. caustic a., any solid hydroxid of a fixed alkali. a. disease. See tularemia. fixed a., any of the alkalies except ammonium. a. reserve. See under reserve. vegetable a., any alkaloid of vegetable origin. volatile a., ammonia, NH3, also, ammonium hydroxid.
- **alkalimeter** (al-kal-im'et-er) [alkali + meter]

 An instrument for measuring the alkali contained in any mixture.
- alkalimetry (al-kal-im'et-re) The measurement of the alkalis present in any substance. Engel's a., a method of determining the alkalinity of the blood by titrating a diluted specimen with normal

- tartaric acid solution until it reddens litmus-paper. The amount of tartaric solution necessary to produce the result indicates the degree of alkalinity of the blood.
- alkaline (al'kal-in) [L. alkali'nus]. Having the reaction of an alkali. a. earth. See under carth. a. reaction.
- **alkalinity** (al-kal-m'it-e). The fact or quality of being alkaline.
- **alkalinization** (al-kal-in-iz a'shun). The process of rendering a thing alkaline.
- alkalinize (al'kal m-īz). To render alkaline.
- alkalinuria (al-kal-in-u're-ah) [alkaline + urine]. An alkaline condition of the urine.
- alkalion (al-k-Ye-on). Hydroxyl ion. See under ion.
- **alkalipenia** (al-kal-i pe'ne-ah) [alkali + Gr πένης poor]. A condition in which the alkali reserve of the body is below normal.
- alkalithia (al-kal-ith'e ah). A proprietary effervescent remedy used in rheumatism and allied conditions.
- alkalization (al-kal-iz-a'shun). The act of making alkaline.
- alkaloid (al'kal-oid) [alkali + Gr. eloos form]. One of a large group of organic, basic substances found in plants. They are usually bitter in taste and phystologically active. Examples are: atropin, caffein, confin, morphin, nicotin, quinin, strychnin animal a., a ptomain or leukomain. artificial a., an alkaloid that is made artificially by chemic processes cadaveric a., putrefactive a., a ptomain.
- alkalometry (al kal-om'et re) [alkaloid + Gr. μέτρον measure] The dosimetric administration of alkaloids
- alkalosis (al kal-o'sis). Excessive alkalinity of the body fluids, increased alkali reserve in the blood and other body tissues acapnial a., alkalosis due to washing out of carbon dioxid from the blood by overventilation of the lungs, as in forced breathing.
- **alkalotic** (alkalot'ik). Pertaining to or characterized by alkalosis
- alkamin, alkamine (al'kam m) An alcohol which contains an amido group.
- alkane (al'kān). A paraffin hydrocarbon.
- **alkanet** (al kan-et) [Arabic] The root of *Alkan'na* (Anchu'sa) tincto'ria, attording a red dye.
- alkanin, alkannin (al-kan'ın). Λ resinous, darkred coloring-matter from alkanet.
- alkapton (al-kap'ton) Same as homogentivic acid.

 alkaptonuria (al-kap-to-nu're-ah) fulbapton +
- alkaptonuria (al-kap-to nu're-ah) [alkapton + Gr. οὖρον urine]. The occurrence of alkapton in the urine The presence of alkapton in the urine is indicated by a dark color on standing or on the addition of an alkali
- **alkarhein** (al kar-c'in) A proprietary alkaline clivir of rhubarb and pancreatm.
- alkasal (al'kas-al). Aluminum and potassium salicylate, said to be a valuable astringent and antiseptic.
- **alkathymol** (al-kath-r'mol). An alkaline antiseptic for use on mucous membrane.
- alkene (al'kēn). An olefin.
- alkresol (al kre'sol). A proprietary solution of cresylic acid; used externally as a germicide and disinfectant.
- alkyl (al'kil). Any univalent aliphatic alcohol radical.
- alkylogen (al-kil'o-jen). An alkyl ester of any one of the halogen acids, e. g., ethyl chlorid.
- all or none. The law, discovered by Bowditch (1871), that the heart muscle, under whatever stimulus, will contract to the fullest extent or not at all.
- allachesthesia, allachesthesia (al-ak-es-the'-ze-ah) [Gr. ἀλλαχη elsewhere + αΐσθησις feeling].

- The sensation of touch experienced at a poin remote from the point touched.
- allantiasis (al-an-ti'as-is) [Gr. ἀλλᾶs sausage]. Sausage-poisoning, or botulism; a condition attended with colic, diarrhea, vomiting, and vertigo, produced by poisoning with putrid or fermented sausages.
- **allantochorion** (al-an"to-ko're-on). The true chorion as distinguished from the primitive chorion. It consists of a blending of the outer wall of the allantoic sac with the primitive chorion.
- **allantogenesis** (al-an-to-gen'es-is). The formation and development of the allantois
- allantoic (al-an-to'ik). Pertaining to the allantois.
- **Bllantoid** (al-an'toid) [Gr. ἀλλᾶs sausage + ϵίδοs form]. 1. Resembling the allantois. 2. Sausage-shaped.
- **allantoidean** (al-an-toi'de-an). Any animal which in the embryo possesses an allantois.
- **allantoidoangiopagus** (al-an-toi"do-an-je-op'-ag-us). Omphaloangiopagus.
- **allantoin** (al-an'to-in). A crystallizable substance, the diurcid of glyoxylic acid, C₄H₆N₄O₃, from allantoic fluid, fetal urine, and many plants. Allantoin may also be formed by the oxidation of uric acid. It has been employed to encourage epithelial formation in wounds and ulcers.
- allantois (al-an'to-is) [Gr. ἀλλᾶs sausage + είδοs form] A sac which in early fetal life springs out from the hind-gut of the embryo. It afterward arches around so as to envelop the embryo completely, and fuses with the subzonal membrane to form the chorion and placenta.
- **Illantotoxicon** (al-an-to-toks'ik-on) [Gr. άλλᾶs sausage + τοξικόν poison]. The poison of decaying sausages. It is a ptomain which is formed during the process of decomposition.
- allelocatalytic (al-cl"o-kat-al-it'ik). Catalysing each other. Two organisms placed in a drop of culture-medium may reproduce from four to twenty times as fast as when one organism only is introduced, probably because of some allelocatalytic substance given off by each which catalyses reproduction in the other.
- **tilelomorph** (al-el'o-morf) [Gr. δλλήλων of one another + μορφή form]. One of a pair of alternative hereditary units or characters either one of which may appear or fail to appear in any particular individual. See *Mendel's law*, under *law*.
- tllelomorphic (al-el-o-mor'fik). Pertaining to an allelomorph; mendelian.
- •llelomorphism (al-el-o-mor'fizm). The existence or the transmission of allelomorphic characters.
- **illelotaxy, allelotaxis** (al-el'o-tak-se, al-cl-o-tak'-sis) [Gr. ἀλλήλων of one another $+ \tau άξι$ s arrangement]. The development of an organ from several embryonic structures.
- Allen's paradoxic law, treatment (al'enz) [Frederick M. Allen, American physician, born 1879]. See under law and treatment.
- Allen's test (al'enz) [Charles Warren Allen, American physician, 1854–1906]. See Allen's test (4th def.), under tests.
- Illergen (al'er-jen) [allergia + Gr. γεν to produce].

 1. Any substance which is capable of inducing or exciting a condition of allergy or specific susceptibility. Such a substance may be a protein (protein allergen or anaphylactogen) or a non-protein. Called also sensitinogen and sensibilisinogen.

 2. The purified protein or proteins of some food. For example, the proteins of milk, egg, or wheat. They are used to test whether a patient is hypersensitive to a certain food or not. bacterial a., the essential protein extracted from the bacterial cell. pollen a. See pollen antigen, under antigen.

- The sensation of touch experienced at a point allergenic (al-er-jen'ik). Anaphylactogenic.
 - allergia, allergie, allergy (al-er'je-ah, al'er-je) [Gr. δλλος other + ξογον energy]. A condition of unusual or exaggerated specific susceptibility to a substance which is harmless in similar amounts for the majority of members of the same species. **physical a.**, a condition in which the patient is sensitive to the effects of physical agents, such as heat, cold, light, etc.
 - **allergic** (al-er'jik). Pertaining to or of the nature of allergy.
 - **allergin** (al'er-jin). 1. Allergen. 2. Sensibilisin. 3. A sterilized standardized solution of tuberculin used in a 1 to 5 per cent. solution in the ophthalmoreaction and in a 25 per cent. solution in the cutaneous reaction.
 - **allergization** (al-er-jiz a'shun). Active sensitization or the introduction of allergens into the body
 - allergy (al'er-je). See allergia.
 - allesthesia, allæsthesia (al-es-the'ze-ah) [Gr. ἄλλος other + αἴσθησις feeling]. Allachesthesia
 - **alliaceous** (al-e-a'shus). Pertaining to or resembling garlic.
 - alligation (al-ig-a'shun). The process of finding the value of a mixture of known quantities of ingredients, each of known value.
 - Allingham's operation, ulcer. I [Herbert William Allingham, contemporary English surgeon] 2. [William Allingham, English surgeon, 1830-1908] See under operation and ulcer.
 - **Allis's inhaler, sign** (al'is-iz) [Oscar II Allis, Philadelphia surgeon, 1833-1921]. See *inhaler* and sign.
 - **alliteration** (al-it-er-a'shun) [L. ad to + lut'era letter] A dysphrasia in which the patient arranges his words according to their sounds.
 - **Allium** (al'e-um) [L. "garlic"]. 1. A genus of hliaceous plants, including the garlic, onion, etc. 2 The bulb of *A sati'vum*, or garlic, a digestive stimulant and pectoral. Dose of syrup (syrupus allti), 1-4 dr. (4-16 c c)
 - **Alloboph'ora agric'ola.** A parasitic worm which may enter the human intestine by the medium of water or green vegetables.
 - allocain (al-o-ka'in) Λ proprietary local anesthetic composed of novocain, alypin, suprarenin, and thymol.
 - allocheiria (al-o-ki're-ah). Same as allochiria.
 - allochesthesia (al-o-kes-the'ze-ah). Same as allachesthesia.
 - allochetia, allochezia (al-o-ke'te-ah, al-o-ke'se-ah) [Gr. ἄλλος other + χέζειν to defecate]. The discharge of non-fecal matter by the anus, or the discharge of fecal matter by an abnormal passage.
 - allochiral (al-o-ki'ral) [Gr. ἄλλος other + χείρ hand]. Exhibiting reversed symmetry; having the relation of the right hand to the left.
 - allochiria (al-o-ki're-ah) [Gr $\&\lambda$ \lambdas other $+ \chi \epsilon l \rho$ hand]. A condition, chiefly in tabes, during which, if one extremity be pricked, the sensation is referred to the opposite side (Obersteiner).
 - **allochroic** (al-o-kro'ik). Changeable in color.
 - allochroism (al-o-kro'izm) [Gr. ἄλλος other + χροά color]. Change or variation in color.
 - allochromasia (al"o-kro-ma'se-ah). Change of color of the hair or skin.
 - allocinesia (al-o-sin-e'ze-ah) [Gr. ἄλλος other + κίνησις motion] A condition in which the patient performs a movement on the side of the body opposite to that directed.
 - allocolloid (al-o-kol'oid) [Gr. ἄλλος other + colloid]. A colloid in which a single element in its allotropic forms makes up the colloid system.
 - alloesthesia, alloæsthesia (al-o-es-the'ze-ah). Allachesthesia.

- **Allogromia** (al-o-gro'me-ah). A genus of parasites found in protozoan animals, such as *A mæba proteus*.
- **allokinesis** (al"o-kin-e'sis). 1. Passive movement. 2. Reflex movement.
- allokinetic (al-o-kin-et'ik) [Gr. ἄλλος other + κίνησις movement] Moved from outside or by reflex action, not voluntary.
- allolalia (al-o-la'le-ah) [Gr ἄλλος other + λαλείν to speak]. Any defect of speech of central origin.
- allomerism (al-om'er-izm) [Gr. ἄλλος other + μέρος form]. Change of chemic constitution while still retaining crystalline form.
- **allometropia** (al-o-met-ro'pe-ah) [Gr ἄλλος other + μέτρον measure] The refraction of the eye in indirect, as opposed to direct, vision (Matthiessen).
- allomorphism (al-o-mor'fizm) Change of form without change in chemic constitution.
- **allonal** (al'o-nal). A proprietary compound formed by fusing allylisopropylbarbituric acid and aminopyrin. It is C₃H₇(CH₂)(CH)₂C(CO.NH)₂CO used as an analgesic hypnotic. Dose, 2.5-5 gr. (o 1,3-0 32 gm).
- allongement (al onzh-maw') [Fr] Elongation; especially any procedure for elongating a uterine tumor after it has been severed from its connections, so as to admit of its extraction. This is usually done by making a spiral incision into its substance while it is being pulled down
- allopath, allopathist (al'o-path, al-op'ath-ist) [Gr. $\tilde{\alpha}\lambda\lambda$ os other $+\pi \tilde{\alpha}\theta$ os affection] An incorrect designation for a regular practitioner.
- **allopathic** (al-o-path'ik). Pertaining to, or characteristic of, allopathy.
- allopathy (al-op'ath-e) [Gr. $\tilde{\alpha}\lambda\lambda$ os other $+\pi \tilde{\alpha}\theta$ os affection]. An erroneous designation for the regular system of medicine and surgery. The term really means the curing of diseased action by inducing a different kind of action in the body.
- allophanamid (al-o-fan-am'id). Same as biuret.
- alloplasia (al-o-pla'se-ah) [Gr ἄλλος other + πλάσις formation]. Heteroplasia. alloplasmatic (al-o-plaz-mat'ik) [Gr ἄλλος other
- alloplasmatic (al-o-plaz-mat'ık) [Gr ἄλλος other + πλάσσειν to form] Formed by differentiation from the protoplasm.
- alloplast (al'o-plast) An idorgan consisting of more than one kind of tissue.
- alloplasty (al'o-plas-te) [Gr. ἄλλος other + πλάσσειν to form] Plastic surgery in which use is made of material not from the human body, such as animal bodies or inorganic material. Cf. autoplasty and heteroplasty.
- **allopsychic** (al-o-si'kik) [Gr ἄλλος other + ψυχή mind] Pertaining to mind in its relation to the external world.
- **allopsychosis** (al"o-si-ko'sis) A mental disorder or psychosis marked by disorganization of the external perceptive powers (hallucinations and illusions), but without disorder of the motor powers, such as speech and action (Wernicke).
- allorhythmia (al-o-rith'me-ah) [Gr. ἄλλος other + ῥυθμός rhythm] Irregularity n the rhythm of the heart-beat or pulse
- allorhythmic (al-o-rith'mik). Affected with or of the nature of allorhythmia.
- allosan (al'o-san) A crystalline, tasteless ester of allophanic acid with santalol. Used like the latter.
- allosome (al'o-sōm) [Gr. ἄλλος other + σῶμα body]. A special kind of chromosome distinguished from the autosome. An accessory chromosome. See chromosome. paired a., a diplosome unpaired a., a monosome
- allotherm (al'o-therm) [Gr. ἄλλος other + θέρμη heat] An organism the temperature of which depends upon its culture-medium.
- **allotoxin** (al-o-tok'sin) [Gr. ἄλλος other + toxin].

 Any substance formed by tissue change within

- the body which serves as a defense against toxins by neutralizing their poisonous properties.
- allotriodontia (al-ot-re-o don'she-ah) [Gr. ἀλλότριος strange + ὁδούς tooth]. 1. The transplantation of teeth from one person to another. 2. The existence of teeth in abnormal places, as in tumors.
- **allotriogeustia** (al-ot-re-o-gu'ste-ah) [Gr. ἀλλότριος strange + γεῦσις taste]. A perverted condition of the sense of taste.
- **allotriolith** (al-o-tri'ol-ith) [Gr. ἀλλότριος strange + λίθος stone] A calculus in an abnormal situation, or one composed of unusual materials.
- **allotriophagy** (al-ot-re-of'aj-e) [Gr. ἀλλότριος strange + φαγεῖν to eat]. Λ craving for unnatural food, pica.
- **allotriuria** (.l-ot-re-u're-ah) [Gr. ἀλλότριος strange + οὖρον urine]. A strange or perverted condition of the urine.
- allotrope (al'o-trop). An allotropic form.
- **allotrophic** (al-o-trof'ik). Rendered innutritious by the process of digestion.
- allotropic (al-o-trop'ik). Exhibiting allotropism.
- allotropism (al-otrop-izm) [Gr. δλλος other + τρόπος turn]. 1 The existence of an element in two or more distinct forms (allotropic forms) with distinct physical properties. Examples of allotropism are furnished by carbon and sulphur 2 Λ tropism between different structures, ε, ε, ε, between spermatozoa and ova (Roux).
- allotropy (al ot'ro-pe). Same as allotropism.
- allotrylic (al-o-tril'tk) [Gr. ἀλλότριος foreign + ελη matter]. Produced by the presence of a foreign body or principle.
- **alloxan** (allok'san). A reddish, crystalline substance, mesosalyl urea, CO(NHCO)₂C(OH)₂ + 4H₂O, an oxidized form of uric acid. It has been obtained from the mucus of the intestine in diarrhea.
- alloxantin (al-ok-zan'tin). A crystalline derivative of alloxan, C₈Π_bN₄O₈, obtained by reduction.
- alloxin (al-ok/sin) Any one of a class of basic substances derived from the nuclein of cell-nuclei, and on oxidation producing urie acid. The alloxins include xantlin, guanni, adenin, and hypoxanthin.
- alloxur bodies (al-ok'sūr). See under body.
- alloxuremia (al"ok su-re'me-ah) [alloxur + Gr. alµa blood] The presence of alloxur bodies in the blood, causing a form of intoxication.
- alloxuria (al-ok-su're ah) [alloxur + Gr. οὐρον urine] Presence of alloxur bothes in the urine.
- alloxuric (al-ok-su'rik). Containing both alloxan and urea residues. See alloxur bodies, under body.
- alloy (al-oi') [Fr. aloyer to mix metals]. A mixture of any two metals except mercury contour a., an alloy especially suitable for contour fillings, submarine a., an alloy that may be used to fill a tooth cavity which is not entirely dry.
- allspice (awl'spis). See pimenta.
- allyl (al'il) [L al'lium garlic + Gr. ὕλη principle]. A univalent radical, C₂H₅ or CH₂,CHCH₂, from garlic and other plants a. alcohol. See under alcohol a. aldehyd. Same as alcohol. See under alcohol a. aldehyd. Same as alcoholous a. cyanamid. See sinamin. a. isothiocyanate, volatile oil of mustard, C₃H₅NCS, oleum sinapis volatile. a. sulphid, an artificially prepared compound, (C₃H₃)S used in cholera and subcutaneously in phthisis. Dose of 1 600 mixture, 1 teaspoonful; subcutaneous dose of ½ per cent solution, 16 min. (1 c c.) daily. a. sulphocarbamid, a. thiocarbamid, a. thiourea. Same as thiosinamin. a. tribromid, a colorless or yellowish liquid, C₃H₂Br₃: used as an anti-pasmodic and anodyne in hysteria, asthma, whooping cough, etc. Dose, 5 min (0 333 c c.).
- allylamin (al-il-am'in). A caustic liquid, NH₂-(C.II.), from oil of mustard.

allyleocain (al-il-ko'kān). A compound used as a local anesthetic in eye operations in 5 per cent. solution.

allyl-phenylcinchonin ester. See atoquinol.

almatein (al-mat-e'in). A compound of hematoxylin and formaldehyd. An odorless powder, soluble in alcohol and glycerin it has been used as a substitute for iodoform.

Almén's test (al-mānz') [August Theodor Almén, Swedish physiologist, 1833-1903]. See under tests.

almond (ahm'und) [Fr. amande, from L. amyg'dala almond]. The fruit of Pru'nus amyg'dala. See amygdala. bitter a., the fruit of the variety P. amyg'dala ama'ra: sweet a., of the variety P. amyg'dala dul'cis; sweet almonds are used for flavoring, and furnish a fixed oil which is used as a demulcent and aperient and in pharmaceutic preparations. Dose of oil of sweet almond, 60-120 min. (4-8 c.c.); of emulsion of oil of sweet almond, 1-4 dr. (4-16 c.c.); of syrup, 1-2 dr (4-8 c.c.). The volatile oil of bitter almond is poisonous, and is used like hydrocyanic acid. Dose, \(\frac{4}{4}\text{-1}\text{ min (0 016-0 06 c c; of spiit, 8 min. (2 c.c.), bitter-almond water is \(\frac{1}{4}\frac{1}{2}\text{ fl oz. (8-15 c.c.).}\)

alnuin (al'nu-in). A concentration prepared from Al'nus serrula'ta or A. ru'bra: resolvent, tonic, and alterative. Dose, 2-10 gr. (0 133-0.666 gm).

Alnus (al'nus) [L]. A genus of betulaceous trees and shrubs—the alders Λ. glutino'sa, a tree of Europe, and Λ. ru'bra and Λ. serrula'ta, shrubs of North America, have tonic and astringent bark. Dose in substance, 8–12 gr. (0.51–0.78 gm.).

Al₂O₃. Alummum oxid.

alochia (ah-lo'ke-ah) [L.; Gr. α neg. + λόχια lochia]. Absence of the lochia.

Aloë (al'o-e), gen. al'oes [Gr. $\dot{a}\lambda\dot{o}\eta$]. A genus of hliaceous plants. A. chunen'sus, a species furnishing Barbadoes aloe A fe'rou, a species furnishing the best South African aloe. 1. per'ryi, the species from which Socotrine aloe is obtained A ve'ra, one of the species from which official aloe is obtained. A. vulga'ris, a species which affords aloe in the West Indies.

aloe (al'o). The dark colored, bitter, inspissated juice of various species of Aloe. It is cathartic and stimulant, and is given in chronic constipation, amenorrhea, and atonic dyspepsia Dose, 1-10 gr (0 065-0 65 gm), of aqueous extract, 1-3 mm. (0 033 0 2 o c.c.); of tincture, \(\frac{1}{2} - 2\) dr (2 \(\frac{8}{6}\) c.c.), of twine, \(\frac{1}{2} - 2\) dr (4 \(\frac{8}{6}\) c.c.); of compound decoction, \(\frac{1}{2}\) 2 \(\frac{1}{6}\) oc. (15-60 c.c.). The tincture of aloe and myrrh con tains 10 per cent. each of aloes and myirh. Dose, 1-4 dr. (4-16 cc). Compound tincture of aloes contains 3 per cent, of aloes and 3 per cent, of gentian, rhubarb, saffron, and zedoary Dose, 1 4 di (4-16cc). a. barbaden'sis, Barbados aloe, pared from A. ve'ra. Barbados a., caballine a., a coarse variety, used mainly in veterinary practice. cape a., a. capen'sis, cape aloe, from Λ . fe'rov, A. spic'ata, and other South African species. Curaçoa a., a kind from the island of Curaçoa, the product of Alos ve'ra. hepatic a., a dark, liver colored variety of aloe. Indian a., aloe from India, the product of a variety of A. vulga'ris.

lign-a. See lignaloc Natal a., a variety from
Natal, in South Africa. a. purifica'ta, Socotrine aloe purified by dissolving in alcohol, straining, and evaporating. Dose, 1-5 gr. (0065-032 gm) **purified a.**, aloes purified by dissolving in alcohol, straining, and evaporating off the alcohol Socotrine a., a variety from Socotra, the prod uct of A. per'ryi. Dose of extract, 1-6 gr (006-04 gm). Zanzibar a., a variety from East Africa.

aloes (al'oz). See aloe.

aloëtic (al-o-et'ik) [L. aloet'icus]. 1. Pertaining to or containing aloe 2 A preparation containing aloe

aloëtin (al-o-e'tin) [Gr. ἀλόη aloe]. A yellow, crystalline principle from aloe, also, a medicinal preparation of aloe.

alogia (ah-lo'je-ah) [Gr. α neg. + λόγος word]. Inability to speak, due to a lesion of the nerve substance.

aloin (al'o-in). A purgative glucosid, $C_{10}H_{18}O_7$, from aloe of several varieties, as barbaloin, nataloin, socaloin, and zanaloin. It occurs in the form of fine crystals of extremely bitter taste, soluble in hot water and alcohol. Laxative dosc, $\frac{1}{2}$ gr. (0 032 gm.), purgative dosc, 2 gr. (0 13 gm).

alopecia (al-o-pe'she-ah) [Gr ἀλώπηξ fox]. Baldness; deficiency of hair, natural or abnormal.

adna/ta, congenital baldness.

a. area a. area'ta, a. cel'si, a. circumscrip'ta, baldness occurring in sharply defined patches, leaving the scalp in sharply defined patches, leaving the scalp smooth and white: probably due to nervous disturbance. a. dynam'ica, alopecia due to de-struction of the hair-follicles by ulceration or some other disease process. a. follicula'ris, inflammation of the hair-follicles of the scalp, resulting in loss of hair from the affected area. a. furfura'cea, a chrome disorder of the scalp, marked by itching, hyperemia, dandruff, and falling out of the hair, which becomes harsh, dry, and without luster called also a pityroides capillatin, pityriasis capitis, schorrhaa capillitii, and dundruf. a. loca'lis, a. neurit'ica, a form which occurs in patches in the course of a nerve or at the site of an injury. a. malig'na, a severe and persistent form of alopecia. a. neurot'ica, a baldness following a nervous disease or injury of the nervous system. a. orbicula'ris. Same as a areata a. pityroi'des capillitii. See a. furfuracca. a. pityroi'des universa'lis, a rapid general loss of hair in debilitated conditions a. præmatu'ra, a. præseni'lis, a. sim'plex, premature baldness. reflex a. See Jacquet's disease, under disease. a. seni'lis, the alopecia of old age a. symptomat'ica, alopecia occurring after long fevers or in the course of some disease. a. syphilitica, baldness from syphilis a. tox'ica, alopecia baldness from syphilis occurring during an infectious disease and thought to be caused by the toxins of the disease. chophytic a., loss of hair secondary to trichophytosis capitis. a. universa'lis, a general falling out of the hairs of the body.

alopon (al'o-pon) A proprietary sedative and analgesic, said to be the hydrochlorids of the mixture of alkaloids contained in opium.

aloresinotannol (al"o-res-in o-tan'ol). A principle derivable from various kinds of aloes.

aloxanthin (al-ok-zan'thin). A yellow principle, C₁₅H₁₀O₈, derivable from aloes by the action of potassium dichromate.

Alpenstich (ahl'pen-stish) [Ger. "alpine stab"]. Epidemic pneumonia in Alpine valleys.

alpha (al'fah) [Gr α (alpha), the first letter of the Greek alphabet] The letter α or α is used as a part of a chemic name to denote the first of a series of isomeric compounds, or the carbon atom next to the carboxyl group. The succeeding letters of the Greek alphabet, beta (β) , gamma (γ) , delta (δ) , etc., are used to name, in order, the succeeding compounds or carbon atoms. **a. angle.** See under angle.

alphadichlorisopropylalcohol (al"fah-di-klor-i"so-pro-pil-al'ko-hol). Aleudrin.

alpha-eigon (al-fah-i'gon) A proprietary compound of albumin and iodin with sodium. See beta-eigon.

alpha-eucain (al-fah-u-ka'in). See under eucain.
alpha-eunol (al-fah-u'nol). A bitter naphthol and eucalyptol preparation: used in skin diseases and surgery as an antiseptic.

alphaglycohepatonicacidlactone (al"fahgli-ko-hep"at-on-ik-as-id-lak'tōn). Hediosit.

alpha-iodin (al-fah-i'odin). Kendall's name for the supposed active principle of the thyroid secretion, which he afterward discovered and named thyroxin.

- alpha-leukocyte (al-fah-lu'ko-sit). A leukocyte which disintegrates during the coagulation of the blood.
- alpha-lobelin. See lobelin.
- alpha-naphthol (al-fah-naf'thol). A non-official variety of naphthol. See naphthol.
- alphasol (al'fas-ol). A proprietary antiseptic used in rhinology and laryngology.
- **alpha-tropein** (al-fah-tro'pe-in). A substance derivable from scopolamin and hyoscin.
- alphelasma (al-fel-as'mah). Same as leukoplakia.
- alphitomorphous (al"fit-o-mor'fus) [Gr. ἄλζιτον barley-meal + μορφή form]. Having a mealy appearance said of certain fungous parasites
- alphogen (al'fo-jen). Same as alphozone.
- **alphol** (al'fol). Alpha-naphthol salicylate, OH C₆-H₄ CO.O C₁₀H₇, used as an internal antiseptic and an anodyne in gonorrheal cystitis and acute articular rheumatism. Dose, 5-15 gr. (0.324-0.072 gm.).
- alphos (al'fos) [L; Gr. ἀλφόs]. A variety of lepra or psoriasis.
- **alphozone** (al'fo-zōn). Succinic dioxid, (COOH-CH₂ CH₂ CO)₂O₂O₃ a white, crystalline powder derived from hydrogen dioxid. It is soluble in water, and has been used for disinfection of hands and instruments, also in abscesses, ulcers, etc., and internally as an intestinal antiseptic, stable and non-toxic. It is marketed in powder or in tablets of r gr. Used in r:1000 solution.
- **Alpinia** (al-pin'e-ah) [after Prospero Alpini, 1553-1617]. A genus of zingiberaceous plants. See galangal.
- Alquié's operation (al-ke-āz') [Alexis Jacques Alquié, surgeon in Montpellier, 1812-1865] See under operation.
- alsol (al'sol). Aluminum acetotartrate, prepared by mixing 5 parts of basic aluminum acetate with 3 parts of tartaric acid and dissolving in water. This is dried, redissolved, and precipitated with alcohol. Used as a substitute for potassium chlorate, phenol, and corrosive sublimate as an astringent and disinfectant, especially in diseases of the nose and throat. Used in from 0.5-1 per cent, solution.
- $Al_2(SO_4)_3.(NH_4)_2SO_4 + 24H_2O.$ Alum.
- alstonamin (al sto'nam-in). A crystalline alkaloid from the bark of Alstonia spectabilis
- Alstonia (al-sto'ne-ah) [after C. Alston, 1683–1760] A genus of apocynaceous trees A. schola'ris, a tree of tropical Asia, affords ditabark
- **alstonin** (al'sto-nin). A white, crystalline alkaloid, $C_{21}H_{20}N_2O_4+3\frac{1}{2}H_2O$, from the bark of Alsto'nia constric'ta.
- **Alt. dieb.** Abbreviation for L. alter'nis die'bus, every other day.
- Alt. hor. Abbreviation for L. alter'nis ho'ris, every other hour.
- altauna (al-taw'nah). An Arabic term for malignant carbuncle, bubo, or endemic ulcer.
- alterant (awl'ter-ant). Same as alterative.
- alterative (awl'ter-āt-iv) [L altera're to change]
 1. Reestablishing healthy functions of the system. 2. A medicine that produces a favorable change in the processes of nutrition and repair. The principal alteratives are mercury and mercuric compounds, arsenic, iodin and the iodids, cod-liver oil, gold, iron, and the compounds of sodium and potassium.
- Alternaria (al-ter-na're-ah). A genus of the fungi imperfecti with dark colored conidia somewhat resembling Trichophyton. It causes several diseases of plants and has been found in diseases of the lungs in man.
- alternating (awl'ter-na-ting). Occurring in regular succession; alternately direct and reversed.

- alternation of generations (al-ter-na'shun): Reproduction in which the offspring do not resemble the parent, but like forms are separated by one or more unlike generations
- Althma (al-the'ah) [L] A genus of malvaceous plants. The root and leaves of A. officina'lis, or marshmallow, are demulcent and furnish a mucilage (mucilago althma). Marshmallow syrup (syrupus althma), made from the root, is used as a vehicle in cough medicine
- **althal** (al'thal). A crystalline fatty compound obtained from the sperm whale.
- althose (al'thōs) A proprietary expectorant preparation of senega, squill, and codein salicylate.
- altisin (al'tis-in) A colorless syrupy alkaloid, C₂₂-H_{il}NO₂, f om the roots of Aconitum heterophyllum.
- Altmann's fluid, granule, theory (ahlt'manz) [Richard Allmann, German histologist, 1852–1900]. See fluid, granule, and theory
- altofrequent (awl to fre'quent) [L. al'tus high + frequent] High frequency. See high-frequency current, under current
- alum (al'um) [L. alu'men; gen. alu'minis] Aluminum and potassium sulphate, AlK(SO₄)₂ 12H2O, a colorless, crystalline substance, astringent and styptic properties, and soluble in water, but insoluble in alcohol. It is used internally as an emetic, and locally in solution in conjunctivitis, laryngitis, leukorrhea, and ulcers, and also as a styptic. Dose, 10-15 gr. ulcers, and also as a styptic. Dose, 10-15 gr. (0.666-1 gm.). 2 Any member of a class of double sulphates formed on the type of the foreammonia a., the double sulphate of aluminum and ammonium used like the ordiammonioferric a., a powerfully nary alum. styptic alum, sulphate of iron, and ammonium. Dose, 5 to gr (0333 0606 gm). burnt a., alum exsecuted or dehydrated by heat, a whitish, porous mass used as a styptic or astringent. Dose, 5-50 gr (0.333 1.0444 gm) chrome a., chromium and potassium sulphate a violet pigconcentrated a., patent a., ammoment nium sulphate, incorrectly called an alum. **ex- siccated a.** See burnt a **a.-hematoxylin**, a
 purple stain, prepared by mixing a solution of hematoxylin in alcohol with a solution of potassium alum in water used as a tissue stain in microscopy. See stains, table of. iron a., iron and potassium sulphate. Roman a, a special make of common alum soda a., aluminum and a.-whey, whey made by boilsodium sulphate. ing alum (2 oz) in milk (1 pint) astringen and hemostatic.
- alumen (al-u'men) [L. for alum]. a. exsicca'-tum, dried or burnt alum (q v.).
- alumina (al u'min-ah) Aluminum oxid, Al₂O₃: found in clay and in many minerals.
- aluminated (al-u'm n-a-ted). Charged with alum.
 aluminium (al u min'e um) [L]. Same as aluminium
- aluminoid (al-u'min-oid). A white, astringent and antiscptic powder.
- aluminol (al-u'min-ol). Same as alumnol.
- **aluminosis** (al-u-min o'sis). A form of pneumonoconiosis caused by alum or by day dust.
- aluminum (al u'min-um) A very light, whitish, lustrous, metallic element, obtainable from clay: specific gravity, 2 67, atomic weight, 27.1: symbol, Al. It is very malkable and duttile, and is used for the manufacture of instruments; also as a base for artificial dentures a. acetate, a compound, Al₂(OH)₂(C₂H₁O₂)₄, used in solution as an astringent and antiseptic. a. acetoglycerate, used as an astringent and antiseptic in diseases of the nose and throat. a. acetotartrate. See alsol. a. and potassium sulphate, ordinary alum, Al₂K₂(SO₂)₄ See alum a. boroformate, an antiseptic and astringent, made from boric acid, formic acid, and aluminum hydroxid, Al₂O₃B₂(OH)₃.H₂CO₃ + 5H₂O. a. borotannate. See

cutol. a. borotartrate. See boral. a. bromid, a white mass, AlBr₃, used as a gargle in diphtheria. a. carbonate, a mild antiseptic and styptic, Al₂(CO₃)₃. a. chlorid, an astringent and deliquescent salt with the formula $AlCl_3 + 6H_2O$, when dried over sulphuric acid. Dose, 5 gr. (0.3 gm). a. gallate. See gallol. a. hydrate, hydroxid, a white, tasteless powder, Al2-(OH)₆. mildly astringent, and used externally as a drying-powder and internally as an antacid and absorbent. Dose, 3-15 gr. (0 2-1 gm.).

a. lactate. See firm.
a. naphthol disulphonate. See alumnol.
a. nitrate, a compound, Al₂(NO₃)₆ + 18H2O, used in pruritus a. oleate, used as an ointment in vulvæ. burns, ulcers, and diseases of the skin, (C18H33O2)6-Al₂. a. phenol-sulphonate. See sozal. potassium salicylate. See alkasal. a. salicylate. See salumin a. sozoiodolate, a crystalline compound, $(C_6H_2OH.SO_3I_2)_2AI + _3H_2O$: used as an antiseptic wash in 2 to 3 per cent. solution. a. sulphate, an antiseptic and astringent salt, Al₂(SO₄)₃ + 16H₂O: antiseptic and astringent in 5 per cent. solution and in stronger solution as a caustic. a. sulphocarbolate. See sozal. a. tannate. See tannal.

alumnol (al-um'nol). Aluminum beta-naphthol disulphonate, [OH.C₁₀H₅(SO₂ O)₂]₃Al₂, a white or reddish powder, soluble in cold water, slightly soluble in alcohol, and insoluble in ether. It is used as an astringent and antiseptic in gonorrhea, endometritis, and purulent ounds in 0.5-5 per cent. solution.

alumozal (al-um'o-zal). A basic salicylate of aluminum used as an intestinal antiseptic.

alundum (al-un'dum). Electrically fused alumina, used in making laboratory appliances which are to be subjected to intense heat.

aluvine (al'u-vīn). An organic amino compound of aluminum. used intravenously in syphilis

Alv. adst. Abbreviation for L. al'vo adstric'ta, when the bowels are constipated

Alv. deject. Abbreviation for L. al'vi dejectio'nes, alvine dejections.

Alvegniat's pump (ahl-ven-yahz'). A mercurial air-pump for extracting gases from the blood.

alveloz (al'vel-oz) [Sp] A tree of tropical America, Euphor'bia heterodox'a: its juice has been recommended for lupus and cancer Dose, 15-30 min (1-2 cc)

alveobronchiolitis (al"ve-o-brong-ke-o-li'tis). Inflammation of the bronchioles and alveoli of the lungs; bronchopneumonia

alveolar (al-ve'o-lar) [L. alveola'ris]. Pertaining to an alveolus.

alveolectomy (al"ve-o-lek'to-me) [alveolus + Gr. ἐκτομή excision] The operation of excising a piece of the alveolar process

alveoli (al-ve'o-li). Plural of alveolus. a. denta'les, the tooth sockets. a. pulmo'num. See alveolus, 3d def.

alveolitis (al-ve-o-li'tis). Inflammation of an alveolus, as of a tooth. See pyorrhwa alveolaris. chronic spatic a., phagedenic pericemental a., pyorrhea alveolaris.

alveoloclasia (al-ve"o-lo-kla'sc-ah) [alveolus + Gr. κλάσις breaking]. Disintegration or absorption of the inner wall of a tooth alveolus, causing looseness of the teeth

alveolocondylean (al-ve"o-lo-kon-dil'e-an). Pertaining to the alveolus and condyle

alveolodental (al-ve"o-lo-den'tal). Pertaining to a tooth (or teeth) and to a socket (or sockets).

alveololabial (al-ve"o-lo-la'be-al). Pertaining to the alveolar processes and the lips.

alveololingual (al-ve"o-lo-ling'wal). Pertaining to the alveolar processes and the tongue.

alveolonasal (al-ve"o-lo-na'sal). Pertaining to the alveolar point and the nasion.

alveolotomy (al"ve-o-lot'o-me) [alveolus + Gr. τομή a cut]. Incision into a tooth alveolus.

alveolus (al-ve'ol-us), pl. alve'oli [L.]. 1. A tooth-socket; the cavity in the maxillary process of the jaw in which the root of a tooth is fixed. 2. The acinus of a gland. 3. An air-sac of the lungs for med by terminal dilatations of the bronchioles. 4. Any one of the honey-comb cells of the gastric mucous

alveus (al've-us) [L. "a trough"]. A trough or a canal; a layer of white matter on the ventricular surface of the hippocampus containing the association fibers which connect the hippocampus with the gyrus hippocampi. a. ampulles'cens, the dilated part of the thoracic duct at the receptaculum chyli. a. commu'nis, the utricle of the ear. a. hippocam'pi, the layer of medullary matter in the brain covering the hippocampus major.

alvine (al'vīn) [L. alvi'nus]. Pertaining to the belly or intestines.

alvonal (al'vo-nal). A sterile 50 per cent. solution of glucose for intravenous injection in the exhaus-

tion (hypoglycemia) of labor.

alvus (al'vus) [L.]. The belly with its contained viscera.

alymphia (ah-lim'fe-ah) [Gr. α neg. + L. lym'pha lymph] Deficiency or absence of the lymph.

alymphopotent (ah-lim'fo-po-tent) [Gr. α neg. + lymphoid + L. po'tens able] Incapable of producing lymphocytes or lymphoid cells.

alypin (al-i'pin). The hydrochlorid of benzoxy-dimethylamino-methyl-dimethylaminobutane, CH3.- $CH_2 C(C_6H_5 COO)[CH_2N(CH_3)_2]CH_2N (CH_3)_2HCL$ It is a white, crystalline powder, odorless, and having a bitter taste, and is soluble in water, alcohol, and chloroform. It is used as a local anesthetic, especially in eye operations. Locally it is used in a 10 per cent. solution, for the eye, in 1 to 2 per cent. solutions, and hypodermically, in 1 to 4 per cent. solutions.

Alzheimer's disease or sclerosis (alz'hi-merz) [Alois Alzheimer, German neurologist, 1864–1915]. See under sclerosis.

A. M. Abbreviation for Meter-angle and Amperemeter.

Am. A symbol for ammonium, NH₄.

A symbol for myopic astigmatism, for meterangle, and for ametropia.

A. M. A. Abbreviation for American Medical Association.

ama (a'mah), pl. a'mæ [L.]. An enlargement of a semicircular canal of the internal ear at the end opposite the ampulla.

amaas (am-ah-as). A specific contagious eruptive fever of South Africa, resembling smallpox, being probably a mitigated form of that disease. Similar conditions in other countries are called alastrim, Cuban itch, glass pox, Kaffir pox, milk pox, paravariola, pseudosmallpox, pseudovariola, Samoa pox, Sauaga pox, variola-alastrim, and white pox.

amacratic (am-ak-rat'ik) [Gr. ἄμα together + κράτος strength]. Same as amasthenic.

amacrinal (am-ak'rin-al). Of the nature of amacrines.

amacrine (am-ak'rin) [Gr. a neg. + μακρός long + τς, τνος fiber]. 1. Having no long processes. 2. Any one of a group of branched retinal structures regarded as modified nerve-cells.

amadou (am'ah-doo) [Fr]. Touchwood or punk; the fungus Bole'tus ignia'rius which grows on old trees, and is used as a wound dressing and as a hemostatic. **sheet a.**, a preparation of amadou used as a dressing for bed-sores.

amakebe (am-ak-e'be). A disease affecting calves in Uganda, due to a parasite, Theile'ria par'va, which is transmitted by the bite of a tick, Rhipiceph'alus appendicula'ris.

amalgam (am-al'gam) [anagram of Gr. μάλαγμα a soft mass]. Any alloy of mercury with another metal. Amalgams are distinguished as binary, ternary, quaternary, etc., according as they contain two, three, or four metals. dental a., an amalgam of silver, tin, and mercury used for filling teeth. Gold, platinum, etc., are sometimes added.

amalgamate (am-al'gam-āt). To unite a metal in an alloy with mercury; to form an amalgam.

amalgamation (am-al-gam-a'shun). The formation of an amalgam.

amalgamator (am-al'gam-a-tor). An apparatus for securing rapid amalgamation of an alloy with mercury.

amandin (am'an-din). A protein from the almond nut.

Amanita (am-an-i'tah) A genus of mushrooms. A. musca'rıa, the ily agaric, a poisonous mushroom. A. phallor'des, the white or deadly amanita; a very poisonous mushroom. A. rubes'cens, a species considered edible. It contains a powerful hemolysin.

amanitin (ah-man'it-in). A poisonous alkaloid, identical with cholin, from fly agaric; also a poisonous glucosid from the various mushrooms, especially from *Amanuta phalloides*.

amanitotoxin (am-an-it-o-toks'in). A poisonous principle or toxin from Amani'ta phalloi'des. It differs from phallin in being more resistant to heat and to the action of pepsin and pancreatinin.

amara (am-a'rah) [L. pl.]. Bitters (q. v.).

amaranth (am'ar-anth) A red azo dye, C₁₀H₆-(SO₂ ONa), N. N. C₁₀H₄(SO₂.ONa)₂ OH, used as a food color.

amaril (am'ar-il) [Sp. amaril'lo yellow]. The poison generated by the Bacil'lus icteroi'des, and believed to be active in inducing yellow fever.

amarillic (am-ar-il'ik). Pertaining to amaril.

amarin (am'ar-in) [L. ama'rus bitter]. A poisonous, crystalline base, triphenyl dihydroglyoxalin, (C₆H₅)₂(CNH)₂CHC₆H₆, from oil of bitter almonds, and also prepared artificially.

amaroid (am'ar-oid). A bitter principle; a general name for vegetable extractives other than alkaloids and glucosids.

amaroidal (am ar-oi'dal). Somewhat bitter; also resembling a bitter in properties.

amarol (am'ar-ol). Same as ingestol.

amarthritis (am-ar-thri'tis) [Gr. ἄμα together + ἄρθρον joint] Inflammation of several joints at the same time.

amasesis (am-as-e'sis) [Gr. a priv. + μάσησις chewing]. Inability to chew the food.

amasthenic (am-as-then'ik) [Gr. ἄμα together + σθένος strength]. Bringing the chemic rays of light into one focus said of a lens.

amastia (ah-mas'te-ah) [Gr. α priv. + μαστός breast]. Absence of the mammæ.

amativeness (am'at-iv-nes) [L. ama're to love] Normal sexual desire

Amato bodies (ah-mah'to). See under body.

amatol (am'at-ol). A war explosive, being a mixture of trinitrotoluene and ammonium nitrate.

amatory (am'at-o-re) [L. amato'rius]. Pertaining to love or sexual desire.

amaurosis (am-aw-ro'sis) [L. from Gr ἀμαυρόειν to darken]. Blindness (Hippocrates), especially blindness occurring without apparent lesion of the eye, from disease of the optic nerve, retina, spine, or brain. albuminuric a., that which is due to renal disease. Burns' a., postmarital amblyopia. cat's eye a., blindness of one eye, with bright reflection from the pupil, as from the tapetum of a cat (Beer). cerebral a., that which is due to cerebral or brain disease. congenital a., that which exists from birth. diabetic a., that which

is associated with diabetes. **hysteric a.**, that which is associated with hysteria. **intoxication a.**, amaurosis caused by some systemic poison, as alcohol or tobacco. **a. partia/lis fu'gax**, sudden transitory partial blindness with scotomas, scintillations, vertigo, nausea, and headache **reflex a.**, that which is caused by the reflex action of a remote irritation. **saburral a.** that which occurs in an attack of acute gastritis. **uremic a.**, an amaurotic condition sometimes attendant on nephritis.

amaurotic (am-aw-rot'ik). Pertaining to or of the nature of amaurosis.

amaxophobia (ah-mak-so-fo'be-ah) [Gr $\delta\mu\alpha\xi\alpha$ car + $\varphi\delta\beta\sigma$ s fear]. Insane dread of being in a carriage.

amazia (ah-ma'ze-ah) [Gr. a priv. + μαζόs breast]. Congenital absence of the mammary gland.

amazon (am'az-on) [Gr. α priv. $+ \mu \alpha \zeta \delta s$] A person in whom the breast is lacking.

Ambard's constant or **formula** (ahm-barz') [Leo Ambard, contemporary physician in Paris]. See under formula.

amber (am'ber) [L suc'cinum]. A yellowish fossil resin, the gum of several species of coniferous trees, found in the alluvial deposits of northeastern Prussia. Its volatile oil is rubefacient, antispasmodic, and stimulant. Dose of oil (o'leum suc'cini), 5-10 min. (0.333-0.666 c.c.).

ambergris (am'ber-gris) [L. am'bra gris'ea gray amber] A gray substance from the sperm-whale's intestines: used as a perfume and as a stimulant in low fevers, chronic catarrh, hysteria, and other nervous affections. Dose, 1-3 gr (0.065-0.198 gm).

Amberg's lateral sinus line (am'bergs) [Emil Amberg, surgeon in Detroit]. See under line.

ambidexter, ambidextrous (am-bid-ek'ster, am-bid-ek'strus) [L. am'bi- on both sides + dex'ter right-handed]. Able to use either hand effectively.

ambidexterity, ambidextrism (am"be-deks-ter'it-e, am-be-deks'trizm). Ability to use either hand equally well.

ambilateral (am-be-lat'er-al) [L. am'bi- both + la'tus side] Pertaining to or affecting both sides.

ambilevous (am-be-le'vus) [L am'br on both sides + la'vus left-handed]. Not having skill in the use of either hand.

ambiopia (am-be-o'pe-ah) [L]. See diplopia.

ambisinistrous (am-be-sin-is'trus) [L. am'bi- on both sides + sinis'ter left] Same as ambilevous.

ambivalence (am-biv'al-ens). Bleuler's name for the tendency of some patients to give expression equally to opposing impulses.

ambivalent (am-biv'al-ent) [L. ambi on both sides + va'lins powerful]. Having equal power in two contrary directions.

amblyacusia (am-ble-ak-oo'se-ah) [Gr. ἀμβλθς dull + ἀκοῦσις hearing]. Dulness of hearing.

amblyaphia (am-ble-a'fe-ah) [Gr. $\delta\mu\beta\lambda bs$ dull + $\delta\varphi\dot{\eta}$ touch]. Bluntness or dulness of the sense of touch

amblychromasia (am"ble-kro-ma'ze-ah). The condition of staining faintly or of having little chromatin.

amblychromatic (am-ble-kro-mat'ik) [Gr. $\dot{a}\mu\beta\lambda\dot{b}s$ dull $+\chi\rho\hat{\omega}\mu\alpha$ color]. Feebly staining.

amblygeustia (am-ble-jū-y'te-ah) [Gr. &μβλbs dull + γεῦσις taste] Dulness of the sense of taste.

amblykusis (am-ble-ku'sis) [Gr. ἀμβλύs dull + ἀκούειν to hear]. Dulness of hearing.

Amblyomma (am-ble-om'ah). A genus of ticks.

A. america'num, the lone star tick of the southern United States, particularly Texas and Louisiana.

A. cajennen'se, a particularly obnoxious species of tropical America.

A. hebræ'-um, an African species which transmits a disease

of sheep and goats known as "heart water" as well as the "tick-bite fever" of man. It is called the bont tick A. macula'tum is found on the Gulf Coast. A. tupercula'tum, a species found in Florida A varianc'tum, a crossias which in Florida A. variega'tum, a species which carries the same infection as A. hebraum.

amblyopia (am-ble-o'pe-ah) [Gr άμβλθς dull + ぬ eyel Dimness of vision from imperfect sensation of the retina and without organic lesion of the eye. a. alcohol'ica, impairment of the vision as a result of alcohol poisoning. arsenic a., disturbance of vision due to the use of arsenic. astigmatic a., amblyopia due to imperfect development of the finer elements of the retina. color a., color-blindness. crossed a., that which affects one eye, with hemianesthesia of the same side. a. ex anop'sia, that which results from long disuse; argamblyopia. hysteric a., a form due to hysteria. nocturnal a., abnormal dimness of vision at night. postmarital a., that which is caused by sexual excess. quinin a., amblyopia following large doses of quumn. It is due to anemia of the retina. reflex a.. that which results from peripheral irritation toxic a., amblyopia due to poisoning, as from tobacco or alcohol. **traumatic a.**, amblyopia due to injury. **uremic a.**, loss of visual power sometimes seen during a uremic attack.

amblyopiatrics (am-ble-o-pe-at'riks) [amblyopia + Gr. laτρικός healing]. The therapeutics or

treatment of amblyopia.

amblyoscope (am'hle-o-skop) [amblyopia + σκοπείνto view] An instrument for training an amblyopic eye to take part in vision.

ambo (am'bo). Same as ambon. amboceptoid (am-bo-sep'toid). A modified amboceptor which has lost its cytophilic power.

amboceptor (am-bo-sep'tor) [L am'bo both + cap'ere to take]. A substance supposed to be found in the blood-scrum, and serving as one of the active elements in cytolysis, the other element being the complement (Ehrlich and Morgenroth). It serves to connect the invading cell with the complement, being composed of two elements, the cytophile group, which has an affinity for the cell, and a complemento plate group, which has an affinity for the complement. The amboceptor normally present in serum is called natural a; that which is produced by inoculation of foreign cells is called immune a Called also immune body, intermediary body, copula, sensitizer, desmon, philocytase, preparative, preparator, fixative, and fixator. See Ehrlich's side-chain theory, under theory. bacteriolytic a., an amboceptor that takes part in bacteriolysis Bordet's a., an alexin-tixing amboceptor. hemolytic a., an amboceptor which takes part in hemolysis

amboceptorgen (am-bo-sep'tor-jen) ceptor giving rise to amboceptors

ambomalleal (am-bo-mal'e al). Pertaining to the incus and the malleus; as, the ambomalleal articulation.

ambon (am'bon). The edge of the sockets in which the heads of long bones are lodged.

Amboyna button (am-boi'nah). Same as frambesia.

ambrain, ambrein (am-bra'in, -bre'in). Same as ambrin.

ambrin, ambrine (am'brīn). 1. A white crystalline fatty substance resembling cholesterin. It is the chief constituent of ambergris. 2. A proprietary preparation of paraffin, rosin, and wax used as a dressing in the treatment of extensive burns and in rheumatic disorders, introduced by Barthe de Sandfort (1913).

Ambrosia (am-bro'zhe-ah) [L. and Gr., from ἄμβρο-τος immortal]. A genus of composite-flowered plants. A. artemisia fo'lia, the common ragweed, and A. trif'ida, the giant ragweed, have been employed as anthelmintics and febrifuges. Their pollens cause hay-fever.

ambrosin (am-bro'sin). A substance contained in the pollen of rag-weed (Ambrosia), which is probably the cause of autumnal hay-fever.

ambrosterol (am-bros'te-rol). A phytosterol, C₂₀-H₈₄O, with a melting-point of 147° to 140° C., found in the pollen of ambrosia.

ambulance (am'bu-lans) [Fr]. A wagon for conveying the sick and wounded. a. company, an organization of hospital corps privates and noncommissioned officers whose duties are to administer first aid, evacuate the wounded in battle, and carry out the details of military hygiene in camp or at posts.

ambulant, ambulatory (am'bu-lant, am'bu-la-to-re) [L. am'bulans walking]. Walking or able to walk, not confining the patient to bed.

ambustion (am-bust'yun) A burn or scald.

ameba (am-e'bah) pl amebæ [L. from Gr. ἀμοιβή changel. A minute one-celled protozoan animal organism; also a genus (Amaba) of such organisms. An ameba is a single-celled nucleated mass of protoplasm which is constantly changing its shape by extending from its circumference processes of protoplasm called pseudopodia. By these processes it moves about and also absorbs nourishment. The following amebæ are parasitic in man-Entamarba coli, Entamarba histolytica, Entamarba gingivalis, Dientamarba fragilis, Endolimax nana, and Iodamarba Buetsch'lii artificial a., combinations of chemicals which behave somewhat like living amelie. For example, a drop of mercury will move toward a crystal of potassium dichromate if both are near each other in dilute nitric acid; a drop of clove oil in a mixture of alcohol and glycerol will show ameboid motion, and a drop of chloroform in water will engulf a piece of glass coated with shellac and eject it after the shellac coprozoic a., has dissolved off free-living amebæ, mostly of the limax type, sometimes found in human feces and characterized by the fact that they grow readily on artificial media. They may gain access after the feces are passed or they may pass through the intestinal tract. There are four genera Dimastigamœba, Hartmanella, Sappinia, and Vahlkampfia

amebacidal (am-c-bas-i'dal) [See amebacide]. Destructive to amebæ.

amebacide (am-e'bas-id) [amcba + L. ca'dere to Destructive to amebæ; also an agent destructive to amebæ.

amebadiastase (am-e"ba-di'as-tās). An intracellular enzyme found in amebæ which digests the bacteria engulfed by the latter.

amebiasis (am-e-bi'as-is). The state of being intected with amebæ. intestinal a. See amebic dysentery, under dysentery.

amebic, amœbic (am-e'bik). Pertaining to, or of the nature of, an ameba.

amebicide (am-cb'is-id) [ameba + L. ca'dere to kill]. 1. Destructive to amebæ. 2. An agent that destroys amebæ.

amebiform (am-e'bi-form). Shaped like or resembling an ameba.

amebiosis (am-e-bi'os-is). Infection with amebæ.

amebism, amœbism (am'e bizm). Invasion of the system with amebæ.

amebocyte, amœbocyte (am-e'bo-sīt) [ameba + An ameba-like cell, frequently Gr. κύτος cell] containing granules, found among the tissues of various invertebrate animals.

amebocytogenous (am-e"bo-si-toj'en-us). Producing or caused by amebocytes.

amebodiastase (am-e-bo-di'as-tās). enzyme extracted from the bodies of protozoa.

ameboid (am-c'boid) [Gr. ἀμοιβή change + είδος like]. Resembling an ameba in form or in movements.

ameboididity (am-e-boi-did'it-e). The power of moving by means of ameboid movements.

67

ameboidism (am-e'boi-dizm). The condition, sometimes shown by nerve-cells, of performing ameboid movements.

amebula, amebula (am-e'bu-lah) [dim. of L. amaba]. A swarm spore of a protozoan having pseudopodia as the spore of the malarial parasite after it has entered the red blood-corpuscle and become amebiform Called also pseudopodiospore

ameburia, amœburia (am-e-bu're-ah) [L amæ'ba + Gr. οὖρον urine] The discharge or presence of ameb.e in the urine.

amelia (am-e'le-ah) [Gr α priv. + μέλος limb].
Absence of the limbs

amelification (am el-if ik-a'shun) [Old Fr. amel enamel + L. fa'cere to make]. The development of enamel-cells into enamel.

amelioration (am-e-le-o-ra'shun) [L. ad to + me'liar better]. Improvement, as of the condition of a patient.

ameloblast (am-el'o-blast) [Old Fr amel enamel + Gr $\beta\lambda\alpha\sigma\tau$ ós germ]. One of the group of cells from which the dental enamel is developed; an enamel-cell The ameloblasts cover the papilla of the enamel-organ Called also adamantollast.

amelodentinal (am"el-o-den'tin-al). Pertaining to the enamel and dentin of a tooth.

amelus (am'el-us) [Gr. α priv. + μέλος limb]. Λ monstrosity without limbs.

amenia (am c'ne ah) [Gr. α neg. + $\mu\dot{\eta}\nu$ month]. Absence of the menses.

amenomania, amenomania (am-e-no-ma'ne-ah) [L. ame'nus pleasant + mania]. Insanty with agreeable hallucinations

amenorrhea, amenorrhea (am-en-or-c'ah) [Gr. a neg $+ \mu \dot{\eta} \nu$ month $+ \dot{\rho}ola$ flow]. Absence or abnormal stoppage of the menses **primitive a.**, a condition in which the menstruation has not appeared at the proper time. **secondary a.**, arrest of the menses after they have once existed.

amenorrheal (am-en-or-e'al) Pertaining to am-

ament (a'ment) [Gr α neg + L. mens mind]. An idiot, a person with no mind.

amenyl (am'en il). A methylhydrastimid allied to hydrastin, recommended as an emmenagogue. Dose, r gr (0 065 gm).

amerisia (ah-me ris'e-ah) [Gr. α priv. + μερίξειν to divide] Inability to articulate words in speaking or writing. A form of aphasia (Heveroch, 1914).

amerism (am'er-izm) [Gr. α neg. + μέροs part]. The quality of not splitting into segments or fragments.

ameristic (ah-mer-is'tik) [Gr. α priv. + μεριστός divided]. Not split into segments.

ametabolon (ah-met-ab'o-lon). An animal which develops without undergoing metamorphosis

ametachromophil. ametachromophile (ahmet-ah-kro'mo-fil, -fil). Orthochromophil.

ametamorphosis (ah-met-ah-mor-fo'sis). Undue activity of thought leading to a condition of mental absorption and abstraction.

ametaneutrophil, ametaneutrophile (ah-met-ah-nu'tro-fil, -fil). Orthoneutrophil.

ametria (ah-me'tre-ah) [Gr. a neg. + μήτρα uterus]. Congenital absence of the uterus.

ametrohemia (ah-me-tro-he'me-ah) [Gr. α neg. + μήτρα womb + αἷμα blood]. Lack of uterine blood-supply.

ametrometer (ah-met-rom'et-er) [ametropia + Gr. μέτρον measure] An instrument for measuring the degree of ametropia.

ametropia (ah-met-ro'pe-ah) [Gr. ἄμετρος irregular + ωψ eye]. Imperfection in the refractive powers of the eye, so that images are not brought to a proper focus on the retina, producing hypermetropia, myopia, or astigmatism. axial a., ametropia due to lengthening of the eyeball on the optic axis curvature a., ametropia due to variations in the curvature of the surface of the eye.

ametropic (am-et-rop'ik). Affected with or pertaining to ametropia.

Amh. An abbreviation for mixed astigmatism with myopia predominating.

amianthinopsy (am-e-an'thin-op se) [Gr. a priv. + ιάνθινος violet + ὄψις vision] Violet-blindness; inability to perceive violet-colored rays.

amianthoid (am-e-an'thoid) Having the appearance of asbestos, a term applied to certain fibers seen in degenerated costal and laryngeal cartilage.

amic (am'ik). Relating to, or derived from, ammonia. The amic acids are the amido derivatives of the inorganic acids.

amicrobic (an-mi-kro'bik) [Gr. α neg. + microbe]. Not caused by microbes.

amicron, amicrone (ah'mi-kron). A colloid particle about 10⁻⁷ cm, in diameter Such particles are invisible even with the ultramicroscope.

amicroscopic (ah-mi-kro-skop'ik). Too small to be observed by the ultramicroscope.

amid, amide (am'id) [ammonia + id]. Any compound derived from ammonia by substituting an acid radical for hydrogen. primary a., ammonia in which one atom of hydrogen has been substituted secondary a., ammonia in which two atoms of hydrogen have been substituted; an imid

amidase (am'id-ās). A deamidizing enzyme.

amidin, amidine (am'id-in) [Fr. amidon starch].

1 One of the constituents of starch granules—the portion that is soluble in water.

2. Any one of a group of derivatives of the amids in which the carbonyl oxygen is replaced by the imid group. insoluble a., tegumentary a., the cellular lining of a starch granule, amylin.

amido-. Same as amino-.

amido-acetal (am-id-o-as'e-tal). A highly poisonous substance. NH₂ CH₂.CH(OC₂H₅)₂, which acts by paralyzing the respiratory center.

amido-acid (am id-o-as'id). Same as amino-acid.

amido-azotoluene (am"id-o-a"zo-tol'u-ēn). A reddish-brown powder, CH₃.C₅H₄ N₂.C₆H₃ CH₂.-NH₂, derived from scarlet red: used in an 8 per cent, ointment to stimulate the growth of epithelium.

amidocephalin (am-id-o-sef'al-in). A form of cephalin found in the brain substance.

amidogen (am'id-o-jen) The hypothetic radical, NH₂, found in amido-compounds.

amidohexose (am"id-o-hek'sōs). A hexose combined with the amido-group NH₂.

amidol (am'id-ol) A salt of diaminophenol, (NH₂)₂-C₆H₃OH, a photographic developer and hair-stain. It may produce eczema and scalp irritation.

amidomyelin (am-id-o-mi'el-in). A base, C₄₄H₉₂-N₂PO₁₀, from the brain substance; also any member of the group to which it belongs.

amidopurin (a"mid-o-pu'rin). Same as adenin.

amidopyrin (am"id-o-pi'rin). Pyramidon; an anti-pyretic and anodyne, dimethyl-amino-phenyl dimethyl pyrazolon, (GH5 N(CO.CH) N(CH3).C-

(CH₃).N(CH₃). It is used in rheumatism, neuritis, tuberculosis, and colds. Dose, 5-6 gr. (0.3 0.4 gm.).

Amidos'tomum an'seris. A round worm parasitic in the mucous membrane of the intestinal tract of geese, particularly underneath the cuticle of the gizzard. Called also Strongylus nodularis and cizzard worm.

amidoxim, amidoxime (am-id-ok'sim). Any one of a class of compounds formed from the amidins by substituting hydroxyl for a hydrogen atom of the amido group.

amidulin (am-id'u-lin). The granulose of starch freed from its envelop of amylocellulose by the action of hydrochloric acid, soluble starch.

amigrin (ah-mi'grin). Magnesium acetylorthoxybenzoate.

amimia (ah-mim'e-ah) [Gr. α neg. $+ \mu \hat{\iota} \mu o_s$ mimic]. Loss of the power of expression by the use of signs or gestures amnesic a., a condition in which gestures can be made, but their meaning cannot be remembered. ataxic a., absolute loss of the power of making signs.

amin (am'in). Any member of a group of chemic compounds formed from ammonia by replacing hydrogen with an alcohol radical. The amins combine with acids to form salts, and are distinguished as primary, secondary, and lertiary, according as one, two, or three hydrogen atoms are replaced. The amins include allylamin, amylamın, ethylamin, methylamin, phenylamın, propylamin, and many other compounds.

amino- (am'in-o). A prefix in chemic names, indicating that the substance represented by the latter part of the name is modified by the substitution of the radical NH2 for hydrogen.

amino-acid (am"in-o-as'id). An organic acid in which one or more hydrogen atoms have been replaced by the amino group NH2. The amino-acids are the building-stones of the protein molecule

amino-acidemia (am"in-o-as-id-e'me-ah) [aminoacid + Gr. alua blood]. Presence of amino-acids in the blood.

amino-aciduria (am''in-o-as-id-u're-ah) [aminoacid + Gr. οὐρον urine]. Presence of amino-acids in the urine.

amino-azotoluol (am''in-o-a-zo-tol'u-ol) crystalline solid, CH₃ C₆H₄ N₂ C₆H₃(CH₃)NH₂ used to stimulate epithelial growth.

aminobenzene (am''in-o-ben'zēn). See anilin. aminoform (am-in'o-form). Same as urotropin.

aminol (am'in-ol). An antiseptic and deodorant liquid with a strong fishy odor, derived from the methylamin of herring-brine.

aminolipin (am-i-no-li'pin). Any one of a class of fatty substances containing amino nitrogen and fatty acids.

aminolysis (am-in-ol'is-is) [amin + Gr. λbσιs dissolution]. The decomposition of a substance involving the rearrangement of ammonia elements.

aminomyelin (am-in-o-mi'el-in). A phosphatid, $C_{44}H_{82}N_2PO_{10}$, from brain substance.

aminosis (am-in-o'sis). The pathologic production of amino-acids in the body.

aminosuria (am"in-o-su're-ah) [amin + Gr. οὖρον urine]. The presence of amins in the urine.

amitosis (am-it-o'sis) [Gr. a priv. + µlros thread].
Direct cell division; cell division by simple cleavage of the nucleus without the formation of spireme spindle figure or chromosomes.

amitotic (am-it-ot'ik). Of the nature of amitosis; not occurring by karyokinesis.

ammeter (am'e-ter) [ampere + Gr. μέτρον measure]. An instrument for measuring electric currents in peres.

p-aciduria (am"o-as-id-u're-ah). Presence mmonia and amino-acids in the urine.

honamia (am-o-ne'me-ah). See ammoniemia.

ammonia (am-o'ne-ah) [named from Jupiter Ammon, near whose temple in Libya it was formerly obtained). A colorless alkaline gas, NH3, of a penetrating odor, and soluble in water, forming ammonia-water (a'qua ammo'nia). Ammonia preparations are antacids and stimulants in acidity of the stomach, headache, hysteria, etc Dose of aqua ammonia, 5-30 min. (0.333-2 c c), of mistura ammonia, 4-8 dr. (16-32 c.c.); of spiritus ammonia, 5-30 min. (0.333-2 c.c.); of spiritus ammonia aromaticus, 15-60 min. (1-4 c.). a. hemate, a compound of ammonia and hematein, used as a violet-black stain for microscopic specimens.

ammoniac (am-o'ne-ak) [L. ammoni'acum]. fetid gum-resin, stimulant and expectorant, from a Persian umbelliferous plant, Dore'ma ammon'acum, used in bronchitis and asthma moniac plaster and plaster of ammoniac and mercury are used as countergritants in pleurisy and rheumatism. Dose of mistura ammoniaci, 1-1 fl oz. (30-60 c c.).

ammoniacal (am-o-ni'ak-al). Containing ammonia.

ammoniated (am-o'ne-a-ted). Combined with ammonia.

ammoniemia mmoniemia (am-o-ne-e'me-ah) [L. ammo'nia + Gr alμα blood] An abnormal condition marked by the presence of ammonia or its compounds in the blood.

ammonio-. A prefix indicating combination with ammonium. a.-ferric sulphate. See under a.-silver nitrate albuminose. iron heconon.

ammonirrhea (am-o-nir-e'ah) [ammonia + Gr. bola flow. The excretion of ammonia by the urine or sweat.

ammonium (am-o'ne-um). The hypothetic radical, NH4, of ammonia It forms salts analogous to those of the alkaline metals These are stimulant to the heart and respiration. a. acetate, a compound, $NH_1C_2H_3O_3$, used as a diaphoretic and refrigerant. a. acetate, solution of, the so-called spirit of Mindererus. Dose, 1-8 dr. (4-32 c.c.). a. arsenate, a crystalline com-(4-32 c.c.). **a. arsenate**, a crystalline compound, (NH₀)₂HAsO₄, used in aqueous solution in skin diseases Dose, ½₀ gr (0 003 gm) **a. arsenite**, NH₄AsO₂, used like ammonium arsenate **a. benzoate**, a white, crystalline salt, C₆-H₅.CO.ONH₄, stimulant and diuretic. Dose, 5 15 gr. (0.333-1 gm). **a. biborate**, a salt useful in renal and vesical diseases. Dose, 10-20 gr. (0.666-1.333 gm). a. bicarbonate, a crystalline compound, (NH₄)HCO₃, stimulant and antacid. **a.** borate, a compound, 2(NH₄HB₂O₄)₃H₂O used in catarrh of the bladder and stone. Dose, 10-20 gr. (0.6-13 gm.). **a. bromid,** a crystalline compound, NH₄Br: used like potassium bromid in camphorate, a crystalline substance, $C_{10}H_{15}$. Sedative dosc, 2-4 gr. (0.333-1.333 gm.). **a.** a. carbamate, a compound, CO(NH₂)ONH₄. It is said that the periodic accumulation of this compound in the blood causes epileptic attacks.

a. carbonate, a white Salt, NH4HCO3.NH4-NH2CO2, a valuable stimulant and expectorant in bronchitis, pneumonia, etc., and a heart stimulant in adynamic states Dose, 3-10 gr. (0.2ulant in adynamic states. Dose, 3–10 gr. (0.2–0.066 gm.). **a. chloraurate**, a salt of gold, NH₄AuCl₄: recommended in disorders of menstruation. Dose, $_{1}^{1}_{0}$ gr. (0.006 gm.). **a. chlorid**, sal ammoniac, a white, crystalline body, NH₄-Cl, a stimulant, resolvent, and expectorant: used in bronchitis, in neuralgia, rheumatism, and in dysmenorrhea and amenorrhea Dose, 1-20 gr. (0 066-1.333 gm.). **a. cyanate**, a salt isomeric with urea and which changes into urea on heating, NH₄.CNO. a. embelate, a crystalline salt, $C_9H_{13}O_2$.NH₄: used as a teniafuge. Dose, 5-10 gr. (0.333-0.666 gm.). a. fluorid, NH₄F,

recommended for enlargement of the spleen and as an antiperiodic and antipyretic. Used in a solution of 4 grains to the ounce. a. hemate. See under ammonia. a. hypophosphite, a proprietary preparation, NH₄H₂PO₂: used as an expectorant in bronchitis, laryngitis, and catarrhal conditions. 2 gr. (0.13 gm) every two or three hours. a. ichthynate, ichthynat a ichthyolate, a reddish-brown viscous fluid used like ichthyol. a. iodid, a white crystalline body, NH₄I; a valuable antisyphilitic and antirheumatic, and used like other iodids Dose, 2 10 gr. (0 133-0 666 gm). a. nitrate, a colorless, crystalline compound, NH4NO3 used in making nitrous oxid gas. parts of alcohol a. oxalate, $(NH_4)_2C_2O_4 + H_2O_5$ is used as a test solution. a. persulphate, a colorless, crystalline substance, (NH₄)₂S₂O₈: used in a 05 2 per cent solution as a deodorant and disinfectant for wounds and as a mouth-wash a. phosphate, a salt in colorless, translucent prisms, (NH₄)₂HPO₄ and NH₄H₂PO₄ useful in gout and rheumatism Dose, 5 20 gr. (0 333-1 333 gm) picrate, an explosive salt in yellow needles, C₆H₂-(NO₂)₃ONH₄ antipyretic and antiperiodic. Dose, $_{8-2}^{1-1}$ gr (0 008 0 033 gm), given in wafer or capsule. a. purpurate, the substance which gives the red color in the murexid test for uric acid. See purpura acid a. salicylate, a white, crystalline compound, $C_6H_4(OH)COONH_4$ used as an expectorant Dose, 2 10 gr (0 13 0 65 gm) a. sulpho-ichthyolate. See ichthyol a. urate, a white powder, (NH₄)C₅H₃N₄O₃, found in urinary sediments and calculi and in the excrement of birds and reptiles. It is used externally in skin diseases, internally in phthisis, to be given with caution Dose, 1-7 gr (0016-0462 gm). a. valerate, a. valerianate, a deliquescent white or colorless salt, C₄H₉ CO ONH₄, in plates—useful in nervous affections. Dose, 1 5 gr (0 006 0 333

ammoniuria (am-o-ne-u're-ah) [ammonia + Gr. οὐρον urine]. Excess of ammonia in the urine.

Ammonius (am-o'ne-us). A surgeon of Alexandria in the third century B C. He invented an instrument for breaking up such stones in the bladder as could not be extracted after incision. He is surnamed "the lithotomist."

ammonol (am'o-nol). Ammoniated phenylacetamid, $C_aH_5NH_2$, a coal tar derivative. It is antiseptic, analgesic, and cholagogue. Dose, 5–20 gr. (0.3–1.3 gm.). **a. salicylate**, a compound used in nervous headaches in doses of 8 gr. (0.5 gm.).

ammonolysis (am-o-nol'is-is). A process analogous to hydrolysis, but in which ammonia takes the place of water.

Ammon's fissure, operation (am'unz) [F. A von Ammon, 1709-1861]. See fissure and operation.

Ammon's horn (am'unz). See cornu ammonis.

ammotherapy (am o-ther'a-pe) [Gr. $\ddot{a}\mu\mu$ os sand $+ \theta\epsilon\rho\alpha\pi\epsilon\dot{a}$ healing]. Treatment of disease by the sand-bath.

amnesia (am-ne'se ah) [Gr. άμνησία forgetfulness]. Lack or loss of memory, especially inability to remember the proper words. anterograde a., amnesia in which the patient is unable to fix or record memory impressions of events as they occur, so that there is no memory for events which have occurred since the onset of the disease. auditory a., word-deafness. Broca's a., inability to remember spoken words. lacunar a., loss of memory for certain isolated events only olfactory a., loss of the sense of smell. retrograde a., amnesia which prevents the re-calling or retention of memories which have previously been acquired, resulting in loss of memory for events that occurred before the attack of the disease. tactile a., astereognosis. tropical a., loss of memory frequently affecting white men in the tropics; a condition very prevalent on the West coast of Africa, where it is called *coast* memory verbal a., loss of memory for words. visual a., word-blindness.

amnesiac (am-ne'sc-ak). A person affected with amnesia

amnesic (am-ne'sik). Affected with amnesia.

amnesin (am-ne'sin). Same as narphoquin.

amniochorial (am-ne-o-ko're-al). Pertaining to the amnion and chorion.

amniogenesis (am"ne-o-jen'es-is) [amnion + Gr. γένεσις formation]. The development of the amnion.

amnion (am'ne-on) [Gr. ἀμνίον lamb]. The innermost fetal membrane, forming the bag of waters: the sac that incloses the fetus and forms a sheath for the umbilical cord. It consists of two layers: the outer (false a.), developed from the mesoblast: the inner (true a), from the epiblast. The false amnion, or subzonal membrane, lies outside the sac of the true amnion, from which it becomes separated. It is finally absorbed or becomes attached to the zona pellucida.

amnionic (am-ne-on'ik). Pertaining to the amnion. amniorhexis (am''ne o-rek'sis) [Gr. ἀμνίον amnion + ἐῆξις rupture]. Rupture of the amnion.

amniorrhea (am-ne-or-o'ah) [Gr. ἀμνίον amnion + ροία flow]. The escape of the amnionic waters, or liquor amnii.

amniote (am'ne-ōt). Any animal or species with an amnion.

amniotic (am-ne-ot'ik). Pertaining to the amnion. **amniotitis**, **amnitis** (am-ne-ot-i'tis, am-ni'tis). Inflammation of the amnion.

amniotome (am'ne-o tôm) [Gr $\dot{\alpha}\mu\nu lo\nu$ amnion + $\tau o\mu\dot{\eta}$ cut]. An instrument for cutting the fetal envelopes.

Amosba (ah-me'ba) pl. Amaba. A genus of protozoans of the class Sarcodina. See ameba. A. bucca'lis. Same as A. dentalis. A. cachex'-ica, the name given to an anieboid organism found in carcinoma. A. co'li. See Entamaba toli. A. co'li mi'tis, a non-pathogenic form. A. denta'-lis, a species found on the teeth. A. dysente'-rise. See Entamaba histolytica. A. histolyt'-ica. See Entamaba histolytica. A. li'max. See Endolimay nana. A. meleag'ridis, a species causing infectious enterohepatitis in turkeys. A. uri'nse granula'ta, a species found in the urine in cases of infective jaundice with albuminuria. A. urogenita'lis, a species found in the urine and the vaginal secretions

amœba, etc. (ah-me'bah). See ameba, etc.

amok (ah-mok') [Malay "impulse to murder"]. A psychic disturbance occurring among the Malays, marked by a period of depression, followed by violent attempts to kill people.

amol (am'ol) A proprietary analgesic, compounded of aromatics: for internal or external use.

Amomum (ah mo'mum) [L; Gr. ἄμωμον] A genus of scitamineous plants which afford cardamoms and grains of paradise. See cardamom and grains of paradise.

amoralia (ah-mo-ra'le-ah) [Gr. α neg. + moral].

Moral imbecility.

amoralis (ah-mo-ra'lis) [Gr. α neg. + mora'lis moral] A moral imbecile.

moral] A moral imbecile. amorpha (ah-mor fah) [Gr α neg. + μορφή form].

Diseases that evince no definite pathologic changes. **amorphia**, **amorphism** (ah-mor'fe-ah, ah-morf'izm) [Gr. α neg. $+\mu \rho \rho \varphi \eta$ form]. The fact or quality of being amorphous.

amorphous (am-or'fus) [Gr. a neg. + μορφή form]. Having no definite form; shapeless.

amorphus (am-or'fus) [Gr. a neg. $+ \mu o \rho \varphi h$ form]. A shapeless acardiac monster-fetus.

amo'tio ret'inæ [L.]. Separation of the retina.

Amp. Abbreviation for ampere.

- ampelopsin (am-pe-lop'sin). A concentration prepared from Ampelop'sis quinquefo'lia. Dose, 2-4 gr. (0.133-0.26 gm).
- **Ampelopsis** (am-pe-lop'sis) [L.; Gr. $\delta\mu\pi\epsilon\lambda$ os grape + $\delta\psi$ s appearance]. A genus of vitaceous climbing shrubs. **A. quinquefo'lia**, the Virginia creeper, is tonic, expectorant, astringent. Dose of fluidextract, 30-60 min. (2-4 c c.).
- ampelotherapy (am-pel-o-ther'ap-e) [Gr. $\delta\mu\pi\epsilon\lambda$ os vine + therapy] The therapeutic use of grape products; grape cure.
- amperage (am'per-āj) The intensity of an electric current expressed in amperes.
- ampere (ahm-pār') [for André M. Ampère, 1775—1836]. The unit of electric-current flow. It is the current which one volt will force through a conductor having a resistance of one ohm. This current will deposit ooil18 gm. of silver per second from a suitable solution. See current.
- **amperemeter** (ahm-pār'me-ter). An instrument for measuring amperage.
- **amphamphoterodiplopia** (am-fam-fo"ter-odip-lo'pe-ah) [Gr. $\dot{a}\mu\varphi t$ on both sides $+\dot{a}\mu\varphi \dot{o}\tau\epsilon\rho\sigma s$ both together +diplopia]. Double vision with both eyes together, or with either eye separately.
- ampheclexis (am-fek-leks'is) [Gr. ἀμφί on both sides + ἔκλεξις selection] Sexual selection on the part of both male and female.
- **amphiarkyochrome** (am-fe-ar'ke-o-krōm) [Gr. $\dot{a}\mu ol$ both $+ \ddot{a}\rho\kappa v_0$ net $+ \chi\rho\hat{\omega}\mu a$ color]. A nervecell, the stainable portion of whose body is a pale network, of which the nodal points are joined by a readily and intensely stainable network.
- **amphiarthrosis** (am-fe-ar-thro'sis) [Gr. $d\mu\varphi l$ both + $d\rho\theta\rho\omega\sigma\iota s$ joint] A joint in which the surfaces are connected by disks of fibrocartilage, as between vertebræ, or by synovial membranes, as in the pubic symphysis. This form of articulation admits of but little motion.
- amphiaster (am-fe-as'ter) [Gr. ἀμφί both + ἀστήρ star]. The figure of achromatin fibers formed in karyokinesis, consisting of two asters joined by a spindle. See diaster.
 - **Amphibia** (am-fib'e-ah) [Gr. $\delta \mu \varphi l$ both $+ \beta l$ os life]. A class of vertebrated animals that are able to live both on land and in water, as the frog.
 - **amphibious** (am-fib'e-us). See *Amphibia*. Capable of living both on land and in water.
 - **amphiblastula** (am-fe-blas'tu-lah) [Gr. $\dot{a}\mu\varphi l$ double + blastula] A blastula with unequal segments.
 - amphiblestritis (am-fe-bles-tri'tis) [Gr ἀμφίβληστρον net + ιτις inflammation]. Inflammation of the retina.
 - amphibolia (am-fib-o'le-ah) [Gr. "uncertainty"]. The uncertain stage of a fever or disease: a period of doubtful prognosis.
 - amphibolic, amphibolous (am-fe-bol'ik, am-fib'-ol-us) [Gr. ἀμφίβολος uncertain or doubtful]. Uncertain; vacillating; of doubtful prognosis.
 - amphicelous (am-fe-se'lus) [Gr. ἀμφί both + κοίλος hollow]. Concave at both ends or sides
 - amphicentric (am-fe-sen'trik) [Gr ἀμφί both + κέντρον point]. Beginning and ending in the same vessel, as a branch of a rete mirabile.
 - amphichroic, amphichromatic (am-fe-kro'ik, am"fe-kro-mat'ik) [Gr. $\grave{a}\mu\varphi t$ both $+\chi\rho\hat{\omega}\mu a$ color]. Affecting both red and blue litmus.
 - amphicrania (am-fik-ra'ne-ah) [Gr. ἀμφί both + κρανίον head]. Pain in both sides of the head.
 - **amphicreatin** (am-fik-re'at-in) [Gr. ἀμφί both + creatin]. A leukomain, C₉H₁₉N₇O₄, from muscle, occurring in the form of opaque, yellowishwhite crystals.
 - amphicreatinin (am-fik-re-at'in-in) [Gr. ἀμφί both + creatinin]. A poisonous leukomain, C₉H₁₀N₇O₄, from muscle.
 - **am**phicroic (am-fi-kro'ik) [Gr. $\dot{a}μφl$ both + κρούειν

- to test]. Turning red litmus paper blue, and blue litmus paper red.
- **amphicyte** (am'fe-sīt) [Gr. ἀμφt double + κὐτοs cell]. One of the cells forming the capsule which surrounds a cerebrospinal ganglion cell. Called also capsule cell.
- **amphicytula** (am-fis-it'u-lah) [Gr. $\delta\mu\varphi l$ double + cytula]. The ovum in its cytula stage.
- amphidiarthrosis (am"fe-dı-ar-thro'sis) [Gr. άμφι double + diarthrosis]. A joint having the nature of both a ginglymus and arthrodia, as the articulation of the lower jaw.
- amphigastrula (am-fe-gas'tru-lah) [Gr. $\partial \mu \varphi i$ double + gastrula]. The ovum at an advanced stage of gastrulation.
- **amphigenetic** (am-fe-jen-et'ık) Produced by means of both sexes; as, *amphigenetic* reproduction.
- amphigonium (am-ie-go'ne-um) [Gr ἀμφί on both sides + γόνος generation] That stage of the life of a malarial parasite which is passed in the mosquito.
- **amphigony** (am-fig'o-ne) [See amphigonium]. Sexual reproduction.
- **amphikaryon** (am-fe-kar'e-on) [Gr ἀμφί double + κάρυον nucleus] A diploid nucleus
- amphikreatin (am-fik-re'at-in). See amphicreatin.
- amphikreatinin (am-fik-re at'in-in). See am-phicreatinin.
- amphileucemic, amphileukemic (am-fe lu-se'-mik, -ke'mik) [Gr. ἀμφὶ both + leukemic] Showing leukemic changes which vary in degree with the changes in the organ.
- **amphimicrobian** (am-fe-mik-ro'be-an) [Gr. $\dot{a}\mu\varphi l$ both + *murobe*]. Both aerobic and anaerobic.
- amphimixis (am-fim-iks'is) [Gr ἀμφί both + μίξις a mingling]. The union of germ nuclei in reproduction, the mingling of the germ plasm, or hereditary substance, of two individuals.
- Amphimo'nas cauda'ta. See Bodo caudata
- **amphimorula** (am-fe-mor'u-lah) [Gr $\alpha\mu\varphi t$ both + morula] The morula resulting from unequal segmentation, the cells of the two hemispheres being of unequal size.
- amphinucleus (am-fe-nu'kle us) [Gr. ἀμφι both + nucleus]. A nucleus that consists of a single body made of spindle-fibers and centrosome, around which the chromatin is massed—It is the ordinary form of protozoan nucleus. Called also centronucleus.
- amphipeptone (am fe-pep'tōn) [Gr ἀμφί both + peptone]. A mixture of antipeptone with hemipeptone formed in the digestion of proteins.
- **amphipyrenin** (am-fe-pi'ren-ın) [Gr $\dot{a}\mu\varphi l$ on both sides $+\pi v p \dot{\eta} v$ stone of a fruit]. The substance of the nuclear membrane of a cell.
- **Amphistoma** (am-fis'to-mah) [Gr $\dot{a}\mu\varphi l$ on both sides $+ \sigma\tau\delta\mu\alpha$ mouth] A genus of parasitic trematode worms. **A. con'icum**, a species found in the rumen of sheep, cattle, etc. **A. hom'inis**, a species occasionally found in the human intestines in India: now known as Gastrodiscus hominis. **A. watso'ni**. See Watsonius watsoni.
- **amphistomiasis** (am"fe-sto-m"as-is). The condition of being infected with trematodes of the genus Amphistoma.
- amphitene (am'fe-tēn) The synaptic stage of miosis.
- amphitropic (am-fe-trop'ik). Passing into the abdomen or other cavity from one side.
- **amphitypy** (am'fit-i-pe). The condition of showing both types.
- ampho-albumose (am-fo-al'bu-mōs). Any albumose which is converted by digestion into amphopeptone.

amphochromatophil (am"fo-kro-mat'o-fil). Amphophil.

amphochromophil (am-fo-kro'mo-fil) [Gr. ἄμωφ both $+ \chi ρ \hat{\omega} μ α$ color $+ \varphi ι λ ε \hat{\imath} ν$ to love]. Amphophil.

amphodiplopia (am-fo-dip-lo'pe-ah) [Gr. $\check{a}\mu\varphi\omega$ both + diplopia]. Double vision in both eyes.

ampholyte (am'fo-lit) [Gr. $\ddot{a}\mu\varphi\omega$ both +electrolyte] An amphoteric electrolyte. See *electrolyte*.

amphopeptone (am-fo-pep'ton). See amphipep-

amphophil, amphophilic, amphophilous (am'fo-fil, am-fo-fil'ık, am-fol'ıl-us) [Gr. ἄμφω both + φιλεῖν to love]. Stainable with either acid or basic dyes; also a cell so staining. a.-basophil, staining with both acid and basic stains, but having a greater affinity for basic ones. a.-oxyphil, staining with both acid and basic dyes, but having a greater affinity for the acid ones.

amphoric (am-for'ık) [L. amphor'ıcus, from am'-phora jar]. Pertaining to a bottle, resembling the sound made by blowing across the mouth of a bottle.

amphoricity (am fo-ris'it e). The condition of giving of amphoric sounds on percussion or auscultation

amphoriloquy (am for-il'o-kwē) [L. am'phora jar + lo'qui to speak]. The production of amphoric sounds in speaking.

amphorophony (am-for-of'on-e) [Gr $d\mu\varphi o\rho\epsilon bs$ jug $+ \varphi\omega\nu\eta$ sound]. An amphoric sound of the voice. **amphoteric, amphoterous** (am-fo-ter'ik, am fot'-er-us) [Gr. $d\mu\varphi b\tau \epsilon \rho os$ pertaining to both] Having opposite characters; capable of acting either as an acid or as a base, combining with both acids and bases, affecting both red and blue litmus.

amphoterism (am-fo'ter-izm). [See amphoteric] The possession of both basic and acid properties

amphoterodiplopia (am-fot"er o-di-plo'pe ah) [Gr. ἀμφότερος both + diplopia]. See amphodiplopia.

amphotony (am-fot'o ne) [Gr ἄμφω both + τόνος tension] A condition in which both sympathicotony and vagotony exist; hypertonia of the entire sympathetic nervous system

amphotropin (am-fo-tro'pin). A white, crystalline powder, hexamethylenamin camphorate, [(CH₂)₆N₄]₂ C₈H₁₄(COOH)₂ used as a urmary antiseptic. Dose, $7\frac{1}{2}$ –15 gr (0 5–1 gm)

amplexation (am-plex-a'shun) [L amplex'us embrace] Treatment of tractured clavicle by an apparatus which fixes the shoulder and embraces the chest and neck.

amplexus (am plex'us) [L] An embrace, as in the sexual clasping of the female by the male frog.

amplification (am-phf-ik-a'shun) [L. amplifica'-two] The enlargement of the visual area of a microscope.

amplifier (am'plif-i-er). An appliance for increasing the magnification of a microscope

amplitude (am'plit-ūd) [L. amplitu'do] Largeness or fulness; wideness or breadth of range or extent. a. of accommodation, the total amount of accommodative power of the eye, the difference in refractive power of the eye when adjusted for farthest vision and that when adjusted for nearest vision a. of convergence, the power required to turn the eyes from their farpoint to their near-point of convergence.

ampoul (am'pool). Ampule.

ampul, ampule (ahm-pool') [Fr] A small glass container capable of being sealed so as to preserve its contents in a sterile condition—used principally for containing hypodermic solutions.

ampulla (am-pul'ah) [L. "a jug"], pl. ampul'læ.

Any flask-like dilatation; especially the dilated end
of the semicircular canal of the ear, that of the
oviduct, or that of the mammary ducts. Bry-

ant's a., an apparent distention of an artery above a ligature. a. chy'li, the receptaculum chyh a. duc'tus deferen'tis [BNA] Same as Henle's a. a. duc'tus lacrima'lis, a dilatation of the lacrimal duct just beyond the punctum. Galen's a., a dilatation of the vena magna galeni. Henle's a., the dilated extremity of the was deferens. a. lactif'era, a dilatation a milk-duct just before it enters the nipple. Lieberkuhn's a., the cecal termination of a lacteal in an intestinal villus a. membrana'cea, the membranous ampulla of the membranous laby rinth Its parts are distinguished as posterior, superior, and lateral. a. ossea, the bony laby-mth a. rec'ti [B N A], a. of the rectum, the dilated portion of the rectum above the perineal flexure a. of Thoma, one of the small terminal expansions in the spleen pulp of the interlobar artery of the spleen. a. tu'bs uteri'ns, the wide part of the oviduct near the fimbriated end. a. of vas deferens. Same as Henle's a a. of Vater, a dilatation at the entrance of the common bile-duct and pancreatic duct into the duodenum. ampullæ (am pul'e) Plural of ampulla

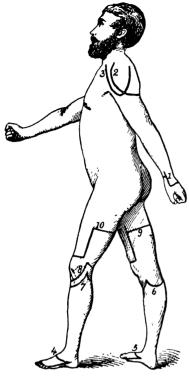

ampular (am pul'ar). Pertaining to an ampulla.

ampullar (am-pular). Pertaining to an ampula.

ampullitis (am-pul-r'tis). Inflammation of an ampulla, especially the ampulla of Henle.

ampullula (am pul'u-lah) [L] Any minute ampulla, like many of those of the lymphatic and lacteal vessels

amputation (am pu ta'shun) [L ambuta'tio] surgical cutting off of a limb or other part cidental a., the separation or loss of a limb by an accident. Alanson's a., circular amputation with a stump shaped like a hollow cone ouette's a., amputation at the hip by a semicircular outer flap to the great trochanter, and a large internal flap from within outward. aperiosteal a., amputation with complete removal of the periosteum from the end of the stump of the bone. **B6**clard's a., amputation at hip-joint by cutting the posterior flap first **Bier's a.**, osteoplastic amputation of the leg with a bone-flap cut out of the tibia and fibula above the stump bloodless a., one in which there is little or no loss of blood, the cir-culation being controlled by mechanic means. Bunge's a., aperiosteal amputation den's a., a single-flap operation, cutting through the femur just above the knee. central a., one in which the scar is situated at or near the center of the stump chop a., amputation by a circular cut through the parts without the formation of a flap Chopart's a., mediotarsal a., amputation of the foot, the calcaneum, astragalus, and a part of the tarsus being retained. cinematic a., cineplastic a. See kineplasty **circular a.,** one performed by means of a single flap and by a circular cut in a direction vertical to the long axis of a limb. coat-sleeve a., a circular amputation, with a single skin-flap made very long, the end being closed with a tape **com**plete a., amputation in which the entire limb or segment of the limb is removed congenital a., the amputation of a part of the fetus by a constricting band. **consecutive a.**, an amputation during or after the period of suppuration. a. in contiguity, an amputation at a joint. a. in continuity, an amputation disewhere than at a joint. cutaneous a., amputation in which the flaps are composed entirely of skin diaclastic a., an amputation in which the bone is broken by the ostcoclast and the soft tissues divided by the écraseur. Dieffenbach's a. See Dieffenbach's operation, under operation double-flap a., one in which two flaps are formed. dry a. See bloodless a. Dupuytren's a., a method of removing the arm at the shoulderjoint called also Lisfranc's a eccentric a., one in which the scar is not at the center of the stump. elliptic a., one in which the cut has an elliptic outline on account of the oblique direction

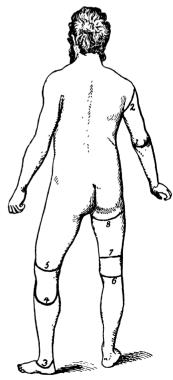

1. Amputation of lower third of forearm (Teale's), 2, at shoulder joint by large postero external flap (second method), 3. at shoulder-joint by triangular flap from deltoid (third method); 4, 5, through tarsis (Chopart's), 6, 7, at knee-joint; 8, by single flap (Carden's); 9, 10, of thigh (Teale's)

1, Amputation at wrist joint (dorsal incision), 2, at wrist-joint (palma incision), 3, at forearm (dorsal incision), 4, at forearm (palmar incision) 5, at elbow-joint (anterior flap), 6, at arm (Teile's), 7, at shoulder-join (first method), 8, 0, of metatarsis (Hey's), 10, 11, at ankle (Syme's) 12, 13, of leg, posterior flap (Lee's), 14, at knee-joint (Carden's), 15, 0; thigh (Bell's), 16, of thigh (Spencer's), 17, of thigh in middle third 18, at hip-joint.

r, Amputation of arm by double flaps; 2, at shoulder-joint; 3, at ankle-joint by internal flap (Mackenzie's); 4, 5, of leg just above the ankle joint (Syme's); 6, 7, beltow the knee (modified circular); 8, through condyles of femur (Syme's); 9, at lower third of thigh (Syme's).

1, Amputation at elbow-joint (posterior flap), 2, at shoul der-joint, posterior incision (first method); 3 at ankle-join (Mackenzie's); 4, through condyles of femur (Syme's); 5, at lower third of thigh (Syme's); 6, at knee (posterior incision) 7, of thigh (Spencer's), 8, at hip-joint.

of the incision. **Farabeuf's a.**, amputation of the leg at the "place of choice" by a large external flap. flap a., one in which flaps are made from the soft tissues, the division being oblique flapless a., one in which no flaps are tormed, and the wound must heal by granulation. Forbes's a., a foot amputation which retains the calcancum, astragalus, scaphoid, and a part of the cuboid bones. **galvanocaustic a.**, one in which the soft parts are divided with the galvanocautery. Gritti's a., one resembling Carden's, the patella being retained at the end of the stump, being brought into contact with the cut surface of the femur. Guyon's a., amputation above the malleoli Hancock's a., one like Pirogoff's, except that a part of the astragalus is also retained in the flap, the lower surface being sawed off and the cut surface of the os calcis brought into contact with it. Hey's a., disarticulation of the metatarsus from the tarsus, with removal of a part of the internal cuneiform bone. immediate a., one performed within twelve hours after the injury intermediary a., intermediate a., one done during the period of reaction and before suppuration interpelviabdominal a., amputation of thigh with excision of the lateral half of the pelvis. interscapulothoracic a., amputation of the upper extremity, including the scapula and external part of the clavicle. intrapyretic a. Same as *intermediary a* **intra-uterine a.**, amputation of lumbs of the fetus in utero by constricting bands. Jaboulay's a., interpelviabdominal amputation kineplastic a. See kineplasty Langenbeck's a., amputation in which the flaps are cut from without inward. Lar-rey's a., a method of disarticulation of the humerus at the shoulder joint by an incision extending from the acromion about three inches down the arm, splitting the deltoid muscle, and from this point about the arm to the center of the axilla. **Le Fort's a.**, a modification of Pirogoff's amputation in which the calcaneus is sawed through horizontally instead of vertically. linear a., amputation by a simple straight division of all the tissues Lisfranc's a. 1 See Dupuytren's a. 2 A division of the foot between the tarsus and the metatarsus MacKenzie's a., amputation like that of Syme except that the flap is taken from the inner side of the ankle Maisonneuve's a., amputation by breaking the bone, followed by cutting of the soft parts. **major a.**, amputation of a leg above the ankle or of an arm above the wrist **Mal**gaigne's a., one in which only the astragalus is retained in the stump. mediate a. See *intermediary a.* mediotarsal a. See *Chopart's* a minor a., amputation of a small part, as a finger or toe mixed a., that which is performed by a combination of the circular and flap methods. multiple a., amputation of two or more parts at the same time musculocutaneous a., one in which the flap consists of muscle and skin. natural a. Same as congenital a. oblique a. Same as oval a osteoplastic a., one in which the two severed surfaces of bone are brought into contact so as to unite oval a., one in which the incision consists of two reversed spirals partial a., amputation of only a portion or segment of a limb. pathologic a., amputation for a diseased condition of the part, as tumor. periosteoplastic a. Same as subperiosteal a. Pirogoff's a., one resembling Syme's, but a part of the os calcis remains in the flap at the lower end of the stump. **primary a.**, one performed after the period of shock, and before the development of inflammation. quadruple a., amputation of all four extremities. racket a., one in which there is a single longitudinal incision continuous below with a spiral incision on each side of the limb. rectangular a., one with a long and a short rectangular skin-flap. See Teate's a. Ricard's a., intertibiocalcaneal amputation. root a., in dentistry the operation of excising the

apical portion of a diseased root by means of a surgical burr. secondary a., one performed during suppuration. spontaneous a. See congental a. subastragalar a., disarticulation of the foot, in which only the astragalus is retained called also Malgaigne's a subperiosteal a., one in which the cut end of the bone is covered with a flap of periosteum. Syme's a., a dislocation of the foot and removal of both malleoli. syn-chronous a., multiple amputation, especially multiple amputation in which two or more parts are removed simultaneously by different operators. Teale's a., amputation with a long rectangular flap of muscle and integument on one side of the limb and a short rectangular flap on the other. tertiary a., amputation done after the stage of inflammatory reaction has subsided. a. by transfixion, one performed by thrusting a long knife through the limb and cutting the flaps from within out. **traumatic a.**, amputation of a part happening in an accident. **Tripier's a.**, one like Chopart's, except that a part of the tarsus is removed. **triple a.**, amputation of three extremities. **Vladimiroff-Mikulicz a.**, osteoplastic resection of the foot with excision of the calcaneum and astragalus.

amrita (am're-tah). A proprietary aphrodisiac.

amuck (ah-muk') Same as amok.

amusia (ah-mu'ze-ah) [Gr. ἀμουσία want of harmony] Inability to produce (motor a.) or to comprehend (sensory a.) musical sounds (Knoblanch) instrumental a., that in which the patient has lost the power of playing a musical instrument paramusia is inability to produce correct musical sounds. vocal motor a., that in which the patient cannot sing in tune.

Amussat's operation, probe, valve (am-oo-saz') [Jean Zulcma Amussat, French surgeon, 1790-1850] See under operation, probe, valve.

amyasthenia (am) as the ne ah) [Gr α neg. $+ \mu \hat{\nu} s$ muscle $+ \sigma \theta \hat{\epsilon} \nu o s$ force]. Deficiency of muscular force, especially a feeling of weakness in the arms and legs, often seen in hysteria.

amyasthenic, amyosthenic (am-i-as then'ik, -osthen'ik) [Gr α priv + μῦς muscle + ἀσθένεια weakness] Marked by muscular weakness.

amycain (am'i ka in) Bi hydrochlorid of amylene and novoc un, a local ane-thetic and hemostatic.

amychophobia (ah-mi-ko-fo'be-ah) [Gr ἀμυχη a scratch + φόβος fear]. Morbid fear of being scratched, as by the claws of a cat.

amyelencephalia (ah-mi"el-en-sef-a'le-ah) [Gr. α neg. + μιελός marrow + ἐγκέφαλος brain]. Congenital absence of both brain and spinal cord. amyelencephalus (ah mi"el-en-sef'al us). A fetal

monster with neither brain nor spinal cord. **amyelia** (ah mi-e'le ah) [Gr α priv + μυελός marrow] Congenital absence of the spinal cord.

amyelic (ah-mi-el'ık). Having no spinal cord.

amyelinic (ah-mi-cl-in'ik). Without myelin; having no medullary sheath.

amyelinuria (ah mi-el-in-u're ah) [α priv. + μυελός marrow + νεύρον nerve] Paralysis or defective function of the spine.

amyelonic (ah-mi-el-on'ik) [Gr α neg. + μυελός marrow].
 1. Having no spinal cord.
 2. Having no marrow.

amyelotrophy (ah-mi-el-ot'rof-e) [Gr. α neg. + μυελός marrow + τροφή nourishment]. Atrophy of the spinal cord

amyelus (ah-mi'el us) [Gr. α neg + μυελός marrow] A fetus with no spinal cord.

amygdala (am-ig'dal-ah) [L. "almond"]. r. The almond See almond 2. A tonsil. 3. One of the lobules of the cerebellum, situated on the lower surface of either hemisphere. It lies near the median fissure and extends into the fourth ventricle. 4. Same as nucleus amygdala. a. ama/ra.

the bitter almond See almond. a. coraso'rum, the kernels of cherry stones sweet almond of many varieties. See almond.

amygdalectomy (am-ig-dal-ek'to-me) [Gr. ἀμυγδάλη almond + ἐκτομή excision]. Excision of a tonsil

amygdalin (am-ig'dal-īn) A glucosid from bitter almond and the leaves of cherry-laurel, C₂₀H₂₇-NO₁₁ + ₃H₂O. It is split by the enzyme emulsin into glucose, benzaldehyd, and hydrocyanic acid.

into glucose, benzaldehyd, and hydrocyanic acid.

amygdaline (am-ig'dal-īn) [L. amygdali'nus]. 1.

Like an almond. 2. Pertaining to a tonsil.

amygdalitis (am-ig-dal-i'tis). Inflammation of a tonsil.

amygdaloglossus (am-ig"dal-o-glos'us). See in muscles, table of.

amygdaloid (am-ig'dal-oid) [Gr. άμυγδάλη almond + είδος form]. Like a tonsil or an almond.

amygdalolith (am-ig-dal'o-lith) [Gr. ἀμυγδάλη almond + λίθος stone]. A concretion in a tonsil.

amygdalopathy (am-ig-dal-op'ath-e) [Gr. $\dot{\alpha}\mu\nu\gamma\delta\dot{\alpha}\lambda\eta$ tonsil + $\pi\dot{\alpha}\theta$ os illness]. Any disease of a tonsil.

amygdalophenin (am-ig''dal-o-fe'nin). A grayish-white, crystalline compound, salicyl phenetidm, $C_6H_4(OC_2H_5)NHOCCH(OH)C_6H_5$ used as an antirheumatic in doses of 15 gr. (r gm).

amygdalose (am-ig'dal-ōs) A disaccharid from amygdalin. It splits into two molecules of dextrose.

amygdalothrypsis (am-ig"dal-o-thrip'sis) [Gr. άμυγδάλη tonsil + θρύψις crushing]. Removal of a hypertrophied tonsil by crushing with a strong forceps.

amygdalotome (am-ig'dal-o-tōm) [Gr. ἀμυγδάλη almond + τομή cut]. An instrument for cutting the tonsils.

amygdalotomy (am-ig-dal-ot'o-me). Incision or abscission of a tonsil.

amygdalo-uvular (am-ig"dal-o-u'vu-lar). Pertaining to the amygdala and the uvula of the cerebellum.

amygdophenin (am-ig-do-fe'nin). Phenylglycolylphenetidin. Its acetyl derivative is antiseptic and februage.

amykos (ah-mi'kos) [Gr. α neg. $+ \mu \hat{\nu} \kappa \sigma_s$ impure]. An antiseptic wash of borax, thymol, and glycerin.

amyl (am'il) [Gr. ἄμυλον starch] The univalent radical, $C_5\Pi_{11}$. **a. acetate**, a colorless, limpid liquid, the acetic acid ester of amyl alcohol, $CH_3 - CO(OC_5\Pi_{11})$, prepared by distilling 1 part of amylic alcohol, 2 parts of potassium acetate, and 1 of concentrated sulphuric acid. It has the odor of bananas and is called banana oil. a. alcohol. See under alcohol. a. chlorid, a colorless liquid, C₅H_BCl. a slow but profound anesthetic. a. hydrid. See pentane. a. iodid, a volatile compound, C₅H_BI, used in dy-pnea and heart affections. tions by inhalation. **a. nitrite**, a yellowish, volatile, fragrant liquid, C₅H₁₁NO₂. It is a vasodilator and heart stimulant, and is used to arrest spasm in epilepsy, malaria, and angina pectoris, and is an antidote to chloroform. Dose, i-1 min. (0.0105-0 006 c.c.); by inhalation, 2-5 min. (0 133-0.333 c.c.) a. salicylate, a compound, C₆H₁₁.-O₂C.C₆H₄ OH: used like methyl salicylate in rheua. valerate, a. valerianate, a colormatism less liquid, the so-called apple-oil, (CH3)2CH CH2.-CO.O (CII₂)₂ CH(CII₃)₂ It is an artificial flavoring substance, and is used for its action on the liver in colic from gall-stones. Dose, 2-3 min. (0.133-0.2 C.C).

amylaceous (am-il-a'she-us) [L. amyla'ceus]. Starchy; containing starch, of the nature of starch **amylamin** (am-il-am'in). A poisonous liquid base, $C_6H_{11}NH_2$, sometimes found in cod-liver oil, and formed by the decomposition of yeast. **a.** hydrochlorid, a compound, $C_6H_{11}NH_2HCl$: used as

an antipyretic. Dose, 7-15 gr. (0.45-1 gm.). **amylase** (am'il-ās) [Gr. ἄμυλον starch + -asc].

Any one of a series of ferments which convert starch into sugar. pancreatic a., amylopsin salivary a., ptyalin.

amylemia, amylemia (am-il-e'me-ah) [Gr. ἄμυλον starch + alμα blood]. Presence of starch in the blood.

amylene (am'il-ēn). A liquid hydrocarbon of five isomeric forms, C_bH₁₀, an unsafe anesthetic.
 a. chloral, an oily, colorless liquid, composed of chloral and amylene hydrate: used as a hypnotic.
 a. hydrate, a colorless liquid, (CH₃)₂C'(OII)C₂H₅ used as a hypnotic and in epilepsy. Dose, 30-60 min. (2-4 c.c.).

amylenization (am-il-en-iz-a'shun). Anesthesia produced by amylene.

amylenol (am-i'len-ol). The amyl ester of salicylic acid: used externally in theumatism.

amylic (am-il'ik) [L. amyl'icus]. Pertaining to amyl. a. alcohol. See under alcohol.

amylin (am'il m). Insoluble amidin.

amylism (am'il-izm). Intoxication or poisoning by amyl alcohol

Amylobacter (am-il-o-bak'ter) [Gr ἄμυλον starch + βακτήριον bacterium]. A genus of Schizomycetes marked by containing starch in their interior. amylocain (am-i'lo-kān). Stovain

amylocellulose (am-il-o-sel'u-lōs). Same as am-ylose, 2d def.

amylocoagulase (am"il-o-ko-ag'u-lās). A ferment occurring in cereals which coagulates soluble starch.

amylodextrin (am-il-o-dek'strin). A compound, colored yellow by iodin, formed during the change of starch into sugar.

amylodyspepsia (am-i"lo-dis-pep'se-ah) [Gr. ἄμυλον starch + dyspepsia]. Inability to digest starch foods.

amyloform (am-il'of-orm) [Gr. ἄμυλον starch + formyl]. A white, insoluble, antiseptic, and deodorizing powder, containing starch and formal-dehyd, and used like iodoform.

amylogen (am-il'o-jen) The portion of the starch granule that is soluble in water.

amylogenesis (am"ıl-o-jen'es-is). The formation of starch.

amylogenic (am-il-o-jen'ik) [Gr. ἄμυλον starch + γεννᾶν to produce]. Producing starch.

amylohemicellulose (am"/il-o-hem-e-sel'u-lôs). A polysaccharid found in the cell wall of plants. It is much like the amylose of starch in that it is insoluble in water and stains blue with iodin

amylohydrolysis (am"il-o-hi-drol'is-is). Hydrolysis of starch, amylolysis.

amyloid (am'il-oid) [Gr. ἄμυλον starch + είδος form]. 1. Resembling starch; characterized by a starch-like formation 2 \ \text{white insoluble substance found as an abnormal deposit in various organs. It is homogeneous, translucent and colorless, and contains phosphorus and sulphur. 3. A substance produced by the action of sulphuric acid and cellulose. It gives a blue color when treated with iodin. a. degeneration, etc. See degeneration, etc

amyloidosis (am-il-oid-o'sis). The formation of amyloid substance in a tissue; amyloid degeneration.

amylolysis (am-il-ol'is-is) [Gr. ἄμυλον starch + λόσις solution]. The digestion and disintegration of starch, or its conversion into sugar.

amylolytic (am-il-o-lit'ik). Pertaining to or causing the digestion of starch; as, amylolytic ferments.

amylopectin (am-ıl-o-pek'tin). A constituent of starch grains. It stains violet-red with iodin and forms a paste with hot water. The other constituent is amylose. Called also alpha-amylose and starch cellulose.

amylophagia (am-il-o-fa'je-ah) [Gr. ἄμυλον starch + φαγεῖν to eat]. Starch-cating; an abnormal craving for starch.

amyloplast (am-il'o-plast) [Gr. ἄμυλον starch πλάσσειν to form]. A starch-forming vegetable leukoplastid.

amyloplastic (am"il-o-plas'tik). Forming starch. amylopsin (am-il-op'sin) [Gr. ἄμυλον starch bus appearance]. A pancreatic ferment which changes starch into maltose.

amylose (am'ıl-ös). 1 Any carbohydrate of the starch group; a polysaccharid 2 One of the con-stituents of starch grains It stains blue with iodin and does not form a paste with hot water. The other constituent is amylopectin. Called also amylocellulose, beta amylose, and granulose. pha a. Same as amylopectin.

amylum (am'il-um) [L; Gr. αμυλον]. Starch. a. ioda'tum, iodized starch used as an alterant Dose, 3-30 gr (0 2-2 gm).

amyluria (am-il-u're-ah) [Gr. ἄμυλον starch + οὐρον urine]. Presence of starch in the urine.

amylzyme (am'ıl-zīm). A proprietary extract containing the digestive enzymes of the fresh pancreas of the hog, used in digestive disturbances resulting from deficiency of pancreatic secretion

amynologic (ah-min-o-log'ik). Immunologic.

amynology (ah-min-ol'o je) Same as immunology **amyocardia** (ah-mi-o-kar'de-ah) [Gr α priv. + $\mu \hat{v}s$ muscle + $\kappa \alpha \rho \delta i \alpha$ heart]. Weakness of the heart muscle.

amyostasia (ah-mi-o-sta'se-ah) [Gr α priv. $+ \mu \hat{v}s$ muscle + στάσις standing] A tremor of the muscles, seen especially in locomotor ataxia.

amyosthenia (ah mi o-sthe'ne-ah) [Gr. a neg $\mu \hat{v}s$ muscle $+ \sigma \theta \epsilon v s$ strength]. Deficient muscular See amyasthenia. power

amyosthenic (ah-mi-os-then'ik). Characterized by or causing muscular weakness.

amyotaxia (ah-mi-o-taks'e-ah). Same as amyotax y **amyotaxy** (ah-mi'o-taks-e) [Gr. α neg. + μυς muscle + τάσσειν to arrange] Muscular ataxia

amyotonia (ah-mi-o-to'ne-ah) [Gr α neg $+\mu \hat{v}s$ muscle + τόνος tone]. Atonic condition of the

musculature of the body; myatonia. a. congen'ita (Oppenheim, 1900), myatoma congenita

amyotrophia, amyotrophy (ah mi o-tro'fe-ah, ah-mi-ot'ro-fe) [Gr α neg | $-\mu \hat{\nu}$ s muscle $+\tau \rho o \varphi \hat{\eta}$ nourishment] Atrophy of a muscle a. spina'lis progressi'va, progressive muscular atro-

amyotrophic (ah-mi-o-trof'ik). Characterized by muscular atrophy.

amyous (am'i-us) [Gr. α neg. $+ \mu \hat{v}_s$ muscle]. Deficient in muscular tissue.

amytal (am'it-al) A proprietary iso-amylethyl barbituric acid: used as a sedative and hypnotic Dose, 11-3 gr (0 1 0 2 gm).

amytin (am-i'tin). Anitin.

amyxia (ah-mik'se-ah) [Gr. α neg. $+ \mu b \xi \alpha$ mucus]. Absence of mucus

amyxorrhea (ah-mik-so-re'ah) [Gr. α neg. + μύξα mucus + pola flow]. Absence of mucous secretion. a. gas'trica, deficiency of mucus in the gastric secretion.

An. Abbreviation for anode and anisometrovia.

ana (an'ah) [Gr.]. So much of each; usually written āā.

anabasis (an-ab'as is) [Gr. "ascent"]. The stage of increase in a disease.

anabatic (an-ab-at'ik) [Gr. ἀναβατικόs]. Increasing or growing more intense.

Anabena (an-ab'en-ah). A genus of blue-green algæ which sometimes imparts a pig-pen odor to a water-supply.

anabiosis (an-ah-bi-o'sis) [Gr. "revival"]. Restoration after apparent death.

anabiotic (an-ah-bi-ot'ik). Lifeless, but still capable of living.

anabolergy (an-ab-ol'er-je) [Gr. ἀναβάλλειν to

build up $+ \xi \rho \gamma \rho \nu$ work]. Force expended in anabolism, or in anabolic processes.

anabolic (an-ah-bol'ık) [Gr. άναβολικός]. Pertaining to constructive processes; constructive.

anabolin (an-ab'ol-in). Any product of a constructive process.

anabolism (an-ab'ol-izm) [Gr. άναβάλλειν to build upl. Any constructive process by which simple substances are converted by living cells into more complex compounds, constructive metabolism and assimilation.

anabolistic (an-ab-o-lis'tik). Pertaining to anabolism.

anabrosis (an-ab-ro'sis) [Gr.]. Ulceration or erosion of the surface.

anabrotic (an-ab-10t'ik). Pertaining to or marked by anabrosi.

anacamptic (an-a-kamp'tik). Pertaining to reflection, as of sound or light.

anacamptometer (an"ah kamp tom'et-er) ανάκαμψις reflection + μέτρον measure]. An instrument for measuring the reflexes (Duprat, 1886).

Anacardium (an-ah kar'de um) [L , Gr. ἀνά up + καρδία heart] A genus of tropical trees with a poisonous juice. A. occidenta'le, the cashew tree. affords the cashew-nut and a useful gum, as well as cardol (q v) It is used for leprosy, for destroying corns and warts, and as a vermicide. Dose of tincture, 2-10 min. (0.133-0.606 c.c.) An ointment is used as a blistering application.

anacatadidymus (an"ah-kat-ad id'im-us) [Gr. ἀνά up + κατά down + δίδυμος twin|. A twin-monster separated above and below, but united into one near the waist

anacatesthesia (an"ah-kat-es-the'ze-ah). **katesthesia**

anacatharsis (an"ah Lath ar'sis) [Gr. årå up + catharsis | Severe vomiting.

anachlorhydria (an ak-lor-hid're-ah). Absence of hydrochloric acid from the gastric juice.

anacholia (an-ah ko'le ah). Decreased secretion of bile.

anacidity (an-as-id'it-e) [Gr. $d\nu$ neg. + acidity]. Lack of normal acidity.

anaclasimeter (an-ak las-im'et-er) [Gr. ἀνάκλασις refraction $+ \mu \epsilon \tau \rho o \nu$ measure]. An instrument for measuring eye refraction

anaclasis (an-ak'lah sis) [Gr. "reflection"]. 1. Reflection or refraction of light. 2. Reflex action. 3. Refracture. 4. For tible flexion of a limb; the breaking up of an ankylosis.

anacousia (an ah-ku'se ah). Anakusis.

anacroasia (an-ak-ro-a'ze ah) [Gr άν neg + άκρόα-σις hearing] Inability to understand language, due to cerebral disease

anacrotic (an-ak-rot'ık). Characterized by anacrotism

anacrotism (an ak'rot-izm) [Gr. ἀνά up + κρότος stroke] The existence or two or and sions of an artery in one beat, the lesser expansions of an artery in one beat, the lesser expansions of an artery in one beat, the principal one. The sion taking place before the principal one. The condition is seen in hypertrophy and dilatation of the left ventricle, after ligation of an artery, in diminished velocity of blood-current, etc.

anacusis (an-ah-ku'sis). Same as anakusis.

Anacy'clus pyre'thrum. See pyrethrum.

anadenia (an-ad-e'ne-ah) [Gr. ἀν neg. + ἀδήν μlandl. 1. Absence of glands 2 Insufficiency of glandular function. a. ventric'uli, absence or destruction of the glands of the stomach.

anadicrotic (an-ah-di-krot'ik) Characterized by double indentation of the ascending wave of the sphygmographic record

anadicrotism (an-ah-dik'rot-izm) [Gr. dvd up + δis twice + $\kappa \rho \delta \tau os$ stroke]. The fact or quality of being anadicrotic.

anadidymus (an-ah-did'im-us) [Gr. ἀνά up + δίδυμος twin]. A monster-fetus, double above, but joined below.

δίψα thirst]. Intense thirst.

anadol (an'ad-ol). A proprietary acetanilid preparation.

anæmia, anæmic. See anemia, anemic.

anaërobe, anaërobion (an-a'er-ōb, an-a-er-o'bemicroorganism having the power to live without either air or free oxygen. **facultative a.**, a microorganism which usually lives in oxygen, but is able to live without it. obligate a., a microorganism which can live and grow only in the absence of free oxygen.

anaërobia (an-a-er-o'be-ah). Pl of anaerobion.

anaërobic, anaërobiotic (an-a-er-ob'ik, an-a"er-Thriving best without air. o-bi-ot'ik)

anaërobiosis (an-a"er-o-bi-o'sis) [Gr. $d\nu$ neg. + $\dot{a}\dot{\eta}\rho$ air + $\beta \dot{l}os$ life]. Life without free oxygen; anoxybiosis.

anaërobism (an-a'er-o-bizm). The ability to live without oxygen.

Anaëromy'ces bronchit'ica. A branching diphtheroid micro-organism found in certain cases of tropical bronchitis.

anaërophyte (an-a'er-o-fit) [Gr. ἀν neg. + ἀήρ air + φυτόν plant]. Λ vegetable anaerobic microorganism.

anaëroplasty (an-a'er-op-las-te) [Gr. άν neg. $\dot{\alpha}\dot{\eta}\rho$ air $+\pi\lambda\dot{\alpha}\sigma\sigma\epsilon\nu$ to form] Exclusion of the air from wounds by applying water.

anaërosis (an-a-er-o'sis) [Gr. $\dot{\alpha}\nu$ neg. $+ \dot{\alpha}\dot{\eta}\rho$ air]. Interruption of the respiratory function, especially in the newborn.

anæsin (an-e'sin). See anesin.

anæsthesia, anæsthetic. See ancsthesia, anes-

anæstiform (an-es'tif-orm). A local anesthetic preparation of reniglandin, cocain hydrochlorid, and sodium sulphate.

anagenesis (an-aj-en'es-is) [Gr. ἀνά again + γένεσις production]. Reproduction or regeneration of tissue

anagenetic (an-aj-en-et'ik). Pertaining to producing anagenesis.

anagnosasthenia (an-ag-nős-as-the'ne-ah) [Gr άνάγνωσις reading + asthenia] Neurasthenia with distress at any attempt to read, also inability to read, although the eye can distinguish printed words.

anagyrin (an-aj'ir-in) [Gr. ἀνά back + γῦρος turn]. An alkaloid, C₁₅H₂₂NO₂, from Anagyrıs fa'lıda, an old-world leguminous shrub; its hydrochlorate is a heart depressant. a. hydrobromid, a white, crystalline compound, C14H18N2O3Br, used as a heart stimulant.

anakatesthesia (an"ah-kat-es-the'ze-ah) [Gr. ἀνά up + $\kappa a \tau \dot{a}$ down + $a i \sigma \theta \eta \sigma \iota s$ sensation]. A hovering feeling or sensation.

anakhre (an-ak'er). See goundou.

anakinetomere (an-ah-kin'e-to-mēr) [Gr. ἀνά up + κίνησις motion + μέρος part]. A. P. Mathews's term for matter in which the molecules and atoms are rich in energy content so that such matter is alive. Cf. katakinetomere.

anakinetomeric (an"ah-kin-e-to-me'rik). Rich in energy content and therefore living. Cf. katakinetomeric.

anakusis (an-ak-oo'sis) [Gr. ἀν neg. + ἀκούειν to hear]. Total deafness.

Pertaining to the anus anal (a'nal) [L. ana'lis]

analeptic (an-al-ep'tik) [Gr. ἀναληπτικός]. Restorative; cordial. 2. A restorative medicine

analeptol (an-al-ep'tol). A tonic compound of phosphorus, nux vomica, cinchona, cocoa leaves, and aromatics.

analgecist (an-al'je-sist). One who administers an anesthetic.

anadipsia (an-ah-dip'se-ah) [Gr. ἀνά intensive + analgen (an-al'jen) [Gr. ἀν neg. + ἄλγος pain]. A white, crystalline, antipyretic, and analgesic substance, ortho-ethoxymonobenzoyl aminoquinolin, C9H5(OC2H5).NH(COC6H5)N, insoluble in water, but fairly soluble in hot alcohol and dilute acids. It is used in rheumatism and neuralgia. Dose, 7-15 gr (0 46-1 gm.). Called also quinalgen, benzanalgen, and labordin.

analgesia (an-al-je'ze-ah) [Gr. ἀν neg. + ἄλγος pan]. Absence of sensibility to pain. a. al'gera, a. doloro'sa, acute pain in a part, with loss of sensibility. **paretic a.**, loss of the sense of pain accompanied by partial paralysis.

analgesic (an-al-je'zik). 1. Relieving pain. 2. Not sensitive as to pain. 3. A remedy for pain. analgesin (an-al-je'sin). See antipyrin. analgetic (an-al jet'ik). Analgesic.

analgia (an-al'je-ah) [Gr. ἀν neg. + ἄλγος pain]. Absence of pain.

analgic (an-al'jik). Insensible to pain.

analgin (an-al'jin). Same as creolin

anallergic (an-al-er'jik). Not allergic; not causing anaphylaxis.

analogous (an-al'og-us). Having an analogy; corresponding in certain particulars.

analogue (an'al-og) [Gr ἀνάλογος proportionate]. A part or organ having the same function as another, but of a different structure. See homologue homologous a., a part that is similar to another in both function and structure.

analogy (an-al'o je). Resemblance in structure due to similarity of function.

analysis (an-al'15-i5) [Gr. ἀνά apart + λύειν to Separation into component parts or elements, the act of determining the component parts of a substance colorimetric a., analysis by means of the various color-tests. **densimetric a.**, analysis by ascertaining the specific gravity of a solution and estimating the amount of matter dissolved gasometric a., the measurement of the different components of a gaseous mixture. **gravimetric a.**, the quantitative analysis of a body by weight. **organic a.**, the analysis of animal and vegetable tissues. polariscopic a., analysis by means of the polariscope. **proximate a.**, the determination of the simpler constituents of a substance **quali**tative a., qualitive a., the determination of the nature of the constituents of a compound. quantitative a., quantitive a., the determination of the proportionate quantities of the constituents of a compound. spectroscopic a., spectrum a., analysis by means of the spectroscope. ultimate a., the determination of the ultimate elements of a compound. volumetric **a.**, quantitative analysis by measuring volumes of liquids.

analysor (an'al-i-zor). Pawlow's name for a specialized part of the nervous system which controls the reactions of the organism to changing external conditions.

analytic (an-al-it'ik) Pertaining to analysis.

nalyzer (an'al-i-zer) A Nicol prism attached to a polarizing apparatus which extinguishes the analyzer (an'al-i-zer) ray of light polarized by the polarizer.

Aname (an'am-e). A genus of poisonous spiders, known as the "bird spiders."

anamirtin (an-ah-mer'tin). An oily glycerid, C10H21O10, from Cocculus indicus.

anamnesis (an-am-ne'sis) [Gr. ἀνάμνησις a recalling]. 1. The faculty of memory. 2. The past history of any particular case of disease It includes the information obtained concerning the patient, his family, his previous environment, experiences, and sensations.

anamnestic (an-am-nes'tik). Pertaining to anamnesis.

anamniotic (an-am-ne-ot'ik) [Gr. άν neg. + άμνίον amnion]. Having no amnion.

anamorphosis (an"ah-mor-fo'sis) [Gr. ἀνά up + μορφή form]. An ascending progression or change of form in the evolution of a group of animals or plants.

ananabasia (an-an-ab-a'se-ah) [Gr. α neg. + ἀνάβασις ascent] Inability to ascend high places. ananaphylaxis (an-an"af-il-aks'is). Antianaphylaxis

ananastasia (an-an-as-ta'se ah) [Gr. α neg. + ἀνάστασις standing up]. Inability to stand up or to rise from a sitting posture.

anandria (an-an'dre-ah) [Gr. ἀν neg. + ἀνήρ man]. The loss of male and assumption of female characters by men.

anangioplasia (an-an"je-o-pla'se-ah) [Gr. ἀν neg. + ἀγγεῖον vessel + πλάσσειν to form] Congenital diminution of the caliber of the arteries

anangioplastic (an-an"/je-o-plas'tik). Due to or marked by defective development of the vascular system.

anapeiratic (an-ah-pi-rat'ik) [Gr. ἀναπειρᾶσθαι to do again]. Due to excessive use.

anapepsia (an-ap-ep'se-ah). Complete absence of pepsin from the stomach secretion.

anaphalantiasis (an-af-al-an-ti'as-is) [Gr.]. An old term for lack of cyclashes (Goneus).

anaphase (an'af-āz) [Gr $\dot{\alpha}\nu\dot{\alpha}$ up + $\varphi\dot{\alpha}\sigma\iota s$ phase]. That stage in mitosis, following the metaphase, in which the halves of the divided chromosomes move apart toward the poles of the spindle to form the diaster. See *milosis*

anaphia (an-a'fe-ah) [Gr. $\dot{a}\nu$ neg. $+ \dot{a}\varphi\dot{\eta}$ touch]. Lack or loss of the sense of touch.

anaphoresis (an-af-or-e'sis). Diminution in the activity of the sweat-glands.

anaphoria (an-af-o're-ah) [Gr. ἀνά up + φέρειν to bear]. Tendency of the eyes to turn upward; an upward tendency of the visual axes.

anaphrodisia (an"af-ro-diz'e-ah) [Gr $\dot{a}\nu$ priv. + ' $\Lambda \varphi \rho o \delta t \tau \eta$ Venus]. Absence or loss of sexual desire.

anaphrodisiac (an"af-ro-diz'e-ak) 1. Repressing sexual desire.
2. A drug or medicine that allays sexual desire.

anaphylactia (an-af-il-ak'she-ah). The condition produced as a result of anaphylaxis, any anaphylactic disease

anaphylactic (an-af-il-ak'tik) Decreasing immunity in-stead of increasing it; pertaining to anaphylaxis, possessing anaphylaxis

anaphylactin (an-af-il-ak'tin). Same as sensibilisin

anaphylactogen (an"af-il-ak'to-jen). A substance capable of causing anaphylaxis; a protein substance which is capable of inducing a condition of anaphylaxis. Called also protein allergen and protein sensitingen.

anaphylactogenesis (an-af-il-ak-to-jen'cs-is). The production of anaphylaxis.

anaphylactogenic (an"af-il-ak-to-jen'ik). Producing anaphylaxis

anaphylactoid (an-af-il-ak'toid). Resembling anaphylaxis See pseudo-anaphylaxis.

anaphylactotoxin (an-af-il-ak-to-tok'sin). Same

as anaphylatoxin.

anaphylatoxin (an-af-il-ah-toks'in). The poisonous substance in anaphylaxis, formed by union between the reaction body developed from the protein first introduced and the protein of the

second injection (Friedberger). **anaphylatoxis** (an-af-i-lat-ok'sis). The reaction produced by an anaphylatoxin.

anaphylaxin (an-af-il-aks'in). Same as anaphy-lactin.

anaphylaxis (an-af-il-aks'is) [Gr. ἀνά against + φύλαξις protection]. The state of unusual or exaggerated susceptibility to a foreign protein which sometimes follows a primary injection of such pro-

tein (Richet, 1803). Called also Theobald Smith phenomenon, hypersusceptibility, and protein sensitization. active a., the anaphylactic state produced in an animal by the injection of a foreign protein; distinguished from passive a antiserum a., passive anaphylavis chronic a., Richet's term for enteritis anaphylactica. heterologous **a.**, a passive anaphylaxis induced by the transference of serum from an animal of a different species. **homologous a.,** a passive anaphylaxis induced by the transference of serum from an animal of the same species. indirect a., anaphylaxis induced by an animal's own protein modified in some way inverse a., an anaphylactic shock produced by a single intravenous injection of Forssman's antibody passive a., anaphylaxis occurring in a normal individual as a result of the injection of the serum of a previously sensitized individual

anaphylodiagnosis (an-af-i"lo-di-ag-no'sis). Diagnosis of disease by means of anaphylactic reactions.

anaphylotoxin (an-af-il-o toks'in). Anaphylatoxin.

anaplasia (an-ap-la'se-ah) [Gr ἀνά backward + πλάσσειν to form]. Reversion of cells to a more primitive and undifferentiated form; a change in a cell by which it becomes in apable of attaining imperfect structure and function. Called also reversionary atrophy and undifferentiation.

Anaplasma (an-ap-laz'mah). A genur of sporozoan organisms, consisting of a tiny dot of chromatin-like material in crythrocytes. A. centra'le, a form occurring near the center of an erythrocyte. A. margina'le, found near the periphery of the red blood-corpuscles of cattle in galziekte, and is believed to be the causative agent in that disease. It is transmitted through the bite of the tick, Boophulus decoloratus in South Africa and B. annulatus in North America.

anaplasmosis (an-ap laz-mo'sis). The condition of being infected with Anaplasma. See galziekte.

anaplastia (an-ah-plas'te-ah). Anaplasia

anaplastic (an-ap-las'tik) [Gr ἀνά again + πλάσσων to form] τ Restoring a lost or absent part.
2 Characterized by anaplasia or imperfect development: said of cells.

anaplasty (m'ap las-te) [Gr ἀνά again + πλάσσειν to form]. Restorative or plastic surgery.

anaplerosis (an-ap le ro'sis). The repair or replacement of lost or defective parts.

anapnograph (an-ap'no graf) [Gr. ἀναπνοή respiration + γράφειν to record]. A device which registers the speed and pressure of the respired air-current.

anapnoic (an-ap-no'ik). τ. [Gr. ἀνά against + ἄπνοια breathlessness] Relieving dyspnea. 2. [Gr. ἀναπνοή respiration.] Pertaining to the respiration.

anapnometer (an-ap-nom'et-er) [Gr ἀναπνοή respiration + μέτρον measure] A spirometer.

anapophysis (an-ap-of'ts is) [Gr. ἀνά back + ἀπόφυσις offshoot]. An accessory vertebral process, especially an accessory process of a dorsal or lumbar vertebra.

anaptic (an-ap'tik) [Gr. α neg + $\dot{\alpha}\varphi\dot{\eta}$ touch]. Marked by anaphia loss of the sense of touch.

anarcotin (ah-nar'ko-tin) [Gr. α neg. + νάρκη stupor] Narcotin so called because it is not truly narcotic said to be a useful antiperiodic.

anarithmia (an-ar-ith/me-ah) [Gr α priv. + $\alpha \rho \iota \theta \mu \delta s$ number]. Inability to count, due to a central lesion.

anarthria (an-ar'thre-ah) [Gr. ἀν neg. + ἄρθρον articulation] Inability to speak properly on account of defect of the peripheral speech musculature. a. litera'lis, stuttering.

anasarca (an-ah-sar'kah) [Gr. $\delta\nu\delta$ throughout + $\sigma\delta\rho\xi$ flesh]. An accumulation of serum in the cellular tissues of the body; general dropsy.

78

anasarcin (an-as-ar'sin). A proprietary heart tonic used in dropsy.

anasarcous (an-ah-sar'kus). Affected with or of the nature of anasarca

anaspadia, anaspadias (an-ah-spa'de ah, an-ah-spa'de-as) [Gr $\dot{a}\nu\dot{a}$ up $+\sigma\pi\hat{a}\nu$ to draw] A condition in which the urethra opens upon the dorsum of the penis

anastalsis (an-as-tal'sis) [Gr. ἀνά up + στάλσις contraction]. Reversed peristalsis; antiperistalsis.

anastaltic (an-as-tal'tık) [Gr. ἀνασταλτικός contracting]. 1 Highly astringent, styptic. 2. A styptic medicine.

anastate (an'as-tāt) [Gr. ἀνάστατος raised up].

Any substance or condition characteristic of or resulting from an anabolic process.

anastatic (an as-tat'ık). Restorative; inclining to recovery.

anastigmatic (an-as-tig-mat'ik). Corrected for astigmatism.

anastole (an-as'tol-e) [Gr. ἀναστολή]. Retraction, as of the hps of a wound.

anastomat (an-as'to mat). An apparatus for securing an anastomosis between a remnant of the sigmoid and the lower end of the rectum

anastomose (an-as'to-mōz). To communicate with one another, as arteries and veins.

anastomosis (an-as-to-mo'sis) [Gr. ἀναστόμωσις, from άναστομόειν to furnish with a mouth]. A communication between two vessels. 2. The surgical or pathologic formation of a passage between any two normally distinct spaces or organs. antiperistaltic a., enterostomy in which the two parts are so joined that the peristaltic wave in each part is in opposite directions. arteriovenous a., anastomosis between an artery and a vein. crucial a., an arterial anastomosis in the proximal part of the thigh, formed by the anastomotic branch of the sciatic, the internal circumflex, the first perforating, and the transverse portion of the external circuinflex. Galen's a., the anastomosis between the superior and inferior laryngeal nerves heterocladic a., an anastomosis between branches of different arteries homocladic a., an anastomosis tween branches of the same artery. Hyrtl's a. See Hyrll's loop, under loop. intestinal a., the establishment of a communication between two portions of the intestines isoperistaltic a., intestinal anastomosis in which the two parts are so joined that the peristaltic wave in each part is in the same direction. Jacobson's a., the anastomosing part of the tympanic pleus, precapillary a., anastomosis between small arteries just before they become capillaries Schmidel's a's, abnormal communications between the vena cava and the portal system. **stirrup a.**, an arterial branch joining the dorsalis pedis with the external plantar artery. terminoterminal a., anastomosis between the peripheral end of an artery and the central end of the corresponding vein, and between the central end of the artery and the terminal end of the vein ureterotubal a., an anastomosis between the ureter and the fallopian tube.

anastomotic (an-as-to-mot'ik). Pertaining to or of the nature of an anastomosis.

anastomotica magna (an-as-to-mot'ik-ah mag'-nah). T. A branch of the femoral artery supplying the knee-joint. 2. A branch of the brachial artery to the elbow.

anat. Abbreviation for anatomy or anatomic.

anatherapeusis (an"ah ther-ap-u'sis) [Gr. ἀνά upward + therapeusis]. Treatment by increasing doses.

anatomic, anatomical (an-at-om'ik, an-at-om'ik-al). Pertaining to anatomy, or to the structure of the organism.

anatomicopathologic (an"at-om"ik-o-path-oloj'ik). Pertaining to pathologic anatomy. anatomicophysiologic (an-at-om''ik-o-fiz-e-o-loj'ik). Pertaining to anatomy and physiology.

anatomy (an-at'o-me) [Gr. ἀνά apart + τέμνειν to cut]. Ι The science of the structure of organcut]. I The science of the structure of organized body.

2. Dissection of an organized body. applied a., anatomy as applied to diagnosis and treatment. artificial a., the study of artificial dissection made in wax. comparative a., a comparative view of the structure of different animals and plants one with another. corrosion a., anatomy by means of corrosive agents that remove the tissues which it is not intended to observe. dental a., the study of the structure of the teeth and their correlated parts. descriptive a., the study or description of in-dividual parts of the body. general a., the study of the structure and composition of the body, and its tissues and fluids in general. gross a., that which deals with structures that can be distinguished with the naked eye. histologic a., histology. homologic a., the study of the correlated parts of the body. **macroscopic** a. Same as gross a. **medical a.**, anatomy concerned with the study of points connected with the diagnosis and situation of internal diseases. microscopic a., minute a., the branch of histology which deals with the relationships between tissues in organs morbid a., pathologic a., the anatomy of diseased tissues physiognomonic a., the study of the external expression of the body surface, especially of the face. physiologic a., the study of the organs with respect to their normal functions. plastic a., the study of anatomy by the aid of models and manikins that can be taken apart. practical a., anatomy studied by means of demonstration and dissection. regional a., the study of limited portions or regions of the body. special a., the study of particular organs or parts. surface a., the study of the form and markings of the surface of the body. surgical a., the study of limited portions or regions of the body, with a view to the diagnosis of surgical diseases. systematic a., descriptive a. topo-graphic a., the study of parts in their relation to surrounding parts transcendental a., study of the general design and morphology of the body and the analogies and homologies of its parts.

anatoxic (an-at-oks'ik). Anaphylactic,

anatoxin (an-ah-tok'sin) A toxin which has been inactivated by the combined action of formol and heat.

anatricrotic (an"at-rik-rot'ik) [Gr $\dot{a}\nu\dot{a}$ up $+\tau\rho\epsilon\hat{i}s$ three $+\kappa\rho\dot{o}\tau\sigma s$ stroke] Causing or characterized by three indentations on the ascending curve of the sphygmogram.

anatricrotism (an-at-rik'rot-izm). That quality of the pulse which produces an anatricrotic sphygmogram.

anatripsis (an-at-rip'sis) [Gr. "rubbing"]. Therapeutic rubbing or friction.

anatriptic (an-at-rip'tik) [Gr. ἀνάτριπτος rubbed up]. A medicine applied by rubbing.

anatrophic (an-at-rof'ik). 1. Correcting or preventing atrophy. 2. A remedy that prevents waste of the tissues.

anatropia (an-at-ro'pe-ah) [Gr. ἀνά up + τρέπειν to turn] Same as anaphoria.

anatropic (an-at-rop'ik). Descending into the abdominal or other cavity.

anaxon, anaxone (an-ak'sōn) [Gr. ἀν neg. + ἄξων axis]. A neuron, or nerve-cell, which appears to be devoid of axis-cylinder processes.

anazoturia (an-az-o-tu're-ah) [Gr. ἀν neg. + azole + Gr. οὐρον urine]. Absence or deficiency in the secretion of nitrates, and especially of urea in the urine.

anazyme (an'az-īm) [Gr. ἀναζυμόειν to leaven]. An iodoform substitute, said to be a combination of phenol and boric acid.

AnCC. Abbreviation for anodal closure contraction.
anchorage (ank'or-āj). The surgical fixation of a displaced viscus. In dentistry, the points of fixation of fillings or of artificial crowns or bridges.

Anchusa (an-ku'zah) [L , Gr. ἄγχουσα alkanet]. The genus of plants to which alkanet (q. v.) belongs.

anchusin (an-ku'sin). A red coloring-matter, $C_{35}H_{*0}O_{8}$, from alkanet root.

anchylo-. See under ankylo-.

ancipital (an-sip'it-al) [L. an'ceps two-headed]. Having two heads or two edges.

Ancistrodon (an-sis'tro-don) [Gr άγκος hook + δδούς tooth]. A genus of poisonous serpents of the family Crotalide. A contor'trux is the copperhead, and A. pisciv'orus, the water-moccasin, of North America

ancistroid (an-sis'troid) [Gr. ιαγκιστρον a fish-book ι + είδος form]. Hook shaped

anconad (an'kon-ad) [Gr ἀγκών elbow + L. ad toward]. Toward the elbow or olectanon.

anconagra (an-kon-ag'rah, an-kon'ag-rah) [Gr. ἀγκών elbow + ἄγρα seizure]. Gout of the elbow.

anconal, anconeal (an'kon-al, an-ko'ne-al) Pertaining to the elbow.

anconeus (an-ko'ne-us). See muscles, table of.

anconitis (an-ko-nı'tis). Inflammation of the elbow-joint.

ancylo-. See under ankylo-.

ancyroid (an'sir-oid) [Gr. ἄγκυρα anchor + είδος form] Shaped like an anchor or hook.

Anda (an'dah) [Brazilian]. A genus of cuphorbiaceous trees. A as'su and A gome'sit, of Brazil, afford purgative oils used like castor oil. Dose, 2–3 dr (8–12 c.c.).

Andernach's ossicles (ahn'der-nahks) [Johann Winther v. *Andernach*, German physician, 1478–1574] The worman bones

Anders's disease (an'ders) [James M. Anders, Philadelphia physician]. Adiposis tuberosa simplex.

Andersch's ganglion, nerve (an'dersh-ez) [Carl Samuel *Andersch*, German anatomist, 1732–1777] See ganglion and nerve.

Anderson's pills (an'der-sonz) [Patrick Anderson, Scotch physician of the 17th century]. See under pill

Andira (an-di'rah) Λ genus of tropical leguminous trees. Goa powder (q v) and chrysarobin (q v) are derived from Λ araro'ba, of Brazil Many of the species afford active poisons, and several are anthelmintic.

andolin (an'do-lin). A local anesthetic said to contain beta-eucain and stovain with suprarenalin hydrochlorid

Andral's decubitus (an-dralz') [Gabriel Andral, French physician, 1797-1876]. See under decubitus

andrase (an'drās) [Gr ἀνήρ man + -ase enzyme]
A hypothetical enzyme-like substance regarded as the material basis of maleness in heredity. Cf. gynase.

androcyte (an'dro-sīt) [Gr. ἀνήρ man + κυτος cell]. Same as spermatid.

androdedotoxin (an-dro-de-do-tok'sin). A poisonous principle contained in the leaves of rhododendrons.

androgalactozemia (an"dro-gal-ak-to-ze'me-ah) [(Gr. ἀνήρ man + γάλα milk + ζημία loss]. The secretion or escape of milk from the male breast.

androgenesis (an-dro-jen'es-is) [Gr ἀνήρ man + γένεσις production]. Development of an egg which contains only parental chromosomes and nuclei.

androgenous (an-droj'en-us) [Gr. ἀνήρ man + γεννᾶν to beget]. Pertaining or tending to the production of male rather than female offspring.

androgone (an'dro-gōn) [Gr. ἀνήρ man + γονη seed]. A spermatogenous cell.

androgyne (an'dro-jin). Androgynous.

androgyneity, androgyny (an-dro-jin-e'it-e, an-droj'en-e). Hermaphroditism, also, effeminacy.

androgynism (an-droj'ın-ızm). Hermaphroditism in the female.

androgynoid (an-droj'in oid). A male hermaphrodite with woman-like appearance.

androgynous (an-droj'in-us). Of double or doubtful sex, hermaphrodite.

androgynus (an-droj'en-us) [Gr. ἀνήρ man + γυνή woman]. A hermaphrodite also an effeminate man.

andrology (an-drol'o-je) [Gr. $\delta\nu\dot{\eta}\rho$ man $+\lambda\delta\gamma$ os discourse]. Scientific study of the masculine constitution at 1 of the diseases of the male sex; especially the study of diseases of the male organs of generation.

Andromachus (an-drom'ak-us). A physician of Crete who became body physician to the Emperor Nero—He invented a famous medical compound called "Theriacum Andromachi."

andromania (an dro ma'ne-ah) [Gr. ἀνήρ man + μανία madness] Nymphomania.

Andromeda (an-drom'e-dah) [L.]. A genus of ericaceous shrubs and trees, some of which afford a poisonous narcotic principle Λ. maria'na, Λ nut'ida, and Λ. polifo'lia are among the poisonous species

andromedotoxin (an drom"cd-o-tok'sin) [Andromeda + toxin]. A poisonous crystalline principle from various cricaceous plants: it inhibits the respiratory centers and is hypnotic.

androphobia (an-dro to'be-ah) [Gr. $d\nu\dot{\eta}\rho$ man + $\varphi\dot{\rho}\beta\sigma$ dread]. Morbid dislike of the male sex.

androphonomania (an"dro-fo no-ma'ne-ah) [Gr. ἀνδροφόνος man-killing + μανία madness]. Homicidal insanity.

Andropogon (an dro-po'gon). A genus of grasses.

A sor'gum includes broom corn, kafir corn, and sorgum

AnDTe. Abbreviation for anodal duration tet-

anectasin (an-ek'tas-in) [Gr ἀν neg. + ἔκτασις distention]. A substance produced by bacteria, having an effect on the vasomotor nerves opposite to that of ectasin.

anedemin (an-e de'min). A proprietary dropsy remedy containing apocynum, strophanthus, squill, and sambucus.

anelectrode (an-el-ek'trod) [Gr ἀνά up + electrode] The positive pole of a galvanic battery.

anelectrotonic (an"c-lek-tro-ton'ik). Pertaining to anelectrotonus.

anelectrotonus (an"el-ek-trot'o-nus) [Gr. ἀνά up + electrotonus]. Lessened irritability of a nerve in the region of the positive pole or anode during the passage of an electric current.

Anel's operation, probe, etc [Dominique Anel, French surgeon, 1679-1730]. See operation, probe, etc.

anematosis, anæmatosis (an-em-at-o'sis). General anemia.

anemia, anemia (an-e'me-ah) [Gr àn neg. + alua blood] A condition in which the blood is deficient either in quantity (oligemia) or in quality. The deficiency in quality may consist in diminution of the amount of hemoglobin (oligochromemia) or in diminution of the number of red blood-corpuscles (oligocythemia). It may be local, or due to mechanic interference with the blood-supply, as by compression of a vessel, embolism, spasm, etc.; or general. In the latter case the deficiency of quantity or quality is due to imperfect nutrition wasting disease, or direct loss of blood. Anemia is marked by paleness of the skin and much membranes, loss of energy, palpitation of the

systolic murmurs, and other general symptoms.

Addison's a., Addison-Biermer a., pernicious anemia. aplastic a., anemia in which the ordinary regenerative changes in the circulating blood do not take place. aplastic a., acute, a fatal form of anemia due to degeneration of the bonemarrow and failure of blood formation. aregenerative a. Same as a plastic a. arterial a., relative depletion of the arteries due to dilatation of the veins. atrophic a., anemia dependent on atrophy of the bone-marrow. Biermer's a., Biermer-Ehrlich a., pernicious anemia. bothriocephalus a., anemia caused by the Bothriocephalus latus. cattle a., a condition caused by infection with Theileria parva. cerebral a. 1. Deficient blood-supply to the brain. 2. A disease of heavy milking cows of middle age, occurring at the time of parturition, and marked by paralysis and subnormal temperature. Called also milk fever. chlorotic a. See chloranemia. costogenic a., anemia due to disorder of the bone-marrow of the ribs. crescent-cell a. See sickle cell a. cytogenic a., essential a. See progressive pernicious a. familial splenic a. See Gaucher's disease, under disease. febrile pleiochromic a., a disease characterized by wide-spread hyaline thrombi in the terminal arterioles and capillaries, the thrombi being composed of agglunated red blood-cells; called also Moschcowils's disease. fecal a., anemia from auto-intoxication due to intestinal inactivity. general a., that which affects the whole of the blood and the entire organism. See anemia. globular a., anemia from deficiency of red blood-corpuscles. goat's milk a., an alimentary anemia occurring in infants fed on goat's milk ground-itch a., hookworm disease. hemolytic a., anemia due to active destruction of red corpuscles within the circulation. hemopathic a., an anemia in which the disturbance is primarily in the circulating blood. hemorrhagic a., that which is due to loss of blood hemotoxic a., anemia due to the toxic destruction of red bloodcells. hypoplastic a., anemia due to incapacity of the blood-forming organs. idiopathic a., that which is due to disease of the blood-making organs; primary anemia. It includes progressive pernicious anemia, chlorosis, aplastic anemia, and hemolytic jaundice. a. infan'tum pseudoleukæ'mica, a disease of children, usually under two years of age, marked by anemia, enlargement of the spleen, and some of the findings of pernicious anemia. Some cases exhibit polynuclear leukocytosis, and some, lymphocytosis. The condition is probably connected with congenital syphilis in some cases and with infantile leishmaniasis in others. Called also von Jaksch's anemia or disease, splenic anemia of infants, and infantile splenomegaly. infectious a. of horses. See swamp fever, under fever intertropical a. See ankyl-ostomiasis Leishman's a., kala-azar. local a. See anemia a. lymphat'ica. Same as pseudoleukemia malignant a. Same as progressive pernicious a megaloblastic a., anemia marked by the presence of megaloblasts in the blood. **metaplastic a.**, pernicious anemia marked by change in the plastic elements of the blood. **miner's a.**, ankylostomiasis. **Momburg's a.** See *Momburg's belt*, under *belt* **my-elopathic a.**, anemia due to destruction of the erythroblastic tissue of the bone-marrow. myelophthisic a., anemia due to the destruction, or crowding out, of bone-marrow by various lesions. negative a., a condition marked by the presence of erythroblasts in the blood, but without diminution in the number of red cells. osteosclerotic a., anemia due to the crowding out of bone-marrow by osteosclerosis or thickening of bone. pernicious a., a chronic disease, without discoverable cause, marked by progressive dim-inution of the red corpuscles of the blood, with the usual symptoms of anemia, and often with emaciation, fever, and hemorrhage into the retina.

It is believed to be due to destruction of the red corpuscles, and is generally speedily fatal. Called also Addison's a., Buerner's a, Addison-Buerner a, essential a., and idiopathic a. phenylhydrazin a., a blood state resembling that of pernicious anemia caused in animals by the injection of phenylhydrazin. polar a., an anemic condition which affects those who winter in the polar regions. Porto Rican a., an extreme form of anemia caused by uncinariasis. posthemorrhagic a., anemia following hemorrhage. primary a. Same as idiopathic a. progressive pernicious a. See pernicious a. a. pseudoleukæ/mica infan/tum. See a. infantum pseudoleukæ/mica retinal a., a condition in which the caliber of the patinal arteries is diminished. Punehere's the retinal arteries is diminished. Runeberg's a., progressive pernicious anemia with temporary periods of improvement. secondary a., that which is due to hemorrhage, cancer, or some other antecedent disease or injury. sequestration a., a local anemia produced by withdrawing temporarily some of the blood from the part by sequestering it to the other limbs by cordage. sickle cell a., a disease marked by anemia and by ulcers and characterized by the red blood-cells of the patient acquiring a sickle-like or crescentic shape in vitro. The disease seems to be confined to the negro race and it is hereditary. slaty a., a grayish color of the tace in poisoning by acetanilid or silver. spastic a., a local anemia from spasm of blood-vessels spinal a., deficiency in the supply of blood to the spinal cord. splenic a., a. splenet'ica, a disease marked by splenic enlargement and anemia without involvement of the lymphatic glands splenic a. of infants. See a infantum pseudoleukamica. symptomatic a. Same as secondary a. thrombopenic a. See thrombopenia. toxic a., anemia due to destruction of the blood-cells by poisons or disease toxins traumatic a., that which is due to loss of blood from an injury or wound neurotic a., anemia brought about by nervous shock. **tropical a.**, anemia affecting persons visiting the tropics and who have not become acclimatized. **tunnel a.** See ankylostomiasis. von Jaksch's a., anemia infantum pseudo-

anemic (an-em'ik). Affected with or pertaining to anemia.

Anemone (an-em'o-ne) [L. anemo'ne; Gr. ἀνημ- $\dot{\omega}$ νη]. A genus of plants. See pulsatilla

anemonin (an-em'on-in). The active principle of Anem'one pulsatil'la, a colorless crystalline substance, C₁₀H₈O₄, or pulsatilla camphor. It is used as an antispasmodic and sedative in asthma, bronchitis, whooping-cough, etc., and as an anodyne in dysmenorrhea, epididymitis, etc. Dose, ½-¾ gr (002-005 gm.).

anemonism (an-em'on-izm). Poisoning by the plants of the genus *Anemone*.

anemonol (an-em'on-ol). An exceedingly poisonous volatile oil from various species of *Anemone* and from other ranunculaceous plants.

anemopathy (an-em-op'ath-e) [Gr. ἄνεμος wind + πάθος affection]. The treatment of disease by inhalation.

anemophilous (an-em-of'il-us) [Gr. ἄνεμος wind + φιλείν to love]. Pollenated by the wind said of certain flowers.

anemophobia (an"em-o-fo'be-ah) [Gr. $\delta \nu \epsilon \mu \sigma s$ wind $+ \varphi \delta \beta \sigma s$ fear]. Morbid fear of wind or of drafts

anemotaxis (an-em-o-tak'sis) [Gr. ἄνεμος wind + ταξις arrangement]. Adjustment with reference to the wind.

anemotrophy (an-em-ot'rof-e) [Gr. $\dot{a}\nu$ priv. + $aI\mu a$ blood + $\tau\rho o\varphi \dot{\eta}$ nourishment]. Deficiency of blood nourishment.

anemotropism (an-em-ot'ro-pism) [Gr. ἄνεμος wind $+ \tau \rho \delta \pi \eta$ a turn]. A turning toward or away from the wind.

anempeiria (an-em-pi're-ah) [Gr. α priv. + εμπειρία experience]. Loss of acquired capacities; inability to apply what has been learned, ε. g, speech or writing (Heveroch, 1914).

anencephalia, anencephaly (an"en-sef a'le-ah, an-en-sef al-e) [Gr. ἀν priv. + ἐγκέφαλος brain]. Absence of the brain.

anencephalic (an"en-sef-al'ik). Characterized by anencephalia; having no brain.

anencephalohemia (an''en-sef-al-o-he'me-ah)
[Gr ἀν neg. + ἐγκέφαλος brain + αἶμα blood].
An insufficient supply of blood to the brain.

anencephalous (an-en-sel'al-us). Having no brain. anencephalus (an-en-sel'al-us) [Gr. ἀρ priv. + εγκέφαλος brain]. A monster-fetus without a brain.

aneosinophilia (an-e-o-sin-o-fil'e-ah). Absence of eosinophil cells from the blood

anepia (an-e'pe-ah) [Gr. ἀν priv. + ἔπος word].
Inability to speak.

anepiploic (an-ep-c-plo'1k). Devoid of omentum. **anerethisia** (an er-e-this'e-ah) [Gr. άν neg. + έρεθίζειν to excite]. Deficient irritability.

anergasia (an-er-ga'ze-ah) [Gr ἀν neg. + ἐργασία work]. Lack of functional activity.

anergic (an-er'jik) [Gr. ἀν neg. + ἔρνον work].

1. Characterized by abnormal inactivity, inactive.
2. Pertaining to energy.

anergy (an'er-je). Weakening of the body defenses against infection, antianaphylaxiv.

anerobic. An improper spelling of anaerobic.

aneroid (an'er-oid) [Gr. αν neg. + νηρός wet + είδος form]. See under barometer.

anerythrocyte (an-er'ith-ro-sīt) [Gr. dv neg. + erythrocyte]. A red blood-corpusele having no hemoglobin; called also lympho-crythrocyte.

anerythroplasia (an-cr''ith-ro-pla'se-ah) [Gr. $\dot{a}\nu$ neg + $\ddot{\epsilon}\rho\nu\theta\rho\sigma$ s red + $\pi\lambda\dot{a}\sigma\sigma\epsilon\iota\nu$ to form]. Absence of red blood-corpuscle formation

anerythroplastic (an-cr"ith-ro-plas'tik). Marked by absence of red blood-corpuscle formation.

anerythropsia (an-er-ith-rop'se-ah) [Gr. άν neg. + ἐρυθρός red + ὄψις sight]. Impaired perception of red tints.

anerythroregenerative (an-er"ith-ro-re-jen'er-ativ). Marked by the absence of regeneration of red blood-corpuscles.

anesin (an'es-in) [Gr. ἄνεσις relaxation]. Same as chloretone.

aneson (an'es-on). Same as chloretone.

anesthecinesia (an-es"the-sin e'se-ah) [Gr. α neg. + $\alpha i\sigma\theta\eta\sigma\iota_{S}$ sensation + $\kappa \iota\nu\eta\sigma\iota_{S}$ movement]. Loss of sensibility and motor power.

anesthekinesia (an-es"the-kin-e'ze-ah). Anesthe-cinesia.

anesthesia, anæsthesia (an-es-the'ze-ah) [Gr. åv neg + αίσθησις sensation | Loss of feeling or sensation, especially loss of tactile sensibility, though the term is used for loss of any of the other senses. angiospastic a., loss of sensibility dependent on spasm of the blood-vessels Arnott's a., local anesthesia produced by a freezing mixture of ice and salt. Bier's local a., local anesthesia produced by the injection of a o 5 per cent. solution in the veins of a limb that has been rendered bloodless by elevation and constriction. Called also vein anesthesia. block a. See regional a and block. bulbar a., central anesthesia due to a lesion of the pons caudal a., anesthesia produced by injecting the anesthetic into the caudal or sacral canal. central a., anesthesia dependent on disease of nerve-centers. cerebral a., that which arises from a cerebral lesion. colonic **a.**, anesthesia induced by injecting the anesthetic agent into the colon. Cf. Gwathmey's a. **con**duction a. See regional a. Corning's a.

1. Local anesthesia by the injection of a weak cocain solution, first intracutaneously, then sub-

cutaneously, and finally into the deeper tissues, the injection being followed by the application of an Esmarch bandage proximally to the site of injeccrossed a., tion. 2. Spinal anesthesia. which occurs on one side of the body, and is due to dissociated a., a lesion of the other side. dissociated a. dissociation a., anesthesia for pain and tem perature while the tactile sense persists. doll's head a., central anesthesia affecting the head, neck, and upper part of the thorax. a. doloro'sa, tactile anesthesia with pain in the part; severe pain after the occurrence of paralysis the condition is seen in certain diseases of the spinal cord. Drain-Dumenil a., anesthesia produced by introducing into each nostril two cotton tampons about 3 or 4 cm. long, which are impregnated with ethyl chlorid for about 1 cm. electric a., temporary anesthesia induced by the pas sage of an electric current. endoneural a., regional anesthesia produced by injecting an anesthetic beneath the epineurium of the sensory nerve trunk of the operative field facial a., insensibility of the parts supplied by the facial nerve. gantlet a., anesthesia in the hand from the wrist to the finger-tips. general a., that which affects the whole body. girdle a., a ring of anesthesia surrounding the body loss or lack of the sense of taste. Gwathmey's oil-ether a., anesthesia produced by the intro-duction into the rectum of liquid ether with olive oil dissolved in it. hysterical a., bodily anesthesia occurring in hysteria. infiltration a., thesia occurring in hysteria. infiltration a., local anesthesia produced by injecting solutions, such as cocain, morphin, cucain, salt solution, etc., under the skin infusion a., administration of ether by means of infusion in normal saline solution. **insufflation a.**, anesthesia produced by insufflating a mixture of ether and compressed air into the trachea through a slender tube. intranasal a., anesthesia for tooth extraction by the insertion into the masal fossæ of pledgets soaked in cocain solution. intraneural a., neural anesthesia in which the anesthetic is injected into the nerve intratracheal a., the administration of an anesthetic agent by delivering into the patient's trachea through a tube. Javanese a., anesthesia produced by pressure upon the carotids Jonnesco's spinal a., anesthesia by injections of one of the cocain substitutes into the spinal arachnoid space, strychnin being added to the anesthetic. The puncture is made in the dorsolumbar region for operations on the abdomen or lower extremities, and between the first and second dorsal vertebræ for operations in the upper portions of the body. Kulenkampff's plexus a., local anesthesia of the upper extremity produced by injecting cocain or novocain into the brachial plexus. local a., that which is confined to one limited part of magnesium a., anesthesia prothe surface. duced by the injection of magnesium salts. ullary a. Same as spinal a. (2). Meltzer's a., anesthesia by means of intratracheal insufflation. See insufflation. mental a., inability on the part of a person to recognize or identify sensory stimulations. mixed a., that which is produced by the use of more than one anesthetic agent. morphin-scopolamin a., general anesthesia produced by subcutaneous inof scopolamin hydrobromate. muscular a., lack or loss of the muscular sense. neural a., anesthesia of a part produced by injecting an anesthetic into or about the nerve that supplies the part at a distance from the area to be anesthetized. called also regional a oil-ether a. See Gwathmey's a. olfactory a., abrogation of the sense of smell. paraneural a., neural anesthesia in which the anesthetic is injected around the nerve. parasacral a., regional anesthesia produced by injecting the sacral nerves as they emerge from the sacral foramina. paravertebra, regional anesthesia secured by anesther

the spinal nerves at their exit from the spine. partial a., anesthesia with retention of sen-sibility in some degree. perineural a., re-gional anesthesia produced by injections in close proximity to the nerve. peripheral a., that which is due to changes in the peripheral nerves. **plexus a**. See Kulenkampff's plexus a. pressure a., anesthesia produced by forcing the anesthetic into a tissue by pressure. primary a., a temporary anesthesia experienced in the early stages of the production of general anesthesia. pulmonary a., anesthesia by inhalation. rectal a., local anesthesia induced by placing an anesthetic agent in the rectum. regional a., the production of insensibility of a part by interrupting the appropriate parts and the production of the productio part by interrupting the sensory nerve conductivity of any region of the body. It may be produced by (1) field-block, the creation of walls by anesthesia encircling the operative field by means of injections of a local anesthetic; or (2) nerve-block, that is, the making of extraneural or paraneural injections in close proximity to the nerves where conductivity is to be cut off. Called also block a. and conduction a. Schleich's a. I. General anesthesia produced by inhaling a mixture of chloroform, sulphuric ether, and petroleum ether. 2. Same as infiltration a. segmental a., loss of bodily sensation affecting a segment of the body; due to lesion of a single nerve-root. spinal a. 1. That which is due to a spinal lesion. 2. Anesthesia produced by injection of an an-esthetic, as cocain, beneath the membrane of the spinal cord. **splanchnic a.**, block anesthesia for visceral operation by injection of novocain into the region of the semilunar ganglia. spraying a., local anesthesia produced by applying the solution in a spray. surgical a., that which is produced by the administration of anesthetics. tactile a., loss or impairment of the sense of touch. thermic a., loss of the heat sense. total a., loss of all sensibility in the affected part. twilight a., twilight sleep. See under sleep. unilateral a. Same as hemianesunder sleep. unilateral a. Same as hemianes-thesia. vein a. Same as Bier's local a. visceral a., loss of visceral sensations.

anesthesimeter (an-es-the-sim'et-er) [Gr. $\dot{a}\nu a\iota\sigma\theta\eta$ - σla anesthesia + $\mu\dot{\epsilon}\tau\rho\sigma\nu$ measure]. I. An instrument to measure the amount of an anesthetic administered. 2. An instrument for taking the degree of insensitiveness.

anesthesin (an-es'the-sin). A proprietary brand of ethyl aminobenzoate.

anesthesiology (an-es-the-ze-ol'o-je) [anesthesia + Gr. λόγος treatise]. The study of anesthesia and anesthetics.

anesthesiophore (an-es-the'ze-o-for) [anesthesia + Gr. φορός bearing]. Conveying the anesthetic action.

anesthetic (an-es-thet'ik). I. Without the sense of touch or of pain. 2. A drug that produces anesthesia. Billroth's a. Same as Billroth's a. Same as Billroth's mixture, under mixture. Cotton's a. See Cotton process ether, under ether. general a., one whose administration affects the whole organism: the general anesthetics include amylene, carbon tetrachlorid, chloral hydrate, chloroform, ethylene chlorid, ether, ethidene chlorid, ethyl bromid, nitrous oxid, methylene dichlorid. hyoscin-morphin-cactin a., a proprietary anesthetic and hypnotic preparation. local a., one that anesthetizes only the part to which it is applied. The chief are cocain, phenol, eucain, holocain, cold, ether spray, stovain, or rhigolene spray. Schleich's a. I. An anesthetic consisting of chloroform, sulphuric ether, and petroleum ether in such proportions that the mixture has a boiling-point about the same as the body temperature. 2. A solution of cocain, morphin, and common salt: injected for the production of local anesthesia. Wilson's local a., cocain hydrochlorid, benzoin, boric acid, naphthol, oils of wintergreen, eucalyp-

tus, peppermint, and thyme, spirit of nitroglycerin, absolute alcohol, and water.

anesthetist (an-es'thet-ist). An expert in administering anesthetics.

anesthetization (an"es-thet-iz-a'shun). The production of insensibility to pain.

anesthetize (an-es'thet-īz). To put under the influence of anesthetics.

anesthetometer (an-es-the-tom'ct-er). An apparatus for measuring and mixing anesthetic vapors and gases.

anesthetospasm (an-es-thet'o-spazm). Spasm with anesthesia.

anesthol (an-es'thol). A general anesthetic mixture composed of chloroform, ether, and ethyl chlorid

anesthone (an-es'thôn). A proprietary local anesthetic, paramido-ethyl-benzoate.

anesthyl (an-es'thil). A mixture of 1 part of methyl chlorid with 5 parts of ethyl chlorid: used as a local anesthetic.

anestil (an-es'til). Anesthyl.

anethene (an'eth-ēn). A hydrocarbon, $C_{10}H_{16}$, from oil of dill.

anethol (an'eth-ol) [Gr ἄνηθον anise]. Methylallylphenol, C₃H₅ C₆H₄ OCH₃, a white, tragrant solid or liquid, from the oil of fennel and of anise. It is a pleasant carminative and an antiseptic. Dose, 3 min. (o 2 c c.).

Dose, 3 min. (ο z e c.). **Anethum** (an-e'thum) [L; Gr. ἄνηθον]. A genus of plants, including fennel and dill The fruit of A. or Peuced'anum grave'oleus, or dill, is carminative and stimulant. See dill and fennel.

anetin (an'e-tin). A local anesthetic composed of equal parts of ethyle-ter of para-aminobenzoic acid and methylester of meta-aminopara-oxybenzoic acid in 40 per cent. dextrose solution.

anetiologic (an-e"te-o-loj'ik) [Gr ἀν neg. + cti-ologic]. Not conforming to etiologic principles.

anetodermia (an-e-to-der'me-ah) [Gr. ἀνετός slack + δέρμα skin]. Atrophy of the skin; dermatolysis.

aneuria (ah-nu're-ah) [Gr. a neg. + νεῦρον nerve]. Failure or lack of nervous energy.

aneuric (ah-nu'rik). Affected with aneuria.

aneurilemmic (ah-nu-ril-em'ik). Marked by the absence of neurilemma.

aneurysm, aneurism (an'u-rizm) [Gr ἀνεύρυσμα a widening]. A sac formed by the dilatation of the walls of an artery and filled with blood. The chief symptoms of aneutysm are the formation of a pulsating tumor, a peculiar bruit (aneurysmal bruit) heard over the swelling, and pressure symptoms, consisting of pain and paralysis from pressure on nerves and absorption of contiguous parts. abdominal a., an aneurysm of the abdominal aorta. ampullary a. Same as sacculated a. a. by anastomosis, a. anastomotica, a dilatation of several arteries which forms a pulsating tumor under the skin. aortic a., ancurysm of the aorta. arteriovenous a. (William Hunter, 1761), the rupture simultaneously of an artery and a vein in which the blood flows directly into a neighboring vein (aneurysmal varix) or else is carried into such a vein by a connecting sac (varicose aneurysm). axial a., an aneurysm in which the entire circumference of the vessel is dilated. axillary a., aneurysm of the axillary artery. **Bérard's a.**, an arteriovenous aneurysm in the tissues outside of the injured vein; aneurysm in the tissues around a vein. bone-a., a pulsating vascular tumor of a bone. branching a., a cirsoid aneurysm. cardiac a., aneurysmal dilatation of the heart, or of one of its chambers. cirsoid a., the dilatation and tor-tuous lengthening of a part of an artery. com-pound a., one in which some of the coats are ruptured and others merely dilated. consecu-

tive a., one in which all the exterior coats are ruptured and the surrounding tissues are infiltrated: called also diffuse a. cylindroid a., the uniform dilatation of a considerable part of an artery: called also tubular a. cystogenic a., one formed by the rupture of a cyst into an artery. diffuse a. See consecutive a. dissecting a., one in which the blood is forced between the coats of an artery ectatic a., one formed by distention of a section of an artery without rupture of any of its coats. embolic a., one caused by embolism. embolomycotic a., aneurysm due to embolism from some vegetative condition in the heart. endogenous a., one due to disease of the coats of the vessel. erosive a., an aortic aneurysm resulting from the extension of disease from the heart valves producing ulcerative endarteritis with destruction of the intima. exogenous a., one that is due to a wound or to violence external a., one not situated in a body cavity. false a., one in which all the coats are ruptured and the blood is retained by the surrounding tissues. fusiform a., a spindle-shaped arterial dilatation. hernial a., one in which the sac is formed by an inner coat projecting through the outer. innominate a., aneurysm of the in-nominate artery. internal a., one situated in any one of the body cavities. intracranial any aneurysm situated within the cranium. lateral a., one that projects from one side of an artery. medical a., a deep-seated aneurysm (as in the thorax) not accessible by a surgical operation. **miliary a.**, aneurysm of a minute artery, chiefly intracranial. **mixed a.** Same as compound a. mycotic a., aneurysm produced by growth of microorganisms in the vessel-wall. orbital a., one situated within the orbit of the eye. osteoid a. Same as bone-a. Park's a., an arteriovenous aneurysm in which the dilatation communicates with two venns pelvic a., one situated within the pelvis. phantom a., a condition in which the aorta is palpable and the patient complains of throbbing in the region of the aorta. Called also students' a. and aortismus abdominalis. Pott's a., an aneurysmal varix. racemose a., a condition in which the blood-vessels become dilated, lengthened, and tortuous. Rasmussen's a., a dilatation of a terminal artery in a tuberculous cavity. Its rupture produces hemorrhage in the third stage of pulmonary tuberculosis. renal a., renal epistaxis. See epistaxis. Richet's a., fusiform aneurysm. Rodrigues's a., a varicose aneurysm with the sac lying contiguous to the artery. sacculated a., a sac-like arterial dilatation which opens into the artery by an opening that is small compared to the size of the sac. secondary a., one that recurs after having apparently been cured. serpentine a., an elongated and varicose senile condition of certain arteries, such as the splenic, iliac, and temporal. **Shekel**ton's a. Same as dissecting a. spongy a., an angioma. spontaneous a., an endogenous aneurysm. spurious a. See false a. students' a. See phantom a. surgical a., one that may be treated by a surgical procedure.

thoracic a., one situated within the thorax.

traction a., ancurysm produced by traction
on the aorta by the duct of Botalli that is incompletely atrophied traumatic a., an aneurysm due to injury. true a., an aneurysm in which the sac is formed by the arterial walls one of which, at least, is unbroken. tubular a. See cylindroid a. valvular a., an aneurysm between the layers of a valve of the heart. varicose a., an aneurysm in which the artery communicates with a contiguous vein by means of an intervening sac. verminous a., one that contains hemato-zoa. worm a., aneurysm in horses caused by the larvæ of strongylus.

aneurysmal (an-u-riz'mal). Pertaining to or resembling an aneurysm.

aneurysmatic (an-u-riz-mat'ik). Pertaining to an aneurysm; aneurysmal.

aneurysmectomy (an-u-riz-mek'to-me) [Gr. ἀνεθρυσμα aneurysm + ἐκτομή excision]. Extirpation of an aneurysm by removal of the sac.

aneurysmoplasty (an-u-riz'mo-plas-te) [Gr. ἀνεύρυσμα aneurysm + πλάσσειν to form]. Plastic restoration of the artery in aneurysm; reconstructive endoaneurysmorrhaphy.

aneurysmorrhaphy (an-u-riz-mor'af-e) [Gr. ἀνεὐρνσμα aneurysm + ἡαψή suture]. The operation of suturing an aneurysm.

aneurysmotomy (an-u-riz-mot'o-me) [Gr. ἀνεὐρυσμα aneurysm + τομή cut]. The operation of incising the sac of an aneurysm and allowing it to heal by granulation.

anfractuosity (an-frak-tu-os'it-e) [L. anfrac'tus a bending]. A cerebral sulcus.

anfractuous (an-frak'tu-us). Convoluted or sin-

angei. For words thus beginning, see those beginning angi-.

angeitis (an-ji'tis) [Gr. ἀγγεῖον vessel + -ιτιs inflammation]. Inflammation of a vessel, especially of a blood-vessel. See angiitis.

Angelica (an-jel'ik-ah) [L., from Gr. ἀγγελικόs angelic]. 1. A genus of umbelliferous plants. 2. The ripe fruit of A. archangelica and the rhizome and roots of A. atropurpurea are aromatic, stimulant, and emmenagogue, and are used in gout, rheumatism, bronchitis, and intermittent fever. Dose of fruit or root in substance, 30-60 gr. (2-4 gm.); of fluidextract of the fruit, 5- 10 min. (0.333-060 c.c.); of fluidextract of the root, 30-60 min. (2-4 c.c.) American a., A. atropurpurea. European a., A archangelica.

angel's (ān'jelz) wing. A deformity in which both scapulæ are peculiarly prominent: called also

winged scapulæ.

angiasthenia (an-je-as-the'ne-ah) [Gr. $\dot{\alpha}\gamma\gamma\epsilon\hat{i}$ ον vessel + α neg. + $\sigma\theta\hat{\epsilon}\nu$ ος strength]. Loss of tone in the vascular system; vascular instability.

angiectasis (an-je-ek'tas-is) [Gr. ἀγγεῖον vessel + ἔκτασις dilatation'. Dilatation of a blood-vessel, whether from aneurysm, varix, or angioparalysis.

angiectatic (an-ge-ek-tat'ik). Characterized by dilated blood-vessels.

angiectopia (an-je-ek-to'pe-ah) [Gr. άγγεῖον vessel + ἔκ out + τόπος place]. Abnormal position or course of a vessel.

angiemphraxis (an-je-em-frak'sis) [Gr. ἀγγεῖον vessel + ἔμφραξις stoppage]. The stopping up of a vessel.

angiitis (an-je-i'tis) [Gr ἀγγεῖον vessel]. Inflammation of a vessel, chiefly of a blood- or a lymph-vessel. consecutive a., inflammation of a vessel caused by extension of the inflammation from the neighboring tissues.

angileucitis (an-je-lu-si'tis). See angioleucitis. angina (an'jin-ah, an-ji'nah) [L.]. Any disease or symptom characterized by spasmodic suffoca-tive attacks; especially a disease of the pharynx or fauces exhibiting such attacks. a. abdom'inis, severe colicky pain in the abdomen with increased tension of the pulse, occurring in sclerosis of the abdominal vessels. a. acu'ta, a. sim'plex, a simple sore throat. agranulo-cytic a., a. agranulo-cytic a., a. agranulo-cytic a., a. condition marked by destructive ulcerative lesions of the throat, leukopenia, marked reduction of granular cells in the blood and bone-marrow, and often icterus. The disease affects principally middle-aged women and is fatal. Called also agranulocytosis and malignant leukopenia. a. arthrit'ica, pharyngitis of a gouty nature. benign croupous a., pharyngitis herpetica. a. catar-rha'lis, catarrhal pharyngitis. a. cor'dis, angina pectoris. a. croupo'sa, pseudomembranous or croupous sore throat. a. cru'ris. See intermittent claudication, under claudication. a. diphtherit'ica, diphtheritic pharyngitis or laryngitis.
a. dyspep'tica, a condition resembling angina

pectoris, due to distention of the stomach with gas. a. epiglottide'a, inflammation of the epiglottis. a. erysipelato'sa, pharyngitis due to erysipelas. false a. See a. pectoris vasomotoria. a. follicula'ris, follicular tonsillitis. a. gangræno'sa, malignant a., gangrenous inflammation of the fauces. hysteric a., pseudo-angina. a. laryn'gea, laryngitis. a. ludovi'ci, a. lud-wig'ii, Ludwig's a., purulent inflammation seated around the submaxillary gland, beneath the jaw and about the floor of the mouth, usually due to streptococcus infection. a. membrana'cea. See croup. a. mi'nor, a mild form of angina pectoris. mock a. See a. pectoris vasomotoria. nerve a., neuralgia due to spasm of the sclerotic arteries of the nerves. a. nervo'sa, anginal attacks in nervous persons. a. nosoco'mii, a. ulcero'sa, ulcerative pharyngitis. a. no'tha, vasomotor angina. a. parotid'ea, mumps or parotiditis. a. pec'toris, a disease marked by paroxysmal thoracic pain, with suffocation and syncope, due to spasm of the systemic arteries, and occurring usually in connection with aortic aneurysm or disease of the heart (Heberden, 1768). Called also breast-pang, sternalgia, sternodynia, and orthopnæa cardiaca. a. pec'toris vasomoto'ria, a condition marked by precordial pain due to vasomotor disturbance and showing no organic disease of the heart; called also pseudo-angina, vasomotor a., mock a., spurious a., and false a. a. phlegmono'sa, a. tonsilla'-ris, parenchymatous tonsillitis. Plaut's a., Vincent's angina. **pseudomembranous a.** See Vincent's a. a. rheumat'ica, a pharyngitis associated with the rheumatic diathesis. a. scarlatino'sa, pharyngitis due to scarlatina. a. sine dolo're, a slight anginal attack in which no pain is experienced. a. spu'ria, vasomotor angina. spurious a. See a. pectoris vasomotoria. atreptococcus a., angina due to a streptococcus. a. tonsilla'ris. See quinsy. a. trachea'lis, croup. a. ulcero'sa, pharyngitis ulcerosa. a. urat'ica, gouty pharyngitis. vasomotor a. See a. pectoris vasomotoria. Vincent's a., an infectious, mildly contagious ulceromembranous disease of the mucosa, usually confined to the tonsils, but sometimes affecting the pharynx, mouth, gums, and even the larynx and trachea. It is caused by Bacillus fusiformis with which there is usually associated a spirillum (Spironema vincentii). Called also Plaut's a., pseudomembranous a., ulceromembranous a., phagedenic gingititis, and trench mouth. Infection with Vincent's bacillus may occur in other parts of the body than the throat, and it has been suggested that the term Vincent's angina should be replaced by Vincent's disease or Vincent's infection.

anginal (an'jin-al). Pertaining to or characteristic of angina.

anginiform (an-jin'if-orm). Resembling angina.

anginoid (an'jin-oid). Resembling an angina.

anginophobia (an-jin-o-fo'be-ah) [angina + Gr. φόβοs fear]. Morbid dread of angina pectoris.

anginose, anginous (an'jin-os, an'jin-us) [L. an-gino'sus]. Pertaining to or affected with angina.

anginosis (an-jin-o'sis). A general term for anginal conditions; angina.

angioataxia (an"je-o-at-aks'e-ah) [Gr. ἀγγείον vessel + ataxia]. Irregular tension of the blood-vessels.

angioblast (an'je-o-blast) [Gr. άγγεῖον vessel + βλαστός germ]. One of the mesameboid cells whence the blood-vessels and blood-cells are derived.

angiocardiokinetic (an"je-o-kar"de-o-kin-et'ik) [Gr. άγγεῖον vessel + καρδία heart + κίνησις motion]. 1. Affecting the motions or movements of the heart and blood-vessels. 2. Any agent that affects the movements of the heart and vessels.

angiocardiopathy (an"je-o-kar-de-op'ath-e). Any disease of the heart and blood-v

angiocarditis (an"je-o-kar-di'tis) [Gr. ἀγγεῖον vessel + καρδία heart]. Inflammation of the heart and great blood-vessels.

angiocavernous (an-je-o-kav'er-nus). Of the nature of angioma and cavernoma.

angioceratoma (an"je-o-ser-at-o'mah). See angiokeratoma.

angiocholecystitis (an"je-o-ko-le-sis-ti'tis) [Gr. άγγεῖον vessel + χολή bile + κυστις bladder]. Inflammation of the gall-bladder and bile-ducts.

anglocholitis (an"je-o-ko-li'tis) [Gr. ἀγγεῖον vessel + χολή bile]. Inflammation of the bile-ducts. a. proliferans, proliferating inflammation of the bile-ducts leading frequently to carcinoma.

angiochondroma (an"je-o-kon-dro'mah). A chondroma about which there is an excessive development of blood-vessels.

angioclast (an'je-o-klast) [Gr. άγγεῖον vessel + κλαστός broken]. A forceps-like instrument for compressing a bleeding artery.

angiocrine (an'je-o-krin) [Gr. άγγεῖον vessel + endocrine]. Noting vasomotor disorders of endocrine origin.

angiocrinosis (an"je-o-krin-o'sis). A vasomotor disorder of endocrine origin.

angiocyst (an'je-o-sist) [Gr. ἀνγγεῖον vessel + cyst]. An ingrowth of mesothelial tissue in the embryo having blood-forming power.

angiodermatitis (an"je-o-der-mat-i'tis). Inflammation of the vessels of the skin.

angiodiascopy (an"je-o-di-as'ko-pe) [Gr. ἀγγεῖον vessel + διά through + σκωπεῖν to examine]. Direct visual inspection of blood-vessels of the extremities, a light being held behind the part.

angiodystrophia ovarii (an"je-o-dis-tro'fe-ah o-va're-i) [Gr. $\alpha\gamma\gamma\epsilon$ iov vessel + dystrophy]. Discase of the ovary with disease and increase in the number of blood-vessels of that organ.

angioelephantiasis (an"je-o-el-ef-an-ti'as-is). Extensive angiomatous condition of the subcutaneous tissues.

angiofibroma (an"je-o-fi-bro'mah). An angioma containing fibrous tissue. a. contagio'sum trop'icum, a skin disease of Brazil characterized by an eruption of red papules which develop into bluish nodules.

angiogenesis (an"je-o-jen'es-is) [Gr. άγγεῖον vessel + genesis]. The development of the vessels.

angiogenic (an"je-o-jen'ik). 1. Arising in the vascular system. 2. Developing into blood-vessels.

angioglioma (an"je-o-gli-o'mah). A very vascular form of glioma.

angiogliomatosis (an''je-o-gli-o-mat-o'sis). A condition marked by the formation of multiple vascular gliomas.

angiogliosis (an"je-o-gli-o'sis). A condition marked by the development of angiogliomas.

angiograph (an'je-o-graf) [Gr. άγγεῖον vessel + γράφειν to record]. A form of sphygmograph.

angiography (an-je-og'raf-e) [Gr. ἀγγεῖον vessel + γράφειν to record]. A treatise upon the vessels; the study of the vessels.

angiohyalinosis (an"je-o-hi"a-lin-o'sis) [Gr. άγγεῖον vessel + hyalinosis]. Hyaline degeneration of the muscularis of blood-vessels. a. hæmorrhag'ica, a congenital hemorrhage producing a kind of hemophilia.

angiohypertonia (an"je-o-hi-per-to'ne-ah) [Gr. άγγεῖον vessel + ὑπέρ over + τόνος tension]. Angiospasm.

angiohypotonia (an"je-o-hi-po-to'ne-ah) [Gr. $\dot{\alpha}\gamma$ - γ είον vessel + $\dot{\nu}\pi\dot{o}$ over + $\tau\dot{o}\nu$ os tension]. Same as vasodilatation.

angioid (an'je-oid) [Gr. άγγεῖον vessel + εἶδος form]. Resembling a blood-vessel.

angiokeratoma (an"je-o-ker-at-o'mah) [Gr. άγγεῖον vessel + κέρας horn + ωμα tumor]. A disease ed by telangiectases or warty growths, in groups, together with thickening of the epidermis (Mibelli, 1889). The disease is seen chiefly on the feet and legs of children. Called also telangiectatic warts.

angiokeratosis (an"je-o-ker-at-o'sis). Angiokeratoma.

angiokinesis (an"je-o-kin-e'sis) [Gr. ἀγγεῖον vessel + κίνησις movement]. Vascular activity.

angiokinetic (an"je-o-kin-et'ik). Pertaining to vascular activity.

angioleucitis, angioleukitis (an"je-o-lu-si'tis, an"je-o-lu-ki'tis) [Gr. ἀγγεῖον vessel + λευκός white]. Inflammation of a lymph-vessel.

angiolipoma (an"je-o-lip-o'mah). An angioma containing fatty tissue, often seen in the subcutaneous tissue.

angiolith (an'je-o-lith) [Gr ἀγγεῖον vessel + λίθος stone]. A calculus in a vein.

angiolithic (an-je-o-lith'ik) [Gr. ἀγγεῖον vessel + λίθος stone]. Characterized by a mineral deposit in the coats of the vessels.

angiology (an-je-ol'o-je) [Gr. άγγεῖον vessel + λόγος treatise] The sum of knowledge regarding the blood- and lymph-vessels.

angiolymph (an'je-o-limf). A proprietary preparation containing the glucoside of Ixia rosea, Morwa sinensis, and Orchis maculata: used for the treatment of tuberculosis (Roux).

angiolymphitis (an"je-o-lim-fi'tis). Same as lymphangitis.

angiolymphoma (an"je-o-lim-fo'mah). A tumor made up of lymph-vessels.

angioma (an-je-o'mah), pl. angio'mata [Gr. άγγεῖον vessel $+ -\omega \mu \alpha$ tumor]. A tumor the cells of which tend to form blood-vessels (hemangioma) or lymphvessels (lymphangioma); a tumor made up of new-formed blood-vessels or lymph-vessels. a. arteria'le racemo'sum, a dilatation and complex intertwining of many new-formed and altered vessels of small caliber with subsequent involvement of normal vessels. a. caverno'sum, cavernous a., an erectile tumor; a tumor made up of a connective-tissue framework inclosing large spaces filled with blood: sometimes called erectile tumor. a. cu'tis, a kind of nevus made up of a network of dilated blood-vessels. fissural a., angioma occurring in embryonal fissures of the face, neck, or lips. hypertrophic a., an angioma containing solid matter formed by hyperplasia of the endothelium. infective a. Same as a. serpinginosum. plexiform a., ordinary angioma made up of dilated and tortuous capillaries usually located in the skin. a. serpigino'sum, a skin disease characterized by minute vascular points, looking like grains of cayenne pepper, arranged in rings on the skin. simple a., a nevus or telangiectasis a tumor composed of a network of small vessels or of distended capillaries bound together by connective tissue. telangiectatic a., one made up of dilated blood-vessels. a. veno'sum racemo'sum, the swellings caused by severe varicosity of superficial veins.

angiomalacia (an"je-o-ma-la'se-ah) [Gr. ἀγγεῖον vessel + μαλακία softness]. Morbid softening of the walls of the vessels.

angiomatosis (an-je-o-mat-o'sis). A diseased state of the blood or lymphatic vessels. a. of retina, a rare condition marked by diseased retinal vessels and subretinal hemorrhage; called also von Hipple's disease.

angiomatous (an-je-om'at-us). Of the nature of angioma.

angiomegaly (an"je-o-meg'al-e) [Gr. άγγεῖον ves-sel + μέγαs large]. Enlargement of blood-vessels; especially a condition of the eyelid marked by great increase in its volume.

angiometer (an-je-om'et-er) [Gr. άγγεῖον vessel + μέτρον measure]. An instrument for measuring the diameter or caliber and tension of the blood-vessels.

angiomyocardiac (an"je-o-mi-o-kar'de-ak). Affecting the vessels and the heart muscle.

angiomyoma (an"je-o-mi-o'mah). A myoma containing many vessels.

angiomyosarcoma (an"je-o-mi"o-sar-ko'mah).
A tumor made up of elements of angioma, myoma, and sarcoma.

angioneoplasm (an"je-o-ne'o-plazm) [Gr. άγγεῖον vessel + neoplasm]. A tumor or neoplasm of blood-vessels.

angioneurectomy (an"je-o-nu-rek'tom-e) [Gr. $\dot{\alpha}\gamma\gamma\epsilon\hat{l}$ ov vessel + $\nu\epsilon\hat{\nu}$ ov nerve + $\dot{\epsilon}\kappa\tau$ ou $\dot{\eta}$ excision]. Excision of vessels and nerves; especially, the operation of resecting all the elements of the spermatic cord, except the vas deferens with its artery and vein, for the cure of enlarged prostate.

angioneuroedema, angioneuroedema (an"-je-o-nu-ro-e-de'mah) [Gr. ἀγγεῖον vessel + νεῦρον nerve + οἴδημα swelling]. A swelling of the skin or surface, due to some vasomotor neurosis.

angioneurosis (an"je-o-nu-ro'sis) [Gr. ἀγγεῖον vessel + neurosis]. Any neurosis affecting primarily the blood-vessels; a disorder of the vasomotor system, as angiospasm, angioparesis, or angioparalysis.

angioneurotic (an"je-o-nu-rot'ik). Caused by or of the nature of an angioneurosis.

angioneurotomy (an"je-o-nu-rot'o-me) [Gr. αγγεῖον vessel + νεῦρον nerve + τομή cutting]. The operation of cutting vessels and nerves.

angionoma (an"je-o-no'mah) [Gr. άγγείον vessel + νομή ulcer]. Ulceration of a blood-vessel.

angiopancreatitis (an"je-o-pan-kre-at-i'tis). Inflammation of the pancreatic vessels or of the vascular tissue of the pancreas.

angioparalysis (an"je-o-pa-ral'is-is) [Gr. άγγεῖον vessel + paralysis]. Paralysis of blood-vessels from vasomotor defect.

angioparesis (an-je-o-par'cs-is) [Gr. ἀγγεῖον vessel + paresis]. Vasomotor paresis.

angiopathy (an-je-op'ath-e) [Gr. άγγεῖον vessel + πάθος affection]. Any disease of the vessels.

angioplany (an'je-o-plan-e) [Gr. άγγεῖον vessel + πλάνη wandering]. Abnormality in position, course, or structure of a vessel.

angioplasty (an'je-o-plas-te) [Gr. ἀγγεῖον vessel + πλάσσειν to form]. Plastic surgery of blood-vessels.

angiopoietic (an"je-o-poi-et'ik) [Gr. ἀγγεῖον vessel + ποιεῖν to make]. Causing the formation of blood-vessels.

angiopressure (an'je-o-presh-ur). Control of hemorrhage from a vessel by the application of a hemostatic forceps with pressure.

angiorhigosis (an"je-o-rig-o'sis) [Gr. ἀγγεῖον vessel + ρῖγος rigor]. Rigidity of the wall of a blood-vessel.

angiorrhaphy (an-je-or'af-e) [Gr. ἀγγεῖον vessel + ραφή suture]. Suture of a vessel or vessels. arteriovenous a., the suturing of an artery to a vein, so as to divert the arternal current into the vein.

angiorrhexis (an-je-or-ek'sis) [Gr. άγγεῖον vessel + ῥῆξις rupture]. Rupture of a vessel.

angiosarcoma (an"je-o-sar-ko'mah) [Gr. ἀγγεῖον vessel + sarcoma]. A sarcoma containing many vessels. a. myxomato'des, an angiosarcoma in which the walls of the vessels are affected with mucous degeneration.

angiosclerosis (an"je-o-skle-ro'sis) [Gr. ἀγγεῖον vessel + sclerosis]. Hardening of the walls of the blood-vessels; a combined sclerosis of arteries, veins, and capillaries.

angioscope (an'je-o-skōp) [Gr. άγγεῖον vesset + σκοπείν to view]. A microscope for observing capillary blood-vessels.

angiosialitis (an')e-o-si-al-i'tis) [Gr. àvveîov vessei + elalov saliva]. Inflamervary duct. angiosis (an-je-o'sis). Same as angiopathy.

angiospasm (an'je-o-spazm) [Gr. ἀγγείον vessel + σπασμός spasm]. Spasmodic contraction of the blood-vessels.

angiospastic (an-je-o-spas'tik). Of the nature of angiospasm; causing contraction of the bloodvessels.

angiosperm (an'je-o-sperm) [Gr. άγγεῖον vessel + σπέρμα seed]. A true flowering plant, a plant having its seeds in an inclosed ovary

angiostaxis (an"je-o-stax'is) [Gr. ἀνγεῖον vessel + στάξις hemorrhagel. Hemorrhagic diathesis.

angiostenosis (an"je-o-sten-o'sis) [Gr. ἀγγείον vessel + stenosis]. A narrowing of the caliber of a vessel.

angiosteosis (an"je-os-te-o'sis) [Gr. ἀγγεῖον vessel + ὀστέον bone]. Ossification or calcification of a vessel.

angiosthenia (an-je-os-the'ne-ah) [Gr. ἀγγείον vessel $+ \sigma\theta\dot{\epsilon}\nu\sigma$ strength]. Arterial tension

Angiostomidæ (an"je-o-sto'mid-e). A family of the Nematoda characterized by heterogony. There is only one important genus, Strongyloides.

angiostrophe, angiostrophy (an-je-os'tro- $f\bar{e}$) [Gr $\dot{\alpha}\gamma\gamma\epsilon\hat{e}o\nu$ vessel $+\sigma\tau\rho\sigma\dot{e}\dot{\eta}$ a twi-t]. The twisting of a vessel for the arrest of hemorrhage.

angiotelectasis (an"je-o-tel-ek'tas-is) [Gr. $\dot{\alpha}\gamma\gamma\epsilon\hat{n}$ ον vessel + $\tau\epsilon\hat{n}$ ος end + $\epsilon\kappa\tau\alpha\sigma\iota$ s dilatation]. Dilatation of the capillary vessels and the minute arteries and veins.

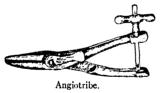

angiotenic (an-je-o-ten'ik) [Gr. άγγεῖον vessel + reiver to stretch]. Marked by or caused by distention of blood-vessels.

angiotitis (an-je-0-ti'tis) [Gr. ἀγγεῖον vessel + ottis]. Inflammation of the vessels of the ear.
angiotome (an'je-0-tōm) [Gr. ἀγγεῖον vessel + τομή a cutting] Any one of the segments of the vascular system of the embryo called also vascular segment.

angiotomy (an-je-ot'om-e) [Gr. άγγεῖον vessel + τομή a cutting] The dissection of the blood-vessels. angiotonic (an"je-o-ton'ik). Increasing the vascular tension.

angiotribe (an'je-o-trīb) [Gr. ἀγγεῖον vessel + $\tau \rho i \beta \epsilon i \nu$ to crush]. of forceps in An exceedingly strong pair

which pres-sure is exercised by means of a screw. It is used for crushing tissue containing an artery for the purpose of

closing the artery and checking hemorrhage. Called also vasotribe

angiotripsy (an'je-o-trip-se). Production of hemostasis by means of the angiotribe. Called also vasotri psy

angiotrophic (an"je-o-trof'ik) [Gr. άγγεῖον vessel - τροφή nutrition]. Pertaining to vascular nutrition.

angitis (an-ji'tis). Same as angitis.

angle (ang'l) [L. an'gulus]. 1. A sharp bend formed by the meeting of two borders or surfaces. The angle of a tooth is the line where two or more surfaces of a tooth meet. 2 The degree of divergence of two lines or planes that intersect. a. of aberration. See a. of deviation. Ackermann's a's, certain angles of the base of the skull, characteristic of kyphosis, encephalocele, and hydrocephalus. acromial a., the angle between the head of the humerus and the clavicle. alpha a., that formed by the intersection of the visual line with the optic axis. Alsberg's a. See Alsberg's triangle, under triangle. alveolar a., the angle between a line running through a point beneath the nasal spine and the most prom-

inent point of the lower border of the alveolar process of the superior maxilla and the cephalic horizontal a. of aperture, the angle between two lines from the focus of a lens to the ends of its diameter auricular a., the angle formed be-tween two auricular radii. auriculo-occipital a., the angle between lines from the auricular point to the lambda and opisthion. axial a., any dental angle which is parallel with the long axis of a tooth. They are the mesiobuccal, mesiolabial, distobursal, distolabial, mesiolingual, and distolingual angles basilar a., basiopic a., the angle between the nasobasilar line and Meissner's horizontal. **beta a.**, that between the radius fixus and a line joining the bregma and hormion. biorbital a., the angle formed by the intersection of the axis of the orbits. Broca's a. Same as basilar a. buccal a's, the angles formed by the junction of the buccal surface of a tooth with the other surfaces Camper's a. I Same as facial a. 2. Same as maxillary a cardiohepatic a., the angle formed by the horizontal limit of hepatic dulness with the upright line of cardiac dulness in the fifth right intercostal space, close to the sternal border. carrying a., the angle formed by the axes of the arm and forearm when the forearm is extended cavosurface a., the angle formed by the cavity wall and the surface of a tooth cephalic a., any angle of the skull cerebellopontile a., the angle beor face tween the cerebellum and the pons. **chi a.**, that between two lines from the hormion to the staphylion and basion respectively. condylar a., the angle between the planes of the basilar groove and the occipital foramen a. of convergence, the angle between the visual axis and the median line when an object is looked at. costal a., the angle between two false ribs meeting at the sternum. craniofacial a., the angle between the basifacial and basicranial axes at the middle of the spheno-ethmoid suture. critical a., the angle made with the perpendicular by a ray of light passing from a rarer to a denser medium and then refracted. Daubenton's a., angle formed by the opisthiobasial line and opisthionasial line. a. of declination. See Mikulicz's a. deviating a., the least possible angle of deviation that can be produced by a given prism. a. of deviation, the angle between a refracted ray and the incident ray prolonged. distal a's, the angles at the junction of the distal walls of a tooth cavity with the other surfaces of a tooth crown. disto**buccal a.**, the angle formed by the junction of the distal and buccal surfaces of a tooth. **disto**bucco-occlusal a., the angle formed by the distal, buccal, and occlusal surfaces of a tooth. distobuccopulpal a., the angle formed by the junction of the distal, buccal, and pulpal walls of a tooth cavity distocervical a., the angle formed by the distal and cervical walls of a tooth cavity. **distoclusal a.** See disto-occlusal a. disto-incisal a., the angle formed by the distal and incisal walls of the cavity of a tooth. distolabial a., the angle formed by the junction of the distal and labial walls of a tooth cavity. distolabiopulpal a., the angle at the junction of the distal, labial, and pulpal walls of a tooth distolingual a., the angle at the junction of the distal and lingual walls of a cavity. distolinguo-occlusal a., the angle formed by the distal, lingual, and occlusal surfaces of a tooth. distolinguopulpal a., the angle formed by the junction of the distal, lingual, and pulpal walls of a tooth cavity. disto-occlusal a., the angle formed by the junction of the distal and occlusal surfaces of a tooth. distopulpal a., the angle formed by the junction of the distal and pulpal walls of a tooth cavity. **Ebstein's a.** Same as cardiohepatic a. **elevation a.** r. The angle made by the visual plane when moved upward or downward with its normal position. 2. See Alsberg's triangle, under triangle. epigastric a., the angle made by the ensilorm cartilage with the

body of the sternum. ethmocranial a., the angle included between the plane of the cribriform plate of the ethmoid bone prolonged and the basicranial axis. external a., the angle formed by the eyelids at the outer canthus facial a., an angle which indicates the slope of the forehead. gamma a., the angle formed by the line of fixation with the optic axis of the eye. a. of incidence, the angle at which a ray of light strikes a denser medium. See retraction. incisal a., the angle formed at the incised surface of a tooth by its lateral surfaces. iridocorneal a., a. of iris, iritic a.. the angle formed at the periphery of the anterior chamber of the eye by the cornea in front and the iris behind. Jacquart's a. Same as ophryos pinal a. a. of the jaw, the junction of the lower edge with the posterior edge of the lower jaw. labial a., the angle formed between the labial surface and the other surfaces of a tooth. limiting a. See critical a. line a., an angle formed by the union of two surfaces. Louis's a., Ludwig's a., that between the manubrium and the gladiolus Called also angulus ludovici. mastoid a., the posterior inferior angle of the parietal bone maxillary a. (of Camper), the angle between two lines extending from the point of contact of the upper and lower central incisors to the ophryon and the most prominent point of the lower mesial a., the angle at the junction of the mesial surface with the other surfaces of a tooth. mesiobuccal a., the angle formed by the junction of the mesial and buccal surfaces of a tooth. mesiobucco-occlusal a., the angle formed by the junction of the mesial, buccal, and occlusal surfaces of a tooth. mesio-incisal a., the angle formed by the junction of the mesial and incisal surfaces of a tooth. mesiolabial a., the angle formed by the junction of the mesial and labial surfaces of a tooth. mesiolingual a., the angle formed by the junction of the mesial and lingual surfaces of a tooth. mesiolinguo-occlusal a.. the angle formed by the junction of the mesial, lingual, and occlusal surfaces of a tooth. mesio**occlusal a.**, the angle formed between the mestal and occlusal surfaces of a bicuspid or molar tooth metafacial a., the angle between the base of the skull and the pterygoid process, meter-a., the angle traversed by the visual axis of the eye from its position at rest to its position when fixed on an object one meter distant Mikulicz's a., an angle formed by two planes, one passing through the long axis of the epiphysis of the femur and the other through the long axis of the diaphysis. It is normally 130 degrees. Called also angle of declination. a. of Mulder, the angle between the facial line of Camper and a line from the root of the nose to the spheno occipital suture and intersecting the first line. nu a., the angle between the radius fixus and a line joining the hormion and nasion. occipital a. Same as Daubenton's a. ophryospinal a., the angle at the anterior nasal spine between lines from the auricular point and the glabella optic a., the visual angle. parietal a., the angle between lines passing through the extremities of the transverse bizygomatic diameter and the maximum transverse frontal diameter. Pirogoff's a. Same as venous a. point a., an angle formed by the union of three surfaces called also solid a. a. of polarization, the angle at which light is most completely polarized. principal a. Same as refracting a. a. of the pubes, that made by Quatrethe pubic bones at their symphysis Quatre fages's a. Same as purietal a. Ranke's a. the angle between the horizontal plane of the skull and a line through the center of the alveolar margin and the center of the nasofrontal suture. a. of reflection, that which a reflected ray makes with a line perpendicular to the reflecting surface. refracting a., that between the two refracting faces of a prism: called also principal a. a. of refraction, the angle between a refracted ray and a line perpendicular to the refracting surface See

refraction. rolandic a., a. of Rolando, the angle between the mesial plane and the fissure of Rolando at their intersection. sacrovertebral a., that which the sacrum forms with the lowest lumbar vertebra. Serres's a. Same as metafocial a. sigma a., the angle between the radius fixus and a line from the staphylion to the hormion. solid a. See point a. somatosplanchnic a. the angle formed by the junction of the somatic and splanchnic layers of the mesoblast in the embryo. sphenoid a. I An angle at the top of the sella turcica between lines from the nasal point and from the tip of the rostrum of the sphenoid; called also Welcher's a. 2. The anterior inferior angle of the parietal bone. sternal a., Louis's angle. sternoclavicular a., that formed at the junction of the sternum ar I clavicle. **subpuble a.**, that formed at the puble arch. **a. of Sylvius**, the angle between the fissure of Sylvius and a line perpendicular to the superior edge of the cerebral hemisphere. tentorial a., the angle between the basicranial axis and the plane of the tentorium. Topinard's a. Same as ophryospinal a. a. of torsion, the angle between the axes of different portions of long bones. venous a., the angle between the internal jugular and subclavian veins. a. of Virchow, the angle between the nasobasilar line and the nasosubnasal line. visual a., the angle formed between two lines extending from the nodal point of the eye to the extremities of the object seen Vogt's a. the angle between the nasobasilar and alveolonasal lines. Weisbach's a., the angle at the alveolar point between lines passing from the basion and from the middle of the frontonasal suture. Welcher's a. See sphenoid a. xiphoid a's, the angles formed by the borders of the xiphoid notch.

Angle's classification (ang'elz) [Edward Hartley Angle, American orthodontist, contemporary]. A classification of the various modes of malocclusion. A's splint. See under splint.

Anglesey leg (ang'gl-se) [Marquis of Anglesey, 1768-1854, for whom the leg was made]. See under leg.

anglicus sudor (ang'lik-us su'dor). The English sweating fever; a deadly pestilential fever which has several times ravaged England.

angophrasia (ang-o-fra'zhe-ah) [Gr. ἄγχειν to choke + φράσις utterance]. A drawling and broken form of speech occurring in dementia (Kussmaul).

angostura. See angustura.

angstrom (ang'strom). The unit of wave-length equal to 10⁷ mm.

Angström's law, unit (ahng'stremz) [Anders Jonas Angstrom, Swedish physicist, 1814-1874]. See under law and unit.

Anguillula (ang-wil'u-lah) [L. "little eel"]. A genus of nematode parasites. A. ace'ti, a species found in vinegar, and sometimes in the urine. A. intestina'lis, A. stercora'lis. Same as Strongyloides stercoralis.

anguilluliasis, anguillulosis (an-gwil-u-li'as-is, -lo'sis). The presence of an anguillula in the body.

Anguillulids (ang-wil-lu'lid-e). A family of the Nematoda. They are small free-living forms, having the mouth armed with a spine. There are four genera. Anguillula, Anguillulina, Rhabditis, and Leplodera.

Anguilluli'na putrefa'ciens. A free-living ne matode normally saprozoic, but occasionally found in the stomach of man.

angular (ang'u-lar) [L. angula'ris]. Sharply
bent; having corners or angles.

angulation (ang-u-la'shun) [L. angula'tus bent]
The formation of a sharp obstructive angle is the intestine.

angulus (ang'u-lus). Latin for angle. a. cos'ts, the angle of a rib. a. i'ridis [B N A], the angle of the iris. a. ludov'ici. See Louis' angle, under

angle. a. mandib'ulæ [BNA], the angle of the jaw. a. mastoi'deus, the mastoid angle. a. ou'li, the canthus of the eye a. o'ris, the corner of the mouth. a. pu'bis [BNA], the angle of the pubes. a. ster'na, Louis' angle.

angustura (ang-us-tu'rah) [Sp Angostura, "narrows," a town of Venezuela] The bark of Galipe'a cuspa'nia, a tree of South America. It is a bitter tonic and stimulant used in dysentery and in bilious and intermittent fever. Dose of the infusion, 1-2 fl.oz (30 oc c.c.), of the fluid-extract, 10-30 min (0.606-2 c c.), of the powdered bark, 10-40 gr (0.666-2 666 gm).

angusturin (ang-us-tu'rın). A tonic alkaloid, C₁₀H₁₀NO₁₄, from angustura.

angusty (ang-us'te) [L. angus'tus narrow]. Narrowness.

anhalamin (an-hal'am in). A crystalline alkaloid, C₁₁H₁₅NO₈, from Anhalo'nium lewin'ii

anhalin (an'ha-lin). An alkaloid from Anhalo'nium fissura'tum, which is identical with hordenin.

anhalonin (an-ha-lo'nin). A crystalline alkaloid, $C_{12}H_{15}NO_3$, from *Anahalo'nium lewin'ii* and *A jourdanta'num*; has the physiologic properties of mezcalin. It is recommended in dyspnea, angina pectoris, and pneumothoray.

Anhalonium lewinii (an-hal-o'ne-um lu-win'e-i).

A Mexican cactus, a heart stimulant: sometimes used in angma pectoris and in cardiac asthma.

Dose of fluidextract, 1-3 min (0 066-0.2 c c)

anhaphia (an ha'fe-ah) [Gr $\dot{a}\nu$ neg $+ \dot{a}\varphi \dot{n}$ touch]. Loss of the sense of touch

anhedonia (an-hed-o'ne-ah) [Gr ἀν priv + ἡδονή pleasure]. Total loss of feeling of pleasure in acts that normally give pleasure

anhelation (an-he'-a'shun) [L. anhela'two]. Dyspnea, with panting, shortness of breath.

anhematopoiesis (an-hem"at-o-poi-e'sis) [Gr. ἀν neg + αἰμα blood + ποιεῖν to make] Same as anhematoris.

anhematosis (an"hem-at-o'sis) [Gr ἀν priv. + άlματόειν to make bloody]. Defect in the formation of blood.

anhemolytic (an-hem-o-lit'ik) [Gr. αν- neg. + αlμα blood + λντικός dissolving] Not causing hemolysis, not destructive to blood-corpuscles.

anhepatogenic (an-hep"at-o-jen'ik) [Gr ἀν neg. + ήπαρ liver + γεννᾶν to produce]. Not originating in the liver, not due to any morbid process within the liver.

anhidrosis (an-hid-ro'sis) [Gr. ἀν priv + ἰδρώς sweat]. An abnormal deficiency of sweat.

anhidrotic (an-hid-rot'ik). 1 Checking the secretion of sweat. 2 An agent that checks the secretion of sweat

anhistic, anhistous (an-his'tik, an-his'tus) [Gr. *ἀν* priv + *ἰστό*ς web]. Of a uniform substance, structureless

anhydratation (an-hi-dra-ta'shun). The condition of not being hydrated.

anhydremia (an-hid-re'me-ah) [Gr. ἀν neg. + ὕδωρ water + αίμα blood]. Lack of water in the blood.

anhydrid (an-hi'drid) [Gr. ἀν neg + ὕδωρ water]. A chemic compound derived from a substance, especially an acid, by the abstraction of a molecule of water. **acetic a.**, a colorless mobile liquid of a pungent acetic odor. It is the anhydrid of acetic acid, (CH₃CO)₂O. **arsenious a.**, arsenic trioxid.

anhydromuscarin (an-hi-dro-mus'kar-in). A synthetic alkaloid, OH(CH₃)₃N.CH₂ CHO, which has no action on a frog's heart

anhydromyelia (an"hid-ro-mi-e'le-ah) [Gr. ἀν priν. + ὕδωρ water + μυελόν marrow]. A deficiency of the fluid that is normally found in the spinal cord.

anhydrosugar (an-hi-dro-shug'ar). A substance produced from cane-sugar by heating it under diminished pressure to about 170° C. It does not ferment nor reduce copper solutions; its formula is CH₂OH.CHOH CHO CHOH.CH CHO, and it has been used as a food in diabetes

anhydrous (an-hi'drus) [Gr. ἀν neg. + ὕδωρ water].
Deprived or destitute of water.

anhypnosis (an hip-no'sis). Insomnia.

anianthinopsy (an-e-an'thin-op-se) [Gr. ἀν neg. + ἰάνθινος voolet + ὄψις vision]. Inability to distinguish violet tints

anideus (an-id'e-us) [Gr. d\u03c4 priv. + \u03c42\u03c5\u03c5 form].
A twin monster-fetus in which the parasite is a mere shapeless mass.

anidrosis (an-id-ro'sis). Same as anhadrosis.

anile (a'nil) [L. anus, old woman]. Pertaining to old age in women.

anilid, anilide (an'il-id). Any compound formed from aromatic amins by substitution of an acyl group for the hydrogen of NH₂.

anilidmetarsenite (an-il-id-met-ar'sen-it). A white powder, $C_0H_0NO_2AsC_0H_1NHAsO_2$, used in skin diseases by subcutaneous injection

anilin (an'il-in) [Arabic an'nıl indigo, nıl blue; L. nıl indigo]. Phenylamin; a colorless, oily liquid, C₀H₂NH₂, from coal-tar and from indigo, made commercially by reducing nitrobenzene. It is slightly soluble in water, freely so in ether and alcohol. It is poisonous, producing vertigo, weakness, and cyanosis (a condition called antism). The drug itself and its sulphate have been used in epilepsy and chorea. Combined with other substances especially chlorin and the chlorates, it forms the anilin colors or dyes that are derived from coal-tar. Dose of anilin camphorate, 8–12 gr. (0.52-0.8 gm.). a. sulphate, a white, crystalline substance, (C₀H₂NH₂D₂H₂SO₄: used as a nervine in epilepsy, chorea, etc. Dose, \frac{1}{4}-1\frac{1}{2} gr. (0.05-0.1 gm.)

anilinophil, anilinophile (an-il-in'o-fil, -fil)
[and n + Gr. φιλείν to love] τ Anilinophilous.
2. An anilinophilous element or structure

anilinophilous (an-il-in-of'ıl-us). Staining readily with anilin dyes.

anilipyrin (an-il-ip-i'rin) A preparation of 1 part of acetanilid with 2 parts of antipyrin soluble in water. It is used in rheumatism and influenza. Dose, 5-15 gr (0 3-1 gm).

anilism (an'il-izm). Porsoning by anilin; a condition marked by vertigo, muscular weakness, cyanosis, and digestive derangement, and often affecting workers in anilin factories

anility (an-il'1t-e) [L. anus, old woman]. Old age in women.

anima (an'im-ah) [L "air"], r. The soul. 2. The active principle of a drug

animal (an'im-al) [L. anima'lis, from an'ima life, breath]. 1. A living organism having sensation and the power of voluntary movement, and requiring for its existence oxygen and organic food. 2 Pertaining to such an organism. a. gum. See under gum. normal a., an animal used in bacteriologic experiments which has never been infected either naturally or artificially. spinal a., an animal whose spinal cord has been severed, thus cutting off communication with the brain.

animalcule (an-im-al'kūl) [L. animal'culum]. Any minute or microscopic animal organism.

animalculist (an-im-al'ku-list). One who believes in the theory that the undeveloped embryos are present in the spermatozoon. Cf. ovist.

animality (an-im-al'it e). The distinguishing characteristics of animals.

animalized (an'im-al-īzd). Cultivated in the animal body or on animal secretions, such as blood, milk, etc.: said of bacteria.

animasa (an-im-a'sah). An extract prepared from the media and intima of blood-vessels. Used in arteriosclerosis and hypertonia.

- animation (an-im-a'shun). 1. The state of being alive 2. Livehness of spirits. suspended a., a temporary state of apparent death.
- anime, animi (an'im-e, an'im-i) [Fr. animi]. A name of various resus, especially that of Hymen-w'a cour'baril and H. stilbocar'pa, trees of tropical America at present little used in medicine.
- **animin** (an'im-in). A substance derived from boneoil.
- animism (an'im-izm) [L an'ima soul]. The obsolete doctrine that the soul is the source of both normal and pathologic processes.
- anincretinasis (an-in-kre-tin-a'sis) Anincretinosis
- anincretinosis (an-in-kre-tin-o'sis) [Gr άν priv + incretion]. A disorder due to defect or lack of some internal secretion.
- aniodol (an-i'o-dol). An antiseptic solution of trioxymethylene used in sterilizing dressings and instruments.
- anion (an'e-on) [Gr ἀνὰ up + lών going] The element which in electrolysis is evolved at the positive pole or anode; an ion carrying a charge of negative electricity. See ion. The anions include all the non-metals, the acid radicals, and the hydroxyl ion. They are indicated by an accent mark or a minus sign at the upper right hand corner of the symbol, as CI' or Cl⁻.
- **anios** (an'e-os). A proprietary greenish liquid, used as an antiseptic and disinfectant.
- aniridia (an ir-id'e-ah) [Gr. ἀν priv. + uris] Congenital absence of the iris.
- **anisalol** (an-is-al'ol). The phenyl ester of anisic acid, $C_0H_1(OCH_1)CO_2C_0H_2$, occurring in colorless crystals: antirheumatic and analgesic. Dose, 8-15 gr (0.5-1 gm).
- anisate (an'is-āt). A salt of anisic acid. The anisates are antiseptics and antipyretics
- **anisated** (an'is-āt-ed). Flavored with amse
- anischuria (an-is ku're-ah) [Gr ἀν priv. + lσχουρία retention of the urine]. Incontinence of the urine, enuresis.
- anise (an'is) [L. ani'sum]. The fruit of Pimpinel'la ani'sum, an umbelliferous plant. It is carminative and expectorant, and has a slightly stimulant action on the heart. Dose, 10-20 gr (0.660-1.33.3 gm.). Dose of the water (a'qua ani'si), 1-4 dr (4-15 c.c.), of the essence (essen'tia ani'si), 10-20 min (0.600-1.33.3 c.c.), of the volatile oil (o'leum ani'si), 1-5 min. (0.606-0.33.3 c.c.), of the spirit (spir'ilus ani'si), 1-2 dr (4-8 c.c.). Chinese a., star-a., the fruit of Illi'cium ve'rum or of I anisa'lum, magnoliaceous trees of Asia the volatile oil is identical with that of anise, and is used like it.
- anisic acid (an-is'ik). See under acid.
- **anisin** (an'is-in). A crystalline alkaloid, $C_{22}H_{24}$ N_2O_3 , from anise.
- anisochromatic (an-i"so-kro-mat'ik) [Gr. δp neg. + "ros equal + $\chi \rho \hat{\omega} \mu \alpha$ color]. Not of the same color throughout applied to solutions used for testing color-blindness, containing two pigments which are distinguished by both the normal and the color-blind eye.
- anisochromia (an-i-so-kro'me-ah) [Gr. ἄνισος unequal + χρῶμα color] Variation in the color of the red corpuscles due to unequal hemoglobin content.
- anisocoria (an-is-o-ko're-ah) [Gr ἄνισος unequal + κορή pupil]. Inequality of the pupils in diameter.
- anisocytosis (an-i-so-si-to'sis) [Gr. $\alpha m\sigma os$ unequal $+\kappa b\tau qs$ cell]. Inequality in the size of cells, especially of the red blood-corpuscles.
- anisodent (an-i'so-dont) [Gr. άνωσος unequal + δδοῦς tooth]. Having irregular teeth of unequal length!.
- anisogamy (an-i-sog'am-e) [Gr. arcses unequal +

- γάμος marriage]. Sexual conjugation in protozoa in which the individuals differ in structure and size.
- anisognathous (an-i sog'na-thus) [Gr. ἄνισος unequal + γνάθος μαν]. Having the upper jaw much wider relatively than the lower one.
- anisohypercytosis (an-i-so-hi-per-si-to'sis) [Gr. ανισος unequal + ὑπέρ over + κύτος cell]. Increase in the number of leukocytes of the blood, with abnormality in the proportion of the various forms of neutrophile cells.
- anisohypocytosis (an-i-so-hi-po-si-to'sis) [Gr. ἄνισος unequal + ὑπό under + κύτος cell]. Decrease in the number of leukocytes of the blood, with abnormality in the proportion of the various forms of neutrophile cells.
- anisol (an't ol) A fragrant liquid, methylphenyl ether, CH₃(CCH₅, prepared from phenol by heating with potassium and methyl iodid.
- anisoleukocytosis (an-1"so-lu-ko-si-to'sis) [Gr. árioos unequal + leukocytosis]. Variability in the proportion of the various forms of neutrophile leukocytes of the blood
- anisomelia (an-is-o me'le-ah) [Gr. ἄμισος unequal + μέλος hmb] Inequality between paired limbs.
- anisomeric (an-i-so-mer'ik). Not isomeric.
- **anisometrope** (an-i-so-met'rōp). Λ person affected with anisometropia.
- anisometropia (an''is o met-ro'pe ah) [Gr. $\&\nu$ aos uncqual $+ \mu \epsilon \tau \rho o \nu$ measure $+ \omega \psi$ eye]. A difference in the retractive power of the two eyes.
- anisometropic (an"is-o met-rop'ik). Having eyes which are unlike in refraction
- **anisonormocytosis** (an-i"so-nor-mo-si-to'sis) [Gr. ἄνισος unequal + normocyte]. A condition in which the leukocytes of the blood are normal in number, but the proportion of the various forms of neutrophile cells is abnormal.
- anisopia (an 15 ο'pe-ah) [Gr. ἄνισος unequal + ἄψ eye]. Inequality of vision in the two eyes.
- anisospore (an-i'so spōr) [Gr. ἄνισος unequal + σπόρος spore]. A sexual spore that unites with a spore of opposite sex to form an adult
- anisosthenic (an is os-then'ik) [Gr ἄνισος unequal $\sigma \theta \epsilon \nu \delta s$ strength]. Not having equal strength: said of paired muscles.
- anisotonic (an i so ton'ik). Not isotonic, having unequal osmotic pressure, either hypotonic or hy pertonic.
- anisotropal, anisotropic (an-is-ot'ro-pal, an-is-o-trop'ik) [Gr. ἄνισος unequal πρόπος turning]. Doubly retracting or having a double polarizing power.
- anisum (an-i'sum), gen ani'si Latin for anise.
- anisuria (an-i-su're ah) [Gr. άν neg. + τσος equal + οδρον urine] A condition marked by alternating oliguria and polyuria.
- anitin (an'it-in). A hydrocarbon and sulphur derivative, occurring in the form of a brownishblack hygroscopic and germicidal powder.
- anitol (an'it-ol) Any of the compounds of anitin with cresols, phenols, etc. They are germicides.
- anitrogenous (ah-ni-troj'en-us). Not nitrogenous.
 ankle (ang'kl). The part of the leg just above the foot a.-bone, the astragalus. cocked a., a partial dislocation of the fetlock-joint of a horse.
 tailors' a., an abnormal bursa over the head of the fibula in tailors, from pressure caused by sitting on the floor with the legs crossed in front.
- ankyloblepharon (ang-kil o-blef'ar-on) [Gr. άγκύλη 1000se + βλέφαρον cyclid]. The adhesion of the ciliary edges of the cyclid to each other.
- ankylochilia (ang-kil-o-ki'le-ah) [Gr. άγκύλη loop + χείλος lip]. Adhesion of the lips to each other.
- ankylocolpos, ankylokolpos (ang-kil-o-kol'pos) [Gr. ἀγκίλη loop + κόλπος vagina]. Attesia or imperforation of the vagina.

ankylodactylia (ang"kil-o-dak-til'e-ah) [Gr. άγκύλη loop + δάκτυλος finger]. Adhesion of fingers or toes to one another.

ankyloglossia, ankyloglossum (ang-kil-o-glos'-e-ah, ang-kil-o-glos'um) [Gr. ἀγκύλη loop + γλῶσσα tongue]. Tongue-tie.

ankylomele (ang-kil-o-me'le) [Gr. ἀγκύλος bent + μήλη probe]. A curved probe.

ankylophobia (ang-kil-o-fo'be-ah) [ankylosis + Gr. φόβος fear]. Morbid fear of ankylosis in cases of fracture or joint affection.

ankylopoietic (ang-kı-lo-pot-et'ık) [Gr. ἀνκύλος bent + ποιεῖν to make]. Producing or characterized by ankylosis.

ankyloproctia (ang-kil-o-prok'she-ah) [Gr. ἀγκύλη loop + πρωκτός anus]. A stricture of the anus.
 ankylosed (ang'kil-ōzd). Affected with ankylosis.

ankylosis (ang-kıl-o'sis) [Gr. ἀγκύλωσιs]. Abnormal immobility and consolidation of a joint. artificial a., the surgical fixation of a joint; arthrodesis bony a., the abnormal union of the bones of a joint called also true a. extracapsular a., that caused by rigidity of parts outside a joint. false a., spurious a., ankylosis due to rigidity of the surrounding parts. fibrous a., that due to the formation of fibrous bands within a joint. intracapsular a., ankylosis due to the undue rigidity of structures within a joint. ligamentous a., ankylosis by ligaments or fibrous structures. true a. Same as bony a.

Ankylostoma, Ankylostomum (ang-kil-os'to-mah, -os-to'mum) [Gr. ἀγκύλος trooked + στόμα mouth]. A genus of nematode parasites. A. america'num. Same as Necator americanus. A. brazilien'se, a species found in Brazil A. cani'num, the common hook-worm of dogs A. ceylon'icum, a species infesting felines and cannies in India. A. duodena'le (Dubini, 1843), the common hook-worm, a nematode worm, the male being 10-12 mm. (}-\{\}\] inch\) in length and 0 4 mm. (\{\}\}\] inch\) broad, the female somewhat larger The mature parasites inhabit the small intestine, producing the disease ankylostomiasis

ankylostomiasis (ang"kil-os-to-mi'as-is). Hookworm disease; a condition due to the presence of Ankylostoma duedenale or Necator americanus, nematode worms which closely resemble each other. The disease occurs in practically all tropical and subtropical countries and is especially prevalent in the southern United States and in the West Indies. In temperate regions it occurs in mines and tunnels where conditions of temperature and moisture re-semble the tropics. The larve of the parasite live in earth and gain entrance to the digestive tract either directly with contaminated food or water, or indirectly by way of the skin of the feet or legs. The latter infection is followed by a transitory eruption known as "ground itch" or "mazamorra." From here the parasites are carried by the blood to the lungs, ascend the trachea, are swallowed, and settle in the small intestine. The infection is marked by gastro-intestinal disturbance, abdominal pain, intermittent tever, progressive anemia, pallor, and emaciation which may be marked or concealed by a dropsical condition. Called also dochmiasis, uncinariasis, hook-worm disease, miners anemia, St. Gothard's tunnel disease, tunnel-anemia, Egyptian chlorosis

ankylostomo-anemia (ang-kil-os"to-mo-an-e'-me-ah). Ankylostomiasis.

ankylotia (ang-kil-o'she-ah) [Gr. άγκύλη noose + ovs ear] Closure of the external meatus of the

ankylotic (ang-kil-ot'ik). Pertaining to or marked by ankylosis.

ankylotome (ang-kil'o-tōm) [Gr. ἀγκύλη loop + τομή cut]. A knife for operating upon tongue-tie. ankylotomy (ang-kil-ot'o-me) [Gr. ἀγκύλη loop + τομή cut]. A cutting operation for curing tongue-tie.

ankylurethria (ang-kil-u-re'thre-ah) [Gr. ἀγκύλη loop + urethra]. Stricture of the urethra.

ankyrism (ang'kir-izm) [Gr ἄγκυρα hook]. A hook-like articulation or suture.

ankyroid (ang'kır-oid) [Gr. ἄγκυρα hook + είδος form]. Hook-shaped.

anlage (an'lah-geh) [Ger. "a laying on"]. The embryonic area in which traces of any part first appear, the first aggregation of cells which will form any distinct part or organ of the embryo.

Annandale's operation (an'an-dālz) [Thomas *Annandale*, Scotch surgeon, 1838–1907]. See under operation.

annatto (an-at'o). See annotto.

anneal (an-ē'l). To temper by heat, as metals, glass, or porcelain, in order to render them tougher and more easily workable.

annectent (an-ek'tent) [L. annec'tens]. Connecting or joining.

Annelida (an-el'id-ah). A class of metazoan invertebrates, the red-blooded worms—It contains only one class of medical interest, *Hirudinea*.

annexa (an-eks'ah). Adnexa.

annexal (an-eks'al). Adnexal.

annexitis (an-eks-i'tis). Adnexitis.

annexopexy (an-eks'o-peks-e). Adnexopexy.

annidalin (an id'al-in). Dithymol truodid: a substitute for aristol.

annotto (an-ot'o). A red color or stain from the fruit of Bix'a orella'na, a South American tree:

used for coloring plasters.

annuens (an'u-enz) [L. "nodding"]. The rectus capitis anticus minor muscle.

annular (an'u-lar) [L. annula'rıs]. Shaped like a

annulorrhaphy (an-u-lor'af-e) [L. an'nulus ring + Gr. $\dot{\rho}\alpha\varphi\dot{\eta}$ suture]. Closure of a hernial ring or sac by sutures.

annulus (an'u-lus), pl. an'nuli shaped organ or area. a. abdomina/lis, either one of the openings of the inguinal canal. a. cilia/ris, the boundary between the iris and the choroid. a. conjunctive [BNA], the conjunctival ring See ring. a. femora'lis [BN A], the femoral ring a. fibrocartilagin'eus membra'næ tym'pani [BN A], the margin of attachment of the tympanic membrane annuli fibro'si, rings of fibro-elastic tissue at the roots of the cardiac valves a. fibro'sus fibrocartilag'inus intervertebra'lis [BNA], the ring forming the circumference of an intervertebral fibrocartilage. a. hæmorrhoida'lis, an elevation over the location of the external sphincter muscle, containing the venous anastomoses of muste, containing the venous anastomoses of the hemorrhoidal plexus. **a.** inguina/lis abdomina/lis [B N A], the internal abdominal ring **a.** inguina/lis subcuta/neus [B N A], the external abdominal ring. **a.** i/ridis. Same as circulus arteriosus iridis. **a.** mi/grans, a disease marked by formation on the tongue of raised red patches with a yellow border, which spread in eccentric circles over the upper and under surfaces. a. ova/lis, the margin of the septum the foramen ovale of the fetal heart. a. tendin eus commu'nis [BNA] See Zinn's ligamenta under ligament. a. tra'chem, any one of the ringtrachea. a. tympan'icus, the tympanic a. umbilica'lis, the umbilical ring. a. of the trachea. ring. urethra'lis, a thickening around the urethral opening of the bladder formed by a thickening of the middle muscular coat. **Vieussen's a.**, annulus ovalis. a. zin'nii. See Zinn's ligament, under ligament.

Anoc. Abbreviation for anodal opening contraction. **anochlesia** (an-ok-le'se-ah). I. Tranquillity. 2. Catalepsy.

anochromasia (an-o-kro-ma'se-ah). Absence of the "sual staining reaction from a tissue or cell

anoci-association (ah-no"se-as-o-se-a'shun) [L. a neg. + noccre to injure + association] The blunting of harmful association impulses; a method of anesthesia designed to minimize the effect of surgical shock. The mind of the patient is calmed by an injection of scopolamin and morphin one hour before the operation. The general anesthetic employed is usually nitrous oud and oxygen. The field of operation is blocked by infiltration with novocain and every division of sensitive tissue during the operation is preceded by the injection of novocain. Sharp dissection and gentle manipulations are employed. To minimize postoperative discomfort in serious cases quinin and urea hydrochlorid solution is injected at some distance from the wound (Crile).

anociated (ah-no'se-a-ted). In a condition of anoci-association.

anociation (ah-no-se-a'shun). Same as anociassociation.

anocithesia (ah-no-se-the'ze-ah) [anoci-association + anesthesia]. Anoci-association.

anococcygeal (a-no-kok-sij'e-al). Pertaining to the anus and coccyx.

anodal (an-o'dal). Pertaining to the anode.

anode (an'ōd) [Gr. ἀνά up + ὁδόs way]. The positive pole of a galvanic battery or other electric source. Cf. cathode.

anodmia (an-od'me-ah) [Gr. $\dot{\alpha}\nu$ neg. + $\dot{\delta}\delta\mu\dot{\eta}$ smell]. Lack of the sense of smell.

anodontia (an-o-don'she-ah) [Gr. ἀν priv. + ὀδούς tooth]. Absence of the teeth.

anodyne (an'o-din) [Gr. ἀν neg. + ὁδίνη pain]. 1. Relieving pain. 2. A medicine that relieves pain. The anodynes include opium, morphin, codein, hyoscin, atropin, coniin, ether, lupulin, potassium bromid Hoffmann's a., the compound spirit of ether anodyne and antispasmodic. Dose, 30-120 min. (2-8 c.c.).

anodynia (an-o-din'e-ah) [Gr. άν neg. + δδύνη pain]. Freedom from pain.

anodynone (an-o-di'nōn). A proprietary preparation of ethyl chlorid

anoësia (an-o-e'ze-ah) [Gr. ἀνοησία]. Want of understanding; idiocy.

anoëtic (an o-et'ik) [Gr. α neg + νοητός thinkable]. Not subject to conscious attention.

anogon (an'o-gōn). Mercury iodobenzoparasulphonate, used by intramuscular injection in syphilis.

anoia (an-oi'ah) [Gr. ἄνοια]. Idiocy; amentia.

anomalogy (an-om-al'o-je). The study of anomalies.

anomalopia (an-om-al-o'pe-ah) [Gr ἀνώμαλος irregular + ὄψε vision]. A relative defect of color vision in which the proportions of green required to equate red to yellow differ from the norm

anomaloscope (an-om'al-o-skōp) [Gr. ἀνώμαλος irregular + σκοπεῖν to view]. An instrument for examining the eye to detect color-blindness

nomalotrophy (an-om-al-ot'ro-fe) [Gr. ἀνώμαλος irregular + τροφή nutrition]. Abnormality of nutrition.

Romalous (an-om'al-us) [Gr. ἀνώμαλοs]. Irregular, marked by deviation from the natural order

10maly (an-om'al-e) [Gr. ἀνωμαλία]. Marked deviation from the normal standard. **Freund's a.**, stenosis of the upper thoracic aperture from shortening of the first rib, resulting in deficient expansion of the apex of the lung.

Anomia (ah-no'me-ah) [Gr. α neg. + ὅνομα name] Loss of the power of naming objects or of recognizing names.

anonacein (an-o-na'se-in). An alkaloid of Hylopia athiopica, an African aphrodisiac.

anonychia (an-o-nik'e-ah) [Gr. ἀν neg. + ὅνυξ nail]. Congenital absence of a nail or nails.

anonymous (an-on'im-us). Nameless; innominate.

anoöpsia (an-o-op'se-ah) [Gr. ἄνω up + ἄψ eye].
An upward strabismus

Anopheles (an-of'el-ēz) [Gr. ἀνωφελής hurtful]. A genus of mosquitos characterized by long slender palpi, nearly as long as the beak and by holding the body at an angle with the surface on which it rests while the head and beak is in line with the body, whose members are the hosts of malarial parasites, their bite being the means of transmitting malaria. See mosquito and malaria species known to carry malaria and their habitats are as follows: A. albima'nus, tropical America. A. al bipes, tropical America. A. argyrotar'sus, tropical America. A. bancrof'ti, Australia A. costa'lis, Africa. A. cruci'ans, southern United States. A. culcija'cies, India. A. funes'ta, Africa. A. listo'ni China, India, Japan. A. ludlo'wi, East Indies and the Philippines. A. maculipen'mis, Europa. A. al'bipes, tropical America A. argyrotar'sus, Europe. A. punctipen'nis, temperate America. A. quadrimacula'tus, North America. A. sinen'sis, China, India, and Japan. A. ste'vensi, India. A. umbro'ssus, Malay. A. willmo'ri, Malay. A. bifurca'tus, a European species which passes the winter in the larval state. A. cru'zi, a species in Brazil which breeds only in the water accumulated in certain leaves. A. eise'ni, a species of Central America which breeds only in tree holes. A. nigerri'nus, a species believed by some to transmit Filaria bancrofti.

anophelicide (an of el'is id) [anopheles + L. cæ'dere to kill]. Destructive to anopheles.

anophelifuge (an of el'il ūj) [anopheles + L. fuga're to put to flight]. Preventing the bite or attack of anopheles

Anophelinæ (an-of d-i'ne) A subfamily of the Culicidae, or mosquitos, including several genera whose members act as carriers of the malarial parasite. The most important genera are Anopheles, Mysorhynchus, Pyritophorus, Mysorhynchus, Nysorhynchus, and Cellia.

anopheline (an of'ıl-in). Pertaining to or caused by mosquitos of the subfamily Anophelina.

anophelism (an of'el izm). Infestation of a district with anopheles.

anophoria (an-o fo're-ah) [Gr. ἀνά upward + φέρεω to bear] See anotropia.

anophthalmia (an-of-thal/me-ch) [Gr. + φφθαλμός eye] Congenital ab ence of a. cyclop'ica, a rudimentary con bition of both the eye-socket and cont

anophthalmos, anophthalmus (an-of thal'-mos, -mus) [Gr ἀν neg + ὁφθαλμός eye] 1 Congental absence of the eyes. 2. A person born with no eyes

anopia (an-o'pe-ah) [Gr. ἀν priv. + ἄψ eye]. r. Absence or rudimentary condition of the eye. 2. Defect of vision 3 Anoopsia.

Anoplura (an-o plu'rah). A suborder of the Hemiptera, the sucking lice, characterized by the absence of wings. It includes only two genera of medical interest, *Pediculus* and *Phthirius*. Cf. *Mallophaga*.

anopsia (an-op'se-ah) [Gr. ἀν neg. + ὅψις vision].

 Disuse of vision (e g., amblyopia ex anopsia)
 Should not be used for blindness or weak sight (Hirschberg).
 Anoopsia. quadrantic a., loss of vision in one-quarter of the visual field.

anorchia, anorchidism, anorchism (an-or'ke-ah, an-or'kid-izm, an'or kizm) [Gr. άν priv. + ὅρχις testis]
 Congenital absence of the testes.

anorchus (an-or'kus) [Gr ἀν without + δρχις testis]. A person with no testes or with undescended testes.

anorectal (a-no-rek'tal). Pertaining to the anus and rectum.

anorexia (an-o-rek'se-ah) [Gr ἀν without + ὅρεξις appetite]. Lack or loss of the appetite for food.
 a. nervo'sa, a serious nervous affection of the stomach in which the patient loses his appetite and systematically takes but little food.

anorganology (an-or-gan-ol'o-je). The study of non-living things, abiology.

anorthography (an-or-thog'raf-e) [Gr. ἀν neg. + δοθός straight + γράφειν to write]. Motor agraphia; loss of power of writing correctly.

anorthopia (an-or-tho'pe-ah) [Gr. άν priv. + δρθός straight + öψις vision]. Distorted vision.

anorthoscope (an-or'tho-skop) [Gr. ἀν priv + δρθός straight + σκοπείν to view]. An instrument for combining two disconnected pictures in one perfect visual image.

anoscope (a'no-skōp) [a'nus + Gr. σκοπείν to view]. A speculum for examining the lower rectum.

anosmatic (an-oz-mat'ik) [Gr. ἀν neg. + ὀσμάειν to smell]. Having no sense of smell, or only an imperfect sense of smell

anosmia (an-oz'me-ah) [Gr. ἀν neg. + ὀσμή smell]. Absence of the sense of smell. a. gustato'ria, the loss of the power to smell foods which are being caten. a. respirato'ria, loss of smell due to nasal obstruction.

anosmic (an-oz'mik). Having no sense of smell.

anosodiaphoria (an-o"so-di af-o're-ah) [Gr α neg. + νόσος disease + διαφορία difference]. Indifference to the existence of disease

anosognosia (an-o-so-gno'se-ah) [Gr. α neg. + νόσος disease + γνῶσις knowledge]. Ignorance of the existence of disease

anosphrasia, **anosphresia** (an-os-fra'ze-ah, -fre'-se-ah) [Gr ἀν priv. + δσφρασία smell]. Absence of the sense of smell

anospinal (a-no-spi'nal). Pertaining to the anus and the spinal cord

anostosis (an-os-to'sis) [Gr. ἀν priv. + δστέον bone]. Defective development of bone.

anotia (an-o'she-ah) [see anotus]. Congenital absence of the ears.

anotropia (an-o-tro'pe-ah) [Gr. ἄνω upward + τρέπειν to turn]. A condition in which the visual axes tend to rise above the object looked at: called also anotheria.

anotus (an-o'tus) [Gr. ἀν neg. + οδs ear]. An earless fetus.

anovarism (an-o'var-izm) [Gr. $\delta \nu$ neg. + ovary]. Absertion of the ovaries.

an (a-no-ves'ik-al) [L. a'nus fundament a bladder]. Pertaining to the anus and

anoxemia, anoxhemia, anoxyemia (an-oks-e'-me-ah, an-oks-he'me-ah, an-oks e e'me-ah) [Gr. ἀν neg. + σχygen + Gr. αlμα blood] Deficient aeration of the blood, deficiency in the oxygen content of the blood. Called also σχygen-want.

anoxemic (an-ok-se'mik). Characterized by or due to a lack of the normal proportion of oxygen in the blood.

anoxoluin, anoxolyin (an-oks-ol'u-in, an-oks-ol'e-in). A substance, insoluble in glacial acetic acid, occurring in albumin, fibrin, casem, and globulin.

anoxybiosis (an-ok"se-bi-o'sis) [Gr. $\delta \nu$ neg. + oxygen + βlos life]. Anaerobiosis

anozol (an-o'zol). A mixture of iodoform and thymol used as a substitute for iodoform.

ansa (an'sah), pl. an'sa [L. "handle"]. Any looplike structure. a. cap'itis, the zygomatic arch.
Haller's a., the loop formed by the nerve which
connects the facial and glossopharyngeal nerves.
a. of Henle. Same as Henle's loop See under loop.
a. hypoglos'si, a loop in the neck formed by the
descendens hypoglossi nerve. a. lenticula'ris, a
tract between the crusta and the lenticular nucleus.
a. nervo'rum spina'lium [B N A], loops of the
spinal nerves joining the anterior spinal nerves.
a. peduncula'ris, the portion of the brain to
the ventral side of the thalamus. a. of Reil.
Same as a. peduncularis. a. sacra'lis, the loop
that connects the ganglion impar with the trunks
of the sympathetic nerve. a. subcla'yia, a. of
Vieussens, a small nerve extending between the

middle and inferior cervical, or first dorsal, ganglia, and making a loop around the subclavian artery.

a. vitelli'na, an embryome vem from the yolksec to the umbilical vein. Wrisberg's a., a nerve that connects the right great splanchuic and right pneumogastric nerves.

ansate (an'sāt) [L. ansa'tus, from an'sa handle]. Having a handle. a commissure, a. fissure. See commissure, fissure.

anserine (an'ser-in) [L. ansert'nus]. Pertaining to or like a goose.

Anstie's limit or rule, test (an'stēz) [Francis Edmund Austic, English physician, 1833-1874]. See under rule and test.

antacetin (ant-as-c'tin). Potassium saccharate: used as an antidote for poisoning by mineral acids; also in dyspepsia and tenia

antacid (an-tas'rd) [L. an'ti against + a'cidus sour]. 1. Correcting acidity 2 A substance that counteracts or neutralizes acidity.

antacidin (an-tas'id-in). Calcium saccharate: sometimes prescribed for rheumatism

antagonism (an-tag'on-izm) [Gr ἀνταγώνισμα struggle]. Opposition or contrariety, as between muscles, medicines, or organisms.

antagonist (an-tag'on-ist) [Gr. ἀνταγωνιστής]. A medicine or a muscle which counteracts the effects of another medicine or muscle. associated a's act upon different parts, and by their combined action move the parts in parallel directions direct a's act on the same part, and by their combined action keep the part at rest.

antalgesic (ant-al-je'sik). Antalgic.

antalgic (ant-al'jik) [Gr. ἀντί against + ἄλγος pam]. 1. Relieving pain 2. A remedy for pain.

antalgin (ant-al'jin). Same as tocanalgin.

antalkaline (ant-al'kal-īn) [Gr ἀντί against + alkalı]. τ. Neutralizing alkalınıty. 2 An agent that neutralizes the alkalıs.

antaphrodisiac (ant"af-ro-diz'e-ak). 1. Abrogating the sexual instinct. 2. An agent that allays sexual impulses

antapoplectic (ant"ap-o-plek'tik) [Gr. ἀντί against + ἀποπληξία apoplexy]. Good against apoplexy.

antarthritic (ant-ar-thrit'ık) [Gr. ἀντί against + ἀρθριτικός gouty].
 I. Good against gout.
 A remedy for gout.

antasthenic (ant-as-then'ik) [Gr. ἀντί against + ἀσθένεια weakness]. Restoring the strength

antasthmatic (ant-ast-mat'ık) [Gr. ἀντί against + ἄσθμα asthma] r Affording relief in asthma.
 A medicine that relieves the spasm of asthma.

antatrophic (ant-at-rof'ik). Correcting or opposing the progress of atrophy.

antebrachium (an-te-bra'ke-um) [L. an'te before + bra'chium arm] The forearm.

antecardium (an-te-kar'de-um). The pit of the stomach See anticardium.

ante cibum (an'te si'bum). Latin for "before meals."

antecornu (an-te-kor'nu). The cornu of a lateral ventricle of the brain.

antecubital (an-te ku'bit-al). Situated in front of the cubitus or forearm.

antecurvature (an-te-kur'vat-ūr) [L. an'te before + curvatu'ra bend]. A slight anteflexion.

antefebrile (an-te-feb'ril) [L. an'te before + fe'bris fever]. Before the onset of fever.

anteflexion (an-te-flek'shun) [L. an'te before + flex'io bend]. An abnormal forward curvature; a form of displacement in which the upper part of the organ is bent forward

antehypophysis (an-te-hi-pof'is-is). The anterior lobe of the hypophysis or pituitary body.

antelocation (an"te-lo-ka'shun) [L. an'te before + loca'tio placement]. The forward displacement of an organ.

- antemesin (ant-e-mes'in). A proprietary remedy for nausea, dyspepsia, etc.
- antemetic (ant-em-et'ik) [Gr. ἀντί against + ξμετικός emetic]. 1. Relieving nausea or vomiting.
 2. An agent that prevents or relieves vomiting.
- ante mortem (an'te mor'tem). Latin for "before death."
- antenatal (an-te-na'tal) [L. an'te before + na'tus born]. Occurring or formed before birth.
- **antenna** (an-ten'ah), pl. amen'na A feeler of an arthropod, one of the two lateral appendages on the anterior segment of the head of arthropods.
- ante partum (an'te par'tum). Latin for "before delivery."
- **antephialtic** (ant"ef-e-al'tik) [Gr. ἀντί against + έφι άλτης nightmare]. Good against or preventing nightmare.
- **anteposition** (an-te-po-zish'un). Forward displacement, as of the uterus.
- anteprostate (an-te-pros'tāt) [L an'te before +
 prostate] One of Cowper's glands.
- anteprostatitis (an"te-pros ta-ti'tis). Inflammation of Cowper's glands.
- **antepyretic** (an"te pi-ret'ik) [L. an'te before + pyretic]. Performed before the stage of traumatic fever.
- anteriad (an-te're-ad). Toward the anterior surface of the body.
- **anterior** (an-te're-or). Situated in front of or in the forward part of, affecting the forward part of an organ, toward the head end of the body; as used in B N A, toward the ventral side.
- antero- [L. anternor before]. A prefix signifying
 "before."
- anteroclusion (an"ter-o klu'zhun). See mesto-clusion
- antero-external (an"ter-o-ex-ter'nal). Situated
 on the front and to the outer side.
- anterograde (an'ter-o-grad) [antero + L. gre'di to go]. Moving or extending backward.
- **antero-inferior** (an"ter-o-in-fe're-or). Situated in front and below.
- antero-internal (an"ter-o-in-ter'nal). In front and on the inner side.
- anterolateral (an"te-ro-lat'er-al). Situated before and to one side.
- anteromedian (an"te ro me'de-an). Situated in front and on the median line.
- anteroposterior (an"ter o pos-te're-or). Extending from before backward.
- anterosuperior (an"ter-o-su-pe're-or). Situated in front and above.
- **anteroventral** (an"ter-o-ven'tral). Situated in front and toward the ventral surface.
- **anteversion** (an-te-ver'shun) [L. an'te before + ver'sio a turning] The forward tipping or tilting of an organ; displacement in which the organ is tipped forward, but is not bent at an angle, as in antellexion.
- anteverted (an-te-ver'ted). Tipped or bent forward.
- antexed (an-text'). Bent forward.
- antexion (an-tek'shun). A spinal lesion fixed in the position of forward bending.
- anthelix (an'the-liks) [anti- + helix]. The inner curved ridge of the external ear.
- anthelminthic (an thel-min'thik). Anthelmintic.
 anthelmintic (an-thel-min'tik) [Gr. ἀντί against + ἔλμινς worm]. 1. Destructive to worms. 2. A remedy for worms.
- anthelotic (ant-he-lot'ik) [Gr. ἀντί against + ήλος nail]. Good for corns; a remedy for corns.
- Anthemis (an'the-mis) [L.; Gr. ἀνθεμίς]. 1. A genus of composite-flowered plants. 2. The flower-heads of A. nob'ilis, or common camomile:

- tonic and febrifuge, and used in coughs, spasmodic conditions m infants, and as a stomachic tonic. Dose of infusion, 1-2 fl.oz. (30-60 c.c.); of extract, 2-10 gr. (0.133-0.000 grh.); of powdered drug, 30-60 gr. (2-4 gm.); of volatile oil, 2-10 min. (0.133-0.000 c.).
- anthemorrhagic (ant"hem-or-aj'ik) [Gr. Δντί against + hemorrhage]. Preventing or arresting hemorrhage.
- **anther** (an'ther) [Gr. ἀνθηρός blooming]. The male sexual organ in a flowering plant, it is the portion of the stamen which contains the pollen sacs.
- antheridium (an-ther id'e-um). The male organ of a cryptogamic plant taking part in the formation of sexually produced spores. Cf. archegonium.
- antherozoid (an'ther-o-zoid). Same as spermatozoid
- antherpetic (ant her-pet'ik). Curing or preventing herpes.
- anthocyanin (an-tho-si'an-in). The red pigment of beet root.
- anthocyaninemia (an-tho-si"an-in-e'me-ah). The presence of anthocyanin in the blood.
- anthocyaninuria (an-tho-si"an-in-u're-ah). The presence of anthocyanin in the urine.
- **Anthomy**'ia canicula'ris. A small black houseily, the larve of which sometimes infest the intestine of man.
- Anthomyiidæ (an-tho mi-i'id e)
 A family of flies
 which sometimes infest man. There are three
 genera Finnia, Hylimyia, and Hydrotea.
- **anthophobia** (an-tho fo'be-ah) [G: $\delta \rho \rho$ flower + $\rho \phi \rho$ fear] A morbid dislike or dread of flowers.
- anthorisma (an-thoriz'mah) [Gr. άντί against + ὅρισμα boundary] Λ diffuse swelling.
- anthracemia (an thrah se'me ah) [Gr. ἄνθραξ coal + αίμα blood] 1. Asphyxia from carbon monoxid poisoning 2. The presence of Bacil'lus anthra'cis in the blood.
- anthracene (an'thrah sēn) 1. A colorless, crystalline hydrocarbon, $C_{14}H_{10} = C_6H_4$ C11 C6H4, from coal-tar: used in the manufacture of anthracene dyes—It is slightly soluble in ether and alco-
- hol, and freely soluble in hot vinegar. 2. A ptomain obtained from cultures of the bacillus of anthrax. anthracia (an-thra/shc-ah) [L. an'thrax carbuncle]. A diseased condition characterized by the formation of carbuncles
- anthracic (an-thras'ik). Pertaining to or resembling anthrax.
- anthracin (an'thras in). A poisonous ptomain from anthrax cultures.
- anthracoid (an'thrak oid) [Gr. ἄνθραξ coal + είδος form]. Resembling anthrax or a carbuncle.
- anthracometer (an thrak-om'et-er) [Gr. ἄνθραξ coal + μέτρον measure]. An instrument for measuring the carbon dioxid of the air.
- anthraconecrosis (an"thrak-o-nek-ro'sis) [Gr. ανθραξ coal + νέκρωστς death] Necrotic transformation of a tissue into a black, dry mass.
- anthracosis (an-thrah ko'sis) [Gr. ἀνθράκωσες].

 A malignant ulcer.
 Lung disease produced by inhaled coal-dust; pneumokoniosis or miners' lung
 lin'guæ.
 See black tongue, under tongue.
- anthracotic (an-thrak-ot'ik). Pertaining to or affected with anthrax.
- anthragallol (an-thrah-gal'ol). A product of the interaction of gallic, benzoic, and sulphuric acids. It is trihydroxyanthraquinone, C₁₄H₈O₆.
- anthraquinone (an-thrah-kwin'on) A yellow substance, C₆H₄(CO)₂C₆H₄, from anthracene.
- anthrarobin (an-thrah-ro'bin) [anthracene + ara-roba]. A yellowish-white powder from alizarin, C₆H₄: C(OH).CH: C₆H₂(OH)₂. It is insoluble in

water, but soluble in alcohol and dilute alkaline solutions, and is useful in psoriasis and various skin diseases in 10 to 20 per cent. ointment.

anthrasol (an'thra-sol). A preparation of coaltar freed from pitch and coloring-matter and juniper tar. used in skin diseases in a 5 to 15 per cent. omtment.

anthrax (an'thraks) [Gr. $\ddot{a}\nu\theta\rho\alpha\xi$ coal, carbuncle]. 1. A carbuncle. See carbuncle. 2. Same as malignant a. cerebral a., anthrax in which the bacilli invade the brain. intestinal a., a severe form of anthrax in which the intestine is affected. malignant a., a fatal infectious disease of cattle and sheep, due to Bacil'lus anthra'cis, and characterized by the formation of hard edema or ulcers at the point of inoculation and by symptoms of collapse. It may occur in man. Called also emtagious anthrax, splenic fever, woolsorters' disease, ragsorters' disease, malignant pustule, milzbrand, and charbon. pulmonary a., a form of anthrax due to inhalation of dust containing Bacil'lus anthra'cis. Called also woolsorters' disease. symptomatic a., a disease of cattle characterized by emphysematous and subcutaneous swellings and nodules and caused by Bacillus (Clostridium) Called also blackleg, quarter-evil, black chauvæi. quarter, black spaul, rauschbrand, and bloody murrain.

anthropocracy (an-thro-pok'ras-e) [Gr. ἄνθροπος man + κρατεῖν to rule] The tendency in therapeutics to actively interfere in the course of disease. Cf. physiocracy.

anthropogeny (an-thro-poj'en-e) [Gr. ἄνθρωπος man $+ \gamma \epsilon \nu \nu \hat{a} \nu$ to produce]. The evolution and development of man.

anthropography (an-thro-pog'raf-e) [Gr. $\ddot{a}\nu\theta\rho\omega\pi\sigma$ s man $+\gamma\rho\dot{a}\varphi\epsilon\nu$ to write] That branch of anthropology which deals with the distribution of the varieties of man, as distinguished by physical character, institutions, customs, etc. Cf. *cthmography*.

anthropoid (an'thropoid) [Gr. ἄνθρωπος man + είδος form]. Having the form of a man.

Anthropoidea (an-thro-poi'de-ah). [See *anthro-poid*] A suborder of *primates*, including man and the monkeys, as distinguished from the lemurs.

anthropology (an-thro-pol'o-je) [Gr. ἄνθρωπος man + λόγος discourse]. The natural history of mankind, the science that treats of man. criminal a., the science of criminals (Lombroso).

anthropometer (an-thro-pom'et-er). An instrument for measuring the height and sitting height.

anthropometry (an-thro-pom'et-re) [Gr. ἄνθρωπος man + μέτρον measure]. The science which deals with the measurement of the size, weight, and proportions of the human body.

anthroponomy (an-thro-pon'o-me) [Gr. ἄνθρωπος man + νόμος law]. The science that deals with the laws of human development in relation to environment and to other organisms.

anthropophagy (an thro-pol'aj-e) [Gr. ἄνθρωπος man + φαγεῖν to eat]. Cannibalism; also a sexual perversion with cannibalistic tendencies.

anthropophobia (an"thro-po-fo'be-ah) [Gr. αν- $\theta \rho \omega \pi \sigma \sigma$ man + $\varphi \dot{\sigma} \beta \sigma \sigma$ fear]. Morbid dread of human society.

anthroposomatology
 o-je) [Gr. ἀνθρωπος man + σῶμα body + λόγος discourse]. The sum of knowledge regarding the human body.

anthropotomy (an-thro-pot'o-me) [Gr. ἄνθρωπος man + τομή cut]. Human anatomy.

anthropotoxin (an-thro-po-tok'sin) [Gr. ἄνθρωπος man + toxin]. A poison said to be excreted by the human lungs.

anthydropic (ant-hi-drop'ik) [Gr. ἀντί against + ὑδρωπικός dropsical]. Curing or relieving dropsy. anthypnotic (ant-hip-not'ik) [Gr. ἀντί against + ὕπνος sleep]. Preventing or hindering sleep.

anthysteric (ant-his-ter'ik). See antihysteric.

anti- [Gr. ἀντί against] A prefix signifying against.
 antiabric (an-ti-a'brik). Resisting the poisonous effects of abrin.

antiabrin (an-te-a'brin). An antitoxin produced in the blood after the exhibition of abrin

antiaditis (an-te-ad-i'tis) [Gr. ἀντιάς tonsil + -ιτις inflammation]. Inflammation of the tonsils.

antiagglutinating (an"te-ag-lu'tin-a-ting). Preventing agglutination.

antiagglutinin (an"te-ag-lu'tin-in) A substance that opposes the action of an agglutinin.

antiaggressin (an"te-ag-res'm). A substance formed in the body by repeated injection of an aggressin, and tending to oppose the action of the aggressin.

antialbumate, antialbuminate (an-te-al'bumāt, an-te-al-bu'min-āt) [anti + albumin] Parapeptone, a product of the incomplete digestion of albumin. It resists digestion by pepsin, but is digested by trypsin, the pancreatic ferment changing it into antipeptone.

antialbumid (an-te-al'bu-mid). Same as antial-bumale.

antialbumin (an-te-al-bu'min). A constituent of albumin which is changed by gastric digestion into antialbumose.

antialbumose (an-te-al'bu-mōs). One of the albumoses formed by the action of gastric digestion on albumin It is converted into antipeptone during digestion.

antialexin (an-te-al-ek'sin). A substance which opposes the action of alexin.

antiamboceptor (an-te-am'bo-sep-tor). A substance which opposes the action of an amboceptor. Called also *anti-immune body*.

antiamylase (an-te-am'ıl-ās). A substance counteracting the action of amylase.

antianaphylactin (an-te-an-af-il-ak'tin). An antibody which counteracts an anaphylactin.

antianaphylaxis (an"te-an-ah-fi-lak'sis). A condition in highly immunized animals in which anaphylactic phenomena do not occur because the free antibody in the blood prevents the antigen from reaching the sensitized cells. Called *anergy* and *description*.

antianopheline (an"te-an-of'el-īn). Directed against anopheline mosquitoes or their larvæ

antiantibody (an-te-an'te-bod-e). An antibody produced in an animal by the injection of an antibody from another animal

antiantidote (an-te-an'te-dōt). A substance that counteracts the action of an antidote.

antiantienzyme (an-te-an-te-en'zīm). A supposed substance formed in the body to prevent the undue accumulation of antienzyme.

antiantitoxin (an-te-an-te-toks'in) An antibody, formed in immunization with an antitoxin, which counteracts the effect of the latter.

antiapoplectic (an"te-ap-op-lek'tik). Affording relief in or preventing apoplexy.

antiarachnolysin (an"te-ar-ak-nol'is-in) A substance counteracting the poison of the spider.

antiarin (an-te'ar-in). An intensely poisonous principle, $C_{14}H_{20}O_5 + 2H_2O$, from upas-poison: a heart depressant. Dose, $_{1}J_{00}$ gr. (0.00065 gm.).

Antiaris (an-te-ā'ris) [Javanese *antiar*]. A genus of artocarpous trees. *A. toxica'r1a* is the upas-tree of Java exceedingly poisonous.

antiarsenin (an-te-ar'sen-in). A non-arsenical substance developed in the body by immunizing doses of arsenous acid.

antiarthrin (an-te-ar'thrin). A brownish powder consisting of salicin with roasted horse-chestnut added to disguise the taste used in uric-acid diathesis in doses of 15 gr (1 gm).

antiarthritic (an"te-ar-thrit'ik). Curing or relieving gout.

- antiasthmatic (an"te-ast-mat'ik). Same as ant-asthmatic
- **antiautolysin** (an-te-aw-tol'is-in). A substance which opposes the action of autolysin.
- antibacterial (an"te-bak-te're-al). Checking the growth of bacteria.
- antibacterin (an-te-bak'te-rin). A pale yellow liquid used in tuberculosis by inhaling. It is said to contain boric acid, solution of ferric chlorid, and spirit of chloric ether.
- antibacteriolytic (an"te-bak-te-re-o-lit'ik). Counteracting bacteriolytic action.
- antibechic (an-te-bek'ik) [Gr. ἀντί against + βήξ cough]. Relieving a cough; curing coughs.
- antiberberin (an-te-ber'ber-in). A blackish liquid preparation from rice used in beriberi.
- antibilious (an-te-bil'yus). Good against bilious conditions.
- **antibiosis** (an-te-bi-o'sis) [Gr. $\dot{a}\nu\tau t$ against $+\beta los$ hfe]. An association between two or more organisms which is detrimental to one of them.
- antibiotic (an"te-bi-ot'ik) [Gr. ἀντί against + βlos life]. Destructive of life.
- **antiblastic** (an-te-blas'tik) [Gr. ἀντί against + βλαστός germ] Characterized by the retardation of bacterial growth.
- antiblennorrhagic (an"te-blen-or-aj'ik). Preventing or relieving gonorrhea.
- antibody (an'te-bod-e). The specific body produced by the cells of a host in reaction against an antigen; a substance in the blood and tissue juices of animals rendered immune by inoculation, and exciting a specific antagonistic influence on the substance under the influence of which it was formed The antibodies include amboceptors, agglutinins, antienzymes, antitoxins, bacteriolysins, cytotoxins, hemolysms, opsonins, and precipitins anaphylactic a., a substance formed as a result of the first injection of a foreign protein and responsible for the anaphylactic symptoms following the second injection of the same protein. See senstibilism heterogenetic a., heterophile a., an accessory antibody produced by the injection of a heterogenetic antigen. lipodotropic a., the substance in the blood-serum of syphilities which combines with the (lipoidal) antigen to produce a positive Wassermann test sensitizing a. See amboceptor.
- antibrachium (an-te-bra'ke-um). See antebra-
- antibromic (an-te bro'mik) [Gr. ἀντί against + βρῶμος smell] Deodorant overcoming ill smells.
 antibrule (an'te-brūl). A proprietary antiseptic
- antibrule (an'te-brūl). A proprietary antiseptic and antipruritic: used for burns, scalds, skin discases, etc.
- **antibubonic** (an-te-bu-bon'ik). Good against bubonic plague
- **anticalculous** (an-te-kal'ku-lus). Good against calculus.
- anticancrin (an-te-kan'krin). Same as cancroin.
- anticardium (an te-kar'de-um) [Gr. ἀντί against + καρδία heart]. The pit of the stomach, or scrobiculus cordis
- anticarious (an-te-ka're-us). Preventive of caries.
 anticatalase (an-te-kat'al-ās) An antibody having an antagomstic action on catalase.
- anticatalist, anticatalyzer (an-te-kat'al-ist, an-te-kat'al-i-zer). A substance that retards the action of a catalyzer by acting on the catalyzer itself.
- anticataphylactic (an"te-kat-af-il-ak'tik). Interfering with cataphylaxis.
- **anticataphylaxis** (an"te-kat af-il-ak'sis). The condition in which cataphylaxis is inhibited.
- anticatarrhal (an"te-kat-ar'al). Curing or relieving catarrh.

- anticathode (an-tp-kath'ōd). The part of a vacuum tube opposite the cathode.
- anticeltina (an-te sel tr'nah). A compound of mercury and urea, used in diseases of the cornea and iris
- anticephalalgic (an-te-sef-al-al'jık). Curing or preventing headache.
- **anticheirotonus** (an"te-ki-rot'o-nus) [Gr $\dot{a}\nu\tau l$ - $\chi\epsilon\iota\rho$ thumb $+\tau\dot{o}\nu\sigma$ s tension]. Spasmodic inflection of the thumb.
- antichloren (an-te-klor'en). A proprietary mercury albuminate used in syphilis. Dose, & gr. (o.o. gm.).
- antichlorotic (an"te-klo-rot'ik). Useful as a remedy for chlorosis.
- anticholagogue (an-te ko'lag-og). Restraining the function of the liver.
- anticholerin (an-te-kol'er in) [Gr. ἀντί against + χολέρα cholera] A substance from cultures of the cholera bacıllus, used against cholera.
- antichoromanic (au"te-l.o-ro-ma'nik), Useful against dancing mania and spasms.
- antichymosin (an te kı'mo sın). An antibody which prevents the action of chymosin on milk.
- anticipate (an-tis'ip-āt) [L an'te before + cap'ere to take]. To occur or recur before the regular time.
- **anticlinal** (an-te kh'nal) [Gr ἀντί against + κλίνων to slope] Sloping in opposite directions.
- anticloudine (an te klow'den). A proprietary paste for preventing moisture, stain, dampness, etc., from affecting glass or nickel instruments.
- **anticnemion** (an-tik ne'me-on) [Gr. ἀντί against + κνήμη leg] The shin
- anticoagulative (an te-ko ag'u-lat-iv). Preventing or opposing coagulation.
- anticoagulin (an te-ko-ag'u-lin). A substance formed in the body and having an action antagonistic to that of coagulin.
- anticomplement (an te kom'ple-ment) A substance that opposes or counteracts the action of a complement.
- anticomplementary (an te-kom ple-men'tar-e). Capable of reducing or destroying the power of a complement
- anticonvulsive (an"te-kon-vul'siv). Good against convulsions.
- anticor (an'te kor). A swelling or slough in the neck of a horse, caused by irritation of the harness.
- anticornutin (an"te-kor-nu'tin). 1. Topasol G. II, a therapeutic preparation of zinc and copper ferrosulphates antiseptic. 2. Topasol G IV, an antiseptic preparation of iron, zinc, and calcium sulphates.
- anticoroin (an"te-ko-ro'in). Topasol G. V, an antiseptic preparation of iron, zinc, and magnesium sulphates.
- anticreatinin (an"te-kre-at'ın-ın). A kukomain of the creatinin group, derived from creatinin.
- **anticrisis** (an-te-kri'sis). Anything that interferes with the occurrence of a crisis.
- anticritical (an te-krit'ik al). Relieving or preventing a crisis.
- anticrotin (an-te-kro'tin). The antitoxin of crotin the toxin of Croton tiglium.
- anticus (an-ti'kus). Latin for anterior.
- anticutin (an-te-ku'tin) [L. anti against + cutaneous reaction] An antibody in the blood of certain tuberculous persons which, when added to tuberculin, neutralizes the latter so that it will not produce the cutaneous reaction.
- anticyclic acid (an-te-sik'lık). See acid.
- anticytolysin (an-te-si-tol'is-in). Same as anti-cytoloxin.
- anticytost (an-te-si'tôst). An antibody which neutralizes or produces immunity to cytost.

anticytotoxin (an"te-si-to-toks'in). A substance that opposes the action of a cytotoxin.

antidiabetic (an-te-di-ab-et'ik). Preventing or curing diabetes.

antidiabetin (an"te-di-ab-e'tin). A sugar for diabetics, composed of saccharin and mannite.

antidiastase (an-te-di'as-tās). A substance formed in the blood-serum on the injection of a diastase which opposes the action of the diastase.

antidinic (an-te-din'ik) [Gr. άντί against + δίνος whirl]. Curing or preventing vertigo.

antidiphtherin (an-te dif'the-rin) [Gr avrl against diphtheria]. A derivative from cultures of the diphtheria bacillus, used against diphtheria.

antidiphtheritic (an"te-dif-ther-it'ik). Counter-

acting diphtheria.

antidiphtheriticon (an"te-dif-ther-it'ik-on). mixture of oil of birch (5 parts), oil of beech (3 parts), potassium sulphid (5 parts), potassium carbonate (1 part), and alcohol (70 parts): used as a remedy for diphtheria.

antidolorin (an-te-do-lor'in) [Gr. avri against + L. do'lor pain]. A proprietary preparation of ethyl

chlorid.

antidotal (an-te-do'tal). Serving as an antidote. antidote (an'te-dot) [L. antido'tum, from Gr. άντί against + διδόναι to give]. A remedy for counteracting a poison. a. against arsenic, hydrated oxid of iron with magnesia. chemic **a.**, one that changes the chemic nature of the poison. **Hall a.**, a solution of 7.35 parts of potassium iodid and 4 parts of quinin hydrochlorid in 480 parts of water, used as an antidote for mercuric chlorid poisoning. mechanic a., one that prevents the absorption of a poison. **physiologic a.,** one that counteracts the effects of a poison by producing other effects. universal a., a solution of 1 part of iron sulphate in 2 parts of magnesia water.

antidromic (an-te-drom'ik) [Gr. ἀντί opposite + δρόμος race-coursel. Conducting impulses in a direction opposite to the normal: said of nervefibers.

antidynamic (an"te-di-nam'ik) [Gr. ἀντί against + δύναμις force]. Reducing the strength.

antidyscratic (an"te-dis-krat'ik) [Gr. avri against δυσκρασία bad temperament]. Good against à dyscrasia.

antidysenteric (an''te-dis-en-ter'ik). Relieving, curing, or preventing dysentery.

antidysentericum (an"te-dis-en-ter'ik-um). preparation of myrobalan, pelletierin, extract of rose, extract of pomegranate, and gum arabic. used in chronic diarrhea and in dysentery.

antiedemic (an"te e-de'mik). Counteracting ede-

antiemetic (an"te-e-met'ik). Arresting or preventing emesis or vomiting; relieving nausea.

antiemulsin (an-te-e-mul'sin). An immune serum counteracting emulsin.

antiendotoxic (an-te-en-do-tok'sik). Counteracting the effect of endotoxins.

antiendotoxin (an"te-en-do-toks'in). An antibody which counteracts the endotoxin of bacteria.

 antienzyme (an-te-en'zim) [Gr. άντι against + enzyme].
 1. An agent that neutralizes an enzyme: formed in the blood-serum of an animal on the injection of the enzyme. 2. An enzyme which neutralizes the action of another enzyme.

antiepithelial (an-te-ep-e-the'le-al). Destructive to epithelial cells.

antifebrile (un-te-feb'ril) [anti- + L. fe'bris fever]. Allaying or diminishing fever.

antifebrin (an-te-feb'rin). Same as acetanilid.

antiferment (an-te-fer'ment). An agent that hinders or prevents the action of a ferment.

antifermentative (an"te-fer-men'ta-tiv). Checking a fermentation process.

antifertilisin (an-te-fer'til i-zin). A substance which neutralizes fertilizin.

antiformin (an-te-for'min). A proprietary mixture of an alkaline hypochlorite and an alkaline hydrate used as a disinfectant. It does not injure tubercle bacilli and is used in isolating the latter.

antifungin (an-te-fun'jin). Magnesium borate, Mg(BO₂)_{2.2}Mg(OH)_{2.7}H₂O, a white powder, soluble in hot water. It is used as a gargle in diphtheria.

antifungoid (an-te-fun'gold). Good against fungoid organisms.

antigalactic (an"te-gal-ak'tik) [Gr. avrl against + yaka milk]. Diminishing the secretion of milk.

antigelatinase (an-te-jel-at'in-ās) A substance in the serum of animals infected with bacteria which prevents the digestion of gelatin.

antigen (an'te-jen) [antibody + Gr. γεν to form].

1. A substance that causes the formation of antibodies; a substance which has the power of inducing, in the animal organism, under suitable conditions, the formation of antibodies. antigens include toxins, ferments, precipitogens, applutinogens, opsogens, lysogens, venins, agglutinins, complements, opsonins, amboceptors, precipitins, and most native proteins. basic substance used in complement-fixation reactions. acetone-insoluble a., an antigen for the Wassermann reaction consisting of the acetoneinsoluble constituents of an alcoholic extract of beef heart. beef heart a., an antigen for the Wassermann reaction made by extracting fresh normal beef heart tissue with absolute alcohol. The fresh normal hearts of guinea-pigs, rabbits, and humans are also used. cholesterinized a., beef heart antigen to which has been added o... per cent. of cholesterin. defatted a., diaplyte a., Dreyer's a. See Dreyer's vaccine, under vac-Forssman's a., a heterogenetic antigen found in most tissue cells and in the red bloodcells of sheep. It is heat stable and alcohol soluble, and so probably at least partly lipoid. heterogenetic ?., heterophile a., an antigen which on injection produces other than its own homologous antibodies. heterophil a., an antigen having afinity for some antibody besides the one for which it is specific. Hitchens and Hansen's a., cultures of meningococcus are grown on salt-free agar, suspended in water, precipitated with alcohol, then with ether, dried, and rubbed up in a mortar with physiologic salt solution for use. **pollen a.**, the essential protein of the pollen of plants extracted with a suitable menstruum. **Sach's a.**, an antigen consisting of a cholesterinized alcoholic extract of beef's heart. therapeutic a., any substance which, on injection into the body, stimulates the formation of protective antibodies.

antigenic (an-te-jen'ik). Having the properties of an antigen.

antigenophil (an-te-jen'o-fil). Antigentophil.

antigentophil (an-te-jen'to-fil) [antigen + Gr. φιλεῖν to love]. Having an affinity for the antigen; said of that group of an amboreptor which attaches to the antigen or specific cell.

aration of copper and an acid. antigermin (an-te-jer'min).

antiglobulin (an-te-glob'u-lin). A precipitin which precipitates globulin.

antiglyoxalase (an-te-gli-oks'il-ās). A substance existing in the pancreas which antagonizes glyovalase

antigonorrheic (an"te-gon-o-re'ik). Good against gonorrhea.

antihelix (an-te-he'liks). See anthelix.

antihemagglutinin (an"te-hem-ag-lu'tin-in). substance whose action is antagonistic to hemagglutinin.

antihemioranin (an"te-hem-ik'ran-in). Same as antimigraine.

- antihemolysin (an"te-he-mol'is-in). Any agent which opposes the action of a hemolysin.
- antihemolytic (an"te-hem-o-lit'ik). Preventing hemolysis.
- antihemorrhagic (an-te-hem-o-raj'ik). Stopping hemorrhage.
- antiheterolysin (an-te-het-er-ol'is-in). An antibody formed on immunization with a heterolysin. antihidrotic (an"te-hi-drot'ik). Anhidrotic.
- antihormone (an-te-hor'mon). A substance which neutralizes the action of a hormone.
- antihydrophobic (an-te-hi-dro-fo'bik). Preventing or curing hydrophobia.
- antihydropic (an"te-hi-drop'ık) [anti- + hy-dropic]. Reheving dropsical conditions.
- antilydropin (an-te-hi'dro-pin). A crystalline duretic substance obtained from cockroaches. Dose, 10-15 gr. (0.000-1 gm.).
- antihygienic (an-te-hi-je-en'ik). Opposed to hygienic principles.
- antihysteric (an"te-his-ter'ik). Relieving hysteria.
 anti-icteric (an"te-ik-ter'ik). Relieving icterus or jaundice.
- anti-immune (an-te-im-ūn'). Acting so as to prevent immunity. a. substance. Same as anti-amboceptor.
- anti-isolysin (an-te-i-sol'is-in). A substance that counteracts an isolysin.
- **anti-itis** (an-te-i'tis). A proprietary cataplasm used in treating inflammations in veterinary practice.
- antikamnia (an-te-kam'ne-ah) [Gr. $d\nu\tau l$ against + $\kappa d\mu\nu \epsilon.\nu$ to suffer]. A proprietary antipyretic and analgesic remedy, said to contain sodium bicarbonate, caffein, and acetanilid. Dose, 4–10 gr. (0 266 0 666 gm.).
- antikataphylactic (an"te-kat-af-il-ak'tik). Interfering with kataphylaxis
- antikenotoxin (an-te-ken-o-toks'in). A substance which inhibits the action of kenotoxin. It is formed when kenotoxin is injected into the body.
- antiketogen (an-te-ke'to-jen). A substance which produces antiketogenesis.
- antiketogenesis (an-te-ke to jen'es-is). The prevention of the development of ketones; reduction of ketones.
- antiketogenetic (an"te-ke-to-jen-et'ik). Antiketogenic.
- antiketogenic (an-te-ke-to-jen'ik). Preventing or decreasing the formation of ketones.
- antiketoplastic (an-te ke-to-plas'tik). Same as antiketogenic.
- **antikinase** (an-te-ki'nās). An antibody thought to inhibit the action of kinase.
- antikinesis (an-te-kin-e'sis) [Gr. ἀντί against + κίνησις movement] The tendency of organisms to resist and lean in an opposite direction to a dragging rotary force, e g, on a slowly revolving plane (Dubois, 1808).
- antikol (an'tik-ol). A proprietary antipyretic remedy, reputed to consist of acetanilid, sodium bicarbonate, and tartaric acid. Dose, 3-10 gr. (0.2-06 gm.).
- antilab (an'te-lab). Same as antirennin.
- **antilactase** (an-te-lak'tās). An antienzyme that counteracts lactase.
- antilactoserum (an"te-lak-to-se'rum). A serum which inhibits the action of lactoserum.
- antilemic, antilemic (an-te-le'mik) [Gr. ἀντί against + λοιμός plague]. Effective against the plague
- **antileprol** (an-te-lep'rol). A proprietary purified form of chaulmoogra oil, for use in leprosy.
- antilepsis (an-te-lep'sis) [Gr ἀντίληψις a receiving in return]. Revulsive or derivative treatment.
- antileptic (an-te-lep'tik) [see antilepsis]. Revulsive.

- Any agent antilethargic (an"te-leth-ar'jik). Hindering sleep; overcoming a tendency to lethargy.
 - antileukocidin (an-te-lu-ko'si-din). The antitoxin for the leukocytic poison of the staphylococcus.
 - antileukotoxin (an"te-lu-ko tok'sin). Same as antileukocidin.
 - **antilipase** (an-te-lip'ās). A substance counteracting a lipase.
 - antilipoid (an-te-li'poid). An antibody having the power of reacting with a lipoid
 - antilithic (an-te-lith'ik) [Gr. $\dot{a}\nu\tau t$ against $+\lambda t\theta$ os stone]. Preventing the formation of stone or calculus.
 - antilobium (an-te-lo'be-um) [L.; Gr. ἀντιλόβιον].
 The trar is of the ear.
 - antilogia (an-te-lo'je-ah) [Gr. ἀντί against + λόγοs reason] A combination of contradictory symptoms rendering diagnosis uncertain.
 - antiluetic (an"te-lu et'ik). Antisyphilitic.
 - antiluetin (an-te-lu'et-in). Potassium ammonium antimonic bitartrate, SbO(C₄H₄O₆)₂ K(NH₄)₂.H₂O, recommended for syphilis.
 - antilusin (an-te-lu'sin). An antilytic serum used in gastric and intestmal ulceration.
 - antilypyrin (an"te le-pi'rin). A product of heating r part of acetanild with 2 parts of antipyrin: antipyretic and analgesic. Dose, 7 8 gr. (0 462-0518 gm.).
 - antilysin (an-te-li'sin) [see anti- and lysin]. A substance formed in the blood of an animal immunized against a disease, and neutralizing the lysins produced by the bacteria of the disease, so that the alexins are able to destroy the bacteria.
 - antilysis (an til'is-is). The action of antilysins.
 - antilyssic (an-te-lis'ik) [Gr. ἀντί against + λύσσα rables]. Tending to cure rables.
 - antilytic (an-te-lit'ik). Pertaining to antilysis.
 - antimalarial (an te mal-a're-al). Curing or preventing malaria.
 - antimaniacal (an-te ma-ni'ak-al). Good against mania.
 - antimedical (an-te-med'ik-al). Inconsistent with the principles of medical science.
 - antimellin (an-te-mel'in). A glucosid from jambul usod in diabetes.
 - antimephitic (an-te-mef-it'ik). Purifying the atmosphere.
 - antimere (an'te-mēr) [Gr. ἀντί against + μέρος a part]. One of the opposite corresponding parts of an organism which are symmetric with respect to the longitudinal axis of its body. Cf. metamere.
 - antimeristem (an te me ris'tem) A preparation of a fungus, Mucor racemus malignus, grown on malignant tumors of animals: used in treating cancer
 - antimetropia (an"te-met-ro'pe-ah) [Gr ἀντί against + μέτρον measure + ἄψ eye]. Hypermetropia in one eye with myopia in the other.
 - antimiasmatic (an"te-mi-az-mat'ik) [Gr. ἀντί against + μίασμα miasm]. Serviceable against miasmatic disorders.
 - antimicrobic (an"te-mi-kro'bik). Checking the growth of microbes.
 - antimicrobin (an-te-mi-kro'bin).
 r. An antibody in scrum which destroys bacteria themselves.
 2. A proprietary whooping-cough remedy given by inhalation.
 - antimigraine (an"te-me-gran') [anti- + mi-graine]. A proprietary headache mixture. Dose, 10-20 gr. (0.6-1.2 gm.).
 - antimonial (an-tim-o'ne-al). Pertaining to or containing antimony.
 - antimonic (an-te-mon'ik). Containing antimony in its pentad valency.

antimonid (an-te-mo'nid). Any binary compound of antimony.

antimonious (an-te-mo'ne-us). Containing antimony in its triad valency.

antimonium (an-te-mo'ne-um). Latin for antimony. a. diaphoret'icum, a compound of antimoniate, nitrate, and sulphate of potassium: diaphoretic and laxative. Dose, 10-30 gr. (0.66-2 gm.).

antimony (an'tim-o-ne) [L. antimo'nium or stib'ium]. A crystalline metallic element with a bluish luster, symbol Sb, atomic weight 120.2, forming various medicinal and poisonous salts These salts are arterial and heart depressants, and have emetic and diaphoretic properties; in large doses they are gastro-intestinal irritants. a. anilin-tartrate, SbO.C₆H₆(NH₂)C₄H₄O₆, a less toxic substitute for tartar emetic for intravenous chemotherapy. a. chlorid, a deliquescent substance, SbCl₃, which is used as a caustic for small tumors and poisoned wounds; called also butter of antimony. compound pills of a., or Plummer's pills, contain \(\frac{1}{2} \) gr. each of calomel and sulphureted antimony. \(\frac{1}{2} \) oxid, antimonic oxid, Sb₂O₃, a white-gray powder. Dose, 1-2 gr. (0.066-0.133 gm.). **a.** oxysulphid, kermes mineral. Dose, 1-2 gr. (0.06-0.13 gm.). **a.** pentasulphid, antimonic sulphid, Sb₂S₃, a golden-yellow compound. **a. and potassium tartrate**, tartar emetic, a colorless, crystalline compound, $2K(SbO)C_1H_1O_3 + H_2O$, soluble in water and having locally a marked irritant effect. It is used internally as an emetic and as an expectorant in laryngitis, bronchitis, and pneumonia, and in the chemotherapeutic treatment of kala-azar, schistosoma infections (bilharziasis), trypanosomiasis, and granuloma inguinale Dose, as an emetic, 1-2 gr. (0 065-0 13 gm.), as an expectorant, $\frac{1}{20}$ -10 gr. (0 003-0.006 gm.); for intravenous injection, 2-10 c.c. of a sterile 1 per cent. solution. powder of a., or James' powder, contains 1 part of antimonious oxid and 2 parts of calcium phosphate. It is a diaphoretic, emetic, and cathartic. Dose, 1-5 gr. (0 060-0 333 gm.). a. and sodium tartrate, Na(SbO)C.H.O. 2H.O. used in trypanosomiasis and other tropical diseases. Intravenous dose, \(\frac{1}{4}\)-1 gr. (0.016-0.066 gm). sodium thioglycollate. See under sodium.
a. sulphid, the impure antimonium trisulphid, Sb₂S₃. Dose, $\frac{1}{2}$ –3 gr. (0 033–0.2 gm.). The purified antimony sulphid is given in the dose of $\frac{1}{2}$ –1 gr. (0.016-0.066 gm.). a. thioglycollamid, an organic antimony compound, Sb(S CH₂.CO NH₂)₃, used in the treatment of granuloma inguinale, kala-azar, and filariasis Dose, 0.08 gm. in 20 c c. of sterile water by intravenous or intramuscular injection every second day for from 15 to 25 times. a. trioxid, white antimony or antimonious oxid, Sb₂O₃, is given in the dose of 2-4 gr. (0 13-0 25 wine of a. (vi'num antimo'nii), a solution gm). of antimonium and potassium tartrates in wine. diaphoretic and expectorant. Dose, 1-5 min. (0.066-0.333 c.c).

antimonyl-anilin tartrate. A yellow, crystalline substance, used in trypanosomiasis.

antimorphin (an-te-mor'fin). A proprietary solution of disodium sulphate: used as a cure for the morphin habit.

antimucorin (an"te-mu-ko'rin). Topasol G. III, a therapeutic preparation of iron and zinc sulphates: antiseptic.

antimycotic (an"te-mi-kot'ik). Same as antibacterial.

antinarcotic (an"te-nar-kot'ik). Serviceable against narcotism.

antinarcotin (an"te-nar'ko-tin). A proprietary remedy for the cure of morphinism and kindred habits.

antinephritic (an"te-ne-frit'ik). Serviceable in kidney diseases.

antinervin (an-te-nervin). Salbromalid: a mix-

ture of bromacetanilid and salicylanilid a remedy for neuralgia. Dose, 10-15 gr. (0.666-1 gm.).

antineuralgic (an"te-nu-ral'jik). Relieving neuralgia.

antineuritic (an-te-nu-rit'ik). Counteracting neuritis.

antineuritin (an-te-nu'rit-in). The antineuritic vitamin or vitamin B. See vitamin.

antineuronist (an-te-nu'rön-ist) An anatomist who is opposed to the neuron theory.

antineurotoxin (an"te-nu-ro-tok'sin). A substance that counteracts a neurotoxin.

antiniad (an-tin'e-ad). Toward the antinion

antinial (an-tin'e-al). Pertaining to the antinion.
 antinion (an-tin'e-on) [Gr. ἀντί against + ἰνίον occiput]. The frontal pole of the head, the median frontal point farthest from the mon.

antinonnin (an-te-non'nin) Potassium dinitrocresylate, $C_0H_2(NO_2)_2CH_3OK$ used as a disinfectant, to destroy molds, and to prevent putrefaction.

antinosin (an-te-no'sin) [Gr. ἀντί against + νόσος disease]. The sodium salt of tetranodophenolthalein, CO.O.C₆H₄.C(C₆H₂I₂ ONα)₂, a greenish-blue powder, having a faint odor of iodin—used as an external antiseptic in solutions of τ τοοο.

antiodontalgic (an-te-o don-tal'jik). Reheving toothache.

antiopiumist (an-te-o'pe-um-ist). One who is opposed to the use of opium.

antiopsonin (an-te-op'so-nin) A substance that has an inhibitory influence on opsonins.

antiorgan (an-te or'gan) Directed against the tissues of an organ, as antiorgan ferment.

antiotomy (an-te-ot'o-me) [Gr. ἀντιάς tonsil + τέμνειν to cut]. Excision of the tonsils

antioxidase (an-te-oks'id-ās). A substance which counteracts oxidase

antioxidation (an-te-ok-sid-a'shun). The prevention of oxidation.

antioxygen (an-te-ok'sig-en). A substance which hinders oxidation.

antiparalytic (an"te-par-al-it'ik) [anti- + paralysrs]. Relieving paralytic conditions

antiparasitic (an"te-par-as-it'ik). Destructive to parasites, an agent destructive to parasites.

antiparasitin (an"te-par-as'it-in) A preparation of potassium dinitrocresylate used to destroy insect parasites.

antiparastata (an"te-par-as'tat-ah) [Gr $\dot{a}\nu\tau l$ against $+\pi\alpha\rho\alpha\sigma\tau\dot{\alpha}\tau\eta s$ testis]. Cowper's glands.

antiparastatitis (an"te-par-as-tat-i'tis). Inflammation of Cowper's glands.

antipathic (an-te-path'ik) [Gr. ἀντί against + πάθος feeling]. Of diverse nature.

antipathogen (an-te-path'o-jen) Any substance which acts against a pathogen or morbific agent.

antipathy (an-tip'ath e) [Gr. $\dot{a}\nu\tau t$ against $+\pi \dot{a}\theta$ os affection]. An opposing quality or property.

antipepsin (an-te-pep'sin). An antienzyme that neutralizes the action of pepsin.

antipeptone (an-te-pep'tōn). A peptone derived from antialbumose by digestion (Kuhne).

antiperiodic (an"te-pe-re-od'ik). Scrviceable against malarial or periodic recurrence.

antiperiostin (an-te-per-e-os'tin) A proprietary preparation for the treatment of exostoses, galls, splint spavin, etc., in veterinary practice.

antiperistalsis (an"te-per-is-tal'sis). Peristaltic action proceeding from below upward.

antiperistaltic (an"te-per-is tal'tik). Diminishing peristaltic action.

antiperonosporin (an"te-per-o-nos'po-rin). Topasol G. I, a therapeutic preparation of zinc and copper sulphates: antiseptic.

- antiphagin (an-te-fa'jin). A specific component of virulent bacteria which renders them resistant to phagocytosis.
- antiphagocytic (an"te-fag-o-sit'ık). Counteracting or opposing phagocytosis.
- antiphlogistic (an"te-flo-jis'tik). 1. Counteracting inflammation and fever. 2. An agent so acting.
- **antiphlogistin** (an"te-flo-jis'tin). A proprietary preparation used as an anodyne, antiseptic, antiphlogistic, and as a surgical dressing.
- antiphone (an'te-fōn) [Gr. ἀντί before + φωνή voice]. An instrument to be worn in the auditory meatus to protect the ear from noises.
- antiphrynolysin (an"te-frin-ol'is-in). The antivenene for the toxin of toad venom
- antiphthisic (an-tif-thiz'ık or an te-tiz'ik). Checking or reheving phthisis.
- antiphthisin (an-til'the-sin) An extractive from cultures of tubercle bacilli, containing of per cent, of cresol used in treatment of phthisis. Called also sozalbumin.
- antiphymin (an-te-fi'min) [Gr. ἀντί against + φύμα growth] A preparation of formaldehyd, ozone, sulphur dioxid, etc., forced into water under high pressure. Used by inhalation in tuberculosis.
- **antiphytosin** (an"te-fi-to'sm). A therapeutic preparation resembling tuberculin.
- **antiplague** (an-te plāg'). Preventing or curing the plague.
- **antiplastic** (an-te-plas'tik) [Gr. $\delta \nu \tau l$ against $+ \pi \lambda \dot{\alpha} \sigma \sigma \epsilon \iota \nu$ to form] 1. Unfavorable to the healing process. 2 An agent that impoverishes the blood
- **antiplatelet** (an-te-plāt'let). Having a destructive action on blood-platelets
- **antipnein** (an-te-pne'm). A substance which counteracts pnein.
- antipneumin (an-te-nu'min) [Gr. ἀντl against + πνεθμα gas] A substance occurring in animal tissues which diminishes the gaseous exchanges in muscle (Battelli and Stern, 1911).
- **antipneumococcic** (an"te-nu-mo-kok'sik). De stroying pneumococci. See under serum.
- antipneumotoxin (an"te-nu-mo-tok'sin). An antitoxin that antagonizes pneumotoxin
- antipodagric (an-te-po-dag'rik). Curing gout.
- antipodal cell (an-tip/o-dal). See cell.
- **antiprecipitin** (an-te-pre-sip'it-in) Λ substance antagonistic in its action to precipitin.
- antiprostate (an-te-pros'tāt) See anteprostate.
- **antiprostatitis** (an"te-pros-tat-i'tis). Inflammation of Cowper's glands.
- **antiprotease** (an-te-pro'te-ās). A substance contained in bacteria which checks proteolytic action
- antiprothrombin (an-tc pro-throm'bin). An anticoagulant which acts by retarding or preventing the conversion of prothrombia into thrombia. It has been isolated from some of the organs of the body, particularly the liver (heparin)
- antiprotozoal (an"te-pro-to-zo'al) Destructive of or inimical to protozoa
- antipruritic (an"te-pru rit'ik). Relieving or preventing itching.
- antipsoric (an-tip-so'rik) [Gr. ἀντί against + ψώρα itch]. Curative of the itch
- antiputrefactive (an"te-pu-tre-fak'tiv). Good against putrefaction.
- antiputrol (an-te-pu'trol). A proprietary anti-
- **antipyic** (an-te-pi'ik) [Gr. ἀντί against + πύον pus]. Preventing or restraining suppuration.
- antipyogenic (an"te-pi-o-jen'ik) [Gr. ἀντί against + πύον pus + γεννᾶν to form]. Preventing or hindering the development of pus.
- antipyonin (an-te-pi'on-in) [Gr. άντι against + πύον pus]. Sodium tetraborate or metaborate,

- NaBO₂.H₂O, a white, smooth powder, soluble in water and not caustic—used in keratitis and conjunctivitis.
- **antipyralgos** (an"te-pi-ral'gos). A proprietary analgesic and antipyretic agent.
- **antipyresis** (an"te-pi-re'sis) [Gr. ἀντί against + πυρέσσαν to have a fever]. The therapeutic use of antipyretics.
- antipyretic (an"te-pi-ret'ik) [Gr. ἀντί against + πυρετός fever]. 1 Relieving fever, cooling, or febritugal 2. A febrifuge or remedy for fever. The principal antipyretics are cold, diaphoretics, such as aconite, tartar emetic, etc., quinin, salicyhe acid, antipyrin, acetanilid, phenacetin, hydroquinon, etc.
- antipyrin (an-te pi'rin) [Gr. ἀντί against + πῦρ fire]. A grayish or reddish crystalline basic coaltar derivative, phenyldimethylpyrazolone, C11H12-N₂O It is soluble in water, chlorotorm, and alcohol it is antipyretic, antirheumatic, and analgesic, and is used in typhoid fever, pneumonia, phthisis, rheumatism, and neuralgia (0.333-0666 gm) a. acetylsal Dose, 5-10 gr. a. acetylsalicylate, acetopyrin. a. amygdalate, a salt of antipyrin, used in treatment of whooping-cough Dose, \$-6 gr. (0 040-0 4 gm.). a. benzoate, benzopyin. a. camphorate, an antipyretic compound used in night-sweats. a. mandelate, a salt of antipyrin: a non-poisonous antipyretic. See tussol a. meta-oxybenzoate, a liquid salt of antipyrin. a. monobromid, bromopyrin. a. paraoxybenzoate, a crystalline salt of antipyrin salicylate. Same as salipyrin a. tanns a. tannate. a yellowish, tasteless powder, insoluble in water, and containing 37 per cent of antipyrin.
- **antipyrinomania** (an-te-pi"rin-o-ma'ne-ah) [antipyrin + Gr. μανία madness]. Insanity from excessive use of antipyrin.
- antipyrotic (an"te-pi rot'ik) [Gr. ἀντί against + πθρωσις a burning].
 1. Good against burns.
 2. An agent that cures burns.
- antirabic (an-te-ra'bik). Preventive of or curing rabies; antilyssic.
- antirachitic (an"te-rak it'ik) Preventive, curative, or corrective of rickets
- antirennin (an-te-ren'in). An antienzyme formed in the blood-serum of animals injected with rennin. It counteracts the rennin and prevents coagulation of milk
- antirheumatic (an"te-ru-mat'ik) [anti- + rheumatic] Relieving or preventing rheumatism.
- antirheumatin (an te-ru'mat in). 1 A blue, crystalline compound, a combination of sodium salicylate and methylene-blue. It is soluble in water and alcohol, and is used as an antirheumatic. It gives a blue color to the urine. Dose, 1 1½ gr (0066-01 gm) 2 An ointment containing fluorphenol (1 part), difluordiphenol (4 parts), wool-fat (85 parts), and vaselin (10 parts): used in influenza and rheumatism.
- antirheumol (an-te ru'mol). A neutral 20 per cent solution of salicylic acid glycerin ester in glycerin and diluted alcohol used as a liniment for rheumatism.
- **antiricin** (an-te-ri'sin) An antitoxin produced in the blood after the exhibition of ricin
- **antirobin** (an-te-ro'bin) The antitoxin of robin, a poison of the locust tree.
- Antirrhinum (an-tir-ri'num) [L; Gr. ἀντίδοινον].

 A genus of scrophulariaceous plants A. lina-ria, the toad-flax a scrophulariaceous herb; used homeopathically. A. vulga'ris, snapdragon, toad-flax, or ramsted, is purgative and diuretic.
- antisapros (an-te-sapros) An oil obtained from *Pinus pinea* It contains 70 to 80 per cent of limonene and is used in solutions or as a spray in cases of chronic bronchitis
- antiscabin (an-te-ska'bin). A mixture of Peruvian balsam, boric acid, soap, beta-naphthol, alcohol, and glycerin: a remedy for scabies.

- antiscabious (an-te-ska'be-us) [L. an'ti against + sca'bies itch]. Curative of the itch.
- antisclerosin (an-te-skle-ro'sin). A preparation of inorganic salts, sodium chlorid, sodium sulphate, calcium glycerophosphate, magnesium phosphate, sodium carbonate, and sodium phosphate used in arteriosclerosis for lessening intra-arterial presure.
- **antiscorbutic** (an"te-skor-bu'tik) [Gr. ἀντί against + scorbutus]. Correcting or curing scurvy.
- antisensibilisin (an-te-sen-sib-il'iz-in). A hypothetic substance in proteins which on second injection unites with the sensibilisin and produces anaphylactic shock.
- antisensitization (an"te-sen-sit-iz-a'shun). A condition produced in guinea-pigs by a previous injection of normal rabbit serum which makes it impossible to passively sensitize the guinea pig with rabbit's immune serum.
- antisensitizer (an-te-sen'sit-i-zer). Same as antiamboceptor.
- antisepsin (an-te-sep'sin). Monobromacetanilid or acetbromanilid, a-crystalline compound, C₆H₄Br NH.CO.CH₃ antipyretic, antiseptic, and analgesic. Dose, 6-7 gr. (0.4-0.466 gm.). Called also asepsin.
- antisepsis (an-te-sep'sis) [Gr. ἀντί against + σῆψις putrefaction]. Exclusion of the germs that cause putrefaction.
- antiseptic (an-te-sep'tik). r. Preventing decay or putrefaction 2. A substance that will inhibit the growth of micro-organisms without necessarily destroying them. Cf disinfectant. Some of the chief antiseptics are alcohol, boric acid, phenol, creosote, corrosive sublimate, common salt, charcoal, chlorin, tannic acid, sugar, and vinegar. Credé's a., silver citrate. Dakin's a. See Dakin's fluid, under fluid, and chlorazene. Lister's a., mercury-zinc cyanid.
- antisepticin (an-te-sep'tis-in). A proprietary antiseptic compound of thyme, peppermint, eucal-yptol, and benzoboric acid.
- antisepticism (an-te-sep'tis-izm). The systematic employment of antiseptic agents.
- antisepticize (an-te-sep'tis-īz). To render anti-septic.
- antiseptiform (an-te-sep'tif-orm). A formaldehyd preparation used as an atmospheric deodorizer and disinfectant.
- antiseptin (an-te-sep'tin). A whitish powder, said to be a mixture of zinc iodid, zinc sulphate, boric acid, and thymol: used as an antiseptic in wounds, gonorrhea, and skin diseases.
- antiseptol (an-te-sep'tol). Cinchonin iodosulphate: a reddish powder, used externally like aristol; internal dose, 1-3 gr. (0 006-0.2 gm.).
- antiserum (an-te-se'rum). A serum, containing specific antibodies, obtained from the blood of an animal that has received repeated doses of an antigen or that has recovered from an infection.
- antisialic (an"te-si-al'ik) [Gr. ἀντί against + σίαλον saliva] 1. Checking the flow of saliva.
 2. An agent that checks the secretion of saliva.
- antisialogogue (an"te-si-al'o-gog). Checking the flow of saliva.
- antisideric (an"te-sid-er'ik) [Gr. ἀντί against + σίδηρος iron]. Incompatible with iron.
- antispasmin (an-te-spaz'min). A whitish, hygroscopic powder, being a combination of narcein sodium and sodium salicylate It is used as an antispasmodic, sedative, and hypnotic in laryngismus stridulus, whooping-cough, irritating cough, etc. Dose, ½-2 gr. (0.033-0.13 gm.).
- antispasmodic (an"te-spaz-mod'ik). 1. Relieving spasm. 2. An agent that relieves spasm. Some of the chief antispasmodics are alcohol, ammonia, belladonna, camphor, castor, chloroform, conium, ether, musk, potassium bromid, sumbul, and valerian.

- antispastic (an-te-spas'tik). Same as antispasmodic.
- antispermotoxin (an"te-sper-mo-tok'sin). A substance that opposes the action of a spermotoxin.
- antispirochetic (an"te-spi-ro-ket'ik). Good against a spirocheta.
- antisplenetic (an"te-sple-net'ik). Useful in spleen diseases.
- antistalsis (an-te-stal'sis). A backward movement of the bowel contents
- antistaphylococcic (an"te-staf-il-o-kok'sik). Destroying staphylococci.
- antistaphylolysin (an''te-staf-il-ol'is-in). A substance in the blood-serum which opposes the action of staphylolysin.
- antisteapsin (an"te-ste-ap'sin). An antibody which counteracts steapsin.
- antistreptococcic (an"te-strep-to-kok'sik). Antagonistic to streptococci.
- antistreptococcin (an"te-strep-to-kok'sin). The antitoxin of streptococcus: used in erysipelas and septicemia.
- antisubstance (an-te-sub'stanz). Same as antibody.
- antisudoral, antisudorific (an"te-su'dor-al, an"te-su-dor-if'ik) [anti- + L. su'dor sweat] Preventing or giving relief to excessive sweating.
- **antisudorin** (an"te-su'do-rin) Λ proprietary remedy to correct excessive sweating.
- antisyphilitic (an"te-sif-il-it'ik) [Gr ἀντί against + syphilitic].
 I. Useful in cases of syphilis.
 A remedy for syphilis.
- antitabetic (an"te-tab-et'ik). Directed against or curative of tabes dorsalis.
- antitetanic (an"te-tet-an'ik). Preventing or curing tetanus.
- **antitetanin** (an"te-tet'an-in). An antitoxin to the poison of tetanus.
- antitetanolysin (an"te-tet-an-ol'is-in). The antibody to tetanolysin.
- antitetraizin (an"te-tet-ra'iz-in). A quinin derivative used in neuralgia and influenza. Dose, 3-4 gr. (0.2-0 26 gm.).
- antithenar (an-tith'e-nar) [Gr. ἀντί against + θέναρ palm, sole]. Situated opposite to the palm or the sole.
- **antithermic** (an-te-ther'mik) [Gr. ἀντί against + θέρμη heat] Antipyretic, antifebrile.
- antithermin (an-te-ther'min) [Gr. ἀντί against + θέρμη heat] A crystalline coal-tar derivative, C₆H₃(NH)₂ CO(CH₂)₂ CO CH₃, or phenylhydrazin-levulinic acid used as an antipyretic, antiseptic, and analgesic, but should be employed with caution. Dose, 3-8 gr. (0.2-0.52 gm.).
- antithermolin (an-te-ther'mo-lin). A proprietary preparation used as an anodyne and antiphlogistic application.
- antithrombin (an-te-throm'bin) [Gr. åvrl against + thrombin]. A substance which prevents the action of thrombin upon fibrinogen, thus preventing coagulation of the blood Such a substance exists in normal blood in small concentrations, but the amount can be increased by injecting peptone into the circulation
- antithyroidin (an-te-thi-roi'din). An ambercolored fluid made from the serum of sheep from which the thyroid has been removed used in exophthalmic goiter (Moebius). Dose, 8-20 min. (052-1.25 c.c.).
- antitonic (an-te-ton'ik). Reducing tone or tonicity.
- antitoxic (an-te-tok'sik). Good against a poison.
- antitoxigen (an-te-tok'sij-en) [antitoxin + Gr. γεννῶν to produce]. Any substance that produces or increases antitoxin in the blood.
- antitoxin (an-te-tok'sin) [Gr. άντί against + τοξικόν poison]. A substance found in the blood-

serum and in other body fluids which is specifically antagonistic to some particular toxin. Antitoxins are sometimes found in small amount normally, but they may be greatly increased by injecting the corresponding toxin. animal a's, antitoxins corresponding toxin. which neutralize animal poisons or venoms, such as those of snakes, spiders, eels, wasps, scorpions, fish, salamanders, and toads. artificial a., an antitoxin obtained by passing an electric current through infected bouillon. bacterial a's, antitoxins which neutralize the bacterial toxins, especially those of diphtheria, tetanus, botulism, dysentery, and the war-wound anacrobes. botulinus a., botulism a., an antitoxin found in the blood of animals that have been injected with botulism toxin. Bull and Pritchett's a. See under serum. concentrated a., antitoxin which has been concentrated by precipitation of inert materials. diphtheria a., the antitoxin which will suppress the harmful effect of diphtheria toxin It is found normally in small amounts in various animals and in man, in larger amounts in persons who have recovered from an attack of diphtheria, and can be produced in enormous amount and po tency for use as a therapeutic agent by injecting animals (usually horses) with diphtheria toxin. diphtheria a., concentrated, a diphtheria antitoxin which has been concentrated and purified by precipitating out and reserving the active globulins and discarding the remainder **diph**theria a., dried, a diphtheria antitoxin which has been dried by suitable methods to make it more permanent and less bulky. Dochez's a. See Dochez's scrum, under serum. Dunbar's a., an antitoxin from the pollen of rag-weed, goldenrod, rye, etc, used in the treatment of hay-fever dysentery a., an antitoxin prepared by injecting the toxin of the Shiga strain and used in treating cases of this disease. **normal a.**, a serum capable of neutralizing an equal quantity of normal toxin solution **plant a's**, antitoxins which neutralize the vegetable poisons, especially ricin, abrin, robin, and crotin. streptococcus a. See antistreptococcus serum, under serum tetanus a., the antitoxin which will suppress the harmful effect of tetanus toxin. It is produced by injecting animals (usually horses) with tetanus toxin. It is used as a prophylactic and also as a therapeutic agent.

antitoxinum (an"te-tok-si'num). Latın for antitoxin. a. diphther'icum, diphtheria antitoxin
a. tetan'icum, tetanus antitoxin.

antitragicus (an-tit-raj'ik-us). See muscles, table of.

antitragus (an-tit'ra-gus) [anti- + tragus]. A prominence on the ear fronting the tragus.

antitrismus (an-te-triz/mus). A spasm which prevents the closure of the mouth.

antitrope (an'te-trop) [Gr. ἀντί against + τρέπειν to turn]. τ. Any organ which forms a symmetric pair with another. 2. Same as antibody.

antitropin (an-te-tro'pin). A general term for the antibodies.

antitrypsic (an te trip'sik) Same as amitryptic. antitrypsin (an-te-trip'sin) An antibody of blood-serum having an inhibitive action on trypsin

antitryptic (an-te-trip'tik) [Gr. ἀντί against + tryptic] Counteracting the activity of trypsin.

antituberculin (an-te-tu-ber'ku-lin). An antibody developed on the injection of tuberculin.

antituberculotic (an"te-tu-ber-ku-lot'ik). Good against tubercle, checking the advance of tuber-culosis.

antitulase (an-te-tu'lās). An immunizing serum for tuberculosis obtained from horses, cattle, and sheep.

antituman (an-te-tu'man). Sodium chondroitin sulphate, used in carcinoma. Dose, 2 gr. (0.1 gm.) per day.

antitussin (an-te-tus'm) [Gr. aprl against + 1. tus'sis cough]. An outment containing 5 per cent. of difluordiphenyl, (C₆H₄F)₂. used as a disinfectant vulnerary, also in whooping-cough.

antitussive (an-te-tus'iv). Relieving or preventing cough.

antityphoid (an-te-ti'foid). Counteracting or preventing typhoid.

antityrosinase (an-te ti-ro'sm-ās). An antienzyme that counteracts tyrosinase.

antiuratic (an-te-u-rat'ik). Preventing the deposit of urates.

antiurease (an-te-u're-ās). An antibody which inhibits the activity of urease.

antivaccination (an"te-vaks in-a'shun) Opposition to vaccination

antivaccinationist (an"te-vaks-in-a'shun-ist). A person who is opposed to vaccination.

antivenene (an"te-ven-ēn') [Gr ἀντί against + L. tene'num porson]. An antitoxin produced by the injection of snake venom, most effective against the neurotoxin of the venom.

antivenereal (an"te-ve-ne're al). Antisyphilitic; good against venereal diseases.

antivenin (an-te-ven'in). Same as antivenene.

antivenom (an-te-ven'om). An antitoxin against snake venom.

antivenomous (an-te-ven'om-us). Counteracting venom.

antivirulin (an-te-vir'u lin). The substance in animals actively immunized against rabies which neutralizes or inactivates the virus of rabies.

antivivisection (an"te-viv-is-ek'shun). Opposition to vivisection.

antixenic (an-tik-ze'nik) [Gr årri + ξίνος strange or foreign] Pertaining to the reaction of living tissue to any foreign substance

antizymotic (an"te-zi mot'ik) Opposing the action of ferments or ferment-like germs.

antodontalgic (an"to-don-tal'jik). Relieving toothache.

antodyne (ant'o-din). Phenoxypropanediol, a crystalline compound used to allay pain in typhoid, pneumonia, and tuberculosis

antophthalmic (ant-of-thal/mik). Relieving oph-

antoxurin (ant-oks u'rin) A proprietary preparation of dichlorbenzol used as a remedy for threadworms (Oxyuris).

antra (an'trah). The plural of antrum.

antracele (an'trah-sēl) Same as antrocele.

antral (an'tral) [L. antra'lus]. Of or pertaining to an antrum.

antrectomy (an-trek'to me) [Gr. ἄντρον antrum + ἐκτομή excision] Surgical removal of the walls of the mastoid antrum.

antritis (an-tri'tis). Inflammation of an antrum, chiefly of the maxillary antrum.

antro-atticotomy (an"tro-at-ik-ot'o-me). The operation of opening the antrum and the attic of the labyrinth.

antrocele (an'tro-sēl) [Gr ἄντρον antrum + κήλη tumor] An accumulation of fluid in the maxillary antrum

antronasal (an-tro'na-zal). Pertaining to the maxillary antrum and the nose.

antrophore (an'tro-fōr) [Gr ἄντρον cavity + φέρειν to bear]. A form of soluble medicated bougie.

antrophose (an'tro-fōz) [Gr. ἄντρον cavity + phose]. A phose originating in the central ocular mechanism.

antrosse (an-trors'). Directed forward or upward.
 antroscope (an'tro-skôp) [Gr. ἄντρον antrum + σκοπεῖν to inspect]. An instrument for illuminating and examining the maxillary antrum.

antroscopy (an-tros'ko-pe). The use of the an- AOO. Abbreviation for anodal opening odor. troscope; inspection of an antrum.

antrotome (an'tro-tom) [see antrotomy]. An instrument for performing antrotomy.

antrotomy (an-trot'o-me) [Gr. ἄντρον antrum + The cutting open of an antrum. τομή cutl

antrotympanic (an"tro-tim-pan'ik). to the antrum and the tympanic cavity.

antrotympanitis (an"tro-tim-pan-i'tis) [antrum + tympanitis] Chronic purulent inflammation of the mastoid antrum and of the middle car.

antrum (an'trum), pl. an'tra [L.; Gr. ἄντρον cave] A cavity or chamber, especially one within a bone. a. au'ris, the tympanum. a. cardi'acum, an abnormal dilatation of the esophagus near the stomach. a. ethmoida'le, ethmoid a., the ethmoid sinus. a. of Highmore, a. maxilla're, maxillary a., a large cavity in the upper jaw-bone communicating with the nose. Malacarne's a., the posterior perforated space. mastoid a., a. mastoi'deum, a recess in the mastoid process communicating with the tympanum a. pylo'ri, a. pylo'ri, a. pylor'icum, a small culdesac of the stomach near the pylorus. a. tympan'icum [BNA]. Same as mastoid a.

antuitrin (an-tu'it-rin). A soluble extract from the anterior lobe of the pituitary

antyase (an-ti'ās). A serum used for immunizing against typhoid fever.

Antyl'lus. A famous Greek physician and surgeon of the third or fourth century A. D. Only fragments of his works have survived.

anuresis, anuria (an-u-re'sis, an-u're-ah) [Gr. ἀν Absolute suppression of neg + οὖρον urine] micturition calculous a., suppression of urine caused by a renal calculus

anuretic, anuric (an-u-ret'ik, a-nu'rik). Pertaining to, affected with, or of the nature of, anuresis.

anus (a'nus) [L]. The distal end and outlet of artificial a., an opening from the the rectum. bowel formed by an operation aditus ad aquæductum cerebri.

Bartholin's a., a. cer'ebri, the anterior opening of the aqueduct of Sylvius. entero-uterine a., a condition in which the intestine has herniated into the ruptured uterus, and fecal matter is discharged through the uterus and vagina. imperforate a., closure of the natural opening of the anus. preternatural a., an anus situated at some unusual or abnormal place. a. of Rusconi, the blastopore a. vestibula'ris, vulvovaginal a., a condition in which there is no anus, but the rectum opens into the vulva

anusol (a'nu-sol) [L. a'nus anus + o'leum oil]. Iodoresorcinsulphonate of bismuth recommended as a remedy for hemorrhoids and for rectal catarrh, fissure, and anal and vulvar pruritus.

anvil (an'vil). See incus.

anxietas tibiarum (anks-i'e-tas tib-e-a'rum). painful condition of unrest leading to a continual change of the position of the limbs, and due to an increase of the muscular sense.

anxiety (ang-zi'et-e). A feeling of apprehension. situation a., a feeling of apprehension coming on with the starting of some undertaking.

anydremia (an-id-re'me-ah) [Gr. ἀν neg. + ὕδωρ water + aiua blood]. See anhydremia.

anypnia (an-ip'ne-ah) [Gr. $\dot{a}\nu$ neg. + $\ddot{\nu}\pi\nu$ os sleep]. Sleeplessness; insomnia.

anytin (an'it-in). See anitin.

anytol (an'it-ol). See anitol.

A. O. Abbreviation for anodal opening and opening of the auriculoventricular valves.

AOC. An abbreviation for anodal opening contraction.

tolan (a'o-lan). A proprietary sterile milk in am-

AOP. Abbreviation for anodal opening picture.

aorta (a-or'tah) [L.; Gr. ἀορτή]. The great artery that springs from the left ventricle and gives rise to all the arteries of the systemic circulation. The aorta divides opposite the fourth lumbar vertebra into the two common iliacs ries, table of. abdominal a., the part of the aorta below the diaphragm a. angus'ta, narrowness of the aorta arch of the a., the proximal portion of the aorta, consisting of an ascending, a transverse, and a descending part. a. chlorot ica, a small aorta sometimes seen in one affected with chlorosis. dynamic a., a neurotic condition in which the pulsations of the abdominal aorta are abnormally marked. palpable a., a condition in which, on account of a thin retracted abdominal wall, the aorta is easily palpable. thoracic a... that part of the aorta that lies below the arch and above the diaphragm

aortal (a-or'tal). Aortic.

aortarctia (a-or-tark'she-ah) [Gr. ἀορτή aorta + L. arcta're to narrow]. Construction or narrowing of the aorta.

aortectasia, aortectasis (a-or-tek-ta'se-ah, a-ortek'tas-is) [Gr. ἀορτή aorta + ἔκτασις distention]. Dilatation of the aorta.

aortic (a-or'tik). Of or pertaining to the aorta.

aorticorenal (a-or"tik-o-re"nal). Pertaining to the aorta and the kidneys

aortism (a'or-tizm) A constitutional tendency toward aortic disease.

aortis'mus abdomina'lis. See phantom ancurvsm, under aneurvsm

aortitis (a or-ti'tis) [aorta + Gr. -tris inflammation]. Inflammation of the aorta. Dohlethe aorta. Dohle-Heller a., syphilitic aortitis a. syphilit'ica oblit'erans, syphilitic aortitis resulting in obliteration of the aorta or some of its branches.

aortolith (a-or'to-lith) [aorta + Gr $\lambda i los$ stone]. A calculus in the aorta

aortomalacia (a-or"to-ma-la'she-ah) [Gr aorta + μαλακία softness] Abnormal softness of the aorta.

aortoptosia, aortoptosis (a-or-top-to'se-ah, -to'sis) [Gr. $\dot{a}o\rho\tau\dot{\eta}$ aorta $+\pi\tau\hat{\omega}\sigma\iota_s$ falling] Downward displacement of the abdominal aorta.

aortorrhaphy (a-or-tor'af e) [Gr ἀορτή aorta + ραφή suture]. Suture of the aorta.

aortostenosis (a-or"to-ste-no'sis) [Gr ἀορτή aorta + στένωσις narrowing]. Narrowing or stricture of the aorta.

aortotomy (a-or-tot'o-me) [Gr. ἀορτή aorta + $\tau \delta \mu \eta$ a cutting] The operation of cutting into the aorta.

AOS. Abbreviation for anodal opening sound.

aosmic (ah-os'mik) [Gr α neg. $+ \dot{o}\sigma\mu\dot{\eta}$ odor]. Odor-

apaconitin (ap-ak-on'it-in) [Gr. $\dot{a}\pi\dot{o}$ from + aconttin]. A poisonous base derived from aconitin.

apallagin (ap-al'aj-in). Tetra-iodophenol-phthalein; the mercury salt of nosophen, having antiseptic properties.

apallesthesia (ah-pal-es-the'se-ah) [Gr. α neg. + π άλλειν to tremble + αίθησις sensation]. Same as pallanesthesia.

apandria (ap-an'dre-ah) [Gr. ἀπό from + ἀνήρ man]. Morbid or insane aversion to the male sex.

apanthropia, apanthropy (ap-an-thro'pe-ah, ap-an'thro-pe) [Gr ἀπό from + ἄνθρωπος man]. 1. Morbid fear of human companionship. 2. See apandria.

aparathyreosis (ah-par-a-thi-re o'sis). Aparathy-

aparathyrosis (ah-par-ah-thi-ro'sis). Absence of

aparthrosis (ap-ar-thro'sis) [Gr. ἀπάρθρωσις]. Same as diarthrosis.

apathetic (ap-ath-et'ik). Indifferent; undemonstrative.

apathic (ap-ath'ik). Without sensation or feeling.
 apathism (ap'ath-izm). The state of being slow in responding to stimuli.

apathy (ap'ath-e) [Gr. $\dot{\alpha}\pi\dot{\alpha}\theta\epsilon\iota\alpha$] Lack of feeling or emotion; indifference

apatropin (ap-at'rop-in) [Gr $\delta \pi \delta$ from + atropin]. Apoatropin,

apectomy (a-pek'to-me). Same as a picoectomy.

ape-fissure (ap'-fish-er) See under fissure.

ape-hand (āp'-hand) A hand in which the thumb remains in a position extending at right angles from the hand.

apellous (a-pel'us) [Gr α priv + L pel'lis skin].
1 Skinless; not covered with skin; not cicatrized: said of a wound.
2 Having no prepuce.

apenteric (ap-en-ter'ik). Abenteric.

apepsia (ah-pep'se-ah) [Gr. α neg. + πέπτειν to digest]. Cessation or fullure of the digestive functions
 achlorhydria a., absence of the digestive secretions of the stomach. hysteric a., a. nervo'sa. Same as anorexia nervosa.

apepsinia (ah pep-sin'e-ah). Total absence or lack of secretion of pepsin or pepsinogen by the stomach.

apergol (a'per-gol). A capsule containing apiol, ergotin, oil of savin, and aloin.

aperient (ap e're-ent) [L. ape'riens opening]. 1. Mildly cathartic. 2. A gentle purgative.

aperiodic (ah-pe-ri-od'ik) Having no definite period said of membranes which have no definite periods of vibration of their own, but are free to take up any vibrations imparted to them.

aperistalsis (ah"per-1s-tal'sis) [Gr. α neg. + per-istalsis]. Absence of peristaltic action.

aperitol (ap-er'it-ol). A proprietary laxative preparation of phenolphthalem, isovaleriame acid, and acetic acid. Dose, 6 gr. (04 gm).

apertometer (ap-er-tom'et-er). An apparatus for measuring the angle of an aperture of microscopic objectives.

Apert's syndrome (ah-parz') [Eugène Apert, Parisian pediatrist, born 1868]. See acrocephalosyndactylia.

apertura (aper-tu'rah). Latin for aperture or opening a. latera/lis, the foramen of Luschka. a. media/lis ventric'uli quar'ti, the foramen of Magendie a. pel'vis infe'rior [B N A], the outlet of the pelvis a. pel'vis supe'rior [B N A], the pelvic inlet a. pirifor'mis [B N A], the nasal opening in the skull.

aperture (ap'er-chūr) [L. apertu'ra]. An opening or orifice. angular a., the angle formed at a luminous point between the most divergent rays that are capable of passing through the objective of a microscope. In dentistry, the terminal end of the root of a tooth a. of larynx, the opening leading into the larynx bounded by the epiglottis in front, by the arytenoid notch behind, and by the aryteno-epiglottidean folds on the sides a. of lens. Same as angle of aperture. numeric a., the power of the objective of a microscope to receive and transmit rays of light. On it depends the resolving power of a microscope. It is the sine of one-half the angle of aperture multiplied by the index of refraction of the medium between the cover and the front lens. It is usually abbreviated N. A piriform a., the nasal opening in the skull.

apetalous (ap-et'al-us). Having no petals.

apex (a'peks), pl ap'tees [L.]. The top or pointed extremity of any conic part. The apex of a tooth is the terminal end of the root of a tooth. appendiculocecal a., the opening between the vermiform appendix and the cecum. a.-beat, the beat

of the apex of the left ventricle against the chest wall, felt in the fifth intercostal space, about three and a half inches from the middle of the sternum. a. capit'uli fib'ulæ [B N A], the styloid process of the fibula. a. cor'dis, the apex of the heart. a. of heart, the blunt rounded extremity of the heart represented by the left ventricle: it is located in the fifth left intercostal space 8 cm. from the midline. a. height, the magnitude of the ordinates of the summated twitch of the muscle. a. na'si, the tip of the nose. a. pulmo'nis, the upper extremity of the lung. a. time, the interval at which the apex of the summated twitches of a muscle succeeds the second stimulus applied to the same muscle.

aphacia, aphakia (ah-fa'se-ah, ah-fa'ke-ah) [Gr. α neg. + φακός lentil]. Absence of the lens of the eye.

aphacic, **aphakic** (ah-fa'sik, ah-fa'kik) [Gr. a neg. + φακός lentil]. Destitute of the lens of the eye.

aphagia (ah-fa'je-ah) [Gr. a priv. + φαγεῖν to eat]. Loss of the power of swallowing. a. al'gera, refusal of a person to take food because it gives pain.

Aphanocapsa, Aphanocapta (ah"fan-o-kap'sah, ah"fan-o-kap'tah) [Gr ἀφανής invisible + κάψα envelop]. A genus of schizomycetes related to Bacillus, but having phycochrome in the cells.

aphasia (ah-fa'ze-ah) [Gr. α priv. + φάσις speech] Defect or loss of the power of expression by speech, writing, or signs, or of comprehending spoken or written language, due to injury or disease of the brain-centers. ageusic a., loss of power to express words relating to the sense of taste. amnemonic a., forgetfulness of words, with consequent aphasia. amnesic a., inability to remember words anosmic a., inability to express in words sensations of smell. associative a., aphasia due to a disturbance of connection between the parts comprising the central structure. ataxic a., aphasia in which the patient knows what he wishes to say, but cannot utter the words on account of inability to coordinate the muscles, because of disease of the speech-center; called also motor a. auditory a., aphasia due to disease of the hearing center of the brain; word-deafness. Broca's a., ataxic aphasia. combined a., aphasia of two or more forms combined in the same patient. commissural a., conduction a., aphasia due to a lesion in the insula interrupting the path between the motor and sensory speech-centers complete a., aphasia due to lesion of all the speech-centers, producing inability to communicate with others in any way. **cortical a.** See pictorial a frontocortical a. Same as ataxic a. frontolenticular a. Same as commissural a. gibberish a., aphasia with utterance of meaningless phrases. graphomotor a., aphasia in which the patient cannot express himself in writing. Grashey's a., aphasia due to lessened duration of sensory impressions, causing disturbance of perception and association, without lack of function of the centers or conductivity of the tracts. It is seen in acute diseases and concussion of the brain. intellectual a. Same as true a. jargon a., aphasia in which several words are run together as one. Kussmaul's a., voluntary refraining from speech, as in the insane. lenticular a. Same as commissural a. a. leth'ica. Same as amnemonic a. **mixed a.**, combined motor and sensory aphasia. Same as ataxic a. nominal a., aphasia marked by the defective use of names.

optic a., inability to find the name for objects seen, due to interruption of the connection between the speech and visual centers. parietooccipital a., combined alexia and apraxia.
pictorial a., cortical aphasia, so called because
the cortex is the region containing the centers for images of words. psychosensory a., inability to understand language, spoken, written, or ex-

pressed in any way. puerperal a., aphasia occurring during pregnancy or the puerperium. semantic a., aphasia characterized by a lack of recognition of the full significance of words and phrases. sensory a., inability to understand the meaning of written or spoken words, due to disease of the auditory and visual word centers. subcortical a., aphasia due to a lesion interrupting impulses toward the afferent tracts that proceed to the auditory speech center tactical a., aphasia characterized by inability to arrange words properly, so that the patient talks jargon. tactile a., inability to name objects which are felt. temporoparietal a., cortical sensory aphasia. total a., combined motor and transcortical a., aphasia caused by a lesion of a pathway between the speech center and other cortical centers. true a., aphasia due to lesion of any one of the speech centers; called also intellectual a. verbal a., aphasia marked by a greatly restricted vocabulary. visual a., inability to comprehend written words. Wernicke's a., cortical sensory aphasia.

aphasic, aphasiac (ah-fa'sik, ah-fa'ze-ak). 1. Pertaining to or affected with aphasia. 2. A person affected with aphasia.

aphemesthesia (ah"fe-mes-the'ze-ah) [Gr. a neg. + φήμη voice + αἴσθησις perception]. Failure of word-perception; word-blindness and worddeafness.

aphemia (ah-fe'me-ah) [Gr. α priv. $+ \varphi \eta \mu \eta$ voice]. Loss of the power of speech, due to a central lesion. In aphemia the patient sees the object and knows what it is, but is unable to form the word which belongs to it.

aphemic (ah-fem'ik). Pertaining to or affected with aphemia

aphephobia (af-e-fo'be-ah) [Gr. ἀφή touch φόβos fear]. A morbid dread of being touched.

apheter (al'et-er) [Gr. ἀφετήρ sendet]. Λ supposed material which gives to inogen the stimulus that decomposes it, and thus causes muscular contraction.

Aphiochæ'ta ferrugin'ea. A fly found in tropical America and in India which causes cutaneous myiasis in man.

Aphloi'a theafor'mis. A shrub of Madagascar; a decoction is used in hematuria.

aphonia (ah-fo'ne-ah) [Gr. a priv. + φωνή voice]. Loss of voice not due to a central lesion. **a**. clerico'rum, clergyman's sore throat. hysterica, loss of speech due to hysteria. a. paralyt'ica, aphonia due to paralysis or disease of the laryngeal nerves. a. parano'ica, stubborn and wilful silence. **spastic a.**, spasm of the adductor muscle brought on by efforts to speak.

aphonic (ah-fon'ik). 1. Pertaining to or affected with aphonia. 2. Without audible sound.

aphose (ah-foz') [Gr. a neg. $+ \varphi \hat{\omega}_s$ light]. phose or subjective visual sensation due to absence or interruption of light.

aphosphorosis (ah-fos-fo-ro'sis). A condition in which there is insufficient amounts of phosphorus in the system. It is seen particularly in velt cattle in South Africa.

aphrasia (ah-fra'ze-ah) [Gr. a priv. + φράσις utterancel. Dumbness of any kind. a. parano'ica, voluntary abstention from speech in the insane.

aphrenia (ah-fre'ne-ah) [Gr. α neg $+\varphi\rho\hat{\eta}\nu$ mind].

aphrodisia (af-ro-diz'e-ah) [Gr. άφροδίσια venery]. Sexual desire, especially if morbid or excessive.
 Venery or sexual congress.

aphrodisiac (af-ro-diz'e-ak). 1. Exciting the sexual impulse. 2. Any drug that arouses the sexual instinct.

aphrodisin (af-ro-dis'in). A proprietary remedy compounded of yohimbin, aronacein, extract of miura puama, lecithin, etc.

aphronesia (af-ro-ne'se-ah) [Gr. α neg. + φρονήσις good sensel. Dementia.

aphtha (af'thah) [L.; Gr. ἄφθα]. A little ulcer; thrush.

aphthse (af'thē) [Gr. ἄφθαι]. Thrush; more correctly, the whitish spots in the mouth that characterize it. See thrush. Bednar's a., ulcers occurring on the hard palate of cachectic cachectic a., a fatal disease, characinfants terized by aphthous ulceration under the tongue, enlarged and degenerated liver and spleen, and skin pigmentation Cardarelli's a. Same as cachectic u. contagious a., epizoötic a., the foot-and-mouth disease of cattle. See under disease. Riga's a., cachectic aphthæ. a. trop'icæ, an aphthous eruption with digestive disturbance occurring in the tropics.

aphthenxia (af-thenk'se-ah) [Gr. ἄφθεγτος voiceless]. Impairment of the power to express articulate sounds.

aphthoid (af'thoid) [Gr. $\ddot{a}\varphi\theta a$ thrush + $\epsilon l\delta os$ form]. Resembling thrush; thrush-like.

Aphthomo'nas infes'tans. An organism, possibly related to Leishmania, found in foot-andmouth disease.

aphthongia (af-thon'je-ah) [Gr. a priv. $+ \varphi\theta\delta\gamma\gamma$ os sound]. Aphasia due to spasm of the speechmuscles.

aphthous (af'thus). Pertaining to, characterized by, or affected with, aphth.e.

aphylactic (ah-fi-lak'tik) Marked by aphylaxis. aphylaxis (ah-fi-lak'sis). Absence of phylactic power; absence of phylaxis.

apical (ap'ik-al). Pertaining to or located at the

apicectomy (a-pis-ek'to-me). Apicoectomy.

apiceotomy (a-pis-e-ot'o-me). Apicoectomy.

apicitis (a-pe si'tis) Inflammation of an apex, as the apex of a tooth or the apex of the lung.

apicoectomy (a"pik-o-ck'to-me) [aper + ἐκτομή excision] Excision of the apex of the root of a tooth.

apicolysis (a-pik-ol'is-is) [apex + Gr. λύσις destruction]. The operation of causing the apex of the lung to collapse, thus obliterating the apical cavity.

apicotomy (a-pik-ot'o-me) Apicoectomy. **apiectomy** (a-pe-ek'to-me). Apicoectomy.

a'pii fruc'tus. See under A pium.

apinealism (ah-pi'ne-al-izm). The symptoms produced by removal of the pineal gland.

apinoid (ap'in-oid) [Gr. α priv. $+\pi i \nu o s$ dirt $+\epsilon i \delta o s$ form]. Clean; free from filth.

apinol (ap'in-ol). A proprietary substance claimed to consist mainly of levomenthone, C10II13O, obtained in the destructive distillation of pine wood; antiseptic, anesthetic, and expectorant: used in wounds, ulcers, and catarrh of the stomach.

apiol (a'pe-ol) [L. a'pium parsley + o'leum oil]. A clear, volatile oil, the dimethylmethylene ether of allyl tetroxybenzene, (CH₃O)₂C₉H₆ O₂ CH₂ CH, often seen in white needles, derived from parsley (A' prum sati'rum): used in menstrual and malarial disorders. Dose, 3-5 min. (0.18-0 333 cc). Called also parsley-camphor.

apiolin (a'pe-o-lin). A principle derived from parsley emmenagogue. Dose, 3 min. (0.18 c.c.).

apiose (a'pe-ôs). A peculiar sugar from the glucosid apiin. It is a pentosc with a branched chain, (CH₂-OH)₂.C(OH) CHOH.CHO.

Apioso'ma bigem'inum. Same as Piroplasma bigeminum.

apiphobia (a-pe-fo'be-ah) [L. a'pis bee + Gr. φόβος fear]. Morbid dread of bees and their sting.

Ap'is mellif'ica. The honey bee. A preparation of its poison is used in homeopathic practice.

apisination (a-pis-in-a'shun) [L. a'pis bee]. Poisoning by the sting of bees.

- apituitarism (ah-pit-u'it-ar-izm). The condition caused by total removal of the pituitary body.
- **Apium** (a'pe-um) [L]. A genus of umbelliferous plants, including parsley and celery—Celery seed (a'pii fruc'tus), the ripe fruit of A. grave'olens, is diuretic and antispasmodic—Dose, 30 gr. (20 gm.).
- a'pium vi'rus. A homeopathic preparation from bee-stings.
- **aplacental** (ah-pla-sen'tal) [Gr a neg. + placenta]. Having no placenta.
- **aplanatic** (ah-plan-at'ik) [Gr. α neg. + πλανάειν to wander]. Correcting, or not affected by, spheric aberration
- **aplanatism** (ah-plan'at-izm). Freedom from spheric aberration.
- aplasia (ah-pla'ze-ah) [Gr a priv. + πλάσσειν to form] τ. Incomplete or defective development
 2. Congenital atrophy a. pilo'rum intermit'tens, spindle-shaped hairs (Virchow).
- **aplasmic** (ah-plaz'mik). Containing no protoplasm or sarcoplasm.
- **aplastic** (ah-plas'tik) [Gr. α priv. + πλάσσειν to form] Having no tendency to develop into new tissue.
- **apnea, apnea** (ap-ne'ah) [Gr. α priv. $+ \pi \nu \dot{\eta} \alpha$. $\pi \nu o i \alpha$ breath]. 1. The transient cessations of breathing that follow a forced respiration. 2. Asphyxia. **deglutition a.**, temporary arrest of the activity of the respiratory nerve-center during an act of swallowing **traumatic a.** See traumatic asphyxia, under asphyxia.
- apneumatic (ap-nu-mat'ik). 1. Free from air. 2. Done with the exclusion of air, as, an apneumatic operation.
- **apneumatosis** (ap"nu-mah-to'sis) [Gr. α priv. + πνευμάτωσις]. Collapse of the air cells of the lungs, congenital atelectasis of the lungs.
- **apneumia** (ap-nu'me-ah) [Gr α priv. + πνεύμων lung]. Congenital absence of the lungs.
- apnœa (ap-ne'ah). See apnea
- **apnol** (ap'nol). A proprietary asthma remedy containing periplocin.
- **apo-** [Gr. ἀπό from]. A prefix implying separation or derivation.
- apoaconitin (ap"o-ak-on'it-in). See apaconitin.
- **apoatropin** (ap-o-at'ro-pin) [Gr. $\delta\pi\delta$ from + atropin]. A slightly soluble crystalline alkaloid, the anhydrid of atropin, $C_{17}H_{21}O_{2}N$.
- **apobiosis** (ap-o-bi-o'sis) [Gr. $\dot{a}\pi\dot{o}$ away $+\beta los$ life]. Physiologic death.
- apobiotic (ap-o-bi-ot'ik). Pertaining to any change which decreases the vital energy of any tissue.
- apocain (ap'o-ka-in). Same as tutocain.
- apochromatic (ap-o-kro-mat'ik). Free from chromatic and spheric aberration.
- **apocodein** (ap-o-ko'de-ın) [Gr. ἀπό from + codein]. An alkaloıd, C₁₈H₁₀NO₂, from codein **a. hydro-chlorid**, a yellow, amorphous powder, C₁₈H₁₀NO₂HCl used as an expectorant, emetic, and hypnotic, like apomorphin. Expectorant dose, *i*-1 gr. (o ot-o o 8 gm.).
- **apocope** (ap-ok'o-pe) [Gr. "a cutting off"]. A cutting off, amputation.
- apocoptic (ap-o-kop'tik). Resulting from, or pertaining to, an amputation.
- **apocrine** (ap'o-krīn) [Gr. ἀπό from + κρινεῖν to secrete]. Losing part of its protoplasm while secreting; said of certain gland cells. Cf. evocrine
- **apocrustic** (ap-o-krus'tik). Astringent and repellent; also a drug so acting.
- **apocynein** (ap-o-si'ne-in). An active principle from Apoc'ynum cannab'inum: it acts like digitalin.
- apocynin (ap-os'in-in). T. One of the active principles of Apoc'ynum cannab'ınum.
 2. A concentration or resinoid from Apoc'ynum cannab'inum.
 Dose, 1-12 gr. (0.016-0.033 gm.).

- Apocynum (ap-os'in-um) [L; Gr. Δπόκυνον dogbane] A genus of apocynaceous plants. A. androsæmsfo'lium, dogbane of North America, is diuretic and diaphoretic, and in small doses tonic. Tonic dose, to gr. (0.6 gm.), emetic dose, 30 gr. (1.9 gm.) The root of A cannab'snum, or Canada hemp, is cathartic and expectorant; in doses of 20 gr. (1.25 gm.) it is emetic, in doses of 5 gr. (0.3 gm.) it is tonic and antiperiodic, ordinary dose, 2-20 gr. (0.129-1.20 gm.), dose of fluidextract, 5-20 min. (0.333-1.25 cc.).
- **apodemialgia** (ap"o-de-me-al'je-ah) [Gr ἀποδημία journey + ἄλγος pain]. A morbid or insane longing to go away from home.
- **apodia** (ah-po'de-ah) [Gr α priv. + ποbs foot]. Congen-tal absence of the feet.
- apokamnosis (ap"o kam-no'sis). Abnormal liability to latigue in myasthenia, a feeling of tiredness, numbness, and heaviness in a limb motion
- **apolar** (ah-po'lar) [Gr α priv. $+ \pi \delta \lambda \sigma$ pole]. Not having poles nor processes.
- **apolegamic** (ap o leg-am'ık) [Gr ἀπολέγειν to pick out + γάμος marriage] Pertaining to selection, especially sexual selection.
- **apolipsin** (ap-o hp'sin) An antipyretic analgesic and nerve sedative derived from coal-tar.
- **Apollinaris water** (ap ol-in-a'rıs). Any effervescent table-water from Remagen, Germany.
- Apollonius (ap-ol-o'ne us). 1 A physician of Citium in Cyprus, who lived in the first century. He wrote a commentary on Hippocrates' treatise on articulations 2. A Greek physician, called "the Empiric," who lived about 200 B C. 3. A Greek physician who lived about 180 B. C.
- **apolysin** (ap-ol'is-in) [Gr. ἀπόλυσις deliverance, from ἀπό from + λύσις loosing] A white, crystalline compound, C₀H₄(OC₂H₅)NH C₀H₇O₆, or monoparaphenetidincitric acid. It is soluble in hot water, alcohol, and glycerin, and is used as an analgesic and antipyretic in hemicrania, sciatica, pneumonia, etc. Dose, 5 30 gr. (0.324–2 gm.).
- apomorphin (ap-o-mor'fin) [Gr. ἀπό from + morphin] A crystalline alkaloid, C₁₇H₁₇NO₂, derived from morphin by the abstraction of a molecule of water. It is a powerful emetic and relaxant.
 a. hydrochlorid, a grayish, crystalline compound, C₁₇H₁₇NO₂HCl, used as an emetic and expectorant. Dose, ¹/₁₀ ¹/₁₀ gr (o oo2 · o oo6 gm.). A 2 per cent. solution is used for hypodermic injection a. methylbromid. See cuporphin.
- **apomyelin** (ap-o-mi'el in) [apo- + myelin]. A principle derivable from brain substance.
- **aponal** (ah'po-nal). A proprietary hypnotic, amylene carbamate, NH₂.CO O C(CH₃)₂ C₂H₄.
- **apone** (ah'pōn) [Gr. α neg. $+ \pi \delta \nu$ os pain]. An anodyne preparation of various composition, with capsicum as its base. Dose, 3-10 min. (0.18-0.000 (c.)).
- aponea (ap o ne'ah). Same as aponoia.
- **aponeurology** (ap"o-nu-rol'o-je) [aponeurosis + Gr. λόγος discourse]. The sum of knowledge regarding aponeuroses and fasciæ.
- **aponeurorrhaphy** (ap-o-nu-ror'af e) [aponeurosis + Gr. ἡαφή suture]. Suture of an aponeurosis, fasciorrhaphy,
- aponeurosis (ap"on-u-ro'sis) [Gr. ἀπό from + νεῦρον tendon]. 1. A fascia; a white, shining, gristly membrane, serving mainly as an investment for muscle (a of investment), or to connect muscles with the parts that they move (a. of invertion). 2. The material of which aponeuroses and fasciæ are composed; gristle. abdominal a., the conjoined tendons of the oblique and transversalis muscles on the abdomen. buccopharyngeal a., a band between the pterygoid process and the posterior portion of the alveolus of the lower jaw; to it are attached the superior constrictor of the pharynx and the buccinator

muscles. **Dénonvillier's a.** See under fascia. **a. of insertion.** See aponeurosis. **a. of investment.** See aponeurosis. **Sibson's a.**, an aponeurosis attached to the seventh cervical vertebra above and the dome of the pleura below; called also verlebropleural ligament. **subscapular a.**, a membrane attached to the circum-ference of the subscapular fossa **supraspinous a.**, a thick and dense membranous layer that partly envelops the supraspinatus muscle. **vertebral a.**, a thin fascial lamina, partly inclosing the erector spinæ muscle. **a. of Zinn.**Same as ligament of Zinn.

aponeurositis (ap"on-u-ro-si'tis) [aponeurosis + Gr. -ιτις inflammation]. Inflammation of an aponeurosis

aponeurosis aponeurotic (ap"o-nu-rot'ik). Pertaining to or of

the nature of an aponeurosis. **aponeurotome** (ap-o-nu'ro-tōm). A knife for cutting aponeuroses.

aponeurotomy (ap"o-nu-rot'o-me) [aponeurosis + Gr τομή a cut]. Surgical cutting of an aponeurosis.

aponia (ah-po'ne-ah) [Gr.]. Freedom from pain. **aponic** (ah-po'nik). Relieving pain or fatigue.

aponoia, aponœa (ap-o-noi'ah, ap-o-ne'ah) [Gr. ἀπό away + νοῦς mind]. Amentia.

Aponus, Petrus (ap-o'nus). See Abano.

apophlegmatic (ap-o-fleg-mat'ik). Causing a discharge of mucus; expectorant.

apophylactic (ap-o-fi-lak'tik). Pertaining to or marked by apophylaxis

apophylaxis (ap-o-fi-lak'sis) [Gr. ἀπό away + phylaxis] Decrease of the phylactic power of the blood, as seen in the negative phase of opsonic or vaccine therapy

apophysary, **apophysiary** (ap-of'iz-a-re, ap-o-fiz'e-a-re). Pertaining to an apophysis.

apophyseal (ap-of-iz'e-al). Pertaining to an apophysis.

apophyseopathy (ap-o-fiz-e-op'ath e) [apophysis + Gr. πάθος disease]. Disease of an apophysis, particularly Schlatter's disease

apophysis (ap-of'is-is) [Gr ἀπό from + φθσιs growth]. Any process, outgrowth, or swelling, especially a bony process that has never been entirely separated from the bone of which it forms a part basilar a., the basilar process of the occipital bone. cerebral a., a. cer'ebri, the pineal body genial a., the four genial tubercles. a. of Ingrassias, the lesser wing of the sphenoid bone a. lenticula'ris, the orbicular process of the temporal bone a. mamilla'ris, the olfactory bulb. a. ravia'na, a. of Rau, the long or gracile process of the malleus.

apophysitis (ap-of-is i'tis). τ. Inflammation of an apophysis 2 Appendicitis. a. tibia'lis adolescen'tium. Same as Schlatta's disease. See under disease.

apoplasmia (ap-o-plaz'me-ah) [Gr. ἀπό away + πλάσμα plasm]. Deficiency of the blood-plasm.

apoplectic (ap-o-plek'tik) [Gr. ἀποπληκτικόs]. Pertaining to or affected with apoplexy.

apoplectiform, apoplectoid (ap-o-plek'tif-orm, ap-o-plek'toid) Resembling apoplexy.

apoplexia (ap-o-plek'se-ah) [L.]. Apoplexy. a. u'teri, sudden uterine hemorrhage, due to arterial degeneration or hemorrhagic infarct.

apoplexy (ap'o-plek-se) [Gr. ἀποπληξία]. I. Sudden paralysis and coma from effusion and extravasation of blood or serum into the brain or spinal cord. 2. Copious extravasation of blood within any organ. asthenic a., apoplexy from debility. Broadbent's a., cerebral hemorrhage beginning outside the ventricle, but progressing until it enters the ventricle bulbar a., effusion into the substance of the pons capillary a., apoplexy resulting from the rupture of capillary vessels. cerebellar a., effusion into the sub-

stance of the cerebellum. cerebral a., effusion into the cerebral substance. choroidal, hepatic, pulmonary, renal, retinal, splenic a., etc., sudden effusion in the various organs indicated by the adjective. congestive a., congestion without extravasation of blood, but followed by symptoms resembling those of true apoplexy. cutaneous a., sudden effusion of blood to the skin and subcutaneous tissue. embolic a., apoplexy due to stopping of a cerebral artery by an embolus. functional a., nervous a., a condition simulating true apoplevy, but due to some functional disturbance of the nervous system. See heat stroke, under stroke ingravescent a., progressive paralysis due to the slow leakage of blood from a ruptured vessel. meningeal a., effusion occurring between the meninges. multiple a., a succession of small cerebral effusions of blood, with slight attacks of paralysis. neonatal a., apoplexy in newborn placental a., hemorphage into the placental portile a. Same as bulbar a pulmonary a., the escape of blood into the parenchyma of the lungs. sanguineous a., that which is caused by an effusion of blood. **serous a.**, the sudden effusion of a considerable quantity of serous fluid. simple a., a fatal comatose state not due to a discoverable cerebral lesion spinal a., effusion into the substance of the spinal cord. **splenic a.**, malignant anthrax **thrombotic a.**, apoplexy due to thrombosis of a cerebral artery. verminous a., coma due to the presence of worms in the intestine.

apoquinamin (ap"o-kwin-am'in). An alkaloid, $C_{19}H_{22}N_2O$, derivable from quinamin.

apoquinin (ap-o-kwin'in). A cinchona alkaloid, $C_{19}H_{22}O_2N_2.H_2O$, isomeric with cuprein.

aporetin (ap-o'ret-in) [Gr. $\dot{\alpha}\pi\dot{b}$ from $+\dot{\rho}\epsilon\tau l\nu\eta$ resin]. A purgative resin from rhubarb.

aporioneurosis (ap o"re-o-nu-ro'sis) [Gr ἀπόρια doubt + neurosis]. Anxiety neurosis See under neurosis.

aporrhegma (ap-o-reg'mah) [Gr. ἀπό from + δηγμα fracture]. Any one of the toxic substances split off from the amino-acids of a protein by bacterial decomposition (Kutscher). Cf. ptomain

aposia (ah-po'ze-ah) [Gr. α neg. $+ \pi b \sigma \iota s$ thirst]. Absence of thirst.

apositia (ap-o-sish'e-ah) [Gr ἀπό from + σῖτοs food]. Disgust or loathing of food.

apositic (ap-o-sit'ik). Causing a loathing of food; diminishing the appetite.

apospory (ap os'po-re) [Gr. ἀπό away + σπόρος spore]. Lack of power of forming spores.

apostasis (ap-os'tas-is) [Gr]. 1. An abscess. 2. The end or crisis of an attack of disease.

apostem, apostema (ap'os-tem, ap-os-te'mah) [Gr. ἀπόστημα]. An abscess.

aposthia (ap-os'the-ah) [Gr. α neg. + π ό σ θ η the prepuce]. Congenital absence of the prepuce.

Apostoli's treatment (ap-os-to-lēz') [Georges Apostoli, French physician, 1847-1900]. See under treatment.

apothanasia (ap-o-than-a'se-ah) [Gr. ἀπό away + θάνατος death] The postponing of death, the prolongation of life

apothecaries' weight. See weights and measures.

apothecary (ap-oth/ek-a-re) [Gr. $\dot{\alpha}\pi o\theta \dot{\eta}\kappa \eta$ storehouse]. Λ druggist or pharmacist.

apothem, apotheme (ap'oth-em, ap'oth-ēm) [Gr. $\dot{\alpha}\pi\dot{\theta}$ from $+\theta\dot{\epsilon}\mu a$ deposit] A dark deposit which sometimes appears in vegetable infusions and deposits exposed to the air.

apothesine (ap-oth'e sin). A crystalline compound, the cinnamic ester of gamma-diethylamino-propyl alcohol hydrochlorid, C₆H₅(CH)₂.CO₂ (C₂-H₅)₂.N (CH₂).CH₃ + HCl¹ used as a local anesthetic in o 5-2 per cent. solution.

apotheter (ap-oth'et-er) [Gr. ἀπό away + τιθέναι to place]. A navel-string repositor.
 apotoxin (ap-o-toks'in). The substance produced

apotoxin (ap-o-toks'in). The substance produced by the action of toxogenin on the injected toxin and causing the symptoms of anaphylaxis.

apotripsis (ap-o-trip'sis) [Gr. ἀποτρίβειν to abrade]. Removal of a corneal opacity (Hirschberg).

apotropaon (ap-o-tro'pa-on) [see apotropiae]. An amulet.

apotropiac (ap-o-tro'pe-ak) [Gr. ἀπό away + τρέπειν to turn]. Prophylactic, in the sense of averting evil influence (in Greek medicine).

apoxemena (ap-ok sem'in-ah) [Gr. ἀποξεῖν to scrape off] The substances removed from a pocket in the treatment of pericementoclasia.

apoxesis (ap-ox-c'sis). Removal of apoxemena from the periolasial pocket; called also *curettage*.

apozem, apozema, apozeme (ap'oz-em, apoz'-em-ah, ap'oz-ēm) [Gr. $\dot{a}\pi\dot{o}\zeta\epsilon\mu a$, from $\dot{a}\pi\dot{o}$ away + $\xi\epsilon\hat{\nu}\nu$ to boil]. A medicinal or medicated decoction.

appalagin (ap al'aj-in). A gray powder, mercury tetraiodophenolphthalein, recommended as a powerful antiseptic.

apparatotherapy (ap-ar-at-o-ther'ap-e). Treat ment by mechanic apparatus.

apparatus (ap ar-a'tus) [L., from ad to + para're to make ready] 1. A number of parts acting together in the performance of some special function. 2. A mechanic appliance or appliances used in operations and experiments. 3. Cystotomy or lithotomy. **absorption a.**, an apparatus used in gas analysis by means of which a portion of the substance to be examined is absorbed and its quantity thus estimated. acoustic a., auditory **a.**, the assemblage of parts essential for hearing. biliary a., the parts concerned in the formation, conduction, and storage of bile, including the secreting cells of the liver, bile-ducts, and gall-bladder chromidial a., the chromatin staining material of the protoplasm of a cell, occurring in the form of granules, rods, strands, and networks. Clover's a., a device used in administering ether or chloroform. Desault's a., Desault's bandage. See bandage. a. digesto'rius [B N A], the digestive system. Fell-O'Dwyer a., an instrument for performing artificial respiration and for preventing collapse of the lung in chest operations. Finsen's a., a system of lenses for applying the violet-rays of light in the light treatment of disease. Golgi a., an intracellular structure about the size of the nucleus seen only by means of special stains. a. of Golgi-Rezzonies, spiral filaments seen in the incisures of the neurilemma. a. ligamento'sus col'li, the occipito-axoid ligament. a. ma'jor, median lithotomy. a. mi'nor, lateral lithotomy Potain's a., a kind of aspirating apparatus Prana a., an apparatus for making pencils of carbon-dioxid snow. Sayre's a., an apparatus for suspending a patient during the application of a plastera. ma'jor, median lithotomy. of-Paris jacket sound-conducting a., those parts of the acoustic apparatus that transmit sound sound-perceiving a., those central parts of the acoustic apparatus that are essential for the perception of sounds. Soxhlet's a., a kind of flask for the extraction of soluble constituents Tallerman's a., an apparatus for inclosing an extremity of the body for the purpose of applying to it dry hot air in the treatment of rheumatism, etc **Taylor's a.**, a steel support for the spine, used in Pott's disease vocal a., the various organs collectively that subserve phonation **Waldenberg's a.**, an apparatus for exhausting or compressing air which is inhaled by the patient or into which the patient exhales. Zander 8., one of the machines, of which there are several forms, designed to give exercise and to apply manipulations to the body.

appendage (ap-en'dāj) Any thing or par tappended. **auricular a.**, the projecting part of the cardiac auricle. **cecal a.**, the vermiform

appendix. a's of the eye, the lashes, eyebrows, lacrimal apparatus, and conjunctiva. a's of the fetus, the umbilical cord, placenta, and membranes. ovarian a., the parovarium. a's of the skin, the hair, nails, schaceous glands, and sweat-glands. uterine a's, the ligaments of the uterus, the oviducts, and the ovaries. vermicular a., the vermiform appendix. vesicular a. See appendix exiculosus

appendalgia (ap-en-dal'je ah) [appendix + Gr. άλγος pain]. Pain to the region of the appendix.

appendectomy, **appendicectomy** (ap-en-dek'-to-me, ap-en-dis-ek'to-me) [appendix + Gr. έκτομή excision]. Surgical removal of the appendix vermiformis; ecphyadectomy.

appendekthlipsia (ap en dek-thlip'se-ah) [appendix $+ \theta \lambda \hat{\psi}$ (sompression] An operation for appendicitis with adhesions of the appendix done by closing the lumen by dividing the appendix with a thermocautery and leaving a clamp in place at that site.

appendical, appendiceal (ap en'dik al, ap-endis'e-al). Pertaining to an appendix.

appendicealgia (ap"en-dis-e-al'je ah) [appendix + Gr. ἄλγος pain]. Pam in the appendix.

appendicectasis (ap-en-dis-ek'tas-is). A dilated condition of the appendix.

appendicectomy (ap en-dis-ek'to-me). See appendectomy.

appendices epiploicæ (ap-en'dis-ēz ep-ip-lo'is-e) [L.] Peritoneal pouches containing fa' and joined to the large intestine **uterine a.**, the uterine ligaments, oviducts, and ovaries

appendicitis (ap-en-dis-i'tis) Inflammation of the appendix vermiformis (Mestivier, 1750, Fitz, 1880). chronic a. See recurrent a. a. by contiguity, appendictis caused by infection from neighboring tissues foreign-body a., appendicitis due to a foreign body in the lumen fulminating a., appendicits marked by sudden onset and rapid and fatal development gangrenous a., gangrene of the appendix due to interference with the circulation helminthic a., verminous appendicitis a. larva'ta, latent appendicitis in which the infection is in a quiescent state, but liable to break forth into activity at any time masked a., appendicitis larvata. a. oblit'erans, appendicitis with sclerosis and shrinking of the submucous tissue and plastic peritomtis, causing obliteration of the lumen of the apperforative a., appendicitis with perforation of the organ **protective a**. Same a a obliterans **purulent a**., suppurative appendicitis. recurrent a., chronic appendicitis in which atteaks recur after long intervals relapsing a., chronic appendicitis with frequently recurring attacks stercoral a., appendicitis in which a concretion is the assumed cause subperitoneal a., appendicitis in which the appendix is buried under the peritoneum instead of being free in the peritoneal cavity suppurative a., purulent infiltra-tion of the walls of the appendix. syncongestive a., non-infective appendicitis, marked by the presence of serous infiltrates and occurring synchronously with similar congestion of the neighboring tissues traumatic a., appendictis caused by external traumatism verminous a., appendicitis due to the presence of a worm in the appen-

appendicocecostomy (ap-en"dik-o-se-kos'to-me). The operation of draining the appendix into the cecum.

appendico-enterostomy (ap-en''dik-o-en-ter-os'-to-me). I. Same as appendicostomy. 2 The formation of an anastomosis between the appendix and the intestine.

appendicolysis (ap-en-dik-ol'is-is) [appendix + λύσιs dissolution] An operation for appendicitis with adhesions in which the cicatricial serosa on the base of the appendix is slit open and the ap-

pendix slowly withdrawn from its adhesive sheath through the slit.

appendicostomy (ap en-dik-os'to-me) [appendix + Gr. στόμα a mouth]. The operation of opening the vermiform appendix for the purpose of irrigating the lower bowel. Called also Weir's operation.

appendicular (ap-en-dik'u-lar). Pertaining to the appendix vermiformis.

appendix (ap-en'diks), pl. appen'dices [L. for appen'dere to hang upon]. An appendage. auricular a., a conical muscular pouch forming the upper part of each auricle of the heart Called also auricula [BNA]. a. ces'ci, appendix vermiformis. a. cer'ebri, the pituitary body ensiform a., the xiphoid cartilage. a. epididym'idis, a small pedunculated structure sometimes found near the appendix testis. **opiploic a.** See appendices epiploica. **a. fasci'olso**, prolongations of the neck lesions of pellagra on to the sternum fat a., an appendix around which there is an abnormal quantity of fat. a. fibro'sa hep'atis, a fibrous process formed by the tip of the left lobe of the liver for attachment to the diaphragm fliform a., a vermiform appendix in the form of a slender cord, not over 2 millimeters in diameter. high a., a condition in which the appendix and cecum are situated in the right hypochondriac region, just below the liver. Called also undescended a Morris' a., a vermiform appendix undergoing fibroid degeneration. residual a., the portion of the vermiform appendix remaining after abscess of the organ treated by drainage. a. of the testicle, a. tes'tis [B N A], a small vascular structure situated in front of the globus major of the epididymis. Called also hydatid of Morgagni. undescended a. See high a a. ventric'ulæ laryn'gis [B N A], the lary ngeal pouch. a. vermifor'mis, a worm-like diverticulum of the cecum, varying in length from 3 to 6 inches, and about $\frac{3}{10}$ inch in diameter. Called also processus vermiformis [B N A]. a. vesiculo'sa, a small pedunculated structure, attached to the fallopian tube near the fimbriated cord Called also hydatid of Morgagni.

appendoroentgenography (ap-en"do-rent-genog'raf-e). Roentgenographic examination of the appendix vermiformis.

appendotome (ap-en'do-tom). An instrument for removal of the appendix.

apperception (ap-er-sep'shun) [L. ad to + perci'pere to perceive. Conscious perception and appreciation; the power of receiving, appreciating, and interpreting sensory impressions.

apperceptive (ap-er-sep'tiv). Pertaining to apperception.

appetite (ap'et-īt) [L. appe'tere to desire]. A natural longing or desire, especially that for food. perverted a., the longing for unnatural and indigestible things as articles of food.

applanation (ap-la-na'shun) [L. applana'tio]. Undue flatness, as of the cornea

apple (ap'l). The fruit of the rosaceous tree. Py'rus ma'lus; also the tree itself. Adam's a. See Adam's apple a. of the eye. 1. The pupil, 2. The eyebal! May a., Podophyllum.

applicator (ap'lik-a-tor). An instrument making local applications.

apposition (ap-o-zish'un) [L. apposit'io]. The contact of adjacent parts or organs.

approximal, approximate (ap-rok'sim-al, ap-rok'sim-āt). Situated close together: said of the surfaces of teeth that adjoin.

apractic (ah-prak'tik). Marked by apraxia.

apraxia (ah-prak'se-ah) [Gr a neg. + πράσσειν to do] Complete loss of ability to perform purposeful movements. Mind-blindness; a condition in which there is a lack of a proper apprehension of the true nature of things, leading to the performance of preposterous acts. Called also object-blindness and soul-blindness. a. al'gera, a

hysteric state in which all mental or bodily action is prevented by inducing a severe headache, cortical a., motor apraxia. ideational a., improper use of objects, due to disturbance of a proper apprehension of the nature of things. ideokinetic a., ideomotor a., a form due to an interruption between the ideation center and the center for the limb. In it simple movements can be performed, but not complicated ones. innerva-tion a., motor apraxia. limb-kinetic a., ideokinetic apraxia. motor a., inability to perform acts demanded by the will.

apraxic (ah-prak'sik). Pertaining to, or marked by,

aproctia (ah-prok'she-ah) [Gr. α neg. + πρωκτός anus]. Imperforation of the anus.

apron (a'prun). A covering for the body in front, worn by surgeons and nurses Hottentot a.. the artificial or abnormal elongation of the nymphæ; velamen vulvæ. Called also pudendal a

aprophoria (ap-ro-fo're-ah) [Gr. α neg $+ \pi \rho o \varphi \epsilon$ ρειν to present]. Inability to express articulated words in speech or writing (Heveroch, 1914).

aprosexia (ah-pro-sek'se-ah) [Gr. α priv. + προσέχειν to heed] A condition in which there is in-ability to by the attention; inattention due to mental weakness or to defective hearing, and often seen in chronic catarrh of the nose or of the nasopharynx (aprosexia nasalis)

aprosopia (ah-pro-so'pe-ah) [Gr. α neg $+ \pi \rho \delta \sigma \omega \pi o \nu$ face Partial or complete absence of the face.

apselaphesia (ap"sel-af-e'ze-ah) [Gr. α neg. + $\psi\eta\lambda\dot{\alpha}\varphi\eta\sigma\iota$ s touch]. Lack or loss of the sense of touch

apsithyria (ap-sith-ī're-ah) [Gr. α neg $+\psi\iota\theta\nu\rho l\zeta\epsilon\iota\nu$ to whisper]. Hysteric loss of speech and even of the power of whispering (J. Solis Cohen, 1883).

apsychia (ah-sik'e-ah) [Gr. α neg. + $\psi v \chi \dot{\eta}$ spirit]. 1. Loss or lack of consciousness. 2. A faint or swoon.

apsychosis (ah-si-ko'sis) [Gr. α neg. $+\psi \dot{\nu} \chi \eta$ mind]. Absence or loss of the function of thought

aptyalia, aptyalism (ah-ti-a'le-ah, ah-ti'al-izm) [Gr. α priv. $+ \pi \tau \nu \alpha \lambda i \zeta \epsilon \iota \nu$ to spit]. Deficiency or absence of the saliva.

apus (a'pus) [Gr a neg. $+ \pi o \dot{v}s$ foot]. A teratism or fetus without feet.

apyetous (ah-pi'et-us) [Gr. α neg. $+ \pi bo\nu$ pus]. Showing no pus; not suppurating

apyknomorphous (ah-pik-no-mor'fus) [Gr. a priv. + πυκνός compact + μορφή form] Not pyknomorphous; not having the stainable cell-elements compactly placed: said of a cell.

apyogenous (ah-pi-oj'en-us). Not caused by pus. **apyonin** (ah-pi'on-in) [Gr. a neg. + πύον pus]. Yellow pyoktanin; a yellow antiseptic powder used as a substitute for pyoktanin in ophthalmic surgery.

apyous (ah pi'us) [Gr. α neg. + πύον pus] Having no pus; non-purulent.

apyretic (ah-pir-et'ik) [Gr. α neg. + pyretic]. Having no fever; afebrile.

apyrexia (ah-pır-ek'se-ah) [Gr. α neg. + pyrexia]. The absence or intermission of fever.

apyrexial (ah-pi-rek'se-al) Pertaining to apyrexia, or to the stage of intermission of a fever

apyrogenetic, apyrogenic (ah-pi"ro-jen-et'ik, ah-pi-ro-jen'ik) [Gr. α neg. $+\pi \nu \rho$ fever $+-\gamma \epsilon \nu$ to producel. Not producing fever.

apyrol (ap'i-rol). A proprietary mixture of antipyrin and quinin sulphate.

Aq. L. a'qua, water.

Aq. astr. L. a'qua astric'ta, frozen water. Aq. bull. L. a'qua bul'liens, boiling water.

Aq. com. I. a'qua commu'nis, common water.

Aq. dest. L. a'qua destilla'ta, distilled water. Aq. ferv. L. a'qua fer'vens, hot water.

Aq. fluv. L. a'qua fluvia'lis, river water.
Aq. font. L. a'qua fonta'na, spring-water.
Aq. mar. L. a'qua mari'na, sea-water.
Aq. niv. L. a'qua nivia'lis, snow water.
Aq. pluv. L. a'qua pluvux'lis, ram watet.

Aq. pur. L. a'qua pu'ra, pure water. Aq. tep. L. a'qua tep'ida, tepid water.

agua (ah'kwah). 1. Latin for water. 2. A solution of a medicinal substance in water. a. ammo'niæ (U. S. P.), water charged with ammonia gas, and containing 10 per cent. by weight of gaseous ammonia: an antacid and diffusible stimulant. Dose, 5-30 min. (0333-2 cc). a. am-mo'nise for'tior (U. S. P.), stronger ammonia water, containing 28 per cent. by weight of ammonia gas. a. am'nii. See liquor amnii. a. amyg'dalse ama'rse, bitter almond water: used hke dilute hydrocyanic acid. Dose, 2-4 dr. (75-15 c.c.) 2-2 floz. (15-60 c.). a. ani'si (U.S.P'), anise water carminative. Dose, \(\frac{1}{2}\)-2 floz. (15-60 c.c.). a. astric'ta, frozen water. a. auran'-tii flor'um (U. S. P.), orange-flower water. $\frac{1}{2}$ -2 floz. (15-60 c.c.). a. auran'tii flor'um for'tior, stronger orange-flower water. a. bul'liens, boiling water. a. cal'cis, lime-water. a. cam'phoræ (U. S. P.), camphor water. Dose, ½-1 floz (15 30 c.c.). a. carmelita rum, compound spirit of melissa. a. ca/rui, caraway water: carminative. Dose, 1-2 floz. (30-60 c.c.). a. chlori, chlorn-water; water charged with chlorin antiseptic and cleansing. Dose, 10–30 min. (0 600 2 c.c.). a. chlorofor'mi (U. S. P.), chloroform water. Dose, 1–2 floz (15 60 c.c.). a. cinnamo'mi, cinnamon water. Dose, $\frac{1}{2}$ 2 fl.oz. (15-60 cc). a. colonien'sis, cologne water. a. commu'nis, ordinary water. a. creoso'ti, creosote water. Dose, 1-4 dr. (4-16 cc) a. destilla'ta (U.S.P.), distilled water. a. destilla (16 cc) a. la'ta steriliza'ta (U.S.P.), distilled and sterilized water a. fer'vens, hot water. a. fluvia'lis, river water. a. foenic'uli (U. S. P.), fennel water. Dose, 1-2 floz (30-60 cc). a. fonta'na, spring water or well-water. a. for'tis, mtric a. hamamel'idis, water of hamamelis, miscalled extract of witch-hazel mainly used as a vulnerary and as a mouth-wash. a. hydroge'nii diox'idi, a mixture of water and hydrogen dioxid detergent and antiseptic a. labyrin'thi, the clear fluid in the labyrinth of the ear. a. lauro-cer'asi, cherry-laurel water: used like dilute hydrocyanic acid. Dose, 5-30 min. (0333-2cc). a. levico, a natural arsenoferric water from springs at Levico. a. mari'na, sea-water. a. men'thæ piperi'tæ (U. S. P.), peppermint water. Dose, 1 2 floz. (30 60 c.c) a. men'thæ vir'idis (U. S. P.), spearmint water. Dose, 1-2 fl oz. (30-60 cc). a. nivia/lis, snow water. a. oc'uli, the aqueous humor or fluid of the eye a. pericar'dii, the pericardial fluid. a. phe**nola'ta**, carbolic acid water, phenolated water, a solution of liquid phenol 22 parts in 928 parts of distilled water. a. pimen'ts, water of pimenta, or allspice. Dose, ½-2 floz (15 60 cc) a. pluvia'lis, rain water. a. ptychro'tis, Ajowan water. carminative. Dose, 1-2 flox (30 60 cc). a. re'gia, nitrohydrochloric acid. a. ro'sæ (U. S. P), rose-water: mainly used as a flavor Dose, 1 2 fl oz. (30 60 c c.). a. ro'sæ for'tior (U S P.), stronger rose-water. a. sambu'ci, elder-flower water. Dosc, if loz (15 c.c.) a. sedati'va, a preparation of 2 ounces of ammonia water, 13 drams of spirits of camphor, 1 ounce of sodium chlorid, and enough water to make one pint: used as a sedative application. a. tep'ida, warm water. a. vi'tæ, brandy.

aquacapsulitis (ak''wah-kap-su-li'tis) [L. a'qua water + cap'sula capsule]. See aquocapsulitis.

aquse (a'kwe). Waters; officially, medicated waters.

a. aromat'icse (U. S. P.), water saturated with some volatile oil: used in pharmacy.

aquæductus (ak-wē-duk'tus). Latin for aqueduct.
a. cer'ebri [B N A] See aqueduct of Sylvius.
a. coch'leæ, aqueduct of cochlea.
a. Syl'vii, aqueduct of Sylvius.
a. vestib'uli [B N A] See aqueduct of Columnus

aquaphone (ak'wah-15n) [L. a'qua water + Gr. $\varphi \hat{\omega} \nu \eta$ voice] An instrument resembling a steth-oscope for detecting sounds in water pipes.

aquapuncture (ak'wah-punkt ūr) [L. a'qua water + puncture]. The subcutaneous injection of water.

aqueduct (ak'wē-dukt) [L. aquaduc'tus, from a'qua water + duc'tus canal]. A canal for the conduction of a liquid. cerebral a. See a. of Sylvius. a. of cochlea, a foramen in the temporal bone for a vein from the cochlea. a. of Cotunnius, the aqueduct of the vestibule. a small canal opening upon the posterior surface of the petrous portion of the temporal bone and transmitting a small vein. a. of Fallopius, the canal for the facial nerve in the petrous bone. called also facial canal. a. of Sylvius, the cavity or ventricle of the midbrain, it connects the third and fourth ventricles. Called also aquaductus cerebri, iter a tertio ad quartum ventriculum, optocale, and mesocele. a. of the vestibule. See a of Cotunnius, optowele, and mesocele.

aqueous (a'kwe us) [L a'qua water] 1. Watery, prepared with water 2 The aqueous humor of the eye — See under humor.

aquinol (ak'win-ol). A brownish disinfectant liquor composed of formalin, glycerin, potash soap, and thymol

aquiparous (ak-wip'ar us) [L. a'qua water + par'ere to produce] Producing water or a watery secretion

aquocapsulitis (a"kwo-kap-su-li'tis) [L. a'qua water + capsulitis] Serous iritis.

aquosity (ak wos'it-e) [L. aquos'itas]. A watery state or condition

aquula (ak'woo-lah) [L "little stream"]. The perilymph (a. exter'na) or endolymph (a. inter'na).

arabate (ar'ab-āt). A salt of arabic acid.

arabin (ar'ab-in). An amorphous carbohydrate, (C₅H₁₀O₅)₂ + H₂O, from gum arabic, soluble in water. Called also arabic acid.

arabinochloralose (ar-ab"in-o-klo'ral-ōs). A hypnotic like chloralose, but free from its tetanic effects.

arabinosazone (ar-ab-in o'sa zōn). A phenylosazone of arabinose, CH₂OH(CHOH)₈C(N.NH.C₆-H₆) CH N.NH C₆H₈. It is a yellow crystalline substance made by treating arabinose with phenylhydrazine and acetic acid.

arabinose (ar-ab'in ōs) Gum-sugar; a crystalline aldo-pentose, CH₂OH(CHOH)₃CHO, obtained from vegetable gums by acid hydrolysis. It is sometimes found in urine.

arabinosuria (ar-ab"in-o-su're-ah). The presence of arabinose in the urine.

arabinulose (ar-ab-in'u lōs). A ketopentose.

arabite (ar'ab-it). A sweet crystalline principle, C₂H₁₂O₅, derivable from arabinose by the action of sodium amalgam.

arabitol (ar-ab'it-ol). An alcohol, CH₂OH(CHOH)₃-CH₂OH, formed by the reduction of arabinose

arachidic (ar-ak-id'ik) [L. arachis peanut]. Caused by peanut kernels; as arachidic bronchitis.

arachin (ar'ak-in). A globulin, also an alkaloid, C₅H₁₄N₂O, isolated from peanuts.

Arachis (ar'ak-is). See peanut.

Arachnida (ar-ak'nid-ah) [Gr. ἀράχνη spider]. A class of the Arthropoda, including the spiders, ticks, mites, and scorpions.

arachnidism (ar-ak'nid-ism). Same as arachnoidism.

arachnitis (ar-ak-ni'tis) [arachnoid + -tris inflammation]. Inflammation of the arachnoid,

arachnodactylia (ar-ak"no-dak-til'e-ah) [Gr. dράχνη spider + δάκτυλος finger]. Spider fingers; a condition in which the bones of the fingers, and sometimes of the toes, grow extremely long and thin. Called also dolichostenomelia.

arachnoid (ar-ak'noid) [Gr. ἀράχνη spider + είδοs form]. I Resembling a spider's web. 2. A deheate membrane interposed between the pia mater and the dura mater of the brain and spinal cord, being separated from the pia mater by the subarachnoid space.

arachnoidal (ar-ak-noid'al). Of or pertaining to the arachnoid.

Arachnoidea (ar ak-noi'de-ah) A class of arthropods including the spiders, mites, and ticks.

arachnoidea (ar-ak-noid'e-ah) The arachnoid membrane See *arachnoid*.

arachnoidism (ar-ak'noi-dizm) [Gr ἀράχνη spider].

The condition produced by the bite of poisonous spiders.

arachnoiditis (ar"ak-noi-di'tis). Same as arachnutis

arachnolysin (ar-ak-nol'is-in) [Gr. ἀράχνη spider + lysm] The active hemolytic principle of the poison of the garden-spider

arachnopia (ar-ak-no'pe-ah) [arachnoid + pia]. The arachnoid and pia considered as forming one organ, the piarachnoid.

arachnorhinitis (ar-ak"no-ri-ni'tis) [Gr ἀράχνη spider + rhinitis] Disease of the nasal passages caused by the presence of a spider.

arack, arrack (ar-ak') [East Indian] An alcoholic liquor distilled from dates, rice, the sap of palms, mahua flowers, etc.

aræometer. See areometer.

araiocardia (ar-a-o-kar'de-ah) [Gr. ἀραιός thin + καρδία heart]. Same as brachyeardia

Aralia (ar a'le-ah) [L] A genus of aromatic and diaphoretic plants, including spikenard or pettymorrel (1 racmo'sa), dwarf elder (A his'pida), and other plants used in domestic medicine. **A. quinquefo'lium.** See ginseng

aralkyl (ar-al'kil) An aryl derived from an alkyl radical

aranein (ar-a'ne-in) [L. ara'nea spider] A fluid from the abdomen of spiders used in homeopathic practice as an embrocation

araneous (ar-a'ne-us) [L. ara'ne-us]. Like a cobweb.
Aran's cancer, law (ar-ahnz') [François Amilcar Aran, French physician, 1817-1861]. See under cancer and law.

Arantius, body of, ventricle of (ar-an'sheus) [Julius Casar Arantius (Italian Arantio), an Italian anatomist and physician, 1530-1580]. See body and ventricle.

araroba (ar-ar-o'bah) [Brazilian]. 1. See Andira. 2. See Goa powder.

arasa (ar-a'sah). The root of a Brazilian plant, a decoction of whose bark is used in metrorrhagia.

arbasin (ar-ba'sin). A histon found in the spermatozoa of the sea-urchin.

arbor (ar'bor) [L. "a tree"] The arbor vite of the cerebellum.
a. vi'tæ. 1. The tree-like set of outlines of white substance seen on a median section of the cerebellum 2 A series of branching ridges within the cervix uteri 3 The tree Thu'1a occidenta'lis; also the popular name of other trees and species of the same genus. The fresh leaves, twigs, and fruit are diaphoretic, diuretic, and emmenagogue. Dose of volatile oil, 1-5 min. (0.06-03 c c).

arborescent (ar-bor-es'ent) [L. arbores'cens] Branching like a tree.

arborization (ar"bor-iz-a'shun). The branching termination of certain nerve-cell processes; also a form of the termination of a nerve-fiber when in contact with a muscle-fiber.

arboroid (ar'bo-roid) [L. ar'bor a tree]. Branching like a tree.

arbulith (ar'bu-lith). A proprietary urinary antiseptic and uric-acid solvent, a mixture of arbutin and hexamethylenamus lithium benzoate.

arbutin (ar'bu-tin) [L. Ar'butus, q. v.]. A crystal-line glucosid, $C_{12}H_{16}O_7 + \frac{1}{2}H_2O$, from the leaves of Arctostaphylos (Arbutus), u'ca-ur'si, and other ericaceous plants—used as a urinary antiseptic and diuretic. Dose, 5 15 gr. (0 3-1 gm)

Arbutus (ar'bu-tus) [L]. A genus of cricaceous trees and shrubs A. menzie'sii is the madroño of the Pacific States, whose bark is astringent. trailing a. See Epigaa A. une'do, the European arbutus, is astringent ara-ursi. See ura-ursi.

arc (ark) [L. ar'eus bow] rc (ark) [L. ar'cus bow] Any part of the circum-ference of a circle. auricular a., binauricular a., a measurement from the center of one auditory meatus to that of the other. bregmatolambdoid a., extends along the course of the sagittal mercury a., an electric discharge suture. through mercury vapor in a vacuum tube, giving off a light rich in ultraviolet and actinic rays. nasobregmatic a., a line from the root of the nose to the bregma. naso-occipital a., extends from the root of the nose to the lowest part of the occipital protuberance neural a., a series of four or more neurons forming a complete circuit between certain receptors and effectors of the body, and constituting the pathway for neural reactions reflex a., an afferent nerve, its nervecenter and an afferent nerve, considered as the pathway for a reflex act. sensorimotor a., the path by which a nerve impulse is carried from a sense organ to a muscle

arcade (ar-kād') An anatomic structure composed of a series of arches **Flint's a.**, an arteriovenous arch at the base of the renal pyramids.

arcanum (ar-ka'num) [L. "secret"] A secret medicine or nostrum.

arcate (ar'kāt) [L arca'tus shaped like a bow]. Bow-shaped

arcatura (ar-ka tu'rah) [L ar'cus bow] Outward curvature of the forelegs of horses

arcein (ar'se in) Arecalın hydrobromate an energetic miotic agent

arch (artsh) [L ar'eus bow] Any structure or a is used to designate the dental arch abdominothoracic a., the lower boundary of the front of the thorax. **abnormal a.**, a dental arch which varies from the normal alveolar a, the arch of the alveolar process of either jaw a. of aorta, the curved portion of the aorta between the ascending and descending portions. aortic a's, a series of five pairs of arterial arches of the fetus in the region of the neck. branchial a's. I Same as aortic a's. 2. Four pairs of cartilaginous arches of the fetus in the region of the neck carpal a's, several small arteries supplying the region of the wrist. a's of Corti, a series of arches made up of the rods of Corti crural a., femoral a., Poupart's ligament. deep crural a., a band of fibers arching in front of the sheath of the femoral vessels. dental a., an arch formed by the alveolar process on each jaw, containing teeth and covered by the gums embryonic a's, fetal chial, mandibular, hyoid, a's, the aortic, branchial, mandibular, pulmonary, and thyrohyoid arches. epiphyseal a., the embryonic structure in the roof of the third ventricle from which the pineal and parapineal bodies develop fallopian a., the fallopian ligament. See ligament femoral a., Poupart's ligament. glossopalatine a., the anterior pillar of the fauces Haller's a's, the external and internal arcuate ligaments of the diaphragm. hemal a., hæmal a., the arch formed by the body and processes of a vertebra, a pair of ribs, and the sternum, or other like parts; also the sum of all such arches. hyoid a., the second fetal arch which persists in the styloid process, the stylohyoid ligament, and lesser cornu of the

hyoid bone. Langer's axillary a., a thickened border of fascia forming a bridge across the occipital groove. malar a., the zygomatic bone. mandibular a., the fetal arch whence are developed the jaw bones, with the malleus and incus. nasal a., the arch formed by the nasal bones and by the nasal processes of the superior maxilla. neural a., the arch of a vertebra formed by its pedicles and lamina, also the sum of all such arches palatine a's, the pillars of the fauces, the two arches of mucous membrane inclosing the muscles at the sides of the passage from the mouth to the pharynx. They are anterior or glossopalatine arches and posterior or pharyngopalatine arches. palmar a., deep, an arch formed in the palm by the communicating branch of the ulnar and the rachal artery palmar a., superficial, an arch in the palm forming the termination of the ulnar artery paraphyseal a., the embryonic structure in the roof of the third ventricle of vertebrates from which the paraphysis develops pharyngeal a's, the branchial arches of the fetus pharyngopalatine a., the posterior pillar of the fauces plantar a., the arch formed by the external plantar artery and the dorsalis pedis **postaural a's**, the branchial arches **postvelar a.**, the embryonic structure in the roof of the third ventricle from which tela choroidea superior develops **pubic a.,** a portion of the pelvis formed by the rami of the ischia pulmoand of the pubic bone on each side nary a., the fitth of the aortic arches on the left side it becomes the pulmonary artery. Riolan's a., the arch formed by the transverse meso-colon. Shenton's a. Same as Shenton's line, under line stylohyoid a., one of the embryonic arches made up of four segments, viz the pharyngobranchial, which develops into the styloid process, the epibranchial, developing into the stylohyoid ligament, the ceratobranchial and the hypobranchial, which together develop into the lesser cornu of the hyoid bone supraciliary a., the supraciliary ridge supra-orbitala., a bony arch formed by the prominent margin of the orbit. tarsal a., either of two arternal arches, derived from the internal palpebral arteries, encircling the upper and lower lids tendinous a., the edge of an opening in a fascia which gives passage to an artery. thyrohyoid a., the third fetal arche its cartilage is represented by the greater cornu of the hyoid bone Treitz's a., an arch composed of the left superior colic artery and the mesenteric vein, and lying between the ascending portion of the duodenum and the inner edge of the left kidney. a. of a vertebra, the arching portion of a vertebra inclosing the spinal foramen. visceral a's, the fetal arches. Zimmermann's a., a non-existent aortic arch of the embryo, formerly supposed to exist and to explain the origin of certain occasionally occurring vessels between the fourth and fifth arches zygomatic a., the arch formed by the malar and temporal bones

archæocyte (ar'ke-o-sīt). See archeocyte.

archæus (ar-ke'us). Paracelsus' term for the vital principle, the living force in the body or the animate universe.

Archagathus (artsh-ag'ath-us). A Greek surgeon who emigrated to Rome in 210 A D

 archamphiaster (ark-am'fe-as-ter) [Gr. ἀρχή first + ἀωςί around + ἀστήρ star] Any amphiaster producing polar globules

Archangelica (ar-kan-jel'ik-ah) [L. from Gr \dot{a} ρχαγγελικός archangelic] A genus of umbelliferous plants. See Angelica.

archebiosis (ar"ke-bi-o'sis) [Gr. ἀρχή beginning + βίος life]. The supposed spontaneous generation of organisms

archecentric (ar-ke-sen'trik) [Gr ἀρχή beginning + centric]. Denoting a primitive type of structure from which the other types in the members of the group are derived.

archegenesis (ar-ke-jen'es-i-) [Gr. ἀρχή beginning + γένεσις reproduction]. Same as archebiosis.

archegonium (ar-ke-go'ne um) [Gr. ἀρχή beginning + γόνος tace]. The female organ of a cryptogamic plant taking part in the formation of sexually produced spores
 Cf. antheridium.

archenteron (ar-ken'ter-on) [Gr ἀρχή beginning + ἔντερον intestine]. The cavity formed by the invagination of the blastoderime vesicle during the gastrula stage, and opening by the blastopore. Called also calenteron.

archeocinetic (at"ke-o-sin-et"ik) Archeokinetic. **archeocyte** (ar'ke-o-sit) [Gr ἀρχαῖος ancient + κύτος cell] Any free or wandering ameboid cell

archeokinetic (at"ke o-kin-et'ik) [Gr ἀρχαῖος ancient + κίνησίς motion] A term applied to the primitive type of motor nerve mechanism, as seen in the peripheral and ganglionic nervous systems Cf. neokineta and paleokinetae.

archepyon (ar-kep'e on) [Gr $\dot{a}\rho\chi\dot{\eta}$ original $+\pi bo\nu$ pus]. Very thick, cheesy pus

archesperm (ar'ke-sperm) The fertilized contents of an archegonium.

archespore, archesporium (at/ke-spōr, ar-ke-spo/re-um) [Gi ἀρχή first + σπόρος seed]. The mass of cells which give use to mother spore cells

archetype (ar'ke-tip) [Gr $\dot{a}\rho\chi\dot{\eta}$ original + $\tau\dot{\nu}\pi\sigma$ type]. An ideal, original, or standard type or form

archiblast (ar'ke-blast) [Gr ἀρχή first † βλαστός germ] 1. The tormative material or protoplasm of an egg 2. His' term for the fundamental part of the blastodermic layers as distinguished from the parablast or peripheral portion of the mesoderm.

archiblastic (ar-ke blas'tik). Derived from, or pertaining to, the archiblast

archiblastoma (ar"ke blas-to'mah). A tumor derived from archiblastic or parenchymatous material.

archicarp (ar'ke karp). See ascogonium.

archicenter (ar'ke-sen'ter) [Gr ἀρχι first + κέντρον center] An archetype, an organ or organism which is the primitive form from which another organ or organism is descended.

archicentric (ar ke-sen'ttik). Pertaining to an archicenter

archicyte (ar'ke-sīt) [Gr ἀρχι- first + κύτος cell]. A feithzed egg before segmentation has taken place.

archicytula (ar-ke sit'u-lah) [Gr ἀρχι- first + κότος cell] A fertilized egg cell in the stage in which the nucleus is first discernible.

archigaster (ar'ke-gas ter) [Gι. ἀρχι· first + γαστήρ belly] The primitive alimentary canal of the embryo

archigastrula (ar ke-gas'tru-lah) [Gr. ἀρχι- first + gastrula] The gastrula in its most primitive form of development

Archigenes (ar-kij'en ēz) A celebrated Greek physician, born at Apamea in Syria. He practised in Rome (98 117 A D), and wrote several works, some portions of which are preserved

archigenesis (ar-ke jen'es-is). Same as arche-

archigonocyte (ar-ke-gon'o-sīt) [Gr ἀρχι- first + ganacyte] The primary germ-cell formed by segmentation of the fertilized oyum.

archikaryon (ar-ke-kar'e-on) [Gr ἀρχι- first + κάρυον nucleus]. The nucleus of a fertilized egg.

archil (ar'kil) The lichen Roccel'la tincto'ria; also a violet coloring-matter from this and other lichens.

archimonerula (ar"ke mo-ner'u-lah) [Gr ἀρχιfirst + monerula] The monerula while undergoing a primitive and total cleavage.

archimorula (ar-ke-mor'u-lah) [Gr ἀρχι- first + morula] A mass of cells arising from the division of the archicytula and preceding the archigastrula.

archinephron (ar-ke-nef'ron) [Gr. ἀρχι- beginning + νεφρός kidney]. The wolffian body. See body, wolffian.

archineuron (ar-ke-nu'ron) [Gr. ἀρχι- beginning + νεθρον nerve]. The neuron at which an efferent impulse starts (Waldeyer).

archipallial (ar-ke-pal'e-al). Pertaining to the archipallium.

archipallium (ar-ke-pal'e-um) [Gr. ἀρχι- first + pallium]. The olfactory cerebral cortex or pallial portion of the rhinencephalon. It includes the hippocampus and part of the gyrus hippocampi. Cf. neopallium.

archiplasm (ar'ke-plazm) [Gr. $\delta\rho\chi\iota$ - first + $\pi\lambda\delta\sigma\mu\alpha$ something formed]. I The most primitive living matter. 2. The substance of which the fertilized ovum consists.

archisome (ar'ke-som). Archiplasm.

archispore (ar'ke-spör). Same as archespore.

archistome (ar'kis-tōm) [Gr. άρχι- first + στόμα mouth]. Same as blastopore.

architis (ar-ki'tis) [Gr. ἀρχός anus + -ιτις inflammation]. Inflammation of the anus; proctitis.

archocele (ar'ko-sēl) [Gr. ἀρχός anus + κήλη hernia] Hernia of the rectum.

archocystocolposyrinx (ar''ko-sis-to-kol-po-si'-rinks) [Gr ἀρχός anus + κύστις bladder + κόλπος vagina + σῦριγξ pipe]. Fistula of the anus, vagina, and bladder

archocystosyrinx (ar"ko-sis-to-si'rinks) [Gr. $\delta \rho \chi \delta s$ anus $+ \kappa \dot{\nu} \sigma \tau \iota s$ bladder $+ \sigma \hat{\nu} \rho \iota \gamma \xi$ pipe]. Fistula of the anus and bladder.

archon (ar'kon). Vaughan's term for a common poisonous radical common to all proteins.

archoplasm (ar'ko plazm). Boveri's name for the substance composing the attraction sphere and the entire achromatic figure.

archoptoma (ar-kop-to'mah) [Gr. $\dot{\alpha}\rho\chi\dot{\delta}s$ anus + $\pi\tau\hat{\omega}\mu\alpha$ fall]. A prolapsed portion of the rectum.

archoptosis (ar-kop-to'sis) [Gr. ἀρχόs anus + πτῶσιs fall]. Prolapse of the lower rectum.

archorrhagia (ar-kor-ra'je ah) [Gr ἀρχός anus + ρηγνύναι to burst forth]. Hemorrhage from the rectum

archorrhea (ar-kor-e'ah) [Gr. ἀρχός anus + ροία flow]. A liquid discharge from the rectum.

archosome (ar'ko-sōm). Archiplasm.

archostegnosis, archostenosis (ar''ko steg-no'sis, ar''ko-ste-no'sis) [Gr. ἀρχός anus + στένωσις stricture]. Stricture of the rectum.

archusia (ar-ku'se-ah). A hypothetical substance necessary for cell growth.

archyl, archyle (ar'kil, ar-ki'le) [Gr. ἀρχή beginning + ὕλη matter] Same as protyl.

arciform (ar's f-orm) [L. ar'cus bow + for'ma shape]. Bow shaped; arcuate.

arctation (ark-ta'shun) [L. arcta'tio]. Contracture or narrowing of any canal or opening.

Arctium (ark'she-um) [L]. A genus of composite-flowered plants A. lap'pa, the European burdock, and A. mi'nus, American burdock, are diuretic, alterative, and antirheumatic. Dose of fluidextract, 10-00 min (0.000-4 c.c.).

Arctostaphylos (ark-to-staf'il-os) [Gr. ἄρκτος bear + σταφυλή grape]. A genus of ericaceous plants. See uva-ursi.

arcual, arcuate (ark'u-al, ark'u-āt) [L. arcua'lis]. Arched; arc-shaped.

arcuation (ark-u-a'shun) [L. arcua'tio]. Curvature; especially an abnormal curvature.

arcus (ar'kus), pl. ar'cus [L.]. An arch, bow, or arc. See arch. a. adipo'sus, arcus senilis. a. ante'rior atlan'tis [B N A], the anterior arch of the atlas. a. aor'tæ, the arch of the aorta. a. costa'rum [B N A], the arch formed by the ribs. a. denta'lis [B N A], the dental arch. a. glossopalati'nus [B N A], the anterior pillars

of the fauces. a. juvena'lis, a. juveni'lis, a ring around the corneal margin of the iris, sometomes seen in young persons and resembling the arcus senilis. a. lumbocosta'lis latera'lis [B N A], the ligamentum arcuatum externum. a. lumbocosta'lis media'lis [B N A], the hga mentum arcuatum internum. a. palati'ni, the pillars of the fauces. a. parieto-occipita'lis, the curved convolution formed by the backward continuation into the occipital lobe of the superior postcentral sulcus. a. pharyngopalati'nus [B N A], the posterior pillars of the fauces. a. poste'rior atlan'tis [B N A], the posterior arch of the atlas. a. seni'lis, a ring of degeneration seen about the corneal periphery in aged persons. a. supercilia'ris [B N A], the superciliary arch. a. tar'seus, tarsal arch. See arch. a. tendin'eus, tendinus arcus. a. ver'tebræ [B N A], arch of a vertebra. a. vola'ris profun'dus [B N A], a. vola'ris superficia'lis [B N A], the palmar arches. See under arch. a. zygomat'icus, the zygomatic arch.

ardanesthesia, ardanæsthesia (ar-dan-es-the'-ze-ah) [L. ar'dor heat + anesthesia]. Thermanes-thesia.

ardent (ar'dent) [L. arde're to glow] 1. Hot or feverish. 2. Characterized by eager desire.

ardor (ar'dor) [L]. 1. Intense heat. 2. Eager desire. a. uri'næ, a scalding sensation during the passage of urine. a. ventric'uli, pyrosis or heartburn.

area (a're-ah) [L.]. A limited space or plane surface. acoustic a., a. acus'tica [B N A], the triangular lateral and median part of the floor of the fourth ventricle over which pass the strice medullares acustic. The part below the strae forms the trigonum acustic. **alisphenoid a.**, the surface of the great wing of the sphenoid bone. a. amniot'ica, the transparent part of the human embryo. anteroparietal a., the part of the outer surface of the parietal bone in front of the parietal eminence. aortic a., the area on the chest over the inner end of the association a's, second costal cartilage. areas in the cerebral cortex whose function it is to correlate the impressions received and start motor impulses in harmony with them auditory a., an auditory center. Bamberger's a., an area of dulness in the left intercostal region: indicative of pericardial effusion Betz cell a. See psychomotor a. Broca's a. See a parolfactoria catchment a., the area from which water will flow to a water supply. a. cel'si. Same as alopecia areala Cohnheim's a's, dark areas outlined by bright matter, seen on cross-section of a muscle-fiber. **cord a.**, that part of the cerebral cortex where lesions will produce degeneration of the spinal cord. **cortical a.**, a portion of the cerebral cortex which can be diffrom neighboring portions; called also cortical field. a. cribro'sa, the macula cribrosa. a. of critical definition, that part of an optic image within which the detail is clear. crural a., a space at the base of the brain between the chiasm and the pons. dangerous a., the ciliary region of the eye, so called because when injured the gravest results embryonic a., the area germinamay follow tiva. excitable a., the motor area in the cerebral cortex. excitomotor a., that area of the cerebral cortex which incites voluntary motion. Flechsig's a's, three areas, anterior, lateral, and posterior, on each half of the medulla oblongata, marked out by the fibers of the vagus and hypoglossal nerves frontal a., the convex surface of the frontal bone. frontoparietal a., the frontal lobe of the cerebrum with the ascending parietal convolution. genital a's, areas on the inferior turbinal and upper part of the nasal septum which become engorged during menstruation. germinal a. a. germinati'va, the round place on one side of the vitelline membrane where the development of

the embryo begins glove-a., an area of anesthesia of the fingers, hand, and wrist in certain cases of multiple neuritis. hyaline a's, limited areas of hyaline substance surrounding the cell-nests in elastic cartilage. hysterogenic a's. See hysterogenic points, under point Kiesselbach's a., an area on the anterior part of the nasal septum above the intermaxillary bone my's field, under field **Krönig's a**. See K10-a's of Langerhans. See islands of Langerhans, under Island Lannier-Hackerman a., the region of the lower pharynx and upper esophagus, where diverticula most frequently develop

a. luna ta, a cerebellar area situated cephalad of the postlunate fissure.

a. martegia'ni, a slightly enlarged space at the optic disk, marking the beginning of the hyaloid canal. midfrontal a., the median part of the frontal area. mitral a., the area on the chest over the apex of the heart. **motor a.**, the ascending frontal and ascending parietal convolutions where the nerve-centers for motion are thought to be situated. **occipital a.** 1. The area of the brain below the occipital bone. 2 The outer surface of the occipital bone above the superior curved line **olfactory a.**, the cerebral area, including the olfactory bulb, tract, and trigone, and the anterior portion of the callosal convolution and the uncus a. opa'ca, the outer opaque part of the germinal area. a. parapyramida'lis, the area of the cerebellum lying caudad of the parapyramidal fissure. parietal a., that portion of the brain below the parietal bone on each side a. parolfacto'ria [brocæ], a small gyrus on the mesial surface of the cerebral hemisphere immediately in front of the gyrus subcallous called also Broca's area and gyrus obfactorius medialis of Retzius. a. pellu'cida, the central clear part of the germinal area a. perfora'ta, the perforated space. See space a. placenta'lis, that part of the ectoderm of the ovum which is connected with the wall of the uterus posteroparietal a., that part of the outer surface of the parietal bone that lies behind the parietal eminence a. postpterygoi'dea, the area of the cerebellum situated caudad to the area pterygoidea a. postre'ma, an area on the floor of the fourth ventricle bounded by the tenia medullaris and the funiculus separans precentral a. See psychomotor a. projection a's, Flechsig's name for the areas of the cerebral cortex which are concerned in the sensory and motor functions of the brain, being connected by projection fibers with the underlying parts of the central nervous system. psychomotor a., the area of the cerebral cortex which is concerned with the integration and the efferent transmission of the motor expression of the results of sensorial stimulation. It is situated just in front of the central fissure of Rolando. It corresponds with the precentral area of Campbell and is also known as the Betz cell area a. pterygoi'dea, the area of the cerebellum between the postlunate and the postpterygoid fissures pulmonary a., an area on the chest at the second left intercostal space where sounds formed at the pulmonary orifice of the right ventricle are heard best pyriform a., the pyriform lobe. See under lobe rolandic a., the excitomotor region of the brain sensation a., sense a., the area of distribution of a particular sensory nerve sensorial a., the general surface of the cerebrum, especially that part which lies between the interparietal, parietal, occipital, and callosomarginal fissure septal a., the mesial surface of either half of the septum lucidum silent a., an area of the brain surface injury of which produces no motor or sensory impressions now called association a. Spencer's a., an area on the cortex of the frontal lobe of the brain just outside of the olfactory tract and anterior to the point where it joins the temporosphenoid lobe. Faradic stimulation of this area influences respiratory movements. a. spongio'sa, the peripheral part of the dorsal gray column of the spinal cord adjoining the substantia gelatinosa. squamoso-

temporal a., the outer surface of the squamous bone. a. stria'ta, the part of the occipital lobe of the cerebral cortex containing the line of Gennari, it is the visual center subumbilical a., a patch of superficial tenderness on the abdominal surface. superfrontal a., the upper part of the frontal area temporal a., a patch above the temporal fossa, reaching to the outer canthus of the eye. tricuspid a., the area of the chest wall over the lower portion of the body of the sternum, where the sounds formed at the tricuspid valve are best heard trigger a., an area, stimulation of which may cause physiologic or pathologic changes in another area. a. Vasculo'sa, that part of the area opaca where the bloodvessels are first seen. vertical a., an area of tenderness evactly over the vertex. visual a., the angular gyrus and occipital lobe. visuopsychic a., the area of the cerebral cortex concerned in the interpretation of visual sensations visuosensory a., the area of the cerebral cortex concerned in the reception of visual sensations. vitelli'na, the yoke area in mesoblastic eggs be-yond the area vasculosa. Wernicke's a., a cerebral area composed of supramarginal and angular convolutions and portions of the first and second temporal convolutions.

areatus (ar-e-a'tus). Occurring in patches.

Areca (ar'e-kah) [I.; East Indian]. 1. A genus of palm trees, chiefly Asiatic. A. cal'echu affords betel-nut and an inferior catechu. The fruit is tonic, astringent, and anthelmintic. Dose of fluidextract, 00-180 min. (3.75-11.25 c.c.).

arecaidin (ar-e-ka'id-in). Methyl tetrahydronicotinic acid, C₇H₁₁NO₂, an artificial derivative of arecalin: anthelmintic.

arecain (ar'e-ka-in). A colorless, crystalline alkaloid, CH₃N C₅H₇COOH, from betel nut—It has vermifuge properties and is actively poisonous.

arecalin (ar'ek-al-in). An oily miotic and anthelmintic alkaloid, CH₃ N C₆H₇ CO O CH₃, from betel-nut. Dose, $\frac{1}{20}$ $\frac{1}{10}$ gr. (0 003 0 006 gm.). **a.** hydrobromate, a white, crystalline compound, C₈H₁₃NO₂ HBr—used as a miotic in a 1 per cent solution and as an anthelmintic in veterinary medicine.

arecane, arekane (ar'ek-ān) An oily, volatile base from betel-nut: purgative, sialogogue, and heart depressant.

arecin (ar'es in). A cinchona alkaloid, $C_{23}H_{26}O_4N_2$, from cusco bark. It is isomeric with cusconin and has properties analogous to those of quinin.

arecolin (ar-ek'o-lin). Same as arccalin.

areflexia (ah-re-flek'se-ah) [Gr. α neg. + reflex]. Absence of reflexes.

aregenerative (ah-re-jen'er-a-tiv). Characterized by absence of regeneration, more especially of blood-corpuscles in aplastic anemia.

arenation (ar-en-a'-hun) [L. are'na sand] Ammotherapy; treatment of disease by hot sandbaths.

arenoid (ar'en-oid) [I.. are'na sand + Gr. eldos form]. Resembling sand.

areocardia (ar-e-o-kar'de ah) [Gr άραῖος thin + καρδία heart]. Bradycardia.

areola (ar-e'o-lah), pl. are'ola [L. dim. of a'rea space]. 1. Any minute space or interstice in a tissue 2. The darkish ring around the nipple. Chaussier's a., the areola of induration of a malignant pustule. a. papilla'ris, the darkened ring around a woman's nipple. second a., a ring which, during pregnancy, surrounds the areola papillaris. umbilical a., a pigmented patch which sometimes surrounds the navel. vaccinal a., the ring of redness that surrounds a vaccine pustule.

areolar (ar-e'o-lar). Containing minute interspaces. areolitis (ar-e-o-li'tis). Inflammation of the areola of the breast.

- areometer (ar e-om'et-er) [Gr. ἀραιός light + μέτρον measure]. A hydrometer.
- areometric (ar-e-o-met'rik). Pertaining to hydrometry.
- areometry (ar-e-om'et-re). Hydrometry.
- Aretæus (ar-et-e'us) A famous Greek physician, born in Cappadocia: lived in the first century A. D. He wrote a work on acute and chronic diseases in eight books.
- arevareva (ah-ra"vah-ra"vah) [Tahitian]. A severe skin disease, with general decay of the vital powers, said to be due to excessive use of kava.
- Arg. Abbreviation for L argen'tum, silver.
- **argaldin** (ar-gal'din). An albumin-silver preparation, said to liberate formaldehyd when in contact with mucous surfaces—used in nose and throat work.
- **argamblyopia** (ar"gam-ble-o'pe-ah) [Gr. ἀργόs idle + amblyopia]. Amblyopia due to long disuse of the eye.
- **Argand burner** [Aimé Argand, Swiss physicist, 1755-1803] See burner.
- Argas (ar'gas). A genus of ticks A. america'nus. Same as A. persicus A. minia'tus. Same as A. persicus, the fowl tick, Persian tick, or miana bug, a cosmopolitan tick, one of the most important parasites of poultry. It sucks the blood of fowls, producing a weak and unthrifty condition of a flock. In Persia, India, Australia, and Brazil it acts as the carrier of fowl spirochetosis Called also adobe 'tick, blue bug, and tampan A. reflex'us, a tick found on pigeons. Its bite causes local inflammation in man.
- **Argasidæ** (ar-gas'id e). A family of the Ixodidæ, distinguished from the true ticks by absence of the scutum. The genera are: *Areas, Ornthodorus*, and *Alectorobius*
- Argasinæ (ar-gas'i ne). A subfamily of the Arachnidæ, including the ticks
- argatoxyl (ar-gah-toks'il). A monosilver salt of paraminophenylarsonic acid, used in septic conditions
- argein (ar'je-in). A colloidal silver proteinate recommended for use in gonorrhea.
- **argenol** (ar'jen-ol). An antiseptic silver albuminoid preparation.
- argentaffine (ar-jen'taf-in) [L. argen'tum silver + affin't) having affinity for Having affinity for silver; staining with silver solutions
- **argentalbuminose** (ar-jen-tal-bu'min-ōs). Silver nitrate ethylenediaminalbuminose: used in gonorrhea in 0.25 per cent solution
- argentamid (ar-jen-tam'id) [L argen'tum silver + amid]. An astringent and antiseptic liquid preparation of silver
- **argentamin** (ar-jen-tam'in) [L argen'tum silver + amin] A colorless liquid, consisting of a solution of silver phosphate in an aqueous solution of ethylenediamin. It is used in gonorrhea and conjunctivitis in 1 1000 solution, also as a disinfectant.
- argentarsyl (ar-jen-tar'sil) A preparation of iron cacodylate and colloidal silver—used in malaria.
- **argentation** (ar-jen-ta'shun) [L. argen'tum silver]. Staining with a silver salt.
- argen'ti bro'midum, a. chlo'ridum, etc. See under silver.
- argentic (ar-jen'tik). Containing silver in its higher valency.
- argentide (ar-jen'tīd). A proprietary concentrated solution of silver iodid used as a germicide in cystitis, gonorrhea, etc
- argentiform (ar-jen'tif-orm) Silver hexamethylenamin, a salt said to contain 35 per cent. of silver and having germicidal power
- **argentine** (ar-jen'tīn) [L argenti'nus] Pertaining to or containing silver
- argentol (ar'jen-tol) Quinaseptol silver, a com-

- pound, C₉H₅N.SO₂(OH)OAg, used as a local astringent and antiseptic in surgery and for gonorrhea
- argentoproteinum (ar-jen"to-pro-te-i"num). Silver protein
 a. for 'te, strong silver protein
 a. mi'te, mild silver protein.
- **argentose** (ar'jen-tōs). An astringent and germicidal silver compound.
- **argentous** (ar-jen'tus). Containing silver in its lower valency.
- argentum (ar-jen'tum), gen. argen'ti. Latin for silver. See silver.
- **arginase** (ar'jin-ās). A ferment existing in the liver which splits arginin into urea and ornithin.
- **arginin** (ar'jin-in). An amino-acid, amino-guamidin valerianic acid, NH₂C(NH)₂(CH₂)₃CHNH₂CO₂H, produced by the hydrolysis or digestion of proteins. It is one of the hexone bases (Schulze and Steiger, 1886).
- **argobol** (ar'go-bol). A yellowish-white powder said to contain 20 per cent. of silver, used in gonorrhea, vaginitis, and metritis.
- argochrome (ar'go-krōm). A sulver compound of methylene blue: used by intravenous injection in staphylococcus infections
- **argoferment** (ar-go-fer'ment). A preparation of colloidal silver electrolytically prepared.
- argoflavin (ar-go-fla'vin). The silver salt of acriflavin used intravenously in staphylococcus infections.
- argol, argols (ar'gol, ar'golz). Crude cream of tartar from wine-casks.
- **argon** (ar'gon) [Gr ἀργός inert]. A chemic element discovered in the atmosphere in 1895. It is one of the inert gases, its symbol is Λ, its atomic weight is 59.88
- argonin (ar'go-nin). A white powder consisting of a combination of silver intrate and casein. It is soluble in water and contains 4.25 per cent of metallic silver: used in 1.2 per cent, solution as an injection in gonorrhea and in ophthalmia neonatorum.
- **argulan** (ar'gu-lan) A sulfamino-antipyrin-mercury compound recommended by Kolle in the treatment of relapsing fever.
- **argydide** (ar-ji'did). A proprietary silver preparation, known as milk of silver iodid, said to be a non-irritating antiseptic for local use
- **Argyll Robertson pupil** [Douglas Argyll Robertson, Scotch physician, 1837–1908] See pupil
- argyn (ar'jin) A proprietary colloid compound of silver oxid and serum albumin containing 25 to 30 per cent. of silver—used like argyrol, in 10 to 25 per cent solution
- **argyria** (ar-jir'e-ah) [Gr. ἄργυρος silver] Discoloration of the skin or tissues, due to the free use of silver preparations.
- argyriasis (ar-jii 1'as is) Argyria
- argyric (ar-ji'rik). Pertaining to, or caused by, silver.
- argyrin (ar'jir-in). An alkaloid from horse-chestnut useful in hemorrhoids
- argyrol (ar'jir-ol). A vitellin silver preparation, i. e, mild silver protein, in the form of brown scales, soluble in water—used in gonorrhea, conjunctivitis, laryngitis, etc., in a o 5-2 5 per cent—solution.
- **argyrosis** (ar-jir-o'sis) [Gr. ἄργυρος silver]. Argyria or other abnormal or diseased condition due to the use of a silver preparation
- arheol (ah-re'ol) A proprietary name for santalol.
- **arhinencephalia** (ah"rin-en-sef-a'le-ah) [Gr. a neg. + rhinencephalon] Congenital absence of the rhinencephalon, cyclopia.
- arhinia (ah-rin'e-ah) [Gr. α priv. + ρίς nose]. Congenital absence of the nose.
- arhovin (ar-ho'vin). A combination of diphenylamin and thymolbenzoic acid ester: used in gonorrhea.

arhythmia (ah-rith'me-ah) [Gr. α priv. + ῥυθμός rhythm] Any variation from the normal rhythm of the heart-beat The various forms of arhythmia are sinus arhythmia, extrasystole, heart-block, auricular fibrillation, auricular flutter, pulsus alternans, and paroxysmal tachycardia. continuous a., irregularity in the force, equality, and sequence of the pulse-beat, continuing as a permanent phenomenon called also perpetual a. inotropic a., disturbance of the cardiac rhythm due to disturbances of the contractility of the heart muscle. nodal a. See nodal rhythm, under rhythm perpetual a., arhythmia occurring as a permanent respiratory a., an exaggeration of condition the normal respiratory increase and expiratory decrease in the frequency of the heart's action. Called also juvenile a and sinus irregularity. sinus a., irregularity of the heart-beat dependent on interference with the impulses originating at the smoauricular node.

arhythmic (ah-rith'mik) [Gr α priv. + ριθμός rhythm] Characterized by absence of rhythm.

aricin (ar'ıs-in) [Arıca, a town of Chih] An alkaloid, C₂₃H₁₈N₂O₄, from a variety of cinchona bark, with properties analogous to quinin.

aril (ar'ıl) [L. an'l'lus dried grape]. An accessory covering or appendage of seeds

arillode (ar'il ôd) An appendage of certain seeds attached to the micropyle or raphe.

aristin (ar is'tin). A crystalline principle from various species of Aristolochia.

aristochin (ar-is'to-kin). A white, tasteless powder, diquimn carbonic ester, containing 96 per cent of quinin.

aristogenics (ar is-to-jen'iks) [Gr ἄριστος best + -γεν to produce] Same as eugenies.

aristol (ar is'tol) [Gr ἄριστος best]. Dithymoldnodd, (CH)2CH C6H2I(OH) CH3, a brownish-red powder used as a deodorant antiseptic dressing like nodorom. It is used either in the form of the powder or in a 5-10 per cent, ontment made with lanolin or vaselin. Called also annidalin and nodothymol.

Aristolochia (ar"is-to-lo'ke-ah) [L.; Gr. ἄριστος best + λόχια lochia] A genus of shrubs and herbs of many species often actively medicinal. See serpontaria and guaso. A. reticula'ta is Texas snakeroot. A. serpenta'ria is Virginia snakeroot.

aristolochin (ar"is-to-lo'kin) A poisonous principle, C₂H₂₂N₂O₁₇, obtainable from *Artstolo'chia* serpenta'ria and other plants of the same genus

aristoquin (ar-is'to-kwin). Same as aristochin.

arithmomania (ah"rīth-mo-ma'ne-ah) [Gr ἀριθμός number + μανία madness] The insane habit of counting, with worriment about numbers

arkyochrome (ar'ke-o-krōm) [Gr. ἄρκυς net + χρῶμα color] Any nerve-cell in which the chromatic substance arranges itself in the form of a network. Cf gyrochrome, perichrome, and sticho-chrome

arkyostichochrome (ar"ke-o-stik'o-krōm) [Gr. ἄρκυς net + στίχος row + χρώμα color]. Any nerve cell which is both an arkyochrome and a stichochrome.

arlco-urease (arl'ko-u're-ās). A preparation of the enzyme of soy bean. As it decomposes urea it is employed in the quantitative estimation of urea in the scretions of the body.

Arlt's operation, sinus, trachoma (arltz)
[Ferdinand Ritter von Arlt, oculist in Vienna, 1812–
1887] See under operation, sinus, and trachoma.

arm (arm) [L. ar'mus]. The upper extremity from the shoulder to the hand; also, the part between the shoulder and the elbow as distinguished from the forearm bird a., reduction in size of the forearm from atrophy of the muscles. glass a., a neurosis seen in baseball pitchers, marked by spasm of the pronator teres muscles. golf-a., a form of neurosis seen in golf-players after excessive exercise.

armamentarium (ar"mah-men-ta're-um) [L.] The outfit of a practitioner or institution, including books, instruments, medicines, and surgical appliances

armarium (ar-ma're-um) [L] Same as armamentarium

armature (ar'mat-ūr) [L armatu'ra a defensive apparatus] The iron bar or keeper across the open end of a horse-shoe magnet

Armenian bole (ar-me'ne-an) A pale, reddish clay used in tooth-powders and sometimes for aphth.e.

armilla (ar-mil'ah), pl armil'iæ [L "bracelet"]. The annular enlargement of the wrist.

armoracia (ar-mo-ra'she-ah) [L]. Horse-radish. See Cochlearia

Arnal'dus Villanova'nus. A celebrated physician, born about 1235, who wrote extensively on medicine, alchemy, and religion.

Arndt-Schultz law. See under law.

Arneth's formula (at-nāts') [Joseph *Arneth*, German physician, born 1873] See under *formula*.

Arnica (ar'nik ah) [L] A genus of composite-flowered plants. The flower-heads (ar'nicæ flo'res) or root (ar'nicæ ra'dix) of A. mon'tana, or leopard's bane, are used as a cardiae stimulant, but in large doses are a poisonous depressant. It is largely employed in homeopathic practice. Dose of tincture, 5–30 min (0.333-2 c c); of the extract of the root, 1-3 gr (0.000-0.2 gm); of the fluidextract of the root, 5-30 min (0.333-2 c c), of the tincture of the root, 5-30 min (0.333-2 c c). The preparations of arnica are extensively employed for sprains, bruises, and painful swellings.

arnicin (at'nis in) 1. A bitter, acrid glucosid, $C_{20}H_{30}O_4$, from arnica. 2. A resmous basic principle, $C_{35}H_{54}O_7$, from arnica flowers

Arnold's bodies [Julius Arnold, German pathologist, 1835-1915] See under body.

Arnold's canal, ganglion, etc [Friedrich Arnold, German anatomist, 1803-1890]. See canal, ganghon, etc.

Arnold's test [V. Arnold, Austrian physician of 19th century]. See under tests.

Arnott's bed (ar'nots) [Neil Arnott, Scotch physician, 1788-1874]. See under bed.

arnotta, arnotto (ar-not'ah, -o) See annotto.

Arnou's sign (ar nooz') Sec under sign.

aroma (ah-ro'mah) [Gr ἄρωμα spice] The fragrance or odor, especially that of a spice or medicine or of articles of food or drink.

aromatic (ar o-mat'ik) [L. aromat'icus; Gr. ἀρωματικόs] 1 Having a spicy odor 2. A medicinal substance with a spicy fragrance and stimulant qualities a. compounds, a. series. See closed chain, under chain.

aromatin (ar-o'mat-in) 1. A commercial preparation used as a substitute for hops said to be from gentian root 2. A commercial preparation said to be a precipitated phosphate of iron.

aromin (ar-o'min). A fragrant alkaloid from urine containing benzene derivatives.

Aronson's serum (ar'on-sunz) [Hans Aronson, German bacteriologist, 1865 1919]. See under serum

arphoaline (ar-fo'al-in). An albumin preparation, each gram of which contains 0 006 gm. of arsenic with phosphorus used in cancer. Dose, 5-15 gr. (0 25-1 gm.)

arrachment (ar ash-mahw'). Extraction of a membranous cataract by pulling out the capsule through a corneal incision.

arrack (ar'ak) See arack.

arrectores pilorum (ar-ek-to'rez pi-lo'rum) [L. "the raisers of the hair"]. The minute involun-

tary muscles of the skin whose contraction produces the appearance called cutis anserina, or goose-flesh.

arrested (ar-es'ted). Detained; stopped. The head of the child is said to be arrested when it is detained, but not impacted, in the pelvic cavity.

arrhenal (ar-e'nal). Disodium methylarsenate, CH₃OAs(ONa)₂, a crystalline compound used as a tonic in malarial cachexia, tuberculosis, cancer, etc. Called also stenosin and neoarsycodyl. Dose, ½-1½ gr. (o 033-0.007 gm.).

arrhenokaryon (ar-e-no-kar'e-on). An organism which is produced by androgenesis.

arrhinencephalia (ah"rin-en-sef-a'le-ah). See arhinencephalia.

arrhinia (ah-rin'e-ah). See arhinia.

arrhythmia (ah-rith'me-ah). Same as *arhythmia*. **arrhythmic**. See *arhythmic*.

arrosion (ar-o'zhun) [L. ab away + ro'dere to gnaw]. Wasting away of a vessel-wall under pressure.

arrow, caustic (ar'o). An arrow-shaped bit of nitrate of silver or other caustic substance: used mainly for insertion into malignant tumors.

arrowroot. A nutrient starch derived from the rhizome of *Maran'ta arundina'cea* and other plants. It is used as a non-irritating food in fevers and conditions of gastric irritability.

arrow-wood. Euonymus.

Arroyo's sign (ar-ro'yōz) [Carlos F. Arroyo, American physician, born 1892]. Asthenocoria.

arsabenzol (ar-sab en'zol) Salvarsan.

arsacetin (ars-as'e-tin). Sodium para-acetyl-amino-phenyl-arsinate, or acetyl-atoxyl, CH₂ CO.NH.C₆-H₄ AsO(OH).ONa, a white, crystalline powder, an organic arsenic compound, used in syphilis and protozoan diseases (Ehrlich) Dose, subcutaneously, 1½-9 gr (0 t 0 6 gm), internally, 1 gr. (0 005 gm) three times a day.

arsamin (ar'sam-in). Same as atoxyl.

arsaminol (ar-sam'ın-ol). A Japanese make of arsphenamin

arsan (ar'san). A compound of arsenic and glidin, used in skin and protozoan diseases.

arsanilate (ar-san'il-āt). A salt of arsenilic acid.

arsanthran (ar-san'thran) Sodium acetyl-anthranilarsenate.

arsenate (ar'sen-āt). Any salt of arsenic acid.

arsenauro (ar-sen-aw'ro) An antiluetic solution of the bromids of gold and arsenic.

arsenfast (ar-sen-fast'). Resistant to the action of arsenic

arsenferratose (ar-sen-fer'at-ōs). A solution of ferratin in syrup alterative and tonic.

arsenglidin (ar-sen-gli'din). Same as arsan.

arsenhemol (ar-sen-hem'ol). A compound of arsenic with hemol It is a brown powder: used as an alterative and hematinic in nervous and skin diseases. Dose, 1½ gr. (o.1 gm.). in pills three times a day.

arseniasis (ar-sen-i'as-is). Chronic arsenical poisoning.

arsenic (ar-sen'ik). Pertaining to or containing arsenic in its pentad valency.

arsenic (ar'sen-ik) [L. arsen'icum, arse'nium, or arse'nium; from Gr ἄρσην strong]. 1 A medicinal and poisonous element; it is a brittle, lustrous, grayish solid, with a garlicky odor. Symbol, As; atomic weight, 710, specific gravity, 58 The salts of arsenic are used medicinally as tonics and alteratives in chronic malaria, anemia, asthma, scrofula, and in chronic eczemz, etc. Its organic compounds are used in the treatment of syphilis and allied conditions. 2. A popular name for arsenic trioxid (q. v.). a. bromid, a crystalline compound, AsBr₃: used in diabetes. Dose, ³₃₀—

‡ gr. (0.0022-0.008 gm.). **a.** chlorid, a very poisonous liquid, AsCl₃. **a.** disulphid, realgar, As₂S₂: employed as a pigment, and sometimes as a medicine. **a.** iodid, a red, crystalline compound, AsI₃: used in coryza and skin diseases. Dose, ½_R gr (0.002 gm). **a.** trichlorid, AsCl₃, one of the constituents of the lethal war gas vincennite. **a.** trioxid, white arsenic or arsenous acid, a white or glassy compound, Λ×₂O₃, with a sweetish taste used locally as a depilatory and caustic. It has been used in 0 1 per cent. solution in trypanosome diseases Dose, ½₀ - ½₀ gr. (0.0022-0.004 gm)) Liquor ac'udi arseno's is a 1 per cent. solution, and is given in doses of 3-5 min. (0.2-0.3 c.c.). **a.** trisulphid, orpiment, As₂S₃ employed as a pigment and sometimes as a medicine. white a., arsenic trioxid.

arsenical (ar-sen'ik-al) [L. arsenica'lis]. Pertaining to or containing arsenic.

arsenicalism, arsenism (ar-sen'ik-al-izm, ar'senizm) Chronic arsenical poisoning.

arsenic-fast (ar'sen-ik-fast) See arsenfast.

arsenicophagy (ar"sen-ik-of'aj-e) [arsenic + Gr. φαγεῖν to eat]. The habit of eating arsenic.

arsenicum (ar-sen'ik-um) [L.]. See arsenic.
arsenid, arsenide (ar'sen-id). Any compound of arsenic with another element.

arsenionization (ar-sen-e-o-niz-a'shun). The electric administration of the ions of arsenic as a protozoacid.

arsenious, arsenous (ar-sen'e-us, ar'sen-us). Containing arsenic in its lower or triad valency. **a. acid.** See under acid

arsenite (ar'sen-īt). Any salt of arsenous acid.

arsenium (ar-se'ne-um) [L.]. The element arsenic. arsenization (ar-sen-iz-a'shun) Treatment with arsenic

arsenobenzene (ar"sen-o-ben'zēn) A general term for the various arsenic compounds used in the treatment of spirochetal diseases

arsenobenzol (ar"sen-o-ben'zol). See arsphenamin. **arsenobillion** (ar-sen o-be'yon). The name given to a British-made arsphenamin.

arsenoblast (ar-sen'o-blast) [Gr ἄρσην male + βλαστός germ] The male element of a sexual cell: a masculonucleus.

arsenoceptor (ar-sen'o-sep-tor). A supposed chemic affinity in cells for arsenical preparations

arsenocerebrin (ar"sen-o-ser'e-brin) A proprietary preparation of cerebrin and sodium cacodylate for hypodermic use.

arsenoferratin (ar"sen-o-fer at-in) An arsenic iron albumin compound. Dose, 7½ gr (0 5 gm).

arsenogen (ar-sen'o-jen) A combination of iron (16 per cent), phosphorus (2 per cent), and arsenic (14 per cent.) with paranucleic acid.

arsenohemol (ar"sen-o-he'mol). Same as arsen-hemol.

arsenohygrol (ar-sen-o-hi'grol). A silver arsenic compound: used for syphilis.

arsenophagy (ar-sen-of'aj-e) [L. arse'nium arsenic + Gr. φαγεῖν to eat]. The habit of eating arsenic.

arsenophenol (ar''sen-o-fe'nol). An organic arsenical preparation, (OHC₆H₄As)₂, which has been employed as a spirillicide.

arsenophenylglycin (ar-sen-o-fen-il-gli'sin). A compound, [AsC₆H₄ NH.CH₂.COOH]₂, obtained by reducing the condensation product of atoxyl and chloracetic acid: used in trypanosomiasis.

arsenostyracol (ar"sen-o-sti'rak-ol). A preparation of arsenic and guaiacol cinnamic ester: used in tuberculosis

arsenotherapy (ar"sen-o-ther ap-e) [arsenic + Gr. θεραπεία treatment]. Treatment of disease by the use of arsenic and arsenical preparations.

arsenotriferrin (ar"sen-o-tri-fer'in). Arsentriferrin. arsenous (ar'se-nus). Containing arsenic in its lower valency. a. acid. See under acid.

arsenoxid (ar-sen-oks'id). A poisonous compound, m-amino-p-hydroxyphenylarsenous oxid, formed in the tissues of the body by the reduction of salvarsan after mixed mercurial and salvar-an treatment.

arsenphenolamin (ar"sen-fe-nol-am'in). Same as salvarsan.

arsentriferrin (ar-sen-tri-fer'in). A proprietary iron arsenoparanucleate containing iron, arsenic, and phosphorus. Used in anemia, neurusthenia, hysteria, and skin diseases. Dose, 5 gr. (0.33 gm.) three times a day after meals.

arsenum (ar-se'num). Latin for arsenic.

arsenyl (ar'sen-il). Same as arrhenal.

arsin (ar'sin) Any member of a peculiar group of volatile arsenical bases, formed when arsenous acid is brought in contact with albuminous substances. The typical arsin is AsH₃, a very poisonous gas, and was used in warfare. It causes hemolysis, jaundice, gastro-enteritis, and nephritis.

arsinic acid (ar-sın'ik). See under acid

arsoferrin (ar-so-fer'in). A proprietary tablet preparation of organic iron with arsenic and glycerophosphoric acid.

arsonate (ar'so-nāt). A salt of arsonic acid.

arsonic acid (ar-son'ik) See under acid

arsonium (ar-so'ne-um). The univalent radical, AsH₄, which acts in composition like ammonium.

arsonodiacetyl (ar"son-o-di-as'et-il). A pentavalent arsenical compound, diasetyl-3, 5-diamino-4 hydroxyphenylarsonic acid, suggested for use in syphilis and trypanosomiasis.

arsono-ethanol (ar"so-no-eth'an-ol). A pentavalent arsenical compound, β -(p-arsonophenyl) amino-ethanol, suggested for use in syphilis and trypanosomiasis.

arsonvalization (ar"son-val-iz-a'shun) [A. d'Ar-sonval, French physicist, born 1851] The use of electric currents which are interrupted with great rapidity

arsotropin (ar-sot'ro-pin). Tablets of arsenous iodid and belladonna extract, used in neuralgia and epilepsy

arsphenamin, arsphenamine (ars-fen-am'in) Diaminodihydroxy-arsenobenzene dihydrochlorid. [OH.C6H3(NH2 HC1) As]2 used in the treatment of syphilis, yaws, pernicious malaria, pernicious anemia, and other protozoan infections yellowish powder which rapidly oxydizes on exposure to air, and is, therefore, put up in vacuum tubes. As the acid solution is very painful, the substance is converted, immediately before injection, into an unstable sodium salt by the addition of sodium hydroxid solution. The administration is made either deeply into the muscles of the but tock or else subcutaneously. The average dose is 0.5 gm for each 60 kilos (132 pounds) of body weight. Called also salvarsan (Germany), arsenobenzol (France), diarsenol (Canada), arraminal (Japan), 606, Ehrlich-Hata preparation. **Bilver a.**, arsphenamin in which silver has been substituted claimed to combine the therapeutic activities of silver and arsphenamin Dose, 1½~ 4½ gr. (0.1-0.3 gm) at intervals of twenty-four hours to four days Called also argentum arsphenamina. sodium a., the sodium salt of arsphenamin, soluble in water without the addition of alkali.

arsphenamized (ars-fen'am-izd). Treated with arsphenamin.

arsybismol (ar-se biz'mol). Basic acetyloxyaminophenyl-arsinate of bismuth.

arsycodyle (ar-sik'o-dil). Sodium cacodylate; a white powder, (CH₃)₂AsO₂Na used in skin diseases. Dose, ½-1 gr. (0.032-0.065 gm).

arsylene (ar'sil-ēn). Propenyl arsenic acid, con-

taining 45 per cent. of arsenic, in the forms of the monosodium (for injection) and monocalcium (for ingestion) salts: used in the treatment of pernicious and other forms of anemia. Dose, 0.05-0 i gm. a day.

arsylin (ar-si'lin). A yellowish powder, arsenated phosphorus albumin used as an alterative in skin diseases. Dose, 10-20 gr. (0 66-1.33 gm.).

artarin (ar'tar-in). An alkaloid, $C_{21}H_{23}NO_4$, from the root of *Xanthox'ylum senegalen'se*. It is a heart stimulant, resembling veratrin in its action.

artefact (ar'te-fakt) [L. ar'te by art + fac'tum made]. Any artificial product; any structure or change that is not natural, but is due to manipulation. The term is used in histology and microscopy for a tissue that has been mechanically altered from its natural state.

Artemisia (ar-te-mis'e-ah) [L.; Gr ἀρτεμισία, from "Αρτεμισ Diana] A genus of composite-flowered plants A. abrol'anum, or southernwood, is tonic, stimulant, vermifuge, and vulnerary. Dose of fluidextract, 10 20 min (0.006–1.333 c.c.). A. absin'thium. See absinth A. maril'ima yields santonica.

arterenol hydrochlorid (ar-te-re'nol). A proprietary preparation, being the hydrochlorid of aminohydroxyethyl pyrocatechin, (OH)₂ C₀H₃ CH-(OH).CH₂ NH₂ HCl—It is used like the preparations of the suprarenal gland, and is said to be less toyic.

arteria (ar-te're-ah) [L, from Gr. ἀρτηρία artery]. An artery.

arteriagra (ar-te-re-ag'rah) [Gr. ἀρτηρία artery + ἄγρα seizure] Any gouty affection of an artery.

arterial (ar-te're-al). Pertaining to an artery or to the arteries.

arterialization (ar-te"re-al-iz-a'shun). The change of venous into arterial blood.

arteriarctia (ar"ter-e-ark'she-ah) [L. arte'ria artery + arcta're to contract] Contraction of an artery, narrowing of the caliber of an artery.

arteriasis (ar-te-ri'as-is). Degeneration of the walls of arteries.

arteriectasia, arteriectasis (ar"te re-ek-ta'se-ah, ar"te-re-ek'ta-sis) [Gr. ἀρτηρία artery + ἔκτασις dilatation] Dilatation of an artery.

arterin (ar'te-rin). The blood pigment of the red corpuscles in the arterial blood.

arteriocapillary (ar-te"re-o-kap'ıl-a-re). Pertaining to the arteries and the capillaries.

arteriococcygeal gland (ar-te"re-o-kok-sij'e-al). Luschka's gland See gland.

arteriofibrosis (ar-te"re-o-fi-bro'sis) [artery + fibrosis] The narrowing of the arteries and capillaries by an inflammatory internal fibrosis; arteriocapillary fibrosis. See fibrosis.

arteriogenesis (ar-te"re-o-jen es-1s) [Gr. άρτηρία artery + γένεσις production] The formation of arteries.

arteriogram (ar-te're-o-gram) [artery + Gr. $\gamma \rho \dot{\alpha} \mu \mu \alpha$ inscription] A sphygmogram, a tracing of the arterial pulse.

arteriograph (ar-te're o-graf). 1. An instrument for recording the arterial pulse. 2 A tracing of the arterial pulse

arteriography (ar"te-re-og'ra-fe) [Gr. $d\rho\tau\eta\rho la$ artery $+\gamma\rho\dot{a}\varphi\eta$ writing]. I A description of the arteries. 2. The graphic recording of the arterial pulse

arteriolæ rectæ (ar-te-ri'o-le rek'te). The straight arterioles; branches of the arteries of the kidney going to the medullary pyramids.

arteriole (ar-te're-öl) [L. arteri'ola]. Any minute arterial branch.

arteriolith (ar-te're-o-lith) [Gr. άρτηρία artery + λίθος stone]. A chalky concretion in an artery.

arteriology (ar-te-re-ol'o-je) [Gr. ἀρτηρία artery + λόγος discourse]. The sum of what is known

regarding the arteries, the science or study of the arteries.

- arteriomalacia (ar-te"re-o-mal-a'she-ah) [Gr. άρτηρία artery + μαλακία softness]. Abnormal softness of the arterial coats.
- **arteriometer** (ar''te-re-om'et-er) [Gr. ἀρτηρία artery + μέτρον measure] An apparatus for measuring changes in the caliber of a beating artery.
- arteriomotor (ar-te-re-o-mo'tor). Pertaining to or causing dilatation and constriction of arteries.
- **arteriomyomatosis** (ar-te''re-o-mi-o-mat-o'sis). A growth of irregular muscular fibers in the walls of an artery causing thickening of the walls.
- arterionecrosis (ar-te"re-o ne-kro'sis). Necrosis of an artery or of arteries.
- arteriopathy (ar"te-re-op'ath-e) [Gr. $\dot{a}\rho\tau\eta\rho la$ artery $+\pi\dot{a}\theta$ os disease]. Any arterial disease.
- arteriophlebotomy (ar-te"re-o-fleb-ot'o-me) [Gr. ἀρτηρία artery + phlebotomy]. Bloodletting by scarification of the integument.
- **arterioplania** (ar-te"re o-pla'ne-ah) [Gr. $arho au \eta au au$ artery au au au au au au au artery takes an unusual course.
- arterioplasty (ar te're-o-plas-te) [Gr ἀρτηρία artery + πλάσσειν to form]. Matas' operation for ancurysm, by restoring the continuity of the parent artery by making a new channel out of the sac-walls
- **arteriopressor** (ar-te"re-o-pres'or). Producing increased blood-pressure in the arteries.
- arteriorrhaphy (ar-te re-or'af-e) [Gr. ἀρτηρία artery + ῥαφή suture] Suture of an artery.
- arteriorrhexis (ar-te''re-o-rek'sis) [Gr. ἀρτηρία artery + ρηξις rupture]. Rupture of an artery.
- (ar-te"re-o skle ro'sis) arteriosclerosis $\dot{a}\rho\tau\eta\rho\dot{a}$ artery $+\sigma\kappa\lambda\eta\rho\dot{o}$ s hard] A condition of thickening of the coats of the arteries with inflammatory changes, degenerative or productive. decrescent a., senile arteriosclerosis diffuse a., general thickening of the walls of arteries and It is most commonly seen in association with chronic nephritis and essential hypertension, the essential lesion being a thickening of the intima of the smaller vessels *Called also diffuse hyperplastic sclerosis and arteriocapillary fibrosis. infantile a., diffuse hyperplastic sclerosis of arteries in infants and children, due to chronic nephritis or congenital syphilis Möncke-See Monckeberg's selerosis, under berg's a. sclerosis nodose a., nodular a., disease of the arteries marked by the formation of fibrous nodes or plaques in the lining membranes of the arteries senile a., arteriosclerosis which is the natural concomitant of old age. It is most marked in the
- radials and other medium-sized arteries. **arteriosclerotic** (ar-te"re-o-skle-rot'ik). Pertaining to or affected with arteriosclerosis.
- arteriosity (ar"te-re-os'1t-e). The condition or quality of being arterial.
- arteriospasm (ar-te're-o-spazm). Spasm of an
 artery.
- **arteriostenosis** (ar-te''re-o-sten-o'sis) [Gr. ἀρτηρία artery + στενός narrow]. The narrowing or diminution of the caliber of an artery.
- **arteriostosis** (ar te"re-os-to'sis) [Gr. ἀρτηρία artery + ὀστέον bone]. Ossification of an artery.
- **arteriostrepsis** (ar-te're-o-strep'sis) [Gr. ἀρτηρία artery + στρεπτός twisted]. The twisting of an artery for the arrest of hemorrhage
- **arterio-sympathectomy** (ar-te"re-o-sim-path-ek'to-me) See periarterial sympathectomy, under sympathectomy.
- **arteriotome** (ar-te're-o-tōm). An instrument for performing arteriotomy
- arteriotomy (ar''te-re-ot'o-me) [Gr. ἀρτηρία artery + τομή cut]. The surgical division or opening of an artery, chiefly for the abstraction of blood. Arteriotomy is usually performed upon the temporal artery.

- **arteriotony** (ar-te-re-ot'o-ne) [Gr. ἀρτηρία artery + τόνος tension]. The intra arterial tension of the blood, blood-pressure.
- arteriovenous (ar-te"re-o-ve'nus) Both arterial and venous; pertaining to or affecting an artery and a vein
- **arterioversion** (ar-te"re o ver'shun) [L. arte'ria artery + ver'sio a turning]. Surgical eversion of the coats of a bleeding artery for the purpose of arresting hemorrhage.
- arterioverter (ar-te"/re-o-ver"/ter). An instrument for performing arterioversion.
- arteritis (ar te ri'tis) [Gr. ἀρτηρία artery + -ιτις inflammation]. Inflammation of an artery. Compare endarteritis and periarteritis a. defor'-mans, chronic endarteritis with calcareous infiltration a. hyperplas'tica, arteritis with the formation of new connective tissue. a. nodo'sa, periarteritis nodosa a. oblit'erans, endarteritis resulting in the obliteration or closure of the lumen of the vessel.
- artery (ar'ter e) [L. arte'ria, from Gr ἀήρ air + τηρείν to keep, because they were supposed by the ancients to contain air] Any one of the vessels through which the blood passes from the heart to the various parts of the body. The walls of an artery consist of three coats an outer coat (tunica adventitia), composed of connective tissue and elastic fibers, a middle coat (tunica media), made up of transverse elastic and muscular fibers, and an inner coat (tunica intima), made up of endothelial cells, surrounded by longitudinal elastic fibers and connective tissue. end a., an artery which does not anastomose with another either directly or by its branches called also terminal a. Neubauer's a., the inferior thytoid artery. nutrient a., an artery which carries blood to the interior of α bone, passing through a nutrient foramen sylvian a., the middle cerebral artery See table of arteries, terminal a., an artery which does not divide into branches, but terminates directly in capillaries.
- arthigon (ar'the-gon) A proprietary antigonorrheal vaccine containing a number of strains of gonococci and 10 per cent of protaigol
- **arthragra** (ar-thra'grah, ar'thrag-rah) [Gr $\ddot{a}\rho\theta\rho\rho\nu$ joint + $\ddot{a}\gamma\rho\alpha$ seizure] Λ gouty seizure in a joint or in the joints.
- **arthral** (ar'thral) [Gr. ἄρθρον joint]. Pertaining to a joint.
- arthralgia (ar-thral'je ah) [Gr. ἄρθρον joint + ἄλγος pain] Neuralgia or pain in a joint. a. saturni'na, arthralgia of lead-poisoning
- arthralgic (ar-thral'jik). Pertaining to arthralgia; affected with arthralgia
- **arthrectomy** (ar-threk'to me) [Gr. ἄρθρον joint + ἐκτομή excision]. The excision of a joint.
- **arthrempyesis** (at"threm pi-e'sis) [Gr. ἄρθρον joint $+ \epsilon \mu \pi i \eta \sigma \iota s$ suppuration]. Suppuration in a joint.
- **arthresthesia** (ar-thres the ze-ah) [Gi ἄρθρον joint + αἴσθησις sensation]. Joint sensibility, the perception of joint motions
- arthrifuge (ar'thrif ū_j) [arthritis + L fuga're to put to flight]. A cure for gout
- **arthrigonin** (ar-thre-go'nin) [Gr. ἄρθρον joint + gonococcus]. A proprietary polyvalent gonococcus vaccine.
- arthrisin (ar'thris-in). See acetyl salwylamid.
- arthritic (ar-thrit'ik). 1 Pertaining to or affected with gout or arthritis.
 2. A person affected with arthritis
- arthriticin (ar-thrit'is-in). A disinfectant and antarthritic used in the treatment of gout. It is a compound of diethylenamin and the nitril of the ethyl kresot of amino-acetic acid, C₂H₅ O C₆H₄ N.-CH₂.NH₂ CO[N(CH₂)₄NH]
- arthritide (ar'thrit-īd). Any inflammatory joint disease; an arthritis.

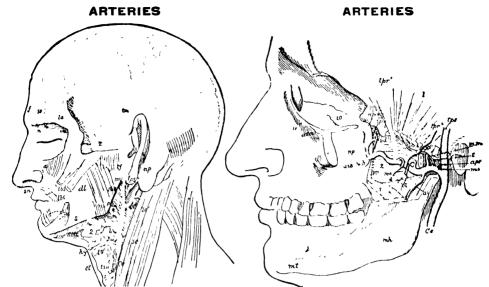

A TABLE OF THE ARTERIES.

The arteries in this table are arranged alphabetically, the names of the larger trunks being printed in larger type (small capitals), the names of the branches in ordinary type.

| ARTERY | Origin. | Distribution | Branches |
|-----------------------------------|--|---|---|
| Aberrant. | An anomalous artery connecting the brachial with one of the arteries of the forearm. | | |
| Acromial. Acromial. | Acromiothoracie. Suprascapular. | Part of the deltoid muscle Helps form the acromial rete. | |
| Acromiothoracic. | First portion of the axillary. | Arm, shoulder, upper front portion of chest. | Acromial, clavicular, hume- ral, pectoral. |
| Adipose. | Branches of the dia- phragmatic, capsu- lar, and renal. | Fat around the kidney. | |
| Afferent. | Interlobular of kid- neys. | Glomeruli of the kidney. | |
| Alar thoracic. | Second portion of the axillary. | Lymphatics of the axilla. | |
| Alveolar. | Posterior dental. | The gums | |
| Anastomotic. | External plantar. | Outer side of the foot. | Anastomosing with the branches of dorsalis pedis. |
| Anastomotic. | Internal plantar. | Inner portion of the foot | Anastomosing with branch of dorsalis pedis. |
| Anastomotic. | Middle meningeal. | Great wing of sphenoid bone. | Anastomosing with deep temporal |
| Anastomotic. | Sciatic. | Outer rotator muscles of thigh | Helps to form the crucial anastomosis |
| Anastomotica magna. | Brachial. | Region of the elbow. | Anterior and posterior. |
| Anastomotica magna | Superficial femoral. | Region of the knee. | Superfioral and deep. |
| Angular, | Terminal branch of facial. | Lacrimal sac and inferior portion of orbicularis palpebrarum | Anastomosing with the in- fracibital. |
| Antral. AORTA (abdominal). | Posterior dental. Thoracic aorta. | Antrum of Highmore, The two common iliaes form its terminal branches. | Phrenic, celiac axis, superior mesenteric, suprare- nal, lumbar, renal, sper- matic, inferior mesenteric or ovarian, right and left common iliac, middle sa- ctal. |
| AORTA (arch). | The left ventricle. | The thoracic aorta is its terminal branch. | Right and left coronary, innominate, left common carotid, left subclavian. |
| Aorta (primitive). | The aorta from its origin to the place from which the first branch arises | | |
| AORTA (thoracic). | Arch of aorta. | The abdominal aorta is its terminal branch. | Pericardiae, bronchial, esophageal, posterior me- diastinal, intercostal, sub- costal, diaphragmatic. |
| Appendicular. | Ileocolic. | Mesentery of vermiform appendix. | |
| Articular, middle. | Popliteal. | Crucial ligaments and knee- joint. | |
| Articular, superior, external. | Popliteal. | Crureus and knee. | |
| Articular, superior, internal. | Popliteal. | Knee | |
| Ascending. | External circumflex, | Deep portions of gluteal muscles and hip-joint. | |
| Asternal. | Internal mammary. | Inner aspect of costal car- tilages | |
| Auditory, internal. | Basılar. | Internal ear. | |

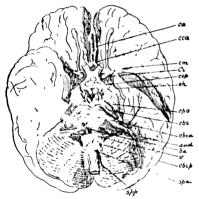

ARTERIES

| ARTERY. | ORIGIN. | Distribution. | Branches. |
|--|---|--|--|
| Auricular. | Occipital. | Auricle. | |
| Auricular, | Temporal. | Auricle. | |
| anterior, inferior. | | | |
| Auricular, deep. | Internal maxillary. | Tympanic membrane and integument of external auditory meatus. | |
| Auricular, left. | Left coronary artery. | Left auricle, pulmonary artery, and beginning of aorta. | |
| AURICULAR, posterior. | Fifth branch of external carotid. | Middle ear, mastoid cells, auricle, parotid gland, di- gastric and other mus- cles. | Stylomastoid, auricular, mastoid, parotid, and muscular. |
| Auricular, right. | Right coronary artery. | Right auricle, auricular septum, aorta. | |
| AXILLARY. | Subclavian. | Upper extremity, including pectoral muscles, axilla, side of chest, and shoulder. | Superior thoracic, acromiothoracic, long thoracic, alar thoracic, subscapular, anterior and posterior circumflex. The brachial is its terminal branch. |
| Azygos. | External plantar. | Articulations of the tarsus. | |
| Azygos. | Internal plantar. | The joints on inner side of foot. | Anastomosing with the branches from the external plantar. |
| Azygos. | Popliteal. | Knee. | |
| Azygos. | Sciatic. | Back part of capsule of hip-joint. | |
| Azygos. | Superior profunda. | Back part of elbow-joint. | Anastomosing with anasto- motica magna and inter- osseous recurrent. |
| Azygos. | Suprascapular. | The shoulder-joint. | |
| Azygos. | Temporal | Temporo-maxillary articulation. | |
| Basilar. | Right and left ver- tebral. | Cerebrum and cerebellum. | Transverse, internal auditory, anterior cerebellar, superior cerebellar, right and left posterior cerebial. |
| Bicipital. | Anterior circumflex. | Long tendon of biceps and shoulder-joint. | |
| Brachial. | Axillary. | Shoulder, arm, forearm, and hand. | Superior and inferior pro- funda, nutrient, anasto- motica magna, muscular, radial and ulnar. |
| Brachiocephalic. | Same as Innominate. | | |
| Bronchial, inferior. | Thoracic aorta. | Bronchi and lungs. | |
| Bronchial, superior. | Arch of aorta. | Bronchi | |
| Buccal. Buccal. | Facial. Internal maxillary. | Cheek-muscles. Buccinator muscle and oral mucous membiane. | |
| Buccal. Buccinator. | Posterior dental. Same as Buccal a. | Buccinator muscle. | |
| Bulb, artery of the. | Internal pudic. | Erectile tissue of bulb and corpus spongiosum. | |
| Calcanean, external and internal. | Peroneal. | Os calcis and surrounding tissues. | |
| Calcanean, inferior. | External plantar | Inner surface of os calcis. | Anastomosing with internal calcanean. |
| Calcanean, middle. Callosal or calloso-marginal. | Posterior tibial. Anterior cerebral. | Os calcis. Callosal and marginal convolutions. | |
| Capsular. | Same as Suprarenal. | | |
| Cardiac. | Gastric. | Cardiac end of the stomach. | |
| CAROTID, common. | Innominate (on right side), arch of aorta (on left side). | Gives origin to external and internal carotids. | External and internal car- otid. |

Tacial and Temporal Interiors (after Henle)—Ce, external carotid, true, superior thyroid te superior largingeal, et, crico-thyroid, true, superior thyroid te superior largingeal, et, crico-thyroid, try, hvood branch of linguid, the dorsal of tonger e, sub-lingual, me, tacial, smt, submentid, a, angular, the inferior labial, the, coronary of upper lip, et, artery of nasal septum, et, se', sternomastods, at, posterior airicular, et, stylomastoids, pda, ascending phanyingeal, me, internal maxillary, try, superficial temporal, tt, trusyers ficial, etm, middle temporal, et, external superior bit if the front description of the experior still, la, he runal, m, nasal, *, parotid branches of external superior la, la, he runal, m,

Internal Maxill'19. Intery (after Heale)—mi, internal mixillary, o, external curotid (f), superficial temporal, apr. deep uniquit, t, anterior tympono, min, middle meningeal, ar, interior dental, ma, mylohyod, mit, mint, (f), deep an terior temporal, ft, pterygoid, min, investers, b, baccinator, arf, posterior branch of superior tixe or, mintra orbital and, anterior founds of superior divodir, rid Vidian; ff sphenoplatine, ff, perygoid time, fo, posterior nasal; ff nasopulatine, ff, 2 deep posterior temporal

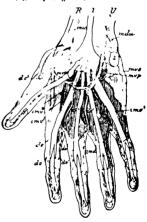

Asteries at Rase of Brain (after Henle)—ca anterior cerebral, car, interior communic ung, cm, middle cerebral, Ci, internal carotid, cop, posterior communicating—ch, aiterior chord, cpo, posterior cerebral, chs, superior cerebral, chs, anterior inferior cerebellir, and internal auditory, ba, basilar—2, vertebral, chp, posterior inferior cerebellar, pa, anterior spinal, spp, posterior spinal

Axillary Artery and branches (after Henle —, i.e., axillary)
R, bruchal, this, superior that e.e., this, aromothericis, this
certiful mannary, cha, anterior creamflex, chip, posterior cre
cumflex, c., subscapular, e.e., circumflex of scipula, i, subcla
vius muss les, e., pectoralis mussles, 3, serratus magnus, 4, latisal
mus dors, 5, teres major, 6 long he d of treeps, 7, deltoid, 8
subscapular muscle, 9, bicipital groove

norsal Arteries of Hand (after Henle)—cdr, posterior radiorada, cdu, dorsal ulnocarpal, mdr, dorsal radiocarpal arteries, mdu, posterior ulnocarpal, mdl, imdl, mmd3, dorsal interossei; mv^e, posterior perforating, dd, dorsal digital.

Palmar Arches (after Henle) -R, radial, U, ulnar, mv, superficial volar, mvs, arteria metacarpei volaris ulnaris sublimis, mvp, arteria metacarpea volaris radialis profunda, mp, arteria metacarpea volaris ulnaris profunda, dc, dc^2 , dc^3 , palmar digitalis, mv^3 , mv^3 , mv^3 , palmar interosseous, mv^* , posterior perforating, dv, collateral digital arteries

| Artery. | Origin. | Distribution. | Branches. |
|---|--------------------------------|--|--|
| CAROTID, external. | Common carotid. | Front and back of the neck, face, side of the head, integuments, meninges, middle ear, thyroid gland, tongue, tonsils. | Ascending pharyngeal, su- perior thyroid, lingual, facial, occipital, posterior auricular, temporal, inter- nal maxillary. |
| CAROTID, internal. | Common carotid. | Large portion of brain, the orbit, internal ear, nose, and forehead. | Tympanic, Vidian, arteria receptaculi, pituitary, Gasserian, meningeal, ophthalmic, posterior communicating, anterior choroid, anterior cerebral, middle cerebral. |
| Carpal. | Radial. | Lower end of radius and wrist, | Helps form the anterior carpal rete. |
| Carpal. | Ulnar. | Carpus. | Helps form the posterior carpal rete. |
| Caudate. | Middle cerebral. | Head of caudate nucleus. | - |
| Caval. | Right phrenic. | Vena cava. | |
| Cecal, anterior. | Inferior mesenteric. Posterior | Anterior portion of the cecum. | |
| Cecal, posterior. | mesenteric. | Posterior portion of the cecum. | |
| CELIAC AXIS. | Abdominal aorta. | Esophagus, stomach, du- odenum, spleen, pancreas, liver, and gall-bladder. | Gastric, hepatic, splenic. |
| Central (of retina), or of Zinn. | Ophthalmic. | Retina. | |
| Cerebellar, anterior. | Basilar. | Lower anterior surface of cerebellum. | |
| Cerebellar, inferior. | Vertebral. | Cerebellar cortex and vermiform process. | Inferior vermiform and hemispheral. |
| Cerebellar, superior. | Basılar. | Circumference of cerebel- lum and superior vermi- form process. | Superior vermiform and hemispheral. |
| Cerebral, anterior. | Internal carotid. | Frontal lobe, corpus callo- sum, olfactory and optic tracts. | Anterior communicating, ganglionic, commissural, hemispheral. |
| Cerebral, middle. | Internal carotid. | Frontal, parietal, and tem- porosphenoidal lobes, basal ganglia, and island of Reil. | Ganglionic, hemispheral. |
| Cerebral, posterior or inferior. | Basılar. | Occipital and temporosphenoidal lobes. | Ganglionic, hemispheral. |
| Cervical. | Uterine. | Cervix uteri. | |
| Cervical, ascending. | Inferior thyroid. | Muscles of neck, vertebræ, and spinal canal | Muscular, spinal, and phrenic. |
| Cervical, deep. | Superior intercostal | Deep muscles of back of neck. | Muscular, anastomotic, vertebral. |
| Cervical, descending. | Deep cervical. | Tissues of the neck. | |
| Cervical, superficial. | Transverse cervical. | Muscles of back of neck and scapular region. | C |
| Cervical, transverse (transversalis colli). | Thyroid axis. | Muscles of neck and scap- ular region. | Superficial cervical and pos- terior scapular. |
| Chasmic. | Anterior cerebral. | First part of the optic nerve. | |
| Choroid, anterior. | Internal carotid. | Hippocampus major and corpus fimbriatum. | |
| Choroid, posterior. | Posterior cerebral. | Velum interpositum and choroid plexus. | |
| Ciliary. Circumflex. | Ophthalmic. | Eye. | Pentoral and hisinisal |
| anterior. | Axillary. | Pectoralis major, biceps, and shoulder-joint. | Pectoral and bicipital. |
| Circumflex, external. | Profunda femoris. | Muscles of the thigh. | Ascending, transverse, and descending. |
| Circumflex iliac, deep. | External iliac. | Upper portion of thigh and abdominal muscles. | Muscular and cutaneous. |

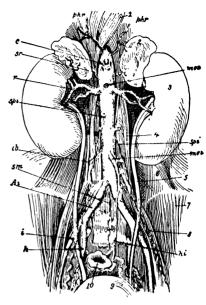

| Artery. | Origin. | Distribution. | Branch es. |
|---|--|--|---|
| Circumflex iliac, superficial. | Common femoral. | Iliacus and sartorius mus- cles, inguinal glands, and skin of thigh. | |
| 1 1 1 | Profunda femoris. | Muscles of the thigh. | |
| | Axillary. | Deltoid, triceps, teres mi- | Acromial, articular, muscu- |
| posterior. | Acromiothoracic. | nor, and shoulder-joint. Subclavius muscle. | lar, nutrient. |
| 1 1 | ciatic. | Integument over the coccyx. | |
| | nternal auditory. | Cochlea. | |
| | nferior mesenteric. | Descending colon. | |
| 1 20000 | uperior mesenteric. | Transverse colon. | |
| 1 - 1 | uperior inesenteric. | Ascending colon. | |
| Colic, transverse. C | Colic, middle. | Transverse colon. | |
| Commissural. A | nterior cerebral. | Callosum. | • |
| Communicating. D | Oorsali s pedis. | Terminates in the plantar arch. | The princeps hallucis. |
| Perforating). | Deep palmar arch. | Inosculates with the dorsal interosseous arteries. | |
| Communicating, anterior. | nterior cerebral. | Helps form the circle of Willis; supplies the caudate nucleus. | |
| Communicating, posterior. | osterior carotid. | Helps form circle of Willis; supplies uncinate gyrus and optic thalamus. | Uncinate, middle thalamic. |
| | acial. | Lower lip. | |
| | est anterior sinus of Valsalva. | Heart. | Left auricular, anterior in- terventricular, left mar- ginal, terininal. |
| | nght anterior sinus of Valsalva. | Heart. | Right auricular, preventric- ular, right marginal, pos- terior interventricular, transverse. |
| | ee <i>Gastric</i> and <i>Pyloric</i> . | | transverse, |
| Corpus cavernosum, D | acial. Porsal artery of penis. | Upper lip. Corpus cavernosum. | Artery of nasal septum. |
| Cremasteric. D | Ocep epigastric. | Cremaster muscle. | |
| Cremasteric. Sp | permatic. | Cremaster muscle. | Anastomosing with the cre- masteric of the deep epi- gastric. |
| | ee Laryngeal, infe- rior. | | 8 |
| 1 | ee Femoral. | | |
| 1 - | Iepatic. | Gall-bladder. | |
| 1 | uperior vesical. | Vas deferens. | |
| | nfraorbital. ee <i>Mandibular</i> . | Incisor and canine teeth, and antrum. | |
| | nternal maxillary. | Maxillary antrum, teeth of | Antral dantal alexal |
| (or alveolar). | memar maxmary. | upper jaw, gums, and cheek. | Antral, dental, alveolar buccal. |
| Dental, superior. | osterior dental. | Molar and bicuspid teeth of upper jaw. | |
| | xternal circumflex. | Muscles of thigh. | |
| superficial. | xternal carotid. | Neck. | |
| 1 | horacic aorta. | Diaphragm. | |
| | xternal plantar. | Three outer toes and outer side of second toe. | |
| | uperficial palmar arch. | Ulnar side of index finger and both sides of other fingers. | |
| Diploic. St | upraorbital. | Diploë of frontal sinuses. | |
| Dorsal (of penis). P | udic. | Penis. | |

ARTERIES

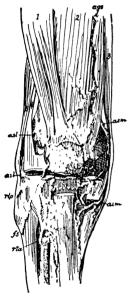

cya de la companya de

Subclavian Artery (atter Henle).—Ab, innominate; Cc, common carotid, S, subclavian; v, vertebral, bu, basilar, mmt, internal mammary, es, superior epigastric, mp, musculophrenic, is, superior intercostal, cvp, deep cervical, ti, inferior thyroid, cva, ascending cervical, cvs, superficial cervical, ts suprascapular, tc, posterior scapular

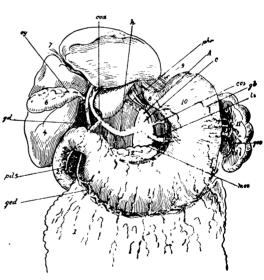

ARTERIES

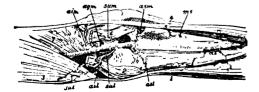

The Abdominal Aorta (atter Henle).—Ai, common iliac, i, external iliac, h, internal iliac, sm, middle sacral, phr, inferior phrenic; lb, lumbar, c, cehac, mes, superior mesenteric; mes, inferior mesenteric; sp, capsular, r, renal; spi, internal sperm atic, h., internal hemorrhoidal.

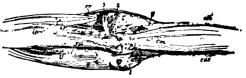

Arteries of Front of Knee (after Henle)—asm, superior internal articular, asm, inferior internal articular, rta, anterior tibial recurrent, fs. superior fibular, rtp, posterior tibial recurrent, atl, inferior external articular; asl, superior external articular

The Celiac Artery and Branches (atter Henle)—A, aorta, phr. inferior phrenic, c, celiac; ead, pylonc, cos, coronary; h, hepatic, cy, cys tic, xd, gastroduodenal; pds, superior pancreaticoduodenal, ged, right gastro-epiploic; h, splenic,

Popisteal Artery (after Henle).—sul, sum, sural arteries, sul, superficial sural; asm, superior internal articular; asl, superior external articular, arm, inferior internal articular, ad, inferior external articular; agm, middle articular.

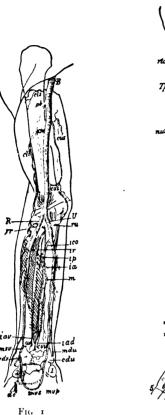

The Cubital Rete (after Henle)—cts, radial profunda; cus, superiol profunda; cms, collateralis media, rr, radial recurrent; sr, recurrent interosseous; sp, posterior interosseous, U, ulnar, ru, ulnar recurrent, i, internal epicondyle; 2, external epicondyle; 3, head of radius; & olecranon; 5, branchioradial muscle; 6, internal ulnar muscle

| ARTERY. | Origin, | Distribution. | Branch es . |

| Gluteal. | Internal iliac, poste- | Gluteal muscles, gluteal region, pelvic muscles. | Muscular, superficial and deep. |
| Gustatory (or lingual). | Inferior dental. | Lingual nerve. | - |
| Helicine. | , | The arteries of erectile and cavernous tissue, as in the penis, uterus, etc. | |
| Hemispheral. | Inferior cerebellar. | Cerebellar cortex. | |
| Hemispheral. Hemorrhoidal, inferior (or external). | Superior cerebellar. Pudic. | Cerebellar cortex. Sphincter muscle, levator ani. | |
| Hemorrhoidal, mid- dle (rectal, middle). | Internal iliac, ante- | Middle portion of rectum. | |
| Hemorrhoidal. | Inferior mesenteric. | Upper part of rectum. | |
| HEPATIC. | Celiac axis. | Pylorus, part of stomach, pancreas, part of duode- num, liver. | Pyloric or subpyloric, pan- creatic, gastroduodenal, right and left terminal. |
| Hepatic, left (or terminal). | Gastric. | Left lobe of liver. | |
| Hepatic, right (or terminal). | Hepatic. | Right lobe of liver. | Cystic. |
| Humeral. | See Brachial. | | |
| Humeral, thoracic. | Acromiothoracic. | Pectoralis major, deltoid, and integuments. | Anastomosing with circumflex. |
| Hyaloid. | Central artery of retina. | Crystalline lens. | |
| Hyoid. | See Infrahyoid and Suprahyoid. | | |
| Hypogastric (or umbilical). | Anterior branch of internal iliac. | Vesical branches: seen only in fetus. | |
| Heocolic. Hac, circumflex. | Superior mesenteric. See Circumflex iliac, deep. | Cecum and adjacent bowel. | |
| ILIAC, common. | Abdominal aorta. | Peritoneum, psoas, ureter, and external and internal iliac arteries. | Peritoneal, ureteric, external and internal iliac. |
| ILIAC, external. | Common iliac. | Abdominal muscles, gen- itals, lower limb. | Epigastrie, circumflex iliac, muscular, femoral. |
| ILIAC, internal. | Common iliac. | Pelvic viscera, generative organs, inner side of thigh. | Anterior and posterior trunk. |
| ILIAC, internal (anterior branch). | Internal illac. | Bladder, pelvic and genital organs, hip-joint, thigh. | Superior, middle, and infe- rior vesical, middle hem- orrhoidal, uterine, vaginal, obturator, internal pudic, sciatic. |
| ILIAC, internal (posterior branch). | Internal iliac. | Muscles of abdomen, hip, sacrum, and gluteal region. | Iliolumbar, lateral sacral, and gluteal. |
| Iliolumbar. | Internal iliac, posterior branch. | Muscles and bones of pelvis. | Iliac and lumbar. |
| Incisive. | Mandibular. | Incisor teeth. | |
| Infrahyoid. | Superior thyroid. | Infrahyoid bursa and thyro- hyoid muscle. | |

ARTERIES ARTERIES

F16. 3

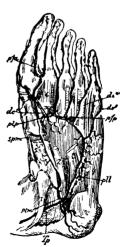

FIG. 1—Brachial Artery and Branches (after Henle)—B, brachial, R, radial, U, ulnar, cls, deltoid artery, cls, deep radial; \$\overline{\phi}\$, superior profunda, cm, arteria collateralis media, cui, anastomotic, rr, anterior radial recurrent, ru, anterior ulnar recurrent, see, common interosseous, ia, anterior interosseous, ib, posterior interosseous, rr, posterior interosseous recurrent, iar, palmar anterior interosseous, ia, anterior interosseous, m, median, cvr, anterior radiocarpal, cvu, anterior ulnocarpal, cdr, posterior ulnocarpal, ddr, posterior ulnocarpal, mdu, posterior ulnocarpal, mvs, superficial volar, mvp, ulnar part of deep palmar arch, dc, first palmar digital

FIG 2—Poster for Tibual Artery (after Henle)—Po, poplited, Fa, anterior tibual, 7p, posterior tibual, Pe, peroneal, rta, anterior tibual recurrent, rtp, posterior tibual recurrent, fs, superior fibular, nuf, nutrient of fibula, nut, nutrient of tibua, pff, anterior peroneal, com, transverse anastomotic, man, anterior methal mallcolar, mal, internal mallcolar, mpm, posterioredian malleolar; cam, middle calcaneal, p/m, internal plantar, pll, external plantar

FIG 3—Femoral Artery (after Henle)—cf1, common femoral, esp, superficial epigastric, ets, superficial circumflex iliac; pie, external pudic, prf, deep femoral, cf1, external circumflex of thigh, cfm, internal circumflex of thigh, pf1, first perforating; pf3, second perforating, pf3, third perforating, ags, anastomotica magna, sf, superficial femoral

Dorsal Arteries of Foot (after Henle) — Ta, anterior tibial; Død, dorsal, pøf, anterior peroneal, mam, anteromedian malleolar, mat, internal malleolar, tra, metrnal supratarsal, tip, external tarsal tia, metatarsal; pip, deep plantar, mal, timdl, malleolar, tra, posterior perforating, pfa, anterior perforating, pfa, anterior perforating, spm, superficial median of the foot

Plantar Arteries (after Henle) — Tp, posterior tibial, plm, in the mal plantar; pll, external plantar, plp, deep plantar, spm, superficial median of foot, dcl, dcl, dcl, dd-, palmar interosseous arteries, dvb, digital plantar of little 'oe, plp, posterior perforating, pla, anterior perforating.

| ARTERY. | Origin. | DISTRIBUTION. | Branch es . |
|------------------------------------|---------------------------|---|---|
| Infraorbital. | Internal maxillary | Upper lip, lower eyelid, lacrimal sac, side of nose. | Orbital, anterior dental, nasal. |
| Infrascapular. | Dorsal scapular. | Subscapularis, scapula, and shoulder-joint. | |
| INNOMINATE. | Arch of the aorta. | Right side of head and neck, right side of trunk, and right arm. | Right carotid, right subclavian, occasionally thyroidea ima. |
| Intercostal, anterior. | Internal mammary. | Intercostal muscles, upper ribs, and pectoralis major. | |
| Intercostal, anterior. | Musculophrenic. | Lower intercostal spaces. | |
| INTERCOSTAL, | Subclavian. | Neck and upper portion of thorax. | Deep cervical, first inter- |
| superior. Interlobular. | Renal. | Malpighian bodies and uri- niferous tubules. | costal, aberrant. |
| Interosseous, anterior. | Common interosse- | Muscles of the forearm. | |
| INTEROSSEOUS, common. | Ulnar | Deep structures of the forearm. | Anterior and posterior interosseous. |
| Interosseous, posterior. | Common interosse- ous. | Muscles and deep struct- ures back of forearm. | Posterior interosseous re- current. |
| Interpeduncular. | Posterior cerebral. | Posterior perforated space and lower portion of peduncles. | |
| Interventricular, anterior. | Left coronary. | Ventricles and interventricular septum. | |
| Interventricular, posterior. | Right coronary. | Ventricles and interventricular septum, | |
| Labial, inferior. | Facial. | Lower lip. | |
| Labial, superior. | See Coronary, superior. | | |
| Lacrimal. | Middle meningeal. | Orbit. | |
| Lacrimal. | Nasal. | Lacrimal sac. | |
| Lacrimal. | Ophthalmic. | Lacrimal gland, eye mus- cles, cheek, and eyelids. | Recurrent lacrimal, muscu- lar, palpebral, malar, cili- ary. |
| Laryngeal, inferior | Inferior thyroid. | Larynx. | , in the second |
| Laryngeal, superior (or internal). | Superior thyroid. | Mucous membrane and intrinsic muscles of larynx. | |
| Lenticular. | Middle cerebral. | Lenticular nucleus. | |
| Lenticulo-optic. | Middle cerebral. | Posterior portion of inter- nal capsule and anterior portion of optic thalamus. | |
| Lenticulostriate. | Middle cerebral. | Lenticular and caudate nu- clei. | |
| Lenticulothalamic. | Posterior cerebral. | Posterior end of lenticular nucleus and thalamus. | |
| LINGUAL. | External carotid. | Tongue, sublingual gland, tonsil, epiglottis. | lingual, ranme. |
| Lumbar (4 pairs). | Abdominal aorta. | Abdominal walls, vertebræ, lumbar muscles, and renal capsules | Muscular, vertebral, dorsal, renal. |
| Malar. | Lacimal. | Temporal fossa. | |
| Mammary, external. | See Thoracic, long. | | |
| Mammary, glandular. | Aortic intercostal. | Mammary gland. | |
| MAMMARY, internal. | Subclavian. | Thorax and thoracic structures. | Superior phrenic, mediasti- nal, pericardiac, sternal, anterior intercostal, per- forating, musculophrenic, superior epigastric, inter- nal mammary. |
| Mandibular. | Internal maxillary. | Teeth of the lower jaw. | Incisive and mental. |
| Mastoid. | Occipital. | Dura mater, lateral sinus, mastoid cells. | |
| Mastoid. | Posterior auricular. | Posterior belly of the occipi- tofrontalis muscle. | |

ARTERIES

| ARTERY. | Origin. | Distribution. | Branches. |
|----------------------------------|--|--|---|
| Mastoid. Maxillary, internal. | Stylomastoid. External carotid. | Mastoid cells and antrum. Structures indicated by the names of branches. | Deep auricular, tympanic, middle meningeal, small meningeal, mandibular, deep temporal, pterygoid, masseteric, buccal, alveolar, infraorbital, posterior palatine, Vidian, pterygopalatine, sphenopalatine. |
| Meatal. Median. | Stylomastoid. Anterior interosse- | External auditory meatus. Median nerve and super- | |
| Mediastinal, anterior. | Internal mammary. | ficial palmar arch Anterior mediastinum, thymus gland. | |
| Mediastinal, posterior. | Thoracic aorta. | Posterior mediastinum. | |
| Medullary. | Peroneal. | Fibula. | |
| Medullary. | Posterior tibial. | Tibia. | Ascending and descending. |
| Medullary. | Renal. | Malpighian pyramids. Cerebral membranes. | |
| Meningeal. | Ascending pharyn- geal. | Cerebral memoranes. | |

| Vitelline. | See Omphalomesen- teric. | | ••• |
| Volar, superficial, Xiphoid. Zygomatico-orbital. | Radial. Superior epigastric. The orbital branch of the temporal artery. | Muscle of thumb, Xiphoid cartilage. | Helps to form superficial palmar arch. |

arthritis (ar-thri'tis) [Gr. ἄρθρον joint + -ιτιs in-flammation]. Inflammation of a joint. acute a., arthritis marked by pain, heat, redness, and swelling, due to gout, rheumatism, gonorrhea, or traumatism. acute gouty a., acute arthritis associated with gout. acute rheumatic a., a form of acute arthritis of rheumatic origin. atrophic a., arthritis deformans marked by acute inflammation and swelling of the joints, which are followed by gradual and progressive atrophy of the joint structures. chronic villous a., a form of arthritis deformans due to villous outgrowths from the synovial membranes, which cause impairment of function and crepitation, called also dry joint. a. defor mans, a disease of the joints, of doubtful etiology and with a marked tendency to chronicity, characterized by changes in the synovial membranes and periarticular structures, and often by atrophic and hypertrophic changes in the bones, leading to marked joint deformity. a. defor mans neoplas tica, osteitis fibrosa. degenerative a. Same as hypertrophic a. diaphragmatic a., angina pectoris. dysenteric a., arthritis due to the absorption of specific dysenteric toxins into a joint a. fungo'sa, white swelling; tuberculosis of a joint. gonococcal a., gonorrheal a., acute arthritis due to gonococcus. gouty a., arthritis due to gout. hemophilic a., any joint lesion occurring in arthritis. hypertrophic a., arthritis deformans marked by hypertrophy of the cartilage at the edge of the joints, with ossification of this hypertrophied tissue: called also osteoarthritis and degenerative a. a. inter'na, gout of an internal organ. navicular a., inflammation of the cartilage covering the navicular bone of the hoof of a horse. **neuropathic a.**, Charcot's disease. **a. nodo'sa.** 1. Arthritis deformans 2. Gout. a. pau'perum, rheumatoid arthritis, also called poor-man's gout. proliferating a. Same as atrophic a. rheumatoid a., a term formerly applied to atrophic arthritis on the supposition that the disease was rheumatismal or gouty in its nature. Called also chronic rheumatoid arthritis, rheumatic gout, etc. suppurative a., a form marked by purulent joint infiltration; often due to traumatism or to pyemia syphilitic a, a form associated with or due to syphilis. uratic Same as gouty a. urethral a., gonorrheal arthritis. visceral a., gout of an internal organ.

arthritism (ar'thrit-izm) [arthritis]. The gouty diathesis; the peculiar diathesis or disposition of body that predisposes to joint disease. It is marked by any of the following conditions: seborrhea, eczema, asthma, corpulency, diabetes, gout, hemorrhoids, migraine, bronchorrhea, and nasal hydrorrhea.

arthrobacterium (ar"thro-bak-te're-um) [Gr. ἄρθρον joint + bacterium] A bacterium that is reproduced by separation into joints or arthrospores.

arthrocace (ar-throk'as-e) [Gr ἄρθρον joint + κάκη badness]. Caries of a joint.

arthrocele (ar'thro-sēl) [Gr. ἄρθρον joint + κήλη tumor]. A swollen joint.

arthrochondritis (ar"thro-kon-dri'tis) [Gr. ἄρθρον joint + chondritis]. The inflammation of the cartilages of a joint.

arthroclasia (ar-thro-kla'ze-ah) [Gr. ἄρθρον joint + κλάειν to break]. The breaking down of an ankylosis in order to secure free movement in a joint.

arthroclisis (ar-thro-kli'sis) [Gr. ἄρθρον joint + κλείσις closure]. Ankylosis of a joint

arthrodesia (ar-thro-de'se-ah) Arthrodesis.

arthrodesis (ar-throd'es-is) [Gr. ἄρθρον joint + δέσις binding]. The surgical fixation of a joint; artificial ankylosis.

arthrodia (ar-thro'de-ah) [Gr. ἀρθρωδία]. An articulation or joint which allows a gliding motion of the surfaces.

arthrodial (ar-thro'de-al). Of the nature of an arthrodia.

arthrodynia (ar-thro-din'e-ah) [Gr. ἄρθρον joint + δδύνη pain]. Pain in a joint.

arthro-empyesis (ar"thro-em pi-e'sis) [Gr. ἄρθρον joint + ἐμπθησις suppuration]. Suppuration within a joint.

arthro-endoscopy (ar''thro-en-dos'ko-pe) [Gr. $\delta\rho\theta\rho\rho\nu$ joint + endoscopy] The inspection of the interior of a joint by means of an endoscope.

arthrogenous (ar-throj'en-us) [Gr. ἄρθρον joint + γεννῶν to produce]. Formed as a separate joint; as, arthrogenous spore.

arthrography (ar-throg/ra-fe) [Gr. ἄρθρον joint + γράφειν to write]. A description of the joints.

arthrogryposis (ar"thro-grip-o'sis) [Gr ἄρθρον joint + γρυπός curved]. 1 Persistent flexure or contracture of a joint. 2 Tetanoid spasm.

arthrokleisis (ar-thro-kh'sis) [Gr. ἄρθρον joint + κλείσις closure]. Ankylosis, or the production of it.

arthrolith (ar'thro-lith) [Gr ἄρθρον joint + λίθος stone]. A calculous deposit in a joint.

arthrolithiasis (ar"thro-hth-i'as-is). Gout.

arthrology (ar-thiol'o-je) [Gr ἄρθρον joint + λόγος treatise] The sum of what is known regarding the joints.

arthromeningitis (ar"thro-men-in-ji'tis) [Gr. ἄρθρον joint + μήνιγξ membrane]. Same as syno-

arthrometer (ar throm'et-cr) [Gr. ἄρθρον joint + uέτρον measure]. An instrument for measuring the angles of movements of joints as an indication of the range of mobility.

arthrometry (ar-throm'et-re). The measurement of the range of mobility of joints.

arthroneus (ar-throng'kus) [Gr. ἄρθρον joint + ὄγκος mass]. Swelling of a joint.

arthroneuralgia (ar"thro-nu-ral'je-ah) [Gr. ἄρθρον joint + neuralgia]. Neuralgia of a joint.

arthropathology (at"thro path-ol'o-je) [Gr. ἄρθρον joint + pathology]. The pathology of diseases of the joints; joint pathology.

arthropathy (ar-throp'ath-e) [Gr. &ρθρον joint + πάθος disease]. Any joint disease. Charcot's a., a trophic joint disease with effusion of fluids into a joint, seen in locomotor ataxia and in syringomyeha and sometimes in general parcis, inflammatory a., an inflammatory joint disease; arthritis. osteopulmonary a., enlargement and swelling of the ends of the long bones following pulmonary disease. static a., a disturbance in a joint of the extremity secondary to a disturbance in some other joint of the same extremity, as one in the knee-joint secondary to one in the hip-joint. tabetic a. Same as Charcot's a.

arthrophyma (ar-thro-fi'mah) [Gr. ἄρθρον joint + φῦμα swelling] The swelling of a joint.

arthrophyte (ar'thro-fit) [Gr. ἄρθρον joint + φυτόν plant]. An abnormal growth in a joint cavity.

arthroplastic (ar-thro-plas'tik). Pertaining to arthroplasty.

arthroplasty (ar'thro-plas-te) [Gr ἄρθρον joint + πλάσσεν to form]. Plastic surgery of a joint or of joints; formation of movable joints.

arthropod (ar'thro-pod). An animal belonging to the Arthropoda.

Arthropoda (ar-throp'o-dah) [(ir ἄρθρον joint + πούς foot]. One of the great divisions of the animal kingdom, including articulate animals with jointed limbs. It comprises insects, spiders, crustaceans, myriapods, etc.

arthropodan, arthropodic (ar'thro-po-dan, arthro-po'dik). Pertaining to or caused by arthropods.

arthropyosis (ar"thro-pi-o'sis) [Gr. ἄρθρον joint + πύωσις suppuration]. The formation of pus in a joint cavity.

- **arthrorheumatism** (ar-thro-ru'mat-izm) [Gr. ἄρθρον joint + rheumatism]. Articular rheumatism.
- arthrosia (ar-thro'se-ah) [Gr. ἄρθρον joint]. τ. A proprietary medicine: said to be antilithic, tonic, and alterative. 2 Painful inflammation of a joint.
- arthrosis (ar-thro'sis) [Gr. ἄρθρωσις joint]. 1. A joint or articulation. 2. A disease of a joint. a. defor'mans, arthritis deformans.
- **arthrospore** (ar'thro-spōr) [Gr. $\ddot{a}\rho\theta\rho\rho\nu$ joint + $\sigma\pi\dot{o}\rho\sigma$ seed] Modified forms of bacteria at one time thought to be more resistant than the usual forms. In the rod-shaped forms the cells become granular, and in the chain forms certain members enlarge.
- **arthrosteitis** (ar"thros-te-i'tis) [Gr ἄρθρον joint + δστέον bone] Inflammation of the bony structures of a joint.
- arthrosteopedic (ar-thros-te-o-pe'dik). Pertaining to the extremities and skeleton, as arthrosteopedic surgery.
- **arthrostomy** (ar-thros'to-me) [Gr. $\alpha\rho\theta\rho\rho\nu$ joint + $\sigma\tau\delta\mu\alpha$ an opening]. The surgical formation of an opening into a joint, as for the purpose of drainage.
- **arthrosynovitis** (ar"thro-si-no-vi'tis) [Gr. ἄρθρον joint + synovitis] Inflammation of the synovial membrane of a joint.
- **arthrotome** (ar'thro-tōm) [Gr ἄρθρον joint + τέμνειν to cut] Λ knife for operating on joints.
- arthrotomy (ar-throt'o-me) [Gr ἄρθρον joint + τομή cut] Surgical incision of a joint
- **arthrotropic** (ar-thro-trop'ik) [Gr $\delta \rho \theta \rho \rho \nu$ joint $+ \tau \rho \delta \pi \sigma s$ turning toward]. Having an affinity for joints
- **arthrotyphoid** (ar-thro-ti'foid) [Gr ἄρθρον joint + typhoid]. Typhoid fever beginning with symptoms resembling those of rheumatic fever.
- **arthroxesis** (ar-throks'es-is) [Gr. ἄρθρον joint + ξέσις scraping]. The scraping of an articular surface.
- **Arthus's phenomenon** (ar-toos'ez) [Maurice Arthus, contemporary French physiologist] See under phenomenon
- artiad (ar'te-ad) [Gr ἄρτιος even]. Any chemic element having an even-numbered valency
- article (ar'tik-l) [L artic'ulus a little joint] An interarticular segment, one of the portions or segments forming a jointed series.
- articular (ar-tik'u-lar) [L. articula'ris] Of or pertaining to a joint.
- articulate (ar-tık'u-lāt) [L. articula'tus jointed],
 I Divided into or united by joints. 2. Enunciated in words and sentences. 3. To divide into joints
- articulated (ar-tik'u-la-ted). Connected by joints.articulatio (ar-tik-u-la'she-o). Latin for articulation or joint
- articulation (ar-tik-u-la'shun) [L. articula'tio].

 1. A joint in an arthrosis. See joint. 2. The enunciation of words and sentences 3. In dentistry, arrangement of artificial teeth so as to accommodate the various positions of the mouth and to serve the purpose of the natural teeth which they are to replace. ambomalleal a., the articulation of the malleus with the incus. capitular a's, the articulations between the vertebra and the heads of the ribs carpal a. 1. The wrist-joint. 2. The knee-joint of an animal. confluent a., speech in which the syllables are run together.
- articulator (ar-tik'u-la-tor). A device for effecting a joint-like union dental a., a dentist's apparatus for matching the upper and lower dentures
- articulatory (ar-tik'u-la-to-re). Pertaining to utterance.
- articulo mortis (ar-tik'u-lo mor'tis) [L.]. At the point, or moment, of death.

- artifact (ar'te-fakt). Same as artefact.
- artifactitious (ar-te-fak-tish'us). Having the character of an artifact.
- **artificial** (ar-tif-ish'al) [L. ars art + fa'cere to make] Made by art; not natural nor pathologic.
- **Artiodactyla** (ar"te-o-dak'til-ah) [Gr. ἄρτιος even + δάκτυλος toe] An order of hoofed animals, having hoofs or toes even in number, including ruminants, pigs, deer, and antelopes.
- Artorius (ar-to're-us). A physician and medical writer of Rome in the first century B. C. He wrote a treatise on hydrophobia, which has been lost.
- **Arum** (a'rum) A genus of plants. A. dracon'tuum has narcotic and antispasmodic properties. A. macula'tum furnishes sago.
- arvenol (ar-ve'nol). A preparation of menthol, thymol, and camphor used by inhalation in respiratory diseases.
- aryepiglottic, aryepiglottidean, arytenoepiglottic (ar"e-ep-ig-lot'ik, ar"e-ep-ig-lot-id'e-an, ar-it"en-o-ep-ig-lot'ik) [Gr. άρὐταινα pitcher + epiglottis]. Pertaining to the arytenoid cartilage and to the epiglottis.
- **aryl** (ar'il-). A chemic prefix indicating a radical belonging to the aromatic series.
- arylarsonate (ar-il-ar'so-nāt). A name for certain aromatic organic salts of arsenic They include atoxyl, arsacetin, salvarsan (606), soamin, and orsudan.
- arytænoideus (ar"it-en-oi'de-us). See muscles, table of
- **arytenectomy** (ar-e-ten-ck'to-me) [L. arytenoid + Gr. ἐκτομή excision]. Excision of an arytenoid cartilage in the horse.
- arytenoid (ar-it-e'noid) [Gr ἀρύταινα pitcher + είδος torm]. Shaped like a jug or pitcher.
- arytenoidectomy (ar"1t-e-noi-dek'to-me) [aryte-noid + Gr. ἐκτομή excision] Surgical removal of an arytenoid cartilage.
- arytenoiditis (ar-it"en-oi-di'tis). Inflammation of the arytenoid cartilage or muscles
- **As.** An abbreviation for astigmatism; also the symbol for arsenic.
- a. s. Abbreviation for L., au'ris sinis'tra, left ear.
- **As. H.** Abbreviation for hypermetropic astigmatism. **As. M.** Abbreviation for myopic astigmatism.
- asafetida, asafœtida (as-af-et'id-ah) [f. Persian a'za gum + L fat'ıda fetid]. A fetid gumresin, with garlic-like odor, from the root of Fer'ula asalw'tida, F. fw'tida, and other species. It is slightly soluble in alcohol, and forms an emulsion with water. Asafetida is an antispasmodic, stimulant, and expectorant, and is used in chorea and hysteria, especially when digestive disorder exists. Dose, 5-20 gr (0 333-1.333 gm). emulsion of a. (emul'sum asa/wt'vdw), called also milk of asafetida Dose, 4-8 dr. (15-30 cc) ture of a. (mistu'ra asafæt'idæ, called also Dewees' carminative, contains also magnesia and opium. Dose, 30-120 min (2-8 cc). pills of a. (pilu'la asatet'ida) Each pill contains 3 gr. (0 2 gm) of asafetida. Dose, 1-4. pills of a., compound (pilit'dæ asafæt'idæ compos'itæ). Dose, 5 20 gr. (0 333-1.3 gm). **plaster of a.** (cmplas'trum asafæt'idæ), contains asafetida, 35 parts; lead plaster, 35 parts, galbanum, 15 parts, yellow wax, 15 parts, and alcohol, 120 parts. **tincture of a.** (tinctu'ra asafwt'idæ). Dose, 30–60 min. (2–4 c c.).
- **asaphia** (ah-sa'fe-ah) [Gr. ἀσάφεια]. Indistinctness of utterance.
- **asaprol** (as'a-prol) [Gr α neg. $+ \sigma \alpha \pi \rho \delta s$ decayed]. A white antiseptic, antirheumatic, and antipyretic substance, Ca(C₁₀H₆OHSO₃)₂, or calcium betanaphthol-alpha-monosulphonate, soluble in water and alcohol. It is used in rheumatism, gout, diphtheria, influenza, typhoid fever, etc. **Dose**, 5–10 gr. (0.333–0.666 gm.).

asarol (as'ar-ol). The trimethyl ether of propenyl trioxybenzene, C₃H₅.C₆H₂(OCH₃)₃, a volatile oil from various species of Asarum.

Asarum (as'ar-um) [L; Gr. ἄσαρον]. 1. A genus of aristolochiaceous plants. 2. The root of A. canaden'se, wild ginger or Canada snakeroot, is a fragrant and aromatic stimulant. Dose of fluid-extract, 15-60 min. (1-4 c.c.). A europa'um, or asarabacca, is diuretic, diaphoretic, purgative, and emetic. Dose of the leaves (as'ari ʃo'lia) as an errhine, 1-2 gr. (0 000-0.133 gm); as an emetic, 30-120 gr. (1 95-7 8 gm).

asbestos (as-bes'tos) [Gr. ἄσβεστος quicklime]. A fibrous magnesian and calcic silicate, having a limited use in dentistry and surgery. It is incombustible.

asbolin (as'bo-lin) [Gr. ἀσβόλη soot]. A yellowish oil from the roots of pine trees, consisting largely of pyrocatechol used in tuberculosis.

ascariasis (as-kah-ri'as-is) [see *Ascarts*]. Infestation with ascarides also ill health due to ascarides.

ascaricide (as-kar'is-īd) [Gr ἀσκαρις ascaris + L. cæd'ere to kill]. A drug that destroys ascarides.

Ascaridæ (as-kar'id-e). A family of Nematoda characterized by three oral papille or lips.

ascarides (as-kar'id-ēz) Plural of ascaris.

ascaridiasis (as"kar-id-i'as-is). See ascariasis.

ascaridol (as-kar'id ol). An anthelmintic and irritant liquid obtained by distilling oil of chenopodium at a reduced pressure (about 8 mm).

ascariosis (as-kar-e-o'sis). Ascariasis.

Ascaris (as'kar-is), pl ascar'ides (as-kar'id-ēz)
[L., Gr. ἀσκαρίς]. A genus of intestinal lumbricoid parasites of the order Nematoda. A. ala'ta, A. ca'nis. See Tovascaris canis A. e'qui, a species found in horses A. lumbricoi'des, the eclworm or round-worm, a common worm resembling the earth-worm, it is found in the small intestine, especially in children, causing colicky pains and diarrhea A. margina'ta. See Toxascaris canis A. megaloceph'ala, a species found in horse A. mys'tax. See Belascaris mystax A. o'vis, a species found in sheep A. su'is, A. suil'la, a species found in forse A. texa'na, a species recently found in Texas. A. vermicula'ris. See Oyyuris A. vitulo'rum, a species found in cattle.

ascaron (as'kar-ōn). A toxic mixture of proteoses and peptones obtained from several species of

ascending (as-en'ding). Having an upward course.
 ascensus uteri (as-en'sus u'ter-i) [L]. Abnormally high position of the uterus.

 $\mathbf{As}_{2}(\mathbf{CH}_{3})_{4}$. Cacodyl.

Asch's operation, splint [Morris J. Asch, American laryngologist, 1833-1902] See operation, splint.

Ascherson's membrane, vesicles (ash'er-sunz) [Ferdinand Moritz Ascherson, German physician, 1708–1879] See under membrane and vesicle.

Aschner's phenomenon (ash'nerz) [B. Aschner, contemporary German physician]. See phenomenon.

 $\mathbf{As}_2(\mathbf{CH}_3)_4\mathbf{O}$. Cacodyl oxid.

Aschoff's bodies or nodules (ash'ofs) [Ludwig Aschoff, German pathologist, born 1866]. See under body. A's node. See under node.

Aschoff-Tawara node. See under node.

ascia (as'e-ah) [L "ax," from the shape of its folds]. A name for various forms of spiral bandage.

ascites (as-i'tēz) [L.; Gr. ἀσκίτης, from ἀσκός bag]. Dropsy of the abdominal cavity, an accumulation of serous fluid in the peritoneal cavity. It is marked by fluctuant, painless swelling of the abdomen, which gives a dull sound on percussion. Ascites is due to local inflammation of the peritoneum or to obstruction of the venous cir-

culation by disease of the heart, kidney, or liver. The fluid in ascites is clear and yellow, and coagulates on standing. a. adipo'sus, a variety characterized by a milky appearance of the contained fluid, due to the presence of cells that have undergone a fatty degeneration. chyliform a., a. chylo'sus, the presence of chyle in the peritoneal cavity; it is caused by the rupture of a chyliferous vessel. fatty a. See a. adiposus. hydremic a., that which is associated with, or due to, a watery state of the blood. preagonal a., a flow of serum into the peritoneal cavity just before death pseudochylous a., ascites in which the contained fluid resembles chyle in appearance, but does not contain fatty matter.

ascitic (as-it'ik). Affected with, or pertaining to,
ascites.

Asclepiad (as-kle'pe-ad). A priest of the temple of Æsculapius (Asclepias), supposed to be a descendant of his; also applied to any devoted high-minded physician.

Asclepiades (as-kle-pi'ad-ēz). A Bithynian physician, born about 124 B C., who practised at Rome and attained a great reputation. He wrote many works (about 20), but only small fragments of them, in the form of quotations in later literature, are in existence.

asclepiadin (as-kle-pi'ad-in) A bitter glucosid from Asclepias: emetic, aperient, sudorific, and poisonous. Dose, 1-5 gr. (0 005-0.333 gm.).

Asclepias (as-kle'pe-as) [L.]. A genus of asclepiadaceous plants. The root of A. lubero'sa, or pleurisy-root. is expectorant, diaphoretic, and tonic, and is used in the fevers of rheumatism, pleurisy, and bronchitis Dose in powder, 20-60 gr. (1.333-4 gm.). A curassa'vica is an herb of tropical America astringent, styptic, and anthelmintic. Dose of fluidextract, 20-60 min. (1.25 4 c c).

asclepidin (as-klep'id-in). A proprietary concentration from Ascle'pias tubero'sa: deobstruent. Dose, 1-5 gr. (0 005-0 333 gm)

asclepin (as'klep-in). 1. A poisonous cathartic, diaphoretic, and alterant principle obtainable from asclepiadin. 2. A proprietary alterative, evacuant, tonic, and schative from Ascle' pias tubero'sa. Dose, 2-4 gr '0.13 0 26 gm').

ascocarp (as'ko-karp) [Gr. ἀσκός bag+καρπός fruit]. The developed fructification in ascomycetes, including asci and ascospores.

Ascococcus (as-ko-kok'us) [Gr ἀσκός bag + κοκκός kernel] A genus or form of bacterial coccus, consisting of round or ovoid cells, occurring in masses and surrounded by tough gelatinous envelops. A. billro'thii occurs in the air and in decaying meat. A. cu'reus occurs in the skin in seborrhea.

ascogonium (as ko-go'ne-um). The female organ in some of the cryptogamous plants which, after fertilization, develops into asci. Called also *archicarp* and *carpogonium*.

Ascoli's reaction (as-ko'lēz) [Albert Ascoli, Italian veterinarian]. See reaction.

Ascomycetes (as"ko-mi-se'tēz) [Gr ἀσκός bag + μύκης fungus]. A group of fungi which form ascospores. It includes the yeasts, Penicillium, Aspergillus Trichophyton, and Achorion.

ascospore (as'ko-spōr) IGr. ἀσκός bag + σπόρος seed]. One of a set of spores contained in a special sac, or ascus. See spore.

ascus (as'kus) [Gr. ἀσκός a bag], pl. as'ci The sporangium or spore-case of certain lichens and fungi, consisting of a single terminal cell.

-ase. A suffix designating an enzyme, as lipase, diastase.

asebotin (as-eb'o-tin). A glucosid obtained from the leaves of mountain laurel, Kal'mia latifo'lia.

asecretory (ah-se'kre-to-re). Without secretion.

asellin (as-el'in) [L. asel'lus cod]. A poisonous base, C₂₅H₃₂N₄, from cod-liver oil.

Aselli's glands or **pancreas** (as-el'ēz) [Gasparo Aselli, Italian anatomist, 1581-1626]. See under pancreas.

asemasia (ah-se-ma'ze-ah) [Gr. a neg. + σημασία sign]. Lack or loss of the power of communication by words or by signals.

asemia (ah-se'me-ah) [Gr. α priv. $+ \sigma \hat{\eta} \mu \alpha$ sign]. Inability to employ or to understand either speech or signs, due to a central lesion. **a. graph'ica**, inability either to write or to understand writing, due to a central lesion. **a. mim'ica**, inability to understand or to perform any action expressive of thought or emotion. **a. verba'lis**, inability to make use of or to understand words.

asepsin (ah-sep'sin). Same as antisepsin.

asepsis (ah-sep'sis) [Gr. α priv. + σηψις decay]. Absence of septic matter, or freedom from infection.

aseptic (ah-sep'tik) [Gr. α neg. $+ \sigma \hat{\eta} \psi$ s decay]. Not septic; free from septic material **a. acid**, an antiseptic mixture of boric acid, water, hydrogen dioxid, and salicylic acid. **a.-antiseptic**, both aseptic and antiseptic.

asepticism (ah-sep'tis-izm). The principles and practice of aseptic surgery.

asepticize (ah-sep'tis-iz). To render aseptic; to free from pathogenic materials.

aseptin (ah-sep'tin). A proprietary food-preservative, said to be boric acid.

aseptinol (ah-sep'tin-ol). I. A proprietary ointment made of zinc oxid, resorcinol, etc. 2. A proprietary dusting-powder made of boric acid, eucalyptol, menthol, etc.

aseptol (ah-sep'tol) [aseptic + L. o'leum oil]. Phenolsulphonic acid, OH.C₀H₄.SO₂OH, a reddish, oily disinfectant and antiseptic: used like phenol in 1-10 per cent. solutions. Called also sozolic and phenylsulphonic acid.

aseptolin (ah-sep'to-lin). A preparation of phenol and pilocarpin: useful in intermittents and in phthisis.

aseptule (ah-sep'tūl). A capsule that will preserve its contents from decomposition.

asequence (ah-se'kwens). Lack of the normal sequence between the auricular and ventricular contractions of the heart.

asexual (ah-seks'u-al). Having no sex; not sexual. **asexualization** (ah-seks-u-al-iz-a'shun). Sterilization of an individual, as by castration or vasectomy.

asferrin (as-fer'in). An organic arsenic iron compound in the form of a greenish powder.

asferryl (as-fer'il). Iron arsenotartrate, a greenishyellow powder used in anemia, chlorosis, and debility. Dose, ½ gr (0.02 gm) three times a day.

ash. 1. The incombustible residue remaining after any process of incineration. 2. Any tree or species of the genus Fraxinus. F. or'nus and others afford manna (q. v.). The bark of many species is astringent and antiperiodic. flowering a., Chionanthus. white a., Fraxinus americana.

asialia (ah"si-a'le-ah) [Gr. α neg. + σίαλον spittle].
Absence or deficiency of the saliva.

asiderosis (ah-sid er-o'sis) [Gr α neg. + σίδηροs iron] Abnormal decrease of the iron reserve of the body.

Asimina (ah-sim'in-ah) [L., from its Algonkin name]. A genus of North American trees and shrubs. A. tril'oba, the papaw or pawpaw, has an edible fruit and medicinal properties.

asiminin (ah-sim'in-in). An alkaloid from the seeds of *Asim'ina tru'oba*. It is narcotic, but is seldom used as a remedy.

asiphyl (ah-sif'il). See as pirochyl.

asitia (ah-sish'e-ah) [Gr. a priv. + oîros food]. A loathing for food.

asjike (ahs-ji'ke). Beriberi.

askaron (as'kar-on). Same as ascaron.

As₂O₃. Arsenic trioxid.

asoma (ah-so'mah), pl. aso'mata [Gr. a priv. $+ \sigma \hat{\omega} \mu a$ body]. A monster-fetus with an imperfect head and the merest rudiments of a trunk.

asomatophyte (ah-so'mat-o-fit) [Gr. α neg. + $\sigma \hat{\omega} \mu \alpha$ body + $\varphi \nu r \delta \nu$ plant]. A plant in which there is no distinction between body and reproductive cells Bacteria belong to this class.

AsO.OH(CH₃)₂. Cacodylic acid.

Asopia (ah-so'pe-ah). A genus of pyralid moths A. farina'lis, the meal moth, acts as the intermediate host of Hymenolepsis diminuta.

aspalasoma (as"pal-as-o'mah) [Gr. $\delta\sigma\pi\dot{\alpha}\lambda\alpha\xi$ mole $+\sigma\tilde{\omega}\mu a$ body]. A variety of monster-fetus with lateral or median abdominal eventration and with other deformities.

asparagin (as-par'aj-in) [Gr. ἀσπάραγος asparagus]. The monamid of aspartic acid, NH₂.CO.CH₂-CH(NH₂)CO₂H, from asparagus and from many kinds of seeds. It is soluble in hot water, but insoluble in ether and alcohol. It is diuretic. Dose, I-2 gr. (0.066-0.133 gm.). a. hydrargyrate, a duretic and antisyphilitic agent. Hypodermic dose, ½ gr. (0.01 gm.).

asparaginic acid (as-per-aj-in'ik). See acid.

Asparagus (as-par'ag-us) [L.; Gr. ἀσπάραγος]. A genus of liliaceous plants The root of Λ. officina'lis is a mild diuretic. Dose of fluidextract, ½-1 dr. (2-4 c c.).

asparamid (as-par-am'id). Same as asparagin.

asparol (as'par-ol). A fluid preparation of Aspar'agus offuma'lis.

asparolin (as-par'o-lin). A proprietary antispasmodic uterine tonic.

aspartic acid (as-par'tik) Same as asparaginic acid. See acid.

aspect (as'pekt) [L. aspec'tus, from aspicere to look toward]. 1. That part of a surface which looks in any particular direction. 2. The look or appearance.

aspen (as'pen). See Populus.

aspergillar (as per-jil'ar). Pertaining to or caused by Aspergillus.

aspergillin (as-per-jil'in). A black pigment resembling hematin, from the spores of various species of Aspergil'lus: called also vegetable hematin

aspergillomycosis (as-per-jil-o-mi-ko'sis) A mycosis caused by aspergilli, aspergillosis.

aspergillosis (as"per-jil-o'sis). A diseased condition marked by the presence of an aspergillus. aural a. See otomycosis. pulmonary a., infection of the lungs with Aspereillus, producing symptoms and lesions resembling those of pulmonary tuberculosis.

Aspergillus (as-per-jil'us) [L. asper'gere to scatter]. A genus of ascomycotous lungi. It includes several of the common molds and some that are pathogenic. It is characterized by rounded conidiospores thickly set with chains of black co-

nidia. A. auricula'ris, a mold found in the ceru-men of the ear: pathogenic. A. bar'ba has been found in mycosis of the head. A. bonfor'di has found been in black mycetoma. A. concen'tricus, a species formerly considered to be the cause of Tinea imbricata.

Aspergillus (Rivas).

A. fla'yus, a mold found on corn and grain and believed to be concerned in the causation of blind staggers in horses. A. fumiga/tus has been found in the ear, nose, and lungs. A. glau'cus, a bluish mold found on dried fruit, occurring also in tne ear. A. mucoroi'des, a species found in tuberculous or gangrenous lung tissue. A. mycosis. Same as ctamycosis. A. nid'ulans, a species causing white mycetoma. A. ni'ger, a species found in the external ear causing otomycosis. It also causes diseases in animals that consume grain infected with it. A. ocra/ceus, the species which ferments the coffee berry and produces the characteristic and desirable odor. A. pic'tor, a species found in the white patches of pinta. A. re'pens, a species found in the auditory canal, where it may produce a false membrane.

aspermatism (ah-sper'mat-izm). Same as aspermua.

aspermia (ah-sper'me-ah) [Gr. α priv. $+ \sigma \pi \epsilon \rho \mu \alpha$ seed]. Deficient secretion of semen.

aspersion (as-per'shun) [L. as per'sio] The act of sprinkling the body with a therapeutic agent.

asphærinia, aspherinia (ah-sfe-rin'e-ah) [Gr. a neg. + σφαῖρα ball] Same as aglobulta.

asphalgesia (as-fal-je'ze-ah) [Gr. ἄσφι own + ἄλγοs pain]. A sensation of burning felt on touching certain articles occurring during hypnosis.

asphyctic, **asphyctous** (as-fik'tık, as-fik'tus). Pertaining to, or affected with, asphyxia.

asphyxia (as-fiks'e-ah) [Gr. a priv $+ \sigma \varphi b \xi \iota s$ pulse]. Suffocation; also suspended animation from suffocation or a deficiency of oxygen in the blood. It is attended by a feeling of suffocation, evanosis, and coma a. carbon'ica, suffocation from the inhalation of coal-gas, water-gas, or carbon monoxid a. liv'ida, asphyxia in which the skin is livid from the presence of carbon dioxid in the blood, but the circulation continues. local a., suspension of vital functions in a limited part, as fingers, toes, or nose, due to arterial spasm. It comes on suddenly, lasts for several weeks, and often ends in gangrene Called also Raynaud's disease. a. neonato'rum, imperfect breathing, as in newborn infants. a. pal'lida, asphyxia attended with paleness of the skin, weak pulse, and attended with paleness of the skin, many a, as-abolition of the reflexes **secondary a**, asphyxia recurring after apparent recovery suffocation. traumatic a., discoloration of the head and neck as a result of sudden or severe compression of the thorax or upper abdomen, or both, called also ecchymotic mask, traumatic apnea, and pressure stasis.

asphyxial (as-fik'se-al). Characterized by asphyxia. **asphyxiant** (as-fik'se-ant). Producing asphyxia

asphyxiate (as-fik'sc-āt). To put into a state of more or less complete asphyxia.

aspidin (as'pid-in). A poisonous principle, C₂₃-H₂₇O₇, derivable from male-fern.

Aspidium (as-pid'e-um) [L.; Gr. ἀσπίδιον little shield]. A genus of ferns called shield-ferns. The rhizome and stipes of A (Dryop'teris) fil'in-mas (male fern) and A margina'lis is a valuable tenacide Dose, 60-240 gr (4-16 gm); of fluidextract, 15-60 min (1-4 c.c.); of oleoresin, ½-1 dr. (2-4 gm.). A. spinulo'sum is used as a teniafuge.

aspidosamin (as"pid-o-sam'in). A basic principle, $C_{24}H_{28}N_2O_2$, from quebracho bark: emetic.

Aspidosperma (as"pid-o-sper'mah) [Gr. ἀσπίς shield + σπέρμα seed]. I. A genus of apocynaceous trees. 2. Quebracho bark: the bark of A. quebra'cho blan'co, a South American tree It is antiperiodic and is useful in asthmatic and cardiac dyspnea. Dose of fluidextract, I fl dr (4 c c).

aspidospermin (as"pid-o-sper'min). An alkaloid, $C_{22}H_{30}N_2O_2$, from the bark of Aspidosper'ma quebra'cho. Dose, $\frac{1}{2}$ -3 gr. (0.033-2 gm.).

aspiphenin (as-pe-fe'nin). A combination of aspirin and phenacetin.

aspirate (as'pi-rat). 1. To treat by aspiration. 2. A consonantal sound in which some part of the

respiratory tract is constricted, the nasal cavity shut off, and the breath makes a whistling noise.

aspiration (as-pir-a'shun) [L ad to + spira're to breathe].
The act of breathing or drawing in.
The removal of fluids or gases from a cavity by means of the aspirator.

aspirator (as'pir-a-tor) An apparatus used for removing by suction the fluids or gases from a cavity. **Dieulafoy's a.**, consists of a glass cylinder with a piston, and having two openings, one for a trocar and cannula, the other for a discharge tube.

aspirin (as'pir-in) Acetyl-salicylic acid, CH₃CO₂-C₆H₄CO₂H, a white, crystalline compound, soluble in 100 parts of water and in alcohol used like sodium salicylate as a remedy for rheumatism and pleurisy, in chorea, and to reduce fever in tuberculosis. It is incompatible with alkalis and must be given in dry form. Dose, 15 gr (1 gm.).

aspirochyl (as-pi'ro-kil). Mercury paraminophenylarsenate used in syphilis. Dose, 16 min. (1 c c.) of a 1:20 suspension in glycerin, hypodermically. Called also as1 phyl.

aspirolithin (as"pir-o-lith'in). A proprietary combination of acetylsalicylic acid and lithium.

aspirophen (as-pi'ro fen). A mixture of free salicylic acid and monoacetyl phenocoll, used like the salicylates.

Asplenium (as-ple'ne-um). A genus of ferns, several species of which are medicinal.

asporogenic, asporogenous (as"po-ro-jen'ik, as"po-roj'en-us) [Gr α neg + sporogenuc]. Not producing spores; not reproduced by spores.

asporous (ah spo'rus) [Gr α neg + σπόρος seed]. Having no true spores applied to microorganisms. **asporulate** (ah-spor'u-lat). Not producing spores. **aspriodin** (as-pii'o-din) A compound of iodin and

aspirm.

asquirrol (as-kwir'ol) A proprietary mercury preparation, mercury dimethylate, for use by injection in syphilis

assafœtida (as-af-et'ıd-ah). See asafctida.

assanation (as-an-a'shun) [L. ad to + sa'nus sound]. Samtation, the improvement of sanitary conditions.

Assézat's triangle (ah-se-zahz') [Jules Assézat, French anthropologist, 1832-1876]. See under triangle

assident (as'id-ent). Generally but not always accompanying a disease, as, assident symptoms.

assideration (as''id-er-a' shun) [L. ad to + sidera'tio untoward influence]. The drowning of an infant in ice-cold water.

assimilable (as im'il-a-bl). Susceptible of being assimilated.

assimilation (as-im-il-a'shun) [L. assimila'tto, from ad to + simila're to make like]. The transformation of food into living tissue; constructive metabolism. mental a., the reception and correct appreciation of sensory impressions. primary a., chylification secondary a., the preparation of food-elements for normal assimilation by the hematopoietic apparatus.

associable (as-o'se-a-bl) Easily affected by sympathy with other parts.

association (as-o-se-a'shun) [L associa'tio, from ad to + so'ctus a fellow] The coördination of the functions of similar parts In neurology, correlation involving a high degree of modificability and also consciousness. See association center, under center a. center. See under center a. of ideas, the mental operation by which a mental impression calls up the memory of other impressions that at some former time have been associated with the former.

assonance (as'o-nans). A morbid tendency to alliteration in speaking.

assuetude (as'we-tūd). The state of being habituated to disturbing influences. **assurin** (as'u-rin). A diaminodiphosphatid, C₄₆H₉₄-N₂P₂O₉, said to occur in the brain substance.

Ast. Abbreviation for astigmatism.

astasia (as-ta'ze-ah) [Gr. α priv. + στάσις stand]. Motor incoordination with inability to stand **a.-abasia**, nability to stand or to walk because of aboulic ideas

asteatosis (as"te-ah-to'sis) [Gr. α neg. + στέαρ tallow]. Any diseased condition characterized by scantiness or absence of the schaceous secretion. **a. cu'tis**, a dry, scaly, or fissured state of the skin, attended with a deficient secretion of schaceous matter.

aster (as'ter) [L.; Gr. ἀστήρ star]. The starshaped structure formed around the centrosome in mitosis. See mitosis. **sperm-a.**, a star-shaped structure in the fertilized ovum at the head of the spermatozoon.

astereocognosy (ah-ste"re-o-kog'no-se). Same as astereognosis.

astereognosis (ah-ste"re-og-no'sis) [Gr. α neg. + $\sigma \tau \epsilon \rho \epsilon \delta s$ solid + $\gamma \nu \hat{\omega} \sigma \iota s$ recognition]. Loss of power to recognize the shape of objects by touch.

asteriasterol (as-te-re-as'ter-ol) A sterol obtained from the starfish, Asterias forbesi.

asterion (as-te're-on) [Gr. ἀστέριον star-like]. The point of union of the occipital, parietal, and temporal bones on the surface of the skull.

Asterionella (as-te-re-o-nel'ah) A genus of diatoms which sometimes imparts an aromatic odor to a water-supply.

asternal (as-ter'nal). Not joined to the sternum. **asternia** (ah-ster'ne-ah) [Gr. α neg. + στέρνον sternum]. Absence of the sternum.

Asterococ'cus mycoi'des. The minute organism which causes pleuropneumonia of cattle. It can be grown in various culture-media and the bacteria-free filtrate will reproduce the disease.

asteroid (as'ter-oid) [Gr. $\delta\sigma\tau\dot{\eta}\rho$ star + $\epsilon l\delta\sigma$ form]. Star-shaped; resembling the aster.

asterol (as'ter-ol). A brownish powder, a compound of paraphenol sulphonate of mercury and ammonium tartrate, (OH.C₆H₄SO₂)Hg 4C₄H₄O₆-(NH₄)₂. It is soluble in water and does not precipitate albumin. It is used as an external antiseptic in 2-5 per cent. solution.

Asth. Abbreviation for asthenopia.

asthenia (as-the'ne-ah, as-then-i'ah) [Gr. α priv. + σθένος strength]. Lack or loss of strength. neurocirculatory a., a symptom-complex characterized by the occurrence of breathlessness, giddiness, a sense of fatigue, pain in the chest in the region of the precordium, and palpitation. It occurs chiefly in soldiers in active war service, though it is seen in civilians also Called also soldier's heart, irritable heart, effort syndrome, and disordered action of the heart (D. A. H.) periodic a., a condition marked by periodically returning attacks of marked asthenia. a. pigmento'sa, Addison's disease a. universa'lis, constitutional visceroptosis with its attendant neurasthenic tendency, vasomotor weakness, and gastrointestinal atony (Stiller's theory).

asthenic (as-then'ik) [Gr. α priv. $+ \sigma\theta\acute{\epsilon}\nu\sigma$ s strength]. Characterized by weakness or feebleness.

asthenocoria (as-then-o-ko're-ah) [Gr. α neg. + $\sigma\theta\epsilon\nu\sigma_{S}$ strength $+\kappa\delta\rho\eta$ pupil] A condition in which the pupillary light reflex is sluggish, seen in hypo-adrenia.

asthenometer (as-then-om'et-er) [Gr. ἀσθένεια asthenia + μέτρον measure]. An instrument for measuring the degree of muscular asthenia or of asthenopia.

asthenope (as'then-ŏp). A person affected with asthenopia.

asthenopia (as-then-o'pe-ah) [Gr. α priv. $+ \sigma\theta \epsilon \nu \sigma s$ strength $+ \delta \psi_1 s$ vision]. Weakness or speedy tiring of the visual organs, attended by pain in

the eyes, headache, dimness of vision, etc. accommodative a., asthenopia due to strain of the ciliary muscle. muscular a., that which is due to weakness of the external ocular muscles. nervous a., asthenopia occurring as one of the symptoms of neurosis and marked by fatigue and contraction of the visual field. called also retinal a and asthenua of the retinal retinal a., that which is due to retinal disease. tarsal a., asthenopia due to irregular astigmatism produced by the pressure of the lids on the cornea.

asthenopic (as-then-op'ik). Characterized by asthenopia.

asthenoxia (as-then-ok'se-ah) [Gr. α neg $+ \sigma \theta \hat{\epsilon} \nu o s$ strength + oxygen]. Lack of power to oxidize waste-products.

asthma (az'mah, ast'mah) [Gr. &σθμα panting]. A disease marked by recurrent attacks of paroxysmal dyspnea, with wheezing, cough, and a sense of constriction, due to spasmodic contraction of the The paroxysms last from a few minutes bronchi. to several days, and they may result from direct irritation of the bronchial mucous membrane or from reflex irritation Many cases of asthma are anaphylactic manifestations in sensitized persons. alveolar a., that which is characterized by dilatation of the alveoli of the lungs. amygdaline a., reflex asthma caused by a disease of the tonsils. **bacterial a.,** asthma due to bacterial infection. bronchial a., asthma marked by bronchial spasm and a swelling of the bronchial mucous membrane. bronchitic a., catarrhal a., asthmatic disorder attendant upon a catarrhal bronchitis. cardiac a., dyspnea due to heart disease cat a., asthma brought on by the presence of a cat (ailurophobia). Cheyne-Stokes' a., cardiac asthma. a. convulsi'vum. Same as bronchial a. cutaneous a., reflex asthma caused by some irritation of the skin. dust a, a form of asthma caused by the dust encountered in houses, in the streets, or in trades. a. dyspep'**ticum**, reflex asthma dependent upon a dyspepcie disorder. emphysematous a., emphysema of the lungs attended with asthmatic paroxysms. essential a., nervous a., true a., that due to nervous impulses solely, and not accompanied by any structural change in the bronchi. food a., asthma brought on by ingestion of certain foods gastric a., asthma which is a symptom of some gastric disease. grinders' a., an interstitial pneumonia due to the inhalation of fine particles peculiar to grinders of steel, etc. hay-a. Same as hay-fever **Heberden's a.**, angina pectoris **horse a.**, a form of allergic asthma in which the attacks are brought on by the presence of horses or of horse products humid a., asthma with profuse expectoration **Kopp's a.**, spasm of the glottis; laryngismus stridulus **Millar's a.**. glottis; laryngismus stridulus millers' a., a condition laryngismus stridulus of the lungs found in millers, caused by the inhalation of flour. miners' a., anthracosis. nasal a., asthma caused by a disease of the nose. pollen a., hay-fever. potters' a., pneumonoconiosis reflex a., asthma due to some reflex action. renal a., reflex asthma due to disease of the sexual a., asthma due to sexual diskidnev turbance, such as excessive venery or genitourinary catarrh spasmodic a., asthma caused by spasm of the bronchioles. stone a., pressure and pain in the chest due to the presence of a calculus in the bronchi. **thymic a.**, a rare condition occurring usually in children, but occasionally in adults, marked by enlargement of the thymus, paroxysmal attacks of asthma, and a tendency to sudden death (thymic death, mors thymica). Cf. status lymphaticus. Wichmann's a., laryngismus stridulus.

asthmalysin (as-mal'is-in) [asthma + Gr. λύσις dissolution]. A combination of adrenalin and pituitary gland used in bronchial asthma.

asthmatic (az-mat'ik) [L. asthmat'icus]. Pertaining to, or affected with, asthma.

asthmogenic (as-mo-jen'ik). Giving rise to asthmatic attacks.

asthmolysin (as-mol'is-in). A proprietary preparation of the pituitary and adrenal bodies used in treatment of asthma.

asthmosan (az'mo-san). A proprietary combined extract of the adrenals and the hypophysis.

astigmagraph (as-tig'ma-graf). An instrument for showing the astigmatism of the eye.

astigmatic (as-tig-mat'ik). Pertaining to, or affected with, astigmatism.

astigmatism (as-tig'mat-izm) [Gr. a priv. + στίγμα point]. A defect of curvature of the refractive surfaces of the eye in which rays of light are not focused to a single point, but from a diffuse area on the retina (Airy, 1827). acquired a., that due to some disease or injury of the eye. against the rule, that in which the meridian along which the greatest refraction takes place is horizontal. compound a., that which is complicated with hypermetropia or with myopia in all meridians congenital a., that which exists at birth corneal a., that due to irregularity in the curvature or refracting power of the cornea. direct a. See a. with the rule. hypermetropic a., hyperopic a., that which complicates hypermetropia hyperopic a., compound, astigmatism in which all meridians are hyperopic, the focus of each principal meridian being back of the retina horizontal lines are usually more distinct. hyperopic a., simple, astigmatism in which one meridian, usually the vertical, is emmetropic and The focus the horizontal meridian is hyperopic of the vertical meridian is not in the retina; that of the horizontal is behind the retina: horizontal lines appear distinct. inverse a. See a. against the rule irregular a., astigmatism in which the curvature in different parts of the same meridian of the eye varies or in which successive meridians differ irregularly in refraction, the image produced being an irregular area. lenticular a., that which is due to some imperfection of the lens. mixed a., that in which one principal meridian is myopic and the other hypermetropic. myopic a., that which complicates myopia myopic a., compound, astigmatism in which all meridians are myopic, both principal meridians having their foci in front of the retina, vertical lines are usually more distinct. myopic a., simple, astigmatism in which the focus of one meridian is situated on the refina, while that of the other lies in front of the retina: vertical lines appear distinct oblique a., astigmatism in which the direction of the principal meridians approaches 45° and 135° **physiologic a.**, the slight astigmatism possessed by nearly all eyes and causing the twinkling sensation when distant points of light are viewed. regular a., a stigmatism in which the refractive power of the eye shows a uniform increase or decrease from one meridian to the other, being practically constant in each meridian the image produced is regular in shape, either a line, an oval, or a circle a. with the rule, that wherein the meridian in which the greatest refraction takes place is vertical or nearly so.

astigmatometer, astigmometer (as"tig-matom'et-er, as-tig-mom'et-er) [astigmatism + Gr. μέτρον measure]. An instrument used in measuring astigmatism.

astigmatoscope (as-tig-mat'o-skōp) [astigmatism + Gr. σκοπεῖν to see]. An instrument for discovering and measuring astigmatism.

astigmatoscopy (as-tig-mat-os'ko-pe). The use of the astigmatoscope

astigmia (as-tig'me-ah). Same as astigmatism.

astigmic (as-tig'mik). Same as astigmatic.

astigmometer (as-tig-mom'et-er). Astigmatometer.

astigmometry (as-tig-mom'et-re) [astigmatism +

μέτρον measure]. The measurement of astigmatism the use of the astigmatometer.

astigmoscope (as-tig'mo skōp). Astigmatoscope.

astomatous (as-tom'at-us) [Gr. α neg. + στόμα mouth] Having no mouth.

astomia (as-to'me-ah) [Gr α neg + στόμα mouth]. Absence of the mouth opening

astragalar (as-trag'al-ar). Pertaining to the astragalus

astragalectomy (as"trag-al ek'to-me) [astragalus + Gr ἐκτομή excision] Excision of the astragalus.

astragalocalcanean (as trag"al o kal-ka'ne an). Pertaining to the astragalus and the calcaneum.

astragalocrural (as-trag"al-o-kru'ral). Relating to the astragalus and the leg.

astragaloscaphoid (as-trag"al o-ska'foid). Pertaining to the astragalus and the scaphoid bone.

astragalotibial (as-trag"al-o-tib'e-al). Pertaining to the astragalus and the tibia.

astragalus (as-trag'al-us) [L., Gr ἀστράγαλος die].

1. A bone of the foot which articulates the tibia and fibula above with the calcaneum below.

2. A genus of leguminous plants of many species.

3. gum'mifer and other Oriental species afford tragacanth others are poisonous.

4. mollis'simus, of the United States (one of the plants called loco), is poisonous, and its active principle is mydriatic.

astral (as'tral). Of or relating to an aster.

astraphobia, astrapophobia (as-traf-o'be ah, as"trah-po-fo'be-ah) [Gr. ἀστραπή lightning + φόβοs fear] Morbid fear of lightning

astriction (as-trik'shun) [L astrin'gere to constrict]. The action of an astringent.

astringe (as-trinj'). To act as an astringent.

astringent (as trin'jent) [L. astrin'gens, from ad to + strin'gene to bind] 1. Causing contraction and arresting discharges. 2. An agent that arrests discharges. The principal astringents are silver intrate, tannic acid, gallic acid, lead acetate, zinc sulphate, catechu, kino, alum, and dilute mineral acids.

astroblast (as'tro-blast) [Gr ἄστρον star + βλαστός germ] Α cell that develops into an astrocyte.

astrocele, astrocœle (as'tro sēl) [Gr ἄστρον star + κοίλος hollow]. The hollow space within the astrosphere in which the centrosome lies.

astrocinetic (as"tro-sin et'ik) [Gr ἄστρον star + κίνησις movement] Pertaining to the movements of the attraction-sphere in karyokinesis.

astrocyte (as'tro sit) [(ir ἄστρον star + κύτος cell].

1. Any star-shaped cell; especially such a cell of the neuroglia called also spider cell.

2. A bone-corpuscle, so called from its star-like shape

astrocytoma (as"tro-si-to'mah). A tumor composed of astrocytes.

astroglia (as-trog'le-ah) [Gr. ἀστήρ star + neuroglia] Neuroglia tissue found chiefly in the gray matter and composed of astrocytes

astroid (as'troid) [Gr. ἀστήρ star + είδος form].

1. Star-shaped. 2. A structure of the neuroglia formed by a felted mass of fibers

astrokinetic (as"tro-kin-et'ık) [Gr. ἄστρον star + κίνεσις motion]. Pertaining to the movements of the centrosome.

astrolin (as'tro-lin). Antipyrin methylethylglycolate, $C_5H_{10}O_3$ $C_{11}H_{12}ON$, a crystalline compound used in migraine and headache. Dose, 5–15 gr. (o 3–1 gm.).

astroma (as-tro'mah). Same as astrocytoma.

astrophobia (as-tro-fo'be-ah) [Gr. $\ddot{a}\sigma\tau\rho\rho\nu$ star + $\phi\dot{\rho}\beta\sigma$ s fear]. Fear of the stars and celestial space.

astrosphere (as'tro-sfēr) [Gr. $\ddot{a}\sigma\tau\rho\rho\nu$ star $+\sigma\varphi\alpha\hat{i}\rho\alpha$ sphere]. 1. The central mass of an aster, same as altraction sphere. 2. The aster, exclusive of the centrosome.

astyclinic (as-te-klin'ik) [Gr. ἄστυ city + κλίνη bed]. A city or municipal hospital, dispensary, or clinic; used also adjectively.

asuran (as'u-ran). Sodium-p-carbamino arsenate

asurol (as'u-rol). A double salt of mercuric salicylate and amido-oxybutyrate of sodium. used in syphilis.

asyllabia (ah-sil-a'be-ah). A condition in which letters are recognized by the patient, but he is unable to form them into syllables.

asylum (as-i'lum) [L.]. An institution for the support and care of the helpless and deprived classes, such as the insane and the blind.

asymbolia (ah-sim-bo'le-ah) [Gr. α priv. + συμβολου symbol] The loss of all power of comprehending symbolic things, such as words, figures, gestures, etc. (Wernicke).

asymmetry (ah-sim'et-re) [Gr. α neg. $+ \sigma \nu \mu \mu \epsilon \tau \rho l \alpha$ symmetry]. Lack or absence of symmetry; dissimilarity in corresponding parts or organs on opposite sides of the body which are normally alike. In chemistry, lack of symmetry in the special arrangements of the atoms and radicals within the molecule **chromatic a.**, difference in color in the irides of the two eyes.

asynchronism (ah-sin'kro-nizm) [Gr. α neg. + synchronism]. The occurrence at distinct times of events normally synchronous, disturbance of coordination.

asynclitism (ah-sin'klit izm) [Gr. a neg + synclitism]. Oblique presentation of the head in parturition. anterior a., Naegele's obliquity. See obliquity. posterior a., Litzmann's obliquity. See obliquity.

asynergia (ah-sin-er'je-ah). Same as asynergy.
a. ma'jor, marked inco-ordination as indicated by a staggering gait
a. mi'nor, inco-ordination as shown in past-pointing and finger tests

asynergic (ah-sin er'jik) Marked by asynergy.

asynergy (ah-sin'er-je) [Gr. a priv. + συνεργία cooperation] Lack of coordination among parts of organs normally acting in harmony. In neurology, disturbance of that proper association in the contraction of muscles which assures that the different components of an act follow in proper sequence, at the proper moment, and are of the proper degree, so that the act is executed accurately. appendicular a., asynergy confined to the extremities, axial a., asynergy affecting the axial musculature. axio-appendicular a., asynergy affecting both the trunk and extremities. a. ma'jor, marked incoordination as indicated by staggering gait a. mi'nor, mild incoordination as indicated by pointing tests. trunkal a., asynergy affecting the muscles of the trunk.

asynesia (ah-sin-e'ze ah) [Gr ἀσυνεσία]. Dulness of intellect; stupidity.

asynodia (ah-sın-o'de-ah) [Gr. α priv. + συνοδία a journeying together]. Sexual impotence.

asynovia (ah-sin-o've-ah). Deficiency of the synovial secretion.

asyntrophy (ah-sin'tro-fe) [Gr α neg. $+ \sigma b \nu$ together $+ \tau \rho o \varphi i \alpha$ growth]. Lack of symmetry in development.

asystematic (ah"sis-tem-at'ik) Not confined to any one system of nerve-fibers; diffuse.

18ystole, **asystolia** (ah-sis'to-le, ah-sis-to'le-ah) [Gr. a neg + systole]. Imperfect or incomplete systole; inability of the heart to perform a complete systole.

asystolic (ah-sis-tol'ik) Characterized by asystole.

1systolizm (ah-sis'to-lizm). See asystole.

A. T. German abbreviation for old tuberculin (Alt Tuberculin).

atactic (ah-tak'tik) [Gr. ἄτακτος irregular]. 1. Same as ataxic. 2. Lacking coördination; irregular.

atactiform (ah-tak'tif-orm). Ataxia-like; slightly ataxic.

atactilia (ah-tak-til'e-ah). Loss of tactile sensibility.

atseniol (ah-te'ne-ol). A proprietary tapeworm remedy for dogs.

atavic, atavistic (at'av-ık, at-av-is'tik). Characterized by atavism.

atavicosis (at-av-ik-o'sis). A degeneration of the intestines due to the eating of highly concentrated food, which minimizes the work of the intestines.

atavism (at'ah-vizm) [L. at'avus grandfather] Inheritance of a characteristic or disease from remote, but not from the more immediate, ancestors. As now used in genetics, atavism is an inheritance from one of the grandparents of some particular character unlike the corresponding character in either parent. Cf. reversion.

ataxaphasia (ah"tak-sa-fa'ze-ah) [Gr. ἀταξία lack of order + aphasia]. Ability to utter words, but not sentences.

ataxia (ah-tak'se-ah) [Gr ἀταξία lack of order]. Failure of muscular coordination; irregularity of muscular action. acute a., an ataxic condition due to a general myelitis characterized by minute foci throughout all the nerve-centers from the pons downward. It follows measles, smallpox, and other infectious diseases. **alcoholic a.**, a condition resembling locomotor ataxia, due to chronic alcoholism. autonomic a., defective coordination between the sympathetic and parachronic alcoholism. sympathetic nervous systems Briquet's a., a hysteric condition with anesthesia of the skin and leg muscles. Broca's a. Same as hysteru a. central a., ataxia due to lesion of the centers controlling coordination. cerebellar a., ataxia due to discase of the cerebellum. cerebral a., ataxia due to disease of the cerebrum. a. cor'dis. Same as delirium cordis family a., Friedreich's a., hereditary a., Friedreich's disease an inherited disease, usually beginning in childhood or youth, with selections of the disease. with sclerosis of the dorsal and lateral columns of the spinal cord — It is attended by ataxia, speech impairment, lateral curvature of the spinal column, and peculiar swaying and irregular movements, with paresis of the muscles, especially of the lower extremities (Friedrich, 1863-76). hereditary extremities (Friedrich, 1863-76). hereditary cerebellar a., a disease of early adult life, due to atrophy of the cerebellum, and marked by ataxia, increased knee-jerk, speech-defects, and nystag-mus. hysteric a., hysteria simulating ataxia. intrapsychic a., a lack of unity of ideation and emotional reaction, as in a patient who weeps at a funny occurrence or laughs outright at the death of a close relative. **Leyden's a.**, pseudotabes. **locomotor a.**, degeneration of the dorsal columns of the spinal cord and of the sensory nervetrunks, with wasting. The disease is marked by paroxysms or crises of intense pain, incoordination, disturbances of sensation, loss of reflexes, paroxysms of functional disturbance of various organs, as the stomach, laryny, etc; also by various trophic disturbances, especially of the bones and joints, incontinence or retention of urine, failure of sexual power, etc. The course of the disease is usually slow but progressive, and, although it may often be temporarily arrested, complete cure is very rare. The disease occurs after middle life, and is more frequent in the male sex. It is also known as tabes dorsalis and posterior spinal sclerosis. Marie's a., hereditary cerebellar ataxia. motor a., inability to control the coordinate movements of the muscles. professional a. See occupation neurosis, under neurosis. spinal a., that which is due to disease of the spinal cord. static a., lack of muscular coordination during states of rest. superior a., that which affects principally the face and upper

- extremities. thermal a., a condition characterized by great and paradoxic fluctuations of the temperature of the body. vasomotor a., paresis or spasm of blood-vessels due to some affection of vasomotor nerves or centers. vestibular a., incoordination due to vestibular disease.
- ataxiadynamia (ah-tax''e-ah-di-na'me-ah). Ataxodynamia.
- ataxiagram (ah-taks'c-ah-gram) [ataxia + Gr. $\gamma \rho \dot{\alpha} \mu \mu \alpha$ writing]. A tracing drawn by an ataxic patient.
- **ataxiagraph** (ah-taks'e-ah-graf) [ataxia + Gr. $\gamma \rho \dot{\alpha} \varphi \epsilon \nu$ to write]. An apparatus used in ascertaining the extent of ataxia by measuring the amount of swaying of the body when standing erect and with the eyes closed.
- ataxiameter (ah-tax-e-am'et-er) [ataxia + Gr. μέτρον measure]. An apparatus for measuring ataxia.
- **ataxiamnesic** (at-ak"se-am-ne'sik). Characterized by both ataxia and amnesia.
- ataxiaphasia (ah-tax"e-ah-fa'ze-ah). Inability to form words into sentences
- ataxic (ah-taks'ik). Affected with, or pertaining to, ataxia.
- ataxiophemia (ah-tax"e-o-fe'me-ah). Ataxophe-mia.
- ataxiophobia (ah-tax"e-o-fo'be-ah). Ataxophobia.
- ataxoadynamia (at-ak"so-ad-in-a'me-ah). Ataxia associated with adynamia; ataxia associated with marked weakness.
- **ataxophemia** (ah-taks-o-fe'me-ah) [Gr. $\dot{\alpha}\tau\alpha\xi t\alpha$ disorder + $\dot{\varphi}\dot{\eta}\mu$ to speak]. Lack of coordination of the speech muscles.
- **ataxophobia** (ah-taks-o-fo'be-ah) [Gr. $\dot{a}\tau a\xi ia$ disorder + $\varphi \dot{o}\beta os$ fear]. Morbid or insane dread of disorder.
- ataxy (at-ak'se). Same as ataxia.
- atelectasis (at-el-ek'tas-is) [Gr. ἀτελής imperfect + ἔκτασις expansion]. Imperfect expansion of the lungs at birth, partial collapse of the lung.
- atelectatic (at"el-ek-tat'ik). Pertaining to, or affected with, atelectasis
- atelia (ah-te'le-ah) [Gr. ἀτέλεια incompleteness].
 Imperfect development.
- ateloisis (ah-te-le-o'sis) [Gr. α neg. + τέλειος complete] A form of infantilism marked by childish facial appearance, small jaw bone, small stature, short slender limbs, poorly developed muscles, a thin voice, low arterial pressure, and scanty urination (Gilford) Called also Lorain's disease.
- atelocardia (at"el-o-kar'de-ah) [Gr. ἀτελής imperfect + καρδία heart]. Incomplete development of the heart.
- atelocephalous (at"el-o-sef'al-us) [Gr. $\dot{\alpha}\tau\epsilon\lambda\dot{\eta}s$ imperfect $+\kappa\epsilon\varphi\alpha\lambda\dot{\eta}$ head] Having an incomplete head or skull.
- atelocheilia (at"cl-o-ki'le-ah) [Gr ἀτελής imperfect + χείλος lip]. Defective development of a lip.
- atelocheiria (at"el-o-ki're-ah) [Gr. ἀτελής incomplete + χείρ hand]. Incomplete development of the hand.
- ateloglossia (at"el-o-glos'e-ah) [Gr. $\dot{\alpha}$ τελής imperfect + γλ $\dot{\alpha}$ σσα tongue]. A congenital defect of the tongue.
- atelognathia (at"el-og-na'the-ah) [Gr. ἀτελήs imperfect + γνάθος jaw]. Congenital defect of the jaw.
- atelomyelia (at"el-o-mi-e'le-ah) [Gr. ἀτελής imperfect + μυελός marrow]. Incomplete development of the spinal cord.

- atelopodia (at"el-o-po'de-ah) [Gr. ἀτελής incomplete + πούς foot]. Congenital defect of the foot.
- **ateloprosopia** (at"el-o-pros-o'pe-ah) [Gr. ἀτελής incomplete + πρόσωπον face]. Defective development of the face.
- atelorachidia (at"el-or-a-kid'e-ah) [Gr. ἀτελής incomplete + ῥάχις spine]. Incomplete development of the spinal column.
- atelostomia (at"cl-o-sto'me-ah) [Gr. ἀτελής incomplete + στόμα mouth]. Imperfect development of the mouth.
- athelia (ah-the'le-ah) [Gr. a neg. $+ \theta \eta \lambda \dot{\eta}$ nipple]. Absence of the nipples.
- Athenseus (ath-en-e'us). A celebrated physician, founder of the school of the "pneumatists." He was born in Cilicia in the first century A. D., and practised in Rome. He wrote extensively, but only fragments of his works remain.
- **athermal** (ah-ther'mal) [Gr α neg. $+\theta \epsilon \rho \mu \eta$ heat]. Not warm: said of springs the water of which is below τ_5 ° C.
- athermancy (ah-ther'man-se). The state of being athermanous
- **athermanous** (ah-ther/man-us) [Gr. α neg. + $\theta \epsilon \rho \mu \eta$ heat]. Absorbing heat-rays and not permitting them to pass.
- **athermic** (ah-ther'mik) [Gr α neg. + $\theta \epsilon \rho \mu \eta$ heat]. Without fever or rise of temperature.
- athermosystaltic (ah-ther"mo-sis-tal'tik) [Gr. a neg $+ \theta \ell \rho \mu \eta$ heat $+ \sigma \nu \sigma \tau a \lambda \tau \iota \kappa \delta s$ drawing together]. Not contracting under the action of cold or heat said of striated muscle.
- atheroma (ath-er-o'mah) [Gr. ἀθήρη porridge].
 1. A sebaceous cyst. 2. Arteriosclerosis of the aorta and larger atteries with marked degenerative changes
 a. cu'tis, sebaceous cyst.
- **atheromasia** (ath"er-o-ma'ze-ah) [Gr. ἀθήρη gruel]. Atheromatous degeneration.
- atheromatosis (ath"er-o-mat-o'sis). An atheromatous condition.
- atheromatous (ath-er-o'mat-us). Affected with, or of the nature of, atheroma.
- **atheronecrosis** (ath"er-o-nek-ro'sis). The necrosis or degeneration accompanying atherosclerosis
- atherosclerosis (ath"er-o-skle-ro'sis). A senile form of arteriosclerosis with atheromatous degeneration of the connective tissue of the arterial walls
- **atherosis** (ath-er-o'sis) [Gr. ἀθήρη porridge]. Arterial atheroma, arteriosclerosis.
- **Atherosperma** (ath"e-ro-sper'mah) [Gr. $\dot{\alpha}\theta\dot{\eta}\rho$ spike $+\sigma\pi\dot{\epsilon}\rho\mu\alpha$ seed]. A genus of monimiseous trees: the bark of A. moscha'lum, sassafras tree of Australasia, is diaphoretic, diuretic, and sedative. Dose of the tincture, 30–60 min. (2–4 c.c.); of the volatile oil, 1–3 min. (0 06–0 2 c.).
- athetoid (ath'et-oid) [Gr. ἄθητος not fixed]. 1. Resembling athetosis. 2. Affected with athetosis. athetosic (ath-e-to'sik). Pertaining to athetosis.
- athetosis (ath-et-o'sis) [Gr. ăθητος not fixed]. An affection marked by a constant recurring series of slow vermicular movements of the hands and feet, occurring chiefly in children, and due principally to a brain lesion (Hammond, 1873). Called also posthemiplegic chorea. double congenital a., infantile spasmodic paraplegia.
- athrepsia (ah-threy'se-ah) [Gr. α neg. + θρέψις nutrition]. 1. Infantile atrophy See under atrophy. 2. Ehrlich's term for immunity to tumor inoculation due to a supposed lack of the special nutritive material necessary for tumor growth.
- athrepsy (ath'rep-se). Same as athrepsia.
- **athreptic** (ah-threp'tik). Pertaining to or affected with athrepsia, due to insufficient nutrition.
- athymia (ah-thim'e-ah) [Gr. α priv. + θυμός mind].
 1 Dementia. 2. Loss of consciousness 3. Absence of the thymus gland

edge]. Loss of power of correctly locating a sensation.

topomenorrhea (at"op-o-men-or-e'ah) [Gr. $\tilde{a}\tau \sigma \pi \sigma s$ misplaced $+ \mu \dot{\eta} \nu$ month $+ \dot{\rho}ola$ flow]. Vicarious menstruation.

topy (ah'to-pe). The condition of being sensitive to an atopen.

toquinol (at-o-kwin'ol). A proprietary preparation, allyl phenylcinchoninester, used as a uric acid eliminant in gout and arthritis. Dose, 9 gr. (o.6 gm.).

toxic (ah-tok'sik) [Gr. a neg. + τοξικόν poison]. Not poisonous; not due to a poison.

toxogen (at-ok'so-jen) [Gr. α neg. + τοξικόν poison + γεννῶν to produce]. A preparation from spleen and adrenals of horses: used for defensive inoculation.

toxyl (ah-tok'sil). A white, odorless powder, sodium arsanilate, NH₂ C₀H₄.AsO(OH) ONa. It contains 37 per cent. of arsenic. It is used hypodermically in psoriasis, lichen, and other chronic skin diseases in 20 per cent. solution. It is given internally and hypodermically in anemia, chlorosis. neurasthenia, hysteria, chorea, and tuberculosis. It is also recommended in trypanosomiasis, malaria, and spirillosis. Hypodermic dose, $\frac{1}{3}$ gr. (0.02-0 04 gm).

toxylate (at-ok'sil-āt). A salt of atoxyl.

trabiliary (at-rah-bil'e-a-re) [L. at'ra black + bi'lis bile] Pertaining to black bile. See capsule, atrabiliary.

trabilin (at-rah-bi'lin). A preparation of suprarenal gland used as a hemostatic in eye diseases.

tremia (ah-tre'me-ah) [Gr. α neg. + τρέμειν to tremble]. 1. Absence of tremor. 2. Hysteric inability to walk.

treol (at're-ol). A black syrupy liquid, ammonium atreolate, resulting from the sulphonation and purification of certain petroleum distillates used like ichthyol.

trepsy (at'rep-se) [Gr. α neg. + $\theta \rho \dot{\epsilon} \psi \dot{\epsilon}$ nutrition]. Ehrlich's term for immunity of one species to cancerous growths originating in another, which he conceived to be due to absence of the peculiar food matter required for that particular tumor.

treptic (at-rep'tik). Pertaining to atrepsy.

tresia (ah-tre'ze-ah) [Gr. a neg. + τρησις a borng] Imperforation; absence or closure of a normal opening. a. a'ni, imperforation of the anus a. i'ridis, closure of the pupillary opening. tresic (at-re'zik). Characterized by atresia.

tretic (at-ret'ik). Pertaining to or marked by atresia.

tretogastria (ah-tre-to-gas'tre-ah) [Gr. ἄτρητος Imperforation imperforate $+ \gamma \alpha \sigma \tau \dot{\eta} \rho$ stomach]. of the stomach.

treturethria (ah-tre-tu-re'thre-ah) [Gr. ἄτρητος imperforate + ουρήθρα urethra]. Imperforation of the urethra.

tria (a'tre-ah). Plural of atrium. trial (a'tre-al). Pertaining to an atrium.

tricha (ah'trik-ah) [Gr. α neg. + θρίξ hair]. group of bacteria including those forms which show no flagella.

trichia (ah-trik'e-ah) [Gr. a neg. + θρίξ hair]. Absence or lack of hair.

trichosis (ah-trik-o'sis). Same as atrichia.

trichous (ah-trik'us) [Gr. α neg + $\theta \rho l \xi$ hair]. Having no flagella; said of bacteria.

triotome (at're-o-tom) [atrium + Gr. τομή cutting]. An instrument by which the connections between the auricle and ventricle of the heart may be cut without hemorrhage.

trioventricular (at"re-o-ven-trik'u-lar). taining to an atrium or auricle of the heart and to a ventricle.

triplicism (ah-trip'lis-izm). Poisoning produced by eating a kind of spinach, At'riplex littora'lis.

atrium (a'tre-um), pl. a'tria [L. "hall"]. 1. [B N A] An auricle of the heart. See auricle. 2. The main part of the tympanic chamber, situated below the head of the malleus. 3. The point of entrance of bacteria in an infectious disease. a. dex'trum, the right auricle. a. glot'tidis, atrium laryngis. infection-a., the point of entrance of a bacterial disease into the system. a. laryn'gis, that part of the larynx which lies above the false vocal cords. left a., the left auricle. a. of otocyst, the saccule connected with the semicircular canals, ductus endolymphaticus, and cochlea. a. pul-mona'le, the left auricle right a., the right auricle. a. sinis'trum, the left auricle a. vagi'næ, the vestibule of the vagina a. of ventricle, that part of the lateral ventricle connected with the temporal and occipital cornua.

Atropa (at'ro-pah) [Gr Ατροπος "undeviating," one of the Fates]. A genus of solanaceous plants. See belladonna and mandrake.

atrophedema (at-rof-ed-e'mah) [atrophy + edema]. A chronic hereditary disease probably of angioneurotic origin.

atrophia (ah-tro'fe-ah) [L, from Gr. a neg. + τροφή nourishment]. Latin for alrophy. a. cu'tis. See alrophoderma a. infan'tum, tabes tis. See airopnoaerma a. inital viiii, inital mesenterica. a. maculo'sa cu'tis (Jadassohn). See anetodermia. a. mesenterica, tabes riesenterica a. musculo'rum lipomato'sa, pseuterica a. musculo'rum lipomato'sa, dohypertrophic muscular paralysis. See under paralysis. a. pilo'rum pro'pria, atrophy of the hair. a. testic'uli, wasting of the testicle. a. un'guium, atrophy of the nails.

atrophic (at-rof'ik). Pertaining to or characterized by atrophy.

atrophied (at'ro-fēd). Marked by atrophy; shrunken.

atrophoderma (ah-trof'o-der-mah) [Gr. ἀτροφος unfed + δέρμα skin]. Atrophy of the skin or a part of it. a. al'bidum. Same as pityriasis alba atrophicans. a. diffu'sum, diffuse ido pathic atrophy of the skin a. neurit'icum, glossy skin See under skin a. pigmento'sum, xeroderma pigmentosum a. seni'le, senile atrophy of the skin a. stria'tum et macula'tum, a condition marked by atrophic lines and spots on the skin

atrophodermatosis (at-rof-o-der-mat-o'sis). Any skin disease having cutaneous atrophy as a prominent symptom.

atrophy (at'ro-fe) [L. atro'phia; Gr. άτροφία]. wasting or diminution in the size of a part, defect or failure of nutrition. acute yellow a., atrophy and yellow discoloration of the liver with jaundice. The disease is attended by delirium, coma, and convulsions, and is usually fatal. adipose a., emaciation due to lack of adipose tissue. arthritic a., wasting of the muscles that surround a joint, due to injury or to constitutional disease. **brown a.**, atrophy in which the affected viscus assumes a brownish hue. It is seen chiefly in the heart, liver, and spleen. **Buchwald's a.**, progressive atrophy of the skin. **compression a.**, atrophy of a part due to constant pressure. concentric a., atrophy of a hollow organ in which its cavity is contracted. correlated a., the wasting of a part following the destruction or removal of a correlated part Cruveilhier's a., progressive muscular atrophy. degenerative a., the wasting of a part due to degeneration of its cells. **Déjérine-Sotta's type of a.**, hypertrophic interstitial neuritis of infancy. **denervated** muscle a., muscular atrophy resulting from severance of the motor nerve supplying the muscle. dental a., erosion of the teeth. a. of disuse, wasting caused by lack of normal exercise. eccentric a., atrophy of a hollow organ in which the size of the cavity is increased. Erb's a., progressize of the cavity is increased. sive muscular dystrophy. See dystrophy. facial a. See progressive facial a. fatty a., fatty infiltration following atrophy of the tissue elements athymism, athymismus (ah-thi'mizm, ab-thi-mis'mus). Absence of the thymus or the condition induced by removal of the thymus.

athyrea (ah-thi're-ah). Same as athyria.

athyreosis (ah-thi-re-o'sis). The condition due to absence of the thyroid gland or deficiency of the thyroid secretion.

athyria (ah-thi're-ah) [Gr. a priv. + thyroid].

Absence of the thyroid gland; also the myxedema consequent upon it.

athyroidation, athyroidism, athyrosis (ahthi-roi-da'shun, ah-thi'roi-dizm, ah-thi-ro'sis). The condition of ill health due to loss of the thyroid gland or to insufficient secretion of the gland.

athyroidemia (ah-thi-roi-de'me-ah) [L. athyroidism + Gr. αΐμα blood] Abnormal state of the blood due to athyroidism.

athyrosis (ah-thi-ro'sis) Athyreosis.

atite (at'it). A substance in milk which reduces nitrate to nitrite.

atlantad (at-lan'tad). Toward the atlas.

atlantal (at-lan'tal) Pertaining to the atlas.

atlanto-axial (at-lan"to-ak'se-al). Pertaining to the altas and the axis.

atlantodidymus (at-lan"to-did'im-us) [Gr. "Ατλας Atlas + δίδυμος twin] A monster-fetus with two heads on one neck.

atlantomastoid (at-lan"to-mas'toid). Pertaining to the atlas and the mastoid process

atlanto-odontoid (at-lan"to-o-don'toid). Pertaining to the atlas and to the odontoid process of the axis.

atlas (at'las) [Gr]. The first cervical vertebra.

atlo-axoid (at-lo-ak'soid). Pertaining to the atlas and the axis.

atlodymus (at-lod'im-us) [atlas + Gr. δίδυμος twin]. A monster-fetus with one body and two heads

atloido-occipital (at-loi"do-ok-sip'it-al). Pertaining to the atlas and the occiput.

atmiatrics, atmiatry (at-me-at'riks, at-mi'at-re) [Gr. $\dot{\alpha}\tau\mu\dot{o}s$ vapor + $i\alpha\tau\rho\dot{e}i\alpha$ healing art] Treatment by medicated vapors (P. Niemeyer).

atmidalbumin (at-mid-al'bu-min) [Gr. ἀτμός steam + albumin] A protein formed by the action of superheated steam upon a protein.

atmidalbumose (at-mid-al'bu-môs). An albumose derived from atmidalbumin by dehydration.

atmocausis (at-mo-kaw'sis) [Gr. ἀτμός steam + καῦσις burning]. Treatment by the direct application of superheated steam used chiefly in non-malignant uterine affections

atmocautery (at-mo-kaw'ter-e). An instrument for performing atmocausis

atmograph (at'mo-graf) [Gr. ἀτμός breath + γράφειν to record]. An instrument for recording respiratory movements.

atmokausis (at-mo-kaw'sis). See atmocausis.

atmolysis (at-mol'is-is) [Gr. $\delta \tau \mu \delta s$ vapor $+ \lambda \delta \sigma \iota s$ loosing]. 1. The separation of mixed gases by passing through a porous plate, the more diffusible passing through first. 2. The disintegration of organic tissue by the fumes of volatile fluids, such as benzin, ether, alcohol, etc

atmometer (at-mom'et-er) [Gr. άτμός vapor + μέτρον measure]. An instrument for measuring exhaled vapors, or the amount of water exhaled by evaporation in a given time, in order to ascertain the humidity of the atmosphere.

atmos (at'mos) [Gr. άτμός air]. A unit of air-pressure, being a pressure of one degree per square centimeter; called also aer.

atmosphere (at'mos-fēr) [Gr. $\Delta \tau \mu \delta s$ air $+ \sigma \varphi \alpha \hat{\imath} \rho \alpha$ sphere]. 1. The air incircling the earth. See *air*. 2. The pressure of the air upon the earth at the sea-level, or 15 pounds to the square inch.

atmospheric (at-mo-sfer'ik). Of or pertaining to the atmosphere.

atmospherization (at-mos-fer-iz-a'shun). The transformation of venous blood into arterial blood.

atmotherapy (at-mo-ther'ap-e) [Gr. ἀτμός air + θεραπεία treatment]. 1 Treatment by medicated vapors.
 2. Treatment by methodic reduction of respiration.

atochinol (at-o-kin'ol). Atoquinol.

atocia (ah-to'se-ah) [Gr. a priv. + τόκοs birth]. Sterility in the female.

atom (at'om) [Gr. ἄτομος indivisible]. Any one of the ultimate particles of a molecule or of any An atom is the smallest quantity of an matter. element that can exist and still retain the chemic properties of the element. The atom seems to consist of a minute central nucleus, in which practically all of the mass of the atom is concentrated, and of surrounding electrons. The nucleus is positively charged, the amount of the charge corresponds to the atomic number of the atom. In a neutral atom the surrounding negative electrons are equal in number to the positive charges on the nucleus. The number and arrangement of these electrons determine all the properties of the atom except its atomic weight and its radio activity activated a. I An ionized atom 2 An atom in which some of the orbital electrons have been driven out into larger and less stable orbits. The atom is thus prepared to release its stored energy as these electrons return to their normal and stable orbits **Bohr a.**, the conception of a nuclear atom in which the orbital electrons are able to occupy only certain orbits, these orbits being determined by quantum limitations ionized a., an atom from which one or more of the outer or valence electrons have been removed nuclear a., the conception or theory of the atom as com posed of a small central nucleus surrounded by orbital electrons. For table of the atoms see under element. recoil a., rest a., the portion of an atom from which an alpha particle has been given off. This remaining part recoils with a velocity inversely proportional to its mass **Rutherford** Rutherford a. Same as nuclear a stripped a., an atom from which the orbital electrons have been more or less completely removed

atomic (at-om'ik) Of or pertaining to an atom.
a. number, a. volume, a. weight. See under the nouns

atomicity (at-om-is'it-e). Chemic valency, or quantivalence

atomization (at"om-iz-a'shun) The act or process of breaking a hquid up into spray.

atomizer (at'om-i-zer) An instrument for throwing a jet of spray.

atonic (at-on'ik) [L. aton'icus; Gr. a neg + τόνος tone] Characterized by lack of normal tone. choreatic a., the deficient tonicity of muscles often seen in chorea.

atonicity (at-on-is'it-e). Atonic quality.

atonied (at'o-nēd). Lacking in tone; atonic.

atony (at'on-e) [L ato'nia, from Gr. a priv. + τόνος tone]. Lack of normal tone or strength.

atopen (ah'to-pen). An allergen; the substance to which an allergic person is sensitive

atophan (at'of-an). See cinchophen

atophanyl (at-of'an-il). A combination of atophan sodium (0.5 gm), sodium salicylate (0.5 gm), and novocain (0.008 gm) in 5 c.c. of solvent Used by intravenous and intragluteal injection for the treatment of gout, articular rheumatism, and neuralgia.

atopic (ah-top'ik) [Gr. a neg. + τόπος place]. τ. Out of place; displaced. 2. Pertaining to an atopen or to atopy.

atopognosia, atopognosis (ah-top-og-no'se-ah, -no'sis) [Gr. α neg. $+ \tau \delta \pi$ os place $+ \gamma \nu \hat{\omega} \sigma \iota s$ knowl-

of a part. granular a. of kidney, chronic interstitial inflammation of the kidney producing compression and atrophy of the parenchygray a., a degeneration of the optic disk in which it becomes gray. hemifacial a., atrophy of one side of the face. hemilingual a., acrophy of one side of the tongue. Hoffmann's a., a variety of progressive muscular atrophy affecting the legs below the knees, and the forearms and hand. **Hunt's a.**, neuropathic atrophy of the small muscles of the hand unattended by sensory disturbance. idiopathic muscular a., a chronic disease marked by progressive wasting, affecting groups of muscles, and due to changes in the muscles themselves. **infantile a.**, a nutritional disorder of infants characterized by progressive emaciation and weakening of the functions of the body. Called also marasmus, athrepsia, pedatrophy, and decomposition (Finkelstein). inflammatory a., atrophy of the functioning part of an organ caused by hypertrophy of the fibrous elements from inflammation. interstitial a., absorption of the mineral matter of bones, so that only the reticulated portion remains juvenile muscular a., pseudohypertrophic muscular paralysis. See under paralysis. Landouzy-Déjérine a., atrophy of the muscles of the face and scapulohumeral region. linear a., atrophy of the papillary layer of the skin, causing the appearance of blue and white lines. muscular a., a wasting of muscular tissue: of this condition there are many kinds and causes myopathic a., muscular atrophy due to disease of the muscle tissue. **neural a.** Same as neuropathic a. **neuritic muscular a.**, a degeneration of the nerve-trunks, often involving the spinal cord and causing a wasting of the muscles, believed and causing a wasting of the muscles, believed to the spinal cord and causing a wasting of the muscles, believed to the spinal causing a wasting of the muscles, believed to the spinal causing a wasting of the muscles, believed to the spinal causing a wasting of the muscles, believed to the spinal causing a wasting of the muscles, believed to the spinal causing a wasting of the muscles, believed to the spinal causing a wasting of the spinal causing a wasting a wasting a wasting a wasting a wasting a wa ginning with the feet. It is hereditary, usually begins in early life, and is never cured. neuropathic a., atrophy of muscular tissue due to disease of the nervous system. neurotic a., atrophy due to disease of the nervous system. neurotrophic a., atrophy attributed to destruction of the peripheral neurons which maintain the nutrition of a tissue numeric a., atrophy due to diminution in the number of the constituent ele ments, as well as shrinkage of those which remain Parrot's a. of the newborn, primary infantile atrophy or marasmus. pigmentary a., wasting marked by the deposit of pigment in the atrophied cells. pressure a., decrease in the size of a tissue cell caused by excessive pressure. progressive muscular a., a chronic disease marked by progressive wasting of the muscles with paralysis, due to degeneration of the ventral gray horns of the spinal cord, followed by degeneration of anterior nerve-roots and muscles. It is called also poliomyelitis anterior and wasting palsy.

progressive unilateral facial a., an affection attended by progressive wasting of the skin, tissues, and bone, often of the muscles of one side of the face. receptoric a., a condition assumed to be due to atrophy of the cell receptors. Animals kept immune by repeated injections of an antigen sometimes cease to respond by the formation of antibodies. red a., atrophy, mainly of the liver, due to chronic congestion from valvular heart disease. reversionary a. See anaplasia. rheumatic a., atrophy of muscles after an attack of rheumatism. senile a., the normal atrophy of old age. serous a., atrophy with the effusion of a serous fluid into the wasted tissues. simple a., atrophy due to a shrinkage in size of individual cells. spinoneural a., atrophic muscular paralysis resulting from some lesion of the lower portion of the motor tract of the cord. Called also degenerative atrophy or paralysis. toxic a., atrophy of an organ due to poisons, as in the course of infectious diseases. trophoneurotic a., atrophy due to disease of the nerves or of a center supplying a part. unilateral facial a., progressive wasting of the tissues of one side of the face. Vulpian's a., scapulohumeral type of pro-

gressive spinal muscular atrophy. white a., atrophy of a nerve, leaving only white connective tissue

atropia (at-ro'pe-ah). Atropin.

atropin, atropine (at'ro-pin). A poisonous, crystalline alkaloid, de-tropyl-tropein, $CH_3.N.C_4$ - H_{10} CH.O.CO.CH(C_6H_6)CH.OH, obtained by the racemization of hydrocyamin. It is soluble in alcohol and sparingly so in water. It is mydriatic and narcotic, acting by stimulating the sympathetic and depressing the cerebrospinal nerves. It increases the frequency of the heart's action and the strength of respiration, checks the action of the secreting glands (salivary, sweat, mammary, etc.), and produces paralysis of ac-commodation and dilatation of the pupil It is used as a mydriatic in testing refraction, to lessen the vascularity of the iris in iritis, etc , also in cerebral and spinal hyperemia, cardiac failure, excessive sweating, atonic constipation, and in spasm, such as asthma, colic, whooping-cough, etc. Dose, $\frac{1}{16}$ - $\frac{1}{61}$ gr. (0 0006-0.001 gm.). **a. hydriodate**, $C_{17}H_{23}NO_3HIO_3$ a salt used in eye cases in 0.5-1.5 per cent solution. a. methylbromid, a white, crystalline compound, soluble in water used as a mydriatic and antihydrotic. Dose, $10^{-\frac{1}{6}}$ gr. (0.006-0012 gm), as a mydriatic, in 1 per cent. solution a. methyl nitrate. See eumydrin. a. salicylate, a deliquescent powder. dose same as the sulphate. a. santonate, a salt of atropin and santonic acid; highly commended. at other and sancoine acid, highly commented as stearate contains 50.4 per cent of atropin it is used in ointments and suppositories **a. sulphate**, a crystalline or amorphous powder, $(C_{17}H_{13}NO_{3})_{2}.H_{2}SO_{4}$, soluble in water. It has the same properties as atropin. Dose, 120-60 gr. (0.0005-0 0011 gm).

atropina (at-ro-pi'na). Same as atropin.

atropine (at'ro-pin). See atrapin.

atropinism, atropism (at-ro'pin-izm, at'ro-pizm).

Poisoning due to the misuse of atropin or of belladonna.

atropinization (at-ro"pin-iz-a'shun). 1. Subjection to the influence of atropin. 2. Atropinism.

atroscin (at'ros-in) An alkaloid, C₁₇H₂₁NO₄, from Scopo'lia atropoi'dee, isomeric with hyoscin, but far more active as a mydriatic.

A. T. S. Abbreviation for antitetanic serum.

attachment (at-tatsh'ment). In dentistry, anything, such as a clasp, cap, etc, used to attach a partial denture to a natural tooth in the mouth.

Attalus (at'al-us). A Greek physician of the second century A. D He was a pupil of Soranus.

attar (at'ar) [Persian "essence"] Any essential or volatile oil of vegetable origin. a. of roses, a volatile oil derived from rose-petals.

attendant (at-en'dant) [L. atten'dere to wait upon]. A non-professional person attached to a hospital or asylum.

attenuant (at-en'u-ant). 1. Causing thinness, as of the blood 2. A medicine that thins the blood.
attenuate (at-en'u-āt) [L. attenua're to thin]. To render thin; to render less virulent.

attenuation (at-en-u-a'shun) [L. attenua'tto, from ad to + ten'uis thin]. 1. The act or process of thinning or weakening, especially the weakening the toxicity of a virus or of a microorganism by repeated inoculation, successive culture, etc. 2. A medicine or virus that has been attenuated.

attic (at'ik) [L. at'ticus]. The part of the tympanum that is situated above the atrium.

atticitis (at-ik-i'tis). Inflammation of the attic of the tympanum.

attico-antrotomy (at"ik-o-an-trot'o-me). The operation of opening the attic and mastoid antrum. atticomastoid (at"ik-o-mas'toid). Pertaining to the attic and the mastoid.

atticotomy (at-ik-ot'om-e) [attic + Gr. τέμνειν to cut]. The surgical opening of the attic of the

labyrinth.

attitude (at'e-tūd) [L. attitu'do posture]. A posture or position of the body. a. of combat [Fr. attitude de combat], the attitude of the corpse of one burned to death in a conflagration. crucifixion a., rigidity of the body, with the arms extended at right angles: seen in hystero-epilepsy. forced a., an abnormal position or attitude due to some disease, such as is seen in meningitis or as the result of contractures. frozen a., a peculiar stiffness of the gait, especially seen in amyotrophic lateral sclerosis. illogical a's, the strange and grotesque attitudes assumed by those suffering from hystero-epilepsy. passionate a., the dramatic or theatric expression or gesture often assumed by hysteric patients. stereotyped a., an attitude assumed and maintained for a long time, a phenomenon often seen in mental disease.

attollens (at-ol'enz) [L "lifting up"] Raising; hfting up. a. au'rem, a. au'ris. See muscles, table of.

attraction (at-rak'shun) [L attrac'tio]. The force, act, or process that draws one body toward another a. of affinity, chemic a., the tendency of atoms of one element to unite with those of another capillary a., the force which attracts the particles of a fluid into and along the caliber of a capillary tube electric a., the tendency of bodies charged with opposite electricities to move toward each other. magnetic a., the influence of a magnet upon iron and certain other elements a. particle, a small particle seen in the center of an attraction sphere. a. sphere, centrosphere, the central mass of the aster in mitosis, from which the rays proceed, also the clear area surrounding the centrosome

attrahens (at'rah-henz) [L. for "drawing toward"].
a. au'rem. See muscles, table of

attraxin (at-rak'sin) Fischer's name for supposed specific bodies existing in solutions which, when the solution is injected into the tissues, exert a chemotactic influence on the epithelial cells

attrition (at-rish'un) [L. attri'tio a rubbing against].

A rubbing or friction—In dentistry, the wearing away of the substance of a tooth.

At. wt. Abbreviation for atomic weight.

atypic (ah-tip'ik) [Gr. α priv. $+ \tau \nu \pi \sigma s$ type]. Irregular, not conformable to the type.

A. U. Abbreviation for Angstrom unit.

Au. The symbol for gold (L. au'rum).

auantic (aw-an'tik) [Gr αὐαντικός wasted]. Characterized by wasting, atrophic.

Auchmeromy'ia lute'ola. A fly of Congo and Nigeria having a blood-sucking larva known as the Congo floor maggot.

AuCl₁. Auric chlorid.

audiclave (aw'dık-lav). An instrument for aiding

audile (aw'dēl). Pertaining to hearing; a term applied to that type of mentality which recalls most easily that which has been heard. Cf. motile and mide.

audiometer (aw-de-om'et-er) [L. audi're to hear + Gr μέτρον measure]. A device to test the power of hearing.

audiometry (aw-de-om'et-re). The testing of the sense of hearing

audiphone (aw'dif-ōn) [L. audi're to hear + Gr. φωνή voice]. A device for aiding the deaf to hear

audition (aw-dish'un) [L audi'lio] The act of hearing; ability to hear. chromatic a., a. colorée, a sensation of color produced by sound; a variety of chromesthesia. gustatory a., a condition in which certain sounds call up a sensation of taste.

auditognosis (aw-de-tog-no'sis) [L. audit'io hearing + Gr γνωσις knowledge] The sense by which sounds are understood and interpreted.

auditory (aw'dit-o-re) [L. audito'rius]. Pertaining to the sense of hearing.

Auenbrugger's sign (ow-en-broog'erz) [Leopold Joseph Auenbrugger, Austrian physician, 1722–1809, the inventor of percussion as a diagnostic procedurel. See under sign.

Auer's bodies (aw'erz) [John Auer, American physician, born 1875]. See under body.

Auerbach's ganglion, plexus, etc. (ow'er-bahks) [Leopold Auerbach, German anatomist, 1828–1897]. See ganglion, plexus, etc.

Aufrecht's sign (owf'reshts) [Emanuel Aufrecht, German physician, born 1844]. See under sign.

augenwohl (awg'en-völ). A proprietary preparation for eye diseases.

augmentor (awg-men'tor). 1. Increasing applied to nerves or nerve-cells concerned in increasing the size and force of heart contractions. 2. A substance supposed to increase the action of an auxetic.

augnathus (awg-na'thus) [Gr. aū besides + γνάθος jaw]. A fetus with a double lower jaw.

Aujeszky's disease (aw-jes'kēz) [Aladár Aujeszky, contemporary Hungarian physician]. See under disease.

aula (aw'lah) [L.; Gr αὐλή hall]. I The anterior end of the third ventricle of the cerebrum where it communicates with the lateral ventricles through the intraventricular foramina. 2 The red erythematous areola formed about the periphery of the vesicle of the vaccination lesion.

aulatela (aw-lat-e'lah) [L. au'la hall + te'la web]. The membranous covering of the aula.

aulic (aw'lik) [L. au'lıcus]. Pertaining to the aula.
 auliplex, auliplexus (aw'lip-leks, aw-lip leks'us)
 [aula + plexus]. A part of the choroid plexus' within the aula.

aulix (aw'liks) [L. "furrow"]. The fissure of Monro.

aura (aw'rah) [L. for "breath"]. A peculiar sensation or phenomenon that precedes an epileptic attack (Galen). a. asthmat'ica, premonitory attacks of oppression of the chest, flatulence, etc., preceding an attack of bronchial asthma. auditory a., an auditory sensation which sometimes precedes an attack of epilepsy. electrica., a breezy sensation experienced on the receipt of a discharge of static electricity. epigastric a., a painful sensation in the epigastrium which sometimes precedes an epileptic attack. epileptic a., a peculiar sensation which sometimes gives warning of an approaching attack of epilepsy. a. hyster'ica, an aura like that preceding an epileptic attack sometimes experienced by hysteric patients. intellectual a., a dreamy condition that sometimes precedes an attack of epilepsy reminiscent a. Same as intellectual a. a. vertigino'sa, a sudden attack of vertigo occurring in certain neuroses.

aural (aw'ral) [L. aura'lıs]. 1. Pertaining to the ear. 2. Pertaining to or of the nature of an aura.

auramin (aw'ram-in). A di-phenyl methane dye used in vital staining, (CH₃)₂N.C₆H₄.C(NH₂Cl)C₆-H₄.N(CH₃)₂.

aurantia (aw-ran'she-ah). An orange coal-tar stain, the ammonium salt of hexanitrodiphenylamine, C₆-H₂(NO₂)₅.N C₆H₂(NO₂)₂.N.O.O.NH₄. used in staining mitochondria.

aurantiasis (aw-ran-ti'as-is) [L. auran'tium orange]. A golden yellow discoloration, as of the skin (a. cu'tis), caused by eating large quantities of oranges.

aurantium (aw-ran'she-um) [L. for "orange"; gen. auran'tii]. See orange. a. ama/rum cortex, the peel or rind of the unripe bitter orange (Citrus vulgaris). a. dul'ce cor'tex, the rind of the ripe sweet orange (Citrus aurantium).

auremetin (aw-rem'et-in). A dark, maroon, insoluble powder used in treating dysentery. It is a combination of the hydriodid periodids of emetin and auramin, containing 28 per cent. of emetin, 16 per cent. of auramin, and 56 per cent. of iodin.

aureol (aw're-ol) [L. au'rum gold + o'leum oil].

A hair-dye containing menthol (1 per cent.); mono-amidodiphenylamin (0.6 per cent.); amidophenol chlorhydrate (0.3 per cent.); sodium sulphite (0.5 per cent.); dissolved in 50 per cent. alcohol.

aureolin (aw-re'o-lin). A yellow dye

auric (aw'rik). Pertaining to or containing gold.

auricle (aw'rik-l) [L. auric'ula]. 1. The pinna or flap of the ear; the portion of the external ear not contained within the head. 2. The chamber at the apex of the heart on either side above the ventricle. 3 The auricular appendix. cervical a., a flap of skin and yellow cartilage sometimes seen on the side of the neck at the external opening of a persistent branchial cleft.

auricula (aw-rik'u-lah) 1. [B N A] The auricle of the ear. 2. [B N A] The auricular appendix.

auricular (aw-rik'u-lar) [L. auricula'ris]. Pertaining to an auricle, or to the ear.

auriculare (aw-rik-u-la're) [L. auricula'ris pertaining to the ear]. A craniometric point at the top of the opening of the external auditory meatus.

auricularis magnus (aw"rik-u-la'ris mag'nus). See nerves, table of.

auriculocranial (aw-rik"u-lo-kra'ne-al). Pertaining to the auricle and the cranium.

auriculotemporal (aw-rik"u-lo-tem'po-ral). Pertaining to an auricle and the temporal region.

auriculoventricular (aw-rik"u-lo-ven-trik'u-lar), Pertaining to an auricle and a ventricle.

auriginous (aw-rij'in-us) [L. aurigin'eus, aurigino'sus] Jaundiced; icteric.

aurilave (aw'ril-āv) [L. au'ris ear + lava're to wash].

An apparatus for washing out or cleaning the ear.

aurin (aw'rin). Same as rosolic acid. aurin R, Corallin red

aurinarium (aw-rin-a're-um). A medicated suppository for insertion into the external auditory meatus.

aurinasal (aw-rin-a'sal). Pertaining to the ear and the nose

auriphone (aw'rif-ōn) [L. au'ris ear + Gr. φbνη voice]. A form of ear trumpet in which the sound conveyed is amplified.

auripuncture (aw'rip-unkt-ūr) [L. au'ris ear + punctu'ra puncture]. Surgical puncture of the membrana tympani.

auris (aw'ris). Latin for ear.

auriscalpium (aw-ris-kal'pe-um) [L. au'ris ear + scal'pere to scrape]. An instrument for scooping or scraping foreign matter from the ear.

auriscope (aw'rıs-kōp) [L. au'ris ear + Gr. σκοπείν to see]. A form of otoscope.

aurist (aw'rist). A specialist in ear diseases.

aurocantan (aw-ro-kan'tan) A cantharidin gold salt preparation once introduced for the treatment of tuberculosis

aurochin (aw'ro-kin). Quinin paramidobenzoate. aurococcus (aw-ro-kok'us). The Staphylococcus pyogenes aureus.

aurometer (aw-rom'et-er) [L. au'ris ear + Gr. μέτρον measure]. An apparatus for measuring the sense of hearing of each ear by means of an arrangement for suspending a watch opposite the external canal on a bar fitted so that watch may be slid toward and away from the ear.

aurosol (aw'ro-sol). Colloidal gold.

aurum (aw'rum) [L. for "gold"]. See gold. a. vegeta'bile [L. for "vegetable gold"]. See acid, pipitsahoic.

auscult, auscultate (aws-kult', aws-kul'tāt) [L. ausculta're to listen to]. To perform or practise auscultation; to examine by listening.

auscultation (aws-kul-ta'shun). The act of listening for sounds within the body, chiefly for ascertaining the condition of the lungs, heart, pleura, and other organs, and for the detection of pregnancy. immediate a., auscultation performed without the stethoscope. Koranyi's a., auscultatory percussion done by tapping with one forefinger the second joint of the other forefinger applied perpendicularly to the part. mediate a. (Laennec, 1819), auscultation performed by the aid of an instrument (stethoscope) interposed between the ear and the body. obstetric a., auscultation in pregnancy for the study of the sounds of the fetal heart, etc. parallel a., simultaneous auscultation of corresponding spots on each side of the chest. rod a., auscultatory percussion performed by rubbing the fingers up and down a grooved wooden stick applied perpendicularly to the surface. **stroke a.**, auscultatory percussion performed by stroking of the surface with the finger-tips. transmanual a., auscultation through the hand laid over the part. vibratory a., auscultation of a tuning-fork through the chest

auscultatory (aws-kul'ta-to-re). Of or pertaining to auscultation.

auscultoplectrum (aws-kul-to-plek'trum). An instrument for use both in auscultation and percussion.

auscultoscope (aws-kul'to-skop). Same as phonendoscope.

Auspitz's dermatosis (ow'spitzes) [Heinrich Auspitz, German physician, 1835-1886]. Granuloma fungoides.

Australian blight (aws-trāl'yan). Angioneurotic cdema.

autacoid (au'tak-oid) [Gr. abrós self + akos remedy]. "A specific organic substance formed by the cells of one organ and passed from them into the circulatory fluid to produce effects upon other organs similar to those produced by drugs" (Schäfer). chalonic a., excitatory a., a hormone. hormonic a., inhibitory a., restraining a., a colyone

autan, autane (aw-tan'). A mixture of polymerized formaldehyd and metallic peroxid When water is added to the powder a gas consisting of formalin and aqueous vapor is given off. It is used as a disinfectant.

autechoscope (aw-tek'o-skōp) [Gr $\alpha\dot{\nu}\tau\dot{\sigma}s$ self + $\dot{\eta}\chi\sigma s$ sound + $\sigma\kappa\sigma\pi\epsilon\hat{\iota}\nu$ to inspect]. An instrument for auscultating one's own body

autecic (aw-te'sik). See autæcic.

autecology (awt-c-kol'o-je) [Gr. abrós self + ccology]. The ecology of an organism as an individual. Cf. synecology.

autemesia (awt-em-e'se-ah) [Gr. abτόs self + ξμησις vomiting]. Functional or idiopathic vomiting.

autism (aw'tizm) [Gr. αὐτός self]. A mental condition marked by a tendency to turn away from the outside world and to become self-centered.

autistic (aw-tis'tik). Self-centered; sufficient unto itself. a. thinking, thinking which gratifies some desire and does not submit to criticism from other persons, nor from other tendencies of the individual, does not square itself with the real world. Day dreaming is an example.

auto- [Gr αὐτός self]. A prefix signifying self.

auto-activation (aw"to-ak-tiv-a'shun). The activation of a gland by its own secretion.

auto-agglutination (aw"to-ag-lu-tin-a'shun).
Agglutination of the blood-corpuscles of an individual by his own serum.

auto-analysis (aw-to-an-al'is-is). The analysis and interpretation, on the part of a nervous patient, of the state of mind underlying his disorder: employed as a means of treatment.

auto-antibody (aw-to-an'te-bod-e) An antibody which acts on products of the individual in which it is developed.

- (aw"to-an-te-kom'pleauto-anticomplement An anticomplement formed in the body ment). against its own complements.
- auto-antitoxin (aw-to-an-te-toks'in) [Gr αὐτός self + antitoxin]. Antitoxin produced by the organs of the body and serving to protect the body from disease.
- auto-audible (aw-to-aw'dib-l). Audible to one's self: said of heart-sounds.
- autoblast (aw'to-blast). An independent, solitary bioblast; a microorganism.
- autocatalysis (aw-to-kat-al'is-is). A catalytic reaction which gradually accelerates in velocity, probably because some of the products of the reaction themselves act as catalytic agents (Ostwald).
- autocatalytic (aw-to-kat-al-it'ik). or producing autocatalysis.
- autocatheterism (aw-to-kath'et-er-izm) aυτός self + catheterism]. The passage of the catheter by the patient himself.
- autocholecystectomy (aw"to-ko-le-sis-tek'to-me) [Gr. autos self + cholecystectomy]. Invagination of the gall-bladder into the intestine, with final segregation and expulsion of the organ.
- autochthonous (aw-tok'thon-us) [Gr. αὐτός self + $\chi\theta\omega\nu$ land] Found in the place of formation; not removed to a new site.
- autocinesis (aw"to-sin-e'sis) [Gr αὐτός self + κίνησις motion]. Voluntary motion.
- autoclasis (aw-tok'la-sis) [Gr. αὐτός self + κλάσις breaking. Destruction of a part by influences developed within itself.
- autoclave (aw'to-klav) [Gr. avr'os self + L. cla'vis steam under pressure It is litted with a gage which regulates automatically the pressure, and therefore the degree of heat to which the germs are subjected.
- autocoid (aw'to-koid). An improper spelling of
- autoconduction (aw-to-kon-duk'shun) of applying high-frequency currents by placing the patient or the part to be acted upon within the solenoid, and without direct connection with the circuit
- autocystoplasty (aw-to-sis'to-plas-te). A plastic operation on the bladder with grafts from the patient's body.
- autocytolysin (aw"to-si-tol'is-in). Same as autolysin.
- autocytolysis (aw"to-si-tol'is-is). Same as autol-
- autocytolytic (aw"to-si-to-lit'ik). Same as autolytic
- autocytotoxin (aw-to-si'to-toks-in) A cytotoxin formed in the body by absorption of the products of degenerated cells.
- autodermic (aw-to-der'mik) [Gr. αὐτός self + δέρμα skin]. Made of the patient's own skin a term applied to skin-grafts. See dermato-autoblastv.
- utodestruction (aw"to-des-truk'shun) Self-destruction, specifically the self-destruction that autodestruction
- certain enzymes undergo in solution. autodiagnosis (aw"to-di-ag-no'sis). Diagnosis of
- one's own disease. autodiagnostic (aw"to-di-ag-nos'tik). Pertaining to or causing autodiagnosis.
- autodidact (aw"to-did-akt') [Gr. αὐτός self + διδακτός taught]. One who is self-taught in his profession.
- autodigestion (aw"to-di-jes'chun). See autolysis. autodrainage (aw-to-dran'aj). Drainage of a cavity by diverting the fluid into a new channel made in the patient's own tissues.
- autodyne (aw'to-din). A white, crystalline compound, the monophenyl ester of glycerol, C₀H₄-OCH₂CHOH.CH₂OH: used in painful conditions.

- auto-echolalia (aw"to-ek-o-la'le-sh) [Gr. abros self + echolalia]. Repetition of the words of one's Repetition of the words of one's own statements.
- autocic (aw-te'sik) [Gr. abros self + olkos house]. Always living upon the same organism.
- auto-epilation (aw"to-ep-il-a'shun) [Gr. abros self + epilation]. Spontaneous falling out of hair.
- auto-eroticism, auto-erotism (aw to-e-rot'is-izm, aw"to-e-rot'izm). Self-gratification; perverted sexual instinct gratified without another person.
- auto-erythrophagocytosis (aw"to-er"ith-rofag-o-si-to'sis) [Gr. αὐτός self + ἐρσθρός red + phagocytosis]. Phagocytosis of red blood-cells by other red blood-cells.
- autofundoscope (aw-to-fun'do-skop). An instrument which makes use of the fact that by observing an illuminated blank space through a pinperforated card one can see faint images of the retinal vessels of his own eyes.
- autogamous (aw-tog'am-us). Characterized by self-fertilization
- autogamy (aw-tog'am-e) [Gr. αὐτός self + γάμος 1. Self-fertilization; fertilization within marriage]. a cell itself by union of two chromatin masses derived from the same primary nucleus. Called also automyxis and syngamic nuclear union. Cf. endogamy and exogamy. 2. Conjugation of closely related cells.
- autogenesis (aw-to-jen'es-is) [Gr. αὐτός self + γένεσις production]. Origination within the within the organism.
- autogenetic, autogenous (aw"to-je-net'ik, awtoj'en-us) [auto- + genesis]. 1. Spontaneous generation 2. Self-generated; originated within the As applied to bacterial vaccines, the term denotes those vaccines which are made from the patient's own bacteria, as opposed to stock vaccines which are made from standard cultures.
- autognosis (aw-tog-no'sis) [Gr. αὐτός self + γνῶσις knowledge]. Self-diagnosis; a form of psycho-analysis consisting of giving the patient self-knowledge by revealing to him through his own confessions the course of mental change leading to his symptoms.
- atognostic (aw-tog-nos'tik). Characterized by self-diagnosis; a term applied to the psychoautognostic (aw-tog-nos'tik). analytic method.
- autograft (aw'to-graft). A graft taken from one part of the patient's body and transplanted in another part.
- autografting (aw-to-graf'ting). Autotransplantation.
- autogram (aw'to-gram) [Gr. αὐτός self + γράμμα mark]. A mark forming on the skin following pressure by a blunt instrument.
- autographism (aw-tog'raf-izm) [Gr. αὐτός self γράφειν to writel. A hysteric state in which marks of words written upon the skin leave more or less persistent traces.
- autohemagglutination (aw"to-hem-ag-glu-tin-a'shun). See under hemagglutinin.
- autohemic (aw-to-he'mik) [Gr. αὐτος own + αΐμα blood]. Done with the patient's own blood, as a. therapy.
- autohemolysin (aw"to-he-mol'is-in). ysin which acts against the corpuscles of the individual from which it arises.
- autohemolysis (aw"to-he-mol'is-is). Hemolysis of the blood-corpuscles of an individual by his own serum.
- autohemolytic (aw"to-hem-o-lit'ik). Pertaining to autohemolysis.
- autohemopsonin (aw"to-hem-op'so-nin). An opsonin which renders the red cells susceptible of destruction by the other cells of the patient's body.
- autohemotherapy (aw"to-hem-o-ther'ap-e) [Gr. αὐτός self + αἰμα blood + θεραπεία treatment]. Treatment by administering the patient's own blood.

- autohydrolysis (aw"to-hi-drol'is-is). Spontaneous hydrolysis, such as proteins undergo in neutral solutions.
- **autohypnosis** (aw"to-hip-no'sis). Self-induced hypnotism.
- autohypnotic (aw"to-hip-not'ik). r. Pertaining to self-induced hypnotism. 2. One who can put himself into a hypnotic state.
- **auto-immunization** (aw"to-im-u-ni-za'shun). Immunization effected by natural processes within the body.
- auto-infection (aw"to-in-fek'shun) [Gr. αὐτόs self + infection] Infection by a virus generated within the organism.
- auto-infusion (aw"to-in-fu'zhun) [Gr. αὐτός self + m[uston]. The forcing of the blood toward the heart by bandaging the extremities, compression of the abdominal aorta, etc.
- auto-inoculable (aw"to-in-ok'u-la-bl) [auto- + inoculable]. Susceptible of being inoculated upon a person already affected.
- auto-inoculation (aw"to-in-ok'u-la-shun) [Gr. aὐτόs self + inoculation]. Inoculation with a virus from one's own body.
- auto-intoxicant (aw"to-in-toks'ik-ant). A poison generated within the system.
- auto-intoxication (aw"to-in-toks-ik-a'shun) [Gr. abr6s self + intoxication]. Poisoning by some uneliminated toxin generated within the body. dyscratic a., an abnormal condition of the body fluids from nutritional disturbance. intestinal a., a disordered state due to the accumulation of intestinal poisons in the blood; called also alimentary toxemia.
- autoisolysin (aw-to-i-sol'is-in). A lysin which destroys the corpuscles of the subject from which it was obtained as well as those of other animals of the same species.
- autokinesis (aw"to-kin-e'sis) [Gr. αὐτός self + κίνησις motion]. Voluntary motion.
- autokinetic (aw"to-kin-et'ik). Having the power of voluntary motion.
- autolaryngoscopy (aw"to-lar-in-gos'ko-pe). Observation of one's own larynx.
- autolavage (aw"to-lah-vahzh') [Gr. abrós self + lavage]. Lavage performed on one's self or on one's own stomach.
- autolesion (aw'to-le-zhun). A self-inflicted injury.
- autologous (aw-tol'o-gus) [Gr. αὐτός self + λόγος relation]. Occurring naturally or normally in a structure or tissue; normal to the part
- autolysate (aw-tol'is-āt). A substance or substances produced by autolysis. Autolysates of cancer tissue have been used subcutaneously in the treatment of cancer.
- autolysin (aw-tol'is-in). 1. A lysin present in an organism and capable of destroying the cells or tissues of that organism. 2 A proprietary solution containing non-toxic vegetable proteins. used in the treatment of cancer.
- **autolysis** (aw-tol'is-is) [Gr. $ab\tau \delta s$ self $+ \lambda b\sigma \iota s$ solution]. 1. The automatic disintegration of tissues or of cells, self-disintegration, the disintegration or digestion of tissue by the action of enzymes secreted by its own cells. 2. The destruction of cells of the body by its own serum.
- autolytic (aw-to-lit'ik). Pertaining to or causing autolysis
- autolyze (aw'to-liz). To undergo or to cause to undergo autolysis.
- **automatic** (aw-to-mat'ik) [Gr. αbτοματικός self-acting]. Spontaneous or involuntary; done by no act of the will.
- automatism (aw-tom'at-izm) [Gr. αὐτοματισμόs self-action]. τ. The performance of acts without conscious volition. 2. The doctrine that the brain causes, manufactures, or calls into action mental

- processes and that all mental processes are dependent on brain activity. Cf. parallelism. ambulatory a., a condition in which the patient walks about and performs acts mechanically and without consciousness of what he is doing. Called also poriomania. command a., an abnormal suggestibility to movement, as echopraxia or echolalia.
- **automatograph** (aw-to-mat'o-graf) [Gr. αὐτοματισμός automatism + γράφειν to write] An instrument for recording involuntary movements.
- automixis (aw-to-miks'is) [Gr. αὐτός self + μίξις mixture]. Same as autogamy.
- automors (aw'to-morz). A proprietary disinfectant said to consist of a mixture of a cresol preparation with free sulphuric acid.
- automysophobia (aw"to-mis-o-fo'be-ah) [Gr aὐτόs self + mysophobia]. Insane dread of personal uncleanness.
- autonephrectomy (aw"to-nef-rek'to-me) [Gr. aὐτός self + μέφρος kidney + ἐκτομή excision]. A stricture of the ureter which completely closes the lumen so that no secretion reaches the bladder.
- autonephrotoxin (aw"to-nef-ro-toks'in). A nephrotoxin which acts against the cells of the body in which it is formed.
- autonomic (aw-to-nom'ik). Autonomous; self-controlling; having independent functions nervous system.
 see under system.
- autonomin (aw-ton'om-in). A hypothetical hormone secreted by the pancreas under the influence of the vagal autonomic system which is supposed to antagonize adrenalin
- **autonomous** (aw-ton'om-us) [Gr. aὐτόs self + νόμοs law]. Having independent functions.
- autonomy (aw-ton'o-me) [Gr. $\alpha \dot{\nu} \tau \dot{\sigma} s$ self + $\nu \dot{\sigma} \mu \sigma s$ law]. Functional independence of other parts.
- **auto-ophthalmoscope** (aw"to-of-thal"mos-kōp) [auto- + ophthalmoscope]. An ophthalmoscope for examining one's own eyes.
- **auto-ophthalmoscopy** (aw"to-of-thal-mos'kope). The use of the auto-ophthalmoscope.
- auto-oxidation (aw"to-ok-sid-a'shun). Spontaneous oxidation.
- **autopathography** (aw"to-path-og'raf-e) [Gr. $ab\tau \delta s$ self $+ \pi \delta \theta os$ disease $+ \gamma \rho \delta \varphi \epsilon \iota \nu$ to write]. A written description of one's own disease.
- **autopathy** (aw-top'ath-e) [Gr $\alpha b \tau \delta s$ self $+ \pi \delta \theta o s$ disease]. A disease without apparent external causation.
- **autopepsia** (aw-to-pep'se-ah) [Gr αὐτός self + πέπτειν to digest] Self digestion, autolysis.
- autophobia (aw-to-fo'be-ah) [Gr. αὐτός self + φόβος fear]. Insane dread of solitude or of being alone with oneself.
- autophonia (aw-to-fo'ne-ah). See autophony.
- **autophonometry** (aw-to-fo-nom'et-re) [Gr. $ab\tau bs$ self $+ \varphi \omega v \dot{\eta}$ voice $+ \mu \dot{\epsilon} \tau \rho ov$ measure]. The application of a vibrating tuning-fork to the body of a patient for the purpose of having him describe the sensations which it produces.
- autophony (aw-tof'o-ne) [Gr. $ab\tau bs$ self $+ \varphi \omega \nu \eta$ voice]. r. Observation of one's own voice as transmitted through a patient's chest. 2. A condition in which a patient's voice seems to himself abnormal or too loud.
- **autophthalmoscope** · (aw-tof-thal'mos-kōp). See auto-ophthalmoscope.
- autophyte (aw'to-fit) [Gr. αὐτός self + φυτόν plant]. A plant which does not depend on organized food material, but derives its nourishment directly from inorganic matter. Cf. saprophyte.
- autoplasmotherapy (aw-to-plaz-mo-ther'ap-e) [Gr. αὐτός self + L. plas'ma + Gr. θεραπεῖα treat-

149

- ment]. Treatment of disease by injections of the patient's own blood-plasma.
- autoplast (aw'to-plast). An autograft.
- autoplastic (aw-to-plas'tik). Pertaining to autoplasty.
- autoplasty (aw'to-plas-te) [Gr. αὐτός self + πλάσσειν to form]. The repair of diseased or injured parts by pieces taken from another part of the body.
- autopoisonous (aw-to-poi'zun-us). Poisonous to the organism by which it is formed.
- autoprecipitin (aw-to-pre-sip'it-in). A precipitin which acts on the serum of the animal in which it was developed.
- autoprotection (aw-to-pro-tek'shun) tection, particularly the protection of the body from disease by the formation of auto-antitoxins.
- autopsy (aw'top-se) [Gr. αὐτός self + ὅψις view]. The postmortem examination of a body.
- autopsychic (aw-to-si'kik) [Gr. ἀυτός self + ψυχή mind]. Pertaining to self-consciousness.
- autopsychorhythmia (aw"to-si-ko-rith'me-ah) [Gr. avros self $+ \psi v \chi \dot{\eta}$ mind $+ \dot{\rho} v \theta \mu \dot{\phi} s$ rhythm]. Pathologic rhythmic activity of the brain.
- autopsychosis (aw"to-si-ko'sis). A psychosis or mental disease marked by derangement of ideas relating to the patient's self.
- **autopyotherapy** (aw"to-pi-o-ther'ap-e) [(ir. autos own $+\pi i\omega \nu$ pus $+\theta \epsilon \rho a\pi \epsilon ia$ treatment] Treatment of suppuration by the subcutaneous injection of pus aspirated from the patient's abscess.
- autoreinfusion (aw"to-re-in-fu'zhun) Intravenous infusion into a patient of his own blood or serum which has been effused in his body cavities
- autorrhaphy (aw-tor'af-e) [Gr αὐτός self + ραςή suture]. Closure of a wound by the use of strands of tissue taken from the flaps of the wound.
- autoscope (aw'to skop) [Gr. αὐτός self + σκοπεῖν to view! An instrument for the examination of one's own organs.
- autoscopy (aw-tos'ko-pe) [Gr. αὐτός self + σκοπεῖν 1. The examination of one's own orto view 2. Direct examination of the laryny without gans the interposition of a mirror (Kirstein).
- autosensitization (aw"to-sen-sit-iz-a'shur). Sensitization toward one's own tissues. It can be produced in an animal by injecting its own lens protein, its own placenta protein, and possibly by injecting other tissues.
- autosensitized (aw-to-sen'sit-izd). Sensitized by the patient's own serum or tissues.
- autosepticemia (aw"to-sep-tis-e'me-ah). cemia due to poisons developed within the body.
- autoserobacterin (aw"to-se-ro-bak'ter-in). autosensitized vaccine; a vaccine sensitized by the patient's own serum.
- autoserodiagnosis (aw-to-se-ro-di-ag-no'sis). Diagnostic use of a serum from the patient's own
- autoserosalvarsan (aw"to-se-ro-sal'var-san). See Swift-Ellis treatment, under treatment.
- **autoserotherapy** (aw-to-se-ro-ther'ap-e) [Gr. abτόs self+serum+Gr. θεραπεία treatment]. Treatment of disease by injections of serum derived from the patient's own blood.
- autoserous (aw-to-se'rus). Accomplished means of one's own serum.
- autoserum (aw-to-se'rum) [Gr. autos self + serum]. A serum which is used on the patient from which it is derived. a. therapy. See under therapy.
- autosite (aw-to-sit) [Gr. abros self + σîros food].
 I A monster or teratism capable of independent life. 2. A teratism upon or within which a parasitic twin lives.
- autosomatognosis (aw"to-so-mat-o-gno'sis) [Gr. abros self $+ \sigma \omega \mu a$ body $+ \gamma \nu \omega \sigma us$ recognition]. The feeling that a part of the body that has been removed, as by amputation, is still there.

- autosomatognostic (aw"to-so-mat-og-nos'tik). Pertaining to autosomatognosis.
- autosome (aw'to-sōm) [Gr. αὐτός self + σῶμα body]. Any ordinary paired chromosome as distinguished from an accessory chromosome.
- autospermotoxin (aw"to-sper-mo-tok'sin). A substance formed in the body and capable of agglutinating the spermatozoa of the animal in which they are formed.
- autospray (au'to-sprā). An apparatus for spraying, to be used by the patient himself.
- autostethoscope (aw-to-steth'os-kop) [auto + stethoscope] A stethoscope for use upon one's own chest.
- autosuggestibility (aw"to-sug-jes-tib-il'it-c). peculiar mental state with loss of will, in which suggestions become easy.
- autosuggestion (aw"to-sug-jest'yun) [Gr. aŭrós self + suggestion]. The spontaneous occurrence to the mind of ideas derived from impressions received in the hypnotic state. Also the peculiar mental state often occurring after accidents, in which suggestions are easily received, so that the slightest injury to a part induces a hysteric paralysis or other disability. This latter state is also called traumatic suggestion.
- autosynnoia (aw''to-sin-oi'ah) [†]Gr. αὐτός self + σὑν together + νοῦς mindl. A mental condition in which the patient is so concentrated in his thoughts and hallucinations that he loses all interest in the outside world.
- autotemnous (aw-to-tem'nus) [Gr. aὐτόs self τέμνειν to divide]. Capable of spontaneous division.
- autotherapy (aw-to-ther'ap-e) [Gr. αὐτός self + θεραπεία treatment].
 1. The spontaneous cure of disease.
 2. Self-cure.
 3. Treatment of disease by filtrates from the patient's own secretions.
- autotomy (aw-tot'o-me) [Gr. αὐτός self + τομή a cut] 1 Self-division, fission. 2. A surgical operation performed on one's self.
- autotopnosia (aw-to-top-no'sc-ah) [Gr. αὐτός self $+\tau \delta \pi o s$ place $+\gamma \nu \omega \sigma s$ knowledge]. Inability to orient correctly different parts of the body.
- autotoxemia, autotoxicosis (aw"to-tok-se'meah, aw''to-toks-ik-o'sis) [Gr. αὐτός self + τοξικόν poison + αίμα blood] Poisoning by material generated within the body.
- autotoxic (aw-to-tok'sik) [Gr αὐτός self + τοξικόν poison]. Pertaining to autointoxication.
- autotoxide (aw-to-tok'sīd) A proprietary anti-septic and anodyne stimulant for the nervous and glandular systems.
- autotoxin (aw-to-tok'sin). Any pathogenic principle developed within the body from tissue metamorphosis.
- autotoxis (aw-to-tok'sis). See autointoxication.
- autotransfusion (aw"to-trans-fū'zhun). 1. The forcing of the blood into vital parts by bandaging or elevating the limb. 2. Reinfusion of the patient's own blood.
- autotransplant (aw-to-trans'plant). A piece of tissue taken from one part of an animal and transplanted to another part of the same animal.
- autotransplantation (aw"to-trans-plan-ta'shun). The operation of taking a piece of tissue from one part of an animal and inserting it in another part.
- autotrepanation (aw-to-trep-an-a'shun). Erosion of the skull by a brain tumor.
- autotrophic (aw-to-trof'ik) [Gr. αὐτός self + τροφή nutrition] Self-nourishing said of bacteria which require neither organic carbon nor organic nitrogen for their growth, but are able to build up carbohydrates and protein out of carbon dioxid and inorganic salts.
- autotuberculin (aw-to-tu-ber'ku-lin). 1. Tuberculin made from cultures obtained from a patient's own sputum. 2. Tuberculin or similar products absorbed from a patient's own lesion or foci of the disease.

autotuberculinization (aw"to-tu-ber"ku-lin-iza'shun). Absorption of tuberculin or similar products from a patient's own foci of disease.

autotyphization (aw"to-ti-fiz-a'shun). The production of a state like typhoid fever from accu-

mulation of waste matters in the system.

auto-urine test (aw-to-u'rin). See under tests.

autovaccination (aw"to-vak-sin-a'shun). t The vaccination of a patient with his own virus. 2. Treatment of a patient by causing antigenic products to be liberated from some invading microorganism or diseased tissue and so bring about the formation of antibodies.

autovaccine (aw-to-vak'sēn). A bacterial vaccine prepared from the patient's own secretions or tissues.

autoxemia (aw-tok-se'me-ah). Same as autotoxemia.
autoxidation (aw-toks-id-a'shun). Spontaneous oxidation of a substance which is in direct contact with oxygen.

autoxidator (aw-toks'id-a-tor). A substance in any active cell which can be oxidized by water, producing hydrogen dioxid.

autoxidizable (aw-toks'id-I-za-bl). Spontaneously oxidizable.

auxanogram (awks-an'o-gram). The plate culture used in auxanography.

auxanographic (awks-an-o-graf'ik). Pertaining to auxanography. a. method, auxanography.

auxanography (awks-an-og'raf-e) [Gr. αὐξάνειν to grow + γράφειν to write]. A method of determining the most suitable medium for a microbe by placing drops of various solutions on a plate culture of a poor medium. The microbe will develop the strongest colonies on that spot which contains the best medium.

auxanology (awks-an-ol'o-je) [Gr. αὐξάνειν to increase + λόγος treatise]. The science of growth.

auxosis (awk-se'sis) [Gr.]. Growth or increase. auxotic (awks-et'ik) [Gr. αυξειν to increase]

Stimulating cell proliferation. 2. A substance which stimulates cell proliferation

auxiliary (awks-il'e-a-re) [L. auxilia'ris] 1. Affording aid. 2. That which affords aid.

auxilin (awks-il'in). A proprietary antidiabetic tablet containing extracts of myrtillum, cortex phaseoli, tormentilla root, etc.

auxiliomotor (awks-il-e-o-mo'tor). Aiding or stimulating motion.

auxil'ium med'ici. A proprietary form of hydrogen peroxid.

auxilysin (awks-il'i-zin). A substance similar to conglutinin, but found in goat serum.

auxilytic (awks-il-it'ik) [Gr. αὔξειν to increase + lysis]. Increasing the lytic or destructive power.

auximone (awks'im-ōn) [Gr. αὔξειν to increase + hormone]. A hypothetical substance, akin to vitamin, which favors growth in plants.

auxiometer, auxometer (awks-e-om'et-er, awks-om'et-er) [Gr. αβξειν to increase + μέτρον meas ure]. I. An apparatus for measuring the magnifying powers of lenses. 2. A dynamometer.

auxocardia (awks-o-kar'de-ah) [Gr. αδξειν to increase + καρδία heart]. 1. Diastole. 2. Enlargement of the heart.

auxochrome, auxochromous (awks'o-krōm, awks-o-kro'mus) [Gr. αὔξειν to increase + χρῶμα color] Increasing or developing color· a term applied to a chemic group which, if introduced into a chromogen, will form a dye-stuff.

auxocyte (awks'o-sit) [Gr. αδξειν to increase + κύτος cell]. A cell which is concerned in growth or reproduction.

auxoflore (awk'so-flor). A substance which increases the intensity of fluorescent compounds. Cf. bathoflore.

auxogluc (awks'o-glūk) [Gr. αδξειν to increase + γλυκός sweet]. See under gluciphore.

auxohormone (awks-o-hor'mon) [Gr. αΰξειν to increase + hormone]. A term applied to vitamins.

auxology (awks-ol'o-je) [Gr. αὕξειν to increase + λόγος treatise]. The study or science of the growth of organisms.

auxospireme (awks-o-spi'rēm). The post-synaptic spireme.

A. V., AV. Abbreviation for auriculoventricular.

Av. Abbreviation for avoirdupois.

ava, ava-kava (ah'vah, ah''vah-kav'ah). Same as kava.

avalvular (ah-val'vu-lar). Having no valves.

avantine (av'an-tin). Isopropyl alcohol.

avariosis (ah-var-e-o'sis) [Fr. avarie damage]. Syphilis,

avascular (ah-vas'ku-lar) [Gr. α neg. + vascular]. Not vascular.

avascularization (ah-vas"ku-lar-i-za'shun). The expulsion of blood from a part, as by elastic bandages.

Avollis's syndrome (av-el'ēz) [Georg Avollis, German laryngologist, born 1864] See under syndrome.

Avempace (av-em'pas-e). A name of Abu Bekr Mohammed Ibn Badjeh, an Arabic physician and medical writer of Spain.

Avena (ah-ve'nah) [L.]. A genus of grasses. A. sati'va, the common oat. The seeds are nutritious and stimulant Dose of fluidextract or concentrated tincture, 10 120 min (0 666-8 c.c.).

avenin (av-e'nin).
1. A stimulant and tonic preparation from oats.
2. A principle like casein, obtainable from oats

avenolith (av-e'no-lith) [L ave'na oats + Gr. λίθος stone] An intestinal calculus or enterolith formed around a grain of oats.

Avenzoar (av-en-zo'ar) A renowned Arabic physician, born in Seville, Spain, about the beginning of the twelfth century, his full name being Abu Merwan Ibn Zohr. His principal writing was a compendium of practice, al-Teisir, which is replete with interesting clinical reports He died in 1102.

Averroës (av-er'o-ēz). A distinguished Spanish-Arabian philosopher and physician, born in 1126 at Cordova. His chief work is his commentaries on Aristotle. Died, 1198.

aviator's disease (a've-a-torz). See under disease.

Avicenna (av-is-en'ah). The most celebrated Arabian physician and philosopher, 980-1037; surnamed the "Prince of Physicians."

aviol (ah-vi'ol). An astringent and desiccative preparation containing iodin.

avirulent (ah-vir'u-lent). Not virulent.

avitaminose, avitaminosis (ah-vi-tam'in-ōs, tam-in-o'sis). Any disease due to a deficiency of vitamins in the diet, such as scurvy or beriberi; called also deficiency disease and deprivation disease.

avivement (ah-vev-maw'). The operative refreshing of the edges of a wound.

Avogadro's constant, law (av-o-gad'roz) Amadeo Avogadro, Italian physicist, 1776-1856]. See under constant and law.

avoirdupois (av"or-du-poiz"). See under weights.
avulsion (ah-vul'shun) [L. avul'sio]. The tearing away of a part or structure.

ax. Abbreviation for axis.

axanthopsia (ak-san-thop'se-ah) [Gr. α priv. + ξάνθος yellow + ὄψις vision]. Yellow blindness.

Axenfeld's test (aks'en-felts) [David Axenfeld, German physiologist, 1848-1912]. See under tests.

Axenfeld-Morax. See Morax-Axenfeld.

axial, axile (ak'se-al, ak'sīl). Of or pertaining to the axis of a structure or part.

axifugal (ak-sif'u-gal) [L. ax'is axis + fu'gere to flee]. Centrifugal.

axilemma (ak-sil-em'ah) [axis + Gr. λέμμα husk]. The sheath of the axis-cylinder.

axilla (ak-sil'ah), pl. axu'la [L.]. The arm-pit.

axillary (ak'sil-a-re). Pertaining to the axilla or arm-pit.

axin (ak'sin). A varnish-like substance from an insect, Lac'cus ax'inus: vulnerary and resolvent.
 axinic acid. See acid.

axion (ak-se'on). The brain and spinal cord.

axioplasm (ak'se-o-plazm) Neuroplasm

axiopodium (ak-se-o-po'de-tim), pl. axiopo'dia [Gr. άξων axis + πούν foot]. A pseudopodium possessing a central supporting structure or axostyle. Cf. lobopodium.

axipetal (ak-sip'et-al) [L. ax'is axis + pe'tere to seek]. Same as axopetal.

axis (ak'sis) [L. for "axle"].

1. A line about which
any revolving body turns.
2. The second cervical any revolving body curis. 2. The second cervical vertebra. basibregmatic a., a vertical line from the basion to the bregma; the maximum height of the cranium. basicranial a., a line from the basion to the gonion. basifacial a., a line joining the gonion and the subnasal point. binauricular a., a line joining the two auricular points. coliac a., a large branch of the abdominal aorta cerebrospinal a., the central nervous system. craniofacial a., the axis of the bones at the base of the skull, including the mesethmoid, presphenoid, basisphenoid, and basioccipital encephalomyelonic a., encephalospinal a. See neuraris. facial a., the basifacial axis. frontal a., an imaginary line running from right to left through the center of the eyeball. **neural a.**, the cerebrospinal axis. **optic a.**, **a.** op'tica [B N A], the line of vision; a line passing through the center of the cornea, the center of the lens, and the point of rotation to the posterior pole of the eye sagittal a., an imaginary line extending through the eye from before backward. secondary a., rays of light which pass through the optical center of a lens. thyroid a. See under arteries, table of. vertical a., a vertical line through the center of the eyeball. visual a., a line from the point of vision on the macula lutea to the object of vision.

axis-cylinder (ak-sis-sil'in-der) [axis + cylinder]. The central core which forms the essential conducting part of a nerve-fiber. a. process, the process of a nerve-cell which is continuous with the axis-cylinder of a nerve.

axis-traction (ak-sis-trak'shun). Traction made by the obstetric forceps along the line of the pelvic axis.

axite (ak'sit) [L. ax'ts]. Any one of the terminal filaments of an axis-cylinder.

axodendrite (ak-so-den'drit). One of the non-medullated side-fibrils given off from an axis-cylinder process of a nerve-cell The term is used in distinction from cytodendrite

axofugal (ak-so-fu'gal) [axon + L. fu'gere to flee]. Directed away from an axon or axis-cylinder process.

axoid, axoidean (aks'oid, aks-oi'de-an). Pertaining to the axis or second cervical vertebra.

axolemma (ak-so-lem'ah). Same as axilemma.

axolysis (ak-sol'is-is) [axon + Gr. λbσις dissolution]. Degeneration and breaking up of the axis-cylinder of a nerve-cell.

axometer (aks-om'et-er) [axis + Gr. μέτρον measure]. An instrument for measuring an axis.

axon, axone (aks'on) [Gr. ἄξων axis]. 1. The body axis. 2. An axis-cylinder process of a nerve-cell; the process of a neuron or nerve-cell which conducts impulses away from the cell body. Called also axis-cylinder process, neurite, neuraxis, and neuraxon. a. degeneration, loss of function of the axis-cylinder. a.-hill, a.-hillook, a part of the nerve-cell at the base of the axis-cylinder process which is always free from any chromatin substance.

naked a., an axon which has no inclosing medullary sheath.

axonal (aks'o-nal). Pertaining to or affecting an axon.

axone (aks'on). See axon.

cell.

axoneure, axoneuron (ak'so-nūr, ak-so-nu'ron) [Gr. ἄξων axis + νεῦρον nerve]. Any cell of the cerebrospinal axis.

axonometer (ak-so-nom'et-er) [Gr. δξων axis + μέτρον measure]. An apparatus for the rapid determination of the cylindric axis of a lens.

axopetal (ak-sop'et-al) [axon + L pe'tere to seek]. Directed or proceeding toward an axon or axiscylinder process.

axoplasm (ak'so-plazm) [Gr. ἄξων axis + πλάσμα plasma]. The material that surrounds the fibrils of the axis-cylinder.

axopodium (ak-so-po'de-um). Same as axiopodium.
 axospongium (ak-so-spun'je-um) [axon + Gr. σπόγγος sponge] The meshwork structure making up the substance of the axis-cylinder of a nerve-

axostyle (ax'o-stil). The central supporting structure of an axopodium.

axungia (ak-sun'je-ah) [L. ax'is axle + un'guere grease]. Lard.

ayapana (ah-yah-pa'nah) The leaves of Eupato'rium tripliner'ie, a plant growing in many hot
countries. It is aromatic, stomachic, diaphoretic,
and stimulant used like tea and coffee, and also
as a household polychrest remedy in various hot
regions.

Ayerza's disease (ah-yer'thaz). See under disease. Az. Abbreviation for azote or nitrogen.

azalein (a-za'le-in) [L. aza'lea a plant name]. Same as fuchsin.

azarin (az'ar-in). A non-poisonous yellow coloring-matter from coal-tar

azedarach (az-ed'ar-ak). The bark of Me'lia azed'arach, a tree of Asia anthelmintic, emetic, and purgative. Dose of decoction, \(\frac{1}{2}\)-1 fl.oz. (15-30 c c.); of fluideytract, 60 min. (4 c.c.); of tincture, 30-120 min (2-8 c c).

azerin (az'er-in). A ferment from Dros'era, Nepen'-thes, and various other insectivorous plants.

azid, azide (az'id). A compound which contains the group—CO.N₃.

azoamyly (a-zo-am'il-e) [Gr. α neg. + ζφον animal + ἄμυλον starch]. Inability of the hepatic cells to store up a normal amount of glycogen.

Azobacter (a-zo-bak'ter) See Azotobacter.

azobenzene (az''o-ben-zēn') [azole + benzene].

An orange-red, crystalline derivative, C₆H₅.N:N.C₆H₅, from nitrobenzene, soluble in alcohol and
ether, but only sparingly so in water.

azo-bordeaux (az-o-bor-do'). Cerasin.

azo-compounds (az-o-kom'powndz). Compounds which contain the azo group —N. N—.

azodermin (a-zo-der'min). Acetylated amidoazotoluene, a reddish powder used to promote epithelial formation.

azodolen (a-zod'o-len). A mixture of pellidol and iodolen, used as an antiseptic and to stimulate epithelial formation

azoic (ah-zo'ik) [Gr. a neg. + ζωή life]. Destitute of living organisms.

azoimid (a-zo-im'id), 1. The group -N $\stackrel{\text{II}}{\sim}$ 2. A

protoplasmic poison, hydrazoic acid, NH₃, resembling hydrocyanic acid in its action, made by heating hydrogen hydrochlorid with sodium nitrate. It is highly explosive. Called also *triazoic acid* and *hydronitric acid*.

asole (az'ōl). A derivative of a five-membered ring containing nitrogen and either oxygen, sulphur, or an additional nitrogen atom, as well as carbon atoms. asolitmin (az-o-lit'min). A coloring principle, C₇H₇NO₄, from litmus. It is used as an indicator and has a P_H range of 4.5 to 8.3, being red at 4.5 and blue at 8.3.

azolysin (a-zol'is-in). A proprietary preparation for the treatment of azoturia.

azoöspermatism (ah-zo-o-sper'mat-izm). Azo ospermia.

azoöspermia (ah"zo-o-sper'me-ah) [Gr. a neg. + zoosperm]. Lack or absence of spermatozoa in the semen.

azophen (a'zo fen). Sodium dimethylaminoazobenzene-m-sulphonate, a yellow crystalline substance, it is antiseptic and stimulates tissue formation.

azorubin S (az-o-ru'bin). A dark red dye of the mono-azo group: used in test for liver and biliary tract function.

azote (az'ot) [Gr a neg + ζωή life] Nitrogen.

azotemia (az-o-te'me-ah) [azote + Gr. alµa blood].

1. The presence of urea or other nitrogenous bodies in the blood.

2. A disease of horses due to urea in the blood. It is caused by overfeeding and insufficient exercise, and is marked by a sudden attack of perspiration, paralysis of the hind quarters, and blood in the urine

azotemic (az-o-te'mik). Pertaining to or characterized by azotemia.

azotenesis (az"o-ten-e'sis). Any disease due to an excess of nitrogenous substances in the system.

azotize (az'o-tīz). To combine with nitrogen.

azotized (az'o-tīzd) Containing or charged with nitrogen.

Azotobacter (az-o-to-bak'ter) [azote + bacteria]. A genus of bacteria characterized by being capable of fixing free nitrogen. Same as Azobacter.

azotometer (az-o-tom'et-er) [azote + Gr. μέτρον measure]. An instrument for measuring the proportion of nitrogen compounds in a solution.

azotorrhea (az-o-to-re'ah) [azote + Gr. ροία flow]. Excess of nitrogenous matter in the urine or feces.

azoturia (az-o-tu're-ah) [azote + Gr. οὐρον urine].

Excess of urea or other nitrogen compounds in the urine.

azoturic (az-o-tu'rik). Pertaining to azoturia or the urinary excretion of nitrogen.

azoxy compound (az ok'se). A compound which

contains the group -N-N-.

azoxybenzene (az"ok-se-ben-zēn'). A product, $(C_6H_5N)_2O$, of the reduction of introbenzene.

azule (a/ul) A proprietary name for sterile glass capsules and for a series of preparations contained in such capsules.

azulene (az'u-lēn). A blue coloring matter from certain volatile oils, such as oil of cubebs

azulin (az'u-lin). A blue anilin color or dye.

azulmin (az-ul'min). A black compound, C₄H₅-N₅O, formed during decomposition of prussic acid.

azure (az'ūr). A methyl thionin dyc. **a. A**, asymmetric dimethyl thionin, (CH₂\N C₆H₃(SN)C₆-H₅,NH.HCl. **a. B**, tri-methyl thionin, (CH₃\2N - C₆H₃(SN)C₆H₄ N(CH) | HCl. **a. I**, a trade name for a mixture of azure \(\lambda \) and azure \(\lambda \) a. II, a mixture of equal parts of azure I and methyleneblue. **methylene a.**, any one of several azures present in polychtome methylene blue

azurin (az'u-rin) The double acetate of sodium and theobromin; used as a diuretic. Dose, 10-15 gr. (0.65-0.98 gm)

azurophil, azurophile, azurophilic (az-u'rofil, -fil'ik) [azure + Gr φίλειν to love] Staining
well with blue amin dyes.

azurophilia (az-u-ro-fil'e-ah) A condition in which the blood contains cells having azurophil granulations

azygos (az'ig-os) [Gr. α priv + ζυνός yoke]. τ. Unpaired. 2 Any unpaired part.

azygous (az'ig-us) [see azygos]. Having no fellow; unpaired. See muscles, table of.

azymia (ah-zım'e-ah) [Gr. α priv. + ζύμη ferment]. Absence of a ferment

azymic, azymous (ah-zim'ik, ah-zi'mus) Not causing fermentation; not arising from a fermentation.

azzle-tooth (az'l-tooth). A molar tooth.

B

B. The symbol of boron; also an abbreviation for bal'neum, bath, Baumé (a hydrometer)), and Benoist scale.

Ba. The symbol of barrum.

B. A. Abbreviation for L bal'neum are'næ, sandbath.

Babbitt, B. metal. An alloy of tin, copper, and antimony which has a limited use in dentistry.

Babcock's test (bab'koks) [Stephen Moulton Babcock, American agricultural chemist, born 1843]. See under tests.

Babes's stain (bah'bāz) [Victor Babes, Roumanian bacteriologist, 1854-1926]. See stains, table of.

Babes-Ernst bodies (bah'baz-ernst) [Victor Babes, Roumanian bacteriologist, 1854-1926; Paul Ernst, German pathologist, born 1859]. Metachromatic granules. See granule.

Babesia (ba-be'ze-ah). A genus of protozoa. Same as Piroplasma. B. bo'vis. Same as Piroplasma bigeminum. B. cabal'li, a species causing a babesiasis in South Africa; it is transmitted by the tick Rhipicephalus evertsi and may be cured by the use of trypan blue. B. ca'nis, a species causing canine babesiasis. B. o'vis. Same as Piroplasma ovis.

babesiasis, babesiosis (ba-be-si'as-is, ba-be-se-o'sis). Infection with Babesia Same as proplasmosis. canine b., a disease of dogs in France, Italy, and Africa caused by Babesia cams. See Hemaphysalis.

Babinski's law, reflex, syndrome (ba bin'skës)
[Jules Babinski, physician in Paris, born 1857] See under law, reflex, and syndrome.

Babinski-Nageotte syndrome. See under syndrome

bacca (bak'ah), pl bac'ca [L.] A berry.

Baccelli's method, sign (batsh-el'ēz) [Guido Baccelli, physician in Rome, 1832-1916]. See under method and sign.

bacciform (bak'sif-orm) [L. bac'ca berry + for'ma shape]. Berry shaped

bacillac (bas'il-ak). A proprietary preparation of milk soured by the lactobacillus

Bacillaceæ (bas-il-a'se-e) A family of the order Eubacteriales, including rod-shaped forms producing endospores. It comprises the genera Bacillus and Clostridium.

bacillæmia (bas-il-e'me-ah). Bacillemia.

bacillar, bacillary (bas'il-ar, bas'il-a-re). Pertaining to bacilli or to rod-like forms.

bacillemia (bas-il-e'me-ah) [bacillus + Gr. αίμα blood]. The presence of bacilli in the blood.

bacilli-carrier. See carrier.

bacillicidal, bacillicidic (bas"il-is-i'dal, bas"il-is-id'ik). Destructive to bacılli.

bacillicide (bas-il'is-īd) [bacillus + L. cœ'dere to kill]. A drug which destroys bacılli.

bacilliculture (bas-il'ik-ul-chur). The artificial propagation of bacilli.

bacilliform (bas-il'if-orm) [bacillus + L. for'ma form]. Having the appearance of a bacillus.

bacilligenic (bas''il-ij-en'ik). Caused by a bacillus. bacillin (bas-il'in). A commercial disinfectant.

bacillinum (bas-il-i'num). A homeopathic preparation of tuberculous lung tissue.

bacilliparous (bas-il-ip'ar-us) [bacilli + L. pare're to produce]. Producing bacilli.

bacillogenic (bas-il-o-jen'ik) 1. Caused by bacilli.
2. Producing bacilli

bacillogenous (bas-il-oj'en-us). Caused by bacilli. bacillol (bas'ıl-ol). A product of the distillation of tar containing 52 per cent. of cresol. It is made up as a soap mixture similar to the compound solution of cresol, and is used as an antiseptic and disinfectant.

bacillophobia (bas''il-o-fo'be-ah) [L. bacil'li + Gr. $\phi \circ \beta os$ fear] Λ morbid fear of microbes.

bacillosis (bas-il-o'sis) [L. bacil'lum a rod]. The state of bacillary infection.

bacilluria (bas il-u're-ah) [bacilli + Gr. οδρον urme]. The presence of bacilli in the urme.

bacillus (bas-il'us), pl. bacil'li [L. "little stick"].

1. A rod-shaped body. 2. A genus of Bacillaceæ, the members of which are rod shaped and sometimes occur in chains Abel's b., Bacterium ozanæ abortion-b., B. abor'tus. See ozena abortion-b., B. abor'tus. See Bacterium abortum B. accidenta'lis tet'ani, a form in small motile rods, from wounds of moculation tetanus. Causes septicemia with edema in mice, guinea pigs, and rabbits. **B.** ace'ti, **B.** acet'icus, a species found in the air and in vinegar in the form of large cylindric cells, or short, rounded rods, disposed in thick chains. It causes acetic fermentation. **Achalme's b.** (1891) See Clostridium aërogenes capsularus acid-fast b., acid-resisting b., any bacterium which, after staining, is very resistant to the decolorizing influence of acids such are the mycobacterium lepræ, smegmatis, and tuberculosis B. ac'idi butyri'ci, a form from mixtures of saccharin solutions and cheese Coagulates milk and forms butyric acid. B. ac'idi lac'tici. See Bacterium acidi lactici. B. acidif'icans longis'simus, a zymogenic species from the yeast of distillery mash. B. acidifor mans, a form from the liver of yellow-fever cadavers: pathogenic for rabbits and guineapies. B. acidoph'ilus. See Lactobacillus acidophilus. B. ac'ne contagio'sso, a form in non-motile short rods, from the pus of acne contagiosa of horses. Produces acne and suppuration in horses and cattle. B. ac'nes. Sec Fusiformis acues. B. actinobac'ter. See Clostridium butyricum. B. actinomyce'tum com'itans, a very short bacillus or a coccus frequently found associated with Actinomyces bovis. B. ægypti'-See Hemophilus of Koch-Weeks. B. mrofe'tidus. See Clostridium aroseridum. aerogenes. See Bacterium aerogenes. В. Bacterium aerogenes. aërog'enes capsula'tus. See Clostridium aerogenes capsulatum. B. aërog'enes meningit'idis, a zymogenic and pathogenic species from a case of meningitis. **B. aëroph'ilus**, a nonpathogenic bacillus from the air: in slender, nonmotile rods joined with filament. B. aer'trycke. See Bacterium cholera suis. B. aërugino'sus. Same as Pseudomonas pyocyanea. Afanassiew's b., a short species found in the expectoration of whooping-cough and pathogenic for dogs. B. al'-

bicans paterifor'mis, a species from the skin in seborrhea: in straight non-motile rods variously disposed. **B. albu'minis**, a non-pathogenic form from feces. B. al'bus, a white, non-pathogenic species from water: a short, motile micro organism with blunt ends. B. al'bus aërobies'cens, a non-pathogenic form from pure water. B. al'bus cadav'eris, a pathogenic form from the blood of a cadaver: in the form of actively motile rods. It kills mice and guinea-pigs. B. al'bus pu'tidus, a non-pathogenic species from water in filaments made up of motile rods. b. of allantiasis. See Clostridium botulinum. B. allantoi'des, a nonpathogenic form from air. B. al'lii, a non-pathogenic form from decaying onions b. of alope'cia area'ta. Same as Bacterium decalvans. **B. al'vei**, a pathogenic species from bees affected with the disease "foul brood." It is pathogenic for mice and guinea-pigs it forms slender, motile rods with large spores. B. aminoph'ilus intestina'lis, a bacillus found in the cecum and producing histamin. B. amylobac'ter. See Clostratum butyricum. B. amyloclas'ticus intestina'lis. testina'lis, a Gram-positive, spore-forming, facultative anaerobic bacillus, 4 to 6 microns long and 0 0 to 1.2 microns thick, isolated from the intestines It splits starchy foods and is thought to be of significance in diabetes **B. amylov'orus**. Same as *Erwinta amylovora* **B. amylozy'ma,** a species of bacillus from water in Paris occurring in the form of rods 2 to 3 µ long. They ferment sugar and yeast. B. anaërob'icus alkali'genes. See Clostridium tetanoides. B. anaërob'icus liquefa'ciens, a species from the intestine of a yellow fever cadaver B. annula'tus, a motile form from river water. B. antennifor'mis, a water bacillus in motile rods: not sporiferous. B. anthra'cis, a large, non motile, sporogenic, aerobic, Gram-positive bacillus which causes anthrax. Called also militariand b and the b. of splenic fever. B. anthra'cis simi'lis, a species resembling B. anthracis, but devoid of disease-producing power. B. anthra'cis symptomat'ici. See Clostridium chauaei. B. anthracoi'des, a species from soil, resembling that of anthrax. B. aphtho'sus, a form in short, non-motile rods: causes ulceration of mouth and nose and cutaneous hemorrhages in cattle. B. a'pium, a species causing a peculiar disease of bees. B. aquat'ilis. See Pseudo-monas aquatilis. B. aquat'ilis fluores'cens, a non-pathogenic form from well-water. B. aquat' ilis grave'olens, a non-pathogenic form from well-water. B. aquat'ilis radia'tus, a saprophytic species from water. B. aquat'ilis sulca'tus, any of five species or forms of bacillus (distinguished as I, II, III, IV, and V) found in the aqueduct water in Vienna. All except IV are actively motile rods; IV is in non-motile rods with motile filaments. B. arbores'cens. See Erythrobacillus arborescens B. arbores'cens nonliquefa'ciens, a saprophytic species from soil. B. argentophosphores'cens, a species in three forms (I, II, III), from sea-water, phosphorescent fish and cuttle-fish zymogenic bacillus found and cuttle-fish **B. aromat'icus,** a bacillus found on cabbage leaves. B. arthrit'idis chron'icæ, a form found in the joints in chronic rheumatism B. asiat'icus, an organism causing a disease in Ceylon which is marked by a protracted mild fever. forms of the organism, distinguished as A and B. B. ater'rimus, a species producing black pigment. It is aerobic, motile, and sporulating. B. auranti'acus, a species from well-water, forming a yellow pigment. B. aures'cens, a water bacillus producing an orange pigment: in motile rods **B. au'reus**, a golden-yellow species from water and from the skin in seborrhea: in straight or slightly curved parallel rods, not actively motile. B. au'reus fœ'tidus, a nonmotile encapsulated bacillus, $1.4 \mu \log_1 0.7 \mu$ broad, found in a fatal infection of a Filipino. It produces a golden-yellow pigment. **B. avisep'ticus.** See Pasteurella aviseptica. **b.** "**B**," a pathogenic

species producing a disease in the larvæ of Lib'aris monach'a. B. baccari'nii, a species causing the monach'a. B. Daccari'nii, a species causing the disease gummosis in grape-vines. Bang's b., See Bacterium abortum. Barton's b., Bartonel'la bacillifor'mis. B. bellonen'sis. See Clostridium adematiens. B. beriber'icus, a species found in persons affected with beriberi: in jointed rods, not unlike those of B anthra'cis. B. bernen'sis, a species found in the beriberi in jointed rods, not unlike those of B anthra'cis. species in thick rods, from Emmenthaler cheese. It causes the odor of the cheese. B. berolinen'sis in'dicus, a species from water in Berlin, in the form of slender, capsulated rods, occurring singly, in pairs, or in chains. produces an indigo-blue color. B. bienstock'ii, a pathogenic species from human feces. B. biermen'tans. See Clostridium bifermentans B. bl'fidus. See Lactobacillus bifidus. B. bipola'ris bubalisep'-Clostridium bisermentans ticus, the species causing barbone. B. bipola'ris sep'ticus, a general name for bacilli of the hemorrhagic septicemia group. b. of black leg. See Clostridium chauvai. Boas-Kaufmann b., a long, thread-like bacillus found in the stomach in carcinoma of that organ. Boas-Oppler b. See Lactobacillus bulgaricus. B. boöcop'ricus, a zymogenic species from cow-dung. Bordet's b., Bordet-Gengou's b. See Hemophilus perlussis. bottle b., an organism, resembling a yeast, regarded as the cause of dry pityriasis capitis. B. botuli'nus. See Clostridium botulinum b. of Bovet, a pathogenic species from the intesting of a warmen who died of chellering the intestine of a woman who died of choleraic enteritis. **B. bo'vis morbif'icans**. See Bacterium enteritidis. **B. bovisep'ticus**. See Pasteurella boviseptica. **B. bras'sice**, a non-pathogenic filamentous species from an infusion of cabbage leaves. B. bremen'sis fe'bris gas'trica, a new bacillus derived from cases of a disease with characteristic typhoid symptoms, but in which the Widal reaction could not be obtained. B. breslavien'sis, a species that caused an epidemic of enteritis, and was probably derived from diseased meat. B. bre'vis, a pathogenic species from sewage in Berlin in the form of non-motile rods 0.25 µ long. Brieger's b. Same as B. cavev'dus. B. bronchica'nis, a bacillus believed to be the causative agent in canine distempter. B. bronchisep'ticus. See Bacterium bronchisepticum. B. bronchiti'dis pu'tridæ, the bacillus of putrid bronchitis; a form in motile rods B. brun'neus, a non-pathogenic species from water, in small, non-motile, sporiferous rods. B. bucca'-See Leptotrichia buccalis. B. bucca'lis max'imus, a saprophytic species from the mouth. in rods 2 to 10 μ long and 1 μ broad. B. bucca'lis minu'tus, a species from saliva. in rods 0.5 to 1 μ long and slightly less in breadth. b. of buffalo plague, a variety of Bacillus bovisepticus, producing a fatal disease in Asiatic buffalo and other animals. B. bulga'ricus. See Lactobacullus bulgaricus. B. bütsch'lii, a large bacillus found in the intestine of cockroaches. It is characterized by the fact that it forms two endogenous spores. butter b. See Mycobacterium butyricum. buttersauer b. See Clostridium butyricum. B. butyl'icus, a zymogenic species found on cereals. B. butyr'icus. See Clostridium butyricum b. "C," a species found on halistones and producing a reddich vallow color. hailstones, and producing a reddish-yellow color. B. cadav'eris, a pathogenic kind from the cadaver after yellow fever. B. coru'leus, a saprophytic bacillus from water. B. corulifa'ciens, a species from the conjunctival secretion of granular conjunctivitis Calmette-Guérin b., a strain of tubercle bacillus deprived of its virulence by a series of cultures in glycerinated ox-gal!: used for prophylactic vaccination of young infants. B. campes'tris. See Pseudomonas campestris. B. cana'lis capsula'tus, a pathogenic species from sewer water: an encapsulated and non-motile type. B. cana'lis par'vus, a pathogenic species from sewer water in non-motile rods. B. can'dicans, a non-pathogenic species from the soil and from water: in motile rods, not sporiferous. b. of

Canestri'ni, a pathogenic species from diseased bees. B. capsula'tus. See Bacterium capsulatum. B. capsula'tus muco'sus, a pathogenic species from the nasal secretions in influenza. B. capsula'tus sep'ticus, a form resembling B. pneumoniæ from rag-sorters' disease and other anthrax-like affections. B. capsula'tus smith'ii, a saprophytic species from the intestines of pigs. B. carabifor'mis, a non-pathogenic species, in highly motile rods, from the stomach of a meat-fed dog. B. carbo'nis. See Clostridium chauvai. B. carnic'olor, a species from water, producing a flesh-colored pigment. B. carota'rum, a non-pathogenic species from boiled carrots and beets. B. carotov'orus. See Exerma carolovora. B. caten'ula, a non-pathogenic species from cheese. catgut b., a species from catgut, believed to be derived from the grass caten by sheep. B. cau-cas'icus. See Lactobacillus caucasicus. B. cauliv'orus, a species producing a disease in potatoes. B. ca'viæ fortu'itus, a non-pathogenic form from guinea-pigs inoculated with yellow fever. B. ca'vim sep'ticus. See Bacterium bronchisepticum. B. cavici'dus, a pathogenic form from human feces, very deadly to guinea-pigs: seen in small short rods. B. cavioi'dus havanien'sis, a pathogenic species from the intestine of a yellow-fever patient. b. of Cazal and Vaillard, a pathogenic species from cheesy nodules in the pancreas and peritoneum. B. cellulo'sse dissol'vens, a strictly anaerobic sporogenic organism isolated from the human intestinal canal; it dissolves cellulose, but does not ferment any carbohydrate. B. ce'reus, a water microbe, in motile rods sporiferous. B. ceylonen'sis, a species found in certain cases of tropical fever B. chauve'i. See Clostridium chauvei. B. chlorhy'drici, a small, slender, motile bacillus found in the stomach in chlorhydria and hyperchlorhydria. B. chlori'nus, a non-pathogenic form from decaying vegetable matter.

B. chol'oræ an'atum, a species producing a disease like chicken cholera in ducks. B. chol'ers asiat'ics (Koch, 1884). See Vibrio cholera. B. chol'ers a'vium. See Pasteurella aviseptica. B. chol'eræ columba'rum, a species producing a disease like chicken cholera in doves. Pathogenic for rabbits and guinea-pigs, but not for Chickens. B. chol'eræ gallina'rum. See Pasteurella ariseptica. B. chol'eræ su'is. See Bacterium choleræ surs B. choleroi'des, a michickens. cro-organism of drinking-water closely resembling the spirillum of epidemic cholera B. cholog' enus, a pathogenic species from angiocholitis, renal abscess, and purulent meningitis. B. chows'i. See Clostridium chaucai. B. chromoaromat'icus, a pathogenic, yellow, odorous species from the carcass of a diseased dog or hog. in motile rods. b. of chyluria, a species found in chylous urine, and thought to be pathogenic of chyluria. B. cinc'tus, a zymogenic species from soil. B. cir'culans, a zymogenic species from water, in rods 2 to 5 μ long and 1 μ broad **B**. circumscrip'tus, a species from the normal conjunctiva, producing orange-yellow cultures. B. cit'reus, a short motile bacillus from the skin oit/reus cadaveris, a non-toxic and non-pathogenic form from dead bodies, forming rows of non-motile rods and producing a yellow pigment and an odor of hydrogen sulphid. Class's b., Diplococcus scarlatina. B. clava'tus. Scarocaterium hoffmanii. B. clavifor'mis, a pathogenic form from fermenting casein. B. pathogenic form from fermenting casein. cloa/cm, a non-pathogenic bacillus from sewage B. cochlea'rius. See Clostridium cochlearium.
B. co'li colorab'ilis, a pathogenic form from cholelithiasis and yellow fever. B. co'li communis.
B. co'li communis. B. co'li concen'tricus, a pathogenic species from the alimentary canal in yellow-fever cases. B. co'li dysenter'icus, a form of B. coli found in dysentery. B. co'li icteroi'des, a pathogenic

BACILLUS BACILLUS B. agyptiacum (Koch-Weeks bacillus), × 1000 B, acidi lactici, × 800 B. aerogenes capsulatus, B anthracis, × 1000 B botuinus, / 1000 B Chauvær (b. of symptomatic anthrax), - 1000. B. coli × 500. B diphtheriæ, × 1000. B, comma, - 1000, I, ordinary form, II, flagellate form. B. icteroides, × 1000. B. hæmorrhagicus, \times 1000. B. duplex (diplococcus of Morax and Axenfeld), × 1000 17 B mallei, \times 800. B. lepræ, × 1000. B influenzæ in nasal secretion, X 7000

species from a yellow-fever corpse. immob'ilis, a non-motile form of B. coli communis, seen in fresh cultures. B. co'li sim'ilis, a non-pathogenic species from the human liver after death, in the form of rods 1 to 3 μ long and 4 to 5 μ broad. **B. colomben'sis.** Same as Bacterium columbense. **b. of Colomiatti**. See Corynebacterium xerosis. **comma-b.** See Vibrio cholera B. conjunctivit'idis, a small, non-motile bacillus, I μ long, causing acute epidemic conjunctivitis. B. conjunctivit'idis subtilifor'mis, a bacillus resembling B. subtilis, isolated from cases of conjunctivitis. B. constric'tus, a motile bacillus from hydrant water, producing a yellow pigment. B. copro'genes foot'idus, a bacillus from intestines of pigs with hog-cholera: not motile. B. copro'genes par'vus, B. pseudomurisep'ticus, a pathogenic and non-motile bacillus from human feces. B. corallinus, a species from dust of air, producing coral-red pigment. B. cortica'lis, a zymogenic species from decoction of pine-bark. B. cras'sus, a thick Gram-positive organism found in cases of ulcus vulvæ acutum. B. cras'sus sputig'enes, a pathogenic form from human sputum and oral secretions, in thick, short rods, often curved like a sausage. **B. cunea/tus**, a pathogenic species from the blood and viscera of animals dead of sepsis. B. cunic'uli pneumon'icus, a species resembling B. choleræ gallinarum: causes ppeumonia and pleurisy in rabbits and gumea-pigs. **B. cunic'uli sep'ticus**, a species causing in rabbits a disease marked by edema, septicemia, and inflammation of serous membranes. B. cuniculici'da. See Bacterium cuniculicida. B. cuniculici'dus immo'bilis, a bacillus like B. choleræ gallinarum: pathogenic for rabbits, but only slightly so for guinea-pigs and doves. B. cuniculici'dus mo'bilis, a pathogenic bacillus from the peritoneal exudate of a dead rabbit. B. cuniculici'dus thermoph'ilus, a bacillus resembling B choleræ gallinarum. pathogenic for rabbits and guinea-pigs. It grows only above 18° C. B. cuticula/ris, a species from water, producing a yellow pigment in form of rods 2 to 3 µ long and 0.3 to 0.5 μ broad. **B. cuticula'ris** al'ba, a saprophytic species from water **B.** cyaneophosphores'cens, a phosphorescent species from Australian seas. B. cyanog'enus. See Pseudomonas cyanogenes. B. cystifor'mis, a non-pathogenic form from the urine of patients with cystitis. in minute sporiferous and highly motile rods. Czaplewski's b., a bacillus isolated from the sputum of whooping-cough, it stains deeply at the poles, and is known as pole bacterium. b. "D," a saprophytic species from hailstones. b. of Dantec, a chromogenic species (red), producing the red color in salted codfish. Danysz's b. See Bacterium Danysz. B. delicat'ulus, a zymogenic species from sewage. b. of Demme, a pathogenic species from blood in erythema nodosum. **B. dendrit icus**, a saprophytic species from water, colonies have a dendritic, or tree-like, appearance. B. denitrif'-icans, organisms that reduce nitrates to nitrites and ammonia. Type I is an obligate anaerobe and Type II is a facultative anaerobe B. denta-lis vir idans, a pathogenic variety from carious teeth, in single or paired rods, slightly curved. **B.** desidio'sus, a water bacillus, in motile rods. it is sporiferous and produces a yellow pigment. **B.** devo'rans, a non-pathogenic form from the soil and spring-water: in actively motile, jointed rods. B. diffu'sus, a non-pathogenic form from soil, in single or paired motile rods or in long filaments.
B. diphthe'rim (Klebs, 1883; Loffler, 1884).
See Corynebacterium diphtheria. B. diphthe'rim avium, a disease causing a peculiar disease of birds in Tunis. B. diphthe'rise columba'rum, the microbe of the diphtheria of pigeons: seen in heaps or masses of short rods. B. diphthe'rise columba'rum, cunic'uli, a bacillus with rounded ends, 3 to 4 μ long: causes a necrosis of intestinal mucous mem-

brane in rabbits. B. diphthe'rise spu'rius, a form closely resembling B. diphtheria; from the healthy and diseased larynx, in immotile rods: not pathogenic. B. diphthe'ris vitulo'rum. See B. necrophorus. B. distor'tus, a form from milk and cheese. B. döderlein'i, the normal non-pathogenic bacillus of the vagina. B. du'bries pneumo'nise, a pathogenic form from the sputum of pneumonia. Ducrey's b. See Hemophilus of Ducrey. B. du'plex. See Hemophilus of Morax-Axenfeld. B. dysente'rise, B. dysen te'rise liquefa'ciens. See Bacterium dysenteria. B. dysente'rise vitulo'rum, a species producing fatal dysentery in calves. B. dysenter'icus, B. dyso'des, a form which causes the souring and spoiling of bread, in rods with filaments. Eberth's b. See Bacterium typhosum. B. e'gens, a bacillus resembling Clostridium aerogenes capsulatus, but culturally distinct from it, derived from a fatal case of gas gangrene. B. ellenbachien'sis, a bacillus of the soil having the power of fixing free nitrogen.

B. emphysemato'sus, a pathogenic bacillus from pneumothorax and a gaseous ulcer in man. Produces inflammation in guinea-pigs and forms a gas. B. endocardit'idis capsula'tus, a pathogenic form from the viscera of cadavers of subjects affected with endocarditis; also from heart thrombi and various infarcts. It occurs in oval rods, often encapsulated, single or in pairs, also in curved filaments. B. endocardit'idis gris'eus, a pathogenic form from the heart in ulcerative endocarditis: in short, motile rods. B. enterit'idis. See Bacterium entertidis. B. enterit'idis See Bacterium enteritidis. muco'sus, a species which caused an epidemic of toxemia with depression. B. enterit'idis sporo'genes, probably a mixture of Clostridium aerogenes capsulatum and Clostridium sporogenes. B. entomotox'icon, a pathogenic species producing disease in squash-bugs. B. epiderm'idis, a species from the spaces between the toes, etc. in sportferous rods; probably not pathogenic. B. epilep'ticus, a bacillus found in the cecum to which has been attributed the causation of epilepsy (C. A. L. Reed, 1916). B. e'qui intestina'lis, a species resembling B. coli from the intestine of a horse. B. equisep'tious, the bacillus causing influenza in horses. B. ero'diens, a species used in tanning leather B. erysipel'atos lep'oris, a form from the crysipelas of the rabbit. B. erysipel'atos su'is, a pathogenic form from the erysipelas of swine. b. of erythems nodosum, a pathogenic form from the erysipelas of swine. genic form occurring in the graver cases of ery-thema nodosum and in other lesions of the skin: in rods, often grouped. B. erythros'porus, a non-pathogenic microbe from decaying albuminous fluids and from water seen in motile rods, producing short filaments, reddish spores, and a greenish-yellow pigment. **B. erzind'jan.** See Bacterium paralyphosum. **B. esterif'icans**, a spore-forming species which in certain media develops the odor of fresh apples. B. esthace ticus, a bacillus that decomposes glycerin into acetic acid and alcohol. B. esthacetosuccin'icus, a species that decomposes mannite and dulcite into acetic and succinic acids. B. ethace'ticus, a zymogenic species from sheep-dung. B. exanthemat'-icus, a pathogenic bacillus from a hemorrhagic infection with brown discoloration of the skin. b. ex pneumo-enterit'ide su'is. See Bacterium cholera suis. B. ex'ilis, a species found in the stools of children. b. "F," a bacillus obtained from the blood of a case of epidemic diarrhea. It is a short coccobacillus, highly motile and flagellated. **B. faculta/tus**, a species from nonmalignant mycosis of the pharynx. B. fæca'lis alcalig'enes. See Bacterium fecalis alcaligenes B. fal'lax. See C'ostridium fallav. B. fe'lis sep'ticus, a pathogenic species from cats' sputum. b. of Feseri. See Clostridium chauwai. b. of Fick. See Proteus vulgaris. B. fig'urans, a saprophytic form from air and water. flamentary b. See Lactobacillus bulgaricus. B.

filamento'sus, a fungus causing a lesion similar to that of actinomycosis. It was found on a cutaneous nodule behind the ear, and appears as yellow or reddish grains. B. filifor'mis. See B. necrophorus. Finkler-Prior b. See Vibrio proleus. b. of Fiocca, a pathogenic form from the saliva of cats and dogs. B. fitzia'nus, a saprophytic form from infusions of hay: turns glycerin into alcohol, etc. B. flaves'cens, a water microbe, not motile and not sporiferous: it produces a yellowish pigment

B. flavocoria'ceus, found in water produces a yellow pigment. b. of Flexner. 1 See Bacterium dysenteriæ. 2. The pathogenic agent of poliomyelitis. B. fluores'cens. See Pseudomonas fluorescens. B. foet'idus, a pathogenic species from cowdung, cheese, and from the sweat of the feet: motile, rod-like forms, the cultures have a highly unpleasant odor. **B. foet'idus ozæ'næ.** Same as unpleasant odor. B. 1680 Idus 0228 1286. Same as Micrococcus læwenbergti. b. of fowl typhoid. See Bacterium sangunarium. B. freudenrei'-chii, a species from the air and from abscesses it decomposes urea. B. friedenbergen'sis, a pathogenic species from sausage, liver, and flesh of horses causes gastro-enteritis. Friedländer's b. (1883). See Bacterium mucosum capsulatum. B. ful'vus, a species from hydrant water it forms a yellowish pigment and occurs in roundish, immotile rods **B. fus'cus**, a species from water, forming a brown or yellow pigment in curved or straight, non-motile rods. **B. fus'cus limba'**tus, a non-pathogenic form from rotten eggs, in short, motile rods **B. fusifor'mis**, a long, slender, flagellate bacillus, with pointed ends, which is found along with spirilla in Vincent's angina. This organism is now regarded as one of the causative organisms of Vincent's angina. B. gallina'rum. See Pasteurella aviseptica. B. gangræ'næ seni'lis, a pathogenic microbe, in non-motile rods, from the blood and fluids in cases of senile gangrene. Gärtner's b. See Bacterium enteritudis. b. See Clostridium aerogenes capsulatum B. gasofor'mans, a gas-forming microbe from water, in small, motile rods B. gastromyco'sis o'vis, the bacillus of braxy in sheep B. gastroph'ilus. See Lactobacillus bulgaricus. B. gayto'ni, a pathogenic species producing disease in honey-bees B. genicula tus, a non-pathogenic bacil-lus from the stomach. Ghon-Sach's b. See Clostralium septique. B. gingi'væ pyo'genes, a pathogenic species from a foul mouth and from decaying tooth-pulp **B. gingivit'idis**, a bacillus found in scurvy produces edematous abscesses in guinea-pigs and rabbits. **B. glau'cus**, a form from water, in slender, non-motile rods. **B. glischrog'enes**, an oval, motile bacillus, 26 to renders urine, milk, and saliva viscid, and produces an odorless gas Gohn-Sachs' b. See Clostrulium septique B. gra'cilis, a non-pathogenic species from water. B. granulobac'ter pectinov'orum, an organism which ferments starch with the production of acctone and butyl alcohol grass b. See Myvobacterium.

B. grave'olens, a non-pathogenic form from between the toes Grawitz's b., a small, non-motile species from acne contagiosa of horses. b. of green diarrhea, a form in small, motile rods, from the stools of children with green diarrhea injected, it will reproduce the same disease, together with urobilinuria. b. of green pus. See Pseudomonas pyocyanea. b. of grouse disease, a non-motile, rounded species, from the lungs of grouse with septicemic disease. Pathogenic for mice, guinea-pigs, and birds. b. of Guadeloupe cattle-farcy, a pathogenic species from the pus of a local specific contagion of domestic animals. b. of Guillebeau, a zymogenic and pathogenic species from ropy milk and inflamed udders of cows. **B.** gummo'sus, a bacillus which converts canesugar, with the formation of mannite, glucose, and fatty acids. B. hamorrhag'icus neph-

rit'idis, a pathogenic species from hemorrhagic nephritis. B. hæmorrhag'icus sep'ticus, a species from hemorrhagic sepsis in man fatal for mice and rabbits B. hansen'ii, a species from hemorrhagic sepsis in man fatal for mice and rabbits. from air and water, producing a yellow pigment.

B. havanien'sis. See Erythrobacillus havaniensis.

B. havanien'sis liquefa'ciens, a species isolated from the skin, producing a blood red pigment. **Havelburg's b.**, a pathogenic bacillus found in the stomach and intestines of yellow-fever patients. Its specificity for yellow fever is undetermined **hay b.**, the Bacillus sub'tilis easily obtained from infusions of hay. B. heminecrobioph'ilus, a pathogenic form from cheesy lymph-glands in variously shaped, somewhat motile rods. b. of hemorrhagic infection, a pathogenic form from the blood and pustules of children dying with a hemorrhagic infection seen in non-motile rods B. hepat'icus fortu'itus, a saprophytic species isolated from the liver in a fatal case of yellow fever B. hes'sii, a species that converts milk and boullon into a mucilagmous substance **B. hirsu'tus**, a large species from the normal conjunctiva. In puncture cultures it shows bristling projections radiating from the puncture, whence its name **B. his-tolyt'icus**. See Clostridium histolyticum **Hoff**mann-Löffler b. See Corynebaterium hoff-mann b. of hog-cholera. See Baterium cholera suis. b. of hog-erysipelas. See Erysipelothric erysipelatos suis. B. hom'inis capsula'tus, a pathogenic species from the corpse of a rag-picker. B. huep'pei, a bacillus from milk and butter, which forms butyre acid from milk-sugar B. hyacin'thi, a species causing disease of the leaves of hyacinths B. hyhyal'inus, a species from water which reduces nitrates to nitrites. B. hydroph'ilus fus'cus, a species found in water, producing septicemia in mice, rabbits, dogs, fish, and frogs **B. ianthi'**nus, a species from water, motile and not sporif-erous it produces a dark violet pigment **B**. ichthyis'mi, an anaerobic organism isolated from fish which had caused poisoning B. icterog'enes capsula/tus, the B pneumoniæ found in the spleen in jaundice B. icteroi'des. See Bacterium icteroides

B. implex'us, a saprophytic species from water

B. inca'nus, a saprophytic form from marsh-water. B. in'dicans, a short, capsulated rod form which produces indigo by fermentation with the glucosid indican, but in suitable cultures assumes an orange, cinnabar, or even a red tint B. in'dicus, a pathogenic form from the stomach of an Asiatic monkey, in short, highly motile rods **B.** indigof'erus, a form from water, producing a blue pigment **B.** indigog'enes, a pathogenic species from the materated leaves of indigo plants. It causes the fermentation which produces indigo in motile rods, often forming chains within an envelope. **B.** infan'tilis, a saprophytic bacillus found by Herter in the intestines of cases of infantilism b. of in-B. infla'tus occurs as an intruder in various cultures in motile rods and filaments. B. influenzes. See Hemophilus influenze. B. influenzes. fluen'zæ mo'tilis, a motile organism discovered by Plasencia in 1918 in cases of influenza in Havana It produces influenzal symptoms when injected into monkeys. B. influen'zze sim'ilis, a small, non-motile species from a case of rectal ulcer with secondary liver infection b. of inoculation tetanus, a pathogenic form from the wounds of inoculation tetanus. B. intesti'nus mo'tilis, a saprophytic variety from the intestine of yellow-fever cadavers. B. inunc'tus, a saprophytic form from marshwater. B. irides'cens, a micro-organism often found in drinking-water. b. of Jeffries, a saprophytic species from alvine discharges of summer diarrhea. b. of jequirity ophthalmia, a saprophytic form from jequirity ophthalmia: in

motile rods. b. of Johnes, the bacillus causing chronic dysentery in cattle. Karlinski's nasal secretion b., a short, plump bacillus with pointed ends, found in the nasal secretion of a Mohammedan. b. of Kartulis, a variety from the conjunctiva in Egyptian catarrhal conjunctivitis **Kedrowski's b.**, a streptothrix isolated by Kedrowski from cases of leprosy and considered by him to be a variation form of the mycobacterium of leprosy. Kitasato's b. See B pestis bubon-ica. Klebs-Löffler b. See Coryncbacterium diphtheria. Koch's b. See Mycobacterium tu-berculosis. Koch-Weeks' b. See Hemophilus of Koch-Week Koplik's b., a bacillus from the sputum in whooping-cough, believed, but not yet basoff's b., a pathogenic form from carcinoma of the stomach. Kutscher's b., a pathogenic bacillus resembling the glanders bacillus, found in the nasal discharges of horses. B. lac'mus, a species from water, affording a blue pigment. lactic olus fribergen sis, a species resembling Mycobacterium tuberculssis, found in nodules in the liver produced by injecting butter, causes tuberculous lesion in rats, guinea-pigs, and rabbits. B. lac'ticus, lactic-acid b. Same as Bacterum acid: lactic. B. lactimor'bi, a bacillus causing the disease "trembles" in animals, and milk sickness of man. It is an aerobic, spore-forming species, smaller than the anthrax bacillus. **B. lac'tis aërog'enes.** See Bacterium aerogenes. **B. lac'** tis al'bus, a microbe from milk, in which it causes active peptonization: it occurs in motile rods and long filaments. B. lac'tis cyano'-genes. See Pseudomonas cyanogenes. B. lac'tis erythrog'enes, a bacillus of red milk and of children's feces, forming oscillating rods. It produces a yellow pigment **B. lac'tis pep'tonans**, a zymogenic form from pasteurized milk. **B. lac'tis pituito'si**, a form from ropy milk in curved rods or in cocci. **B. lac'tis sapona'cei**, a zymogenic species from soapy milk. **B. lac'tis** a zymogenic species from soapy milk. B. lact is visco'si, a non-pathogenic form from ropy milk. B. lactopropylbutyr'icus, a bacillus sometimes found in milk. B. lactorubefa'ciens, a bacillus which causes milk to become red and shimy B. lacuna'tus. See Hemophilus of Morav-Avenfeld. B. lar've, the cause of American foul broad in bees. Laser's b., a Lathogenic form from diseased mice B. lateri'cous, a species from water, producing a brick-red pisment in short, non-motile rods, often united into filaments **B. lepisep'ticus**. Same as Pasturella cuniculicida **B. lep'oris letha/lis**, a pathogenic form from the intestines of yellow-fever cadavers B. lep're. See Mycobacter um lepræ. (See Plate) Lesage's b., a pathogenic form from the green, alvine discharges of infants letha'lis, a pathogenic form reported from the spleen and lungs of patients dying of septicemia. Letzerich's b., a pathogenic form from the urine in nephritis. B. leucæ'miæ ca'nis, a pathogenic species from dogs dead of leukemia. B. le'vans, a species derived from fermented dough it changes glucose into acetic and lactic acids, with the formation of hydrogen and carbon dioxid. b. of lichen ruber, a species from the lymph of lichen ruber.

B. limba'tus a'cidi lac'tici, a saprophytic variety from sour milk. B. limo'sus, a saprophytic species from sea-water and ooze. B. lioder'mos, a microbe which peptonizes the casein of milk. B. liquefa'ciens, a non-pathogenic form from water, in short and thick motile rods. B. (or Pneumobacil'lus) liquefa'ciens bo'vis, a pathogenic germ from the contagious pneumonia of cattle. B. liquefa'ciens commu'nis, a saprophytic variety from yellow-fever feces. B. liquefa'ciens mag'nus, a non-pathogenic form obtained from mice inoculated with garden-soil: in motile rods with filaments and spores. B. liquefa'ciens par'vus, a variety in non-motile rods, forming crooked filaments, from animals inoculated with soil. B. liq'uidus, a species

from water, in motile rods not sporiferous. B. litoral'is, a saprophytic species from sea-weed.

B. liv'idus. See Bacterium lividum. b. of Loeb, a species from a case of keratomalacia infantum pathognomonic for mice and guinea pigs, but not for rabbits and pigeons called also capsule baculus of Loeb Löffler's b. See Cornebacterium diphtheria.

B. lubin'skii, a bacillus resembling Clostridium tetani. It causes necrosis, with pus and gas formation, in animals. In cultures it forms gas. B. lu'cens, a saprophytic form from water. Lucet's b., a pathogenic form from the dysentery of fowls. B. lupuliper'da, a zymogenic species from fermenting hops Lustgarten's b., a bacillus discovered in syphilis, and thought at one time to be the cause of that disease. **B. lu'teus**, a species from carious teeth and from air, producing a yellow pigment B. lu'teus su'is, a form from the serous fluids of swine it produces a yellowish-red pigment. B. lymphangit'idis ulcero'sa, the bacillus which causes ulcerative lymphangitis or pseudofarcy in horses. B. lys'sæ, a species from the saliva in rabies. said by some to be pathogenic. **B. maddox'ii**, a species from river water. It decomposes urea **B. ma'idis**, a microbe from maize and from the stools of patients with pellagra: possibly not directly pathogenic, but it affords a pathogenic toxin. It is seen in actively mottle rods. **B. mala/riæ**, a form reported from the blood of malarial patients probably pathogenic. B. mal'lei. See Pfeifferella mallei B. marsilien sis, a pathogenic form from ferrets and pigs with plague b. of Martinez, a saprophytic species from the liver in yellow fever b. of Massol. See Lactobaculus bulgaricus mater'nus, a large, non-motile bacillus found in sputum, smegma, etc. B. max'imus bucca'lis, a large, Gram-positive organism found in the mouth and probably a form of Leptothrix innominata **B. mazun**, the bacillus which causes the lactic-acid fermentation in Armenian mazun. b. of measles, a microbe from the blood in cases of measles possibly pathogenic. b. of meat poisoning. See Bacterium enteritidis. b. of meconium, a saprophytic form from meconium B. megathe'rium, a species from water, earth, boiled cabbage, etc., in motile rods, often forming chains it produces a brown pigment. B. melanos'porus, a species from air producing a black pigment B. meliten'sis. See Bacterium melitensis B. melochlo'ros, a microbe from the dejections of an insect larva found in apples; pathogenic for rabbits **B. membrana'ceus** amethysti'nus, a variety from water: in nonmotile rods, variously grouped; it produces a deep violet pigment B. meningit'idis aerog'enes, a species found in meningitis: causes meningitis, with pulmonary metastasis, in rabbits. B. meningit'idis purulen'tæ, a pathogenic form from the pus of purulent meningitis: in motile rods, developing into long filaments. B. merismopoedioi'des, a saprophytic form from sewage and soil B. mesenter'icus fus'cus, B. mesenter'icus ru'ber, B. mesenter'icus vulga'tus, non-pathogenic forms from air and various sources the last named acts vigorously upon milk and sugar. b. of Metchnikoff. Same as Vibrio melchnikovii. b. of Mil'ler, a germ from carious teeth, pathogenic in non-motile rods, straight or variously curved. B. min'imus. See Erysipelothrix erysipelatos-suis. B. mirab'ilis. See Proteus mirabilis B. mollus'ci, a species from molluscum contagiosum, of doubtful pathogenicity. b. of Morax-Axenfeld. See Hemophilus of Morax-Axenfeld. B. morbificans bo'vis, a species from cows with puerperal fever Pathogenic for animals. Morgan's b. See Baclerium morgani B. mor'sule, an organism isolated in an epidemic of meat poisoning and nearly identical with Bacterium enteritidis. B. mortif'erus, an anaerobic, non-spore-forming bacillus found in a fatal case of hepatic abscess in

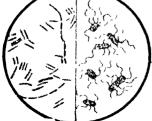

man. Much's b. See Mycobacterium tuberculosis. B. muco'sus capsula'tus. See Bacterium mucosum capsulatum. B. multifermen'-tans. See Clostridium multifermentans. B. multifor'mis trichorrhex'idis, a pathogenic form from hairs affected with trichorrhexis nodosa barbæ. B. multipediculo'sus, a saprophytic species from air and water, in long, slender, non-motile rods. B. muripes/tifer, a pathogenic species causing a peculiar disease in field-mice. B. murisep'ticus. Erysipelothrix erysipelatos-suis. B. murisep'ticus pleomor'phus, a pathogenic form from uterine discharges of pyemia and from abscesses; in motile rods, cocci. or spirilla of many forms. B. muscoi'des, a form from soil, cowdung, old cheese, and from dead mice; probably not pathogenic for man: in somewhat motile rods. B. muste'læ sep'ticus, a form in short rods with rounded ends, causing a disease of ferrets. B. mycoi'des, a zymogenic species from water, earth, hail, etc.: in motile rods joined to form inter-laced filaments **B. mycoi'des ro'seus.** See Erythrobacillus mycoides roseus. B. neapolita'-nus, a pathogenic form from feces, air, etc., and especially from the stools and fluids of cholera patients. **B. necroph'orus**, a pathogenic form causing a large number of diphtheric and necrotic conditions in various animals. Called also B. diphtheriæ vitulorum and B. filiformis. B. nephrit'idis interstitia'lis, a pathogenic bacillus from the urine of children with primary interstitial nephritis: rods of various lengths, frequently stitial nephritis: rods of various lengths, frequently forming undulating filaments. Neumann's b., the B meningitidis purulenta. Nicolaier's b. (1884). See Clostridium tetani. B. nitrobac'ter. See Nitrobacter. B. nitrosom'onas. See Nitrosomonas. Nocard's b. See Bacterium psittacosis. B. nodo'sus par'yus, a saprophytic variety from the healthy urethra: in non-motile rods, generally paired. B. no'ms, a pathogenic form from noma small rods, often developing into filaments. B. No'yyi, a thick flagellated Gramfilaments. B. No'vyi, a thick, flagellated Grampositive anaerobe, one of the important infective organisms of gaseous gangrene. B. nu'bilus, a saprophytic species from river water: in rotating rods, single or in chains. B. ochra/ceus, a form from river water, in motile rods; it is sporiferous from river water, in motile rods; it is sportlerous and produces a yellow pigment **B. odema'-tiens**. See Clostridum edematis. **B. odem'-atis aëro'bicus**, a pathogenic variety from exudates in guinea-pigs, inoculated with garden soil **B. odem'atis malig'ni**. See Clostridium septique. **B. odem'atis thermop'ilus**, a pathogenic species from cattle and diseased guinea-pigs. It is very resistant to heat. Ogata's b. See Bacterium dysenteriæ. B. o'leæ, B. o'leæ tuberculo'sis. See Pseudomonas oleæ. B. olera'cess. See Erwinia oleracea. B. Oligocarboph'-ilus. See Carboxydomonas oligocarbophila. B. oög'enes fluores'cens, a zymogenic species from rotten eggs it produces a pale green pigment. B. oög'enes hydrosulphu'ricus, a zymogenic form from rotten eggs. B. oölyt'icus, a bacillus wnich decomposes egg-albumen and is capable of causing gastric fermentation. b. of Oppler and Boas. See Lactobacillus bulgaricus. B. orchit'icus, a pathogenic bacillus from the nasal secretion of glanders. Injected subcutaneously guinea-pigs it causes edema and paralysis. Intraperitoneal injections cause swelling of the testicle, with the formation of nodes **B. ortho-butyl'icus**, a zymogenic species from fermenting leguminous seeds. **b. of osteomyelitis**, a sethogenic form from cases of osteomyelitis. **B.** tion of glanders. Injected subcutaneously into ova'tus minutis'simus, a pathogenic form from ova tus minutis simus, a patnogenic form from the skin in seborrhea: in pointed oval rods. B. ovisep'ticus, a bacillus causing hemorrhagic septicemia in sheep. B. oxalat'icus, a species from air, producing an ochrous pigment. B. oxyto'cus pernicio'sus, a pathogenic form in short rods, from stale milk. B. oxso'nso. See Bacterium ozana. B. panif'icans, a zymogenic species from bread. B. pantot'rophus. See

Hydrogenomonas pantotropha. paracolon b. See Bacterium paracoli. B. paradox'us, a species obtained from cases of acute tropical dysentery. paradysenteric b. See Bacterium paradysenteric. B. paralu'ticus, a species isolated from cases of general paralusis and species isolated. of general paralysis and tabes dorsalis, and thought to be the etiologic factor in general paralysis.

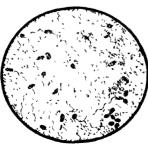

B. parasporo genes. See Clostridium parasporogenes. paratyphoid b., B. paratypho'sus. See Batterium paratyphosum. Park-Williams b., a strain of the Corynebatterium diphtheria used in preparing antitoxin. B. par'vus ova'tus, a pathogenic species from one form of swine-plague. in small, immotile, ovoid rods. B. pasteuria nus. See Clostridum pasteurianus.

B. peduncula tus, a microbe in short, motile rods, from the urine of cystitis: it is pathogenic. B. peptofa'ciens, a zymogenic form from milk. Perez's b., an organism supposed to be the causative agent in ozena, and known as Coccobacillus fatidus nasi. B. perfrin'gens. See Clostridium aërogenes capsulatum. B. pertus'sis. See Hemophilus pertussis. B. pes'tifer, a germ, in mottle rods, from air: its cultures have a foul odor. B. pes'tis bubon'icæ. See Pasteurella pestis. B. pes'tis ca'viæ. See Bacterium pestis caviarum. Pfeiffer's b. See Hemophilus influenza. B. phase'oli. See Pseudomonas phaseoli. B. phase'oli. See Pseudomotile bacillus producing in pheasants a disease marked by somnolence, enteritis, and septicemia. Perez's b., an organism supposed to be the marked by somnolence, enteritis, and septicemia. B. phleg'monis emphysemato'see. See Clostridium aerogenes capsulatum B. phosphores'cens, a photogenic species from sea-water. B. phosphores'cens gel'idus, a non-pathogenic form from phosphorescent fish: in small rods, which become ovate masses. phosphores'cens in'dicus, a photogenic variety from luminous sea-fish and from sea-water; in actively motile rods or filaments B. phosphores'cens indig'enus, a photogenic form from sea-water and from herrings in actively motile rods, sometimes connected into filaments **B.** phospho'reus, a photogenic species from seawater and from fishes **B.** phylloxerici'dus, a species destructive to phylloxera—found in soil and in manure B. phytoph'thorus. See Erwinia phytophthora. B. pigmentoph'agus, a bacillus phylophthora. B. pigmentoph'agus, a bacillus which is said to cause the hair to turn gray by devouring the pigment b. of pink-eye. See Ilemophilus of Koch-Weeks. B. pinna'tus, a zymogenic species from soil plague b. See Pasteurella pestis. Plasoncia's b. See B influenza motilis. B. pleurisep'ticus, a general name for bacilli of the hemorrhagic septicemia group. B. plica'tus. See Pseudomonas plicata. Plotz's b. See Fusiformis typhi evanthematici. B. plu'ton, the cause of European foul brood in bees. B. pneumo'niæ. See Bacterium mucosum cabsulatum. B. pneumo'niæ cavia'rum. See capsulatum. B. pneumo'niæ cavia'rum. See Bacterium bronchisepticum B. pneumon'icus ag'ilis, a variety from the vagus pneumonia of rabbits it has been found in complicated pneumonia of the human subject, and exists in various shapes. B. pneumon'icus liquefa'ciens, a short, nonmotile bacillus from lungs of cattle which died of contagious pneumonia It is pathogenic for cattle. From the cultures pneumobacillin is produced. B. pneumosepticus, a pathogenic form from the cadavers of those who have died of septic pneumonia in short and straight, nonmotile rods. **pole b.** Same as Czapelewski's b. **B. polymyz'a,** a form which causes fermentation in infusions of potato, lupine, etc.: in actively motile rods, also in long filaments. **B. polypi** for'mis, a non-pathogenic form from cow-dung and from mice inoculated with soil in somewhat motile rods. B. por'ri, a microörganism said to be the specific cause of warts. b. of potato-rot, a bacillus producing potato-rot. It splits dextrose into butyric and carbonic acids, and dissolves starch. b. of Proisz, Proisz-Nocard b., a diphtheroid bacillus causing caseous lymphangitis

BACILLUS BACILLUS B. @dematis maligni \cdot I, ordinary form (\times 1000) . II, flagellate form (\times 1200). B. mycoides, × 1000. B. muricepticus, × 800. B. pestis a, agar culture, b, bouillon culture (\times 1000). pneumoniæ, × 800. Fig. II, as seen in sputum. B pseudodiphtheriæ, × 1000. B. pyocyaneus, × 800. p. subtilis 1, × 1000; H, greatly magnified, showing flagella. B. septicæmiæ hæmorrhagicæ, ⋋ 1000. B. tuberculosis, I, × 1000, II, ramified or branching form B. tetani, × roso. B. tussis convulsivæ in sputum of whooping-cough patient, × 1000

B. typhosus, I, ordinary form (× 1000). II, flagellate form (× 1500).

B suipestifer, × 1000

B. Zopfii, X ross.

in horses, cattle, and sheep. Same as B. pseudotuberculosis. B. prodigio'sus. Same as Serratio marcescens. B. pro'tous. See Proteus vulgaris. B. pro'tous fluores'cons. See Pseudomonas protea-fluorescens. B. pro'tous letha'lis, a motile, capsulated nodulated bacillus from gangrenous lungs: pathogenic for mice and rabbits. B. pro'teus sep'ticus, a pathogenic species from septic gangrene of the colon. It is flexile and mottle, in somewhat curved rods of varying length. Cultures give off a fetid odor. B. pro'teus vulga'ris. See Proleus vulga'ris. B. pro'teus X 10, an organism at one time thought to cause typhus fever. B. pseudo-anthra'cis, a bacillus resembling that of anthrax. B. pseudobutyr'icus, a bacillus from milk, turning the latter bitter. pseudodiphtheria b. See Corynebecterium hossmann. b. of pseudo-edema, a pathogenic form from mice inoculated with garden-soil. B. pseudo-influen'zee, a pathogenic species from influenza, bronchopneumonia, and purulent otitis media. **B. pseudopneumon'icus**, a pathogenic form from the pus of abscesses, forming cocci or, more rarely, short rods. b. of pseudorabies, a slender bacillus from the cerebral fluid of a rabbit that died from inoculations of a rabid wolf pathogenic. B. pseudosep'ticus, a pathogenic form from mice inoculated with feces. B. pseudotet'-ani. See Clostridium pseudotetani. B. pseudotuberculo'sis, a pathogenic species from the viscera of a sick horse. It is probably the bacillus that produces pseudotuberculosis B. pseudotuberculo'sis mu'rium, a bacıllus resembling
Corynebacterium diphtheria: pathogenic for mice
and guinea-pigs. B. pseudotuberculo'sis
O'vis, a species causing a caseous lymphadenitis in sheep and similar infections in the mouse and also in cattle. **B. pseudotuberculo'sis sim'- ilis**, a pathogenic bacillus resembling *B. pseudo*ilis, a pathogenic bacillus resembling D. pseudo-tuberculosis B. pseudotypho'sus, a species resembling B typhosus, from water, soil, and the body. B. psittaco'sis. See Bacterium psitta-cosis. B. puerpera'lis, a pathogenic species from cases of puerperal sepsis. B. pullo'rum. See Bacterium pullorum. B. pul'pæ pyo'genes, a pathogenic germ from gangrenous tooth-pulp in pairs or chains of somewhat pointed rods. B. puncta'tus, a saprophytic species from water in actively motile rods b. of purpu'ra hæmorrhag'ica, a pathogenic species from hemorrhagic purpura. B. putrif'icus. See Clostridium putrificum. B. pyelonephrit'idis bo'vis, a bacillus causing pyelonephritis in cows. B. pyocinnaba'reus, a bacillus from red pus. It is poisonous and produces a red-coloring pigment.

B. pyocya'neus. See Pseudomonas pyocyanea.

B. pyocya'neus fœ'tidus is derived from pus of an anal abscess: it is a slightly motile form.

B. pyo'genes anaëro'bicus, a pathogenic species from foul pus of rabbits. B. pyo'genes bo'vis. Same as B. renalis boris B. pyo'genes cloaci'nus, a bacillus from sewage: produces abscesses and septicemia. B. pyo'genes cras'sus. See Bacterium mucosum capsulatum. B. pyo'genes for tidus, a motile bacillus, $r > \mu$ long, from pus of anal abscess: produces septicemia in mice and guinea-pigs. B. pyo'genes foe'tidus liquefa'-ciens, a pathogenic species from brain abscess after otitis media. B. pyo'genes gingi'væ, a short, rounded bacillus from alveolar abscess and coating of teeth. It is pyogenic and fatal to mice, guinea-pigs, and rabbits. B. pyo'genes minutis'simus, a variety from pus. B. pyo'genes so'li, a form from rats inoculated with garden-soil. B. radia'tus, a non-pathogenic form from evudates of animals inoculated with garden-earth: in motile rods. B. radicic'ola. See Rhizobium radicicola. B. radicifor'mis. a saprophytic form from water. B. radico'sus, a saprophytic form from water. Resembling B. anthracis. B. ramo'sus, a zymogenic form from soil and water: in somewhat motile rods, often forming long chains and filaments. B. ramo'sus liquefa'ciens, a saprophytic variety in water and air. B. ranici'da, a pathogenic form from water and from frogs dead of septicemia. rauschbrand b. See Clostridium chawaei. Reading b. See Clostridium "Reading bacillus." Reed's b. Same as B. epilepticus B. rena'lis bo'vis, a bacillus resembling Corynebacterium diphtheria. produces nephritis with cystitis in the ox. B. reticula'ris, a saprophytic form from sewage water. B. rheumatarthrit'idis, a species from joint effusions in articular rheumatism: not known to be pathogenic. B. rhini'tis atroph'icus, a saprophytic species from nasal secretions in atrophic B. rhinosclero'matis. See rhinitis. terium rhinoscleromatis. B. rhusiopath'im su'is. See I-rysipelothrix erysipelatos-suis. Roger's b., a large bacillus found in certain cases of dysentery-like enteritis. Rosenbach's b., the B. saprogenes. B. rubefa'ciens, a species from water, producing a pale, rosy-pink pigment: in actively motile, jointed rods. **B. rubel'lus**, a species from guinea-pigs inoculated with street dust: it produces a pale-red pigment. **B. ru'ber**. See Erythrobacillus ruber. **B. ru'ber in'dicus**. See B. indicus. B. ru'ber kielen'sis, a variety ru'ber ova'tus, a phytopathogenic form from blighted sorghum. B. ru'ber sardi'ns, a species from sardines forms a red pigment. B. ru'berlighted sorghum. bidus, a chromogenic species from water, producing a brownish-red pigment, in actively motile rods, often joined into filaments B. ruden'sis, a species causing the rusty spots on American cheddar cheese. **B. saccharobutyr'icus**, a zymogenic form from certain kinds of cheese. **B.** saccharobutyr'icus immo'bilis. See Clostrudium aerogenes B. saliva'rius sep'ticus. See Diplococcus pneumonia. B. salmonici'dus, a bacillus producing a contagious disease of salmon, marked by suppuration and hemorrhage Sana-relli's b. See Bacterium icteroides. B. san-guina'rium. See Bacterium sanguinarium. B. san'guinis ty'phi, a form obtainable from the blood of patients with typhus. B. sapro'genes, an organism in three forms (I. II, III), from the sweat of the feet, the pharyngeal follicles, putrescent pus, and gangrenous tissue pathogenic. B. sapro'genes vi'ni, bacillus found in putrefying wine. B. sarcemphysema'tis bo'vis. See Clostridium chauvæi. B. satelli'tis, an organism supposed by some to be the cause of typhoid ulcers of the intestine. **B. savas'tonoi**. See Pseudomonas olea. **B. sca'ber**, a non-pathogenic form from cheese. **B. sca'lati'næ**, a Grampositive bacillus obtained from the tonsillar exudate in scarlet fever. b. of scarlet fever, a form from the throat in anginose scarlatina: not known to be pathogenic. B. schaf'feri, a form from cheese and fermenting potato: not patho-genic. Schaudinn's b., the Treponema pallida. b. of Scheurlen, a non-pathogenic form from cancer and from the healthy mammary gland in motile rods. b. of Schimmelbusch, the microorganism of noma of cancrum oris. Schrön's b., an acid-fast bacillus found in tuberculosis. b. of seborrhea, a form from the hair and scalp in seborrhea: it produces a brick-red deposit. B. segmento'sus. See Corynchacterium segmenlosum. b. of senile gangrene, a pathogenic form from cases of senile gangrene. B. septics: mise, a saprophytic form from the blood. B. septice'mise hemorrha'gicse. See Pasteuella aviseptica. B. sep'ticus acumina'tus, a pathogenic form from the blood and viscera of an infant after death from septicemia: a slender, non-capsulated coccus. B. sep'ticus agri'genus, a pathogenic form from cultivated soil, in long, immotile rods. B. sep'ticus keratomala'cise, a pathogenic form from various organs after death from sepsis following keratomalacia: in thick, short rods, often in pairs. B. sep'ticus pu'tidus, a pathogenic form from the cadaver of cholera. B. sep'ticus sputi'genus. See

Diplococcus lanceolatus. B. sep'ticus ul'ceris gangræno'si, a pathogenic form from various tissues and fluids of children dead of gangrenous ulcers: in motile, rounded rods or oval cocci. B. sep'ticus ves'ica, a pathogenic form from the urine of cystitis: in motile rods. B. ses'silis, a saprophytic form from the blood of neat cattle. B. shige, Shiga's b. See Bacterium dysenteria. B. sim'ilis, a species from human feces not pathogenic. B. sim'ilis typhus, an organism from water resembling B typhosus: it is in motile rods, not sporiferous B. smarag'dinus fos'tidus, a pathogenic organism from the nasal discharges of ozena in small, curvate rods.

B. smeg'matis. See Myobacterium smegmalis. B. solanacea'rum. See Erwinea solanaceara. B. sol'idus, a pathogenic species, in actively motile rods, from mice inoculated with garden-soil. B. solita'rius, an organism from river water. in mottle rods. **B. sor'ghi**, a bacillus causing the spots on sorghum leaves **B. spermig'enes**, a form which is capable of developing spermin in hquid media probably a variety of the tubercle bacıllus **B. sphenoi'des.** See *Clostratum sphenoides* **B. spinif'erus**, a species from the skin in seborrhea it forms straight or curved B. spino'sus, a motile, non-pathogenic bacillus from fluids of guinea-pigs that died after being inoculated with garden-soil B. sporo'-genes. See Clostridium sporogenes. B. sputi'genus cras'sus, a pathogenic bacillus from the coating of the tongue and from sputum. B. sputi'genus ten'uis, a pathogenic species from sputum of catarrhal pneumonia and phthisis Sternberg's b. Diplococcus lanceolatus B. steut'zeri, a zymogenic species from the soil stewar'ti. See Pseudomonas stewarti. B. stolona'tus, a saprophytic species from water, in mo-tile rods B. stolonif'erus, a species in marsh water. B stria'tus al'bus, a form from healthy nasal mucus in small, striate rods. B. stria'tus fla'vus, a variety from healthy nasal secretions. It produces a sulphur-yellow pigment: seen in small, thick, striated rods. B. stria'tus vir'idis, a saprophytic form from the soil B. subfla'vus, a microbe from river water, in motile rods: not sportferous **B. sub'tilis**, a form from air, water, and soil in motile rods resembling B. anthracis B. sub'tilis sim'ulans, a saprophytic species in two forms from feces in non-motile rods or in long filaments which break up into rods. **B. sucina'cius**, a small species from conjunctival secretions of a case of granular conjunctivitis

B. suici'dus. See Pasteurella
suiseptica.
B. suipes'tifer. See Bacterium
cholera suis

B. su'is, a species characteristic of hog-cholera, seen as a coccus, developing into rods and filaments. **B. suisep'ticus.** See Pasteurella suiseptua. **B. sulphhydro'genus**, a zymogenic form from water evolving H2S B. sulphu'reus, (I) a saprophytic form from urine; (II) a microbe from mud, producing a reddish-brown powder. B. superficia'lis, a form from river water: in motile rods b. of swine erysipelas. See Erysipelothrix erysipelator-suis b. of swine-fever. See Bacterium choleræ suis. b. sycosifbeard of patients affected with sycosis **b. of**symptomatic anthrax. See B. carbonis. B. syncy anus, a species from water, affording a blue pigment **B. synxan'thus.** See Pseudomonas synxantha. **B. syphil'idis**, a species from syphilitic tissues, not certainly known to be pathogenic, it forms slender, and frequently sinuate, rods. **B. tachyc'tonus**, a species from feces of cholera morbus produces septicemia in guinea-pigs and mice. **B. tardig'radus**, a saprophytic species from water: in slow-moving rods.

B. tartar'icus, a zymogenic species from a fermenting solution of calcium tartrate. B. ten'uis sputi'genus, a pathogenic form from sputum. B. ter'mo. See Proteus vulgaris. B. termoph'ilus, a form from the intestine and from sewers:

it causes rapid putrefaction, but is not regarded as pathogenic. B. terri'genus, a zymogenic species from the soil. B. ter'tius. See Clostridium tertium. B. tet'ani. See Clostridium tetani. B. tetanomor'phus. See Clostridium tetanoides. B. thalassoph'ilus, a saprophytic form from sea-weed. B. thermoph'llus, a probably non-pathogenic species from air, soil, water, sewage, and the intestine in non-motile filaments. B. tholoi'deum, a pathogenic species from water, sewage, and the intestinal tract. b. III of von Hibler. See Clostridium septique. timothy b. See Timothy mycobacterium. B. trachelle in the control of t cheiph'ilus. See Erwinia trachesphila. tremelloi'des, a species from water it produces a yellow pigment. B. trem'ulus, a saprophytic species from vegetable infusions a small, motile, flagellate form. b. of trichorrhex'is nodo'sa, a pathogenic species from hair affected with trichorrhexis nodosa. **B. tuberculo'sis** (Koch, 1881). See Mycobacterium tuberculosis. B. tuberculo'sis gallina'rum. See Mycobacterium tuberculosis avium B. tuberculo'sis pis'cium.
See Mycobacterium tuberculosis piscium. B. tuberig'enus, a bacillus found in the nodules of roots of plants: believed to aid in the nutrition of the latter b. tularen'sis. Same as Buterium tularense B. tumefa'ciens. 1 See Pseudomonas tumefaciens. 2. An anaerobic, motile, Grampositive organism found in cases of gas gangrene (W. J. Wilson, 1919). B. tumes'cens, a species of white cultures are obtained by exposing slices of boiled carrot to the air of a room B. tus'sis convul'sivæ. See Hemophilus pertussis B. ty'phi, B. typho'sus. See Bacterium typhosum. B. ty'phi exanthema'tici. See Fusitormis typhi evanthematici. **B. ty'phi mu'rium**. See Bacterium typhi murium **B. tyro'genus**, a motile, sporeless form obtained from cheese **B. ubiq'uitus**, a species from air and water, probably a variety of *B candicans* **B. ul'ceris** cancro'si, the pathogenic bacillus of soft chancre. It is 0.5 to 1.5 μ long and occurs in parallel chains B. ul'ceris mol'lis. See Hemophilus of Ducrey B. ul'na, a non-pathogenic species from the healthy mouth in straight rods, frequently paired. B. ure'æ, a zymogenic species from soil, water, air, feces, urine, etc B. urocepha'lus, a form from putrefying animal matters it causes albummond fermentation b. of Utpadel, a pathogenic species from the small intestine, it forms slowly motile rods, often arranged in twos or threes. B. vacuolo'sus, a species isolated from the intestine in fatal cases of yellow fever. B. vagina'lis, a saprophytic form from the healthy vagina. Vallon-Zaber b. See Clostridium aerogenes capsulatus van Ermengen's b. See Clos-tridium botulinum. van Niessen's b., a bacillus cultivated by van Niessen from the blood of syph-ilitic patients. B. varico'sus conjuncti'væ, a pathogenic species from the healthy conjunctivain non-motile rods, the smaller ones frequently varicose B. vascula'ris, a saprophytic form from the viscera of a yellow-fever cadaver B. **Vascula rum**, a saprophytic species from cadavers of yellow fever. **voil b.**, a species resembling Bacterium coli and Bacterium aerogenes, but distinguished from them by growing less abundantly on gelatin. B. veneno'sus, a species found in water as motile rods: pathogenic for small animals. B. venono'sus bre'vis, a species found in water, in the form of short, thick rods: pathogenic for small animals B. veneno'sus invisi'-bilis, a species found in water, in the form of shorter rods: pathograpic for expell pair in the form of shorter rods: pathograpic for expell pair. stender rods: pathogenic for small animals B. veneno'sus liquefa'ciens, a species found in water produces liquefaction of gelatin and is pathogenic for small animals **B. ventric'uli**, a species isolated from the digestive tracts of dogs: in motile rods, grouped in twos and fours; it peptonizes albumin. B. vermiculo'sus, a non-pathogenic species from water: in the form of short chains and long filaments. b. of verruca

peruana, Yzquierdo's bacillus; a species from the nodules of Peruvian wart. **B. verticilla'tus**, a zymogenic species from soil. **Vignal's b.** See Leptotrichia buccalis. b. of Vincent's angina. See Bacellus fusiformis. B. violaceus. See Pseudomonas violacea. B. violaceus flavus, a species from the conjunctiva of a case of granular conjunctivitis. B. violaceus laurentius, a variety from water, producing a violet pigment. B. vi'rens, a species from water, producing a green pigment. B. vires'cens, a nonpathogenic form from green sputum, in motile rods and long filaments. B. vir'gula, a bacillus which causes an albuminoid fermentation in casein. B. vir'idans, a species from water yielding a green pigment. B. virides'cens non-liquefa'ciens, a zymogenic form from the soil. B. vir'idis, a species found in a Polyporus fungus) and in water. B. vir'idis flavus, a form from water, producing a yellow-green pigment. B. vir'idis palles'cons, a zymogenic variety from air and water, producing a yellow-green pigment, in mottle rods forming filaments. B. visco'sus. See Pseudomonas fluorexcens B. visco'sus. See Pseudomonas fluorexcens visco'sus cerevis'iæ, a zymogenic form from ropy beer and milk. B. visco'sus lac'tis, a non-motile bacillus, 1.2 to 17 μ long. It renders milk viscid. **B. visco'sus sac'chari**, a zymogenic form from ropy saccharine fluids. **B.** visco'sus vi'ni, a zymogenic form from ropy wine. B. vitulo'rum, a pathogenic form from the diphtheria of calves. B. vulga'ris. See Proteus vulgaris Week's b. See Hemophilis of Koch-Weeks. Weigmann's b., a zymogenic species from bitter milk Weil-Felix b., a bacillus of the proteus group isolated from the urine and feces of typhus patients **Welch's b.** See Clostridium aerogenes capsulatum. white b., a saprophytic bacillus from water. wurzel b. See Bacillus radicosus. b. "X," a pathogenic species from yellow-fever cadavers. B. xantho'genus. See Pseudomonas synxantha B. xero'sis. See Corynebacterium xerosis. B. xylinus. See Aceto-bacter vylinum. b. "Y," a form found in dysentery and varying somewhat from B dysenteriæ. yellow b., a saprophytic form from water. sin's b. See Pasteurella pestis. Yzquie Yzquierdo's b., a bacillus which is the probable cause of verruca peruana, or Carrion's disease. B. ze'æ, a species which causes a bacterial disease of Indian zur-Nedden's b., a Gram-negative bacillus seen in ulceration of the cornea. B. zurnia'**nus**, a non-pathogenic form from water.

back (bak). The posterior part of the trunk from the neck to the pelvis. bent b. See camptocormia. bicycle b., the rounded spine and humped shoulders of cyclers functional b., a condition of fatigue and defective balance marked by more or less continuous lumbar pain old man's b., a peculiar spinal or dorsal curvature due to paralysis of the dorsal extensors; paralytic kyphosis. poker b., spondylitis deformans static b., any back trouble due to overstrain, improper position, slight injury, etc trench b., a condition of pain and rigidity in the dorsolumbar region due to injury in the trenches.

back-cross. The mating of an F₁ with one of its parents.

backerin (bak'er-in) [named for de Backer]. preparation of yeast for injection: phagocytic.

backing (bak'ing). In dentistry, a piece of platinum or gold which backs up a mineral tooth.

back-pressure. The pressure caused by the damming back of the blood in a heart chamber, due to a damaged heart valve: believed to be a factor in causing cardiac dilatation.

back-raking (bak-ra'king). Extraction of impacted feces from the rectum of an animal.

back-stroke. See under stroke.

back-up. The distance through which a high voltage current will pass in the atmosphere.BaCl₂. Barium chlorid.

bacony (ba'kun-e). Resembling bacon; streaked with fat, like bacon.

bacteremia (bak-ter-e'me-ah). Bacteriemia.

bacteria (bak-te're-ah), pl. of bacterium [L.].

1. The plural of bacterium. 2. In general, the Schizomyces or fission fungi and especially the Actinomycetales, with eight genera, and the Eubacteriales, with thirty genera. They are minute, one-celled organisms which multiply by dividing in one, two, or three directions of space and have no chlorophil acid-fast b., bacteria which retain anilin stains so tenaciously that they are not decolorized by 5 per cent. mineral acids. **amotile b.**, bacteria which are incapable of motion, as the bacilli of anthrax. **animalized b.**, bacteria that have been cultivated in the animal body or upon animal albumins, such as blood-serum, milk, etc. Such cultivation increases the virulence of the bacteria. chromo-b., chromogenic b., bacteria which produce pigment. denitrifying b., bacteria that are able to reduce nitrates and pathogenic bacteria producing specific infectious b., pathogenic bacteria producing specific infection. mantle b. See Chlamydozoa. mesophilic b., bacteria whose optimum temperature for growth lies between 15° and 40° C. nitrifying b. See nitrobacteria parasitic b., bacteria which multiply in the body or which are dependent on a living host for their nutrition. pathogenic b., bacteria which cause disease. psychrophilic b., bacteria whose optimum temperature for growth is at or near o° C. saprophytic b., bacteria which live in decaying organic matter and cannot multiply in the human body. sulphur b., bacteria which obtain their energy from the oxidation of hydrogen sulphid to free sulphur or even to sulphuric acid. They usually contain granules of free sulphur and some species contain a red pigment. **thermophilic b.**, bacteria whose optimum temperature for growth lies be-tween 40° and 70° C. toxic b., bacteria which cause disease by producing poison or toxin. virulent b., pathogenic bacteria which multiply with extreme rapidity.

Bacteriaceæ (bak"te-re-a'se-e). Formerly the Schizomycetes; as now used, a family of Eubacteriales, including rod-shaped forms whose cells are regular, which do not produce endospores, and which when motile have peritrichous flagella. It includes Chromobactereæ, Achromobactereæ, Cellulomonadeæ, Erwineæ, Zoppeæ, Bactereæ, Encapsulateæ, Lactobacilleæ, Bacterioideæ, Pasteurelleæ, and Hemophileæ.

bacterial (bak-te're-al). Pertaining to, or caused by bacteria.

bactericholia (bak"ter-ik-o'le-ah). Presence of bacteria in the bile-ducts.

bactericidal (bak"ter-is-i'dal) [bacterium + L. ca'dere to kill]. Destructive to bacteria.

bactericide (bak-ter'is-id). 1 Destructive to bacteria. 2. Any agent that destroys bacteria. specific b. Same as bacteriolysin.

bactericidin (bak-ter-is-i'din). A substance present in the body fluids which kills bacteria.

bacteridium (bak-ter-id'e-um), pl bacterid'ia. A term used as a generic name for certain bacilli.

bacteriemia (bak"ter-i-e'me-ah) [Gr. βακτήριον rod + alμa blood]. The presence of bacteria in the blood.

bacteriform (bak-ter'if-orm). Resembling a bacterium in form.

bacterin (bak'te-rin). Same as bacterine.

bacterination (bak ter-in a'shun). 1. Inoculation with bacteria; microbination. 2. Treatment with a bacterial vaccine.

bacterine (bak'te-ren). Same as bacterial vaccine. See under vaccine.

bacterinia (bak-te-rin'e-ah). The condition of unfavorable action which sometimes follows in-oculation with bacterial vaccines.

bacterio-agglutinin (bak-te"re-o-ag-lu'tin-in). An agglutinin which causes the clumping of bacteria.

bacteriocidin (bak-te"re-o-si"din). A bactericidal substance present in the blood.

bacterioclasis (bak-te-re-ok'las-is) [bacteria + Gr κλάσις breaking]. The breaking up or fragmentation of bacteria

bacteriodiagnosis (bak-te"re-o-di-ag-no'sis). Diagnosis by bacteriologic examination of body tissues and fluids.

bacteriofluorescin (bak-te"re-o-flu-o-res'in). A fluorescent coloring-matter produced by bacteria.

bacteriogenic, bacteriogenous (bak-te"re-o-jen'ik, -oj'en-us).
 1. Bacterial in origin.
 2. Producing bacteria

bacteriohemagglutinin (bak-te"re-o-hem-ag-lu'-tin-in). A hemagglutinin formed in the body by the action of bacteria.

bacteriohemolysin (bak-te"rc-o-he-mol'is-in). A hemolysin produced in the body by the action of bacteria.

bacterioid (bak-ter'c-oid) [Gr. βακτήριον rod + είδος form]. 1. Resembling the bacteria. 2. A structure resembling a bacterium.

bacteriologic, bacteriological (bak-te"re-o-loj'ik, bak-te"re-o-loj'ik-al). Pertaining to bacteriology.

bacteriologist (bak"te-re-ol'o-jist). An expert in bacteriology.

bacteriology (bak"te-re-ol'o-je) [Gr. βακτήριον rod + λόγος discourse]. The science which treats of bacteria. Cf microbiology. hygienic b. Same as sanitary b. medical b., that branch of bacteriology which treats of the micro-organisms that cause disease in the animal body pathologic b., that branch of bacteriology which treats chiefly of the effects produced upon the animal body by the presence of bacteria and their toxins sanitary b., bacteriology which deals chiefly with methods of disease prevention based upon the knowledge of the organisms causing disease and the manner in which they spread. systematic b., that branch of bacteriology which studies the classification and relationship of bacteria.

bacteriolysant (bak"te-ri-ol'is-ant). An agent which causes bacteriolysis.

bacteriolysin (bak"te-re-ol'is-in). An antibody formed in the blood as a result of infection or injection and capable of destroying the bacteria of the infection.

bacteriolysis (bak"te-re-ol'is-is) [bacteria + Gr. \(\lambda \text{bacts} \) solution]. The destruction or solution of bacteria within or without the living organism (Pfeiffer, 1804).

bacteriolytic (bak-te"re-o-lit"ik). Pertaining to, or producing solution or destruction of, bacteria.

bacteriolyze (bak-te're-o-līz). To produce or cause bacteriolysis.

bacterio-opsonin (bak-te'/re-o-op-so'nin). An opsonin that has an opsonic action on bacteria.

bacteriopathology
The study or science of microorganisms in their relations to pathology.

bacteriophage (bak-te're-o-fāj). d'Herelle's name for a living ultramicroscopic parasite of bacteria normally existing in the intestinal tract of animals, and living at the expense of live normal bacteria which constitute its sole culture-medium. There is but one species of bacteriophage common to all animals, and it is capable of acquiring virulence for different bacterial species. See Twort-d'Herelle phenomenon, under phenomenon.

bacteriophagia (bak-te"re-o-fa'ji-ah). The destruction of bacteria by a lytic agent, either a bacteriophage or an enzyme; bacteriolysis. bacteriophagic (bak-te"re-o-faj'ik) [bacteria + Gr. φαγεῖν to eat]. Having a phagocytic action on bacteria.

bacterioph'agum intestina'le. Same as bacteriophage.

bacteriophagy (bak-te-re-of'aj-e). Bacteriophagia.
 bacteriophobia (bak-te"re-o-fo'be-ah). A morbid fear of bacteria.

bacterioplasmin (bak-te"re-o-plaz"min). Any one of a class of unchanged albuminous poisons existing in the expressed juice of certain bacteria.

bacterioprecipitin (bak-te"re-o-pre-sip'it-in). A precipitin produced in the body by the action of bacteria

bacterioprotein (bak-te"re-o-pro'te-in). Any one of a class of poisonous albuminous (protein) bodies, unaltered by heat, derivable from certain bacteria. The bacterioproteins produce fever, inflammation, and suppuration, but are not thought to be specific.

bacteriopsonic (bak-te"re-op-son'ik). Exerting an opsonic effect on bacteria.

bacteriopsonin (bak-te"re-op'so-nin). Same as bacterio-opsonin.

bacteriopurpurin (bak-te''re-o-pur'pu-rin) [bacterium + L. pur'pur purple]. The light-purple pigment of Beggiato'a roseopersici'na

bacterioscopic (bak-te"re-o-skop'ik). Pertaining to the microscopy of bacteria.

bacterioscopy (bak"te-re-os'ko-pe) [Gr. βακτήριον bacterium + σκοπεῖν to inspect]. The microscopic study of bacteria.

bacteriosis (bak-te-re-o'sis). Any bacterial dis-

bacteriosolvent (bak-te"re-o-sol'vent). Causing lysis or solution of bacteria, also an agent which causes solution of bacteria.

bacteriostasis (bak-te-re-os'tas-is) [bacteria + Gr. στάσις stoppage]. Prevention of the growth of bacteria, such as that produced by various dyes

bacteriostat (bac-te're-o-stat). An agent which stops the growth of bacteria.

bacteriostatic (bak-te"re-o-stat'ik). Preventing or arresting the growth of bacteria.

bacteriotherapy (bak-te"re-o-ther'a-pe) [bacteria + therapy]. Treatment of disease by the introduction of bacteria into the system

bacteriotoxic (bak-te"re-o-toks'ik). 1. Toxic to bacteria. 2. Caused by bacterial toxins.

bacteriotoxin (bak-te"re-o-toks'in) [bacteria + toxin] Any toxin destructive to bacteria

bacteriotropic (bak-te"re-o-trop'ik) [bacteria + Gr. τρόπος turning]. Turning or changing bacteria: a term applied to that constituent of the serum that renders bacteria more liable to destruction by the serum. Same as opsonic.

bacteriotropin (bak-te-re-ot'ro-pin). A principle, similar to opsonin, but more thermostabile, existing in certain immune sera and aiding phagocytosis by acting on the bacteria. Same as opsonin.

bacteriotrypsin (bak-te''re-o-trip'sin). One of the ferments produced by the cholera spirillum.

bacteritic (bak-ter-it'ik). Caused by or characterized by bacteria.

Bacterium (bak-te're-um), pl. Bacter'ia [L.; Gr. Bakrhpiov little rod]. t. A genus of schizomycetes of rod-like form. 2. Any non-animal micro-organism; a microphyte. B. abor'tum, a partly anaèrobic organism found in the uterine cavity in cases of abortion in cattle and in the milk. It is a short, slender, pleomorphic, Gram-negative rod, and is thought to be the cause of the abortion. Called also Bacillus abortus, Bang's bacillus, and the bacillus of infectious abortion. B. abor'tum e'qui, an organism belonging to the hog-cholera group which is found in the vagina of horses which have aborted. When injected intravenously it

produces abortion in mares. B. accidenta/lis tet'ani, a pathogenic species from pus in tetanus B. ace'ti. See Acelobacter aceti. B. ac'idi lac'tici, an organism belonging to the colontyphoid group and very commonly found in milk. It differs from B. coli in not fermenting dulcite and from B. lactiv aérogencs in not fermenting saccharose. It sours milk. B. segyptiacum. See Hemophilus of Kach-Weeks. B. a'ëris minutis'simum, a very small species from air, producing a canary-yellow pigment. **B. aëro'genes**, a micro-organism found in milk and in feces. It closely resembles *B. coli* from which it can be distinguished by the appearance on E. M. B. culture-medium. It rapidly curdles milk and is but slightly if at all pathogenic. Called also Gartner's bacillus and Bacillus lactis aerogenes. B. al'lli. See Bacillus allii. B. anthroposep'ticum, a species found in cases of osteomyelitis followed by septicemia. B. auranti'acum, a chromogenic species B. aureofla'vum, a species from water, producing a golden-yellow pigment. B. be'tæ, a species from diseased beets. B. bovisep'ticum, a pathogenic species from an infectious disease of the Asiatic buffalo: in immotile, but somewhat os-cullating, rods. **B. breslavien'se**, a pathogenic species from diseased meat. **B. bristolen'se**, Bristol b., a species intermediate in character between B. coli and B. luctis aérogenes: found in dead rats on a ship at Bristol, England, that came from Asia Minor. B. bronchisep'ticum, a short, Gram-negative, slowly motile rod-shaped organism resembling B. facalis alcaligenes. It is found in the smaller bronch of dogs in the early stages of distemper. It may be the cause of the disease. Called also Bacillus bronchisepticus, Bacillus caviæ septicus, and Bacillus pneumoniæ caviarum. B. brunneo**fla'vum**, a species from air, producing a brownishorange pigment. B. brun'neum, a chromogenic orange pigment. B. Drun neum, a chromogenic form from putrid infusions of maize. B. buc'culæ fortu'itum, a saprophytic form from normal saliva. B. buc'culæ minu'tum, a variety from healthy saliva, producing a brightyellow pigment. b. of buffalo plague, a pathogenic form characteristic of a plague which affects the Asiatic buffalo. B. buty'ri colloid'eum, a minument from good and had butter aliba. B. microphyte from good and bad butter alike. capit'ulum, a species from infusions of albuminous matter. B. capsula'tum, a pathogenic species from the blood of guinea-pigs. B. caten'ula, a species from decaying blood and from spoiled wine B. chol'eræ columba'rum, a pathogenic form from cholera of wild pigeons. B. chol'ers gallina'rum. See Pasteurella aviseptica B. chol'ers su'is, an organism belonging to the paratyphoid group and at one time thought to be the cause of hog cholera. Called also Bacillus suipestifer, hog cholera bacillus, Bacillus aërtrycke, and bacillus of swine plague. B. cholo'genes, a pathogenic form in angiocholitis with meningitis. B. cloa'cm. See Bacillus cloaca. B. co'li commu'ne, B. co'li commu'nis, a short, Gram-negative, motile organism giving a characteristic metallic luster on Endo's medium and on the E. M. B. medium. It is found abundantly in the intestines and in the stools. It causes cocoanut-bud rot and may be pathogenic for man. Called also Escherich's bacillus. B. co'li commu'nior, an organism closely resembling Bacillus coli communis, except that it ferments sac-charose. B. columber se, a bacterium isolated from the stools by Castellani and stated to cause one type of continued fever prevalent in the one type of continued lever prevalent in the tropics. B. cuniculic'ida, the bacterium causing rabbit septicemia. B. dan'yss, one of the paratyphoid group of organisms which has been used for killing rats. B. decal'yans, a species of elongated or rounded form: said to cause alopecia areata. B. du'bium, a pathogenic species from feces. B. du'bium pneumo'nis, a pathogenic form from the rusty sputum of pneumonia. B.

dysente'rise (Flexner), one of the colon-typhoiddysentery group of organisms. It ferments dex-trose, mannitol and maltose, and is considered one of the causative organisms in dysentery. B. dysente'riæ (Shigæ), one of the colon-typhoiddysentery group of organisms. It ferments dex-trose only and is considered a causative organism in dysentery. B. dysente'rise (Strong), one of the strains of the dysentery organism. It ferments dextrose, mannit, and saccharose, but not maltose.

B. dysente'rise ("Y"), one of the strains of the dysentery organism. It ferments dextrose and mannit, but not maltose or saccharose. B. dysente'riæ liquefa'ciens, a pathogenic form from cases of diphtheria in Japan. B. dysente'rise vitulo'rum, a pathogenic form from the
dysentery of calves. B. enterit'idis, one of the paratyphoid group of organisms which has caused epidemics of meat-poisoning. It is a motile, Gram-negative rod which ferments dextrose and mannit, with the formation of acid and gas, and xylose and rhamnose, with acid, but no gas. feca'lis alcalig'enes, one of the colon-typhoiddysentery group of organisms closely resembling B. typhosum, except that it produces no acid on any sugar medium. It is not pathogenic. B. friedbergen'se, a pathogenic species from poisonous sausages. B. gallina'rium. See Pasteurella aviseptica. B. glischrog'enes, an oval, motile species from viscid urine: it renders milk and bouillon ropy. **B. gum'mis**, a species which causes the gummy disease of orange, fig, and almond trees. B. hes'sii, one of the microphytes which cause the ropy state of milk. B. icterog'enes, a pathogenic form from liver and blood in acute yellow atrophy of the liver and from typhoid stools. B. icteroi'des, one of the paratyphoid group of organisms at one time thought to be the cause of yellow fever. Called also Sanarelli's bacillus. B. lac'tis visco'sum. See Bacillus hactis viscosi. B. lepisep'ticum, the organism which causes otitis media in rabbits B. le'vans. See Bacillus levans. B. lumino'sum, a luminous, pathogenic species from an amphipod crustacean. of the genus Sali'trus, and from sea-water. B. lu'teum, a non-motile form from water, producing an organge pigment. B. maddox'ii, a zymogenic species from fermenting urine. B. martinez'ii, a pathogenic species from the liver of the yellow-fever cadaver. B. meliten'sis, a small, Gram-negative, non-motile, non-sporogenic bacillus or coccus found in the milk and urine of goats and in cases of Malta fever in man. Called also the Bacillus of Malta fever and melitococcus. B. merismopædioi'des, a species from sewage mud: in rods and in square colonies of cocci. mesophilic b. See under bacteria. B. morbil'li, a form found in the urine of patients with measles. B. mor gani, a group of organisms belonging to the typhoid-dysentery group of bacteria which have been isolated from the stools of infants suffering with diarrhea. B. muco'sum capsula'tum, a short, plump, rounded rod found in some cases of pneumonia. It is Gram-negative, non-motile, cap-sulated, and associated with various pathologic conditions of the nose and accessory sinuses. Called also Friedländer's bacillus, Bacillus pyogenes crussus, pneumobacillus, and Bacillus pneumonia.

B. neapolita'num. See Bacillus neapolitanus.

nitrifying b., a bacterium which converts ammonia into nitrous or nitric acid or abstracts nitrogen from the air and fixes it in the soil. B. o'less, a species causing a disease of olive trees. a species causing a disease of olive trees. B. OESS'NES, an organism, closely resembling Bacterium mucosum capsulatum, which is found in cases of ozena. B. paratypho'sum A, one of the colon-typhoid-dysentery group of bacteria which closely resembles B. typhosum, but it does not ferment ryless nor does it turn lead does not ferment zylose nor does it turn lead acetate agar dark. It produces a disease in man accurate agar dark. It produces a disease in man similar to typhoid fever, but usually mild. **B.** paratypho'sum **B**, one of the colon-typhoid dysentery group of organisms which ferments

xylose and darkens lead acetate agar. It produces a disease in man similar to typhoid fever and often severe. B. paratypho'sum C, one of the colon-typhoid-dysentery group of organisms closely resembling B. paratyphosum B, except in its agglutinating properties. It was included in the compound antienteric vaccine used in the Serbian Army during the World War. B. periplane'tæ, a species which causes a disease of cockroaches. B. pes'tis cavia'rum, one of the colon-typhoiddysentery group of organisms which produces fatal epidemics of "pseudotuberculosis" among guinea-pigs. B. pneumosin'tes, a minute, filterpassing bacilloid microorganism, isolated from anaerobic cultures of filtered nasopharyngeal secretion in influenza (Olitzky). pole b. See Czaplew-ski's bacillus, under bacillus. B. psittaco'sis, one of the colon-typhoid-dysentery group of organisms which produces a fatal disease of parrots and other birds. It closely resembles B. enteritidis. Called also Bacillus psittacosis and Nocard's bacillus. psychrophilic b. See under bacteria. B. pullo'rum, one of the colon-typhoid-dysentery group of organisms which causes the white diarrhea of young chicks. B. pyo'genes fœ'-See Bacillus pyogenes fætidus. 18. See Rhizobium radicicola. radicicola. B. rhinosclero'matis, the organism found in and probably causing rhinoscleroma. It closely resembles B. mucosum capsulatum, but forms resembles B. mucosum capsulatum, no gas in dextrose bouillon nor acid in lactose bouillon and never coagulates milk. **B. rosa**/ceum metallori'des, a motile, rod-like species which produces gas in urine. B. sanguina'rium, one of the colon-typhoid-dysentery group of organisms which causes the infectious leukemia of fowls or fowl typhoid. It is not motile and produces no gas in dextrose bou-illon. **B. suipes'tifer.** See B. choleræ suis. B. sulphu'reum, a species found in mud and in urine. it breaks up the casein of milk and produces hydrogen sulphid; it occurs in slowly motile rods. B. tachyc'tonum, a pathogenic species from stools in cholera nostras. B. ter'mo. See Proteus. thermophilic b. See under bacteria. B. tholoi'deum, a species in short rods, from the intestinal contents of persons in health: pathogenic to certain animals. B. tularen'se, a very small rod-shaped organism, often capsulated, which produces a disease, called tularemia, in rodents very similar to plague and transmissible to man by the bite of a fly (Chrysops). See tularemia. B. ty'phi, B. typho'sum, an actively motile, Gram-negative, rod-shaped organism causing typhoid fever in man. It is found in the blood, stools, urine, and bile of such cases. Called also Eberth's bacillus. B. ty'phi-mu'rium, one of the colon-typhoid-dysentery group of organisms which causes fatal epidemics among B. ure's, a non-pathogenic, rod-like from ammoniacal urine. B. viola'mice. species from ammoniacal urine. ceum, a species from putrefying solutions of egg-albumen. B. whit'mori, an organism which is the causative agent in melioidosis. Cf. melioidosis wool-sac b., a sarcina. B. xyli'num, a species from solutions of the carbohydrates, producing acetic acid.

bacteriuria (bak"te-re-u're-ah) [Gr. βακτήριον rod + ούρον urine]. The existence of bacteria in the urine.

bacteroid (bak'te-roid) [Gr. βακτήριον rod + είδος form]. Resembling a bacterium; also a structure resembling a bacterium.

Bacteroides (bak-te-roi'des). A genus of anaërobic bacteria.
 B. frag'ilis has been found in abscesses.
 B. fusifor'mis. Same as Bacillus fusiformis.

bacteruria (bak-te-ru're-ah). Same as bacteriuria.
 bactoform (bak'to-form). A proprietary alcohol soap containing formaldehyd.

bacto-peptone (bak-to-pep'ton). A proprietary peptone for bacterial culture. baculiform (bak-u'li-form) [L. bacu'lum rod + for'ma shape]. Rod-shaped.

Badal's operation (bad-alz') [Antoine Jules Badal, French ophthalmologist, born 1840]. See under operation.

badian (ba'de-an) [Persian]. See anise, Chinese.

bael (ba'el) [East Indian; L. be'la] The Æ'gle mar'melos, or Bengal quince, a rutaceous tree of India. The root-bark and, especially, the half-dried, unripe fruit are valuable remedies in diarrhea, etc. The ripe fruit is laxative. Dose of fluidextract, ½-2 dr. (2-8 c.c.).

Baelz's disease (bāltz'es) [Erwin von Baelz, German physician, 1845-1913]. See under disease.

Baer's cavity, vesicle (barz) [Karl Ernst von Baer, Russian anatomist, 1792-1876]. See cavity and vesicle.

Baerensprung's erythrasma (bār'en-sproongs) [F. G. F. von *Baerensprung*, German physician, 1822-1865]. See under *erythrasma*.

bag (bag). A sac or pouch. Barnes's b., a rubber bag for dilating the cervix uteri. Champetier de Ribes' b., a conic bag of silk or rubber for dilating the cervix uteri. ice-b., a bag filled with ice, for applying cold to the body. Petersen's b., an inflatable rubber bag inserted into the rectum so as to push up the bladder in the operation of suprapubic cystotomy. Politzer's b., a soft bag of rubber for inflating the middle ear. Voorhees' b., a rubber bag which can be inflated with water used for dilating the cervix uteri. b. of waters, the membranes which inclose the liquor amnii of the fetus.

Bagdad sore. See furunculus orientalis.

Bahnung (bahn'ung) [Ger.] See facilitation.

Baillarger's band or layer (bi-yar-zhāz') [Jules Gabriel Francois Baillarger, French physician, 1806-1891]. See under layer.

Baillie's pill (ba'lēz) [Mathew Baillie, English physician, 1761–1823]. See under pill.

bakankosin (ba-kan'ko sin) A non-toxic nitrogenous glucosid, C₁₀H₂₂NO₈ H₂O, from the seeds of Strychnos bacacona

baker-leg (ba'ker-leg). Knock-knee, or genu valgum.

Baker's cyst (ba'kerz) [William Morrant Baker, British surgeon, 1839-1896]. See under cyst.

bakkola (bak'o-lah). A fungus obtained from birch trees in Finland, used in the form of a decoction in the treatment of cancer.

balance (bal'ans) [L. bi'lanx]. 1. An instrument for weighing. 2. The harmonious adjustment of parts; the harmonious performance of functions. hemogenic-hemolytic b., the normal balance between red blood-corpuscle formation and red blood-corpuscle destruction by which the red corpuscles and the hemoglobin of the blood are maintained at a constant level torsion b. 1. A weighing balance in which the scale-beam is supported by metallic ribbons which act by torsion, 2. An electrometer which acts by the twisting of a single fiber of the web of a silkworm.

balaneutics (bal-an-u'tiks). The science of giving baths

balanic (bal-an'ik). Pertaining to the glans penis or glans clitoridis.

balanism (bal'an-izm) [L. balanis'mus]. Treatment with pessaries or suppositories.

Balanites (bal-an-i'tes). See zachum oil, under oil.
balanitis (bal-an-i'tis) [Gr. βάλανος the glans penis
+ -ιτις inflammation]. Inflammation of the glans
penis. It is usually associated with phimosis. b.
circina'ta, a variety attributed to the presence
of Spirocha'ta balaniti'dis. b. diabet'ica, a
variety caused by the irritation of the urine in
diabetes. b. gangræno'sa, a rapidly destructive
infection producing erosion of the glans penis and
often destruction of the entire external genitals.
The infection is believed to be due to a spirochete.

balanoblennorrhea (bal'an-o-blen-or-e'ah) [Gr. βάλανος glans + βλέννος mucus + ροία flow].
Gonorrheal inflammation of the glans penis.

balanocele (bal'an-o-sēl) [Gr. βάλανος glans + κήλη hernia]. Protrusion of the glans penis through a rupture in the prepuce.

balanochlamyditis (bal''an-o-klam-id-i'tis) [Gr. $\beta\dot{a}\lambda\alpha\nuos$ glans $+\chi\lambda\alpha\mu\dot{b}s$ hood]. Inflammation of the glans clitoridis and hood.

balanoplasty (bal'an-o-plas-te) [Gr. βάλανος glans + πλάσσειν to form]. Plastic surgery of the glans penis.

balanoposthitis (bal"an-o-pos-thi'tis) [Gr βάλαγρs glans + πόσθη prepuce + -ιτις inflammation]. Inflammation of the glans penis and prepuce.
specific gangrenous and ulcerative b., an acute inflammatory disease of the glans penis and opposed surface of the prepuce, marked by ulcerations and sometimes by gangrene, with a flow of odorous pus, and caused by a spirochete. Called also fourth venercal disease.

balanorrhagia (bal"an-or-a'je-ah) [Gr. βάλανος glans + ἡηγνύναι to burst forth]. Gonorrheal balanitis with free discharge of pus.

balantidiasis (bal"an-tid-i'as-is). Infection by parasites of the genus *Balantidium*.

balantidiosis (bal-an-tid-e-o'sis). Balantidiasis.

Balantidium (bal-an-tid'e-um) [Gr. βαλαντίδιον hutle bag]. A genus of Protozoa of the subclass Cihata B. co'li (Malm-

sten, 1857), the largest protozoal parasite of man, being 50 to 100 microns m length and 40 to 70 in width. It is commonly found in the intestines of swine, has been found in ourang-utangs and monkeys, and is rarely found in man, where it may cause a balantidial dysentery. It is oval in form, actively mottle, and may be found free in the contents of the cecum if they are

Balantidium coli (about

fluid or buried in the walls. It has been called Holophrya coli, Leucophrya coli, Paramæcium coli, and Plagiotoma coli **B. minu'teum**, a species resembling Balantidium coli, but smaller.

balata (bal'at-ah). The inspissated juice or latex of *Mim'usops globo'sa*, a tree of tropical America: used much like india-rubber and gutta-percha

Balbiana (bal-be-a'nah). A genus of Sarcosporidia B. gigan'tea is sometimes found in the esophagus of sheep; B. ri'leyi, in the muscles of ducks.

Balbiani's body or **nucleus** (bahl-be-ah'nēz) [Edouard Gérard *Balbiani*, French embryologist, born 1825]. See *yolk nucleus*, under *nucleus*.

balbuties (bal-bu'she-ēz) [L]. Stammering.

baldness (bawld'nes). Lack or loss of hair. See alopecia, atrichia, calvities

Baldy's operation (hawl'dēz) [John Montgomery Baldy, Philadelphia gynecologist, born 1860]. See operation.

baleri (bal-e'ri). A form of trypanosomiasis of horses, sheep, goats, and cattle in the French Sudan, caused by Trypanosoma pecaudi. The disease is marked by severe fever, swellings over the body, injection of the conjunctiva, and considerable emaciation.

Balfour's disease (bal'forz) [George William Balfour, British physician, 1822-1903]. Chloroma.

Balfour's granule (hal'forz) [Andrew Balfour, physician in Khartoum, born 1873]. See under granule.

Balkan frame or splint (bawl'kan). See under splint.

ball. A large pill for veterinary use. chondrin b., one of the ball-like masses in hyaline cartilage,

consisting of cells in a capsule. fatty b. of Bichat. See suching pad. hair b. See hair-ball. ball-and-socket joint. See enarthrosis.

Ball's operation (bawlz) [Sir Charles B. Ball, Irish surgeon, 1851-1916]. See under operation.

Ballet's disease, sign (bal-āz') [Gilbert Ballet, French neurologist, 1853-1916]. See under disease and sign.

balling (bawl'ing). The formation of balls; specifically the formation of balls of nuclear matter in crythrocytes.

Ballingall's disease (bal'ing-gawlz) [Sir George Ballingall, British surgeon, 1780-1855]. Mycetoma.

balling-iron. A mouth-gag used while giving a ball and in mouth operations.

ballism (bal'izm). A condition marked by jerking, twitching movements.

ballistic (bal-is'tik). Pertaining to or caused by projectiles.

ballistics (bal-is'tiks) [Gr. βάλλειν to throw]. The science of the motion of projectiles.

ballistophobia (bal-is-to-fo'be-ah) [Gr. βάλλειν to throw + φόβος fear]. A morbid dread of missiles. ballonnement (bah-lön-maw') [Fr.]. Same as halloning.

balloon sickness. See under sickness

ballooning (bal-oon'ing). The operation of distending any cavity of the body with air for therapeutic purposes.

ballotable (bal-ot'ab-l). Capable of showing ballottement.

ballottement (bal-ot-maw') [Fr.]. The diagnosis of pregnancy by pushing up the uterus by a finger inserted into the vagina, so as to cause the embryo to rise and fall again like a heavy body in water. abdominal b., indirect b., that which is effected by the finger applied to the abdominal wall. direct b., vaginal b., that done by the finger in the vagina. b. of the eye, ocular b., the falling of opaque masses in a fluid vitreous after movements of the eyeball. renal b., palpation of the kidney by pressing one hand into the abdominal wall while the other hand makes quick thrusts forward from behind so as to throw the kidney against the anterior hand.

balm (bahm) [Fr. baume]. 1. A balsam. 2. A healing or soothing medicine. 3. Any labiate plant of the genus Melis'sa, especially M. officina'lis: carminative and aromatic. bee b. See Monarda b. of Gilead. 1 Mecca balsam. 2. Canada balsam. 3. The resin of poplar buds. mountain b. See Eriodictyon.

balmony (bal'mon-e). The scrophulariaceous herb, Chelo'ne gla'bra, of North America: anthelmintic, tonic, and lavative. Dose of fluidextract, $\frac{1}{2}$ -1 dr. (2-4 c c.); of decoction, 1-2 fl.oz. (29.5-50 c.c.).

balneography (bal-ne-og/raf-e) [L. bal'neum bath + Gr γράφειν to write]. A treatise on baths.

balneology (bal-ne-ol'o-je) [L. bal'neum bath + (ir. λόγος discourse]. The science of baths and their therapeutic uses.

balneotechnics (bal"ne-o-tek'niks). The art of preparing and administering baths.

balneotherapeutics (bal"ne-o-ther-ap-u'tiks). Balneotherapy.

balneotherapy (bal"ne-o-ther'ap-e) [L. bal'neum bath + Gr θεραπεία treatment]. The treatment of disease by bathing.

balneum (bal'ne-um), pl. bal'nea [L. for "bath"]. A bath. b. anima'le, animal bath. See under bath. b. are'nse. See sand-bath; also ammotherapy and psammotherapy. b. coeno'sum, b. lu'teum, a mud-bath. b. lac'teum, a milk-bath. b. pneumat'icum, an air-bath.

balopticon (bal-op'tik-on) [Gr. βάλλειν to throw + όπτικός pertaining to sight]. An apparatus for

throwing the enlarged image of an opaque object on a screen.

Bals. Abbreviation for balsam.

balsam (bawl'sam) [L. bal'samum; Gr. βάλσαμον]. A semifluid, resinous, and fragrant vegetable juice of many varieties. The balsams are resins combined with oils. b.-apple, the cucurbitaceous plant, Momor dica balsam ina, with purgative and vulnerary fruit. b.-apple, wild, a North American cucurbitaceous plant, Echinocys'tis loba'ia: a popular vulnerary. Canada b., the oleoresin of fir, terebin'thina canaden'sis, procured from A'bies balsam'ea, the balsam-fir of North America: much used in microscopy and useful in catarrhal affections. Dose, 5 gr. (0.333 gm.). Caperrapi b., a fragrant balsam from Laur'us caperraph b., a fragrant bassam from Law us gigan'teus: useful in chronic catarrhs. b. of copai'ba. See copaiba. friars' b., the compound tincture of benzoin. See benzoin. gur'-jun b., an oleoresin from Dipterocar pus la'vis, a tree of Indo-China: used for coughs, gonorrhea, and leprosy. Dose, 10-50 min. (0.666-3 c.c.).

Mecca b., b. of Mecca, an oleoresin or resin from Balsamoden'dron opobal'samum: highly esteemed in Oriental regions. b. of Peru [L. bal'samum peruvi'anum (U.S. P)], an oleoresin from Toluif'era pere'ira, a tree of Salvador, in Central America: it is expectorant, stomachic, and soothing. Dose of the amulsion, 10-15 min. (0.666-1 ing. Dose of the emulsion, 10-15 min. (0 666-1 cc). It is used locally in chronic skin inflamma-tions. b. of sulphur, r part of sulphur with 8 parts of olive or linseed oil: formerly used in pectoral disorders and as an application to ulcers. Dose, 5-30 min (0 3-2 c.c.). **Tamaco'ari b.**, the product of a Brazilian species of Caraipa. of Tolu [L. bal'samum toluta'num], a resinous exudate from Tolusfera bal'samum, a tree of tropical America. It is stimulant, expectorant, and stomachic. Dose of the tincture, 10-30 min. (0.666-2 c.c.); of the syrup, 1-2 dr. (4-8 c.c.). **Turlington's b.**, friars' balsam. **umi'ri b.**, the product of Humir'icum balsamıf'erum, a tree of South America. Wade's b., compound tincture of benzoin.

balsamic (bawl-sam'ik) [L. balsam'icus]. Of the nature of a balsam.

balsamo del deserto (bal'sam-o del des-er'to). A resin, probably from a variety of pine or fir of Mexico, recommended as a filling for root-canals.

Balsamodendron (bal'sam-o-den'dron) [L; Gr βάλσαμον balsam + δένδρον tree]. A genus of old-world amyridaceous trees of many species, producing bdellium, myrrh, and other balsamic drugs.

balsamum (bal'sam-um). Latin for balsam. b. peruvia'num, the U. S. P. name for balsam of Peru.

Balser's necrosis (bahl'zerz) [August Balser, German surgeon]. See under necrosis.

bal'teum vene'reum. See Venus' girdle, under girdle.

Bamber oil. See under oil.

Bamberger's albuminuria, disease, fluid, pulse, sign, etc. (bahm'ber-gerz) [Heinrich von Bamberger, Austrian physician, 1822-1888]. See under the nouns.

Bamberger-Marie disease [E. Bamberger, contemporary German physician; Pierre Marie]. See under disease.

bamboo (bam-boo') [East Indian]. The common name of many tropical tree-like grasses. Bambu'sa arundina'cea is alterative, anthelmintic, and depurative. b.-brier. See Smilax pseudochina.

ban bach (ban'bahk). A fever attended by pulmonary catarrh and a fine vesicular eruption, occurring in Cochin China.

banana (ban-an'ah). The fruit of Mu'sa sapien'tum: said to be useful as an alterative and antituberculous remedy. Dose of fluidextract, 10-20
min. (0.666-2 c.c.).

band (band). Any part, structure, or appliance that binds. **absorptiom-b's**, dark bands in the spectrum due to absorption of light by the medium (usually a solid or liquid) through which the light has passed. Cf. absorption lines, under line. amniotic b., a strip of false membrane on the inner part of the amnion which sometimes constricts the fetus. anogenital b., a fetal fillet which is the rudiment of the perincum. arrio-ventricular b., auriculoventricular b. Same as bundle of His. axis-b., the primitive streak. belly-b., a flannel strip worn around the abdomen. Biets's b's, bands of linear ichthyosis. b. of Broca, a part of the primordial rhinencephalon close to the anterior perforated space. Clado's b., the suspensory ligament of the ovary covered with peritoneum. b's of the colon, longitudinal muscular bands extending throughout the entire length of the large intestine. They are the mesocolic b, the free b., and the omental b. Coronary b. Same as coronary cushion. See cushion. dentate b. See fascia dentata. free b., that one of the bands of the colon which is situated opposite the mesocolic band. Giacomini's b., the grayish band constituting the anterior end of the fascia dentata of the hippocampus Harris's b., a fold of peritoneum extending from the gall-bladder and cystic duct across the transverse colon or transverse mesocolon, forming a distinct fold across the ventral surface of the duodenum at the hepatic flexure It produces compression of the duodenum. Called hepatoduodenal band or membrane. headb., a strap that fastens a mirror to the forehead. Henle's b., fibers from the anterior aponeurosis of the transversalis abdominis muscle extending behind the rectus below Douglas' fold. horny b., the anterior part of the tania semicircularis. iliotibial b., a part of the fascia lata that forms a sheath for the tensor fascia muscle. Lane's b. See Lane's kink, under kink. Leonardo's b., a term proposed by Sudhoff for the moderator band of Reil, first delineated by Leonardo ardo da Vinci **Maissiat's b.** Same as *diotibial* b. **Matas's b.**, an aluminum band for temporarily occluding large blood-vessels in order to test the condition of the collateral circulation. **Meck**el's b., a part of the anterior ligament fastening the malleus to the wall of the tympanum. mesoblastic b., a row of mesoblastic cells extending the whole length of the embryo. meso-colic b., a muscular band extending longitudinally throughout the length of the colon at a place corresponding to the mesenteric insertion. moderator b. Same as b. of Reil. omental b., a muscular band extending longitudinally throughout the length of the colon at the site of the adhesion of the great omentum. perioplic b., the band of secretor cells at the upper border of the hoof of animals. It secretes the periople. phonatory b's, the vocal cords, or an artificial substitute for them. **Priessnitz's b.**, a cold wet compress. primitive b., the transparent material in the axis of a nerve-tube. b. of Reil, a muscular fillet extending across the right ventricle of the heart, now regarded as forming one of the terminal parts of the bundle of His. See bundle of His. b. of Remak, an axis-cylinder. Simo-nart's b's, bands formed by adhesions between the amnion and the fetus, which have been drawn out by distention of the amniotic cavity with fluid. sinoventricular b. Same as bundle of His. Soret's b., a band in the violet end of the spectrum of hemoglobin. b. of Tarinus. Same as horny b. Vicq d'Azyr's b. See Baillarger's layer, under layer.

bandage (ban'dej). A strip or piece of gauze or other fabric for wrapping any part or member. abdominal b., a wide support worn about the hips during pregnancy, after an abdominal operation, or by a corpulent person. A-S-E b., the third roller of Desault's bandage which forms a triangle the angles of which are located at the axilla, shoulder, and elbow. Barton's b.,

BANDAGES

BANDAGES

Gibson's bandage.

Crossed bandage of the angle of the jaw.

Recurrent bandage of the head.

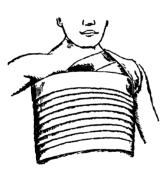

Prossed figure-of-8-bandage of both eyes.

Barton's bandage, or figureof-8 of the jaw.

Recurrent bandage of a stump.

Desault's bandage, first roller.

Desault's bandage, second roller

Desault's bandage, third roller.

Velpeau's bandage.

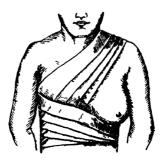

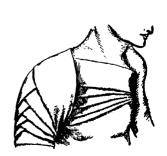

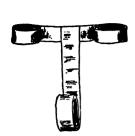

Figure-of-8 bandage of the breast.

Spica of the shoulder.

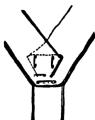

T-bandage.

Four-tailed and many-tailed bandages.

Scultetus bandage.

Y-bandage

Demigauntlet bandage.

Gauntlet bandage.

Spica of the thumb

Figure-of-8 bandage of the elbow.

Spiral reversed bandage of the upper extremity.

Spica of the groin.

Posterior figure-of-8 of both shoulders.

Figure-of-8 of neck and axilla.

Spiral reversed bandage of the lower extremity.

Selva's thumb-bandage.

Figure-of-8 bandage of the instep.

Spica of the instep.

Method of covering the heel.

a double figure-of-8 bandage for fracture of the lower jaw. (See p. 167.) body-b., a strip to be wound repeatedly about the trunk and then fixed. Borsch's b., an eye bandage covering both the diseased and the healthy eye. capeline b., a bandage applied like a cap or hood to the head or chalk b., a bandage shoulder or to a stump made immovable by stiffening with a mixture of chalk and gum. circular b., a bandage applied in circular turns about a part. crucial b. Same in circular turns about a part. as T-bandage. demigauntlet b., a bandage that covers the hand, but leaves the fingers uncovered.

Desault's b., a bandage for a fractured (Society of the content of the covers) clavicle (See p 167.) elastic b., a bandage of india-rubber for everting continuous pressure upon a part. Esmarch's b., an india-rubber bandage applied to a limb from the distal part upward, so as to expel blood from the portion that is to be operated on. figure-of-8 b., a bandage in which the turns cross each other like the figure eight (8). **Fricke's b.**, strapping of the testicle for orchitis and epididymitis. Galen's **b.**, a bandage with each end split in three pieces: the middle is placed on the crown of the head; the two anterior strips are fastened at the back of the neck; the two posterior ones, on the forehead; and the two middle ones are tied under the chin. Garretson's b., a bandage for the lower jaw, running above the forehead and back again to cross under the occiput, and ending under the chin. gauntlet b., a bandage which covers the hand and fingers like a glove. Genga's b. Same as Theden's b. Gibson's b., a bandage for fracture of the lower jaw. (See p. 167) Hamilton's b., a compound bandage for the lower jaw, composed of a leather string with straps of linen webbing. hammock b., a bandage for retaining dressings on the head, consisting of a broad strip over the dressing and brought down over the ears. This strip is then held in place by a circular bandage around the head. **Helio-dorus'** b., a T-bandage. **Hippocrates'** b. Same as capeline b **Hueter's** b., a spica bandage for the perincum immovable b., a bandage for immobilizing a part. **Kiwisch's b.**, a form of figure-of-8 bandage of both breasts to b., a many-tailed bandage with the edges glued together. Maisonneuve's b., a plaster-of-Paris bandage made of folded cloth held in place by other bandages. place by other bandages many-tailed b., a piece of roller to winch slips are stitched in an imbricated fashion. Martin's b's, india-rubber strips for varicose veins. **oblique b.**, a bandage applied obliquely up a limb without reverses. plaster b., a bandage stiffened with a paste of plaster-of-Paris, which sets and becomes very hard. pressure b., a bandage for applying pressure. protective b., a bandage for the purpose. pose of covering a part or of keeping dressings in place. recurrent b., a bandage over the end of a stump. reversed b., one applied to a limb in such a way that the roller is inverted or half-twisted at each turn, so as to make it fit smoothly. **Ribble's b.**, the spica of the instep. **Richet's b.**, a bandage of plaster-of-Paris to which a little gelatin has been added. roller b., a simple continuous strip, to be applied spirally or circularly. Scultetus' b., a bandage applied in strips overlapping each other in shingle fashion. silica b., a bandage rendered firm by treatment with sodium silicate. spica b., a spiral bandage folded regularly on itself like the letter V. spiral b., a roller bandage applied spirally around a limb. spiral reverse b., a spiral bandage applied with reverses, in order better to adapt it to the part. suspensory b., a bandage for supporting the scrotum. T-b., one shaped like the letter T. Theden's b., a roller bandage applied from below upward over a graduated compress to control hemorrhage. Thillaye's b., an arrangement of bandages for approximating

the edges of the wound in the operation for harelip. **Tuffnell's b.**, a roller bandage of cheesecloth impregnated with a mixture of white of egg and flour. **Velpeau's b.**, a bandage to support the arm in fracture of the clavicle.

Bandi (ban'de). See Terni and Bandi's vaccine, under vaccine.

Bandl's ring (ban'dl) [Ludwig *Bandl*, German obstetrician, 1842-1892]. See under ring.

bandy-leg (ban'de-leg). Bow-leg, or genu valgum.
 bane (bān). A poison. dog b. See Apocynum.
 leopard's b. See arnica.

bang. Same as Cannabis indica.

Bang's bacillus, method [Bernhard L. F. Bang, Danish physician, 1869-1918]. See bacillus and method.

Bang's method [Ivar Bang, Swedish physiologic chemist, died 1919]. See under method.

banian (ban'yan) [East Indian]. The Fi'cus bengalen'sis, an East Indian fig-tree, notable for its secondary trunks. The seeds and bark are tonic, antifebrile, and diuretic.

Banti's disease (ban'tēz) [Guido Banti Italian pathologist, 1853-1924]. See under disease.

banting, bantingism (ban'ting, ban'ting-izm) [from William Banting, English coffin-maker, 1797-1878, who invented it, 1863]. The treatment of corpulence by a restricted diet, especially by the avoidance of food containing much saccharine, farinaceous, or oily matter.

B. A. O. Abbreviation for *Bachelor of Obstetrics*. **baobab** (ba'o-bab). See *Adansonia*.

baptin (bap'tin). An aperient glucosid from Baptis'ıa tıncto'rıa.

Baptisia (bap-tiz'e-ah) [L.; Gr. βαπτίζειν to dye]. A genus of leguminous plants. **B. tincto'ria**, an herb of North America, is cathartic, emetic, anti-eptic, etc. It is used it typhoid and typhus fevers, in amenorrhea, and is applied locally to gangrenous sores and ulcers. Dose of extract, 1-10 gr (0 060-0 606 gm.); of fluidextract, 2-20 min. (0 12-1 25 cc), of tincture, 10-30 min. (0.65-2 cc), of resin, 1-5 gr. (0 060-0 333 gm).

baptisin (bap'tiz-in). 1. A glucosid from Baptis'ia tincto'ria a brownish powder, soluble in alcohol. In small doses it is tonic and astringent; in large doses, purgative; used in searlet fever, chronic dysentery, etc. Dose, ½ gr. (0033 gm). 2. A precipitate from the tincture of Baptis'ia tincto'ria. Dose, 1-3 gr. (0.060-02 gm).

baptitoxin (bap-tit-ok'sin) [Baptisia + Gr. τοξικόν poison]. Λ poisonous alkaloid from Baptis'ia; ulexin

bar (bahr). 1. The upper part of the gums of a horse, between the grinders and the tusks, which bears no teeth. 2 That portion of the wall of a horse's hoof which is reflected posteriorly at an acute angle. 3. A unit of pressure, being a pressure by one megadyne per square centimeter. 4. A heavy wire used in prosthetic or orthodontic dental work. articulomachelian b., the cartilaginous structure of the embryo from which the lower jaw is developed. b. of bladder. Same as Mercier's b. hyoid b's, a pair of cartilaginous plates forming the second visceral arch: a part of the hyoid bone is developed from them. lingual b., a heavy wire, usually of gold alloy, placed along the gums on the lingual surface of the teeth of the lower jaw or inserted into the lingual part of the base of a lower denture. Mercier's b., a ridge forming the posterior boundary of the trigone of the bladder. palatine b., a metal bar inserted into the palatine part of an artificial denture to give it strength. sternal b., one of the paired cartilaginous bones in the embryo which unite to form the sternum thyroid b's, the two visceral arches of the embryo which develop into the thyroid cartilage.

170

Bar's incision (bahrz) [Paul Bar, contemporary French obstetrician]. See under incision.

baragnosis (bar-ag-no'sis) [Gr. βάρος weight + α neg. + γνῶσις knowledge]. Absence of the power to recognize weight.

Bárány's sign, symptom, test (bah'rah-nēz) [Robert Bárány, otologist in Vienna, born 1876]. See under symptom and tests.

baraquet (bah-rah-ka') [Fr.]. See influenza.

Barbados aloe (bar-ba'doz al'o). See under aloe. B.-leg. See elephantiasis.

barbaloin (bar-bal'o-in). The aloin of Barbados aloe. Dose, 1-3 gr. (0.066-0 2 gm).

barberry (bar'ber-e)
ris and its fruit. The shrub Ber'beris vulga'-

barbers' itch (bar'berz itsh). Tinea sycosis.

barbiero (bar-be-a'ro). See Lamus magistus.

barbiers (bar-be-a'). A nervous disease occurring on the island of Réunion.

barbital (bar'bit-al). Veronal, a white powder, diethylmalonylurea or diethylbarbituric acid. CO $(HN.CO)_2C(C_2H_5)_2$: used as a hypnotic in doses of 5-15 gr. (0.33-1 gm.). **b. sodium, b. soluble,** the mono-sodium salt of barbital, which is more soluble than barbital.

barbitone (bar'bit-ōn). Same as barbital.

barbituism (bar bit'u-izm). A condition caused by the use of barbital and marked by chill, headache, fever, and cutaneous eruptions.

barbone (bar-bo'ne) [It. "bearded"]. buffalo which is sometimes transmitted to other animals, marked by edematous swellings on the body, fever, dyspnea, loss of appetite, and inflammation of the oral mucous membrane. It is a form of hemorrhagic septicemia and is caused by the Bacillus bipolaris bubalisepticus.

barbotage (bar-bo-tazh') [Fr. barboter to dabble]. Fillestre's method of spinal anesthesia in which the needle is inserted into the sacrolumbar space, and after the injection the piston of the syringe is moved to and fro several times.

barbula hirsi (bar'bu-la her'si) [L. "goat's beard"]. The hairs which grow on the tragus, antitragus, and incisura intertragica at the entrance of the concha

Barcoo disease (bar-koo') [Barcoo, a river in South Australia]. See under disease.

Bard's sign (bardz') [Louis Bard, Swiss physician, born 1857]. See under sign.

bardane oil (bar'dan). A nearly solid oil from the seeds of the burdock, Arct'ium lap'pa.

Bardinet's ligament (bar-de-nāz') [Barthélemy Alphonse Bardinet, French physician, 1819-1874]. See under ligament.

baregin (bah-re'jin). Same as glairin.

baresthesia (bar-es-the'ze-ah) [Gr. βάρος weight + alσθησις perception]. Sensibility for weight or pressure; pressure sense.

baresthesiometer (bar"es-the-ze-om'et-er) [Gr. βάρος weight + αἴσθησις perception + μέτρον measure]. An instrument for determining sensitiveness as to weight or pressure.

Baréty's method (bar at ez') [Jean Paul Baréty, French surgeon, 1887-1012]. See under method.

Barfoed's test (bahr'fedz) [Christen Thomsen Barfoed, Swedish physician, 1815-1899]. See under tests.

baric (ba'rik). Pertaining to barium.

barilla (ba-ril'ah). Impure sodium carbonatepulverin.

barium (ba're-um) [Gr. βάρος weight]. A pale yellowish, metallic element belonging to the alkaline earths, whose salts are poisonous. Its atomic weight is 137.37; its symbol, Ba. b. arsenate, a salt, Ba₃(AsO₄)₂: used in phthisis and in skin diseases. Dose, A=1 gr. (0.004-0.016 gm.). b. bromid, a compound, BaBr₂+2H₂O: used as a

heart tonic and in aneurysm and scrofula. b. carbonate, a poisonous salt, BaCO₃: formerly used in medicine; now employed in preparing the chlorid, etc. b. chlorid, a compound, BaCl₂+2H₂O: a cardiac stimulant; has been used in sclerosis of the nervous tissues and in aneurysm. b. hydrate, b. hydroxid, caustic baryta, Ba(OH), a crystalline salt employed as a test for sulphates. b. iodid, used like potassium iodid. Dosc, t gr. (0.008 gm.). b. loretinate, a neutral compared to the control of pound of barium and loretin, Ba(I.OH.C₀H₄N.-SO₁)₂ + 2½H₂O; in lustrous, orange-hued needles, soluble in water. b. oxid, baryta, BaO. b. platinocyanid, a substance, BaPt(CN), 4H₂O, used for coating the screen of a fluoroscope. b. sulphate, a compound of barium and sulphuric acid, BaSO₄, used as a pigment, also in roentgenology because of its opacity to x-rays.

bark (bark) [L. cor'tex]. The rind or outer cortical cover of the woody parts of a plant, tree, or shrub. ague tree b., sassafras. bayberry b., Myrica. blackberry b., Rubus black cherry b., Prunus virginiana. buckthorn b., Frangula. casca b., the bark of Erythrophlaum guncense chitten b., Cascara sagrada. cinchona b. See Cinchona. coto b. See coto. cotton root b., Gossipium. cramp b., Viburnum opulus. cranberry b., Viburnum opulus. cranberry b., Viburnum opulus. cranberry b., Viburnum. cuprea b., Remijia. cusco b., the bark of a variety of Cincho'na pubes' cens. dita b., Alstonia scholaris. dogwood b., Cornus. elm b., Ulmus. fringe wood b., Cornus. elm b., Ulmus. fringe tree b., Chionanthus. granatum b., pome-granate. guapi b., cocillana. Jesuits b., a popular name for cinchona. Mancona b., Erythrophlæum guineense. ordeal b. See ordeal.

payta b. See paytin. Peruvian b. See Cinchona. quebracho b., Aspidosperma. Santa Martha b., the bark of Cincho'na cordifo'lia. seven b's, Hydrangea. slippery elm b., Ulmus. soap b., soap-tree b., Quillaia. sweet b., sweetwood b., cascarilla. wahoo b., Euonymus. white ash b., Fraxinus americana. white oak b., Quercus alba. white walnut b., Juglans. wild cherry b., Prunus. worm b., the bark of Andi'ra iner'mis and other trees of the same genus: anthelmintic

Barker's pills (bar'kerz) [Fordyce Barker, American physician, 1817-1891]. See under pill.

Barkow's ligament (bar'kōvz) [Hans L. Barkow, German anatomist, 1798-1873]. See ligament.

barley (bar'le). The annual grasses, Hor'deum vulga're, H. dis'tichon, etc.; also their seed, a cereal grain: used for malting and distillation, and to some extent as a food-substance. b.-water, a decoction of pearl barley in water: used as a demulcent and a food in the diarrheas of infants.

Barlow's disease (bar'lowz) [Sir Thomas Barlow, physician in London, born 1845]. See under disease.

barm (barm). Yeast.

Barnes's bag, curve, dilator, etc. (barnz) [Robert Barnes, English obstetrician, 1817-1907]. See bag, curve, dilator, etc.

baro-electroesthesiometer (bar"o-e-lek"tro-esthe-ze-om'et-er) [Gr. βάρος weight + electric + Gr. alσθησις sensation + μέτρον measure]. An instrument to measure the amount of pressure at the time electric sensibility to tingling or pain is felt.

barognosis (bar-og-no'sis) [Gr. βάρος weight + γνῶσις knowledge]. The faculty by which weight is recognized; weight knowledge.

barograph (bar'o-graf) [Gr. βάρος weight + γράφειν to record]. A form of self-registering barometer.

baromacrometer (bar"o-mak-rom'ct-er) [Gr. βάρος weight + μακρός long + μέτρον measure]. An instrument for measuring and weighing new-born

barometer (bar-om'et-er) [Gr. βάρος weight + μέτρον measure]. An instrument for determining the atmospheric pressure. aneroid b., one which contains no mercury or other liquid. plague b., in animals, such as guinea-pigs, kept in a house, during an epidemic of plague. If one of the animals dies, and is found on examination to be infected with plague, antiplague measures are put into effect.

barometrograph (bar-o-met'ro-graf) [Gr. βάρος weight + μέτρον measure + γράφων to record]. A self-registering barometer.

baroscope (bar'o-skōp) [Gr. βάρος weight + σκοπεῖν to observe]. 1. A delicate form of baromefer. 2. An instrument used in the quantitative determination of urea.

Barosma (bah-roz'mah) [Gr. βαρίοσμος strong-A genus of rutaceous African plants. smelling]. See Buchu.

barosmin (ba-roz'min). arosmin (ba-roz'min). A concentration pre-pared from buchu. diuretic. Dose, 1-4 gr. (0.065-0.250 gm.).

barotaxis (bar-o-tak'sis) [Gr. βάρος weight + τάξις turning]. Stimulation of living matter by change of the pressure relations under which it

barotropism (bar-ot'ro-pizm) [Gr. βάρος weight + τροπή turning]. Barotaxis.

Barraquer's disease (bar-rak-erz') [Ignacio Barraquer, Spanish ophthalmologist]. Lipodystrophia progressiva. B's method or operation. See bhaco-eresis.

barren (bar'en). Sterile; unfruitful.

Barrier's vacuoles (bar-e-āz') [François Margarite French physician, 1813-1870]. Peri-Barrier. bronchitic abscesses.

Barry's retinacula (bar'ez) [Martin English biologist, 1802-55]. See retinaculum.

barsati (bar-sat-e') Same as leeches.

Barth's hernia [Jean Baptiste Barth, German physician]. See under hernia.

Barthélemy's disease (bar-tāl'mez) [P Toussaint Barthélemy, French dermatologist, born 1850]. Acne agminata

Bartholin's anus, duct, gland, etc. (bar'tolinz) [Thomas Bartholin, Danish anatomist, 1616-80]. See anus, duct, gland, etc.

bartholinitis (bar"to-lin-i'tis). Inflammation of Bartholin's glands.

Barton's bandage, fracture (bar'tunz) [John Rhea Barton, American surgeon, 1794-1871]. See bandage, fracture.

Bartonel'la or Barto'nia bacillifor'mis. The blood-parasite causing Oroya fever. It occurs in the form of minute rods in the erythrocytes, and is probably related to Piroplasma. Called also Bartonia bodies and x-bodies.

Baruch's sign (bar'ooks) [Simon Baruch, physician in New York, 1840-1921]. See under sign

baruria (hah-ru're-ah) [Gr. βάρος weight + οὐρον urinel. The passage of urine of a high specific gravity.

barutin (bar-u'tin). A preparation of theobromin, barium, and sodium salicylate: used like digitalis. barye (bar'e). Same as bar, 3d def.

baryecoia (bar''i-e-koi'ah) [Gr. βαρυηκοία]. Dulness of hearing.

baryencephalia (bar'e-en-sef-a'le-ah) [Gr. βαρύς heavy + ἐγκέφαλος brain]. Dulness of the intellect.

baryesthesia (bar-e-es-the'ze-ah). Baresthesia. baryglossia (bar-e-glos'e-ah) [Gr. βαρύς heavy + γλῶσσα tongue]. Thick, slow utterance of speech.

barylalia (bar-e-la'le-ah) [Gr. βαρύς heavy + λαλιά speech]. An indistinct and thick utterance. baryphonia (bar-e-fo'ne-ah) [Gr. βαρύς heavy + pown voice]. Difficult utterance of speech.

baryta, barytes (bar'it-ah, bar'et-ēz). Barium oxid, BaO; a poisonous alkaline earth.

barythymia (bar-e-thim'e-ah) [Gr. $\beta a\rho b$ s heavy + $\theta \nu \mu b$ s mind]. Melancholia.

barytic (bar'it-ic). Pertaining to or containing

basad (ba'sad). Toward a base or basal aspect. basal (ba'sal). Pertaining to or situated near a base.

basculation (bas-ku-la'shun) [Fr. basculer to swing]. Replacement of a retroverted uterus by swinging

it into its place.

 base (bās) [L. ba'sis; Gr. βάσιs].
 1. The lowest part or foundation of anything.
 2. The main ingredient of a compound.
 3. In chemistry, the non-acid part of a salt: a substance which com-bines with acids to form salts. 4. In dentistry, that part of an artificial denture which rests on the mucosa of the mouth or jaw and to which the teeth are attached. acidifiable b., one which will unite with water to form an acid. aldehyde b., a base derived from an ammonia compound of aldehyde. alloxur b., alloxuric b. See purin base, under purin animal b., a ptomain or leukomain. cheoplastic b., in dentistry, the aldehyde. base of a denture produced by casting molten metal in a mold **b.** of heart, the surface of the heart which is directed upward and backward and is formed by the auricles. It contains the openings of the pulmonary veins and the venæ cavæ. hexone b's, diamino-mono carboxylic acids formed by the hydrolysis of proteins, and containing six atoms of carbon. They include arginin, lysin, and histidin. Called also histone b's and diamino-acids. histone b's, the nitrogenous bases lysin, arginin, and histidin, which, combined in various proportions, form the histons and protamins. nucleinic **b.**, alloxur body. **pressor b.**, pressor substance. See substance. purin b. See under purin. py-ramidin b., a base, such as cytosin, thymin, and urasil, formed from the splitting up of protein. Schreiner's b., spermin. xanthin b., alloxur body.

basedoid (bas'id-oid). A condition resembling Basedow's disease, but without thyrotoxicosis.

Basedowian (baz-e-do've-an). A person affected with Basedow's disease.

basedowified goiter (bas-e-dow'if-id). See under goiter.

Basedow's disease (bas'id-ōz) [Karl A. von Basedow, German physician, 1799-1854. He described the disease in 1840]. See disease.

base hospital. See under hospital.

Basel nomenclature. See B. N. A. basement (bās'ment). A fundamental part. b.membrane. See under membrane.

baseplate (bās'plāt). A sheet of wax, gutta-percha, or other plastic material used in making trial plates for artificial dentures.

bas-fond (bah-fond') [Fr]. A fundus, especially that of the urinary bladder.

Basham's mixture (bash'amz) [William Richard Busham, English physician, 1804-1877]. Mistura ferri et ammonii acetatis.

basial (ba'se-al). Pertaining to the basion.

basialveolar (ba"se-al-ve'o-lar). Extending from the basion to the alveolar point.

basiarachnitis (ba"se-ar-ak-ni'tis). Inflammation of the basal part of the arachnoid.

basiarachnoiditis (ba"se-ar-ak-noi-di'tis). Basiarachnitis.

basic (ba'sik). 1. Pertaining to or having the properties of a base. 2. Capable of neutralizing

acids. basicaryoplastin (ba-se-kar''e-o-plas'tin) βάσις base + κάρυον nucleus + πλάσσειν to form]. The basophil paraplastin of the nucleus.

basichromatin (ba-sik-ro'mat-in). The basophil portion of the chromatin of a cell.

basichromiole (ba-se-kro'me-ōl) [basophil + chromiole). One of the basophil particles forming the chromatin of the nucleus.

basicity (ba-sis'it-e). r. The quality of being a base, or basic. 2. The combining power of an acid. It is measured by the number of hydrogen atoms replaceable by a base.

basicranial (ba-sik-ra'ne-al) [Gr βάσις foundation + κρανίον cranium]. Pertaining to the base of the skull.

basicytoparaplastin (ba"se-si"to-par-ah-plas'-tin). The basophil paraplastin of the cytoplasm.

basidiospore (ba-sid'e-o-spor). A spore formed on a basidium.

basidium (ba-sid'e-um), pl. basid'ia [Gr. βάσις base]. The spore-producing organ of certain of the higher fungi.

basifacial (ba-sif-a'she-al) [L ba'sis base + fa'cies face]. Pertaining to the lower part of the face.

basigenous (ba-sij'en-us). Capable of forming a chemic base.

basihyal, basihyoid (ba-se-hi'al, ba-se-hi'oid) [Gr. βάσις foundation + ὐοειδής hyoid]. The body of the hyoid bone, in certain of the lower animals, either of the two lateral bones that are its homologues.

basil, sweet (ba'sil, sweet). An aromatic labiate plant, Oc'ymum basil'icum.

basilad (bas'ıl-ad). Toward the basilar aspect.

basilar (bas'il-ar) [L. basila'ris, from ba'sis base]. Pertaining to a base or basal part.

basilateral (ba-sil-at'er-al). Both basilar and lateral.

basilemma (ba-sil-em'ah) [Gr. βάσις base + λέμμα rind]. Basement-membrane; also, the neuroglia.

basilic (ba-sıl'ik) [L. basil'icus; Gr. βασιλικός royal]. Important or prominent.

basilicon (ba-sil'ık-on) [Gr. "royal"]. A popular name for various ointments, and especially for resin cerate

basilysis (ba-sil'is-is) [Gr. $\beta \acute{a}\sigma$ is base $+\lambda \acute{b}\sigma$ is a loosening]. The crushing of the base of the fetal skull to facilitate delivery.

basilyst (bas'ıl-ist). An instrument for performing a basilysis.

basin (ba'sn). 1. The third ventricle of the brain.2. The pelvis.

basinasial (ba-sin-a'ze-al). Pertaining to the basion and the nasion.

basioccipital (ba''se-ok-sip'it-al). Pertaining to the basilar process of the occipital bone.

basioglossus (ba"se-o-glos'us) [Gr. $\beta \dot{\alpha} \sigma s$ foundation $+ \gamma \lambda \dot{\omega} \sigma \sigma a$ tongue]. The part of the hyoglossus muscle which is attached to the base of the hyoid bone.

basion (ba'se-on) [Gr. βάσις base]. The midpoint of the anterior border of the foramen magnum.

basiotic (ba-se-ot'ik) [Gr. βάσις base + οὖς ear]. Noting a small bone of the fetus between the basisphenoid and the basioccipital bones.

basiotribe (ba'se-o-trib) [Gr. βάσις base + τρίβειν to crush] An instrument for crushing the fetal head in order to facilitate delivery.

basiotripsy (ba'se-o-trip-se). The crushing of the fetal head.

basiparachromatin (ba"se-par-ah-kro'mat-in). The basophil paraplastin of the nucleus.

basiparaplastin (ba"se-par-ap-las'tin). The basophil portion of the paraplastin. See paraplastin.
basiphilic (ba-se-fil'ik). Basophilic.

basiphobia (ba-se-fo'be-ah) [Gr. βάσις step + φόβος fear]. Insane dread of walking.

basirhinal (ba-sir-i'nal) [Gr. βάσις base + βίς nose]. Pertaining to the base of the brain and to the nose.

basis (ba'qis) [L. and Gr.]. A base or lower part.
b. cor'dis, the base of the heart. b. cra'nii, the base of the skull.
b. cra'nii exter'na [B N

A], the external base of the skull. **b. cra'nii** inter'na |B N A], the internal base of the skull. **b. pedun'culi** |B N A], the crusta of the crust cerebri; the ventral part of the cerebral peduncle composed of descending fiber tracts. Called also pes pedunculi and crusta. **b. pulmo'nis**, the base of the lung.

basisphenoid (ba-se-sfe'noid). An embryonic bone which becomes the back part of the body of the sphenoid.

basisylvian (ba-se-sil've-an) [Gr. βάσις foundation + sylvian]. Pertaining to the basilar part of the sylvian fissure.

basitemporal (ba-se-tem'po-ral) [Gr. βάσις base + temporal] Pertaining to the lower part of the temporal bone.

basivertebral (ba-se-ver'te-bral) [Gr. βάσις base + L. verte'bra joint]. Pertaining to the centrum of a vertebra.

basket (bas'ket). Same as basket-cell. See under cell.

Basle anatomic nomenclature (bah'zl). See $B.\ N.\ A.$

basometachromophil (ba"so-met-ah-kro'mo-fil) [barie + Gr. μετα beyond + $\chi p \hat{\omega} \mu \alpha$ color + $\varphi l \lambda \epsilon \nu$ to love] Staning with basic dyes to a color different from that of surrounding substances.

basophil, basophile (ba'so-fil) [Gr. βάσις base + φιλεῖν to love]. 1. A basophilic element. 2. Basophilic.

basophilia (ba-so-fil'e-ah) Degeneration of erythrocytes in which there is development of basophil granules, i. e, the presence of blue dots in the pink background of stained erythrocytes. It occurs in severe anemias, leukemias, malarial cachexia, lead-poisoning, etc. Called also basic degeneration, granular degeneration, granular basophilic degeneration, Gravutz's degeneration, stippling, and punctate basophilia.

basophilic, basophilous (ba-so-fil'ik, ba-sof'-il-us) Staining readily with basic dyes.

basophobia (ba-so-fo'be-ah) [Gr. βάσις step + $\varphi \delta \hat{\rho}$ os fear]. Morbid fear of walking.

bass-deafness (bās-def'nes). Deafness to bass musical notes.

Bassia (bas'e-ah). See panchontee

Bassini's operation (bas-e'nëz) [Edoardo Bassini, surgeon in Padua, 1847-1924]. See under operation.

Bassler's sign (bas'lerz) [Anthony Bassler, physician in New York, born 1876] See under sign.

bassorin (bas'o-rin) [Bassora gum. See gum]. A vegetable mucilage, C₀H₁₀O₅, from tragacanth and other gums. It is insoluble in water, though alkalis render it soluble.

bast (bast). The inner part of the bark of various trees used to a very limited extent in surgery.

bastard (bas'tard) [Old Fr] 1. An illegitimate person, one born out of wedlock. 2. Illegitimate.
3. Of inferior quality: not genuine.

bastards (bas'tardz). Λ trade-name for an inferior grade of sugar.

Bastedo's sign (bas-te'dōz) [W. A. Bastedo, physician in New York, born 1873]. See under sign.

Bastian-Bruns law (bas'tshan-broonz) [Henry Charlton Bastian, British neurologist, 1837–1915. See also Bruns]. See under law.

Bastianelli's method (bas-tyan-el'zz) [P. Bastian-elli, contemporary surgeon in Rome]. See under method.

basyl (ba'sil) [Gr. βάσις base + υλη substance]. The electropositive element of a compound.

basylous (bas'il-us). Acting as a base in chemic composition.

Bateman's disease, etc. (bāt'manz) [Thomas Bateman, English physician, 1778-1821]. See under disease, etc.

bath (bath). Any yielding medium, as water, vapor, or sand, in which the body is wholly or partly immersed for the conservation or restoration of the health. acid b., one of water medicated with a mineral acid. it may check excessive sweating. air-b., the therapeutic exposure of the naked body to the air, which is usually warmed or charged with a vapor. **alcohol** b., the washing of a patient in dilute alcohol it is defervescent and stimulant. alkaline b., the washing of a patient in a weak solution of an alkaline carbonate useful in skin diseases, etc. **alum b.**, the use of alum water as a bathing medium. **animal b.**, the therapeutic application of a newly killed animal or its skin to a patient. aromatic b., a medicated bath in which the water is scented with a decoction of aromatic plants or volatile oils, arsenical b., a warm bath in a weak arsenical solution useful in rheumatoid affections astringent b., a bath in a liquid containing tannic acid, alum, or other astringent. blanket b., a wet-pack in which the patient is wrapped in blankets. blood b., a bath in the freshly drawn blood of an animal. bog b., the therapeutic use of thin, peaty mud as a bath. borax b., one in water medicated with glycerin and borax. box-b., one in which the patient is inclosed, except his head, in a box, into which hot-water pipes extend b., an emollient bath made of water in which bran has Been boiled. **Brand b.** (1861), a cold bath in which the water is at 68° F., and in which the patient is gently massaged. **brine b.**, a bath in brine: tonic and stimulant. **buff b.**, a bath in which no garment is worn. cabinet b., a hot-air bath or an electric bath in which the patient is inclosed in a special cabinet. camphor b., a bath given in an atmosphere charged with the vapor of cam-phor. carbon dioxid b., a bath impregnated with carbon dioxid Such are the Nauheim baths used in the Schott treatment. **chemic b.**, an apparatus for regulating the temperature of various chemic processes by surrounding the substance to be heated with water, sand, or other material. cold b., one in which cold water is used, the temperature of the latter varying from 32° to 70° F. colloid b., a bath containing gelatin, bran, starch, or similar substances, used for treatment of toxic dermatitis exfoliativa after arsphenamin injection. cool b., one in water from 60° to 75° F. creosote b., a bath containing creosote, 3 dr, and glycerin, 4 oz., in 30 gallons of water used in scaly skin diseases douche b., the application of water to the body in a large jet. earth b., the placing of a patient in a mass of earth or of sand, usually warmed. electric b., one in which the patient receives either a succession of discharges of static electricity or an interrupted current. electrotherapeutic b., a therapeutic bath through which an electric current is passed at the time of using. electrothermal b., a bath of hot water, hot air, or vapor, during which the patient is exposed to the influence of either static or current electricity. emollient b., a bath in an emollient iliquid, like a decoction of bran. fan b., fanning of the patient's wet body for reducing the heat of fever. faradic b., one in which the patient is treated with a faradic current. Finnish b., a modification of the Russian bath. Finsen b., a general radiation of the patient's entire body with non-concentrated arc lights. **foot-b.**, a bath for the feet; a pediluvium. **fucus b.**, a bath containing seaweed, or a decoction of it, imparting the effect of sodium chlorid and iodin. full b., one in which the patient's body is fully immersed in the water. gas-bubble b., a bath of water containing gases in such quantities that gas-bubbles are set free and ascend to the surface of the water, as in carbon dioxid and oxygen baths. **gelatin b.**, an emollient bath in a very thin hot solution of gelatin. **glycerin b.**, a warm emollient bath in water charged with glycerin and gum acacia. graduated b., one in which the temperature of the

water is gradually lowered hafussi b., a bath of hot water impregnated with carbon dioxid in which the hands and feet of the patient are imwhich the hands and teet of the patient are immersed. half-b., a bath of the hips and lower part of the body. herb b., one which is charged with a decoction of aromatic herbs. hip-b. Same as sitz-b. hot b., one in water from 98° to 112° F. hot-air b., one in air or vapor from 100° to 130° F. hydro-electric b., a bath in water that is charged with electricity. immersion b., the sudden plunging of a patient into water for a short time. internal b., an injection of large quantities of water into the stomach or into the rectum. iron b., one in water charged with iron sulphate. medicated b., a bath variously charged with medicinal substances. mercurial b., a bath in air charged with vaporized calomel or in a weak solution of mercuric chlorid milk-b., one taken in milk: it is emollient, cosmetic, and perhaps slightly nutritive. **moor b.**, a bath in water containing earth from a moor or from waste land, which is believed to be free from certain dangerous microorganisms found in cultivated soil. mud-b., a bath in the mud of certain mineral springs or in the mud of a salt marsh. mustard-b., one taken in water more or less strongly charged with pulverized mustard. **Nauheim b.** See Schott treatment, under treatment needle-b., a showerbath in which the water is projected in a fine, needle-like spray. oil-b., one taken in warm olive oil, sometimes variously medicated: used mainly in Oriental countries. **oxygen b.**, a bath impregnated with oxygen. See gas-bubble b. and perogen b. **ozet b.**, an oxygen bath prepared from a generating mixture known as "oset." **pack-b.**, one in which the body is packed in wet cloths. **peat** b., a bath in water (usually that of a mineral toxing) charged with real it that of a mineral spring) charged with peat: it promotes perspiration and is sometimes powerfully discutient. **permanent b.**, a therapeutic bath in which the patient is kept for a very considerable length of time. **perogen b.** See personal person ogen. pine b., one taken in water medicated with a decoction or extract of pine needles or cones rain-b., a form of shower-bath. reducing b., a bath for reducing the temperature of the body. Russian b., a hot vapor bath followed by friction and a plunge in cold water. sand-b. The immersion of the body in dry, heated sand The covering of the body with the damp sand of the scashore. Sarason's ozet b., a bath made by adding to the water sodium hyperborate and manganese borate, the latter being spread in powder form over the surface of the water, resulting in the liberation of ovygen used to diminish blood-pressure. Schott b. See Schott treatment, under treatment. sea-b., a bath in the water of the sea. sea-water b., a bath in the water of the sea; usually warmed or heated sheet-b., the application of wet sheets to the body. shower-b., a bath in water which falls upon the body in a fine spray. sitz-b., a bath in which the patient sits in the tub, bathing only the hips and buttocks. slime b., a bath in ooze taken from a pond or river. sponge-b., one in which the patient's body is rubbed with a wet sponge. stimulating b., a bath containing tonic, astringent, or aromatic substances used for stimulating the body. **phur b.**, a bath in which potassium sulphid or sub-limed sulphur is added to the water. **sun-b.**, the exposure of the naked-hody to the rays of the sun. surprise b., the sudden plunging of an insane or hysteric patient into cold water: an obsolete or hysteric patient into cold water: an obsolete procedure. **sweat b.**, any bath given to promote sweating. **temperate b.**, one in water from 75° to 85° F. **tepid b.**, one in water from 85° to 92° F. **tub b.**, a bath taken in a tub large enough to receive the whole body. **Turkish b.**, a bath in which the bather is placed in a succession of rooms of increasing high temperature. of increasing high temperature, then rubbed or massaged, and given a douche of warm followed by cold water. vapor-b., the exposure of the body

to steam, to vaporized alcohol, or the like. warm b., one taken in water of from 90° to 104° F. (32.2°-40° C.). water-b., in chemistry, a vessel containing water for immersing bodies to be heated to a temperature not above the boiling-point of water.

bathesthesia (bath-es-the'ze-ah) Bathyesthesia.

bathmic (bath'mik). Pertaining to bathmism.
 bathmism (bath'mizm) [Gr. βαθμός threshold]
 The force which controls the processes of nutrition and growth.

bathmotropic (bath-mo-trop'ik) [Gr. $\beta\alpha\theta\mu\delta$ s threshold + $\tau\rho\epsilon\pi\epsilon\nu$ to turn] Influencing the response of tissue to stimuli. A term used to designate supposed fibers in the cardiac nerves which affect the excitability of cardiac muscles. negatively b., lessening response to stimuli. positively b., increasing response to stimuli.

bathmotropism (bath-mot'ro-pizm) [see bath-motropic]. Influence on the excitability of muscle tissue

bathofiore (bath'o-flör) [Gr. βαθός depth + fluorescence] A substance which decreases the intensity of fluorescence of a compound. Cf. auxoflore.

bathophobia (bath-o-fo'be-ah) [Gr. βάθοs height + φόβοs fear] Morbid dread of high objects.

bathyanesthesia (bath"e-an-es-the'ze-ah) [Gr. βαθύς deep + anesthesia]. Loss of deep sensibility.

bathycardia (bath-e-kar'de-ah) [Gr. βαθθs deep + καρδία heart]. A low position of the heart due to anatomic conditions and not to disease.

bathyesthesia (bath"e-es-the'ze-ah) [Gr. $\beta\alpha\theta bs$ deep $+\alpha l\sigma\theta\eta\sigma ss$ sensation]. Deep sensibility; the sensibility in the parts of the body beneath the surface, such as muscle sensibility and joint sensibility.

bathyhyperesthesia (bath"e-hi-per-es-the'se-ah) [Gr. βαθύς deep + hyperesthesia] Increased sensitiveness of deep structures of the body.

bathyhypesthesia (bath"e-hīp-es-the'ze-ah) [Gr. $\beta \alpha \theta bs$ deep + hypesthesia] Decreased sensitiveness of the deep structures of the body.

batonet (ba-to-net') Pseudochromosome.

batonoma (bat-o-no'mah) [Gr. $\beta \alpha \tau \delta s$ height $+\omega \mu a$]. A tumor caused by the activities of vegetable life of a higher order than the bacteria (Merk).

batophobia (bat-o-fo'be-ah) [Gr. βατός height + φόβος fear]. 1. Morbid dread of high objects, as buildings, mountains, etc. 2. Acrophobia.

batrachoplasty (bat'ra-ko-plas-te) [Gr. βάτραχος frog + πλάσσειν to form]. A plastic surgical operation for the cure of ranula.

batracin (bat'ras-in) [Gr. βάτραχος frog]. A highly poisonous principle from the skin of *Phyllo'-bates chocoen'sis*, a South American amphibian. It is used as an arrow-poison.

battarism, battarismus (bat'ar-izm, bat'ar-izmus). Stuttering or stammering.

battery (bat'er-e). A set or series of cells which afford an electric current. For the different varieties of battery see cell. caustic b., a battery employed in galvanocautery dynamo-b., a dynamo-electric generator; a machine for converting mechanic into electric force. electric b., an apparatus consisting essentially of a set or series of cells for producing an electric current. faradic b., one which produces an induced or faradic current. galvanic b., one which affords a chemically produced current. primary b., one in which a number of primary cells are combined, so as to act together. secondary b., the combination of several storage-cells. storage-b., an apparatus for storing electricity.

Battey's operation (bat'ez) [from R. Battey, of Georgia, 1828-1895]. See operation.

Battley's sedative (bat'lez) [Richard Battley, Fnoluh chemist 1970-1856] See under codation

B. A. U. Abbreviation for British Association Unit.

Baudelocque's diameter (bo-dloks') [Jean Louis Baudelocque, French obstetrician, 1746-1810]. See diameter.

Baudelocque's operation (bo-dloks') [Louis Auguste Baudelocque, French obstetrician, nephew of preceding, 1800-1864]. See under operation.

Bauhin's gland, valve (bo'anz) [Gaspard Bauhin, Swiss anatomist, 1560-1624]. See gland and valve.

Baumès's law (bo-māz') [Jean Baptiste Baumès, French physician, 1777-1828]. See under law.

Baumé's scale (bo-mēz') [Antoine Baumé, French chemist, 1728-1804]. See under scale.

Baumgarten's stain (bowm'gar-ten) [P. von Baumgarten, German pathologist, born 1848]. See under staining.

baunscheidtism (bown'shid-tizm) [from Karl Baunscheidt, the inventor]. Treatment of chronic rheumatism, etc., by acupuncture with the revulsor, an instrument furnished with many fine needle-points, which are dipped into an irritant liquid, as oil of mustard.

bavarol (bav'ah-rol). A reddish-brown, aromatic, tarry liquid its 5 per cent. solution is used as a disinfectant.

bay (bā), lacrimal. The depression at the inner canthus of the eye in which the lacrimal canaliculi lie.

Bayard's ecchymoses (ba-arz') [Henri Louis Bayard, French physician, 1812-1852]. See ecchymosis.

bayberry (ba'ber-e). 1. The fruit of Lau'rus no'bilis, the European laurel 2 The wax-myrtle, Myrica cerij'era, and its berry. 3 The tree, Pimen'la ac'ris, and its fruit: allspice or pimenta.

baycuru (bi-koo-roo'). The powerfully astringent root of *Stat'ice brazilien'sis*, a plant of tropical America. Dose of fluidextract, 5-30 min. (0.333-2 c.c.).

Bayer 205. A German proprietary preparation of unknown composition, but said to be a water-soluble salt of a complex sulphuric acid. It is a white powder freely soluble in water and is said to be extraordinarily effective in trypanosome infections.

Bayer G. 1919. A German proprietary preparation intended for the treatment of filariasis.

Bayle's disease (bālz) [Antoine L. J. Bayle, French physician, 1799-1858]. Progressive general paralysis of the insane

Bayle's granulations (bālz) [Gaspard Laurent Bayle, French physician, 1774 1861] See under granulation.

bayogo (ba-yo'go). A vine of the Philippines, Enta'da scan'dens: a decoction of the wood is used by the natives in skin diseases.

bayonet-leg (ba'un-et-leg) Ankylosis of the knee which follows an uncorrected backward displacement of the tibia and fibula.

bay-rum (ba-rum). See spiritus myrciæ.

bazin (ba'zin). Molluscum contagiosum.

Bazin's disease (bah-zaz') [Antoine Pierre Ernest Bazin, French dermatologist, 1807-1878]. See under disease.

B. C. Abbreviation for bone conduction.

B. C. G. Abbreviation for Calmette-Guérin bacillus.

B. D. Abbreviation for base of prism down.

Bdel'la cardina'lis. The snout mite which feeds on other insects.

bdellepithecium (del"e-pi-the se-um) [Gr. βδέλλα leech + ἐπιθεσις application]. A kind of artificial leech or tube used in leeching.

bdellium (del'e-um) [L.; Gr. βδέλλιον]. The fragrant gum-resin of Balsamoden'dron mu'kul, a tree of India, and B. africa'num; also a gum from Rayas'eus flahellisas'mis a palm of Africa

175

bdellotomy (del-ot'o-me) [Gr. βδέλλα leech + τομή cutting. The act of cutting a sucking leech to increase the amount of blood it will take.

B. D. S. Abbreviation for Bachelor of Dental Surgery.

B. D. Sc. Abbreviation for Bachelor of Dental Science.

B. E. Abbreviation for Bacillen emulsion. See under tuberculin.

Be. Symbol for beryllium.

beaded (be'ded). Having the appearance of a string of beads.

beading (of the ribs) (be'ding). The formation of the rachitic beads or rosary.

beads (bēdz), rachitic. A series of palpable or visible prominences at the points where the ribs

join their cartilages: seen in certain cases of rickets. beaker (be'ker). A form of glass cup used by chemists and apothecaries.

Beale's cells, stain (belz) [Lionel Smith Beale British physician, 1828-1906]. See under cell and

bean, Calabar (ben). See Physostigma. njalla b. See njalla. ordeal b. See Physostigma.

St. Ignatius' b. See ignatia. vanilla b. See vanilla.

bearberry (bar'ber-e). See uva-ursi.

Beard's disease (bērdz) [George Miller Beard. American physician, 1839–1883]. Neurasthenia,

bear's-foot. See Polymnia.

beat (bet) A throb or pulsation, as of the heart or of an artery. apex-b., the stroke of the apex of the left ventricle of the heart against the chestwall, felt in the fifth left intercostal space. ectopic b., a heart-beat originating at some point other than the sino-auricular node forced b., an extrasystole produced by artificial stimulation of the heart. premature b. Same as extrasystole.

beat knee. A subcutaneous cellulitis over the knee cap.

beatin (be'at-in). A substance, C₅H₁₃NO₃, used in urinary diseases.

Beau's disease, lines, syndrome (boz) [Joseph Honoré Simon Beau, French physician, 1800-1865]. See under disease, line, and syndrome.

Beauperthuys' treatment (bo-per-tu-ez') [Louis Daniel Beauperthuys, physician in the West Indies]. See treatment.

bebeerin (be-be'rin). An alkaloid, C10H21NO3, from bebeeru bark. It is a brownish-yellow powder, soluble in 5 parts of absolute alcohol, 15 parts of ether, and 6000 parts of cold water. It has tonic and febrifuge properties, and is used like quinin, and also as a tonic in dyspepsia and de-bility. The sulphate is used for the same purbility. The sulphate is used for the same purposes. Dose, 2-5 gr. (o 133-0.333 gm).

bebeeru (be-be'roo). The greenheart tree, Nectan'dra rodia'i, of tropical America. Its bark is and is used as a tonic in

bitter and astringent, and is used as a tonic in malarial diseases.

Beccari process (bek-a're) [Guiseppe Beccari, physician in Florence]. See process.

bechic (bek'ik) [L. bech'icus, from Gr. βήξ cough]. 1. Good against a cough. 2. A remedy for cough. bechol (bek'ol). A proprietary expectorant preparation of pine.

Bechterew's nucleus (bek'ter-uz) [Vladimir Mikhailovich von Bechterew, Russian neurologist, born 1857]. See nucleus.

Beck's paste (beks) [Emil J. Beck, Chicago surgeon, born 1866]. See under paste.

Becker's phenomenon, test (bek'erz) [Otto Heinrich Enoch Becker, German oculist, 1828–1890]. See under phenomenon and lests.

Béclard's hernia (ba-klahrz') [Pierre Augustin Béclard, French anatomist, 1785-1825]. See hernia.

Becquerel's rays (bek-relz') [Antoine Henri Becquerel, French physicist, 1852-1908]. See under ray.

bed (bed). A couch or support for the body during sleep. air-b., an air-tight, inflatable mattress. Arnott's b., a rubber mattress filled with water employed to prevent bed-sores. Bandeloux's b., an air-bed with a vessel beneath for the collection of urine, the whole being surmounted by a cradle covered with gauze b.fast, b.-ridden, unable to leave the bed. fracture-b., a bed for the use of patients with broken
bones. Gatch b., a bed fitted with a jointed bedrest by which the patient can be raised into a halfsitting position and kept so. hydrostatic b., a water-bed. metabolic b., a bed so arranged that all the feces and urine of the patient is The amount of excreta compared to the saved. intake gives an indication of the metabolism in the body. b.-pan, a shallow vessel for receiving the alvine discharges of the sick. b.-rest, a device for propping up patients in bed. b.-sore, an obstinate and sometimes gangrenous sore, caused by pressure of the body of a patient against the bed. water-b., a rubber mattress filled with water: used to prevent bed-sores.

bedbug. The Ci'mex lectula'rius, a semiparasitic insect that infests neglected beds: used homeopathically as a remedy. See Cimer.

bedlam (bed'lam). An insane asylum.

bedlamism (bed'lam-izm). Insanity.

Bednar's aphthæ (bed'narz) [Alois Bednar, physician in Vienna, 19th century]. See under aphtha.

Bedouin itch. Same as lichen tropicus.

bee (be). See A pis.

bee balm. See Monarda.

Beebe's serum (be'bēz) [Silas Palmer Beebe, New York physician]. See serum.

beef-extract (bef-eks'trakt). The soluble fibrin of lean beef partly desiccated. See under extract.

beef-tea (bef'te). The infusion of lean beef: analeptic and somewhat nutritious.

beer (ber). The fermented infusion of malted barlev and hops.

Beer's collyrium, knife, operation (ba'erz) [George Joseph Beer, German ophthalmologist of 19th century]. See collyrium, knife, and operation.

beerwort (ber'wert). An infusion of malt in water intended to be converted into beer. It is some-

times used for the cultivation of yeasts and molds. beeswax (bēz'waks). Wax derived from honeycomb of Apis mellifera. See cera.

Begbie's disease (beg'bēz) [James Begbie, Scotch physician, 1798-1869]. See under disease.

beget (be-get'). To procreate.

Beggiatoa (bej"e-ah-to'ah) [named for F. S. Beg-A genus of Schizomycetes growing in giatol. water, especially stagnant or contaminated water. They are seen in the form of gliding threads of gray or violet color, and more by means of an undulating membrane The cells contain sulphur granules, but have no sheath. B al'ba forms glairin; B. roseopersici'na produces bacterio-B al'ba forms purpurin.

begma (beg'mah) [Gr βηγμα cough]. A cough; also the material expectorated by coughing.

behavior (be-hav'yor). The act or manner of behaving. invariable b., activity whose character is determined by innate structure, such as reflex variable b., behavior which is modifiable by individual experience.

behaviorism (be-hāv'yor-izm). A theory of psychologic study based upon a purely objective observation and analysis of human and animal behavior without reference to the testimony of consciousness.

behen (be-hen') [Fr. béhen]. A popular name of various herbs and plants of the genera Statice, Centau'rea, Sile'ne, etc.

Béhier-Hardy symptom (ba'he-a-har'de) [Louis Jules Behier, French physician, 1813-1875]. See under symptom.

Behring's law, method, serum, etc. (ba'ringz) [Emil A. von Behring, German bacteriologist, 1854-1917]. See under law, method, serum, etc.

Beigel's disease (bi'gelz) [Hermann Beigel, German physician, 1830-1879]. See under disease.

bela (be'lah) [L.]. See bael.

belse fructus (be'le fruk'tus) [L.]. The fruit of bael (q. v.).

Belas'caris mys'tax. An Ascarid worm common in the dog and cat, but sometimes found in the intestines of children.

belching (bel'shing). The eructation of wind.

belemnoid (be-lem'noid) [Gr βέλεμνον dart + είδος form]. τ. Dart-shaped. 2. The styloid process of the ulna or of the temporal bone.

Belfield's operation (bel'fēldz) [William Thomas Belfield, surgeon in Chicago, born 1856]. omy.

Bell treatment [William Blair Bell, contemporary British gynecologist] See under treatment

belladonna (bel-ah-don'ah) [Ital. "fair lady"]. The Atropa belladon na, or deadly nightshade, a plant of Europe and Asia. Its poisonous leaves (belladonna folia, U. S. P.) and roots (belladonna radix, U. S. P.) are used in medicine and are narcotic, antispasmodic, anodyne, and respiratory and cardiac stimulants. The active principle to which its properties are due is *atropin* (q. v.). Belladonna is used as an antispasmodic in colic, cramps, whooping-cough, asthma, spasm of the bladder and the anal sphincter, and dysmenorrhea; to suppress secretions, as of saliva, sweat, and milk; in collapse, and to abort bronchitis and pharyngitis. It is also an antidote to opium and physostigma. The preparations of belladonna are all poisonous. Dose of the leaves, 1-5 gr. (0 065-0.324 gm.); of the alcoholic extract of the leaves, 10-1 gr. (0006-00162 gm); of the abstract of the root, $_{10}^{10}$ -I gr (0 006-0 066 gm); of the tincture (leaves), I-20 min (0.065-I 25 cc), of the fluidextract of the root, 1-3 min. (0.065-0.18 c.c.); of the juice ($suc' \iota us b$), 5-15 min. (0.333-1 c.c.); of the fluidextract of the leaves, 3-6 min. (0.2-0.4) c.c.); of the solid extract of the root, $\frac{1}{8} - \frac{1}{4}$ gr. (0.008– 0016 gm.).

belladonnin (bel-ah-don'in). An alkaloid, C₁₇-H₂₁NO₂, from belladonna; isomeric with apatropin. bellafolin (bel-ah-fo'lin). A proprietary prepara-

tion containing in pure form the total alkaloids of belladonna

bell-crowned (bel-krownd'). Having a crown shaped like a bell said of a tooth which is largest at the occlusal surface, and tapers toward the cervix.

Bellini's ducts, ligament [Lorenzo Bellini. Italian anatomist, 1643-1704]. See duct and liga-

Bellocq's a cannula (bel-oks') [Jean Jacques Bellocq, French surgeon, 1732-1807]. An instrument for plugging the posterior nares. See cannula.

bellond (bel'ond). Plumbism in cattle due to grazing in the neighborhood of lead-smelters where the soil is impregnated with the lead that settles from the fumes of the foundry.

bellones (bel-onz'). Polypoid tumors in the nares of horses, interfering with proper breathing.

Belloste's pill, solution (bel-osts') [Augustin Belloste, French surgeon, 1654-1730]. See under pill and solution.

Bell's disease or mania [Luther V. Bell, American physician, 1806-1862]. Acute periencephalitis.

Bell's law, nerve, palsy, phenomenon, etc. [Sir Charles Bell, Scotch physiologist in London, 1774-1842]. See under the nouns.

Bell's muscle [John Bell, Scotch anatomist, 1763-1820]. See under muscle.

bell-sound, bell-tympany. A clear, bell-like sound heard in pneumothorax.

belly (bel'e). 1. The abdomen. 2. The prominent part of a bulging muscle. big b., abdominal distention with gastric disturbance in soldiers. b .bound, constipated or costive. b.-button, the navel. **swollen b.**, tympanites in animals. **wooden b.**, abdominal rigidity.

belonephobia (be-lo-ne-fo'be-ah) [Gr. βελόνη needle $+\varphi \delta \beta$ os fear]. An insane dread of needles and pins

belt, Momburg's. A rubber tube or band passed two or three times around the waist and then drawn tight to arrest the bleeding in postpartum hemorrhage.

Belyando spew (bel-yan'do). See grass sickness, under sickness.

ben, oil of. A colorless oil expressed from the seed of Morin'ga pterygosper'ma. It is laxative and bland, and is used for extracting odors.

Bence-Jones albumin, albumosuria, bodies, cylinders, protein, reaction [Henry Bence-Jones, English physician, 1813-1873] See under the nouns.

bend. A turn or curve; a curved part. head-b. a bend of the embryonic body in the region of the midbrain. **neck-b.**, a bend of the embryo at the posterior limit of the hind-brain

bends (bendz). A name for caisson-disease.

bene (be'ne). A Latin word signifying "well."

beneceptor (ben'e-sep-tor) [L. be'ne well + ceptor]. Crile's name for a nerve-ceptor which transmits stimuli of a beneficial character. Cf. nocice ptor and ceptor, 2d def.

benedictine (ben-e-dik'tēn) [Fr]. A liqueur or cordial prepared at Fécamp, in France.

Benedict's test (ben'e-dikts) r. [A L American physician, born 1865] 2. [9] Benedict. 2. IStanley R. Benedict, American physiologic chemist] der tests.

Benedikt's syndrome (ben'e-dikts) [Moritz Benedikt, Austrian physician, 1835-1920 under syndrome.

beneficiary (ben-e-fish'e-a-re). The person to whom the amount of an insurance policy is payable

benign, benignant (be'nin, be-nig'nant) [L. benig'nus]. Not malignant, not recurrent

Béniqué's sound (ba-ne-kāz') [Pierre Jules Béniqué, French physician, 1806-1851]. See under sound.

The fixed oil of sesame benné (ben'e), oil of. seeds. See sesame.

Bennet's corpuscles (ben'ets) [James Henry Bennet, English obstetrician, 1816-1891]. See corpuscle.

Bennett's disease (ben'ets) [John Hughes Bennett, English physician, 1812 1876]. Leukemia

Bennett's fracture, operation (ben'ets) [Edward Hallaran Bennett, Irish surgeon, 1837 1907]. See under fracture and operation.

Benoist's scale (be-nwah'z) [Benoist, French physicist]. See under scale.

benzacetin (ben-zas'e-tin). Acetoamidocthylsalicylic acid, a colorless, crystalline compound, $C_0H_3(OC_2H_3)(NH.COCH_3)COOH$; an antineuralgic remedy, slightly soluble in water. Dose, 8-15 gr. (0.5-1 gm.).

benzaconin (ben-zak'on-in). An alkaloid, C32H43-NO₁₀, of aconite poisonous, but less so than aconitin

benzal (ben'zal). Same as benzylidene.

benzaldehyd (ben-zal'de-hid). Bitter almond oil; a colorless liquid, C₆H₆COH, produced by the oxidation of benzyl alcohol. Dose, 1-1 min. (0.017o.o66 c.c.).

benzamid (ben'zam-id). A white, crystalline body, C₆H₆.CO.NH₂, obtainable from bitter almonds.

benzamin (ben-zam'in). Same as beta-eucain.

benzanalgen (ben-za-nal'jen). An antineuralgic and antiseptic agent, $C_{18}H_{16}N_2O_2$, from chinolin.

It is used in gout, rheumatism, and locomotor ataxia: it is a uric-acid dissolvent. Dose, $7\frac{1}{2}$ -45 gr. (0.486-2.916 gm.).

benzanilid (ben-zan'il-id). A white, febrifugal powder, C₆H₅ CO.NH C₆H₅, or phenylbenzamid prepared by treating anilin with benzoyl chlorid. It is soluble in alcohol, but nearly insoluble in water. Dose, 1-10 gr 0 066-0.666 gm).

benzene (ben'zēn) A colorless, volatile liquid hydrocarbon, Collo, from naphtha or soft coal. It has an ether-like odor, and burns with a light-giving flame It dissolves fats, resins, sulphur, phosphorus, iodin, and several alkaloids It is used as a pulmonary antiseptic in influenza, etc, as a teniacide, externally as a parasiticide, and recently in leukemias Dose, 5-10 min. (0.31-0.62 cc). Called also benzol b. compounds, aromatic compounds derived from benzene by substitution; they include anilin, phenol, salicylic acid, acetanilid, resorcinol, naphthol, thymol, benzoic acid, and numerous other medicinal compounds. See closed chain, under chain b. picrate, fortolin.

benzene-ring. See under ring.

benzenin, benzenobacillin (ben-ze'nin, ben-ze''-no-bas-ıl'in). A poison, like etherin, chloro-formin, and xylenin, extractable by ether from tubercle bacıllı.

benzenoid (ben'ze-noid). A compound having benzene linkage as distinguished from quinonoid linkages

benzidin (ben'zid-in). A colorless, crystalline compound, para-diamino-diphenyl, (NH₂ C₆H₄ C₆H₄-NH₂), formed by the action of acids on hydrazobenzene used as a test for blood. See benzidin test, under test.

benzimid (ben'zim-id). A crystalline compound, C₂₃H₁,N₂O₂, from bitter-almond oil. It is produced by the action of hydrocyanic acid on benzoyl hydrid

benzin, benzine (ben'zin) [L. benzi'num]. A clear, volatile distillate from petroleum made up of hexane and heptane and distilling at 70° to 00° C. It is inflammable, and has a strong ethereal odor. It is used as a solvent for fats, resin, caoutchouc, and certain alkaloids, and has been given as a teniacide. Dose, 5-10 min (031-062 c.c.). Called also petroleum benzin and petroleum ether.

benzinin (ben'zin-in). See benzinobacıllin.

benzinobacillin (ben"zi-no-bas-ıl'in). A toxin derived from tubercle bacılli.

benzoate (ben'zo-āt). Any salt of benzoic acid.
 benzoated (ben'zo-āt-ed). Containing or combined with benzoin or benzoic acid.

benzo-bismuth (ben-zo-biz'muth). A glucose solution of the trioxybismuthobenzoate of sodium containing some phenol Intramuscular dose, 0.2 gm. in the treatment of syphilis.

benzocain, benzocaine (ben'zo-ka-in). See cthyl

benzochol (ben'zo-kol) A mixture of 10 c.c. of a cholesterinized extract of bull heart and 3 c.c. of a 10 per cent alcoholic solution of benzoin resin. used in a precipitation test for syphilis.

benzoeugenol (ben-zo-u'je-nol). Eugenol benzoate, C₁₀H₁₀O₂.CO.C₆H₅, a colorless, odorless, crystalline compound, soluble in hot alcohol: used like guaiacol in tuberculosis.

benzoflavin (ben-zo-fla'vin). A yellow, basic dye, isomeric with chrysanilin.

benzohydrol (ben-zo-hi'drol). A crystalline secondary alcohol, (C₀H₃)CHOH; it is a hydroxyl derivative of diphenylmethane.

benzoic acid (ben-zo'ik). See acid.

benzoin (ben-zo'in) [L. benzo'inum]. The balsamic resin of Sty'rax ben'zoin, a tree of south Asia. It has the stimulant and expectorant properties of benzoic acid, and is used for the same purposes. Dose, 5-30 gr. (0.3-2 gm.); of tincture, \(\frac{1}{2}\)-1 dr. (2-4 c.c.); of compound tincture, \(\frac{1}{2}\)-1 dr. (2-4 c.c.).

benzoinol (ben-zo'in-ol). Any oily substance used as an excipient and as an emollient application.

benzoiodhydrin (ben"zo-i"od-hi'drin). A brown, fatty substance, (C₃H₅)ClH(C₇H₅O₂), derived from benzoyl iodid and epichlorhydrin: it is prepared for use by triturating 32.5 parts with roop parts of sugar, and is said to be preferable to potassium iodid as a therapeutic agent. Dose of the triturate, 2-15 gr. (0.133-1 gm.).

benzokinone (ben-zo-kin'on). A proprietary derivative of guaiacol.

benzol (ben'zol). See benzene.

benzolism (ben'zo-lizm). Poisoning by benzene or its vapor.

benzonaphthalin (ben-zo-naf'tha-lin). A therapeutic mixture of benzoic acid and naphthalin.

benzonaphthol (ben-zo-naf'thol). Benzoyl-naphthol, a crystalline substance, C_6H_6 CO.O. $C_{10}H_7$, a compound of beta-naphthol and benzoic acid. It is an intestinal antiseptic in typhoid fever, etc. Dose, 4-8 gr. (0.26-0 518 gm.). b.-bismuth, a brown powder: used like other bismuth compounds. Dose, 15-30 gr. (1-2 gm.).

benzonitril (ben-zo-ni'tril). A volatile oil, phenylcyanid, C₆H_b CN, with odor of oil of bitter almonds, derivable from benzene-sulphonic acid by the

action of potassium cyanid.

benzoparacresol (ben"zo-par-ah-kre'sol). An antiseptic substance, C₀H₄(CH₃)(CO.C₀H₅), in colorless crystals, insoluble in water. Dose, 4 gr. (0.25 gm.).

benzophenoneid (ben"zo-fe-no'ne-id). A nonirritant, germicidal agent, tetramethyldiapsidobenzophenoid, soluble in water: used in keratitis and corneal ulceration.

benzopurpurin (ben-zo-pur'pu-rin). Any one of a series of azo-dyes of a scarlet color. b. B is an indicator with a PH range of 2.0-4.0.

benzopyrin (ben-zo-pi'rin). Antipyrin benzoate. benzoresinol (ben-zo-rez'in-ol). A resinol from benzoin.

benzosalicin (ben-zo-sal'is-in). Same as populin. benzosalin (ben-zo-sa'lin). A tasteless white powder, the methyl ester of benzosalicylic acid, C₆H_ε.- CO O.C₆H₄ CO O CH₂, used in rheumatism, sciatica, neuralgia, and as an intestinal antiseptic. Dose, 20-40 gr. (1 3-2.6 gm.).

benzosol (ben'zo-sol). A crystalline powder, C₆H₅.-CO O.C₆H₄.O CH₃, or benzoate of guaiacol, containing 54 per cent. of guaiacol. It is insoluble in water, not soluble in alcohol, ether, and chloroform. It is used as a substitute for creosote in tuberculosis and in diabetes, and as an intestinal antiseptic. Dose, 3-12 gr. (0.194-0.78 gm.). Called also benzosol-guaiacol.

benzosol-eugenol (ben"zo-sol-u'je-nol). A eugenol derivative, C₁₅H₁₂O₃, used in tuberculosis.

benzosol-guaiacol (ben"zo-sol-gwi'a-kol). Same as benzosol.

benzosulphinide (ben-zo-sul'fin-id). Same as saccharin.

benzoyl (ben-zo'il). The radical, C₆H₅.CO, of benzoic acid and of an extensive series of compounds. b -acetylperoxid. See acetozone. b. carbinol, a local anesthetic, CoHoCO.CHOH. b.-ecgonin, an alkaloid, CoHo.CO.O.CH.CoHo-(COOH)N.CH₃, prepared from cocain: its action resembles that of cassein b.-eugenol, an antitubercular agent, C₃H₅, C₆H₃(OCH₃)CO₂C₆H₅, prepared from benzoic acid and eugenol: it occurs in tasteless, acicular crystals, insoluble in water. Dose, 71-15 gr. (0.5-1 gm.). b.-morphin, a feebly anesthetic benzoyl compound. See peronin. b. paracresol, a compound of paracresol and benzoyl chlorid: used as an intestinal antiseptic in doses of 5 gr. (0.25 gm). b. peroxid, lucidol. b.-pseudotropein, a locally anesthetic alkaloid from coca. b.-quinin, a benzoyl compound with locally anesthetic properties. b. tannate, a yellowish, insoluble powder. b.-tropein, a sub178

stance, $C_{10}H_{10}NO_2+2H_2O$, occurring in the form of silky needles. Its salts are soluble and locally anesthetic.

benzozone (ben'zo-zōn). See acetozone.

benzurin (ben'zu-rin). The dihydroxymercuri derivative of benzopurpurin.

benzycin (ben-zi'sin). Sodium benzyl succinate, CoHo.CH2.O.CO.(CH2)2CO.ONa: used like benzyl benzoate.

benzyl (ben'zil). The hydrocarbon radical, $C_7H_7 =$ C₆H₅.CH₂, of benzyl alcohol and various other bodies. **b. alcohol**. See under alcohol. **b. ben-zoate**, a volatile oil, C₆H₅.CO.O.CH₂.C₆H₅, from balsams of Peru and Tolu. It lowers the tone of unstriped muscle and has been suggested as a remedy in renal, biliary, uterine, and intestinal whooping-cough, painful menstruation, etc. Dose, 5-7 min. (0.3-0.5 c.c.). b. bromid, a war gas, C₆H₆,CH₂Br, causing lacrimation. b. carbinol, phenyl ethyl alcohol, a constituent of oil of rose, possessing anesthetic properties. b. fumerate, a white coo.CH₂C₆H₅, containing 63 6 per cent. of benzyl. It is used like benzyl benzoate, but has the advantage over the latter of being tasteless. Dose, 5-20 gr. (0.3-1.3 gm.). b.-glycocoll, hip-puric acid. b. mandelate, the benzyl ester of mandelic acid: used as an antispasmodic on smooth muscle-fiber, as in high blood-pressure. b.morphin, a morphin derivative, $C_{17}H_{18}NO_2$.O.-CH₂: a good hypnotic. b. succinate, the dibenzyl ester of succinic acid, $(C_6H_5.CH_2.O.CO_1.00)$. CH2)2: used as an antispasmodic to non-striated muscle. Dose, 5-15 gr. (0.3-1 gm.).

benzylidene (ben-zil'id-ēn). A hydrocarbon radi-

cal, C₆H₅CH:.

benzyphos (ben-zi'fos). Sodium dibenzyl phosphate: used like benzyl benzoate.

Béraneck's tuberculin (ba-ran-eks') [Edmond Béraneck, Swiss bacteriologist, 1859-1921]. under tuberculin

Bérard's aneurysm (ba-rarz') [Auguste Bérard, French surgeon, 1802-1846]. See aneurysm.

Béraud's ligament, valve (ba rōz') [Bruno Jean Jacques Béraud, French surgeon, 1823-1865]. See ligament, valve.

berbamin (ber'bam-in). A crystalline alkaloid, C18H19NO3, from Berberis vulgaris.

berberin (ber'ber-in). An alkaloid, C₂₀H₁₇NO₄, from the bark of *Ber'beris vulga'ris*, *Hydras'tis canaden'sis*, and from other plants. It is a tonic and antiperiodic. Dose of the alkaloid or its salts, 1-10 gr. (0.066-0 666 gm.).

Berberis (ber'ber-is) [L.]. A genus of berberidaceous shrubs, many of them medicinal. B. vulga'ris, the common barberry, is an astringent tonic, purgative in considerable doses. Dose of fluidextract, 5-30 min. (0.333-2 c.c.); of tincture, 10 min.-1 fl.dr. (0 666-4 c.c.).

berbin (ber'bin). See oxycanthin.

bergamiol (ber-gam'e-ol). Linalool acetate, the chief constituent of oil of bergamot.

bergamot (ber'ga-mot) [L. berga'mium]. 1. The tree, Cit'rus berga'mia; also its orange-like fruit, whose rind affords the fragrant oil of bergamot (L. ol'eum berga'mii). 2. A popular name for various fragrant labiate plants, such as Men'tha citra'ta and Monar'da fistulo'sa. wild b. Monarda.

bergapten (ber-gap'ten). A stearopten, C₁₂H₈O₄, from oil of bergamot; bergamot camphor.

Bergenhem's operation (bair'gen-hemz) Bergenhem, contemporary Swedish surgeon]. See under operation.

bergenin (ber'jen-in). A crystalline nerve tonic principle from plants of the genus Saxif'raga.

Berger's method, operation (bāhr-zhēz') [Paul Berger, French surgeon, born 1845]. See method, operation.

Berger's paresthesia, sign (ber'gerz) [Emil Berger, Austrian physician]. See under paresthesia and sign.

Bergeron's disease (berzh'ronz) [Etienne Jules Bergeron, French physician, 1817-1900]. See under disease.

Bergonié method or treatment (bār-go-nya') IJean A. Bergonie, French physician, 1857-1925]. See under treatment.

beriberi (ber-e-ber'e) [Singhalese, "I cannot," signifying that the person is too ill to do anything. An endemic form of polyneuritis prevalent chiefly in Japan, India, China, the Philippines, and the Malay Peninsula, and usually fatal (Bontius, 1642). It is marked by spasmodic rigidity of the lower limbs, with muscular atrophy, paralysis, anemia, and neuralgic pains. The disease is believed to be due to a too exclusive diet of overmilled or highly polished rice or other carbohydrate food which is deficient in accessory food factors known as antineuritic vitamin. Called also kakke, asjike, lampe, endemic multiple neuritis, panneuritis epidemua, and polyneuritis endemica. infantile b., a disease of infants in the Philippines, who are nursed by mothers affected with beriberi ship b., a disease resembling tropical beriberi, seen on Norwegian ships, but with dropsy a more prominent symptom than neuritis. wet b., a form with anemia and dropsy, but without paralysis.

beriberic (ber-e-ber'ik). Pertaining to, or of the nature of, beriberi.

Berlin blue (ber-lin' blew). Iron ferrocyanid or some preparation of it: used as a stain in histology.

Berlin's disease (ber'linz) [Rudolf Berlin, German oculist, 1833-1897]. See under disease.

Bernard's canal, layer, puncture, etc. (bernarz') [Claude Bernard, French physiologist, 1813-1878]. See under the nouns.

Bernhardt's disease (bern'harts) [Max Bernhardt, neurologist in Berlin, 1844-1915]. See under

Bernheimer's fibers (bern'hi-merz) [Stefan Bernhermer, Austrian ophthalmologist, 1861–1918]. See under fiber.

berry (ber'e). A small fruit with a succulent pericarp. bear b., Uva ursi. buckthorn b., Rhamnus cathartica. elder b., Sambucus fish b., Cocculus. horse nettle b., Solanum. horse savin b., Juniperus Indian b., Cocculus poke b., Phytolacca prickly ash b.. saw-palmetto b., Serenoa. Xanthoxylum. sumac b., Rhus glabra.

Berthollet's fluid, law (ber-to-laz) [Claude Louis Berthollet, French chemist, 1748-1822]. See fluid and law.

Bertiel'la sat'yri. A tapeworm found in Mau-

bertillonage (bar-te-yon-nahzh') [Alphonse Bertillon, French criminologist, 1853-1914]. The recorded measurement and description of criminals for future identification.

Bertin's bones, column, ligament (ber'tinz) [Exupère Joseph Bertin, French anatomist, 1712-1781]. See bone, column, ligament.

beryllium (ber-il'e-um) [Gr. βήρυλλος beryl].

A metallic element of atomic weight 9.7, symbol Be. Same as glucinum.

besiclometer (bes-ik-lom'et-er). An instrument for measuring the forehead to ascertain the proper width of spectacle frames.

Besnier's rheumatism (be-ne-āz') [Jules Besnier, French physician]. Chronic synovitis.

besoin de respirer (bez-wan' deh res-pe-ra') [Fr.]. The sensation which prompts the act of breathing.

Besredka's vaccine (bes-red'kahz) [Alexander Besredka, pathologist at Pasteur Institute, Paris]. See under vaccine.

Best's operation (bests) [Vans Best, Scotch surgeon, 1836-1875]. See under operation.

179

bestiality (bes-te-al'it-e) [L. beş'tia beast]. Sexual connection with an animal.

Bestucheff's tincture (bes'tu-chefs) [Russian fieldmarshal, 1693-1766]. See tincture.

Beta (be'tah) [L.]. A genus of plants to which the beet belongs. B. vulga'ris, the common beet.

beta- (be'tah-). The second letter of the Greek alphabet, β ; as a prefix in chemic words, to distinguish one of two or more isomers or to indicate the position of substituting atoms or groups in certain compounds. See alpha.

beta-albumosease (be"tah-al-bu-mo'se-ās). Same as erepsin.

betacism (be'tah-sizm) [Gr. $\beta \hat{\eta} \tau a$ the letter β]. The excessive use of the b-sound in speaking.

beta-eigon (be-tah-i'gon). An iodin-peptone preparation. See alpha-eigon.

beta-eucain (be"tah-u-ka'in). See under eucain.

beta-eunol (be-tah-u'nol). A proprietary naphthol and eucalyptol preparation used in surgery and in skin diseases as an antiseptic

beta-hydroxybutyric acid (be"tah-hi-drok"sebu-tir'ik). See beta-oxybutyric acid, under acid.

beta-imidazolylethylamin (be"tah-im"id-a-zolil-eth-il-am'in). Histamin.

beta-iminazolylethylamin (be"tah-im"in-a-zo!"il-eth"il-am'in). Histamin.

betain (be'tah-in) [L. be'ta beet]. A deliquescent crystalline alkaloid, $C_bH_{11}NO_2$, the anhydride of trimethyl glycocoll, having a sweetish taste, derived from the common beet and other sources, and produced by the oxidation of cholin. It is an emmenagogue. Dose, 2-4 gr (0.13-0.26 gm.). **b.** hydrochlorid. See actdol.

beta-ketopalmitic acid (be"tah-ke-to-pal-mit'-ik). CH₂.(CH₂)₁₂CO.CH₂.COOH, an oxidized form

of palmitic acid.

beta-naphthol (be-tah-naf'thol). See naphthol. b. benzoate. Same as benzonaphthol b. bismuth, a brown, powdery mixture of bismuth oxid, 8 parts, with beta-naphthol, 2 parts. It is insoluble in water, and is used as an intestinal antiseptic. Dose, 15-45 gr (1-3 gm). b. carbonate, an ester in colorless, shining scales an intestinal antiseptic.

beta-naphthol-benzylamin (be-tah-naf"tholben-zil'am-in) A reagent by which aldoses can be distinguished from ketoses. It combines with the former and produces crystalline products, but not with the latter.

beta-naphthyl (be-tah-naf'thil). The combining group, C₁₀II₇, of betanaphthol.
 b. benzoate.
 Same as benzonaphthol.
 b. salicylate.
 Same as betol.

beta-oxybutyria (be"tah-oks-e-bu-ti're-ah). The presence of beta-oxybutyric acid in the urine: believed to be the cause of diabetic coma. Cf. kelonuria.

beta-oxybutyric acid (be"tah-oks-e-bu-tir'ik). See acid.

beta-parahydroxyphenylpropionic acid. Same as tyrosin.

beta-phenylalpha-amino-propionic same as phenyl alanin. See under acid.

beta-quinin (be-ta-quin'in). See quinidin.

betasulphopyrin (be-tah-sul-fo-pi'rin) A compound of sulphanilic acid and antipyrin, used in influenza, coryza, and iodism. Dose, 15 gr. (rgm.).

bête rouge (bāt-roozh') [Fr. "red breast"]. The red mite of Martinique and Honduras which burrows into the skin. It is probably a species of Trombidium.

betel (be'tl) [Tamil vettiles]. An East Indian masticatory, consisting of a piece of betel-nut rolled up with lime in a betel-leaf. It is tonic, astringent, and stimulant. Dose of fluidextract, 1-3 dr. (4-12 c.c.). b.-leaf, the leaf of Pi'per be'tle:

used as a masticatory; pan or pawn. **b.-nut**, the nut of Ar'eca cat'echu, a palm-tree of South Asia: it is a highly astringent anthelmintic.

betin (be'tin). A concentration prepared from the common beet: said to be a good substitute for ergot. Dose, 2-4 gr. (0.133-0.26 gm.).

betol (be'tol). A white powder, beta naphthyl salicylate, C₆H₄(OH)CO₂.C₁₀H₇, a derivative of beta-naphthol and salicylic acid. It is nearly insoluble in water, but soluble in 3 parts of boiling alcohol or ether. It is an intestinal antiseptic and antizymotic, and is useful in rheumatism and cystitis and in putrid intestinal diseases. Dose 10-20 gr. (o 648-1.29 gm.). Called also salinaphthol and naphthalol.

Betonica (be-ton'ik-ah) [L.]. A genus of labiate plants. B. officina'lis, wood betony, was formerly used in medicine the tops are astringent and aromatic, the root, emetic and cathartic.

Bettendorff's test (bet'en-dorfz) [A. J. H. M. Bettendorff, German chemist, born 1839]. See under tests.

Betula (bet'u-lah) [L.]. A genus of trees: the birches. See birch.

betulin (bet'u-lin). A resin or camphor, C₃₆H₆₀O₃, from white birch bark.

betulinar (be-tu'lin-ar). A proprietary solution of salicyl-menthol-betulin, 11 parts, and boroglycerin, 19 parts, in tincture of birch, 20 parts, and aromatic birch-water, 50 parts: antirheumatic.

betulol (bet'u-lol). A proprietary preparation of methyl salicylate: used in gout, rheumatism, and neuralgia.

betweenbrain (be-twen'bran). The thalamencephalon

Betz's cells (bets) [Philipp Friedrich Betz, German physician, born 1819]. See under cell.

Beurmann's disease (bowr'manz) [Lucien de Beurmann, French physician, died 1924]. See under disease.

Bevan's incision (bev'anz) [Arthur Dean Bevan, American surgeon, born 1860]. See incision.

Beyerinck's reaction (bi'er-inks) [M. W. Beyer-inck, contemporary Dutch physician]. See under reaction.

bezoar (be-zo'ar) [Persian]. A concretion of various character from the stomachs and intestines of animals: formerly esteemed as a medicine.

Bezold's abscess, mastoiditis, perforation, sign, triad, etc. (ba'zoldz) [Friedrich Bezold, aurist in Munich, 1842-1908]. See abscess, mastoiduis, perforation, sign, triad, etc.

Bezold's ganglion (ba'zoldz) [Albert von Bezold, German physiologist of 19th century]. See ganglion.

B. F. Abbreviation for bouillon filtré. See under tuberculin.

bhang (bhang) [Hind]. Same as Cannabis indica. B. I. Abbreviation for base of prism in.

Bi. Symbol for bismuth.

bi- [L. bi two]. A prefix signifying "two" or "twice."

Bial's test (be'alz) [Manfred Bial, German physician, 1870–1908]. See under tests.

Bianchi's nodule (be-ang'kēz) [Giovanni Battista Bianchi, Italian anatomist, 1681-1761]. The corpora arantii.

biarticular (bi-ar-tik'u-lar). Pertaining to two joints.

biasteric (bi-as-ter'ik). Pertaining to the two asteria.

biauricular (bi-aw-rik'u-lar). Pertaining to the two auricles.

Bib. Abbreviation for L. bi'be. drink

bib (bib). A fragment of a red blood-cell often seen attached to the crescent bodies of the blood of estivo-autumnal fever. bibasic (bi-ba'sik). Doubly basic; having two hydrogen atoms that may be replaced by bases.

biberin (bi-be'rin). Same as bebeerin.

bibulous (bib'u-lus) [L. bib'ulus, from bib'ere to drink]. Having the property of absorbing moisture.

bicameral abscess (bi-kam'er-al) [L. bi two + cam'era chamber]. An abscess with two chambers

bicapsular (bi-kap'su-lar) [L bi two + cap'sula a capsule]. Having two capsules.

bicarbonate (bi-kar'bon-āt). Any salt having two equivalents of carbonic acid to one of a basic substance.

bicardiogram (bi-kar'de-o-gram). A curve in an electrocardiogram indicating the composite effect of the right and left auricle.

bicaudal, bicaudate (bi-kaw'dal, bi-kaw'dāt) [L. bicauda'lis, bicauda'lus; bi two + cau'da tail]. Having two tails.

bicellular (bi-sel'u-lar). Made up of two cells, or having two cells

bicephalus (bi-sef'al-us). See dicephalus.

biceps (bi'seps) [L. from bi two + ca'put head].

1. Having two heads. 2 See muscles, table of.

biceptor (bi-sep'tor). A receptor which has two complementophil groups.

Bichat's canal, fissure, foramen, etc. (beshaz') [Marie François Xavier Bichat, an eminent French anatomist and physiologist, 1771–1802, the founder of scientific histology and pathologic anatomy]. See canal, fissure, foramen, etc.

bichloralantipyrin (bi-klo"ral-an-te-pi'rin). Same as dichloralantipyrin.

bichlorid (bi-klo'rid). 1. Any chlorid which contains two equivalents of chlorin. 2. An abbreviation for bichlorid of mercury. See under mercury.

bichloridol (bi-klo'rid-ol) A proprietary form of mercury bichlorid

bicho (be'ko). Epidemic gangrenous rectitis. See under rectitis.

bichromate (bi-kro'māt). Any salt of the acid, $H_2Cr_2O_7$

biciliate (bi-sil'e-āt). Possessing two cilia.

bicipital (bi-sip'it-al). 1. Having two heads. 2. Pertaining to a biceps muscle.

Bi₂(CO₃)₃. Bismuth carbonate.

biconcave (bi-kon'kāv). Having two concave surfaces.

biconvex (bi-kon'veks). Having two convex surfaces

bis twice + cornu'tus horned] Having two horns.

bicoronial (bi-ko-ro'ne-al). Pertaining to the two coronæ.

bicorporate (bi-kor'po-rāt) [L. bi two + cor'pus body] Having two bodies

bicuspid, bicuspidate (bi-kus'pid, bi-kus'pid-āt)
 [L. bis twice + cus'pis point]. 1. Having two cusps or points 2. A bicuspid valve. 3. A tooth having two cusps; a premolar tooth

bicycle heart (bi'si-kl hart). A heart disease in consequence of misuse of the bicycle. b. throat, a form of sore throat due to the inhalation of road-dust.

B. i. d. Abbreviation for L bis in di'e, twice a day.

Bidder's ganglion [Heinrich Friedrich Bidder,
German anatomist, 1810-1804]. See ganglion.

bidermoma (bi-der-mo'mah) [L bi two + Gr. δέρμα skin + -ωμα tumor]. A teratoid growth containing two germ-layers.

bidet (be-da') [Fr. "pony"]. A fixed sitz-bath-tub, usually with attachments for giving injections, etc.

biduotertian (bid"u-o-ter'she-an). Tertian but having the recurrences nearly continuous. See under fever.

biduous (bid'u-us). Lasting for two days.

Biedert's cream mixture (be'derts) [Philip Biedert, pediatrist in Strasburg, 1847-1916]. See under mixture.

bi-electrolysis (bi"e-lek-trol'is-is). Electrolysis in which decomposition takes place at both poles.

biennial (bi en'e-al) [L. bi two + an'nus year]. 1.
Occurring once in two years; also lasting two years.
2. A plant which completes its life history in two years, usually reproducing the second year.

Bier's anesthesia, hyperemia, etc. (beerz) [August Karl Gustav Bier, surgeon in Berlin, born 1801]. See anesthesia, hyperemia, etc.

Biermer's anemia, sign (ber'merz) [Anton Buermer, German physician, 1827-1892]. See anemia and sign

Biernacki's sign (byer-naht'skez) [Edmund Biernacki, Polish physician in Lemberg, Austria, 1867–1912]. See under sign

Biesiadecki's fossa (bya-syah-det'skēz) [Alfred von Biesiadecki, Polish physician, 1839-1888]. See under fossa.

Biett's solution (be-ets') [Laurent Théodore Biett, Parisian physician, 1781-1840]. See solution

bifid (bi'fid) [L bif'idus]. Cleft into two parts.

bifocal (bi-fo'kal). Having two foci.

biforate (bi-fo'rāt) [L. bis twice + fo'ra opening]. Having two foramina or openings

bifurcate (bi-fur'kāt) [L. bifurca'tus, from bi two + fur'ca fork] Forked; divided into two like a fork.

bifurcation (bi-fur-ka'shun) [L bifurca'tto, from bi two + fur'ca fork] Division into two branches.

Bigelovia (big-e-lo've-ah) [for Jacob Bigelow, 1787–1870] A genus of composite-flowered plants, B vene'ta, of North America, is one of the species affording damiana (q v)

Bigelow's ligament (big'el-ōz) [Henry Jacob Bigelow, Boston surgeon, 1816-1890] See ligament

bigemina (bi-jem'in-ah). A bigeminal pulse.

bigeminal (bi-jem'in-al). Twin. b. bodies, b. pulse. See corpus bigeminum and pulse

bigeminum (bi-jem'ın-um), pl. bigem'ina [L. "twin"]. Either one of the corpora bigemina of the fetus or of a bird; the fetal bigemina become the corpora quadrigemina.

bigeminy (bi-jem'in-e). The condition of occurring in pairs, especially the condition of two pulse-beats occurring in rapid succession. See bigeminal pulse, under pulse.

big-head. Bulging of the skull-bones of an animal, due to osteomalacia.

big-knee. See under knee.

bigonial (bi-go'ne-al) Connecting the two gonions.

bilabe (bi'lāb) [L. bis twice + la'bium lip]. An instrument for taking small calculi from the bladder through the urethra.

bilateral (bi-lat'er-al) [L. bis twice + la'tus side]. Having two sides, or pertaining to both sides.

bilateralism (bi-lat'er-al-izm). Bilateral symmetry.

bilberry (bil'her-e). The huckleberry of Europe, Vaccin'ium myrtil'lus: used as an intestinal astringent.

bile (bil) [L. bi'lis]. The golden-brown or greenish-yellow substance secreted by the liver; gall. It has a bitter taste, an alkaline reaction, and a density of from 1026 to 1032. It contains water, sodium taurocholate, sodium glycocholate, mucus, cholesterin, lecithin, fat, and various pigments. The bile aids the action of the pancreatic juice: it emulsifies fat and prevents putrefactive changes in the intestine. Bile salts have been used in medicine to stimulate the secretory activity of the liver, as in obstructive jaundice and biliary fistula. A b., bile from the common bile-duct.

B b., bile from the gall-bladder. **C** b., bile from the hepatic duct. **cystic** b., the bile which is held for some time in the gall-bladder before moving into the intestine. **Platner's crystal-lized** b., a crystalline substance obtained by the action of ether in an alcoholic extract of bile. **white** b., the colorless liquid sometimes found in obstructed common and hepatic ducts; believed to be a secretion of the mucosa of the biliary passages.

bile-cyst. The gall-bladder.

bile-duct. One of the excretory ducts of the liver See under *duct*

bilein, bilene (bi-le'in, bi'len). A proprietary mixture of the essential salts of the bile.

bileyl (bil'il). A proprietary extract of fresh ox-

Bilharzia (bil-har'ze-ah) [for T. Bilharz]. A genus of flukes or trematodes. See Schistosoma hæmatobium.

bilharzial (bil-har'ze-al) Bilharzic.

bilharziasis, bilharziosis (bil-har-zi'as-is, bil-har-ze-o'sis). Discuse due to the presence of Bilharzia (Schistosoma).

bilharzic (bil-har'zik). Pertaining to or caused by Bilharzia.

biliary (bil'e-a-re). Pertaining to the bile.

bilicyanin (bil-e-si'an-in) [L. bi'lis bile + cya'neus blue]. A blue pigment derivable from biliver-din; cholecyanin

bilifaction (bil-e-fak'shun). Bilification.

bilifecia (bil-if-e'se-ah). Bile in the feces.

bilification (bil"1f-ik-a'shun). The formation or secretion of bile.

biliflavin (bil-if-la'vin) [I. bi'lis bile + fla'vus yellow]. A yellow pigment obtainable from biliverdin.

bilifulvin (bil-if-ul'vin) [L. bi'lis bile + ful'vus tawny]. An impure bilirubin of a tawny color; also a tawny pigment from ox-gall, not normally found in healthy human bile.

bilifuscin (bil-if-us'in) [L. bi'lis bile + fus'cus brown]. A pigment from human bile and gall-stones

bilihumin (bil-e-hu'min) [L. bi'lis bile + hu'mus earth]. An insoluble ingredient of gall-stones.

bilin (bi'lin) [L. bi'lis bile]. The main constituent of the bile, composed chiefly of the sodium salts of the normal bile acids.

bilineurin (bil-e-nu'rin) [L. bi'lis bile + Gr. νεθρον nerve]. Same as cholin.

bilious (bil'yus) [L bilto'sus]. Characterized by bile, by excess of bile, or by biliousness.

biliousness (bil'yus-nes) Malaise, with constipation, headache, and indigestion, attributed to an excessive secretion of bile.

biliphein (bıl-e-fe'ın) [L. bi'lis bile + Gr. φαιδs tawny] Bilirubin; also, a mixed pigment obtainable from the bile.

biliprasin (bil-e-pra'sin) [L. bi'lis bile + Gr. πράσον leek]. A green pigment from gall-stones.

bilipurpin, bilipurpurin (bil-e-pur'pin, bil-e-pur'pu-rin) [L. bi'lis bile + pur'pur purple]. A purple pigment from biliverdin.

bilipyrrhin (bil-e-pir'in) [L. bi'lis bile + πυβρός red-yellow]. Same as biliphein.

bilirubin (bil-e-roo'bin) [L. bi'lis bile + ru'ber red]. A red bile-pigment, C₁₀H₁₈N₂O₃, sometimes found in urine and occurring in the blood and tissues in jaundice It is crystalline in form, and is insoluble in water, nearly so in alcohol, but quite soluble in alkaline solutions. It is now believed that bilirubin is manufactured out of hemoglobin by the Kupffer cells of the liver.

bilirubinate (bil-e-roo'bin-āt). A salt of bilirubin.
 bilirubinemia (bil-e-roo-bin-e'me-ah) [bilirubin + Gr. atμa blood]. The presence of bilirubin in the blood.

bilirubinic (bil-e-roo-bin'ik). Pertaining to bilirubin.

bilirubinuria (bil-e-roo-bin-u're-ah). Presence of bilirubin in the urine.

bilitropin (bil-it'ro-pin). Hexamethylentetramin in combination with ethereal oils: used in diseases of the liver and the bihary tract

biliuria (bil-e-u're-ah) [L. bilis bile + Gr. οὖρον urine] Bile in the urine.

biliverdin (bil-e-ver'dın) [L. bi'lis bile + vir'idis green]. A green pigment, C₁₀H₂₀N₂O₅, formed from bilirubin by oxidation. It occurs in gall-stones and in the urine in jaundice.

biliverdinate (bil-e-ver'din-āt). A salt of biliverdin.
 bilixanthin (bil-e-zan'thin) [L. bi'lis bile + Gr. ξανθός yellow]. Same as choletelin.

bill of health. A document which must be obtained by the master of a vessel from a consul before his vessel may sail.

Billroth's disease, mixture, operation (bil'rōts) [Theodor Billroth, surgeon in Vienna, 1829-1894]. See disease, mixture, operation.

bilobate (bi-lo'bāt) [L. bi two + lo'bus lobe]. Having two lobes.

bilobular (bi-lob'u-lar) [L. bilobula'ris]. Having two lobules.

bilocular (bi-lok'u-lar) [L. bis twice + loc'ulus cell]. Having two compartments.

biloculate (bi-lok'u-lāt). Bilocular.

bilophodont (bi-lof'o-dont) [L bi two + Gr. $\lambda \delta \varphi$ os ridge + $\delta \delta \delta \delta v$ s tooth] Having teeth with two ridges on them, applied to certain animals, as the kangaroo.

biltong (bil'tong). The dried meat of a species of buck of South Africa. said to be very nutritious.

bimanual (bi-man'u-al) [L. bis twice + manua'lis of the hand]. With both hands, performed by both hands.

bimastic (bi-mas'tik). Having two mammæ.

bimastism (bi-mas'tizm) [I.. bi two + Gr. μαστός breast]. The state of having two mammæ.

bimastoid (bi-mas'toid). Pertaining to both mastoid processes.

bimaxillary (bi-mak'sil-a-re). Pertaining to or affecting both jaws.

bimolecular (bi-mo-lek'u-lar). Relating to or formed from two molecules.

binary (bi'na-re) [L. bina'rius of two]. Made up of two elements.

binaural (bin-aw'ral) [L. bi'ni two + au'ris ear]. Pertaining to both ears.

binauricular (bin-aw-rik'u-lar) [L. bi'ni two + auric'ula little ear]. Pertaining to both auricles.

binder (bin'der). An abdominal girdle or bandage, chiefly for women in childbed (obstetric b.).

bindweb (bind'web). 1. The neuroglia. 2. Any connective tissue or stroma.

binegative (bi-neg'at-iv). Having two negative balances.

Binet age (be-na') See under age.

Binet's test (be-naz') [Alfred Binet, French physiologist, 1857-1911]. See under tests.

Binet-Simon test (be-na-se-man') [Alfred Binet; T. Simon]. See under tests.

Bing's entotic test (bingz) [Albert Bing, German

otologist, 1844-1022]. See under tests.

biniodid (bin-i'o-did). Any iodid that has two atoms of iodin in each molecule.

Bi(NO₃)₃. Bismuth nitrate.

binocular (bin-ok'u-lar) [L. bi'ni two + oc'ulus eye]. Pertaining to both eyes

binotic (bin-ot'ik) [L. bi'ni two + Gr. obs ear]. Pertaining to both ears.

binovular (bin-ov'u-lar) [L. bi'ni two + o'vum an egg]. Derived from two distinct ova.

binoxid (bin-oks'id). Same as dioxid.

binuclear, binucleate (bi-nu'kle-ar, bi-nu'kle-āt) [L. bi'ni two + nu'cleus nut]. Having two nuclei.

Binucleata (bi-nu-kle-a'tah) [L. bi'ni two + nu'-cleus]. A proposed new order of flagellate protozoa, including the Hæmosporidia and the trypanosomes.

binucleolate (bi-nu-kle'o-lāt) [L. bi'ni two + nu-cleolus]. Having two nucleoli.

Binz's test (binz) [Karl Binz, German pharmacologist, 1832-1912]. See under tests.

bio-aëration (bi"o-a-er-a'shun) A modification of the activated sludge method of purifying sewage.

bio-assay (bi-o-as'a) [Gr. βlos life + assay]. Determination of the active power of a sample of a drug by noting its effect on animals, as compared with a standard preparation.

bioblast (bi'o-blast) [Gr. βlos life + βλαστός germ].

An elementary organism, one of the fundamental elements of cell activities. See micelle.

biocatalyst (bi-o-kat'al-ist) [Gr. βlos life + catalyst]. A name suggested by Bayliss for enzyme.

biochemics (bi-o-kem'iks) [Gr. β los life + $\chi\eta\mu\epsilon$ la chemistry]. The chemistry of life.

biochemistry (bi-o-kem'is-tre) [Gr. *βlos* life + *chemistry*]. The chemistry of living organisms and of vital processes, physiologic chemistry.

biochemy (bi-ok'e-me) [Gr. βlos life + χημεία chemistry]. The chemic forces at work in living organisms.

biocitin (bi-o-si'tin). A lecithin preparation from eggs.

biocolloid (bi-o-kol'oid) [Gr βlos life + colloid]. A colloid from animal or vegetable tissue.

biocytoculture (bi-o-si'to-kul-tūr) [Gr βlos life +κύτος cell + culture] A culture made from pus whose leukocytes are alive.

biocytoneurology (bi-o-si"to-nu-rol'o-je) [Gr. βίος life + κύτος cell + νεῦρον nerve + λόγος treatise]. The study of living nerve-cells.

biodal (bi'o-dal). Monoiodo dibismuth methylene dicresotinate used as a dressing powder.

biodynamics (bi"o-di-nam'iks) [Gr. βlos life + δίναμις force]. The branch of physiology which deals with the active vital phenomena of organisms.

biogen (bi'o-jen) [Gr. βlos life + γεννῶν to generate]. 1. Same as micelle. 2 A proprietary preparation of magnesium peroxid

biogene (bi'o-jēn). A proprietary milk preparation used as an invalid food.

biogenesis (bi-o-jen'es-is) [Gr. βlos life + γένεσις origin]. The origin of living beings from things already living.

biogenetic (bi"o-jen-et'ik). Pertaining to biogenesis.

biogenous (bi-oj'en-us). Growing on living organisms.

bioglobin (bi-o-glo'bin). A proprietary wine of iron and hemoglobin.

biograph (bi'o-graf). 1. An instrument for analyzing and rendering visible the movements of animals used in diagnosis of certain nervous diseases. 2. Same as pneumatograph.

biokinetics (bi"o-kin-et'iks) [Gr βlos life + κινητικός moving]. The science of the movements, or changes of position, within developing organisms

Biol. Abbreviation for biology.

biologic, biological (bi-o-loj'ik, bi-o-loj'ik-al). Pertaining to biology.

biologist (bi-ol'o-jist). An expert in biology.

biologos (bi-ol'og-os) [Gr. βlos life + λόγοs word]. The science of matter in the living state; the living and intelligent power displayed in organic and cellular activities. biology (bi-ol'o-je) [Gr. βlos life + λόγος discourse]. The science of living organisms, and of their structure, life, growth, and actions.

bioluminescence (bi"o-lu-min-es'ens). Luminescence or phosphorescence displayed by animal and vegetable organisms.

biolysis (bi-ol'is-is). Chemic decomposition of organic matter by the action of living organisms.

biolytic (bi-o-lit'ik) [Gr. βlos life + λυτικός loosening]. Destructive to life.

biomathematics (bi"o-math-em-at'iks) [Gr. βlos life + mathematics]. Mathematics as applied to the phenomena of living things.

biomedicine (bi-o-med'is-in). Clinical medicine based on the principles of physiology and biochemistry.

biometer (bi-om'et-er) [Gr. βlos life + μέτρον measure]. An apparatus by which extremely minute quantities of carbon dioxid can be measured. used in measuring the carbon dioxid given off from functionating tissue.

biometrician (bi"o-met-rish'an). Λ specialist in the science of biometry.

biometrics (bi-o-met'riks). Same as biometry.

biometry (bi-om'et-re) [Gr. βlos life + μέτρον a measure]. 1. The science of the application of statistical methods to biologic facts; mathematical analysis of biologic data. 2. In life insurance, the calculation of the expectation of life.

biomolecule (bi-o-mol'ek-ūl). A molecule of living substance.

biomonad (bi-o-mo'nad). One of the granules of protoplasm.

biomone (bi'o-mon). A minute particle of living matter made up of biomolecules.

biomore (bi'o-mōr). A mass of biomolecules forming one of the organs of a cell.

bion (bi'on) [Gr. βιῶν living]. An individual living organism.

bionecrosis (bi-o-nek-ro'sis). Same as necrobiosis.
 bionergy (bi-on'er-je) [Gr. βlos life + ξργον work].
 Life-force, the force exercised in the living organ-

BiONO3 H2O. Bismuth subnitrate.

bionomics (bi-o-nom'iks) [Gr. β los life + $\nu \delta \mu$ os law]. The study of the relations of organisms to their environment; ecology.

bionomy (bi-on'om-e) [Gr. β tos life + $\nu b\mu os$ law]. The sum of knowledge regarding the laws of life.

bionosis (bi-o-no'sis) [Gr. β los life $+ \nu \delta \sigma$ os disease]. Any disease caused by living agencies, as bacteria or parasites.

bio-occlusion (bi"o-ok-lu'zhun). Normal occlusion of the teeth.

bio-osmotic (bi"o-oz-mot'ik) [Gr. βlos life + osmotic]. A term applied to the osmotic pressure in living things.

biophagism, biophagy (bi-of'aj-izm, bi-of'aj-e) [Gr. βlos life + φαγεῖν to eat]. The eating or absorption of living matter.

biophagous (bi-of'ag-us). Feeding on living matter.

biophore (bi'o-fōr) [Gr. βlos life + φορόs bearing]. Any one of the smallest living organisms which exhibit vital forces; one of the ultimate molecules of living matter. According to Weismann, the biophores are aggregated into groups called determinants, which are beyond the power of vision by the microscope, these groups being gathered into larger ones called ids, which are the visible chromatin granules, and these in turn into larger groups called idants, which are the chromosomes.

biophoric (bi-o-for'ik). Relating to biophores.

biophylactic (bi"o-fi-lak'tik) [Gr. βlos life + φύλαξ guard]. Guarding or preserving life.

biophysics (bi-o-fiz'iks) [Gr. βlos life + physics]. The physics of vital processes.

- biophysiography (bi"o-fiz-e-og'raf-e) [Gr. βlos life + physiography]. Structural or descriptive biology.
- **biophysiology** (bi"o-fiz-e-ol'o-je) [Gr. β los life + $\varphi b \sigma v$ s nature + $\lambda \delta \gamma os$ discourse]. That part of biology which includes organogeny, morphology, and physiology.
- **bioplasia** (bi-o-pla'se-ah) [Gr. β los life $+ \pi \lambda \delta \sigma \epsilon \iota \nu$ to form]. The storing up of food energy in the form of growth.
- bioplasm (bi'o-plazm) [Gr. βlos life + πλάσμα plasm]. 1. The primitive matter out of which organized tissues are composed, protoglasm. 2. The more essential or vital part of protoplasm, contrasted with the paraplasm. 3. A proprietary preparation used as a nerve tonic.
- bioplasmic (bi-o-plaz'mik). Of or pertaining to bioplasm.
- bioplasmin (bi-o-plaz'min). A substance supposed to exist in all living cells which is essential to the functionating of the cell, but which gradually becomes exhausted, causing a diminution of metabolic activity.
- bioplasminogen (bi"o-plaz-min'o-jen). The supposed substance from which bioplasmin is developed during embryonic growth, and which is itself formed by the junction of substances (called spermatoplasmon and ovoplasmon) in the elementary male and female cells.
- **biopłasson** (bi-o-plas'on) [Gr. βίος life + πλάσσων forming] Protoplasm.
- bioplast (bi'o-plast). An independently existing mass of living matter See micelle
- bioplastic (bi-o-plas'tik) [see bioplasia]. Aiding in growth said of food energy.
- **biopsy** (bi'op-se) [Gr β los life $+\delta\psi$ is vision]. Inspection of the living body, as opposed to *necropsy*; especially diagnostic examination of a piece of tissue removed from a living subject.
- biopsychic, biopsychical (bi-o-si'kik, bi-o-si'kik-al). Pertaining to psychic phenomena in their relation to the living organism.
- **biopyoculture** (bi-o-pi'o-kul-tūr) [Gr. β los life + $\pi \hat{vor}$ pus + culture]. A culture made from pus whose cells are alive.
- biorbital (bi-or'bit-al) [L. bis twice + or'bita orbit]. Pertaining to both orbits.
- biorgan (bi'or-gan). A physiologic organ as distinguished from a morphologic organ or idorgan.
- bioroentgenography (bi"o-rent-gen-og raf-e) [Gr. βlos life + rontgenography]. The making of kinematographic x-ray pictures.
- bios (bi'os) [Gr. \(\theta\)los life]. A substance of unknown constitution first extracted from yeast. It seems to be a nuclear autocatalyst which by its presence greatly accelerates the growth process of yeast (Wildier)
- bioscope (bi'o-skōp) [Gr. βlos life + σκοπεῦν to inspect] An instrument used in bioscopy.
- **bioscopy** (bi-os'ko-pe) [Gr. β los life $+ \sigma \kappa \sigma \pi \epsilon \hat{\nu} \nu$ to inspect]. 1. The examination of the body to see whether or not life is extinct. 2. Examination of the dead fetus with respect to its viability when born.
- biose (bi'ôs). A sugar containing two carbon atoms.
 biosin (bi'o-sin). An iron-albumin-lecithin nutrient preparation.
- biosis (bi-o'sis) [Gr. Blos life]. Vitality or life.
- bioson (bi'o-sōn). An albuminate of iron lecithin nutrient preparation.
- biostatics (bi-o-stat'iks) [Gr. βlos life + στατικόs standing]. The science of the structure of organisms in relation to their function.
- biostatistics (bi"o-stat-is'tiks) [Gr. βios life + statistics]. Vital statistics. See under statistics.
- biosterin (bi-o-ste'rin). An alcohol, C₂₂H₄₄O₂, related to cholesterol, which seems to have the

- health and growth promoting qualities of vitamin A.
- biosulphol (bi-o-sul'fol). A colloidal sulphur preparation, given by the mouth in skin diseases and ioint affections.
- biota (bi'o-tah) [Gr. *\textit{\bios}* life] All the living things of a region; the combined flora and fauna of a region.
- biotaxis, biotaxy (bi-o-tak'sis, bi'o-tak-se) [Gr. β los life $+ \tau \dot{\alpha} \xi$ s arrangement]. 1. The selecting and arranging powers of living cells. 2. The systematic classification of living organisms.
- biotic (bi-ot'ik). 1. Pertaining to life or living matter. 2. Pertaining to the biota.
- biotics (bi-ot'iks) [Gr. βιωτικός living]. The functions and qualities peculiar to living organisms, or the sum of knowledge regarding these qualities.
- biotomy (bi-ot'o-me) [Gr. βlos life + τομή a cutting].
 T. The study of animal and plant structure by dissection.
 2. Vivisection.
- biotoxin (bi-o-tok'sin) [Gr. βlos life + toxin]. A toxin from the tissue of the body.
- biotripsis (bi-o-trip sis) [Gr. βlos life + τρίψις rubbing]. Wearing away of the skin, seen in old people.
- Biot's breathing or respiration (be-ōz') [Camille Biot, French physician of the nineteenth century]. See under respiration.
- **biotype** (bi'o-tip) [Gr. β los life + type]. A group of individuals possessing the same genotype or fundamental hereditary constitution. See genotype.
- biovular (bi-ov'u-lar) [L. bis twice + ovular]. Derived from two ova, referring especially to twins.
- bioxyl (bi-ok'sil). Trade name for a solution of bismuth oxychlorid it is used intramuscularly in syphilis.
- B. I. P. See Morison's method, under method.
- bipalatinoid (bi-pal-at'in-oid). A gelatin capsule partitioned into two compartments for the safe administration of two incompatible drugs.
- bipara (bip'ar-ah) [L. bi- two + parere to give birth]. A woman who has borne two children.
- biparasitie (bi"par-as-it'ik). Living parasitically upon a parasite.
- biparental (bi-par-en'tal). Derived from two parents, male and female.
- **biparietal** (bi-par-i'et-al). Pertaining to the two parietal eminences.
- **biparous** (bip'a-rus) [L. bi two + par'ere to produce]. Producing two at a birth.
- bipartite (bi-par'tit) [L. biparti'tus]. Having two parts or divisions.
- biped (bi'ped) [L. bi two + pes foot]. 1. Having two feet. 2. An animal with two feet.
- bipedal (bip'ed-al). With, or pertaining to, both feet.
- bipenniform (bi-pen'if-orm). Doubly feathershaped said of muscles whose fibers are arranged on each side of a tendon, like the parts on the shaft of a feather.
- biperforate (bi-per'fo-rat). Having two perforations.
- bipolar (bi-po'lar). 1. Having two poles or processes. 2. Pertaining to both poles. 3. A two-poled nerve-cell. rod b., any one of those bi-polar nerve-cells which are related to the terminations of the rod-visual cells.
- Bipola'ris sep'ticus. The group of bacteria causing hemorrhagic septicemia. See Pasteurella.
- bipositive (bi-poz'it-iv). Having two positive valences.
- bipp. See Morison's method, under method.
- bipubiotomy (bi"pu-be-ot'o-me) [L. bis twice + pubiotomy]. See ischio pubiotomy.
- biquinil (bi-kwin'il). Trade name for iodobismuthate of quinin and bismuth oxychlorid in oil: used intramuscularly in syphilis.

biramous (bi-ra'mus) [L. bi two + ra'mus branch]. Consisting of, or possessing, two branches.

birch (bertsh). Any tree or shrub of the genus Bet'ula. The tarry oil of Bet'ula al'ba (white birch), and the volatile oil of B. ken'ta (black birch), are used in medicine.

Bircher's operation (ber'kerz) [Heinrich Bircher, Swiss surgeon, 1850-1923]. See under operation.

Swiss surgeon, 1850-1923]. See under operation.

Birch-Hirschfeld's stain (bersh-hersh'felts)
[Felix Victor Birch-Hirschfeld, German pathologist, born 1842]. See stains, table of.

bird-arm. Reduction in size of the forearm from atrophy of the muscles.

bird-leg. Reduction in size of the leg from atrophy of the muscles.

bird-lime (berd'lim) [bird + L. li'mus slime]. A viscous or gummy substance of various origin, used for catching small birds, some kinds are employed to some extent in dressing wounds and sores.

Bird's formula, treatment [Golding Bird, English physician, 1814-1854]. See formula and treatment.

Bird's sign [Samuel Dugan Bird, contemporary Australian physician] See sign.

birefractive, birefringent (bi-re-frak'tiv, bi-re-frin'jent) [L. bis twice + refran'gere to break up]. Doubly refractive.

birhinia (bi-rin'e-ah) [L. bi two + Gr. bis nose].

Double nose.

Birkett's hernia (ber'kets) [John Birkett, English surgeon of the nineteenth century]. See under hernia.

birmo (ber'mo). A Swiss natural bitter water containing principally sodium and magnesium sulphates.

birotation (bi-ro-ta'shun). Same as mutarotation.

birth (berth). 1. The act or process of being That which is born. b.-control, reguborn. 2 lation of number and time of birth of offspring by prevention of conception. cross-b., preternatural labor with fetus lying transversely. deadb., birth of a fetus which, during or before birth, has lost all signs of antenatal life, heart-beat, pulsation, movement. head-b., a birth in which the head presents. b.-mark, a congenital nevus **b.-palsy**, any paralytic affection due to an injury at birth **premature b.**, expulsion of the fetus after the sixth month, but before full term stillb., birth of a fetus exhibiting heart-beat, but not pulmonary respiration. Such a fetus may die or may possibly be resuscitated.

bisacromial (bis-ak-ro'me-al). Pertaining to the two acromial processes.

bisalt (bi'salt). An acid salt.

bisamylose (bis-am'il-ōs) The ultimate structural element of starch, it is an anhydrid of maltose, C₁₂H₂₀O₁₀; called also diamylose.

bisaxillary (bis-ak'sil-a-re). Pertaining to both axillæ.

bische (bish). A malignant form of dysentery prevalent in Trinadad.

Bischoff's crown (bish'ofs) [Theodor Ludwig Wilhelm von *Bischoff*, German anatomist, 1807–1882]. See *crown*.

Bischoff's operation (bish'ofs) [Johann Jacob Bischoff, German gynecologist, born 1841]. Sec operation.

Bischoff's test (bish'ofs) [Carl Adam Bischoff, German chemist, born 1855]. See under tests.

bisclorol (biz'klo-rol). Trade name for bismuth oxychlorid in camphor-water: used intramuscularly in syphilis in doses of o.1-o.2 gm.

biscuit (bis'ket). 1. A small loaf or cake of bread.
2. Porcelain which has undergone the first baking, before it is subjected to the glazing or enameling.
diabetic b., a form of bread or cake devised for the use of diabetics.

biscuiting (bis'ket-ing) The first baking of porcelain paste, by which biscuit is formed.

bisection (bi-sek'shun) [L. bis twice + sec'tio a cut]. A cutting into two parts.

bisermol (biz'er-mol). A solution in oil of an amalgam of bismuth and mercury. for intramuscular injection in syphilis.

bisexual (bi-sek'shu-al) [L. bis twice + sex'us sex]. Having the reproductive organs of both sexes; hermaphrodite; also having sexual feeling for both sexes.

bisferious (bis-fe're-us) [L. bis twice + feri're to beat]. Having two beats.

bisiliac (bis-il'e-ak) [L. bis twice + iliac]. Pertaining to the two most remote points of the iliac crests.

Bis in d. Abbreviation for L. bis in di'e, twice a day.

Biskra button (bis'krah). See furunculus orientalis.

bismal (biz'mal) Bismuth methylene digallate, ${}_{4}C_{15}H_{12}O_{10} + {}_{3}Bi(OII)_{3}$, a bluish powder, insoluble in water, soluble in alkalis, and used as an astringent in diarrhea. Dose, $1\frac{1}{2}$, $4\frac{1}{2}$ gr. (0.1-0.3 gm.).

Bismarck brown. See under brown.

bismogene (biz'mo-jēn) An unknown constituent of the tissues which changes bismuth into the therapeutically active bismoxyl

bismogenol (biz-mo'jen-ol). Basic salicylate of bismuth used in treating syphilis by intramuscular injection.

bismon (biz'mon) Colloidal oxid of bismuth, containing 20 per cent. of bismuth

bismophan (biz'mo-fan). A proprietary antisyphilitic remedy; it is the bismuth salt of phenylcinchoninic acid.

bismosol (biz'mo sol). A solution of potassium sodium bismuthotartrate and piperazin in an aqueous solution of glucose used by intramuscular injection in syphilis.

bismostab (biz'mo-stab) A proprietary suspension of metallic bismuth—used in syphilis by intramuscular injection

bismoxyl (biz-mok'sil). An organic bismuth compound used in the treatment of syphilis

bismutal (biz'mu-tal) An astringent and antiseptic mixture of bismuth-sodium phosphate and sodium salicylate.

bismutan (biz'mu-tan). A bright-yellow, insoluble powder, said to contain bismuth, resorcinol, and tannic acid: recommended for the diarrhea of children Dose, 1-3 gr. (0.065-0.2 gm) every two hours

bismuth (biz'muth) [L. bismu'thum]. A silver-white metal, atomic weight 208, symbol B1 1ts salts are much used in medicine, especially in inflammatory diseases of the stomach and intestine. Recently bismuth preparations have been much used in the treatment of syphilis by intramuscular injection. b. albuminate, a white or grayish insoluble powder used for intestinal and gastric Dose, 8 15 gr. (0 5-1 gm.) **b. and am**monium citrate, a white, crystalline compound: astringent in intestinal irritation. Dose, 1-5 gr. (0.065-0 324 gm) **b. benzoate**, a whitish, tasteless powder, Bi(C₆II₆CO₂)₃Bi(OII)₃. an external and internal antiseptic. Dose, 5-15 gr. (0.3-1 gm.). **b. beta-naphtholate**. See orphol. **b. boro**phenate, a compound used as an antiseptic dusting-powder. b. carbolate, Bi(OH)₂C₆H₅O, a grayish-white powder: used as an intestinal antiseptic in doses of 5-15 gr. (0 324-1 gm). cerium salicylate, a bismuth salt, in the form of a pinkish, insoluble powder used in enteritis, diarrhea, etc. Dose, 5-15 gr. (0.32-1 gm.). b. chrysophanate. See dermol. b. citrate, an amorphous powder, BiC₆H₆O₇, used in pharmacy and in the preparation of other bismuth remedies. b. cresolate, a grayish-white, tasteless, and odorless powder: an intestinal antiseptic and a good

substitute for iodoform. b. disalicylate. See gastrosan. b. dithiosalicylate. See thioform. b. emetin iodid. See under emetin. ionoid ionoid of b., a watery suspension of colloidal bismuth. Intravenous dose in the treatment of syphilis, 6-12 c.c. equivalent to 0 02-0 04 gm. of hismuth.

b. lactate, a white powder, C₃H₄O₃ Bi.C₃H₆O₃:
used in diarrhea in doses of 1 to 2 gr. (0.065 0.13 gm). b. loretinate, an antiseptic and astringent combination of bismuth and loretin used externally for wounds and skin diseases, and internally for the diarrhea of tuberculosis. Dose, 71 gr. (0.5 gm). b. metacresolate. A pale gray powder (75 per cent. of bismuth, 175 per cent. of metacresol), antiseptic used in diseases of the alimentary canal. b. naphtholate, a compound of bismuth with cresol, phenol, and beta-naphthol. used as an intestinal antiseptic. Dose, 5-15 gr. Called also naphthol-bismuth and $(o \beta - i gm)$. or bhol **b**. **r** b. nitrate, used as an astringent in phthisical diarrhea. Dose, 5 gr (0 3 gm). b. ole-ate, an insoluble emollient and astringent powder, B1(C17H33CO2)3 used externally in skin disb. oxid, a powder of a dull lemon-yellow color, Bi₂O₃, used like bismuth subnitrate in doses of 10-30 gr (0.05-2 gm). **b. oxybromid**, an impalpable yellowish powder, BiOBr, to be given in a tragacanth emulsion: it is useful in nervous dyspepsia b. oxychlorid, a white powder, sometimes known as pearl white, BiOCl, used like bismuth subnitrate b. oxyiodid, a brownish-red powder, BiOI, a local antiseptic useful in certain stomach diseases Dose, 5-10 gr (0 32-0 65 gm) b. oxy-iodo-gallate. See airoform b. oxyiodopyrogallate, a fine, yellowish-red powder, $C_6H_2(OH)_2 O B_1(OH) 1$, recommended as a surgical antiseptic powder pancreatinized b., a proprietary remedy for dyspepsia Dose, 15–75 gr (1–5 gm.). **b. peptonate**, a remedy for gastralgia and dyspepsia Dose, 15–75 gr (1–5 gm.) An antiseptic. used for diseases of the digestive organs-bismuth, 27 5 per cent, phenol, 22 per b. permanganate, a black, bulky powder, Bi(MnO4)3 used as an antiseptic dustingpowder **b. phenolate**, a gray powder, C₆H₅-OB₁(OH)₂ used as an antiseptic in digestive disorders **b. phosphate**, a white powder used as an intestinal antiseptic and astringent Dose, 3–7] gr (0.3–0.5 gm) **b. pyrogallate**, a yellow powder, C₆H₃ OH O O BiOH used as an internal and external antiseptic Dose, 5–15 gr (0 3–1 gm) Called also helcovol **b. resorcinate**, a yellowish-brown powder, Bi₂O₃ 3(C₆H₄O₂)₃Bi₂ used in gastric catarrhs **b. salicylate**, a white, tasteless, and insoluble powder for internal and external Dose, 5-15 gr (0 3 1 gm). **b. subcarbonate**, a yellowish-white, (BiO)₂CO₃ + H₂O used b insoluble powder, H₂() used like the subnitrate. gr (0.006-2 gm). **b. subgallate**, Dose, 10-30 gr (0 000-2 gm). dermatol, a yellow powder, B1(OH)2CO2C6H2(OH)2. used as a non-toxic siccative antiseptic in ulcers, wounds, burns, etc., and internally in gastro-intestinal affections Dose, 30 gr. (2 gm) daily. **b. subnitrate**, a white, insoluble powder, Bi-ONO₃ + H₂O used mainly in gastric disorders. Dose, 10-60 gr (0 606-4 gm) **b. subsalicylate**, a white, amorphous powder, Bi(C₆H₄OHCO₂)₃Bi₂-O₃· used as an intestinal antiseptic in diarrhea and typhoid fever. Dose, 5-15 gr (0,32-1 gm.).

sulphocarbolate, a purplish-red powder intestinal antiseptic b. sulphophenate, reddish powder, sparingly soluble in water: used in dyspepsia. Dose, 3-5 gr. (0.2-0.3 gm.). tannate, used as an astringent in diarrhea, dysentery, etc. b. tribromphenate. See xero-form. b. trioxid, bismuth oxid, Bi₂O₃. Dose, 3 gr. (0.2 gm.). b. valerate, b. valerianate, a white, insoluble powder, Bi(C₆H₉O₂)₃: useful in gastrodynia and neuralgia. Dose, 1-2 gr. (0 032-0.13 gm).

bismuthate (biz'mu-thāt). A salt of bismuthic acid.

bismuthic acid (biz-mu'thik). See under acid.

bismuthoidal (biz-mu-thoi'dal). Trade name for colloidal bismuth: used intramuscularly in syphilis.

bismuthol (biz'mu-thol). An astringent and antiseptic preparation containing bismuth and salicylic acid.

bismuthos (biz'mu-thos). An albuminous preparation containing 21.7 per cent. of metallic bismuth, employed in digestive disorders, particularly of children.

bismuthosis (biz-mu-tho'sis). A state of chronic poisoning from the misuse of bismuth; also, an alleged deposit of a bismuth salt in the gums: the existence of these conditions has been disputed.

bismuthotartrate (biz-mu"tho-tar'trāt). An organic bismuth compound containing 50 to 55 per cent. of bismuth.

bismuthyl (biz'mu-thil). 1. The radical, BiO, found in various bismuth compounds. 2. The trade name of a preparation consisting of precipitated bismuth in water. used in treating syphilis intramuscularly, bismutose (biz'mu-tōz). A bismuth preparation,

bismutose (biz'mu-tōz). A bismuth preparation, a yellowish, insoluble powder, containing 21 per cent. of metallic bismuth used as an astringent in infantile diarrhea and gastro-enteritis.

bisol (bi'sol). A soluble combination of bismuth phosphate and bismuth oxid used in intestinal and gastric affections.

bispheric (bi-sfer'ık). Spheric on both sides.

bissa (bis'ah). A dropsical disease of lower Egypt affecting men and sheep, attributed to the feeding of the latter on a plant called bisse.

bistephanic (bi-ste-fan'ik). Pertaining to the two stephanions.

bistort (bis'tort) [L. bis twice + tor'tus twisted]. The plant, Polyg'onum bistor'ta: its root (L. bistor'ta ra'dix) is a mild astringent. Dose in powder, 20-30 gr. (1.29-2 gm.).

bistoury (bis'too-re) [Fr. bistouri]. A long, narrow, surgical knife, straight or curved, used for incising abscesses, opening up sinuses, fistulæ, etc.

bistratal (bi-stra'tal) [L bis twice + stra'tum layer]. Disposed in two layers.

bisulphate (bi-sul'fāt). A salt having two equivalents of sulphate to one of a base. An acid sulphate

bisulphid (bi-sul'fid). A compound of sulphur and an element containing two atoms of sulphur to one of the other element.

bisulphite (bi-sul'fit) An acid sulphite, a sulphite containing twice as much sulphuric acid as the ordinary sulphite in proportion to the base.

bita higoidea (bi'tah hi-goi'de-ah). Xanthoma.

bitartrate (bi-tar'trāt) Any tartrate with twice the amount of acid contained in a normal salt in proportion to the base.

bite (bit). 1. Seizure with the teeth 2 A wound or puncture made by an insect 3. In dentistry, an imprint of the teeth or gums in some plastic material, used in making artificial dentures close b., closed b., occlusion in which the lower incisors lie behind, or lingual to, the upper incisors, extending nearly or quite to the gingival margin when the jaw is closed. end-to-end b., occlusion in which the incisors of both jaws meet along their cutting edge when the jaw is closed frost-b. See frost-bile. open b., occlusion in which the labial teeth cannot be brought together on account of occlusal interference of the buccal teeth. over b., a condition in which the upper incisor teeth overlap the lower ones when the jaws are closed.

bitemporal (bi-tem'po-ral). Pertaining to both temples or temporal bones.

bito (be'to). 'A small tree, Agialid or Balanites egyptiaca, which is found in tropical Africa and Asia. The bark yields a fish poison, the green

fruit is anthelmintic, the ripe fruit is edible, the fermented juice is used as a beverage, and the seeds yield the medicinal oil called zachun.

bitrochanteric (bi"tro-kan-ter'ik). Pertaining to both trochanters.

bitropel (bi'tro-pel). A proprietary name for capsules of gelatin and glycerin containing medicinal preparations.

bitter (bit'er) [L. ama'rus]. 1. Having an austere and unpalatable taste, like that of quinin. 2. Any medicinal agent that has a bitter taste.

bitter-bark. The bark of a tree, Alsto'nia constric'-ta, of New South Wales and Queensland: used as a febrifuge.

bitter-blaar (bit'er-blahr) A plant (Brachylæna clliptica) used in south Africa in the treatment of diabetes

bitter-wood. See Quassia.

bitters (bit'erz). A popular name for various alcoholic medicines and drinks. often used as tonics, alteratives, or appetizers. Angostura b., a bitter tonic prepared from angustura (q. v.) bark. aromatic b., bitter vegetable drugs which have an aromatic quality simple b., any drug with a bitter taste, which has no general influence upon the system except through its action upon the stomach and intestine. Stoughton b., the compound tincture of absinthe. styptic b., bitter drugs with a markedly astringent quality. Swedish b., compound tincture of aloes.

bittersweet (bit'er-swet). See dulcamara and Celastrus scandens.

Bittorf's reaction (bit'orfs) [Alexander Bittorf, contemporary German physician]. See reaction.

bitumen (bit-u'men) [L.]. Any one of various natural and artificial dry petroleum products. sulphonated b., a preparation made by sulphonating bitumen and neutralizing the product with ammonia It is a viscid brownish fluid.

bituminol (bit-u'min-ol). Ammonium sulphobituminolate used as a substitute for ichthyol.

biurate (bi-u'rāt). An acid urate, a monobasic salt of uric acid.

biuret (bi-u'ret) [L. bis double + urea] A derivative of urea, H₂NCO-NH-CO-NH₂, equivalent to two molecules of urea less one of ammonia. b. reaction. See buret lest, under test

bivalence (biv'al-ens) [I. bis twice + va'lens powerful] A chemic valence double that of the hydrogen atom

bivalent (biv'al-ent). 1. Having a valence of two.2. Representing or composed of two chromosomes joined end to end.

bivalve (bi'valv) [L. bis twice + val'va valve]. Having two valves.

biventer (bi'ven-ter) [L. bi two + ven'ter belly].

A part or organ (as a muscle) with two bellies.

See muscles, table of.

biventral (bi-ven'tral). Having two bellies: digastric.

bivo (bi'vo). A proprietary preparation of meat extract, iron, glucose, and alcohol.

bixin (bik'sin) [L. Biv'a a plant-genus]. An orangered color or stain, C₁₀H₂₀O₂, from annotto (q. v).

bizygomatic (bi"zi-go-mat'ik) [L. bi two + Gr. γυγωμα zygoma]. Pertaining to the two most prominent points on the two zygomatic arches.

Bizzozero's corpuscles (bit-sot'ser-ōz) [Giulio Bizzozero, Italian physician, 1846-1901]. See corpuscle.

black (blak). Reflecting no light or true color; of the darkest hue. bone-b., See charcoal, animal. indulin b., nigrosin.

black alder. See Prinos.

black corsair. See Melanolestes.

Black death. The great pandemic of plague in 1348.

black thorn. See Prunus spinosa.

black tongue. See under tongue.
black tooth (blak'-tooth). Blackness of the teeth

black tooth (blak'-tooth). Blackness of the teeth of hogs, due to accumulation of tartar.

black widow. Lactrodectus mactans.

black-law. Viburnum prunifolium.

Black's formula [J. A. Black, contemporary English army surgeon]. See under formula.

blackberry (blak'her-e). The fruit of various species of Ru'bus. See Rubus.

blackhead. 1. A comedo. 2. A disease of turkeys. See enterohepatitis, 2d def.

blackleg. See symptomatic anthrax, under anthrax.

blacklegine (blak-leg-en') A vaccine for protective inoculation against blackleg

blackwater fever (blak'wat-er). See fever.

bladder (blad'er) [L. vesi'ca and cys'tis]. τ. The membranous sac, situated in the anterior part of the pelvic cavity, which serves as a reservoir for the urine. 2. Any sac or receptacle for a secretion. atonic b., a condition marked by paralysis of the motor nerves of the bladder without any evidence of central nervous lesion. brain-b., any one of the embryonic cerebral vesicles cord b., an atonic condition of the bladder in children, cord resulting from a congenital defect of innervation of the organ. fasciculated b., a bladder which, from hypertrophy of the muscular coat, is ridged on its inner surface. gall-b. See gall-bladder. irritable b., a state of the bladder marked by a constant desire to urinate nervous b., a condition characterized by a constant desire to urinate without the power to do so completely culated b., a bladder with pouches between the hypertrophied muscular fibers stammering b., a bladder which acts spasmodically, causing irregular urmation. **urinary b.** See *bladder*, 1st def. b. worm. See under worm.

bladder-wrack (blad"er-rak'). See Fucus vesiculosus

Blagden's law (blag'denz) [Charles Blagden, English surgeon, 1748-1820]. See under law

Blainville's ear (blah'vēlz) [Henri Marie Ducrotay de Blainville, French zoologist, 1778-1850] See under ear.

Blake's disk (blākz) [Clarence John Blake, Boston otologist, 1843-1919] See under disk

Blancard's pills (blan'kardz) [Stephen Blancard, Dutch physician, 1650-1702]. See under pill

Blanchard's method (blantsh'ardz) [Wallace Blanchard, Chicago surgeon, born 1857]. See under treatment.

bland (bland) [L. blan'dus]. Mild or soothing.

Blandin's gland (blah-daz') [Philippe Fréc'éric Blandin, French surgeon, 1798-1847]. See gland.

Blanfordia (blan-for'de-ah). A genus of mollusks, the intermediate host of *Schistosoma japonicum*

blanquets (blaw-kāz'). Old French for lepers.

Blasius's duct (blah'se-ooz) [Ernst Blasius, German surgeon, 1802-1875]. See duct.

blast (blast) [Gr. βλαστός germ] 1. A nucleated erythrocyte. 2. One of the small filamentous spindles formed by the splitting up of meres. See under mere.

blastema (blas-te'mah) [Gr. βλάστημα shoot]. The rudimentary substance from which cells, tissues, and organs are formed; embryonic tissue.

blastid, blastide (blas'tid, blas'tid). The first indication of a nucleus in a fertilized ovum.

blastin (blas'tin). A substance which stimulates or increases cell proliferation; a substance providing alimentation for cells.

blastocele, blastocœle (blas'to-sēl) [Gr. βλαστός germ + κοίλος hollow]. The cavity of a blastula or vesicular morula.

blastochyle (blas'to-kil) [Gr. βλαστόs germ + χυλόs juice]. The fluid contained in the blastocele.

blastocyst (blas'to-sist) [Gr. βλαστός germ + κυστις cyst]. Same as blastula.

Blastocys'tis hom'inis. A vegetable micro-

Blastocys'tis hom'inis. A vegetable microorganism allied to the yeast, appearing in the form of a spherical cystic structure $5-15 \mu$ in diameter. It is frequently found in the stools of patients who have lived in tropical climates.

blastocyte (blas'to-sit) [Gr βλαστός germ + κύτος cell]. An embryonic cell that has not yet become differentiated.

blastocytoma (blas"to-si-to'mah). A tumor composed of undifferentiated tissue.

blastoderm (blas'to-derm) [Gr. βλαστός germ + δέρμα skin]. The delicate membrane which lines the zona pellucida of the impregnated ovum The blastoderm is formed by the cells (blastomeres) which result from the splitting up of the ovum after impregnation, and have been pushed from the center of the accumulation of the blastochyle The blastoderm forms a hollow sphere (blastodermic vesicle). trilaminar b., the stage of development in which the embryo is represented by the three primary layers the ectoderm, the mesoderm, and the entoderm.

blastodermal, blastodermic (blas-to-der'mal, blas-to-der'mik) [Gr. βλαστός germ + δέρμα skin]. Permining to the blastoderm

blastodisk (blas'to-disk) [Gr. βλαστός germ + δίσκος disk]. A disk or mass that caps one pole of the yolk.

blastogenesis (blas-to-jen'es-is) [see blastogeny].
 1. Reproduction by budding 2. Transmission of inherited characters by the germ-plasm.

blastogenetic (blas-to-jen-et'ik). Same as blas-togenic.

blastogenic (blas-to-jen'ik). Originating in the germ or germ-cell

blastogeny (blas-toj'en-e) [Gr βλαστόs germ + γένεσις generation]. The germ-history of an organism or species

blastolysis (blas-tol'is-is) [Gr. $\beta\lambda\alpha\sigma\tau\dot{o}s$ germ + $\lambda\dot{b}\sigma\iota s$ dissolution]. Destruction or splitting up of germ substance.

blastoma (blas-to'mah), pl blasto'mata [Gr. βλαστός germ + oma] 1. A true tumor, a tumor, not teratogenous, which exhibits an independent localized growth 2. Blastocytoma. autochthonous b., a tumor which arises in a body by proliferation of cells belonging to that body heterochthonous b. Same as levalogenous b pleuricentric b., a neoplasm which arises from a number of scattered cells or groups of cells teratogenous b., a tumor formed of one order of cell, not from the tissues of the host, but from the tissues of another individual within the host. unicentric b., a tumor arising from one cell or from a single group of cells.

blastomatoid (blas-to'mat-oid) [blastoma + Gr. elõos form]. Resembling blastomata.

blastomatosis (blas-to-mat-ɔ'sis) The development of blastomata.

blastomere (blas'to-mēr) [Gr. βλαστός germ + μέρος a part]. Any cell or cell mass of the blastoderm; one of the cells, formed by segmentation of the fertilized ovum, which constitute the morula.

blastomerotomy (blas"to-mēr-ot'o-me) [blastomere + Gr. τομή a cut]. Destruction of a blastomere or of blastomeres.

Blastomyces (blas-tom'is-ēz), pl. blastomyce'tes [Gr. βλαστός germ + μύκης fungus]. A genus of yeasts, morphologically the same as Saccharomyces. The term is applied to the yeasts pathogenic for man and animals. B. coccidio'des. Same as Caccidioides immitis. B. dermatit'idis, a species causing blastomycetic dermatitis in man. B. farcimino'sus, a species causing blastomycotic epizootic lymphangitis in horses.

blastomycetes (blas-to-mi-se'tēz). Plural of blastomyces.

blastomycosis (blas-to-mi-ko'sis) A group of closely related diseases caused by fungi of the genera Saccharomyces, Cryptococcus, Coccidioides, Oddium, and Monitia, and marked by wart-like patches and small epidermal abscesses (blastomycetic dermatitis). A systemic infection may develop marked by respiratory symptoms, loss of weight, malaise, fever, and cough. When the lungs become involved (pulmonary b) the symptoms and physical signs resemble those of tuberculosis.

blastoneuropore (blas-to-nu'ro-pōr) [Gr. βλαστός germ + $\nu\epsilon\bar{\nu}\rho\sigma\nu$ nerve + $\pi\delta\rho\sigma$ pore]. In certain embryos, a temporary aperture formed by the coalescence of the blastopore and neuropore.

blastophore (blas'to-for) [Gr. βλαστός germ + φέρειν to bear]. That part of a sperm-cell or spermatoblast that is not converted into spermatozoa.

blastophthoria (blas-tof-tho're-ah) [Gr. $\beta \lambda \alpha \sigma \tau \delta s$ germ $+ \varphi \theta o \rho \dot{\alpha}$ corruption] Degeneration of the germ-cells from poisoning by lead, alcohol, syphilis, etc.

blastophthoric (blas-tof-tho'rik). Pertaining to blastophthoria.

blastophyllum (blas-to-fil'um) [Gr βλαστός germ + φύλλον leaf] A primitive germ-layer.

blastophyly (blas-tol'il-e) [Gr. βλαστόs germ + φυλή tribe] The tribal history, or arrangement, of organisms.

blastopore (blas'to-pōr) [Gr. βλαστός germ + πόρος opening]. The small opening produced by invagination of the blastula into the notochordal canal It communicates with the archenteron. Called also protostoma and anus of Ruscons.

blastosphere (blas'to-sfēr) [Gr. βλαστός germ + σφαίρα sphere] Same as blastula.

blastospore (blas'to-spor) [Gr. βλαστός germ + spore] A spore formed by budding from a hypha.

blastostroma (blas-to-stro'mah). That part of the egg which takes an active part in the formation of the blastoderm.

blastotomy (blas-tot'o-me). Same as blastomerotomy

blastula (blas'tu-lah), pl blas'tulæ [L]. The stage of the development of the embryo which follows cleav-

age when the cells are arranged in a single layer to form a hollow sphere. Cf gastrula.

blastular (blas'tu-lar).

Pertaining to the blastula.

blastulation (blas-tula'shun) The formation of the blastula.

Blatta (blat'ah) [L]. A genus of insects—the cockroaches. The dried insects are used as a diuretic, and afford antihydropin, taracannin, and blattic acid. Dose

Segmentation cavity

Section through a blastula (Hill)

of Blat'ta orienta'tis, in powder, 2-8 gr. (0.133-0.528 gm). Cockroaches are among the commonest and most offensive of the insects which frequent human habitations. They may act as the intermediate host of Davainea madagascariensis and Gongylonema scutatum B germanica, the German roach, now widely distributed. Called the Croton bug. It is light brown in color and small in size. B. orientalis, the black beetle, a common European species.

Blaud's pill (bloz) [French physician, 1774-1858]. See under pill.

blaze (blaz). An electric current which passes through living tissue when a mechanic stimulus is applied. b. current. See under current.

blazing star. See Helonias.

blear-eye (blēr'i). Marginal blepharitis, or lippitude.

bleb (bleb). Any bulla or skin-vesicle filled with fluid.

bleeder (ble'der). 1. One who bleeds freely or is subject to the hemorrhagic diathesis. 2. One who lets blood, a phlebotomist.

bleeding (ble'ding). 1. The flowing of blood. 2. The letting of blood. b. ear. See nambi uvu. occult b., hemorrhage of such small proportions that the blood can be detected only by chemic test, the microscope, or the spectroscope.

blenal (blen'al) A yellow, oily liquid, santalol carbonate used in gonorrhea.

blennadenitis (blen'ad-en-i'tis) [Gr βλέννος mucus + ἀδήν gland + -ιτις inflammation] Inflammation of mucous glands

blennaphrosin (blen-af'ro-sin) A preparation of a double salt of potassium nitrate and hexamethylenamin with extract of kava-kava used in gonorrhea and cystitis.

blennemesis (blen-em'es-is) [Gr βλέννος mucus + ξμεσις vomiting]. The vomiting of mucus.

blennogenic, blennogenous (blen-o-jen'ik, blen-oj'en-us) [Gr. βλέννος mucus + γεννᾶν to produce] Producing mucus.

blennoid (blen'oid) [Gr. βλέννος mucus + είδος form]. Resembling mucus.

blennorrhagia (blen-o-ra'je-ah) [Gr. βλέννος mucus + ἡηγνύναι to break forth]. 1. Any discharge of mucus. 2. Gonorrhea.

blennorrhagic (blen-o-raj'ik). Pertaining to or of the nature of blennorrhagia

blennorrhea (blen-or-e'ah) [Gr βλέννος mucus + βοία flow] A free discharge from the mucous surfaces, especially a gonorrheal discharge from the urethra or vagina, gonorrhea b. adulto'-rum, gonorrheal ophthalmia. b. alveola'ris, pyorrhœa alveolaris inclusion b., conjunctivitis of the newborn caused by Chlamydozoa b. neonato'rum, ophthalmia neonatorum. Stoerk's b., blennorrhea with profuse chronic suppuration, producing hypertrophy of the mucosa of the nose, pharynx, and larynx.

blennorrheal (blen-or-e'al). Pertaining to or of the nature of blennorrhea.

blennostasin (blen-o-sta'sin) A bitter yellowish compound, $C_{19}H_{22}N_{\star}O(11Br_2)$, or cinchonidin dihydrobromid It is a vasoconstrictor and blennostatic, and is used in catarrhs of the respiratory tract. Dose, 1-4 gr. (0 06 0 26 gm.).

blennostasis (blen-os'tas-is) [Gr βλέννος mucus + στάσις standing] The suppression of an abnormal mucous discharge, or the correction of an excessive one.

blennostatic (blen-o-stat'ık) [Gr βλέννος mucus + lστάναι to halt]. Corrective of an excess of a mucous secretion.

blennothorax (blen-o-tho'raks) [Gr. βλέννοs mucus + θώραξ chest] An accumulation of mucus in the chest.

blennuria (blen-u're-ah) [Gr βλέννος mucus + οδρον urine]. The existence of mucus in the urine.

blenol (ble'nol). A solution of hydrastin and the double citrate of bismuth used locally and internally in disease of mucous surfaces. Dose, 10-40 min. (0.62-2.5 c.c.).

blenorrhol (blen'or-ol). A preparation of protargol and gelatin.

blepharadenitis (blef"ar-ad-en-i'tis) [Gr. βλέφαρον eyelid + ἀδήν gland + -ιτιs inflammation]. Inflammation of the meibomian glands.

blepharal (blef'ar-al). Pertaining to the eyelids.

blepharelosis (blef-ar-el-o'sis) [Gr. βλέφαρον eyelid + είλειν to roll]. Ingrowing of the eyelashes; entropion.

blepharism (blef'ar-izm) [L. blepharis'mus; Gr. βλεφαρίζειν to wink]. Spasm of the eyelids, continuous blinking.

blepharitis (blef-ar-i'tis) [Gr. βλέφαρον eyelid + -ττε inflammation]. Inflammation of the eyelids. b. cilia'ris, b. margina'lis, a chronic inflammation of the hair-follules and sebaceous glands of the margins of the eyelids. b. squamo'sa, a marginal blepharitis in which the edges of the lids become scaly. b. ulcero'sa, an ulcerous form of marginal blepharitis.

blepharo-adenitis (blef"ar-o-ad-en-i'tis). See blepharadenitis.

blepharo-adenoma (blef"ar-o-ad-en-o'mah), pl. bleph'aro-adeno'mata. Adenoma of the eyelid.

blepharo-atheroma (blef"ar-o-ath-er-o'mah). An encysted tumor or sebaceous cyst of an eyelid.

blepharochalasis (blef''ar-o-kal'as-is) [Gr βλέφαρον eyelid + χάλασις relaxation] Relaxation of the skin of the eyelid, due to atrophy of the intercellular tissue Called also dermatolysis pal pebrarum.

blepharochromidrosis (ble "ar-o-kro-mid ro'sis) [Gr $\beta\lambda\dot{\epsilon}\varphi\alpha\rho\sigma\nu$ eyelid $+\chi\rho\dot{\omega}\mu\alpha$ color $+l\delta\rho\dot{\omega}s$ sweat] Excretion of a colored sweat from the eyelids, usually of a bluish shade.

blepharoclonus (blef-ar-ok'lo-nus) [Gr βλέφαρον eyelid + clonus] Clonic spasm of the muscles that close the eye

blepharoconjunctivitis (blef"ar-o-kon-junk-tiv-1'tis). Inflammation of the eyelids and conjunctiva.

blepharodiastasis (blef"ar-o-di-as'tas-is) [Gr, βλέφαρον eyelid + διάστασις separation] Excessive separation of the eyelids, causing the eye to be open very wide

blepharoncus (blef-ar-ong'kus) [Gr βλέφαρον eyelid + ὅγκος tumor] A tumor on the eyelid.

blepharopachynsis (blef"ar-o-pak-in'sis) [Gr. βλέφαρον eyelid + πάχυνσις thickening]. The morbid thickening of an eyelid.

blepharophimosis (blef"ar o-fi-mo'sis) [Gr βλέφαρον eyelid + φίμωσιs narrowing]. A narrowing of the slit between the eyelids

blepharophryplasty (blef-ar-of're-plas-te) [Gr. βλέφαρον eyelid + ὀφρύς eyebrow + πλάσσειν to form]. Plastic operation for the restoration of the eyelid and eyebrow.

blepharoplast (blef'ar-o-plast) [Gr. βλεφαρίς eyelash + πλάσσειν to form] A nucleus-like structure in the motile cells of animals and plants giving origin to a flagellum, as in a trypanosome. By some it is regarded as a modified centrosome

blepharoplasty (blef"a-ro-plas-te) [Gr. βλέφαρον eyelid + πλάσσειν to mold] The plastic surgery of the eyelids.

blepharoplegia (blef"ar-o-ple'je-ah) [Gr. βλέφαρον eyelid + πληγή stroke]. Paralysis of an eyelid (Desmarres); paralysis of both muscles of the eyelid (Graefe-Saemisch).

blepharoptosis (blef"-ar-o-to'sis) [Gr $\beta\lambda\dot{\epsilon}\varphi$ -apov eyelid $+\pi\tau\dot{\omega}\sigma\iota$ s

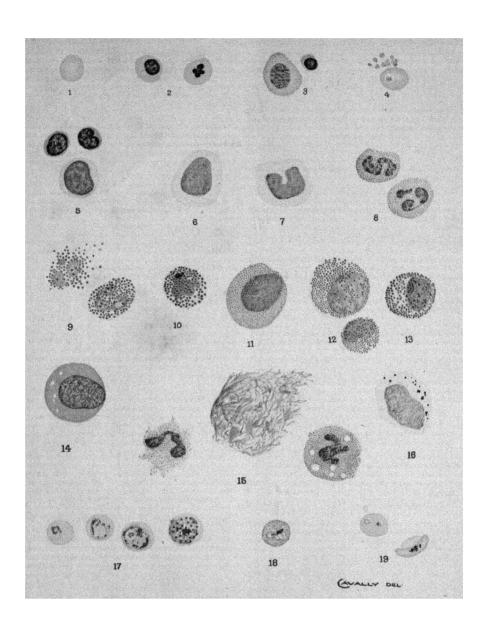

Blepharoptosis.

a fall]. Drooping of an upper eyelid from paralysis.

blepharopyorrhea (blef"ar-o-pi-o-re'ah) [Gr. βλέφαρον eyelid + πύον pus + ροία flow]. Purulent ophthalmia.

blepharorrhaphy (blef-ar-or'af-e) [Gr. βλέφαρον eyelid + ραφή seam]. Same as tarsorrhaphy.

blepharospasm (blef'a-ro-spazm) [Gr. βλέφαρον eyelid + σπασμός spasm]. Spasm of the orbicular muscle of the cyclids.

1, Normal red corpuscle for comparison, 2, normoblests, one with lobulated nucleus, 3, negaloblast and microblest. The megaloblast shows a considerable degree of polychromatophilia, 4 bloodplaques, one lying upon a red corpuscle, 5 lymphocyt and small, o, large mononuclear leukocyte, 7, transitional leukocyte, 8, polymorphonue shine leukocytes, 9 cosmophilic leukocytes, one ruptured, 10 basophilic leukocyte, 11, neutroptatic myclocyte. The granules are sometimes less numerous and less distinct than here shown, 12, cosmophilic myclocytes, 13 herophilic myelocyte, 14, 'irritation'' or 'stimmation' form with small vienoles, 15 degenerated lenkocytes two polymorphonuclear neutron uptured a vienolated, and a "basket cell" composed of in preseller me. " stoom lear leukoeyte containing plen ma pigment-granu (in milani 17 ki il cycle of the tertian malarial parasiinth were drawn from from rere of double terti in , 1% r attan parasite and shown in narrii appoing, 19, estivo autumnal mal mal : ms within the same red cell and a crescent with remains of the red corpublepharosphincterectomy (blef"ar-o-sphing-ter-ek'to-me) [Gr. βλέφαρον eyelid + σφιγκτήρ sphincter + έκτομή excision]. Excision of the sphincter of the eyelid: the operation of removing some fibers of the orbicularis muscle, together with the overlying skin done to relieve the pressure of the eyelid upon the cornea in blepharospasm.

blepharostat (blef'a-ro-stat) [Gr. βλέφαρον eyelid +loτάναι to cause to stand]. An instrument for holding the eyelids and keeping them apart during surgical operations upon the eye.

blepharostenosis (blef"ar-o-sten-o'sis) [Gr. βλέφαρον eyelid + στένωσις a narrowing]. An abnormal narrowing of the palpebral slit.

blepharosynechia (blef"ar-o-sin-e'ke-ah) [Gr $\beta \lambda \dot{\epsilon} \varphi a \rho o \nu$ eyelid $+ \sigma v \nu \dot{\epsilon} \chi \dot{\epsilon} \iota a$ a holding together] The growing together or adhesion of the eyelids

blepharotomy (blef-ar-ot'o-me) [Gr. βλέφαρον eyelid + τομή a cut]. The surgical cutting of an eyelid.

blepsopathia, blepsopathy (blep-so-path'e-ah, blep-sop'ath-e) [Gr $\beta\lambda\epsilon\psi\iota$ s sight $+\pi\dot{\alpha}\theta$ os disease] Λ condition of nervous breakdown produced by eye-strain.

blessed thistle (ble'sed this'l). See Cnicus.

Blessig's groove (bles'igz) [Robert Blessig, German physician, 1830-1878]. See under groove.

blind (blind). Not having the sense of sight.

blind gut (blind gut). The cecum.

blind-spot (blind'spot). A spot on the retina where the optic nerve enters, and which is not sensitive to the light.

blindness (blind'nes). Lack or loss of sight. blue-b., color-blindness as to blue tints. Bright's b., dimness or complete loss of sight without lesion of the retina or optic disk; seen in uremia color-b., inability to distinguish differences of color usually partial, and seldom or never complete. concussion b., functional blindness due to violent explosions caused by high explosive shells, bombs, etc **cortical b.**, blindness due to a lesion of the cortical visual center **day-b.**, vision which is better by night than by day, nyctalopia. **letter-b.**, a state resembling word-blindness, in which individual letters, though seen, convey no meaning to the mind mind-b. Same as psychic b moon-b., retinal anesthesia, said to be caused by exposure to rays of moon during sleep. **nightb.**, a defect of the vision more marked by night, or in a subdued light, than by day, hemeralopia. note-b., an inability to read musical notes, due to a central lesion. object-b., a condition in which objects seen make no impression on the mind. See also apraxia. psychic b., sight without recognition, due to some brain lesson. red-b., blind-ness to red tints red-green b., inability to distinguish red and green. **snow-b.**, dimness of vision, usually temporary, due to the glare of the sun upon snow; niphablepsia soul-b. Same as psychic b. syllabic b., inability to form syllables. word-b., inability to recognize written words as the symbols of ideas.

blister (blis'ter) [L. vesic'ula]. r A collection of serous, bloody, or watery fluid beneath the epidermis. See bulla. 2. An agent producing a vesication ambulant b., one that is shifted from place to place. b.-beetle, b.-fly. See Cantharis. blood-b., a blister having bloody contents. It may be caused by a bruise, but is often due to persistent friction. fever b., herpes labialis. fly-b., a blister of cantharides. flying b., a blister applied long enough to produce redness, but not vesication. Marochetti's b's, small blisters seen under the tongue in hydrophobia. water-b., a blister with watery contents.

blistering (blis'ter-ing). The formation of a vesicle upon the skin.

bloat (blot). See hoven.

Bloch's scale (blocks) [Marcel Bloch, French pathologist, died 1925]. See under scale.

block. 1. A term introduced by Romanes to express the obstruction of the passage of muscular or nervous impulses. 2. In dentistry, a mass of gold for filling teeth. arborization b., heart-block in which the ventricular conduction is impaired. comparator b. See comparator. field b.. regional anesthesia obtained by creating walls of anesthesia encircling the operative field heart-b. See heart-block. nerve b., regional anesthesia secured by making extraneural or paraneural injections in close proximity to the nerve whose conductivity is to be cut off. spinal subarachnoid b., a condition in which the flow of cerebrospinal fluid is interfered with by an obstruction in the spinal canal. ventricular b., obstruction to the flow of cerebrospinal fluid caused by meningitic inflammatory exudate blocking the foramina of Magendie and Luschka by which the cerebral ventricles communicate with the subarachnoid

blocking (blok'ing). I. The cutting off of an afferent nerve-path, as by the injection of cocain (cocain-b). 2. The Freudian term for a sudden stop in an association produced when a complex is touched. 3 The fastening of a histologic specimen impregnated with colloidion to a block of wood or other suitable material which may be clamped in the microtone. b. of thought, a mental condition in which the patient expresses himself with difficulty, because, as he claims, "the avenues of thought are obstructed"

Blocq's disease (bloks) [Paul Oscar Blocq, French physician, 1860-1896] Astasia-abasia.

Blondlot rays (blah-lo') [Prosper René Blondlot, French physicist, born 1849]. See under ray

blood (blud) [L. san'guis, cru'or; Gr. aiµa]. The fluid that circulates through the heart, arteries, and veins, carrying nutriment and oxygen to the body tissues. The blood contained in the arteries is of a bright red color, but after passing to the veins it becomes very dark or brownish red. It consists of a colorless liquid, the plasma, containing red blood-corpuscles (erythrocytes), yellowish, circular, biconcave disks, 7.5 μ in diameter, containing hemoglobin, which carries the oxygen; white blood-corpuscles (leukocytes and lymphocytes), white, spheric, ameboid masses of protoplasm, averaging 10 μ in diameter; blood-platelets (plastocytes), circular or oval disks, 2-3 \mu in diameter, and blood-dust, or hemokoniæ, small, hyaline, refractive bodies. b.-cast, a microscopic thread of blood in the urine b.-cell, a blood-corpuscle. b.-clot, the coagulum of blood. b.-count, the count of the number and proportion of the white and red corpuscles in a carefully measured sample of blood from an individual. The differential b-count includes an estimation of the percentage or proportion of each kind of leukocyte. b.-crystals, crystals of hematoidin in the blood. b.cyst, hematocele, hematocyst, or hematoma. disk. 1. A red blood-corpuscle. 2. A blood-platelet. b.-dust. See hemokonia. b.-fluke. See Schistosoma. b.-groups. See typing of blood. b.-iron, oxyhemoglobin. b.-island, a group of corpuscles in the mesoblast in very early fetal b.-key, a chart of colored pictures to illustrate the principal normal and abnormal conditions of the blood. laky b., blood that has become darkened and somewhat transparent through the solution or destruction of the red corpuscles. live-b., twitching of the eyelids. b.-motes. Same as b.-dust. occult b., blood in such small quantities that it can be detected only by chemic tests, the microscope. or the spectroscope. b.-picture (Arneth's). See Arneth's formula, under formula. b.-plaques.
Same as b.-plates. b.-plasma, the liquor sanguinis, or colorless fluid of the blood. b.-plastid, a particle of cytoplasm thought to develop into a bloodcorpuscle. b.-plates, b.-platelets. See blood. b.-poisoning. See toxemia. b.-pressure, **b.-poisoning.** See *toxemia*. **b.-pressure**, the pressure of the blood on the walls of the arteries,

190

dependent on the energy of the heart action, the elasticity of the walls of the arteries, the resistance in the capillaries, the volume and the viscosity of the blood. The maximum pressure occurs at the time of the systole of the left ventricle of the heart and is termed maximum or systolic. The minimum pressure is felt at the diastole of the ventricle and is termed minimum or diastolic pressure. b.-serum, the clear liquid part of the blood separated from its fibrin and corpuscles. See also blood serum. strawberry-cream b., the blood in marked lipemia which has the appearance of strawberry ice-cream. b.-tumor, a hematoma; also an aneurysm. b. typing. See typing. b.-vessel, an artery, vein, or sinus. whole b., blood from which none of the elements have been removed

bloodless (blud'les). 1. Anemic or exsanguine. 2. Performed with little or no loss of blood.

bloodletting (blud'let-ing). The therapeutic with-drawal of blood. general b., that which is per-formed by venesection. local b., topical b., the abstraction of blood by cupping, scarification, or leeching.

bloodroot (blud'root). See Sanguinaria.

blood-serum (blud'se-rum). A bacteriologic culture-medium composed largely of blood-serum. See also under culture-medium. alkaline b., bloodserum to which has been added from 0.1 to 0.15 per cent. of sodium hydroxid. It is then prepared as is Loffler's blood-serum. It consists mostly of alkali albuminate. coagulated b., plain blood-serum from the horse, cow, sheep, dog or other animal, coagulated and sterilized at a temperature not above 80° C Councilman and Mallory's b., bloodserum coagulated in a hot-air sterilizer and sterilized with steam. glycerin b., blood-serum containing from 4 to 8 per cent. of glycerol. inspis**sated b.**, blood-serum heated to coagulation, usually in test-tubes and in an inclined position. **Löf**fler's b., nutrient bouillon containing I per cent. Mix, of dextrose 1 part and blood-serum 3 parts. tube, and coagulate in an inclined position. Lorrain Smith's b., blood-serum containing 0.05 per cent. of sodium hydroxid.

bloodshot (blud'shot). Congested with blood.

Blot's perforator (bloz) [Claude Philibert Hippolyte Blot, French obstetrician, 1822-1888]. under perforator.

blow-fly (blo'fli). See Calliphora.

blucaloids (blu'kal-oids). Capsules containing eucalyptus oil and methylene-blue, used in malaria. blue (blu). 1. The color of the sky; one of the principal colors of the spectrum. 2. Having the color of the clear sky. **acid b.** See cyanol blue. **alizarin b.**, a blue dyestuff derived from anthracene. alkali b., a dye, sodium triphenylrosanilin mono-sulphate. anilin b., triphenyl-rosanilin hydro-chlorid: used in malaria in doses of 5 gr. (0.3 gm.). anilin b., W. S., a mixture of the trisulphonates of triphenyl-para-rosanilin and of diphenyl-rosan-The latter is CH₃(NH₂)C₆H₂(SO₂.ONa).C(C₆hin. The latter is Childring Childring Childring Childring H₂(SO₃)SO₂ Oha. anthracene b., alizarin blue. azidine b., 3 B. Same as trypan blue. benzamin b., 3 B. Same as trypan blue. benzo b. Same as trypan blue. Berlin b. 1. Anilin blue. 2 Prussian blue. brilliant b., C., brilliant cresyl blue. brilliant cresyl b., an oxazin dye: used in staining blood, (C₂H₆)₂N(CH₃)-C₆H₂(ON)C₆H₃.NH₂Cl. **brom-chlorphenol b.**, an indicator, dibrom-dichlor-phenol-sulphonphthalein, (C6H2ClBrOH)2C.C6H4.SO2.ONa. bromphenol b., a dye, tetrabrom-phenol-sulphone-phthalein, (C₆H₂Br₂OH)₂.C.C₆H₄SO₂.ONa: used as an indicator in determining hydrogen-ion concentration. It has a PH range of 3 to 4.6, being yellow at 3 and blue at 4.6. bromthymol b., a dye, dibrom-thymol-sulphonephthalein, [(CH₃)₂C.H.C₆-HBr(CH₈)OH]₂C.C₆H₄.SO₂.ONa: used as an indicator in determining hydrogen-ion concentration. It has a PH range of 6.0 to 7.6, being yellow at 6.0

and blue at 7.6. china b., anilin blue. chlorazol b., 3 B. Same as trypan blue. Congo b., 3 B. Same as trypan blue cresyl b., 2 R. N. or B. B. S. Same as brilliant cresyl blue. cyanol b., a bright blue acid coal-tar color related to triphenyl-methane. diamin b., any one of several coal-tar colors derived from benzidin or toluidin. dianil b., H. 3 G. Same as trypan blue. b. gum. See Eucalyptus. helvetia b. Same as methyl blue. indigo b., indigotin. Löffler's methylene b. See under stains and staining methods. marine b. Same as antin blue. methyl b., an acid dye used as a counter-stain, ONa.SO₂.C₆H₄.NH.C₆H₄.C(C₆H₄.NH.C₆H₄)₂-(SO₃)SO₂.ONa. methylene b., one of the most important stains used in pathology and bacteriology. It is a salt (generally a chlorid) of tetramethyl-thionin, (CH₃)₂N.C₆H₃(NS)C₆H₃.N(CH₃)₂-Cl. Commercially it is generally a double chlorid of zinc and methylene blue. **methylene b.**, medicinal (U. S. P.), methylene blue which is free of zinc and so less toxic. It is also superior as a stain. It is used as an analgesic and an anti-periodic. Dose, 2-4 grains. **methylene b.**, Dose, 2-4 grains. methylene b., periodic. Dose, 2-4 grains. methylene b., N. N. Same as new methylene blue, N. methylene b., O. Same as toluudin blue, O. naphthamin b., 3 B. X. Same as trypan blue. new methylene b., N., C₂H₅.NH(CH₃)C₆H₂(SN)C₆-H₂(CH₃)N(C₂H₅)HCl. Niagara b., 3 B. Same as trypan blue. Nile b., A., Nile b. sulphate, an oxazin dye which stains fatty acids blue. It (C₂H₅)₂N.C₆H₃(ON)C₁₀H₅.NH₂(SO₄)¹/₂. polychrome methylene h. stain which contains chrome methylene b., a stain which contains methylene green, methylene azure, and methylene violet as well as methylene blue. It can be prepared by boiling a solution of methylene blue or by allowing Loffler's methylene blue to age. **Prussian b.**, ferric ferrocyanid, Fe₄[Fc(CN)₆]s. **py-oktanin b.** Same as methyl violet soluble b., 3 M. or 2 R. Same as antlin blue. spirit b., a mixture of diphenyl-rosanilin, C₆H₅.NHCl C₆H₄C-(CH/CM) [$C_6H_3(CH_3)NH_2|C_6H_4NH$ C_6H_6 , and triphenyl-rosamlin, $C_6H_6.NHCl$ $C_6H_4C|C_6H_4(CH_3)NH.C_6H_6|C_6H_4NH.C_6H_6$. **b. stone**, copper sulphate. **Swiss b.**, methylene blue **thymol b.**, an indicator, thymol-sulphonephthalem, [((CH_3)_2CH_2C_6H_2)_2CH_2C_6H_2]. (CH₃)OH₂C.C₆H₄ SO₂ONa, with an acid P_H range of 12 to 28, being red at 12 and yellow at 2.8, and an alkaline P_H range of 8 to 9.6, being yellow at 8 and blue at 96. **toluidin b., O,** one of the main constituents of Albert's stain, (CH₃)₂N.C₆H₃-(SNCH₄). (SN)C₆H₂.(CH₃).NH₂Cl. **trypan b.**, an acid, azo dye which has been used in vital staining and as a remedy in protozoan infections. It is the so-dium salt of tolidin-diazo-diamino-naphthol-disulphonic acid, $[CH_3, C_6H_3, N, N, C_{10}H_3(NH_2)(SO_2 - ONa)_2, OH]_2$. **Turnbull's b.**, ferrous ferricyanid, $Fe_3(FeCy_6)_2$. **b. vervain.** See *Berbena*. **b.** vitriol, copper sulphate. water b. Same as anilin blue.

bluebottle. See Calliphora.

blue-bottom. A blue pigmentation of the skin in the sacral, coccygeal, and gluteal region.

blue dome cyst. See under cyst.

blues (bluz). A popular name for a short period of mental depression.

Blum's reagent test (bloomz) [Leo Blum, German physician, born 1878]. See under tests.

Blumenau's nucleus (bloo'men-owz) [Leonid Blumenau, Russian neurologist, born 1862]. See under nucleus.

Blumenbach's clivus, process (bloo'men-bahks) [Johann Friedrich Blumenbach, German physiologist, 1752-1840]. See clivus and process.

blunt-hook (blunt'hook). An instrument used mainly in embryotomy.

Blyth's test [Alexander Wynter Blyth, English physician]. See under tests.

B. M. Abbreviation for L bal'neum ma'ris, seawater bath.

B. M. A. Abbreviation for British Medical Associa-

B. M. R. Abbreviation for basal metabolic rate.

B. M. S. Abbreviation for Bachelor of Medical Science.

B. N. A. An abbreviation for Basle Nomina Anatomica, or the anatomic terminology accepted at Basle in 1895 by the Anatomical Society.

B. O. Abbreviation for base of prism out.

Boas's reagent, sign, test, etc. (bo'az) [Ismar Boas, physician in Berlin, born 1858]. See under reagent, sign, tests, etc.

Bobbs's operation (bobz) [John Stough Bobbs, American surgeon, 1809-1870]. See operation.

Bobroff's operation (bob'rofs) [V. F. Bobroff, Russian surgeon, born 1858]. See under operation. bocaral (bo'kar-al). An antiseptic dressing powder

containing boric acid, alum, and phenol.

Bochdalek's ganglion (bok'dal-eks) [anatomist in

Prague, 1801-1883]. See ganglion.

Bock's nerve (boks) [August Carl Bock, German

anatomist, 1782-1833]. See under nerve.

Bockhart's impetigo (bok'harts) [Max Bockhart,

Bockhart's impetigo (bok'harts) [Max Bockhart, German physician of the nineteenth century]. See under impetigo.

Bodo (bo'do) A genus of the Bodonida, being small oval bodies with two anterior flagella, one of which projects forward and the other back. B. cauda'tus, a common coprozoic flagellate found in human feces. They are polymorphic and their motility is jerky. B. sal'tans, the "springing monad" which has been found in ulcers. B. urina'ria has been found in urine. Other species are: Bodo asialica, B javanensis, B. parra, and B weinbergi.

Bodonidæ (bo-don'id-e). A family of flagellates sometimes found in human feces. They are spheric in form with one flagellum projecting forward and one backward. There is no undulating membrane and they are probably not pathogenic.

 body (bod'e) [L. cor'pus; Gr. σωμα].
 1. The trunk, or animal frame, with its organs.
 2. The cadaver or corpse.
 3. The largest and most important part of any organ. accessory b., a body of indefinite structure found in the protoplasm of a spermatid. acetone b's, acetone, aceto-acetic acid, and beta-oxybutyric acid. Called also kelone bodies. adrenal b. See supra-renal gland, under gland. alloxur b's. See purin bases, under purin. Amato b's, bodies seen in the leukocytes of the blood of scarlatinal patients. amylaceous b's. See corpora amylanaphylactic reaction b. See sensiacea anococcygeal b., a mass of fibrous and muscular tissue between the anus and the tip of the coccyx. anti-b. See antibody anti-immune b., anti-intermediary b. See antiamboceptor. apical b. See acrossme. b. of Arantius. See corpora arantii. Arnold's b's, small pieces of erythrocytes in the blood. Aschoff's b's, rheumatic nodules in the myocardium. Auer's b's, rod-shaped bodies seen in the lymphocytes in certain cases of leukemia. Babes-Ernst metachromatic granules. See under granule. Balbiani's b. See yolk nucleus, under nu cleus. Bartonia b's. See Bartonia basilisormis. Behla's b's. Same as Plimmer's b's. Bence-Jones b's. See Bence-Jones protein, under between b. See complement. bird'snest b's, structures formed by the arrangement of cells in epithelial cancer resembling birds' nests. brassy b., a dark, shrunken blood-corpuscle seen in malaria. Buchner's b's, defensive proteins. Cabot's ring-b's, lines in the form of loops or figures of eight, seen in stained erythrocytes in severe anemias. They are stained red with the Wright-Leishman stain and blue with eosinate of methylene-blue. cancer b's. See Plimmer's b's and Russell's b's. carotid b. See carotid gland, under gland. cavernous b's, the corpora caver-

nosa. cell b. See under cell. central b., the structures at the center of the aster during mitosis. chromaffin b. See paraganglion. chromophilous b's. See Nissl b's. ciliary b., that part of the vascular coat of the eye which includes the ciliary muscles and processes. coccygeal b. See coccygeal gland, under gland. colloid b's, masses of an irregularly shaped, glue-like substance in the cerebrospinal axis. Deetjen's b's, blood-plates, demilune b., a circular transparent body with a crescent-shaped area on one edge, seen in the blood in malaria and after typhoid fever. The crescent-shaped portion contains hemoglobin and the bodies are believed to be degenerated red corpuscles The transparent portion of the body is called glass-body. dentate b., denticulate b. See corpus dentatum. Döhle's inclusion b's, small coccus-shaped bodies occurring in the polynuclear leukocytes of the blood in several diseases, especially scarlet Donne's b's, colustrum corpuscles Ehrlich's hemoglobinemic b's, small round granules staining with acid dyes, seen in the bodies of erythrocytes in severe hemocytolysis from septic blood-poisoning. elementary b., a blood-platelet Elzholz's b's, bodies described by Elzholz in degenerated medullated nerve-fibers. end-b. See complement. endoglobar b., archiplasm. epithelial b., a parathyroid gland. falciform b. See sporozoite. fimbriate b. See corpus fimbriatum. foreign b., a mass which is not normal to the place where it is found. **b. of fornix, fornix b.,** the middle part of the fornix; the corpus fornicis. **fuchsin b's.** See Russell's b's geniculate b. See corpus geniculatum. Gianuzzi's b's. See Gianuzzi's crescents, under crescent. glass-b. See demilune b. globoid b's, microorganisms found by Flexner and Noguchi in poliomyelitis, which seemed to bear an etiologic relationship to the disease Golgi b. See Golgi apparatus, under apparatus. Guarnieri's b's, the cytorrhyctes of variola and vaccinia. See Cytorrhyctes. habenular b. See nucleus habenular Hassall's b's. See Hassall's corpuscles, under corpuscle. Heinz b's, small bodies occasionally seen in red bloodcorpuscles after staining with azur I. Called also metachromaticogranularis and β-substance. Highmore's b., the mediastmum testis. Howell's b's, small round or oval bodies, pinkish or bluish in color, seen in certain erythrocytes on staining with Giemsa's stain. They are thought to be fragments of the broken up nucleus of nucleated erythrocytes, and are therefore called nu-Jolly b's, Howell's bodies. hyaloid b., the vitreous body. immune b. See amboceptor. inclusion b's. See Dohle's inclusion b's. intercarotic b., a longish mass of blood-vessels, nerves, and ganglion-cells between the internal and external carotid arteries. **intermediary** b. See amboceptor. interpeduncular b. See corpus interpedunculare. intravertebral b., the centrum of a vertebra. iso-b. See iso-body. Jolly's b's. Same as Howell's b's. ketone b's. Same as acetone b's. Kurloff's b's, bodies seen in the large mononuclear leukocytes of guinea-pigs and other animals; supposed by some to be a stage in the development of the granules of the esoinophil leukocytes; by others to be a stage in the development of a protozoan organism. Called also Lymphocytozoon cobaya. Lallemand-Trousseau b's. Same as Bence-Jones cylinders. See cylinder. Landolt's b's, small elongate bodies between the rods and cones on the outer nuclear layer of the retina. Langerhans's b's, heaps of large, clear, homogeneous cells, situated within or between the lobules of the pancreas. Laveran's b's (1880), the plasmodia of malarial disease. See Leishman-Donovan b's (1903), small round or oval bodies found in the spleen and liver of patients suffering with a peculiar tropical

fever and cachexia (kala-azar). These bodies are the intracellular forms of the protozoan Leishmania donovani, the parasite of kala-azar. See Leishmania donovani. lenticular b., dentate nucleus See nucleus. Lieutaud's b., the trigone of the bladder. Lostorfer's b's. See under corpuscle. Luys' b. Same as corpus subthalamicum. Mallory's b's, bodies resembling protozoa, seen in the lymph-spaces and epithelial cells of the skin in scarlet fever. malpighian b's, small bodies in the kidney at the commencement of the uriniferous tubules, consisting of the mass of vessels (the malpighian tuft) and the envelope or Bowman's capsule. mammillary b's, a pair of small spherical masses of gray matter situated close together in the interpeduncular space rostral to the posterior perforated substance. Each is enclosed in a white capsule and projects as a white eminence at the base of the brain. Called also corpora mamillaria [BNA], corpora candicantia, and corpora albicantia. melon-seed b., any one of a class of small fibrous masses sometimes occurring in the joints and in cysts of the tendon sheaths. metachromatic b's, metachromatic granules. See under granule. Michaelis-Gutmann b's, bodies found in the lesions of malacoplakia of the bladder. They probably are necrotic cells. molluscous b's or corpuscles, peculiar round or oval microscopic bodies within the papules of molluscum epitheliale. Morner's b., nucleo-albumin. muriform b., the morula. Negri b's (1903), oval or round bodies, seen in the protoplasm and sometimes in the processes of nervecells of animals dead of hydrophobia, their presence is considered conclusive proof of rabies. Called also Neurorrhycles hydrophobiæ. Nissl b's, large granular protein bodies which stain with basic dyes, forming the substance of the reticulum of the cytoplasm of a nerve-cell. Called also chromophilous b's and tigroid b's or substance. no-threshold b., a substance in the blood plasm which causes no symptoms. nuclear b., the nuclear disk of a maturing ovum after it takes an ellipsoidal form. Oken's b., the wolffian body olivary b's, oval prominences at the sides of the anterior pyramids of the oblongata. onion b's, epithelial pearls. See under pearl. pacchionian b's, small eminences of the arachnoid tissue under the dura of the brain, and producing by pressure slight depressions (pacchionian depressions) on the inner surface of the cranium. pampiniform b., the parovarium. parabasal b., kinetonucleus. paranuclear b., the attraction-sphere. parasympathetic b's, the intercoracoid body and coccygeal gland. paraterminal b., the cerebral area from the olfactory peduncle backward to the lamina terminalis and upward between the corpus callosum and the hippocampal fissure. **parathyroid b.**, a parathyroid gland See under gland. **parolivary** b's, the accessory olivary nuclei. **perineal** b's, the mass of structures forming the central part of the perineum in women Perles' anemia **b's**, small actively moving, club-shaped bodies from the blood in certain cases of pernicious anemia. pineal b., a small flattened, cone-shaped body, an outgrowth from the epithalamus, resting upon the mesocephalon in the interval between the two thalami. It is not composed of nervous elements and is a rudimentary glandular structure said to produce an internal secretion. Called also corpus pineale [B N A], pineal gland, conarium, and epiphysis cerebri. pituitary b., a small, reddish, ellipsoid organ in a depression (sel'la tur'cica) of the sphenoid bone and attached to the brain by a ped-icle. It consists of two lobes—an anterior one, of a reddish-gray color (pars anterior, or pituitary gland proper), which is made up of columns of cells surrounded by large sinusoidal spaces. This partly incloses a posterior lobe (pars nervosa, neurohy-pophysis, or infundibular body) with its epithelial investment (pars intermedia). The posterior lobe is composed of loosely placed neuroglia cells. The pituitary body is a gland of internal secretion and

secretes two substances, a "pressor" and a "depressor" substance, which respectively increases and lowers the blood-pressure. It is also called hypophysis [B N A], hypophysis cerebri, and pituitary gland. Plimmer's b's, small round capsulated bodies found in capsulated the delication. sulated bodies found in cancer, and thought by the discoverer to be the parasite causing the disease. polar b's. 1. Two small bodies protruded from the ovum at the time of impregnation. They are the smaller cells produced by the maturation divi-2 Metachromatic granules located at the sions. ends of bacteria. presegmenting b's, malarial parasites before they undergo segmentation. **Pro- wazek's b's.** 1. Same as trachoma b's. 2. Extremely small dancing granules found in the material from smallpox pustules and in cowpox vaccine and regarded by Prowazek as the cause of the disease Prowazek-Greef b's. Same as trachoma b's. purin b's. See purin. quadrigeminal b. See corpora quadrigemina. reaction b. Same as sensibilisin. Renaut's b's, bodies found within the nerve-bundles in normal and pathologic conditions. Their function is unknown restiform b., a lateral column of the medulla oblongata, extending to the cerebellum and continuous below with the cerebellar tract of the cord. It connects the posterior roots of spinal nerves with the cerebellum. rice b's, small bodies resembling grains of rice which form in the tendons of joints and float in the fluid of hygroma. **Rosenmüller's b.**, the parovarium. **Ross's b's**, spheric copper-colored bodies showing dark granulations and sometimes having ameboid movements seen in the blood and tissue fluids in syphilis, called also Leukocytozoon pallidum and Lymphocytozoon pallidum. Russell's b's, small, round, or oval vacuolated bodies seen in cases of carcinoma, and thought by some to be yeast plants and the cause of carcinoma. Called also fuchsin b's. sand-b. See corpora aranacea. Seidelin b's, bodies discovered in the red blood-corpuscles in yellow fever, and believed by the discoverer to be parasites and the cause of the disease. Called also Paraplasma flavigenum. semilunar b's, Gianuzzi's crescents. See crescent. Spengler's immune b's, immune bodies extracted from the red blood-corpuscles of animals immunized against tuberculosis: used in tuberculosis. Called also I. K (immun Korper). spheric b., the first stage of the sexual cycle of the malarial parasite, developing later into the gametocyte. **spiculated** b's, spiny looking bodies occurring enclosed in leukocytes or giantcells in the spleen in certain conditions. spongy b. See corpus spongiosum. striate b. See corpus striatum suprarenal b. See suprarenal gland, under gland Symington's b., anococcygeal body. thermostabile b., amboceptor threshold b., any compound in the blood-plasm the presence of which causes symptoms thyroid b., the thyroid gland. See gland. tigroid b's. See Nissl b's. trachoma b's, minute bodies found in clusters in the protoplasm of the epithelial cells from the conjunctiva of trachomatous eyes; possibly the cause of trachoma See Chlamydozoa. trapezoid b. See corpus trapezoideum Trous-seau-Lallemand b's. Same as Bence-Jones cylinders. See cylinder. vitelline b., a body in the egg cell which may serve as a center for yolk formation. vitreous b., the transparent substance of the eye, contained in a hyaloid membrane between the lens and the retina. Winkler's b., spherical bodies seen in the lesions of syphilis. wolffian b's, the mesonephron or primitive kidney, the excretory organ of the em-It consists of a long tube in the lower part of the body-cavity, running parallel with the spinal axis and joined at right angles by a row of twisting tubes given off from the mal-pighian body, and forming a structure resem-bling a comet. The wolffian body develops into the head of the epididymis, vas deferens, and ejaculatory duct in the male. x-b's. 1. Same as

Plimmer's b's. 2. See Bartonia bacilliformis. Zuckerkandl's b's, paraganglia found along the course of the aorta near its bifurcation.

body-cavity. See cælom.

body-louse. See louse.

Boeck's disease (beks) [Cæsar P. M. Boeck, dermatologist in Christiania, 1845-1917]. Sce under disease.

Boeck's itch or scabies (beks) [Carl William Boeck, Norwegian dermatologist, 1808-1875]. See under scabies.

Boedeker's test (ba'dek-erz) [Carl Heinrich Detlef Boedeker, German chemist, 1815-1895]. See under tests.

Boerhaave's glands (boor'hahv-ez) [Hermann Boerhaave, a famous Dutch physician, 1668-1738, professor of botany, medicine, and chemistry in Leyden, 1701-1720] The sweat glands.

Boettcher's cells. See Bottcher's cells, under cell.

Boettger's test. See Bottger's test, under tests.

bog-bean. See Menyanthes

Bogros's space (bog-roz') [Annet Jean Bogros, French anatomist, 1786 1823]. See under space.

Bogue's symptom (bōgz) [E A. Bogue, American dentist]. See under symptom.

bohemium (bo-he'me-um) A newly discovered element of atomic number 75 found in magnesium ores in Bohemia Cf. rhenum

Bohun upas (bo'hun u'pas) The poison-tree of Java, Anti'aris toxica'ria; also its deadly gumresin

boil (boil) See furuncle Aleppo, Biskra, Natal, Oriental, Pendjdeh, Scinde b. See furunculus orientalis blind b., a boil of brief duration which does not form a core Bulama b. [from Bulama, an island of West Africa], a chronic sore of West Africa, said to be due to a burrowing insect-larva. cat-b., a small variety of ordinary furuncle Delhi b., tropical b., forms of furunculus orientalis. Cafsa b., an endemic ulcer, named from Gafsa, in Tunis a variety of Oriental furunculus. gum-b. See barulis.

Bol. Abbreviation for L bo'lus, pill.

boldin (bol'din). A hypnotic and locally anesthetic alkaloid from boldo. Dose, 2-4 gr (0.133-0.206 gm).

boldo (bol'do) [L. bol'dus, bol'doa]. The leaves and stems of Baldu (Pru'mus) bol'dus, a tree of Chili It is tonic, antirheumatic, and antifebrile. Dose of tincture, 5-20 min (031-1.25 cc); of fluidextract, 1-5 min (006-03t cc).

boldoa, boldus (hol'do-ah, bol'dus). See boldo.

boldoglucin (bol-do-glu'sin). A narcotic and hypnotic glucosid from boldo. Dose, 20-60 gr. (1 3.33-4 gm), in capsule

boldoin (bol'do-in). A glucosid obtainable from

bole (bol) [L. bo'lus; Gr βωλos]. A name of various earths, mostly clayey and of a dark color; usually astringent and absorbent iron tonics: used somewhat in veterinary surgery and externally in skin diseases.

Boletus (bo-le'tus) [L.; Gr. $\beta\omega\lambda lr\eta s$]. A genus of fungi or mushrooms, some of which are edible and others poisonous.

boliformin (bo-lif-or'min). A condensation product of formalin and aluminum used as an antiseptic dusting-powder.

bolometer (bo-lom'et-er) [Gr. βολή a throw, a ray + μέτρον measure]. 1. An instrument for measuring the force of the heart-beat. 2. An instrument for measuring minute degrees of radiant heat.

bolt. To swallow food before it is adequately chewed.

bolus (bo'lus) [L.; Gr. βωλos]. A round mass or dose of medicine which is larger than a pill. b. al'ba, kaolin.

bombard (bom-bard'). To subject a body to the impingement of small particles or rays.

Bombax (bom'bax). See mochras.

bombicestrol (bom-be-ses'trol). A sterol obtained from the chrysalis of the silkworm.

bonbon (bon'bon) [Fr.]. A conserve or medicated confection, usually proprietary.

bond (bond). A mark used to indicate the number and attachments of the valencies of an atom in constitutional formulas. It is represented by a dot or a line between the atoms, as H.O.H or H—O—H, Ca:O or Ca = O, HC + CH or HC ≡ CH.

bonduc (bon'duk) [Fr.]. The seeds of Casalpin'ia bon'duc and C. bonducel'la, climbing tropical plants tonic, stimulant, and antiperiodic. Dose of powder, 10-15 gr. (0.666-1 gm).

bonducin (bon-du'sin). A white, bitter powder, $C_{14}H_{1}O_{7}$, from bonduc seeds; insoluble in water: a febrifuge. Dose, $1\frac{1}{2}-3$ gr. (o 1-0 2 gm.).

bone (hōn) [L. σs; Gr δστέον]. 1. The material of the skeleton of most vertebrate animals. It consists of connective tissue, the substratum of which is ossein, and which yields gelatin on bolling, impregnated with lime salts, chiefly calcium phosphate. 2. Any distinct piece of the osseous framework or skeleton of the body. Bones are composed of an outer layer of compact tissue, and of spongy or reticular tissue forming the in-terior portions. The compact tissue is traversed by channels (haversian canals) from which ardiate numerous canaliculi, which are surrounded by concentric lamellæ of bone, separated by spaces, lacuna, containing the bone-cells or corpuscles.

These lacuna communicate with the haversian canals through the canaliculi. The inner, spongy tissue of bone contains large marrow-cavities. Bones are covered exteriorly by a protective memmarble b's, bones that have undergone a con-Albers-Schoenberg densation process converting them into a firm, whitish-gray substance without a trace of marrow space and without a trace of demarcation of the cortex ankle-b., the astragalus. basihyal b., the body of the hyoid bone. basilar b., basioccipital b., the basilar process of the occipital Bertin's b's, the sphenoturbinal bones. breast-b., the sternum. cannon b., a bone in the limb of hoofed animals, extending from the fetlock to the knee or hock-joint capitate b., the os magnum. carpal b's, the bones of the wrist, including the scaphoid, semilunar, pisiform, pyramidal, trapezium, trapezoid, os magnum, and unciform bones cartilage-b., any bone which is developed from cartilage. cavairy b., an occasional bony formation in the adductor magnus femoris or its tendon; riders' bone. chevron b., the V-shaped hemal arches of the third. fourth, and fifth coccygeal vertebræ of a dog. coffin-b., the third or distal phalanx of the foot collar-b., the clavicle. coronary of a horse b., the small pastern bone of the horse. **cranial** b's, the bones of the skull which inclose the brain, as distinguished from those of the face. cribriform b. Same aschmoid b. cuboid b., a bone on the outer side of the foot, in front of the calcaneum and beside the scaphoid. cuneiform b. of the foot, any one of the three bones in front of the stock, any one of the three blocks in front of the scaphoid bone. cuneiform b. of the wrist. See pyramidal b. dermal b., a bone developed by ossification of the skin. ectethmoid b's, the lateral masses of the ethmoid bone. endochondral b., a bone which is developed within a cartilage. epactal b., worm an hope eninteric b. a small worming bone. ian bone. epipteric b., a small wormian bone sometimes seen between the great wing of the sphenoid and the interparietal bone. episternal b., suprasternal bone. ethmoid b., the sieve-like bone which forms a roof for the nasal fossæ and part of the floor of the anterior fossa of the skull. exoccipital b., the cotyloid process of the occipital bone. frontal b., the bone forming the forepart of the cranium. hamate b., the unciform bone.

haunch b., the hip-bone or os coxæ. hyoid b., a horseshoe-shaped bone situated at the base of the tongue, just above the thyroid cartilage. It consists of a body from each side of which two processes (greater and lesser cornua) project backward. incarial b., the interparietal bone. incisive b. Same as intermaxillary b. innominate, b. a bone which, with its fellow on the opposite side, forms the greater part of the pelvis; the hip-bone. It consists of the ilium, the ischium, and the os pubis. intermaxillary b., one of several bones in the middle front part of the upper jaw, separate in fetal life, but fused in the adult (Goethe, 1786). Called also incisive b. interparietal b., a bone, sometimes distinct, which occurs between the parietal, frontal, and superior occipital bones. lacrimal b., a thin, scale-like bone at the anterior and upper part of the orbit, articulating with the frontal, the ethmoid, and the superior maxillary bones. lenticular b., the os orbiculare. lentiform b., the pisiform bone. lingual b. Same as hyoid b. lunate b. Same as semilunar b. malar b., the cheek bone, a quadrangular bone on each side of the cheek bone, a quadrangular bone on each side of the face, uniting the frontal and superior maxillary bones with the zygomatic process of the temporal. marble b's. See Albers-Schoenberg marble b's. maxillary b. See maxilla. membrane-b's, bones which are developed within membrane. multiangular b., large, the trapezium. multiangular b., small, the trapezoid bone. nasal b's, the two small bones forming the arch of the nose. navicular b. Same as ing the arch of the nose. navicular b. Same as scaphoid b. occipital b., the bone that forms the last part of the cranium between the parietal and temporal bones. orbicular b. See os orbiculare. palate b., the irregular bone forming the posterior portion of the hard palate and the lateral wall of the nose, between the internal pterygoid plate of the sphenoid and the superior maxilla. parietal b's, the two quadrilateral bones forming the lateral surfaces of the cranium. pastern b., either of two bones of the horse's foot: large pastern bone, the first phalanx of a horse's foot; small pastern bone, the second pha-lanx of a horse's foot. pedal b., the coffinbone of a horse. periosteal b., bone which is developed directly from and beneath the periosteum. periotic b., the otocrane. petrosal osteum. periotic b., the otocrane. petrosai b., the petrous portion of the temporal bone before birth. pisiform b., the small peashaped bone lying on the ulnar side of the pyramidal bone of the wrist. pneumatic b., a bone containing many air-cells. postular b., the sigiform bone una-interpreparated b. the pisiform bone. pre-interparietal b., a wormian bone sometimes seen detached from the anterior part of the interparietal bone. pterygoid b., the internal pterygoid plate of the sphenoid bone. pyramidal b., a wedge-shaped bone at the outer side of the carpus, articulating with the semilunar, pisiform, and unciform bones. riders' b., an ossification sometimes seen in the tendon of the adductor muscle of the thigh in those who ride on horseback. Riolan's b's, small bones resembling wormian bones, some-times found in the suture between the occipital bone and the petrous portion of the temporal bone. **scaphold b.** 1. The outer bone of the first row of carpal bones. 2. The bone on the inside of the tarsus, in front of the astragalus and behind the cuneiform bones. semilunar b., a bone of the first row of the carpus, lying between the scaphoid and pyramidal bones. sesamoid b., a small, flat bone developed in a tendon which moves over a bony surface. sphenoid b., the irregular, wedge-shaped bone at the base of the skull. splenial b's, splint b's, the dermal or membrane bones of the embryonic head, lying close against the cartilage of the primordial skull. squamo-occipital b., the largest of the four portions of the occipital bone of the fetus. Called also exoccipital and basi-occipital. supra-interparietal b., a wormian bone sometimes occurring at the posterior part of the sagittal suture. suprasternal b., an occasionally occurring ossicle in the ligaments of the sternoclavicular articulation. Called also episternal b. sutural Same as wormian b's. temporal b., the irregular bone at the side and base of the skull, containing the organs of hearing. trapezoid b., the second carpal bone on the thumb side of the distal row. triquetral b. Same as cuneiform bone of the wrist. turbinal b. See turbinal (2). tympanic b., the bone which supports the tympanic membrane and forms the greater part of the external auditory meatus. In man it is an elongated cylinder. **unciform b.**, the innermost bone of the carpus, triangular in shape, with a hook-shaped process on the anterior surface. wormian b's, small, irregular bones in the sutures between the bones of the skull.

bone-ache (bōn'ak). Osteocopic pain. bone-ash (bōn'ash). The calcic phosphate and other dry material remaining after the calcination of a bone.

bone-cartilage (bon-kar'til-ej). See ossein.

bone-cell (bon'sel). Same as osteoblast.

bone-conduction (bon-kon-duk'shun) The conveyance of sound-waves to the auditory apparatus by the medium of the bones of the head.

bone-corpuscle (bon-kor'pus-l). Any connectivetissue cell lodged within the laminæ of a bone.

bonelet (bon'let). An ossicle or small bone.

bone-oil (bon'oil). A tarry and oily liquid obtained from bone by dry distillation a popular panacea.

boneplasty (bon'plas-te). Plastic surgery on bone. boneset (bon'set). See Eupatorium.

bone-setter (bon'set-er). An unauthorized person who professes skill in treating fractures and dislocations.

bone-wax. See under wax.

Bonfils's disease (bawn-fēs') [Emile Adolphe Bonfils, French physician of the nineteenth century]. Hodgkin's disease.

Bonhoeffer's symptom (bon-hef'erz) [Karl Bonhoeffer, psychiatrist in Berlin, born 1868] under symptom.

Bonnet's capsule (bon-āz') [Amadée Bonnet, French surgeon, 1802-1858] See capsule

Bonnier's syndrome (bon-e-āz') [Pierre Bonnier, French physician, born 1861]. See under syndrome.

Bonwill crown, triangle (bon'wil) [William Gibson Arlington Bonwill, American dentist, 1833-1899]. See under crown and triangle.

boohoo (boo'hoo). A form of gastritis with great depression, which frequently attacks visitors to the Pacific Islands.

Boöphilus (bo-of'il-us) [Gr. βοῦς οχ + φιλεῖν to love]. A genus of cattle-ticks. **B. annula**'tus, B. bo'vis. Same as Margaropus annulatus. B. decolora'tus, a tick of South the annulatus. serves as the means of transmitting the anaplasma of galziekte.

boopia (bo-o'pe-ah) [Gr. β oûs ox + $\omega \psi$ eye]. The languishing ox-like eyes of hysteric patients.

Boöponus (bo-op'o-nus) [Gr. βοῦς οχ + πόνυς pain]. A fly of the Philippines where larvæ (foot maggots) cause lameness in cattle and goats

boot, Junod's (zhen-ōz'). An air-tight boot to which is fitted an air-pump. A partial vacuum causes a flow of blood to the parts inclosed in the boot, producing the effect of blood-letting by causing a fainting spell.

boracic acid (bo-ras'ik). See under acid.

boracil (bo-ra'sil). A combination of boric acid, oxybenzoic acid, acetanilid, and metadioxybenzol: used as an antiseptic dusting-powder.

borage (bor'ej). The plant, Bora'go officina'lis: aperient and diaphoretic; formerly considered

a very valuable remedy. Dose of the expressed juice, 2-4 oz. (60-120 c.c.); of fluidextract, 1 dr. (4 c.c.).

boral (bo'ral). Aluminum borotartrate: used as an astringent and antiseptic.

boralid (bo'ral-id). A commercial antiseptic dressing for wounds, containing boric acid and acet-

borate (bo'rāt). Any salt of boric acid.

borated (bo'ra-ted). Combined with or containing borax.

borax (bo'raks), gen. bora'cis [L. from Arabic; Persian būrah]. Sodium pyroborate, Na₂B₄O₇ + 10H₂O; a transparent, crystalline substance of sweetish taste. It is soluble in water, glycerin, and alcohol. It is a refrigerant, antiseptic, soothing detergent and diuretic salt. It is used as an application in affections of the mouth and throat. Dose, 5-30 gr. (0 324-2 gm.). **b. carmin.** See carmin and stains, table of.

borborygmus (bor-bo-rig'mus), pl. borboryg'mi The noise made by flatus in the bowels.

bordeaux (bor-do'). Same as amaranth.

Bordet's phenomenon (bor-daz') [Jules Bordet, contemporary Belgian bacteriologist]. See phenomenon.

bordoresin (bor-do-res'in). A resin that forms 5 to 6 per cent. of European turpentine.

boric acid (bo'rik). See under acid. boricin (bo'ris-in). A compound of borax and

borine (bo'rin). A proprietary antiseptic preparation of boric acid with aromatic stearoptens, etc. borism (bo'rizm). Poisoning by a boron com-

borneëne (bor'ne-ēn). A hydrocarbon, C₁₀H₁₆, readily convertible into borneol.

borneol (bor'ne-ol). Camphyl alcohol, C10H17OH, identical with Borneo camphor, though artificially produced.

bornyval (bor'ne-val). Isovalerianate of borneol: used as a sedative and antispasmodic. Dose, 4 gr. (0 26 gm.).

boroborax (bo-ro-bo'raks). An antiseptic preparation containing boric acid and borax.

borocain (bo'ro-kān). A name for the borate of any one of the cocain substitutes (especially ethocain borate). used as a local anesthetic.

borochloretone (bo-ro-klo'ret-on). A combination of boric acid and chloretone used as a dusting-

borofluorin (bo-ro-flu'o-rin) A proprietary antiseptic and germicide preparation of boric acid, sodium fluorid, benzoic acid, and formaldehyd.

boroform (bo'ro-form). A bactericidal preparation of boroglycerid and formaldehyd.

boroformal, boroformalin (bo-ro-for'mal, bo-rofor'mal-in). A compound of aluminum hydroxid with boric and formic acids, forming white, glossy scales It is antiseptic and deodorant, and is used in gynecology and diseases of the nose and throat.

borogen (bo'ro-jen). Boric-acid ethyl-ester, B(O.-C₂H_b)₃: inhaled in diseases of the air-passages.

boroglycerid (bo-ro-glis'er-id). Glyceryl borate: an antiseptic paste of boric acid and glycerin. In England it is called glacialin.

boroglycerin (bo-ro-glis'er-in). Same as boroglvcerid.

boroglycerol (bo-ro-glis'er-ol). A solution of boroglycerid in glycerin.

borol (bo'rol). Sodium (or potassium) borosulphate, BO SO₂.ONa a colorless, glassy solid, soluble in water, and used in a 20 per cent. solution as a disinfectant and antiseptic in a wide range of diseases. Dose of the solution, 10-50 min. (0.6-3 c.c.). See also saccharin.

boroleum (bo-ro'le-um). A proprietary ointment for intranasal use in nasal catarrh.

borolyptol (bo-ro-lip'tol). A proprietary remedy: used as an antiseptic and disinfectant in typhoid fever and diseases of the gastro-intestinal tract.

boron (bo'ron) [L. bo'rium]. A non-metallic element occurring in the form of crystals and as a powder. It is the base of borax and boric acid: symbol, B; specific gravity, 26, atomic weight, 10.0.

borophene (bo'ro-fēn). A proprietary astringent and antiseptic preparation.

borophenol (bo-ro-fe'nol). A disinfectant preparation of borax and phenol.

borosol (bo'ro-sol). A clear, colorless liquid, containing aluminum tartrate, boric acid, salicylic acid, glycerin, and free tartaric acid. a wash for perspiring feet.

borotartrol (bo-ro-tar'trol). An antiseptic containing sodium tartrate and boric acid.

borothymin (bo-ro-thi'min). A proprietary whooping-cough remedy, a compound of bromids and thyme.

borovertin (bo-ro-ver'tin). Hexamethyleneamine triborate (CH₂)₆N₄ 3HBO₂, a urinary disinfectant.

Borrelia (bo-rel'e-ah). A name proposed for the spirochetes of the blood (Swellengrebel, 1907). Cf. Spironema and relapsing Jever, under fever.

borsal (bor'sal). A mixture of equal parts of boric acid and salicylic acid used as a dusting-powder for wounds.

borsalicylate, borsalyl (bor-sal'is-il-āt, bor-sal'il). A powder containing 32 parts of sodium salicylate and 25 parts of boric acid and a little water used as an analgesic, antiseptic, and deodorant, and given in gout, rheumatism, chorea, and pleurisy. Dose, 5-30 gr (0.3-2 gm.).

borsten (bor'sten) [Fin. "bristles"] A cutaneous disease of newborn infants in Finland, due to irri-

tation of the sebaceous glands, producing gooseflesh with fever.

Borthen's operation (bor'tenz) [Johan Borthen, contemporary Norwegian oculist]. Iridotasis.

boryl (bo'ril) Ethylborosalicylate used externally and internally as an antiseptic and for the treatment of rheumatism.

Bose's hooks (bo'sez) [Heinreich Bose, German surgeon, born 1840] See under hook.

boss (bos). A rounded eminence, as on the surface of a bone or of a tumor.

bosselated (bos'e la-ted) [Fr. bosseler] or covered with small bosses.

bosselation (bos-e-la'shun). r. A small eminence; one of a set of small bosses. 2. The condition or fact of being bosselated, the process of becoming bosselated.

Bossi's dilator (bos'ēz) [Luigi Maria Bossi, contemporary gynecologist in Genoa, 1859–1910]. See dilator.

Bostock's catarrh (bos'toks) [John Bostock, English physician, 1773-1846]. See under catarrh.

Boston's sign (bos'tonz) [L. Napoleon Boston, Philadelphia physician, born 1871]. See under

Boswellia (boz-wel'e-ah). See olibanum.

The larva of various flies (bot flies), typically those of the genus Es'trus these larvæ are parasitic in the stomach of animals and sometimes in that of man. ox-b. See ox-bot.

botalism (bot'al-izm) [L. botalis'mus]. Sausagepoisoning.

Botallo's duct, foramen, etc. [Leonardo Botallo, an Italian physician of the sixteenth century]. See duct, foramen, etc.

botanic (bo-tan'ik). 1. Pertaining to or derived from plants of the vegetable kingdom. 2. Pertaining to botany.

botany (bot'an-e) [L. botan'ica, from Gr. βοτάνη herb]. The science of plants or of the vegetable kingdom.

Botelho's test (bo-tel'hōz) [Dr. Botelho, physician in Paris] See under tests

bothridium (both-rid'e-um). Same as bothrium.

Bothriocephalus (both"re-o-sef'a-lus) [Gr. βοθρίον pit + κεφαλή head]. A genus of tapeworms, also known as Dibothriocephalus. B. corda'tus. See Dibothriocephalus cordatus. B. crista'tus, a species, 3 mm in length, distinguished by two crest-like projections upon the head. B. la'tus. See Dibothriocephalus latus See tapeworm. B. lingulo'ides, a species found in man only in larval form in the loins and about the eyes. The head is marked by a papilla-like projection. B. manso'ni, a species found in the abdominal cavity of Chinese and Japanese

bothrium (both're um). A sucker in the form of a groove such as is seen on the head of *Dibothrio-cephalus latus*.

bothropic (both-rop'ik). A term applied to such poison obtained from snakes of the genus *Lachesis*.

botryoid (bot're-oid) [Gr βότρυς bunch of grapes + είδος form] Resembling a bunch of grapes.

Botryomyces (bot-re-o-mi'sēz) [Gr. βότρυς grape + μύκης fungus]. A genus of Schizomycetes B. e'qui is regarded as the cause of botryomycosis in horses.

botryomycoma (bot-re-o-mi-ko'mah). A small pedunculated tumor caused by botryomycosis.

botryomycosis (bot"re-o-mi-ko'sis). A disease of horses characterized by the formation of botryoid nodules in the lungs. It is supposed to be caused by the presence of Botryom'yees e'qui (Micrococ'cus ascofor'mans). The disease is communicable to man.

botryomycotic (bot"re-o-mi-kot'ik). Pertaining to or affected with botryomycosis.

botryotherapy (bot"re-o-ther'a-pe) [Gr. βότρυς cluster of grapes + θεραπευτική therapy]. The grape-cure.

botrytimycosis (bo-tri"te-mi-ko'sis). Infection with fungi of the genus Botrytis.

Botrytis (bo-tri'tis) A genus of fungi. B. bassia'na, causes the disease muscardine in silk-worms. B. tenel'la, causes a disease of the larvæ of May-beetles

bots (bots). A diseased condition of horses and oven attributed to the presence of the larvae of bot-flies.

Böttcher's cells, etc (bet'sherz) [Arthur Bottcher, German anatomist, 1831-1880] See cell, etc

Böttger's test (bet'gerz) [Wilhelm Carl Bottger, German chemist, died 1871]. See under tests.

Bottini's operation (bot-e'nez) [Enrico Bottini, Italian surgeon, 1837-1903]. See under operation.

bottle bacillus. See under bacillus.

bottle, Senoran's. A bottle used in withdrawing stomach contents after a test-meal.

bottom-disease (bot'um). A condition in horses caused by eating rattlebox, Crotala'ria sagitta'lis. It occurs in low, bottom-lands

botuliform (bot-u'lif-orm) [L. bot'ulus sausage + for'ma shape]. Sausage shaped.

botulin (bot'u-lin) [I.. bot'ulus sausage] Botulinus toxin; a toxin sometimes found in imperfectly preserved or canned meats and vegetables: it is produced by Clostridium botulinum

botulism (bot'u-lizm) [L bot'ulus sausage]. A type of food poisoning caused by a toxin which is produced by Clostridium (Baculus) botulinum in improperly canned or preserved foods It is characterized by vomiting, abdominal pain, difficulty of vision, nervous symptoms of central origin, disturbances of secretion, motor disturbances, dryness of the mouth and pharynx, dyspepsia, a barking cough, mydriasis, ptosis, etc. The term was for-

merly used synonymously with allantiasis or sausage poisoning.

botulismotoxin (bot-u-liz-mo-tok'sin). Same as botulin.

bouba (boo'bah). A form of oriental sore (leish-maniasis) endemic in Brazil and Paraguay. See leishmaniasis americana.

Bouchard's coefficient, disease, nodes, sign (boo-sharz') [Charles Jacques Bouchard, French physician, 1837-1915]. See under coefficient, disease, node, and sign

Bouchardat's test (boo-shar-dahs') [Apollinaire Bouchardat, French chemist, 1806-1886]. See under tests

bouchon (boo-shaw') [Fr.]. The internal clot. See *clot*

Bouchut's respiration, tube (boo-shooz') [Jean Antoine Eugène Bouchul, French physician, 1818-1801]. See respiration and tube.

Boudin's law (boo-dahz') [Jean Christian Marie Francois Joseph *Boudin*, French physician, 1803– 1807]. See under law.

boufrida (boo-fre'dah). An infectious pleuropneumonia of goats occurring in Algeria

Bougard's paste (boo garz') [Jean Joseph Bougard, French physician, 1815-1884]. See under paste.

bougie (boo-zhē') [Fr]. 1 A slender cylinder for introduction into the urethra, or a large one for the rectum or some other orifice 1. A taper-shaped medicinal preparation for introduction into the urethra, rectum, or the like b. a boule (ah-bool') [Fr], a bulbous bougie acorntipped b., one of the forms of bulbous bougies.

armed b. Same as caustic b. bellied b., a fusiform bougie bulbous b., one with a bulbshaped tip. **caustic b.**, one which has a piece of silver nitrate or other caustic attached to its end a form of portcaustic **conic b.**, a form with a cone-shaped tip cylindric b., one with a round or circular section dilatable b., one whose diameter can be increased by turning a screw, or which swells in its place like a surgeon's tent dilating b., one which is designed to effect the dilatation of a stricture ear-b., one for used in aural surgery elastic b., one made of india rubber or other elastic material. elbowed b., one shaped like a sonde coudé (q v). **exploring b.**, one designed to be used like a probe. filiform b., one of very slender and almost hair-like caliber. fusiform b., one with a belly or expansion in its shaft. Gruber's b's, bougies of medicated gelatin for insertion into the auditory medicated b., one which is charged meatus with a medicinal substance olive-tipped b., a form of bulbous bougie rosary b., a beaded bougie for use in a strictured urethra soluble b., one composed of a material that will melt or dissolve in situ. wax-b., one made of linen, gauze, or silk dipped in melted wax and then rolled. whip-b., one with a filiform point and a stem of gradually increasing caliber.

bougienage, **bouginage** (boo-zhe-nahzh'). Dilatation with a bougie.

Bouillaud's disease, tinkle (boo-e-yōz') [Jean Baptiste Bouillaud, French physician, 1796-1881]. See under disease and tinkle.

bouillon (boo-e-yaw') [Fr]. A broth or soup prepared from the flesh of animals used in food-preparations and as a bacteriologic culture-medium. See also culturemedium. ascitic b., a mixture of 1 part of ascitic, pleuritic, or hydroccle fluid with 2 parts of nutrient bouillon. calcium carbonate b., nutritive bouillon containing 1 per cent. of dextrose and 1 per cent. of calcium carbonate. It is used for obtaining mass cultures of the pneumococcus or of the streptococcus. The calcium carbonate neutralizes acids formed during the growth of the bacteria. carbolized b., nutrient bouillon containing from o. 1 to 0.5 per cent. of phenol. dextrose b., nutrient bouillon containing 2 per cent. of dextrose b.

trose. Durham's inosite-free b. See inositefree b. egg-albumen b., a bacteriologic culture-medium containing dried egg-albumen 4 gm, N/10 sodium hydroxid 40 c c., water 200 c.c., and nutrient boullon 600 c c. b. filtre, 5 per cent. glycerin bouillon in which tubercle germs have grown. For use it is sterilized by filtration through porcelain, but it is not concentrated nor heated. **fish b.**, a nutritive bouillon in which fish water is used in place of meat extract. Gasperini's wheat b. See wheat b glucose-formate b., nutrient bouillon containing 2 per cent. of glucose and 0.4 per cent. of sodium formate. glycerin b., nutrient bouillon containing 6 per cent of glycerol. glycerin-potato b., a cold water extract of grated potatoes containing 4 per cent. of glycerol haricot b., an extract of haricot beans containing 1 per cent of salt and 2 per cent, of cane sugar Use 250 gm of beans to a liter of water. hydrocele b. See ascitic b inositefree b., nutrient bouillon in which Bacillus coli or some other sugar-fermenting organism has grown and thus removed all sugars. It is then clarified and sterilized. **iron b.**, nutrient bouillon containing 0.1 per cent. of ferric tartrate or ferric lactate. **Kitasato's glucose-formate b.**See glucose-formate b. lactose-litmus b., nutrient bouillon containing 2 per cent. of lactose and sufficient litmus to color it a deep purple. lead b., nutrient bouillon containing o r per cent of lead acetate litmus b., nutrient bouillon containing enough litmus solution to give it a dark lavender color. malachite green b. nutrient bouillon to each liter of which is added 10 c c. of 1 per cent solution of malachite green malt extract b., a nutritive medium made by dissolving 100 gm of powdered malt extract in r liter of water, adjusting the reaction to plus 1.5 to phenolphthalein and heating in the autoclave for fifteen minutes

Then fifter through paper
and sterilize. It is used as a substitute for
beer-wort bouillon

Martin's b., a preparation of 5 parts of peptone from digested pig's stomach and 100 parts of cattle or rabbits' serum. meat extract b., this is made the same as nutrient bouillon except that 3 gm, of commercial meat extract and 1000 cc of water are used in place of the liter of meat infusion. meat infusion b. See nutrient b. nitrate b., nutrient bouillon containing 05 per cent of potassium nitrate **nutrient b.**, meat infusion (q v under infusion) to which has been added t per cent of peptone and ½ per cent of salt. The reaction is usually set at a desired point and then the whole is sterilized **Parietti's b.**, nutrient bouillon containing small amounts of a mixture of 4 c c. of hydrochloric acid and 100 c c. of a 5 per cent solution of phenol pleuritic b. See ascitte b Reddish's malt extract b. See malt extract b. serum b., a mixture of horse-serum and nutrient bouillon in various proportions. sugar b. See dextrose b. sulphindigotate b., nutrient dextrose b. bouillon containing 2 per cent of glucose and o i per cent. of sodium sulphindigotate. sulphindigotate b. See sulphindigotate b. wheat b., a nutritive medium made by dissolving wheat flour 150 gm., magnesium sulphate 0.5 gm, potassium nitrate 1.0 gm., and glucose 15 gm. in 1000 c.c. of water.

Bouilly's operation (boo-e-yāz') [Georges Bouilly, French surgeon, died 1848]. See under operation.

Bouin's fluid (bwahz') [Paul *Bouin*, contemporary French anatomist]. See under fluid.

boulimia (boo-lim'e-ah). Bulimia

bouquet (boo-ka') [Fr.]. 1. A cluster of vessels, nerves, or fibers. 2. The characteristic flavor and aroma of a wine. 3 The polarized stage of synapsis.

Bourdin's paste (boor-dahz') [Claude Étienne Bourdin, French physician, born 1815]. See under paste.

bourdonnement (boor-don-maw') [Fr.]. A humming or buzzing sound, whether subjective or auscultatory.

Bourget's test (boor-zhāz') [Louis Bourget, Swiss physician, 1856-1913]. See under tests.

boutonnière (boo-ton-yar'). An incision made into the urethra in order to extract an impacted calculus.

Bouveret's disease, sign (boo-ver-āz') [L. Bouveret, French physician]. See disease and sign.

Boveri's test (bo'va-rēz) [Piero Bovert, contemporary Italian neurologist]. See under tests.

bovine (bo'vin) [L bovi'nus]. Pertaining to, or derived from, the ox, cow, or heifer.

bovinin (bo'vin-in). A preparation of ox-blood, egg-albumin, boric acid, and brandy used for anemia and nervous exhaustion. Dose, ½ oz (15 c.c), used also hypodermically.

bovinoid (bo'vin-oid) [bovine + Gr. elòos form]. Resembling that of the ox, a term applied to a form of tubercle bacillus found in man and resembling true bovine tubercle bacilli.

bovista (bo-vis'tah) [L]. The fungus, Lycoper'-don bovis'ta. It is styptic and nervine. its use is mainly homoopathic.

bovovaccination (bo"vo-vak-sin-a'shun). Vaccination with bovovaccine.

bovovaccine (bo-vo-vak'sēn). An attenuated and ground human tubercle bacillus used by von Behring for protective inoculation against bovine tuberculosis.

bowril (bov'ril). A proprietary preparation of meat extract, glucose, and alcohol.

Bowditch's law (bow'ditsh) [Henry Pickering Bowditch, Boston physiologist, 1840-1911]. See under law. See also treppe.

bowel (bow'l) [Fr boyau]. The intestine.

Bowen's disease (bo'enz) [John T Bowen, American dermatologist, born 1857] See under disease.

bow-leg (bo'leg). An outward curve of one or both legs at or below the knee genu varum.

Bowman's capsule, membrane, theory, etc. (bo'manz) [Sir William Bowman, an English physician, 1816–1892]. See capsule, membrane, theory, etc.

box, **fracture-** (boks). A long box, without cover or ends, to support a broken limb.

Boyer's bursa, cyst (bwah-yāz') [Alcxis, Baron, de Boyer, French surgeon, 1757-1853]. See under bursa and cyst.

Boyle's law (boilz) [Robert Boyle, British physicist, 1627-1691] See under law.

Bozeman's catheter, position, etc (bōz'manz) [Nathan *Bozeman*, American surgeon, 1825–1905]. See *catheter*, *position*, etc.

Bozzolo's sign (bot'tso-lōz) [Camillo Bozzolo, Italian physician, born 1845]. See under sign.

B.-p. Abbreviation for boiling-point.

B. P., B. Ph. Abbreviations for British Pharmacopeia.

Br. The chemic symbol of bromin.

bracelets (brās'lets) Transverse markings across the palmar surface of the skin of the wrists.

brachia (bra'ke-ah) [L pl. of bra'chium]. The arms or any arm like processes See under brachium. b. cerebel'li, the peduncles of the cerebellum b. cere'bri, b. of the optic lobes, the upper bands that connect the testes and the nares with the thalamus opticus. b. copulati'a, the superior peduncles of the cerebellum. b. pon'tis, the middle peduncle of the cerebellum.

brachial (bra'ke-al) [L brachia'lis, from bra'chium arm]. Pertaining to the arm.

brachialgia (bra-ke-al'je-ah) [L. bra'chium arm + Gr. ἄλγος pain]. Pain in the arm or arms. brachialis (bra-ke-a'lis). See muscles, table of.

brachinin (brak'in-in). A substance derived from the bombardier-beetle, Brachi'nus crep'itans: useful in rheumatism

brachiocephalic (brak"e-o-se-fal'ik) [Gr. βραχίων arm + κεφαλή head]. Pertaining to the arm and

brachiocrural (brak"e-o-kru'ral). Pertaining to the arm and thigh.

brachiocubital (brak"e-o-ku'bit-al) [Gr. βραχίων arm + L. cubi'tus forearm]. Pertaining to the arm and forearm.

brachiocyllosis (brak"e-o-sil-o'sis) [Gr. βραχίων arm + κύλλωσις a bending]. Crookedness of the

brachiofaciolingual (brak"e-o-fa"she-o-lin'gwal). Pertaining to or affecting the arm, the face, and the tongue.

brachioradialis (brak"e-o-ra-de-a'lis). The supinator longus muscle. See muscles, table of.

brachiotomy (bra-ke-ot'om-e) [Gr. βραχίων arm $+\tau o\mu \dot{\eta}$ a cut]. The surgical or obstetric cutting or removal of an arm.

brachiplex (bra'kip-leks). The brachial plexus.

brachium (bra'ke-um), pl. bra'chia [L.; Gr. βρα-χίων]. 1. The arm, or, more strictly, the arm above the elbow. 2. Any arm-like process See under brachia. b. cerebel'li. Same as b. conb. conjuncti'vum ante'rius. junctivum. Same as b. quadrigem'ınım anle'rius. b. con-juncti'vum cerebel'li [BNA], the superior peduncle of the cerebellum, a fibrous band extending from each hemisphere of the cerebellum upward over the pons, the two joining to form the sides and part of the roof of the fourth ventricle b. con-iuncti'vum poste'rius. Same as b. quadrijuncti'vum poste'rius. Same as v. yaunum bosterius b. infe'rius cerebel'li, op'ticum, one of the processes extending from the corpora quadrigemina to the optic thalamus. b. pon'tis [BNA], the brachium of the pons; the middle peduncle of the cerebellum. Called also medipeduncle and processus cerebelli ad poniem b. quadrigem'inum ante'rius and poste'rius, two white tracts of the brain. the anterior connects the nates with the external geniculate body, the optic thalamus, and optic tracts, the posterior connects the testes with the internal geniculate body. b. supe'rius cerebel'li, the superior peduncle of the cerebellum.

brachybasia (brak-e-ba'se-ah) [Gr. βραχύς short + βάσις walking]. A slow, shuffling, short stepped gait, such as seen in double hemiplegia.

brachycardia (brak-e-kar'de-ah). Same as bradvcardia.

brachycephalic, brachycephalous (brak"is-ef-al'ik, brak-is-ef'al-us) [Gr βραχύς short + κεφαλή head]. Having a short head, having a cephalic index of more than 80.

brachycephalism, brachycephaly (brak-is-ef'-al-izm, brak-is-ef'al-e). The fact or quality of being brachycephalic.

brachychronic (brak-e-kron'ik) [Gr. βραγυχρόνιος of short duration]. Acute: said of a disease (Rabagliati).

brachydactylia (brak"id-ak-tıl'e-ah) [Gr. βραχύς short + δάκτυλος digit]. Abnormal shortness of the fingers and toes.

brachyfacial (brak-if-a'shal). Having a short

brachygnathia (brak-ig-na'the-ah) [Gr. βραχύς short + γνάθος jaw]. Abnormal or very marked shortness of the under jaw.

brachygnathous (bra-kig'na-thus) [Gr. βραχύς short $+ \gamma \nu \dot{a}\theta$ os jaw]. Having an unusually short jaw.

brachymetropia (brak"im-et-ro'pe-ah) [Gr. βραχύς short + μέτρον measure + δψις sight]. Myopia, or near-sightedness.

(brak"im-et-rop'ik). Nearbrachymetropic sighted, or myopic.

brachyphalangia (brak-if-al-an'je-ah) [Gr. βραχύς short + phalanx]. Abnormal shortness of one of the phalanges.

brachystaphyline (brak-e-staf'il-in) [Gr. βραχύς short + σταφυλή uvula]. Having a short palate, i. e., an index more than 85.

bract (brakt). A small modified leaf in a flower cluster.

bradsot (brad'sot). Braxy or anthrax in sheep. See braxv.

bradyacusia (brad-e-ak-u'se-ah) [Gr. βραδύς slow + ἀκούειν to hear]. Dulness of hearing.

bradyarthria (brad-e-ar'thre-ah) [Gr. βραδύς slow

+ ἄρθρον articulation]. Bradylalia: abnormally slow utterance of words.

bradycardia (brad-ik-ar'de-ah) [Gr. βραδύς slow + καρδία heart]. Abnormal slowness of the heartbeat, as evidenced by slowing of the pulse rate to 60 or less. **cardiomuscular b.**, bradycardia caused by disease of the muscle of the heart. central b., bradycardia dependent on disease of the central nervous system. clinostatic b., a condition marked by bradycardia, lessened bloodpressure, and acrocyanosis when the patient lies down (Vincent). essential b., bradycardia that cannot be accounted for by the symptoms nor explained by any postmortem observations, and for which there is at present no known remedy. **nodal b.**, bradycardia in which the venous tracings show no wave due to the contraction of the auricle and in which the stimulus of the heart's contraction arises in the auriculoventricular node. postinfective b., bradycardia occurring after infectious disease.

Bradychylæ'na ellip'tica. See bitter-blaar

bradycinesia (brad"is-in-e'ze-ah). Bradykinesia.

bradycrotic (brad-ik-rot'ık) [Gr. βραδύs slow + κρότος pulsation]. Characterized by s'owness of

bradycrotin (brad-ik'ro-tin). A proprietary antipyretic remedy.

bradydiastalsis (brad"e-di-as-tal'sis). Slow or delayed bowel movement.

bradydiastole, bradydiastolia (brad"e-di-as'tole, brad"id-i-as-to'le-ah) [Gr βραδύs slow + diastole]. Abnormal prolongation of the diastole.

bradyecoia (brad"e-e-koi'ah) [Gr. βραδυήκοος hard of hearing]. Partial deafness.

bradyesthesia (brad"e-es-the ze-ah) [Gr. βραδύς slow + $\alpha l \sigma \theta \eta \sigma \iota s$ perception]. Slowness or dulness of perception.

bradyfibrin (brad-if-i'brin). See pseudofibrin.

bradyglossia (brad-ig-los'e-ah) [Gr. βραδύγλωσσοs slow of speech]. Abnormal slowness of utterance.

bradykinesia (brad"e-kin-e'se-ah) [Gr. βραδύς slow + κίνησις movement]. Abnormal slowness of movement; sluggishness of physical and mental responses.

bradykinetic (brad-e-kin-et'ik) [Gr. βραδύς slow + κίνησις motion]. Characterized by or performed by slow movement; a term applied to a method of showing the details of motor action by motion pictures taken very rapidly and shown very slowly.

bradylalia (brad-il-a'le-ah) [Gr. βραδύς slow + λαλείν to talk]. Slow utterance, due to a central lesion.

bradylexia (brad-e-lek'se-ah) [Gr. βραδύς slow + λέξις word]. Abnormal slowness in reading, due neither to defect of intelligence or vision nor to ignorance of the alphabet.

bradylogia (brad-il-o'je-ah) [Gr. βραδυλογία]. Abnormal slowness of speech.

bradynosus (brad-in'o-sus) [Gr. βραδύς slow + νόσος disease]. A chronic disease.

bradypepsia (brad-ip-ep'se-ah) [Gr.]. Abnormally slow digestion.

bradypeptic (brad-ip-ep'tik). Affected with slow digestion.

bradyphagia (brad-e-fa'je-ah) [Gr. βραδύς slow + φαγεΐν to eat]. Abnormally slow habit of eating.

bradyphasia (brad-if-a'ze-ah) [Gr. βραδύς slow + φάσις speech]. Slow utterance due to a central lesion.

bradyphemia (brad-e-fe'me-ah) [Gr. $\beta \rho \alpha \delta \dot{\nu}$ s slow + $\varphi \dot{\eta} \mu \eta$ speech]. Slowness of speech.

bradyphrasia (brad-if-ra'ze-ah) [Gr. βραδίκ slow + φράσις utterance]. Slowness of speech due to mental disorder.

bradyphrenia (brad-if-re'ne-ah) [Gr. βραδύs slow + φρήν mind]. A condition marked by extreme fatigability of initiative, interest, and psychomotor activity resulting from epidemic encephalitis.

bradypnea, bradypnœa (brad-ip-ne'ah) [Gr. βραδύς slow + πνοή breath]. Abnormal slowness of breathing.

bradyrhythmia (brad-e-rith'me-ah) [Gr. βραδύς slow + δυθμός rhythm]. Slowness of the pulse rate; bradycardia.

bradyspermatism (brad-is-per'mat-izm) [Gr. $\beta\rho\alpha$ - $\delta\theta$ s slow + $\sigma\pi\dot{\epsilon}\rho\mu\alpha$ semen]. Abnormally slow ejaculation of semen.

bradysphygmia (brad-is-fig'me-ah) [Gr. βραδύς slow + $\sigma \varphi v \gamma \mu \dot{o}$ s pulse]. Abnormal slowness of the pulse.

bradystalsis (brad-is-tal'sis) [Gr. βραδύς slow + (pert)stalsis] A slow forward movement of the bowel contents.

bradyteleocinesia (brad"c-tel"c-o-sin-c'se-ah) [Gr. βραδύs slow + τέλεοs end + κlνησιs movement] A defect of motor co-ordination in which a movement is suddenly arrested just before its intended completion, and then after a pause it is completed slowly and unsteadily.

bradyteleokinesis (brad"e-tel-e-o-kin'e-sis).
Bradyteleokinesia.

bradytocia (brad-it-o'se-ah) [Gr. βραδύs slow + τόκοs birth]. Lingering or slow parturition.

bradytrophic (brad-it-rof'ik) [Gr βραδύs slow + τροφή nutrition]. Having slow-acting nutritive processes.

bradyuria (brad-e-u're-ah) [Gr. βραδύς slow + οὐρον urine]. Abnormally slow passage of urine.

Brahmachari's test (brah-mah-kah'rez) [U. N. Brahmachari, Indian physician] See under tests.

braidism (brād'izm) [after James Braid, an English surgeon, 1795-1866]. Same as hypnotism.

Brailey's operation (brāl'ez) [William Arthur Brailey, English ophthalmologist, 1845-1915]. See under operation

brain (brān) [L. enceph'alon; Gr. ἐγκέφαλος]. The mass of nervous material within the cranium, including the cerebrum, cerebellum, pons, and oblongata. abdominal b., the solar plexus. after-b., the metencephalon. b.-axis, the cerebellum, oblongata, pons, crura, basal ganglia, and insula together. end-b. See telencephalon. eye b. See ophthalmencephalon. b.-fag, exhaustion due to overwork with the brain. fore-b. See prosencephalon. hind-b. See epencephalon inter-b. See thalamencephalon. little b., the cerebellum. b.-mantle, all the portions of the cerebral cortex; called also pallium. mid-b., the mesencephalon. b.-murmur, a systolic murmur, chiefly heard in the temporal region, and principally in cases of rickets. new b. See neëncephalon. old b. See paleëncephalon. b.-pan, the cranium. railway-b., cerebral disturbance following an injury in a railway accident. b.-sand, the accrvulus cerebri, or the gritty matter of which it is composed. b.-stem, the brain-axis; all of the brain except the cerebellum and the cerebral cortex. b.-storm, a succession of sudden and severe paroxysms of

cerebral disturbance. **b.-sugar.** See cerebrose. **b.-tire.** See b.-fag. 'tween-b., the thalamencephalon or interbrain. walnut b., cerebral sclerosis, marked by shrinking of the brain tissue and widening of the sulci, resulting in a condition resembling in appearance a peeled walnut. wet b., the edematous condition of the brain due to alcoholism; alcoholic cerebral edema.

bran (bran). The meal derived from the epidermis or outer covering of a cereal grain.

branalcane (bran-al'kān). A proprietary preparation of resorcinol in boroglycerin. used in skin diseases.

branch (brantsh). A division or offshoot from the main stem of blood-vessels, nerves, or lymphatics. Cf. ramus.

branchia (brang'ke-ah) [Gr. βράγχια gills]. The gills of fishes and of others of the lower vertebrates. represented in the human fetus by the branchial clefts and arches.

branchial (brang'ke-al) [Gr. βράγχια gills]. Pertaining to or resembling the gills of a fish.

branchiogenous (brang-ke-oj'en-us) [Gr. βράγχια gills + γεννᾶν to produce]. Formed from a branchial cleft or arch.

branchioma (brang-ke-o'mah). A tumor connected with a branchial arch.

branchiomere (brang'ke-o-mēr). The segment in the early embryo from which the visceral arches are developed.

branchiomerism (brang-ke-om'er-izm) [Gr. βράγχια gills + μέρος part]. The metamerism or metameric division of the entoderm.

Brand bath (brant) [Ernst Brand, German physician, 1827–1897]. See under bath.

Brande's test (brands) [William Thomas Brande, English chemist, 1788-1866]. See under tests.

brandy (bran'de) [L. spir'itus vi'ni gal'lici]. An alcoholic spirit distilled from wine and from various fruits. It contains from 40 to 50 per cent. of alcohol. apple-b., cider-b., a spirit distilled from cider. peach-b., a brandy distilled from ripe peaches. potato-b., brandy distilled from potatoes.

Braquehaye's operation (brak-a-ēz') [Jules Pic Louis *Braquehaye*, French gynecologist, born 1865]. See under operation.

Brasdor's operation (brah-dōrz') [Pierre Brasdor, French surgeon, 1721-1798]. See under operation.

brash (brash). A burning sensation of the stomach; pyrosis water-b., pyrosis. weaning b., diarrhea in a nursling when put on food other than its mother's milk.

brasilin. Brazilin.

brassard (bras-ar') [Fr.]. Red cross insignia worn on the left arm of all persons belonging to the sanitary service of the army.

Brassica (bras'ik-ah) [L.]. A genus of cruciferous plants to which the cabbage, turnip, and mustard belong. B. al'ba is white mustard; B. ni'gra, black mustard.

brassicon (bras'ik-on). A preparation of peppermint oil, 2 c c.; camphor, 6 gm.; ether, 4 c.c.; alcohol, 12 c.c.; mustard oil, 6 drops.

Brauch-Romberg sign (browk'-rom'berg)
[Brauch, contemporary German neurologist; see
Romberg]. See Romberg's sign, under sign.

Brauer's method (brow'erz) [Ludolf Brauer, contemporary German physician]. See under method.

Braun's canal (brawnz) [Carl von Braun, Viennese obstetrician, 1822-1891]. See under canal.

Braun's hook (brawnz) [Gustav von Braun, Austrian gynecologist, 1829-1911]. See under hook.

Braun's test (brawnz) [Christopher Heinrich Braun, German physician, born 1847]. See under tests.

Braun-Fernwald's sign (brawn-fārn'valts) [Carl Braun von Fernwald, Viennese obstetrician, 1823-1891]. See under sign.

Braune's canal (brawn'ez) [Christian Wilhelm Braune, German anatomist, 1831-1802]. See canal. Brauneria (brawn-e're-ah). See Echinacea.

rau'nia jassyen'sis. A parasite, probably a larval tape-worm, found only once in man. Brau'nia jassyen'sis.

Braxton Hicks. See Hicks.

braxy (braks'e). The symptomatic anthrax of sheep caused by Clostridium septique.

Brayera (brah-ye'rah). A genus of rosaceous trees. The female flowers of B. anthelmin'tica (Hagenia abyssinica), called cusso, kusso, or kousso, are anthelmintic, and are used to expel tapeworm. Dose in substance, 2-8 dr. (8-32 gm); of fluidextract, 2-8 dr. (8-32 cc), of infusion, 4-8 fl oz. (118-236 c.c.).

brayerin (bra'er-in). A bitter anthelmintic resin, C₃₁H₃₈O₁₀, from brayera. Dose, 20-40 gr. (1.3-2 6 gm.).

Brazilian trypanosomiasis. See under trypanosomiasis.

brazilin (bra-zil'in). A yellow crystalline substance obtained from the bark of Biancea sappan and other red wood trees. It is very similar to hematoxylin and oxidizes to a bright red dye, brazilein.

bread (bred) [L. pa'nis]. A food-material made by mixing the flour of some grain with water and baking. almond b., a bread for diabetics, made of almond flour. brown b., bread made of maize, wheat, and rye together. casoid b., bread prepared from casein used in diabetes. b.-crumb [L. mi'ca pan'is], bread used in pharmacy, mainly as a vehicle in making pills. diabetic b., bread made of flour which contains a minimum of carbohydrate; such as almond bread, casoid bread. geril b., a bread containing 7½ per cent. of protein and 91 per cent. of reducing sugar: used in constipation and diabetes. Graham b., bread made from the meal or unbolted flour of wheat. b.-paste, a watery culture-medium prepared from bread, and used in bacteriologic work. **protein b.** Same as casoid b.

breadth-feeling (bredth'-fēl-ing). That element in vision by which breadth or lateral extension is perceived.

break (brāk). The interruption of an electric current as distinguished from the make (q v). b.-shock, the shock produced by breaking the electric current as it is passing through the body.

breakbone fever. Dengue.

breakdown (brāk'doun). A condition due to rupture of the suspensory ligament in a horse, causing the toe to point upward.

breast (brest). 1. The anterior aspect of the chest or thorax. 2 The mamma or mammary gland. broken b., gathered b., mammary abscess. caked b. See stagnation mastitis under mastitis. chicken-b., pigeon-b., a condition of the chest in which the sternum is prominent: due to obstruction to infantile respiration or to rickets. Cooper's irritable b., neuralgia of the breast. funnel-b., deformity of the chest, consisting of a marked sinking-in of the sternum, especially of its lower portion. hysteric b., painful swelling of the breast due to hysteria. b.-pang, angina pectoris. pidgeon b., chicken breast. proemial b., the condition of the female breast which is a prelude to pathologic changes. b.-pump, an apparatus for drawing milk from the mammary gland. shoemakers' **b.**, sinking in of the sternum in shoemakers, produced by the pressure of tools against the lower part of the sternum and the xiphoid cartilage. b.-tea. See species pectorales.

breastings (brest'ingz). Colostrum.

breath (breth) [L. spir'itus hal'itus]. The air taken in and expelled by the expansion and contraction of the thorax.

breathing (bre'thing). See respiration. abdom-See under inal b., bronchovesicular b.

Biot's b., irregular breathing in respiration. which the individual respirations vary in volume and the intervals between them vary in length. See meningitic respiration, under respiration. cerebral b. See cerebral respiration, under respiration. cog-wheel b., interrupted b., wavy b., breathing interrupted by nervous weak-ness or by muscular contraction. jerky b., that in which the inspiration is interrupted two or three times also called wavy breathing. luxus b., the excess in breathing above the needs of the system. mouth-b., habitual respiration through the mouth. **puerile b.**, the breathing normally heard in children, and sometimes in others, and characterized by an exaggerated respiratory murmur. suppressed b., breathing without any appreciable sound, as in extensive consolidation of the lung and in some cases of pleuritic effusion. thoracic b., respiration in which the thoracic walls are actively moved. transitional **b.** Same as bronchovesicular respiration.

Breda's disease (bra'dahz) [Achille Breda, con-

temporary Italian dermatologist]. Yaws. bredouillement (bra-dwe-maw'). A speech-defect in which only part of the word is pronounced, due to extreme rapidity of utterance.

breech (brēch). The nates or buttocks.

breeze, electric (brez). See static b. head-b. electricity applied to the head by a plate with pencils for subdividing the current. static b., the brush of fan-shaped spark passing between the patient and the applicator in using static electricity with a pointed electrode.

bregenin (breg'en-m) [A. S breg'en brain]. ammo-lipin, C40H81NO, obtained from brain substance.

bregma (breg'mah) [L; Gr $\beta \rho \epsilon \gamma \mu a$]. The point on the surface of the skull at the junction of the coronal and sagittal sutures.

bregmatic (breg-mat'ık). Pertaining to the bregma. brein (bre'm). A glucosid derived from Bryo'nia al'ba: said to be a stimulant to the arterioles.

Breisky's disease (bri'skēz) [August Breisky, German gynecologist, 1832-1889]. Kraurosis vulvæ.

Bremer's test (brem'erz) [John Lewis Bremer, physician in Boston, born 1874]. See under tests.

Brenner's formula or test (bren'erz) [Rudolf Brenner, German physician, 1821-1884]. See under formula.

brenz- is a pure German prefix meaning burnt. For words beginning thus, see pyro.

brenzcain (brents ka'in) See pyrocain.

brenzcatechin (brents-kat'ek-in). Same as pyrocatechin.

brenzcatechinuria (brents-kat"ek-in-u're-ah). See pyrocatechinuria.

brephic (bref'ik) [Gr. βρέφος embryo]. Pertaining to an early stage of development.

Breschet's canals, veins, etc. (bresh-āz') [Gilbert Breschet, French anatomist, 1784-1845]. See under canal, vein, etc.

Bretonneau's angina or disease (bret-on-ōz') [Pierre Bretonneau, French physician, 1778-1862]. Diphtheria of the pharynx.

Breus's mole (broys) [Carl Breus, Austrian obstetrician, 1850-1914]. See under mole.

breviductor (bre-vid-uk'tor) [L. bre'vis short + duc'tor leader]. The adductor brevis muscle.

breviflexor (bre-vif-leks'or) [L. brc'vis short + flex'or bender]. Any short flexor muscle.

breviradiate (bre-vir-a'de-āt). Having short prolongations: a term applied to one type of neuroglia cells.

brevis'sinus oc'uli. The obliquus inferior muscle. brevium (bre've-um). Same as uranium x2.

Brewer's operation, point (bru'erz) [George Emerson Brewer, New York surgeon, born 1861]. See operation and point.

brick-dust deposit. See under deposit.

bricklayers' itch. Eczema in bricklayers due to irritation from mortar.

brickmakers' anemia. Ankylostomiasis.

brick-pox (brik'poks). A form of swine-erysipelas (Ger. Balksteinblattern) due to a special organism.

bridge (brij). I A device for replacing one or more missing teeth, supported by being fastened to adjoining natural teeth. 2 See pons. cantilever b., a dental bridge which is attached at one end to a natural tooth or root, the other end resting unattached in a depression in a tooth. cell-b's, intercellular bridges. cytoplasmic b., a band of protoplasm joining two adjacent blastomeres. extension b., a bridge having a pontic attached at one end beyond the point of anchorage of the bridge. fixed b., a dental bridge which is permanently fixed to its abutements. Gaskell's b. See bundle of His. intercellular b's, processes of cell substance connecting adjoining cells, plasmodesma. b. of the nose, the upper portion of the external nose formed by the nasal bones removable b., a dental bridge which may be removed and replaced by the wearer. b. of Varolius, pons varolii. Wheatstone's b., an instrument for measuring electric resistance.

bridge-work (brij-werk). A partial denture retained by attachments other than clasps (A D. A.). fixed b., partial dentures retained with crowns or inlays cemented to the natural teeth, which are used as abutments (A. D. A). removable b., partial dentures retained by attachments which permit the removal of the denture. Usually the attachment is in two parts, one part being cemented to the natural tooth or its root and the other being a permanent part of the denture (A. D. A.)

bridges (brij'ez). Protoplasmic structures which unite adjacent cell-elements, alike in plants and animals.

bridle (bri'dl). Any frenum; also a loop or filament which crosses the lumen of a passage on the surface of an ulcer.

bridou (bre-doo'). Same as perleche.

Brieger's bacillus, test (bre'gerz) [Ludwig Brieger, physician in Berlin, 1849–1910] Sce under bacillus and lests.

brier, bamboo- (bri'er). The root of Smi'lax rotundifo'lia, of the United States alterative used like sarsaparılla Dose of fluidextract, 30-120 min. (2-8 c c).

Bright's disease (brits) [Richard Bright, English physician, 1789-1858]. See nephritts and disease.

brightic (bri'tik). r Affected with Bright's discase. 2. A patient ill of Bright's disease.

Brill's disease (brilz) [Nathan E. Brill, New York physician, 1860–1925] See under disease.

brilliant green. See under green.

brightism (brīt'izm) Chronic nephritis.

brim (brim). The edge of the superior strait of the pelvis.

brimstone (brim'ston). See sulphur.

Brinton's disease (brin'tonz) [William Brinton. English physician, 1823-1867]. See under disease,

Briquet's ataxia, syndrome (bre-kāz') [Paul Briquet, French physician, 1796-1881]. See 1 axia and syndrome

brisement (brēz-maw') [Fr. "crushing"]. The breaking up of anything, as of an ankylosis. b force, the breaking up of a bony ankylosis by force.

brise-pierre (brēs-pe-ār') [Fr. "stone-breaker"]. A form of lithotrite.

Brissaud's disease, infantilism, reflex (bresōz') [Edouard Brissaud. French physician, 1852– 1909]. See disease, infantilism, and reflex.

bristle-cell (bris'l-sel). See under cell.

British thermal unit. See under unit.

broach (brotch). A fine barbed instrument used by dentists for dressing a tooth-canal or for extracting the pulp.

Broadbent's apoplexy, sign (broad'bentz) [Sir William Broadbent, English physician, 1835-1907]. See apoplexy and sign.

Broca's area, fissure, formula, etc. (bro'kahz)
[Paul Broca, a French surgeon, 1824-1880]. See area, fissure, formula, etc.

Brocq's disease (broks) [Anne Jean Louis Brocq, French dermatologist, born 1856]. See disease.

Broders's index (bro'derz) [Albert C Broders, American pathologist, born 1885]. See under index.

Brodie's (bro'dēz) abscess, disease, knee, etc. [Sir Benjamin Collins Brodie, English surgeon, 1783-1862]. See abscess, disease, knee, etc.

Brodie's ligament (bro'dēz) [J. Gordon Brodie, Scotch anatomist, 1786-1818]. See ligament.

Broesike's fossa (bre'ze-kez) [Gustav Broesike, German anatomist, born 1853]. See fossa.

broken-wind (bro'ken-wind). Paroxysmal dyspnea in the horse.

brom-. See also bromo.

bromacetone (brōm-as'e-tōn). Lacrimatory and lethal war gas, acetylbrommethane, Br CH₂ CO.-CH₂

bromal (bro'mal). Tribromacetaldehyd, CBr₃-CHO, a colorless, oily, poisonous liquid produced by the action of bromin on alcohol. It is used as a hypnotic and anodyne, and externally as an irritant. Dose, 1-5 min. (0 066-0 333 c c.) in a capsule. b. hydrate, a crystalline substance, CBr₃ CHO li₂O. It 15 an irritant hypnotic, more powerful than chloral hydrate, for which it is used in chorea and epilepsy. Dose, 1-5 gr. (0.066-0 333 gm.).

bromalbacid (brom-al'bas-id). A bromin and albumin compound for nervous excitability. Dose, 15-30 gr. (1-2 gm.).

bromalbin (brōm-al'bin). A compound of albumin and bromin containing about 18 per cent. of bromin.

bromalbumin, bromo-albumin, bromosin (bro-mal-bu'min, bro''mo-al-bu'min, bro'mo-sin). A preparation of bromin (10 per cent.) and albumin used in epilepsy.

bromalin (bro'mal-in). A colorless or white, crystalline compound, $(CH_2)_6N_4$ C_2H_6Br , or bromethylformin, recommended for use in epilepsy-Dose, 20-60 gr. (1.333-4 gm).

bromaloin (bro'mal-o-in). A crystalline derivative from bromin and barbaloin.

bromamid (bro'mam-id). A colorless, crystalline antipyretic and analgesic compound, tribromanilinhydrobromid, C₆H₂Br₃ NH₂ HBr. Dose, 10–15 gr. (0 600–1 gm.).

bromate (bro'māt). Any salt of bromic acid.

bromated (bro'ma-ted). Combined with or containing bromin.

bromatherapy (bro-mah-ther'ap-e). Bromato-therapy.

bromatol (bro'mat-ol). A proprietary whooping-cough remedy, consisting of bromoform emulsified in 35-40 per cent. cod-liver oil.

bromatology (bro-mat-ol'o-je) [Gr. βρωμα food + λόγοs treatise] The science of foods and dietetics. bromatotherapy (bro"mat-o-ther'ap-e) [Gr. βρωμα food + θεραπεία treatment]. The use of food in treating disease.

bromatotoxin (bro-mat-o-toks'in) [Gr. βρῶμα food + toxin] The poison formed in food by fermentation, etc.

bromatoxism, bromatotoxismus (bro-matoks'izm, bro-ma-to-toks-iz'mus) [Gr. βρῶμα food + τοξικόν poison]. Poisoning by food.

bromeresol green (bröm-kre'sol). See under green.
b. purple, an indicator, dibromorthocresolsulphonephthalein, used in the determination of hydrogenion concentration. It has a PH range of 5.2 to 6.8, being yellow at 5 2 and purple at 6.8.

bromdiethylacetylcarbamid (brom-di-eth"il-as"et-il-kar'bam-id). See carbromal.

bromdiethylacetylurea (brom-dı-eth"il-as"et-ilu-re'ah). See carbromal

bromeigon (brōm-i'gon). An eigon of bromin and an albuminous substance.

bromeikon (brōm-i'kon). A proprietary tetrabrom-phthalein sodium.

phthalein sodium.

bromelin (bro-mel'in) [L. brome'lia pineapple]. A

ferment like trypsin, from pineapple-juice. bromethyl (bro-meth'ıl). See ethyl bromid.

bromethylene (brom-eth'il-en). Same as ethylene bromid.

bromethylformin (brōm"eth-il-formin). See bromalin.

brometone (brom'et-ōn). A white, crystalline compound of bromoform and acetone, homologous with chloretone, tribromtertiary butyl alcohol, CBr₃ C(OH)(CH₃)₂, soluble in alcohol, ether, and sparingly in water. It is sedative and is used in headache, chronic cough, and epilepsy. Dose, 5 gr. (0.333 gm).

bromglidin (brom-gli'din). A proprietary organic bromin compound, used as a sedative.

bromhemol, bromohemol (brom-he'mol, bromo-he'mol). Hemol combined with 2.7 per cent. of bromin. Dose, 15-30 gr. (1-2 gm).

bromic (bro'mik). Like bromin, containing bromin.

bromid (bro'mid). Any binary compound of bromin many of them are useful in epilepsy, being cardiac and cerebral depressants.

bromidia (bro-mid'e-ah) A proprietary hypnotic and anodyne preparation.

bromidin (bro'mid-in). A hypnotic preparation of chloral hydrate, extract of cannabis, and extract of hyoscyamus.

bromidrosiphobia (brom''id-ro-ze-fo'be-ah) [Gr. $\beta \rho \hat{\omega} \mu$ os stench $+ l \delta \rho \hat{\omega}$ s sweat $+ \varphi \delta \beta$ os fear] Morbid dread of bodily odors, with delusions as to their perception.

bromidrosis (brom-id-ro'sis) [Gr. βρῶμος stench + ἰδρώς sweat]. Fetid perspiration

bromil (bro'mil) An organic bromid preparation, used like potassium bromid.

bromin (bro'min) [L. bro'mium, bro'minum, bro'mum; Gr. βρῶμος stench]. A reddish-brown liquid element, symbol Br, giving off suffocating vapors. Its atomic weight is 79 92, its specific gravity, 2 99. Its compounds are mostly sedative. A saturated aqueous solution of bromin is used as a disinfectant and in skin diseases.

brominism, bromism (bro'min-izm, bro'mizm). A condition of poisoning produced by the excessive use of bromin or a bromin compound. The symptoms produced are an eruption of acne upon the face and body, headache, coldness of the extremities, fetor of breath, sleepiness, and loss of strength and sexual power.

brominol (bro'min-ol). Same as bromipin.

bromipin (bro'mi-pin). A yellow, oily liquid, being a bromin addition-product of sesame oil, and containing about 10 per cent. of bromin. It is a sedative and nervine. Dose, a teaspoonful to a tablespoonful.

bromization (bro-mi-za'shun). Impregnation with bromids or bromin; the administration of large doses of bromids.

bromized (bro'mizd). Under the influence of bromids.

bromoaceton (bro-mo-as'et-on). CH₂Br.CO.CH₃, a lacrimating war gas.

bromoacetophenon (bro-mo-as-et-o"fe'non). C₆-H₅ CO.CH₂Br, a lacrimating war gas.

bromo-albumin (bro"mo-al-bu'min). See bromalbumin.

bromobenzylcyanid (bro"mo-ben-zil-si'an-id). C₆H₅.CHBr.CN, one of the best lacrimating war gases.

bromocaffein (bro-mo-kaf'e-in). A proprietary bromin and caffein compound: used for sick headache.

bromocarpine (bro-mo-kar'pin). A proprietary remedy for epilepsy and other nervous disorders, containing, it is said, potassium bromid and pilocarpin.

bromochinal (bro-mo-ke'nal). Yellow crystals of quinin dibromsalicylate. It is a feeble antipyretic and soporific

bromochloralum (bro"mo-klo-ral'um). A proprietary compound containing bromin and chloralum disinfectant and antiseptic.

bromocoll (bro'mo-kol). A yellowish, tasteless powder, a combination of gelatin and tannin with bromin. used like potassium bromid, also in an ointment for pruritus. Dose, 3-15 gr. (0.198-1 gm).

bromoderma (bro-mo-der'mah) [bromin + Gr. δέρμα skin]. A skin eruption due to the use of bromin or bromids.

bromoform (bro'mo-form). A colorless liquid, tribrom methane, CHBr₃, an anesthetic and antispasmodic substance. It is used as an anesthetic in whooping-cough and as a sedative in sea-sickness. Dose, 3-15 min. (0.194-1 c.c.). **acetone b.**, brometone.

bromoformin (bro-mo-for'min). Same as bro-malm.

bromoformism (bro-mo-for'mizm). Poisoning with bromoform.

bromogallol (bro-mo-gal'ol). See gallobromol.

bromoglidin (bro-mo-gli'din) Λ compound of bromin and glidin: used like the bromids.

bromohemol. See bromhemol

bromohyperhidrosis (bro'mo-hi-per-hid-ro'sis) [Gr βρωμοs stench + υπέρ over, excessive + tδρωτιs perspiration]. Excessive and badly smelling perspiration.

bromoiodism (bro-mo-i'o-dizm). Poisoning with bromin and iodin or their compounds

bromoketone (bro-mo-ke'tōn). See bromomethylethyl kelone

bromol (bro'mol). Tribromphenol, C₀H₃Br₃OH, a crystalline antiseptic, nearly insoluble in water, but readily soluble in alcohol, chloroform, ether, etc. It is a disinfectant and caustic. Its 3 per cent. solution in olive oil is used in diphtheria, whooping-cough, etc. Dose, ½0-½ gr. (0 006-0 022 gm.).

bromolecithin (bro-mo-les'ith-in). A brominated lecithin.

bromolein (bro-mo'le-in). A brominated almond oil.

bromolithia (bro-mo-lith'e-ah). A proprietary remedy for gout and rheumatism.

bromomangan (bro-mo-man'gan). A proprietary tonic preparation for anemia, epilepsy, hysteria, and neurasthenia.

bromomania (bro-mo-ma'ne-ah) [bromin + mania].
Mental disorder induced by the injudicious use of the bromin compounds.

bromomenorrhea (bro"mo-men-or-e'ah) [Gr. $\beta \rho \hat{\omega}_{\mu}$ os stench $+ \mu \hat{\eta}_{\nu}$ es menses $+ \dot{\rho}ola$ flow]. The discharge of menses characterized by an offensive odor.

bromomethylethyl ketone. CH₂Br,CO.C₂H₅. A lacrimating war gas.

bromophenol (bro-mo-fe'nol). r. Same as bro-mol. 2. A violet-colored, strong-smelling liquid, C₀H₄BrOH, employed in ointments for erysipelas.

bromophenylacetonitril. See bromobenzylcy-anid.

bromophenylmethyl ketone. See bromo-acetophenone.

bromophor (bro'mo-fōr). A preparation of dibromoricinoleic acid, used externally in skin diseases.

bromopnea, bromopnea (brōm-op-ne'ah) [Gr. $\beta \rho \hat{\omega} \mu os$ stench $+ \pi \nu o \eta$ breath]. Fetid breath.

bromopyrin (bro-mo-pi'rin). 1. An antipyretic remedy, antipyrin monobromid, C₁₁H₁₁BrN₂O, in white needles: used like antipyrin. 2. A proprietary compound of antipyrin, caffein, and sodium bromid.

bromoseltzer (bro-mo-selt'zer). A proprietary remedy for headache, etc.

bromoserum (bro'mo-se-rum). A solution in 1000 parts of water of 6 parts sodium bromid and 1 5 parts sodium chlorid used by injection as a bromid substitute.

bromosin (bro'mo-sin). Same as bromalbacid.

bromosoda (bro-mo-so'dah). A proprietary anodyne and antidyspeptic remedy.

bromothymin (bro-mo-thi'min). A proprietary whooping-cough remedy, composed of bromoform and compound syrup of thyme.

bromotolunitril (bro-mo-tol-u-ni'tril). See bro-mobenzylcyanid.

bromphenol blue (brom-fe'nol). See under blue. **b. red.** See under rcd.

bromphenols (brom-fe'nolz). A series of brominized phenols, sometimes found in the precipitates of tested urine.

bromphenyl-acetyl-cystein (brom-fen"il-as" etil-sis-te'in). See phenylmercapturic acid, under acid.

bromsulphthalein (brom-sulf-thal'e-in). A dye, disodium phenoltetrabromphthalein sulphonate, used in testing liver function, the amount remaining in the blood-stream after intravenous injection being considered a measure of hepatic dysfunction.

bromthymol blue (brom-thi'mol). See under blue.
bromum (bro'mum) [L]. The U. S. P. name for bromin

bromural (brom-u'ral). Monobromisovalerianylurea, (CH₃)₂ CH.CH(Br) CO NH.CO NH₂, used as a nerve sedative and mild hypnotic. Dose, 5-10 gr (0 33-0 65 gm.).

bromurated (brōm'u-ra-ted). Containing bromin or bromin salts

bromuret (brom'u-ret) A bromid.

bronchadenitis (brong"kad-en-i'tis) [Gr. βρόγχια bronchia + ἀδήν gland + -ιτις inflammation]. Inflammation of the bronchial glands.

bronchi (brong'ki) [L]. Plural of bronchus.

bronchia (brong'ke-ah) [L.; Gr βρόγχια]. Bronchial tubes smaller than the bronchi and larger than the bronchioles.

bronchial (brong'ke-al) [L. bronchia'lis]. Pertaining to the bronchi or bronchia.

bronchiarctia (brong-ke-ark'she-ah) [L. bron'-chas air-passage + arcta're to bind]. Stenosis of a bronchial tube.

bronchiectasis (brong-ke-ek'tas-is) [Gr. βρόγχος bronchus + ἔκτασις dilatation]. Dilatation of the bronchi or of a bronchus. It may affect the tube uniformly (cylindric b.), or may occur in irregular pockets (sacculated b). It is marked by fetid breath and paroxysmal coughing, with the expectoration of mucopurulent matter. capillary b., dilatation of the bronchioles.

bronchiectatic (brong-ke-ek-tat'ik). Affected with or marked by bronchiectasis.

bronchiloquy (brong-kil'o-kwe) [L. bron'chus bronchus + lo'qui to speak]. A high-pitched pectoriloquy due to a consolidated lung.

bronchiocele (brong'ke-o-sēl) [bronchiole + Gr. κήλη tumor]. A dilatation or swelling of a bronchiole.

bronchiocrisis (brong''ke-o-kri'sis). Bronchial crisis. See under crisis.

bronchiogenic (brong-ke-o-jen'ik). Bronchial in origin.

bronchiole (brong'ke-ōl) [L. bronchi'olus]. A minute bronchial tube, one of the finer subdivisions of the bronchia.

bronchiolectasis (brong''ke-o-lek'tas-is) [bronchiole + Gr. εκτασις dilatation]. Dilatation of the bronchioles.

bronchiolitis (brong"ke-o-li'tis). Capillary bronchitis. acute obliterating b., cirrhosis of the lung due to induration of the walls of the bronchioles. b. exudati'va (Curschmann), inflammation of the bronchioles, with exudation of Curschmann's spirals and grayish, tenacious sputum, often merging into asthma. vesicular b., bronchopneumonia.

bronchiospasm (brong'ke-o-spazm). Spasmodic narrowing of the caliber of the bronchial tubes.

bronchiostenosis (brong"ke-o-sten-o'sis) [Gr. βρόγχια bronchia + στένωσις stenosis]. Stenosis of the bronchi, bronchiarctia.

bronchisan (bron'kis-an). A 4 per cent. solution of pyrenol used as an expectorant and sedative in whooping-cough, chronic bronchial catarrh, etc.

bronchisepticin (brong-ke-sep'tis-in) An antigen prepared from *Bacillus bronchisepticus*: used in the skin test for canine distemper.

bronchismus (brong-kis'mus). Same as bronchio-spasm.

bronchitic (brong-kit'ik) [L. bronchit'icus] Pertaining to, affected with, or of the nature of, bronchitis.

bronchitis (brong-ki'tis) [Gr. βρόγχια air-tubes + -itis]. Inflammation of the bronchial tubes. acute b., a bronchitic attack with a short and more or less severe course. It is due to exposure to cold, to the breathing of irritant substances, and to acute general diseases. It is marked by fever, pain in the chest, especially on coughing, dyspnea, and cough arachidic b., bronchitis caused by the aspiration of peanut kernels into the bronchi. capillary b., an inflammation of the more minute air-passages of the lungs. attended with fever, dy spnea, and depression, and is often fatal. Castellani's b., bronchocatarrhal b., a form of acute spirochetosis bronchitis with a profuse mucopurulent discheesy b., a form accompanying charge some cases of tuberculosis of the lung, in which the alveoli are filled with cells that undergo a cheesy degeneration. **chronic b.**, a long-continued form, often with a more or less marked tendency to recurrence after stages of quiescence. It is due to repeated attacks of acute bronchitis or to chronic general diseases; characterized by attacks of coughing, by expectoration, either scanty or profuse, and secondary changes in the lungs. croupous b., fibrinous b., plastic b., bronchitis with violent cough and paroxysms of dyspnea, in which casts of the bronchial tubes are expectorated with Charcot-Leyden crystals and cosinophile cells. dry b., a form with a scanty secretion of tough sputum. epidemic See influenza. epidemic capillary b., a dangerous form which sometimes accompanies an epidemic of measles. ether b., that due to the irritation of ether. exudative b. Same as croupous b. hemorrhagic b., bronchospirochetosis. mechanic b., a variety caused by the inhalation of dust or of solid particles. membranous b. Same as croupous b. b. oblit'erans, a form in which the smaller bronchi become filled with nodules made up of fibrinous exudate. phthinoid b., tuberculous bronchitis with purulent expectoration. **plastic b.** See croupous b. **polypoid b.** Same as croupous b. **productive b.**, bronchitis with the development of fibrous tissue in and around the bronchi. **pseu-** domembranous b. Same as croupous b. putrid b., a form of chronic bronchitis in which the sputum is very offensive. secondary b., that which occurs either as a complication of some acute disease, such as a fever, or as a local expression of some constitutional disorder. staphylococci. streptococcus b., bronchitis caused by staphylococci. streptococcus b., bronchitis due to streptococci. suffocative b. Same as capillary b. verminous b., bronchitis in sheep and cattle, due to the presence of a worm, Strongylus filanu. vesicular b., that in which the inflammation extends into the alveoli, which are sometimes visible under the pleura as whitish-yellow granulations like millet-seeds.

bronchium (brong'ke-um), pl. bron'chia [L.]. One of the subdivisions of a bronchus.

broncho-adenitis (brong"ko-ad-en-i'tis). Same as bronchadenitis.

broncho-aspergillosis (brong"ko-as-per-jil-o'sis).
Bronchial disease from infection with Aspergillus.

bronchoblennorrhea (brong"ko-blen-o-re'ah). Chronic bronchitis in which the sputum is copious, thin, and mucopurulent.

bronchocavernous (brong-ko-kav'er-nus). Both bronchial and cavernous.

bronchocele (brong'ko-sēl) [Gr. βρόγχος windpipe + κήλη tumor]. See goiler. cystic b., gotter containing cysts.

bronchocephalitis (brong"ko-sef-al-i'tis) A synonym of whooping-cough.

bronchoconstriction (brong"ko-kon-strik'shun). The reduction of the caliber of the bronchi.

bronchoconstrictor (brong"ko-kon-strik'tor)
Constricting or narrowing the lumina of the airpassages of the lungs.

bronchodilatation (brong''ko-di-la-ta'shun). Dilatation of a bronchus

bronehodilator (brong''ko-di-la'tor) Dilating or expanding the lumina of the air-passages of the lungs.

broncho-egophony (brong"ko-e-gof'o-ne). Same as egobronchophony

broncho-esophagoscopy (brong"ko-e-sof-ag-os'-ko-pe). The instrumental examination of the bronchi and esophagus.

bronchol (brong'kol). A proprietary bronchitis remedy containing terebene, oil of sandalwood, creosote, eucalyptol, and strychnin

broncholith (brong'ko-lith) [Gr. $\beta \rho \delta \gamma \chi os$ air-passage + $\lambda l \theta os$ stone]. A bronchial calculus.

broncholithiasis (brong"ko-lith-i'as-ıs) A condition in which calculi are formed in the bronchi

bronchomoniliasis (brong"ko-mo-nil-i'as-is). Infection of the bronchi with Monilia

bronchomotor (brong-ko-mo'tor). Affecting the caliber of the bronchi.

bronchomucomycosis (brong''ko-mu-ko-mi-ko'-sis). Bronchial disease due to infection with Mucor mucedo.

bronchomycosis (brong''ko-mi-ko'sis) [Gr. βρόγχος air-passage + μύκης fungus]. Any bronchial disorder due to fungi.

broncho-o'diosis (brong"ko-o-id-e-o'sis). Bronchitis caused by o'dium.

bronehopathy (brong-kop'ath-e) [Gr. $\beta\rho\delta\gamma\chi\sigma$ s airpassage $+\pi\delta\theta\sigma$ s disease]. Any disease of the airpassages of the lungs.

bronchophony (brong-kof'o-ne) [Gr. βρόγχος airpassage + φωνή voice]. The sound of the voice as heard through the stethoscope applied over a healthy bronchus. Heard elsewhere, it indicates solidification of the lung tissue. pectoriloquous b., a bronchophony with an accompaniment of pectoriloquy. sniffling b., that which is accompanied with a sniffling sound, as of air drawn through the nose. whispered b., that which is heard while the patient is whispering.

bronchoplasty (brong'ko-plas-te) [Gr. βρόγχοs bronchus +πλάσσειν to mold]. Plastic surgery of the trachea; surgical closure of a fistula in the trachea or bronchus.

bronchoplegia (brong"ko-ple'je-ah). Paralysis of the bronchial tubes.

bronchopleuropneumonia (brong"ko-plu"ronu-mo'ne-ah). Pneumonia complicated by bronchitis and pleurisy.

bronchopneumonia (brong"ko-nu-mo'ne-ah)
[bronch: + pneumonia] Inflammation of the
bronchi and lungs; lobular or catarrhal pneumonia. The disease begins in the bronchi and
spreads to the parenchyma of the lungs

bronchopneumonic (brong"ko-nu-mon'ik). Pertaining to, affected with, or caused by bronchopneumonia.

bronchopulmonary (brong"/ko-pul'mon-a-re). Pertaining to the lungs and their air-passages; both bronchial and pulmonary.

bronchorrhagia (brong''kor-a'je-ah) [Gr. βρόγχοs air-passage + ἡηγνύναι to burst forth] Hemorrhage from the lungs.

bronchorrhaphy (brong-kor'af-e) [Gr. $\beta \rho \delta \gamma \chi \sigma$ airpassing $+ \beta \delta \psi \eta$ suture] The suturing of an incised or wounded bronchus.

bronchorrhea (brong-kor-e'ah) [Gr βρόγχος air-passage + ροία flow] Excessive discharge of mucus from the air-passages of the lungs.

bronchoscope (brong'ko-skōp). An instrument for inspecting the interior of the bronch.

bronchoscopy (brong kos'ko-pe) [Gr βρόγχος aupassage + σκοπείν to examine]. Examination of the bronchi through a tracheal wound or through a bronchoscope (Kilhan, 1898).

bronchospasm (brong'ko-spazm). Bronchial spasm.

bronchospirochetosis (brong"ko-spi-ro-ke-to'sis) An infectious disease caused by the presence in the bronchi of the Spirocheta bronchidis and marked by chronic bronchitis attended by the spitting of blood, called also Castellani's bronchitis and hemorrhagic bronchitis

bronchostenosis (brong''ko-sten-o'sis) [Gr. βρόγχοs bronchus + στένωσιs stricture] Stricture or abnotmal dimmution of the caliber of a bronchial tube **spasmodic b.**, spasmodic contraction of the walls of the bronchi

bronchostomy (brong-kos'to-me) |bronchus + Gr. στόμα mouth| The operation of forming a muco-cutaneous opening through the chest wall into a bronchus.

bronchotetany (brong-ko-tet'an-e). Extreme dyspnea caused by spasm of the bronchial musculature, preventing access of air.

bronchotome (brong'ko-tōm). A cutting instrument used in performing bronchotomy.

bronchotomy (brong-kot'o-me) [Gr. βρόγχος air-passage + τομή cut] Surgical incision of the trachea or of a bronchus.

bronchotracheal (brong"ko tra'ke-al). Pertaining to the bronch and trachea

bronchotyphoid (brong-ko-ti'foid). Typhoid fever beginning with severe bronchitis.

bronchotyphus (brong"ko-ti'fus) Typhus complicated with bronchial catarrh.

bronchovesicular (brong"ko-ves-ik'u-lar). Both bronchial and vesicular. See respiration.

bronchus (brong'kus), pl. bron'chi [L., Gr. βρόγχος windpipe]. I Either one of the two main
branches of the trachea. 2 The trachea eparterial b., the first division of the right bronchus.
hyparterial b., the left bronchus, together with
the right bronchus below the first division.

bronzed skin (bronzd skin). See melasma suprarenale.

Brooke's disease (brooks) [H A. G. Brooke, English dermatologist, 1854-1919]. I. Spiradenoma. 2. Psorospermosis. broom (brum). See scoparius and spartein.

brophenin (bro-fe'nin). Paraphenetidin bromisovalerylaminoacetate used as a febrifuge and analgesic. Dose, 10-30 gr. (0.6-1.8 gm.).

brossage (brō--azh') [Fr. "brushing"]. The operation of removing granulations by a stiff brush, as in trachoma.

brush, as in traciona.

broth (broth). See bouillon. bile salt b. See bile salt medium, under culture-medium. Lipschutz's egg-albumen b. See egg-albumen boullon, under bouillon. MacConkey's bile salt b. See bile salt medium under culture-medium. Uschinsky's protein-free b. See protein-free bouillon, under bouillon.

brousnika (broos'ne-kah) [Russ]. A diuretic preparation of the berries of Vaccin'ium vi'tis-Idw'a, or red bilberry. Dose, 2-4 dr (8-16 c.c.).

broussaisism (broos-a'sizm) [after F. J. V. Broussais, 1772–1838]. The obsolete opinion taught by Broussais, that irritability of the mucous membrane of the alimentary canal was a point of primary importance in the causation of disease.

brovalol (bro-val'ol). A proprietary oily liquid, bornylbromvalerate, CH₃ CH(CH₃) CH(Br). CO. O.(C₁₆H₁₇), said to contain 25 2 per cent. bromin, 26 5 isovalerianic acid, and 48 3 borneol used as an antispa-smodic and nervine. Dose, 4-12 min. (0 26-0 8 c.c.).

brow (brow). The superciliary ridge; also the forehead, or either lateral half thereof. b.-ache, b.-ague, b.-pang, supraorbital neuralgia, or hemicrania.

brown (broun). A dusky, reddish-yellow color. Bismarck b., a basic andin dye, phenyelene-diazo-metaphenylene-diazin, C₆H₄[N₂C₆H₃(NH₂)₂]₂, much used as a stain and counterstain in histology. Manchester b., Bismarck brown. b.-tail moth dermatitis. See under dermaturs. phenylene b. Bismarck brown.

brownian movement (brow'ne-an) [Robert Brown, English botanist, 1773-1858]. See movement.

brownism (brown'izm) Same as brunonianism.

Brown-Séquard's disease, sign, etc. (brown-sa kārz') [Charles Edouard Brown-Séquard, French physiologist, 1818-1804]. See disease, sign, etc.

brown-tail moth dermatitis. See dermatitis.

Brucella (broo-sel'ah) [Sir David Bruce]. A generic name for a group of bacteria which includes B. abor'tus (Bacillus abortus), B. (Bacillus) bronchiscpticus, and B. meliten'sis (Bacterium melitensis).

Bruce's septicemia (broos'ez) [Sir David *Bruce*, surgeon in British army]. Malta fever.

Bruch's glands, etc. (brooks) [Carl Wilhelm Ludwig Bruch, German anatomist, 1819–1884]. See gland, etc.

brucin (bru'sin) [from Bru'cea, a genus of shrubs named for J Bruce, 1730–1704]. A bitter, white, poisonous alkaloid, $C_{23}H_{26}N_2O_4+4H_2O$, from nux vomica and other species of Strychnos. It resembles strychnin in its action, but is less poisonous. Dose, $\frac{1}{14}-\frac{1}{16}$ gr. (0.001–0.004 gm.).

Brücke's muscle, etc. (bre'kez) [Ernst Wilhelm von *Brucke*, Austrian physiologist, 1819–1892]. See under *muscle*, etc.

Bruck's test (brooks) [C. Bruck, German physician]. See under tests.

Brudzinski's sign (broo-zin'skez) [J. Brudzinski, Polish physician, 1874-1917]. See under sign.

bruise (brooz). A superficial injury produced by impact without laceration, a contusion.

bruissement (bruēs-maw') [Fr.]. A purring tremor. bruit (bruē) [Fr]. A sound or murmur heard in auscultation, especially an abnormal one aneurysmal b., a blowing sound heard over an aneurysm. b. d'airain (da-rān') [Fr. "noise of brass"], a metallic pectoral tinkling, or bell-

sound, heard in auscultation or percussion over a thoracic cavity. b. de choc [Fr. "sound of impact"], the second cardiac sound, accompanied by a sound of impact, such as is heard over an aneurysm of the aorta. b. de clapotement, a splashing sound indicative of dilatation of the stomach when pressure is made on the walls of the abdomen. b. de claquement, a clapping sound caused by the sudden contact of parts. b. de craquement, a crackling pericardial or pleural bruit. b. de cuir neuf, the new-leather sound. a creaking noise; usually a sign of pericarditis or pleurisy. Called also Bright's murmur. b. de diable, venous hum. See under hum. b. de drapeau, a flapping rustle heard in croup and laryngitis, and sometimes in nasal polyp. b. de froissement, a clashing noise of various origin. b. de frolement, a rustling murmur from pericardial or pleural friction b. de frottement, a rubbing or frictional sound of various origin b. de galop. See cantering rhythm, under rhythm. b. de grelot, a bruit usually caused by the presence of a foreign body in the respiratory passages. b. de Leudet, a fine crackling sound in the ear, audible to both the patient and the examiner, heard in catarrhal and nervous disorders b. de lime, a filing cardiac sound. of the ear. b. de moulin, a splashing or water-wheel sound synchronous with systole, sometimes heard several meters from the patient, variously attributed to cardiac, pericardiac, or mediastinal causes. b. de parchemin, a sound as of two pieces of parchment rubbed together of valvular cardiac origin.
b. de piceulement, a cardiac murmur like the mewing of a cat. b. de pot félé, a cracked-pot sound, characteristic of various lung cavities, etc. b. de rape, a rasping, cardiac, valvular murmur. b. de rappel, a sound as of a drum; a delayed mitral murmur. b. de Roger, a loud, continuous murmur with no interval between the systolic and diastolic periods, heard in the third interspace to the left of the sternum in imperforation of the ventricular septum. Called also Roger's murmur. de scie, a cardiac sawing sound. b. de soufflet, a bellows sound of the heart. See souffle. b. de tabourka. Same as timbre metallique. b. du diable [Fr. diable, a "humming top"], a buzzing venous murmur in anemia. false b., one due to pressure by the stethoscope, or derived from the circudet's b. See b. de Leudet b. placentaire, a blowing sound heard in the pregnant uterus, and caused by the fetal circulation. b. skodique. See resonance, skodaic. systolic b., a pathologic heart-sound heard, on auscultation, with the systole of the heart. **Verstraeten's b.**, a bruit heard in auscultation over the lower border of the liver in cachectic patients.

Brunn's membrane, nests (broonz) [Albert von Brunn, German anatomist, 1849–1895]. See membrane and nests.

Brunner's glands (brun'erz) [Johann Conrad Brunner, Swiss anatomist, 1653-1727] See under gland.

brunonian movement (bru-no'ne-an). See under movement.

brunonianism (broo-no'ne-an-izm) [John Brown, Scotch physician, 1735-1788] The obsolete doctrine that all disease is due either to excess or lack of stimulus

Bruns's disease (brunz) [John Dickson Bruns, New Orleans physician, 1836-1883]. See disease.

Bruns's syndrome (broonz) [Ludwig Bruns, neurologist in Hanover, born 1858]. See under syndrome.

Bruschettini's serum (broo-shet-e'nēz) [Bruschettini, physician in Genoa]. See under serum.

brush (brush). A tuft of flexible materials fastened to a handle varieties used in medical practice are the acid brush, made of glass; the electric brush, a form of electrode; also, laryngeal, nasal,

pharyngeal, stomach, and other brushes. endb., a tuft or brush-like arrangement that sometimes forms the termination of a process from a nerve-cell. faradic b., a brush-like wire electrode used in applying electricity to the body.

Haidinger's b., a brush-like image seen on looking toward a source of polarized light.

Kruse's b., a brush made of fine platinum wires for spreading bacterial material over the surface of a culture-medium. stomach-b., a brush used to cleanse and stimulate the stomach.

Bryant's ampulla, line, triangle (bri'ants) [Thomas Bryant, English surgeon, 1828-1914]. See ampulla, line, and triangle.

Bryce's test (brīs-ez) [James Bryce, Scotch physician of the nineteenth century]. See under tests.

Bryo'bia prætio'sa. A red spider or spinning mite found on clover; it may greatly annoy man.

bryocyte, bryocytole (bri'o-sīt, bri-o-si'tōl) [Gr. βρύειν to proliferate +κίντος cell]. The living parasite which causes proliferation of cells.

bryocytic (bri-o-sit'ik). Marked by cell-proliferation.

Bryonia (bri-o'ne-ah) [L.; Gr. βρυωνία] 1. A genus of cucurbitaceous plants called bryony.

2. The root of B. al'ba and B. dioi'ca. It is an active and acrid hydragogue cathartic, and is given in pneumonia, pleurisy, rheumatic fever, and colds. Its use is largely homeopathic. Dose of the powdered root, 20-60 gr. (1.3-3.7 gm); of the tincture, 5-30 min. (0.333-2 cc); of the fluidextract, 10-60 min. (0.6-4 c.c)

bryonin (bri'on-in). A bitter poisonous glucosid, C₄₈H₈₀O₁₉, from bryonia. It is a drastic, hydragogue purgative and has vesicating properties. Dose, \(\frac{1}{6} - 2 \) gr (0 011-0 133 gm.).

Bryson's sign (bri'sonz) [Alexander Bryson, English physician, 1802-1860] See under sign.

B. S. Abbreviation for Bachelor of Surgery and Bachelor of Science.

B. T. U. Abbreviation for British thermal unit. See under unit.

B. U. Abbreviation for base of prism up.

bu'ba, bu'bas. The native name in South American countries for frambesia. b. brazilien'sis. See es bundia.

bubble, amphoric (bub'l). A sound like the noise of a liquid poured from a bottle: a sign of hydropneumothorax.

bubo (bu'bo) [L, from Gr. βουβών groin]. The inflammatory swelling of a lymphatic gland, particularly in the axilla or groin. Buboes are due to absorption of infective material, and are seen after gonorrhea or syphilis. bullet-b., the characteristics of the characteristics o acteristic hard bubo of primary syphilis. chan-croidal b., virulent b., a suppurating form accompanying or following chancroid. climatic b., a form of adenitis of the lymph-nodes of the groin occurring in tropical countries and not due to venereal causes called also tropical bubo, non-venereal bubo, and adenitis tropicalis. gonorrheal b., a bubo following or accompanying gonorrhea. indolent b., one which is hard and nearly painless, and shows little tendency to suppurate. malignant b., the bubo of bubonic plague. non-venereal b. See climatic b. parotid b. See parotitis. pestilential b., that which is associated with Oriental plague. primary b. Same as bubon d'emblée. sympathetic b., one due to friction or injury. syphilitic b., an indolent bubo following a true or hard chancre. tropical b. See climatic b. venereal b., one due to venereal disease

bubon d'emblée (bu-baw"dah-bla') [Fr.]. A bubo which is due to venereal exposure, but is not preceded by any visible lesion.

bubonalgia (bu-bo-nal'je-ah) [Gr. βουβών groin + äλγos pain]. Pain in the groin.

bubonic (bu-bon'ik) [L. bubon'icus]. Characterized by or pertaining to buboes.

bubonocele (bu-bon'o-sēl) [Gr. βουβών groin + κήλη tumor]. Incomplete inguinal hernia forming a swelling in the groin.

bucardia (bu-kar'de-ah) [Gr. βοῦς οχ + καρδία heartl. Cor bovinum.

bucca (buk'ah) [L.]. The cheek.

buccal (buk'al) [L. bucca'lis, from buc'ca cheek]. Pertaining to the cheek. The buccal surface of a tooth is the surface next to the cheek.

buccally (buk'al-e). Toward the cheek

buccellation (buk-sel-a'shun) [L buccella'tio, from buccel'la morsel]. The arrest of hemorrhage by a pad of lint.

buccilingual (buk-se-ling'wal) [L. buc'ca cheek + lingua tongue]. Pertaining to the cheeks and tongue.

buccinator (buk'sin-a-tor) [L. "trumpeter"]. The flat muscle of the cheek.

buccocervical (buk-o-ser'vik-al). Pertaining to the neck and the buccal surface of a tooth

buccolabial (buk-o-la'be-al). Pertaining to the cheek and lip.

buccolingual (buk-o-ling'wal). Pertaining to the cheek and the tongue.

buccolingually (buk-o-ling'wal-e). From the cheek toward the tongue.

buccopharyngeal (buk-o-far-in'je-al). Pertaining to the mouth and pharynx.

buccoversion (buk-o-ver'zhun). The position of a tooth when it lies buccally to the line of occlusion.

buccula (buk'u-lah) [L.] The fleshy or fatty fold known as double chin.

Buchner's alexin, theory, tuberculin, etc. (book'nerz) [Hans Buchner, German bacteriologist, born 1850]. See under alexin, theory, tuberculin, etc.

achu (bu'ku). The name of various species of Baros'ma. The dried leaves of Baros'ma betuli'na, buchu (bu'ku). B. crenula'ta, and B. serratifo'lia are diuretics and gastric tonics, and are used in chronic urinary inflammations, such as cystitis, urethritis, and pyelitis. Dose, 15-30 gr. (1-2 gm); of fluid-extract (U. S. P.), 20-30 min. (1 25-2 c.c.), of tincture, 1-2 fl.dr. (4-8 c c); of infusion, 1-2 fl oz. (30-60 c.c.). long b., Barosma serratifolia. short b., B. betulina

Buck's extension, fascia, operation (buks) [Gurdon Buck, American surgeon, 1807-1877]. See under extension, fascia, and operation.

buck-bean (buk-ben'). See Menyanthes.

bucked-shin (bukd'shin). Periostitis of the metacarpal bones in young horses.

buckeye (buk'i). A popular designation for Æs'culus gla'bra, and of other trees and shrubs of the same genus tonic and astringent. Dose of fluidextract of the bark, 3-5 min. (0.1-0 333 c.c.).

buckhorn (buk'horn). The royal (or so-called flowering) fern, Osmun'da rega'lis: a popular remedy for rickets.

buckthorn (buk'thorn). See frangula and R nus. California b. See cascara sagrada. See frangula and Rham-

Bucky diaphragm (buk'e) [Gustav Bucky, contemporary German physician]. See under diaphragm.

bucnemia (buk-ne'me-ah) [L., from Gr. βοῦς ox + κυήμη leg]. A diffuse, tense, and inflammatory swelling of the leg.

Budd's cirrhosis, jaundice (budz) [William Budd, English physician, 1811–1880]. See under cirrhosis and jaundice.

buddeized milk (boo'de-īzd) [E. Budde, Danish sanitary engineer]. See under milk.

budding (bud'ing). Gemmation; a form of asexual

reproduction in which the body divides into two

unequal parts, the larger part being considered the parent and the smaller one the bud.

Budge's center (bood'gez) [Julius Ludwig Budge, German physiologist, 1811-1888]. 1. The ciliospinal center. 2. The genital center.

Buerger's disease, staining method (ber'gerz) [Leo Buerger, physician in New York, born 1879]. See disease and stains, table of.

bufagin (bu'fag-in). A digitalis-like substance contained in the parotid glands of the toad, Bufo agua.

Buffalo gnats. See Simulium.

Büffelseuche (bēf'el-zoi-she) [Ger.]. Pasteurellosis of the buffalo.

buffer (buf'er). Any substance in a fluid which tends to lessen the change in hydrogen-ion concentration (reaction), which otherwise would be produced by adding acids or alkalis **b. action**, the action produced by a buffer. **b. salt**. See under salt. **b. solution**. See under solution **b. value**. See under value.

buffering (buf'er-ing). The action produced by a buffer. secondary b. See Hamburger interchange.

buffy coat (buf'e). See coat.

bufidin (bu'fid-in). A reputed poison obtainable from certain toads

bufin (bu'fin). A white secretion obtained by stimulating the parotid gland of the toad by electricity It has a physiologic action similar to that of digitalis

bufonin (bu'fo-nin) [L. bu'fo toad]. A poisonous principle contained in the secretion of the skin of toads and lizards.

bufotalin (bu-fo-ta'lin). Same as bufonin.

bufotein (bu-fo-te'in). A toxin found with bufonin in the secretion of the skin of toads and lizards.

bug (bug). An insect of the order Hemiptera.

assassin b. See Reduvudæ. barley b. See

Acarus. bed-b. See Cimex. blue b., Argas

persicus cone-nose b. See Lamus croton

b., Blatta germanica. harvest b. See Leptus

kissing b. See Malanolestes. Malay b. See

Lamus. miana b. See Argas. pito b. See

Pysodurs. red b. See Leptus wheat b. See

Pedicyloides.

buggery (bug'er-e). Sodomy; sexual intercourse through the anus.

buhach (bu'hatsh). Pyrethrum.

Buhl's disease (būlz) [Ludwig von *Buhl*, German pathologist, 1816–1880]. See *disease*.

Buist's method (bewsts) [Robert C. Buist, Scotch obstetrician, born 1860]. See artificial respiration, under respiration.

Bulam (bu'lam) [an island of West Africa]. Same as Bulama fever. See fever.

bulamize (bu'lam-īz). To infect with Bulama fever.

Bülau's treatment (be'loughz) [Gotthard *Bidau*, physician in Hamburg, 1835–1900]. See under treatment.

bulb (bulb) [L. bul'bus; Gr. βολβόs]. 1. A rounded mass, organ, or part. 2. A rounded subterranean stem or leaf-bud of a plant. 3. The medulla oblongata. b. of the aorta, the enlargement of the aorta at its point of origin from the heart. auditory b., the membranous labyrinth and cochlea. b. of the corpus cavernosum, the enlarged muscular and proximal part of the cavernous body. dental b., enlargement forming at the bottom of the dental follicle in tooth development. duodenal b. See pilleus ventriculi. end-b., any one of the terminal spheroid or ovoid bodies found in the more sensitive parts of the mucous membrane at the ends of branches of nerves of sensation. Called also end-bud. gustatory b. See taste-bulb. hair-b., the bulbous expansion at the proximal end of a hair. b. of jugular vein,

the dilatation at the end of the external jugular vein. b's of Krause, ovoid glands penetrated by one or more nerve-fibers in the conjunctiva, about the mouth, the glans penis, and clitoris. olfactory b., the bulb-like expansion of the olfactory nerve on the under surface of each anterior lobe of the cerebrum. b. of ovary, a plexus of veins and arteries of the ovary Rouget's b., the bulb of the ovary. spinal b., the medulla oblongata. taste-b., end-organs of the gustatory nerve in the papillæ of the tongue. b. of the urethra, the enlarged proximal part of the corpus spongiosum. b. of the vestibule. See bulbus vertibule vestibulovaginal b., a leech-shaped organ beneath the mucous membrane on each side of the vestibule and entrance of the vagina. Together these constitute the equivalent of the bulb of the urethra in the male.

bulbar (bul'bar) 1. Pertaining to a bulb. 2. Pertaining to the oblongata.

bulbiform (bul'bif-orm). Bulb shaped.

bulbitis (bul-bi'tis) Inflammation of the bulbous portion of the urethra.

bulbocapnin (bul-bo-kap'nin) An alkaloid, C₁₉-H₁₉NO₄, derived from Cor3d'alis bulbo'sa or C ca'va (Capnoi'des ca'vum). It has an inhibitory effect on the reflex and motor activities of striated muscle.

bulbocavernosus (bul"bo-kav-er-no'sus) [L.]. The accelerator urina muscle

bulbonuclear (bul-bo-nu'kle-ar). Pertaining to the medulla oblongata and its nerve nuclei.

bulbosin (bul-bo'sin) A principle, said to be poisonous, from Agar'icus bulbo'sus.

bulbo-urethral (bul"bo-u-re'thral). Pertaining to the bulb of the urethra.

bulbous (bul'bus). Having the form or nature of a bulb, bearing or arising from a bulb.

bulbus (bul'bus) [L] A bulb b. aor'tæ, bulb of the aorta b. arterio'sus, the foremost of the three parts of the primitive cardiac vessel of the embryo. Called also b. cor'dis b. cor'dis. Same as b. arterio'sus b. den'tis, the tooth-pulp. b. oc'uli, the eyeball. b. olfacto'rius, olfactory bulb b. pi'li, a hair-bulb b. ure'thræ, the bulb of the urethra b. ve'næ jugula'ris, bulb of the jugular vein b. vestib'uli, the bulbovaginal gland.

bulesis (bu-le'sis) [Gr. βούλησις]. The will or an act of the will.

bulimia (bu-lim'e-ah) [L.; Gr. βοῦς ox + λιμός hunger]. Abnormal increase in the sensation of hunger; hyperorexia. The condition is to be distinguished from polyphagia in that patients with the former condition are often satisfied if they eat small meals, while patients with the latter are only satisfied with large amounts of food.

bulimic, bulimiac (bu-lim'ik, bu-lim'e-ak) [Gr. βουλιμία]. Affected with bulimia.

Bull. Abbreviation for L bul'liat, let it boil.

Bull and Pritchett's antitoxin or serum (Carroll Gideon Bull, New York physician, born 1883, Ida W. Pritchett of Rockefeller Institute]. See under serum

bulla (bul'ah), pl. bul'læ [L]. A large blister or cutaneous vesicle filled with watery fluid. b. ethmoida'lis, a rounded projection into the middle meatus of the nose, due to an enlarged ethmoid cell. b. os'sea, the dilated part of the bony external meatus of the ear.

bullate (bul'āt) [L. bulla'tus]. Inflated or bladderv.

bullation (bul-a'shun) [L. bulla'tio]. An inflated condition; a state of being marked with bullæ.

Buller's shield (bul'erz) [Frank Buller, a Canadian ophthalmic surgeon, 1844-1905]. See under shield.

Bullinus (bul-i'nus). A small mollusk which is the intermediate host of Schistosoma hæmatobium.

bullous (bul'us). Pertaining to or characterized by bullæ.

bulpiss (bool'pis). A contagious disease of Nicaragua marked by the development of crops of itching papules which leave black or white patches.

bultos (bul'tōs) [Sp. bulto, a tumor]. A Peruvian term for abdominal tumors, generally due to enlargement of the viscera.

bumblefoot (bum'bel-foot). Inflammation of the ball of the foot of fowls.

Bumke's pupil (boom'kēz) [Oswald Conrad Edward Bumke, German neurologist, born 1877]. See

bunch (buntsh). Traumatic swelling of a bone in horses.

bundle (bun'dl). A fasciculus, filament, or band composed of nerve-fibers. aberrant b., a tract of nerve-fibers in the isthmus of the gyrus formicatus anterior marginal b., the ventro-marginal descending cerebellar tract of the spinal cord. Arnold's b., the frontal tract of the crusta cerebri atrioventricular b., auriculoventricular b. Same as b of His. a-v. b. See b. of His. basis b. See fasciculus proprius.

Bruce's b., a bundle of descending spinospinal fibers in the cervical and thoracic regions of the cord lying contiguous to the gray matter at the junction of the dorsal horn and the commissure. Called also cornucommissural bundle. Clarke's b., a bundle of nerve-fibers extending between Clarke's and Burdach's columns cornucommissural b. See Bruce's b. b. of Forel, a large bundle of fibers which arises from the nucleus ruber and its capsule, and runs upward, laterad, and dorsad to the ventral part of the thalamus, to the reticular layer, etc funda-mental b. See fasciculus proprius Gierke's respiratory b., the solitary fasciculus. Gratiolet's b., a bundle of nerve-fibers passing from the optic thalamus to the optic center in the occipital lobe of the brain. **ground-b.** See fasciculus proprius **Held's b.** See tectospinal tract, under tract b. of **Helweg.** Same as olivospinal tract. See tract b. of **His**, a muscular band, containing nerve-fibers, connecting the auricles with the ventricles of the heart It serves to convey stimuli from the auricle to the ventricle. Degeneration of this bundle produces heart-block. The bundle of His is made up of four portions the auriculoventricular node; the main bundle; the septal divisions, right and left; the terminal division, which sometimes takes the form of small moderator bands. Called also atrioventricular b, auriculoventricular b, a-v b, and Gaskill's bridge Hoeve's b. See lemniscus temporalis et occipitalis Keith's b., a bundle of fibers in the wall of the auricle of the heart, between the venæ cavæ. Called also sino-atrial b. Kent-His' b. Same as b of His Krause's b. Same as respiratory b Lenhossék's b., the ascending root of the pneumogastric and glossopharyngeal nerves. longitudinal medial b. See fasciculus longitudinalis medialis. Löwenthal's marginal b., the anterolateral descending tract main b., the portion of the bundle of His between the auriculoventricular node and the septal divisions. See b. of His. Marchi's b., a bundle of fibers on the anterior white column of the spinal cord from the cerebellum to the anterior gray column marginal b. 1 The white matter at the tip of the dorsal cornu of the spinal cord. 2 See Löwenthal's marginal b Meynert's b. See fasciculus retroflexus. Monakow's b. See fasciculus retrossexus. Monakow's b. See prepyramidal tract, under tract. muscle-b., a fascicle of muscle-fibers inclosed in a sheath. **oral b.**, a projection which marks the outer surface of the dorsal zone of the human embryo. Philippe Gombault's triangular b., a strand of intersegmental fibers in the dorsomesial angle of the column of the spinal cord in the sacral region. **posterior longitudinal b.** See fusciculus longitudinalis medialis. predorsal b.

See tectospinal tract, under tract respiratory b., the solitary fasciculus. Schultze's b., the comma tract. sino-atrial b. See Keith's b. solitary b., the solitary fasciculus. See fasciculus. Spitzka's b., a bundle of nervefibers running from the cerebral cortex through the pyramidal region of the pes pedunculi to the oculomotor nuclei of the opposite side b. of Stanley-Kent. Same as b. of His. Stilling's b., the solitary fasciculus of the oblongata. thalamomammillary b., the bundle of Vicq d'-Azyr. Thorel's b., a bundle of muscle-fibers in the heart connecting the sino-auricular and the auriculoventricular nodes, and passing around the mouth of the inferior vena cava. Türck's b., a bundle of nerve-fibers running from the cerebral cortex through the outer part of the crusta of the cerebral peduncle and the bone into the internal geniculate body. b. of Vicq d'-Azyr. See mammillothalamic tract, under tract. Weissmann's b., the bundle of striped muscular fibers of a neuromuscular spindle.

Bunge's law, theory (boong'ez) [Gustav von Bunge, physiologist at Basel, 1844–1920]. See under law and theory.

bungpagga (bung-pag'ah) An epidemic disease of West Africa characterized by fever and the development of suppurating tumors in the muscles. It is probably caused by a yeast fungus.

bunion (bun'yon) [1.. bu'nio; Gr. βουνίον turnip]. A swelling of the bursa mucosa of the ball of the great toe, with thickening of the overlying skin and forcing of the toe outward (toward the little toe).

bunodont (bu'no-dont) [Gr βουνός mound + όδούς toothl. Having rounded cusps on the molar teeth

Bunsen burner, coefficient, etc (bun'sen) [Robert Wilhelm Eberhard von Bunsen, German etc (bun'sen) chemist 1811-1800] See burner, coefficient, etc Buphane (bu-fa'ne) A genus of South African

plants containing a poisonous alkaloid

buphanin (bu'fan-in). An amorphous and strongly basic alkaloid from *Buphane disticha*, which resembles hyoscin in physiological action

buphthalmia (būf-thal'me-ah). Buphthalmos. buphthalmos, buphthalmus (būf-thal'mos, -mus) [Gr. βοῦς οχ + δφθαλμός eye]. The first stage of hydrophthalmos; keratoglobus, or enlarge-

ment of the eye.

bur. See burr

Burdach's columns, etc (boor'daks) [Karl Friedrich Burdach, German physiologist, 1776-1847]. See under column, etc

burdock (bur'dok) The plant, Arc'tium lap'pa.
The root (Lappa, U. S. P) is aperient, diuretic, and diaphoretic Dose of tincture of the root or seed, 1-2 fl dr. (4-8 c c.); of fluidextract, 10-60 min. (o 666-3 7 c c.).

buret, burette (bu-ret') [Fr.]. A graduated glass used in volumetric chemistry.

Burghart's symptom (boorg'hartz) [Hans Gerny Burghart, German physician, born 1862]. symplom.

burn (burn). A lesion caused by the contact of heat. **brush-b.**, a wound caused by violent rubbing or friction, as by a rope pulled through the hands. Kangri b., a burn on the abdomen caused by the portable stove (Kangri) carried by natives of Kashmere. Such a burn may develop cancer

Burnam's test (bur'namz) [Curtis F. Burnam, physician in Baltimore]. See under tests.

burner (burn'er). The part of a lamp from which the flame issues. Argand b., a burner for oil or gas, with an inner tube for supplying air to the flame. **Bunsen b.**, a gas-burner in which the gas is mixed before ignition with air, in order to give complete oxidation.

Burnett's solution (bur'netz) [Sir W Burnett. English surgeon, 1779-1861]. See under solution

burnisher (ber'nish-er). A dental instrument for polishing fillings, dentures, and crowns.

Burns's amaurosis (burnz) [John Burns, Scotch physician, 1774-1850]. See under amaurosis.

Burns's ligament, space [Allan Burns, Scotch anatomist, 1781-1813]. See under ligament and space.

Burow's operation, solution, vein, etc. (boor-ooz) [Karl August von Burow, surgeon in Königsberg, 1800-187.4]. See operation, solution, vein, etc.

burquism (burk'izm) [Burq, a French neurologist]. A system of metallotherapy.

burr (bur). A dental tool with teeth or blades for excavating cavities.
by a dental engine.
b.-drill, a dental tool of many varieties, used in making and clearing out cavities.

burra gukeru (bur'ah goo-ker-oo') [East Indian]. The fruit of *Trib'ulus lanugino'sus*, an Asiatic plant: diuretic and aphrodisiac; used in spermatorrhea, etc. Dose of fluidextract, 20-60 min. (1.23-3.7 c.c.).

Burri's stain (boor'ez) [Robert Burri, Swiss bacteriologist]. See stains, table of.

burrow (bur'o). 1. An abnormal sinus or fistula, usually more or less tortuous, and containing pus. 2. The passage made in the tissues by certain parasitic insect-larvæ.

bursa (bur'sah), pl. bur'sæ [L; Gr. βύρσα]. A sac or pouch within the body, often lined with a membrane. The number of bursæ is very great; more than a thousand have been described, but the smaller ones are irregular, and many of them are often, or even usually, absent. adventitious b., an abnormal cyst due to friction or some other mechanical cause, and containing synovial fluid b. anseri'na, a bursa under the insertion of the sartorius and gracilis muscles. Boyer's b., one situated beneath the hyoid bone. Brodie's **b.**, a bursa underneath the gastrocnemius medialis muscle. Calori's b., a bursa situated between the trachea and the arch of the aorta. b. copula'trix, an appendage at the posterior end of the male of certain nematodes. **Dupré's b.**, bursits in the shoulder-joint **Fleischmann's** b., the sublingual bursa. gluteal b., any one of the three bursa beneath the gluteus maximus muscle. His's b., the dilatation at the end of the archenteron. iliac b., a bursa at the point of insertion of the iliopsoas muscle into the lesser tro-chanter. Luschka's b. Same as b. pharyngea. Monro's b., the intratendinous bursa of the olecranon b. muco'sa [BNA], any one of a number of large, simple, or irregular cavities in the subcutaneous areolar tissue, inclosing a clear, viscid fluid, as in front of the patella, over the olecranon, over the malleoli, etc. obturatory b., a bursa underlying the tendon of the obturator internus. omental b., b. omenta'lis [BNA], a cavity b. pharyn'gea, a recess in the pharynx of a fetus and of a young infant. plantar b., a bursa over the instep. popliteal b., a bursa in the popliteal space beneath the tendon of the semimembranosus and that of the inner head of the greaters or the control of the greaters or the control of the greaters or the greaters the gastrocnemius **prepatellar** b., one in front of the patella. **riders** b., an enlarged bursa caused by horseback exercise **subclavian** b., an inconstant bursa between the fibers of the rhomboid ligament. b. **syno'vialis**, any one of large of the propagation of the patella pro a large number of spaces filled with synovial fluid, and interposed between muscles or tendons as they play over bony surfaces.

bursal (bur'sal) [L. bursa lis]. Of, or pertaining to, a bursa.

bursalogy (bur-sal'o-je) [Gr. βύρσα pouch + λόγος word]. The sum of knowledge regarding the bursæ.

Bursata (bur-sa'tah). A division of Nematoda comprising forms which have a bursa copulatrix.

bursatti (bur-sat'e). See leeches.

bursautee (bur-sawt'e). See leeches.

bursin (bur'sin). An alkaloid from Capsel'la bursapasto'ris: used like ergot as an astringent, styptic, and tonic.

bursitis (bur-si'tis). Inflammation of a bursa. Duplay's b., subacromial or subdeltoid bursitis. omental b., seropurulent inflammation of the omental bursa. retrocalcaneal b. Same as achillodynia. Thornwaldt's b., inflammation of Luschka's tonsil, attended with the formation of a cyst in it containing pus, and with nasopharyngeal stenosis.

bursopathy (bur-sop'ath-e) [bursa + Gr. πάθος disease]. Any disease of a bursa. luetic b., bursitis due to syphilis.

bursula (bur'su-lah). A small bag or pouch. b. tes'tium, the scrotum.

Burton's line (bur'tunz) [Henry Burton, British physician of nineteenth century]. See under line.

Bury's disease [Judson S. Bury, English physician of nineteenth century]. Erythema elevatum diutinum.

Busacca's gelatin test (bus-ah'kaz) [Attilio Busacca]. See under tests.

Busquet's disease (boos-kāz') [contemporary French physician]. See under disease.

But. Abbreviation for L. buty'rum, butter.

butalanin (bu-tal'an-in). An amino-acid, alphaamino-valerianic acid, CH₃(CH₂)₂CHNH₂CO₂H, produced by the hydrolysis or digestion of proteins.

butane (bu'tān). An anesthetic hydrocarbon, C₄H₁₀, from petroleum. It is the fourth member of the paraffin series. **Normal b.**, CH₃(CH₂)₂CH₃.

Butea (bu'te-ah) [for John Stuart, Earl of Bute, 1713-1792]. A genus of tropical leguminous trees. B. frondo'sa, a tree of South Asia, is one of the species that afford kino.

butesin (bu'te-sin). Butyl para-aminobenzoate C₄H₄NH₂ COO(C₄H₉), a local anesthetic, used in the form of dusting-powders, troches, ointments, or suppositories, or in the form of a solution in fatty oil. b. picrate, trinormal butyl para-aminobenzoate trinitrophenol, C₆H₄.NH₂COO.(C₄-H₉)₃C₆H₂(NO₂)₃OH, a yellow powder combining the anesthetic properties of butesin with the anti-septic properties of picric acid. Used for surface anesthesia in the eye (in 1.1400 solution) and as a dressing for burns and other denuded lesions of the skin (in 1 per cent. ointment).

Buthus (bu'thus). A genus of scorpions. B. carolinia'nus occur in the southern United States.

butolan (bu'to-lan). A proprietary remedy for oxyuriasis. It is a carbamic acid ester of paraoxydiphenyl-methane Dose, 7½ gr. (½ gm.) three times a day for a week.

butter (but'er) [L. buty'rum; Gr. βούτυρον]. The oily mass procured by churning cream. b. of antimony, a concentrated acid solution, SbCl₃, of antimony trichlorid: used as a caustic application to tumors or ulcers. b. of cacao [L. o'leum theobro'matis], a fixed oil from the seeds of the chocolate plant, Theobro'ma caca'o: used in making suppositories, etc. plasmon b., a mixture of plasmon, butter, water, and salt. b. test. See under test. b. of tin, stannic chlorid. b. of zinc, zinc chlorid, ZnCl₂: disinfectant.

butterfly (but'er-fli). 1. A mass of absorbent cotton with wing-shaped appendages: used mainly in uterine surgery. 2. A form of doubly wing-shaped skin-flaps.

butterine (but'er-ēn). An artificial substitute for butter, prepared mainly from beef-fat.
 butternut (but'er-nut). See Juglans.

buttock (but'ok). The gluteal prominence, or breech, or either lateral half of the same.

button, Aleppo (but'n), furunculus orientalis.

Bagdad b., Biskra b. See furunculus orientalis.

Boari b., a device analogous to the Murphy button for ureterocystostomy. Chlumsky's b., a button for intestinal suture made of pure magnesium on the pattern of the Murphy button. Cretan b. See Cancolica. dog b., nux vomica. Jaboulay b., a device for lateral intestination. tinal anastomosis, consisting of two button-like cylinders of metal which fit together on the screw and keyring principle through a small intestinal opening and without the aid of sutures Lardennois's b., a modified form of Murphy button for intestinal anastomosis mescal b. See mescal Murphy's b., a device for joining the ends of a divided intestine, consisting of two button-like plates of metal, each fitted with a collar having a hollow stem fastened to the center, one stem being smaller than the other, so as to fit into it. Each end of the cut intestine is passed over one of the buttons, and fastened around the collar by a suture; the smaller stem is inserted into the larger and the halves pressed together. Muzzy's b., a tender point at the junction of the parasternal line with the line of the tenth costal cartilage, suggested as indicating inflammation of the diaphragmatic pleura. quaker b., nux vomica. Villard's b., a modified form of Murphy button.

button-scurvy. See scurvy.

buttonhole (but'n-hōl). A small straight incision into a cavity or organ. mitral b., an advanced state of stenosis of the mitral orifice of the heart.

buttress foot (but'res). See under foot.

butyl (bu'til) A hydrocarbon radical, C₄H₉ or CH₃.CH₂.CH₂.CH₂.
 b. alcohol. See under alcohol.
 b. hydrid, a hydrocarbon, C₄II₁₀, from petroleum its vapor is an unsafe anesthetic

butylamin (bu-til-am'in). A ptomain, C₄H₁₁N = CH₃.CH₂ CH₂ CH₂ NH₂, from cod-liver oil diuretic sudorific, and probably poisonous.

butylcarbonic acid (bu"til-kar-bon'ik). Same as valerianic acid. See *acid*.

butylchloral hydrate (bu-til-klo'ral hi'drāt). A compound, trichlorbutylidin glycol, CH₃ CHCl - CCl₂ CH(OH)₂, resembling chloral hydrate, and sometimes prescribed for neuralgia. Dose, 2-15 gr (0.133-1 gm).

butylene (bu'til-ēn). A gaseous hydrocarbon, C₄H₈, in three isomeric forms.

butylethylmalonyl urea (bu"til-eth"il-mal"onil u-re'ah). See butylethyl barbituric acud, under acid.

butylhypnal (bu-til-hip'nal). A combination of antipyrin and butylchloral, in colorless needles hypnotic.

butylmercaptan (bu-til-mer-kap'tan). A thioalcohol, C₁H₉SH; the active principle of the odoriferous gland of the skunk.

butyn (bu'tin). A proprietary local anesthetic for surface anesthesia in the eye and on mucous membranes. It is para-amino benzoyl gamma dinormal butyl amino propanol sulphate, [NH₂.C₆H₄.CO₂-(CH₂)₃.N.(C₄H₉)₂]₂H₂SO₄.

butyraceous (bu-tir-a'she-us). Of a buttery consistence.

butyrase (bu'ti-rās). Same as butyrinase.

butyrate (bu'ti-rāt). A salt of butyric acid.

butyric (bu-tir'ik). Derived from butter. b. acid. See under acid.

butyrin (bu'tir-in). A glycerid existing in butter, $C_3H_5(C_4H_7O_2)_3$: a liquid fat with an acrid, bitter taste.

butyrinase (bu'tir-in-ās). An enzyme of the bloodserum having the power of hydrolyzing butyrin.

butyroid (bu'tir-oid) [Gr. βούτυρον butter + είδος form]. Buttery; having buttery contents.

butyromel (bu-tir'o-mel). Fresh, unsalted butter, 2 parts, and honey, 1 part: a substitute for cod-liver oil.

butyrometer (bu-tir-om'et-er) [Gr βούτυρον butter + μέτρον measure]. An apparatus for estimating the proportion of butter in milk.

butyrone (bu'tir-on). A colorless liquid, C₇H₁₄O, or dipropyl ketone, distilled from calcium butyrate.

butyroscope (bu-ti'ro-skōp) [Gr. βούτυρον butter + σκοπεῖν to examine]. An instrument estimating the proportion of butter-fat in milk.

butyrous (bu'tir-us). Like butter, having a butter-like appearance.

buxin (buks'ın). An alkaloid, $C_{18}H_{21}NO_{2}$, from the bark of the box, *Bux'us semper'virens*; the same in composition as bebeerin: tonic and febrifuge. Dose, 15-30 gr. (1-2 gm).

buyo (boo'yo). The Philippine Island name for betel. See betel. b. cancer. See cancer.

Buzzard's maneuver or reflex (buz'ardz) [Thomas Buzzard, London physician, 1831–1919]. See under reflex

B. V. Abbreviation for L. bal'neum vapo'ris, vapor bath.

bynin (bi'nin). 1. A prolamin found in malt. 2A trade-name for liquid malt

bynogen (bi'no-jen). A proprietary casein-glycero-phosphate-dextrin-maltose preparation.

bynol (bi'nol). A proprietary combination of malt extract and cod-liver oil containing 30 per cent by volume of the oil.

by-product (bi-prod'ukt) A secondary product obtained during the manufacture of a primary product.

Byrd-Dew method (bird-du) [Harvey Leonidas Byrd, American physician, 1820-1884; James Harvie Dew, American physician, born 1843]. See under method.

byrolin (bi'ro-lin). A preparation of boric acid, glycerin, and lanolin: employed in skin discases

byssaceous (bis-a'she-us) [Gr. βίσσος flax). Composed of fine flax-like threads

byssinosis (bis-in-o'sis) [Gr. βίσσος cotton, lint]. A form of pneumokoniosis due to the inhalation of cotton-dust in factories.

byssocausis (bis-o-kaw'sis) [Gr. βύσσος cotton + καῦσις burning]. Moxibustion, or cauterization by the moxa.

byssophthisis (bis-o-tis'is) [Gr. $\beta b\sigma\sigma\sigma s$ cotton $+ \varphi \theta l\sigma \iota s$ consumption]. Phthisis due to the inhalation of the dust of cotton-mills

byssus (bis'us) [L.; Gr. βύσσος]. Lint, charpie, or cotton.

bythium (bith'e-um). A supposed chemic element said to have been discovered in sulphur in 1807.

bythus (bith'us) [Gr. $\beta \nu \theta \nu s$ depth]. The lower portion of the abdomen.

211

C. 1. The chemic symbol for carbon. 2. An abbreviation for centigrade, congius (gallon), closure, contraction, cathode, color-sense, cylinder, cervical,

c. Abbreviation for contact.

c'. Symbol for coefficient of partage.

Ca. Symbol for calcium.

caapi (kah-ap'e). The root and rhizome of a vine, Banisteria caupi, of the Amazon basin. It has stimulant properties

caballine aloes (kab'al-in). See aloes.

cabbage, skunk- (kah'ij). A fetid, araceous plant of North America, Symplocar pus fa'tidus: stimulant and antispasmodic. Dose of fluidextract, 30-60 min. (2-4 c c.).

cabinet, Sauerbruch's (kab'in-et). A cabinet within which the air-pressure can be increased or diminished. It is used in operations on the chest, the patient's head being outside the cabinet, and his body and the surgeon within it.

Cabot's ring-bodies (kab'ots) [Richard C. Cabot, Boston physician, born 1868]. See body.

CaC₂. Calcium carbid.

cacesthenic. See cacesthenic.

cacæsthesia. See cacesthesia.

cacao (kah-ka'o). The seeds of Theobro'ma caca'o: they afford cocoa, chocolate, and cacao-butter. c.-butter. See butter of cacao. prepared c., a powder prepared from the roasted cured kernels of cacao seeds

cacatory (kak'at-o-re). Marked by severe diarrhea.

CaCC. Abbreviation for cathodal closure contraction. cacesthenic, cacæsthenic (kah-es-then'ik). See cacesthesia. Having defective sense organs

cacesthesia, cacæsthesia (kak-es-the'ze-ah) [Grκακός bad + αἴσθησις sensation] Any morbid Any morbid sensation or any disorder of sensibility.

caché (kash-e') [Fr]. An apparatus for making applications of radium, consisting of a cone of lead covered with paper and having a mica-covered window at the bottom.

cachectic (kak-ek'tik). Characterized by cachexia. cachet (kah-sha') [Fr]. A lenticular capsule for inclosing a dose of unpleasant medicine.

cachexia (kak-eks'e-ah) [Gr κακός ill + έξις habit]. A profound and marked state of constitutional disorder; general ill health and malnutrition. African c., negro c., chthonophagia, or geophagia; earth-eating. c. aquo'sa, Griesinger's disease. See disease cancerous c., the weak, emaciated condition seen in cases of malignant tumor. c. exophthal'mica. Same as goiler, exophthalmic. Grawitz's c., a condition resembling pernicious anemia, but without degeneration of the red blood-corpuscles, seen in old persons. hypophyseal c. See Simmond's disease, under disease. c. hypophyseopri'va, the train of symptoms resulting from total removal of the pituitary body, consisting of tumor, fibrillary twitchings, opisthotonos, bradycardia, hypothermia, apathy, and coma. lymphatic c. See pseudoleu-kemia, malarial c., chronic malaria. c. mercurai'lis, chronic mercurial poisoning. negro c. See African c. pachyder'mic c. See myredema. saturnine c., the condition seen in chronic enlargement of the spleen with progressive anemia. c. strumipri'va, myxedema caused by removal of the thyroid strumous c., scrofula. c. thyreoidectom'ica c., thyreopriva. Same as c strumipriva. thyroid c., exophthalmic goiter. tropical c., a general condition of ill health affecting residents in the tropics, frequently associated with disease of the liver or spleen. urinary c., the cachectic condition seen in chronic suppurative disease of the kidney. It is marked by dys-pepsia, loss of appetite, flatulence, tympanites, diarrhea, weakness, and mental depression. minous c., the condition of anemia and debility which accompanies infection with worms, especially ankylostoma.

cachexy (kak-eks'e). See cachexia.

cachinnation (kak-in-a'shun) [L. cachinna're to laugh aloud]. Excessive, hysteric laughter.

cacidrosis (kak-id-ro'sis) [Gr. κακόs bad + τδρωs sweat]. Abnormal or malodorous sweating.

CaCl2. Calcium chlorid.

Ca(ClO₃)₂. Calcium chlorate.

CaCo, Calcium carbonate. CaC₂O₄. Calcium oxalate.

cacocholia (kak-o-ko'le-ah) [Gr κακός bad + χολή bile] Abnormal condition of the bile.

cacochylia (kak-o-ki'le-ah) [Gr κακός bad + χυλός chylel. Abnormality of the gastric juice.

cacochymia (kak-o-ki'me-ah)[Gr. κακός bad + χυμός chyme] 1 Same as cacochylia. 2 Abnormal metabolism.

cacodol (kak'o-dol) An arsenic compound used as a tonic in phthisis

cacodyl (kak'o-dil) [Gr κακός bad + δζειν to smell + ύλη matter] Dimethylarsin, a colorless liquid. (CH₃)₂As—As(CH₃)₂, with an offensive odor gives off a poisonous vapor and is inflammable when exposed to air. c. cyanid, a white powder which, when exposed to the air, gives off an extremely poisonous vapor

cacodylate (kak-od'il-at). A salt of cacodylic acid. The cacodylates are used in skin diseases, tuberculosis, malaria, and other conditions where arsenic is indicated.

cacodyliacol (kak-o-dil-i'ak-ol). Guaiacol cacodylate, CH₃ Λ SO₂(C₆H₄ O CH₃) used in tuberculosis Dose, $\frac{1}{2}$ - $\frac{3}{4}$ gr (003-004 gm.).

cacodylic acid (kak-o-dil'ik). See under acid.

cacoëthes (kak-o-e'thēz) [Gr]. A bad habit operan'di, undue eagerness to perform surgical operations, tomomania

cacoëthic (kak-o-e'thik) [Gr. κακός bad + ήθος dis-Ill-conditioned, malignant. position

cacogenesis (kak-o-jen'es-is) [Gr κακός bad + γένεσις development]. Abnormality in structure; monstrosity.

cacogenic (kak-o-jen'ik). 1. Having a tendency toward race degeneracy. 2. Pertaining to cacogenesis.

cacogenics (kak-o-jen'iks) [Gr. κακός bad + -γεν to Race deterioration from bad sexual produce]. selection.

cacogeusia (kak-o-gu'se-ah) [Gr. κακός bad + γεῦσις tastel A bad taste.

cacolet (kak'o-la). A chair suspended from a packsaddle for transporting the wounded.

cacomelia (kak-o-me'le-ah) [Gr. κακός bad + μέλος limb]. Congenital deformity of a limb.

cacomorphosis (kak"o-mor-fo'sis) [Gr. κακός bad + μόρφη form]. Malformation.

Caconema (kak-o-ne'mah) A genus of nematodes resembling Heterodera.

cacoplastic (kak-o-plas'tik) [Gr. κακός bad + πλαστικός forming]. Susceptible of only an imperfect organization.

cacorhythmic (kak-o-rith'mik) [Gr. κακός bad + ρυθμος rhythm]. Marked by irregularity of rhythm.

cacosmia (kak-oz'me-ah) [Gr. κακός bad + δσμή smell]. A bad odor; stench.

cacostomia (kak-o-sto'me-ah) [Gr. κακός bad, foul + στόμα mouth]. A foul or gangrenous state of the mouth.

cacothenic (kak-o-then'ik). Pertaining to cacothenics.

cacothenics (kak-o-then'iks) [Gr. κακόs bad + θηνια state of being]. Race deterioration through bad environment and surroundings.

cacotrophy (kak-ot'ro-fe) [Gr. κακός ill + τροφή nourishment]. Malnutrition; impaired or disordered nourishment.

cactin (kak'tin). 1. An active principle from Ce'reus grandiflo'rus. 2. A red coloring-matter from Ce'reus specio'sus and other cacti.

cactina (kak-ti'nah). A proprietary preparation of cacti of the genus Ce'reus It is recommended as a substitute for digitalis in heart disease.

Cactus (kak'tus) [Gr. κάκτος a thorny plant]. τ. A genus of cactaceous plants. 2. Any cactaceous plant or species C. grandiflo'rus, the night-blooming cereus, preparations of which are spinal, cardiac, and vasomotor stimulants. Dose of tincture, 15-20 min (1-1.333 c.c.); of fluidextract, 5-10 min (0 333-0 666 c.c.).

cacumen (kak-u'men), pl. cacu'mina [L.]. 1. The top or apex of an organ. 2. The top and uppermost branchlets of a plant. 3. A part of the superior vermiform process of the cerebellum.

cacuminal (kak-u'min-al). Pertaining to the cacumen.

cadaver (kad-av'er), pl. cadav'era [L.]. The human body after death; a corpse.

cadaveric (kad-ah-ver'ik). Of, or pertaining to, a cadaver.

cadaverin (kad-av'er-in) [L. cadav'er corpse]. A ptomain, pentamethylendiamin, NH₂.CH₂(CH₂)₃-CH₂.NH₂: a thick liquid having a foul smell. It is sometimes one of the products of the Finkler-Prior bacillus (Vib'rio pro'teus) and of the commabacillus. It is pathogenic, producing suppuration. cadaverous (kad-av'er-us). Resembling a corpse.

cade oil (kād) [L. o'leum cadi'num]. A tarry oil, from Junip'erus oxyce'drus: used in various skin diseases.

cadechol (kad'ek-ol). An addition product of camphor and desoxycholic acid containing 28 per cent. of camphor. used as a heart tonic.

caderas (kad-e'ras). See mal de caderas.

Cadets' fuming liquid (kad-āz') [Louis Claude Cadet de Gassicourt, French chemist, 1731-1799]. See alcarsin.

cadinene (kad-in'ēn). A terpene, C₁₅H₂₄, from the oils of cade, savin, cubebs, and camphor.

cadmium (kad'me um) [Gr. καδμία calamin]. A bivalent metal, not unlike tin in appearances and properties; symbol, Cd, atomic weight, 112.4; its salts are poisonous. c. bromid, a poisonous substance, CdBr₂. c. iodid, a compound, CdI₂. Its ointment (unguen'lun cad'mit iod'idi) is used in glandular and skin diseases. c. oleate, a preparation used in various skin diseases. c. salicylate, a salt, (C₆H₄(OH)CO₂)₂Cd + H₂O, in fine, white, tabular crystals, or in an amorphous powder. It is antiseptic, and is used in treating purulent ophthalmia. c. sulphate, a salt, Cd-SO₄, weak solutions of which are used as astringents in eye, ear, and urethral inflammations. c. sulphid, c. yellow, CdS, is employed in the arts as a pigment.

Ca. D. Te. Abbreviation for cathodal duration tetanus. caduceus (kad-u'se-us). The wand of Hermes or Mercury, the messenger of the gods: used as a symbol of the medical profession.

caducous (kad-u'kus) [L. cad'ere to fall] Falling off; deciduous.

cæcitas (ses'it-as). Latin for "blindness."

cooum, cossium, and other words in co-. See cecum, ceisum, etc.

cæ'cus mi'nor ventric'uli. The cardiac part of the stomach.

Cwolius Aurelia'nus (se'le-us). A distinguished physician and medical writer, born at Sicca, Numidia, between 100 and 300 A.D. Two of his works in Latin are extant, "De Morbis Chronicis" and "De Morbis Acutis."

Casarean. See cesarean.

cafacetan (kaf-as'et-an). A proprietary preparation containing caffein and acetanilid: used as an antineuralgic.

caffea (kaf'e-ah). Latin for "coffee."

caffeic acid (kaf-e'ik). See acid.

caffeidin (kaf-c'id-in). A crystalline alkaloid, C₇H₁₂N₄O, produced by treating caffein with barium hydroxid.

caffein (kaf'e-in) [L. caffei'na]. An alkaloid, C₈H₁₀N₄O₂, or trimethyl xanthin, occurring in long, silky needles, soluble in water and alcohol, and obtainable from coffee, tea, guarana, and maté. It is a nerve and heart stimulant, a diuretic, and a retarder of tissue waste. It is used in heart disease, dropsy, migrain, and opium-poisoning Dose, 1-3 gr. (o.o6-o.2 gm.). c. borocitrate, a white, soluble powder: sedative and antiseptic. c. carbolate, c. phenate, a sedative and antiseptic: used subcutaneously. c. chloral, a soluble crystalline combination of caffein and chloral, C₈H₁₀N₄O₂-CCl₃COH: analgesic and sedative. Dose, 3-5 gr. (o.2-o.3 gm.). c. citrate (more correctly called citrated caffein), a combination of cafein and citric acid, C₈H₁₀N₄O₂-C₆H₈O₇. Dose, 1-3 gr. (o o66-o 2 gm.). c. hydrobromid, a diuretic: used subcutaneously. c. nitrate, a salt, in yellowish, needle-like crystals. c. phthalate, a sedative and antiseptic: used subcutaneously. c. sodiocinnamate, an antiseptic and sedative agent, resembling the corresponding benzoate. c. sodium benzoate, a white, crystalline, and crusty substance, sedative and antiseptic; often used subcutaneously. c. triiodid, a remedy, in dark-green prisms, (C₈H₁₀N₄O₁L₂HI)₃ + 3H₂O: used as an iodin substitute Dose, 2-4 gr (o.13-0.26 gm.). c. valerianate, a compound used in whooping-cough and hysteric vomiting.

caffeinism (kaf'e-in-izm). A morbid condition due to excess in the use of coffee.

caffeone (kaf'e-ōn). An aromatic principle from roasted coffee: said to have hypnotic properties.

cagot (kag'ō). A cretin of the Pyrenees.

cahinca (kah-hing'kah). The root of Chiococ'ca racemo'sa and C. angui'uga, rubiaceous plants of tropical America: purgative and diuretic.

cahincin (kah-hin'sin). A bitter, crystallizable glucosid, C₄₀H₆₄O₁₈, from cahinca. Dose, as a diuretic and cathartic, 2-4 gr. (0.13-0.26 gm.); as an emetic, 8-15 gr. (0.5-1 gm.).

CaH₂O₂. Calcium hydroxid.

cainotophobia (ki-no-to-fo'be-ah) [Gr. καινοτης novelty $+ \varphi \circ \beta \circ s$ fear]. Morbid aversion from anything novel.

caisson-disease (kā'son). See disease.

Cajal (ka-hal'). See Ramón v Cajal.

cajeput, cajuput (kaj'e-put, kaj'u-put). The Melaleu'ca leucadeu' dron, a myrtaceous East Indian tree: its leaves afford a greenish, volatile oil (oil of cayeput): used for toothache, rheumatism, and various intestinal disorders. Dose, 2-10 min. (0.13-0.65 c.c.). spirit of c., a 2 per cent. alcoholic solution of oil of cajeput. Dose, \(\frac{1}{2}\)-r fl.dr. (2-4 c.c.).

cajeputene (kaj'ep-ut-ën). A liquid hydrocarbon, C₁₀H₁₆, obtainable from oil of cajeput: anthelmintic, anodyne, and antispasmodic. Dose, 2-10 min. (0.123-0.666 c c.).

cajeputol (kaj'e-pu-tol). An eleopten from oil of cajeput, $C_{10}H_{10}$ - $H_{2}O$: used like cajeputene.

caked breast (kākt). See stagnation mastitis under

- Cal. Abbreviation for large calorie.
- cal. Abbreviation for small calorie.
- Calabar bean (kal'ab-ār). Same as Physostigma. C. swellings. See swelling.
- calabarin (kal-ab'ar-in). An alkaloid from Calabar bean. c. sulphate, has been somewhat employed in medicine: it is an active poison. Dose, ¹/_{0.5} gr. (0.001 gm.).
- calabazilla (kal"ab-ah-zēl'yah) [Sp.]. A squash, Cucur'bua peren'nis: its macerated root is used in California for hemorrhoids.
- calage (kah-lahzh') [Fr.]. Propping with pillows to immobilize the viscera and thus relieve seasickness.
- calamine (kal'am-īn). A native zinc carbonate **prepared c.**, calamine calcined, washed, and pulverized: used in preparing the *unguen'-tum calami'næ* and as a dusting-powder.
- calamus (kal'a-mus) [L. for "reed"]. 1. The plant Ac'orus cal'amus and its aromatic rhizome. It is a carminative and stimulant tonic its extract, fluidextract, and tincture are used as medicines. Dose of fluidextract, 10-20 min. (0.6-125 cc.); of tincture, 1 fl dr (4 c.c.). 2. A genus of ratan-palms. C. dra'co affords the best dragon's-blood of commerce. c. scripto'rius, "writers' pen," a space at the lower part or floor of the fourth ventricle, between the restiform bodies.
- calaya (kal-a'yah). An extract prepared from the fruit of *Annes'lia febrif'uga*: antiperiodic. Dose, 30 gr. (2 gm.).
- calbroben (kal'bro-ben). Sabromin
- calcalith (kal'kal-ith). A proprietary uric-acid solvent consisting of calcium carbonate, lithium, and colchicin.
- calcaneal, calcanean (kal-ka'ne-al, -ka'ne-an).
 Pertaining to the calcaneum.
- calcaneitis (kal-ka-ne-i'tis). Inflammation of the calcaneum or os calcis.
- calcaneo-astragaloid (kal-ka"ne-o-as-trag'aloid). Pertaining to the calcaneum and astragalus.
- calcaneocavus (kal-ka"ne-o-ka"vus). Club-foot in which calcaneus is combined with cavus.
- calcaneocuboid (kal-ka"ne-o-ku'boid). Pertaining to the calcaneum and cuboid bone.
- calcaneofibular (kal-ka"ne-o-fib'u-lar). Pertaining to the calcaneum and the fibula.
- calcaneonavicular, calcaneoscaphoid (kalka"ne-o-nav-ik'u-lar, kal-ka"ne-o-ska'foid). Pertaining to the calcaneum and scaphoid bone.
- calcaneoplantar (kal-ka"ne-o-plan'tar). Pertaining to the calcaneum and the sole of the foot.
- calcaneotibial (kal-ka"ne-o-tib'e-al). Pertaining to the calcaneum and tibia.
- calcaneovalgocavus (kal-ka"ne-o-val"go-ka'-vus). Club-foot in which calcaneus, valgus, and cavus are combined.
- calcaneum (kal-ka'ne-um), pl calca'nea [L.]. The heel-bone, or os calcis; the irregular quadrangular bone at the back of the tarsus.
- calcaneus (kal-ka'ne-us) [L.]. I [B N A] Same as calcaneum. 2. Club-foot in which the heel only touches the ground.
- calcanodynia (kal''ka-no-din'e-ah) [calcanum + Gr. δδύνη pain]. Pain in the region of the os calcis, pain in the heel.
- calcar (kal'kar) [L. for "spur"]. The hippocampus minor. c. a'vis, the hippocampus minor. c. femora'le, a vertical lamina of strong tissue in front of the lesser trochanter, serving to strengthen the neck of the femur. c. pe'dis, the heel.
- calcarea (kal-ka're-ah) [L.]. Lime; calcium oxid or hydroxid. c. carbon'ica, a homeopathic preparation made from the middle layer of the oyster shell: used in rickets, scrofula, acid dys-

- pepsia, etc. c. chlora'ta, chlorinated lime: a disinfectant and bleaching agent. c. fluor'ica, a homeopathic preparation of fluorspar, given in tumors of bone, varicose veins, and cataract. c. hy'drica, a solution of calcium hydroxid; liquor calcis, or lime-water. c. phosphor'ica, precipitated calcium phosphate. c. us'ta, quick-lime or caustic lime; calcium oxid or unslaked lime.
- calcareous (kal-ka're-us) [L. calca'rius]. Pertaining to or containing lime or calcium; chalky.
- calcarine (kal'kar-in) [L. calcari'nus spur-shaped]. Spur shaped.
- calcariuria (kal-ka-re-u're-ah) [L. calca'rius containing lime + Gr. οὖρον urine]. The presence of lime salts in the urine.
- calcemia (kal-se'me-ah) [calcium + Gr. alμa blood]
 The presence of an abnormally large amount of calcium in the blood
- calcic (kal'sik). Of, or pertaining to, lime or to
- **calcicosis** (kal-sik-o'sis) [L calx lime]. Marble-cutters' phthisis, pneumonia due to the inhalation of marble-dust.
- calcidin (kal'sid-in). A combination of iodin and calcium: used in croup in doses of $\frac{1}{3}$ -1 gr. (0.022-0.065 gm.).
- calcific (kal-sif'ik). Forming lime.
- calcification (kal"sif-ik-a'shun) [L. calx lime + fa'cere to make]. The process by which organic tissue becomes hardened by a deposit of calcium salts within its substance. metastatic c., that which results from an excess of the lime-salts of the blood, such as may occur as a consequence of osteomalacia.
- calcigerous (kal-sij'er-us) [L. catx lime + ger'ere to bear]. Producing calcium salts.
- calcimeter (kal-sim'et-er) [calcium + Gr. μέτρον measure]. An instrument for estimating the amount of calcium present, as in the blood.
- calcination (kal-sin-a'shun) [1. calcina're to char].

 The process of roasting or reduction to a powder or of drying by heat.
- calcine (kal'sīn). To perform calcination.
- calcipexy (kal'sip-ek-se) [calcium + Gr. $\pi\eta\gamma\nu\nu\nu\alpha\iota$ to fix or fasten]. Fivation of calcium to tissues within the organism.
- **calciphilia** (kal-sif-il'e-ah) [calcium + Gr. φιλείν to love]. A tendency to absorb lime salts from the blood and thus to become calcified.
- calciprivic (kal-sip-ri'vik) [calcium + L privus without]. Pertaining to a deficiency or absence of calcium.
- calcium.

 calcium (kal'se-um) [L. calx lime]. A yellow metal, the basic element of lime. Symbol, Ca; atomic weight, 40 o7. It is found in nearly all organized tissues. c. acetate, a resolvent, Ca(C₂H₃O₂)₂· useful in tuberculosis and in psoriasis. c. benzoate, a compound, Ca(C₆H₃CO₂)₂ + 3H₂O, employed in nephritis and the albuminuria of pregnancy. Dose, 5-10 gr. (0.32-0.65 gm). c. bisulphite, a colorless, strong-smelling fluid, Ca(HSO₃)₂· an active antiseptic, for use in gargles and washes. c. borate, an antiseptic agent, Ca₃(BO₃)₂: used externally as a dusting-powder and internally for diarrhea. Dose, 3-0 gr. (0.2-0.6 gm.). c. boroglycerid, a glassy hygroscopic and antiseptic agent prepared from calcium borate and glycerin. c. bromid, a sedative, CaBr₂: used in epilepsy and insomnia Dose, 20-30 gr. (1.3-2 gm.). c. cacodylate, a calcium salt of cacodylic acid [(CH₃)₂AsO.O₂Ca. used the same as the sodium salt. c. carbid, CaC₂, a caustic substance used in the generation of acetylene gas c. carbonate, chalk, CaCO₃, occurring in bones, shells, etc., and prepared artificially. It is astringent and antacid used in dyspepsia, colic, diarrhea, and locally as a dusting-powder. Preparations and doses chalk-mixture, 1 oz. (30 c c.); compound chalk-powder, 20-60 gr. (1.3-4 gm.).

c. caseinate, casein from cows milk rendered partially soluble by combination with calcium. It is mixed with milk for use in diarrheal disease of infancy. **c. chlorid,** a white, hygroscopic powder, CaCl₂; resolvent disinfectant: used in enlarged glands and uterine and ovarian tumors. Dose, 10-20 gr. (0.6-1.3 gm). c. cresylate, a syrupy preparation of calcium hydroxid and cresol a good disinfectant. c. cyanamid. See dibrombehenate. See sacyanamid. c. bromin. c. dithiocarbonate, an orange red crystalline powder, CaCOS₂ used in skin diseases. **c. eosolate,** an odorless and tasteless soluble powder, (C₉H₇S₂O₁₂)₂.Ca₃, antitubercular and antiseptic: used in bronchial and pulmonary diseases and in diabetes. Dose, 5-15 gr. (0 3-1 gm) c. ferrophospholactate, a salt used in the treatment of rickets and tuberculosis. Dose, 3-7½ gr. (0.2-0.5 gm) c. fluorid, CaF₂, occurs in the bones and teeth. c. glycerophosphate, a white, crystalline powder, soluble in water; $C_3H_5(OH)_2OPO_3Ca$. used in neurasthenia, etc. Dose, 3-4½ gr. (0.2-03 gm.). c. hippurate, a soluble white powder used to remove any excess of uric acid from the system. Dose, $7\frac{1}{2}$ gr. (0.5 gm.). c. hydrosulphid, Ca (SH)₂ a depilatory called Martin's depilatory. c. hydroxid, c. hydrate, Ca(OH)2, slaked lime. See under c. hypophosphite, Ca(H₂PO₂)₂ used as a food-medicine in tuberculosis and rickets. as a tood-medicine in tuberculosis and rickets. Dose, 10-30 gr. (0 6-2 gm). c. iodate, an anti-pyretic and antiseptic salt, Ca(IO₃)₂ + 6H₂O. c. iodid, CaI₂, an irritant antiseptic used in erysipelas, tuberculosis, scrofula, etc. Dose, 1-3 gr. (0 06-0 2 gm). c. iodobehenate. See sa-jodin. c. lactate, Ca(C₃H₅O₃)₂ + 5H₂O₃, is used in rickets and scrofula. Dose, 3-7½ gr. (0 2-0.5 gm). c. lactophosphate, a mixture of calcium lactate, calcium acid lactate, and calcium acid phosphate, used in tuberculosis and calcium acid phosphate. used in tuberculosis Dose, 5-10 gr. (0 32-0.65 gm.). c. loretinate, basic, a salt in slender, cream-colored needles, Ca-(1.O.C₂N₄SO₃). c. loretinate, normal, an or-ange-red powder, Ca (I OH C₉H₄N.SO₃)₂H₂O; antiseptic. c. nitrate, Ca.(NO₁)₂ a white efflorescence rates. c. oxalate, CaC₂O₄, occurs in the urine evaporates and in certain calculi c. oxid, lime or quicklime, CaO, a corrosively alkaline and caustic earth. c. permanganate, a crystalline salt, Ca(MnO₄)₂ + 5H₂O used internally in the diarrhea of children. Dose, \(\frac{3}{2}\)-2 gr. (0.040-0 13 gm).

c. peroxid, a light cream-colored powder. CaO₂, insoluble in water, but gradually decomposed with the liberation of oxygen c. phenolsulphon-Same as c. sulphocarbolate c. phosate. phates are six in number: (1) Normal calcium orthophosphate, Ca₃(PO₄)₂, bone phosphate (cal'-cii phos'phas pracipita'tus, U. S. P.), occurring in bones and teeth, and in nearly all the fluids and excreta of the body used as a food medicine. Dose, 5-10 gr. (0 33-0.65 gm.). (2) Stellar phosphate, or monohydric orthophosphate, CaHP()4, occurs in some urinary calculi. (3) Tetrahydric calcium orthophosphate, Call₄(PO₄)₂, occurs in the brain, and forms the phosphate of acid urine and other acid body fluids. (4) Calcium meta-phosphate, $Ca(PO_3)_2$. (5) Calcium pyrophosphate, $Ca_2P_2O_7$. (6) Calcium hypophosphate, $CaPO_3 + II_2O$. **c. salicylate**, a white, tasteless, crystalline powder, $Ca(OH.C_0H_4.CO.O)_2 + 2II_2O$ useful in intestinal diseases. Dose, (0.45-1.3 gm.). c. santonate, an anthelmintic remedy. Dose, $\frac{1}{2}$ -1 $\frac{1}{2}$ gr. (0.03-0.1 gm.). c. sucrate, a compound of lime and saccharose, administered for rheumatism in the syrup of lime. of sulphate, a compound occurring in the form of gypsum, 2CaSO₄ + H₂O, and as burnt gypsum or plaster-of-Paris, CaSO₄. See plaster-of-Paris and gypsum. c. sulphid, a compound, CaS. The calcium sulphid of pharmacy is the same as calx sulphid rata. c. sulphite, a compound, CaSO₃: used in septic and zymotic diseases. c. sulpho**carbolate**, a white, crystalline substance, **Ca**- $(C_0H_0SO_1)_3 + 6H_3O$, soluble in water, used as an astringent and antiseptic in diarrhea, cholera morbus, intestinal ulcer, etc. Dose, $4\frac{1}{2}$ -15 gr. (0.3-1 gm.). c. sulphydrate, a preparation of sulphureted calcium used as a depilatory. c. tungstate, a crystalline substance, $CaWO_4$, used for coating the screens of fluoroscopes.

calcoglobulin (kal-ko-glob'u-lin). The form of albumin which occurs in calcifying tissue.

calcoid (kal'koid). A tumor or new-growth of the tooth-pulp.

calcospherite (kal-ko-sfēr'īt). One of the small globular bodies formed during the process of calcufication, by chemic union between the calcium particles and the albuminous organic matter of the intercellular substance. These cells coalesce to form calcoglobulin.

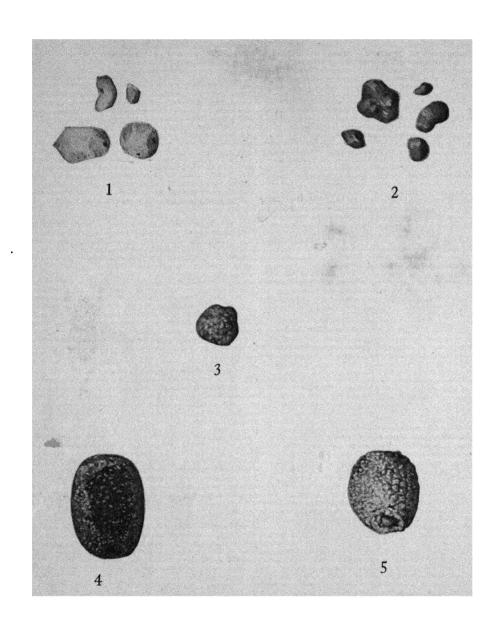

calcreose (kal'kre-ōs). A proprietary preparation of beechwood creosote and lime used in pulmonary and gastro-intestinal affections

calculary (kal'ku-la-re). Pertaining to calculus.

calculifragous (kal-ku-lif'rag-us) [calculus + L. fran'gere to break]. Breaking a bladder stone; hthotritic.

calculosis (kal-ku-lo'sis). The presence of calculus. calculous (kal'ku-lus). Pertaining to, of the nature of, or affected with, calculus.

calculus (kal'ku-lus), pl cal'culi [L for "pebble" An abnormal concretion occurring within the animal body, and usually composed of mineral salts alternating c., a urinary calculus made up of successive layers of different composition. alvine c., a concretion in the intestine formed by hardening of portions of the fecal contents arthritic c., a deposit in or near a joint in gout. It is usually composed of sodium urate, sometimes of calcium urate. Called also chalk-stone. aural c., a lump of hardened cerumen in the external meatus of the ear. biliary c., a gall-stone, found mainly in the biliary passages and gallbladder sometimes within the liver. It is composed of cholesterin, bile-pigment, and other organic matter, mixed with inorganic salts blood c., a phlebolith, or concretion of coagulated blood. bronchial c., a concretion in an air-passage. calcium oxalate c., hard rough calculi composed of calcium oxidate. cholesterol c., calculi formed of cholesterol. coral c., a branched, coral-like calculus found in the pelvis of the kidcutaneous c. See milium cystin-c., a soft variety of urinary calculus composed of cystin. dendritic c. Same as coral c dental c., the tartar of the teeth. It consists of a salivary deposit of calcium phosphate and carbonate with organic matter, and also the serumal deposit of matter from the blood. **encysted c.**, a urinary calculus inclosed in a sac developed from the wall of the bladder fibrin c., urinary calcult formed from blood-clots fusible c., a calculus formed of a mixture of calcium phosphate and triple phosphates which fuses to a black, enamel-like mass under the blow-pipe. hematogenic c., calculus produced by the blood, as the serumal tartar on the teeth. See serumal c., also tartar. hemic c., a calculus developed from a blood-clot. hemp-seed c., a small, smooth, and pale urinary calculus of calcium oxalate of the size and shape of a hempseed. hepatic c., a gall-stone formed and remaining in the substance of the liver. indigo c., calculus formed by oxidation of the indican of the urine. intestinal c. See enterolith. lacteal c., mammary calculus. lung c., concretions formed in the bronchi by accretion about an inorganic nucleus, or from calcified portions of lung tissue. Called also *lung stones*. mammary c., a concretion in one of the lactiferous ducts. mulcretion in one of the lactiferous ducts. mul-berry c., a urinary calculus of lime oxalate, so called from its shape. nasal c. See rhinolith. ovarian c., an enlarged and calcified corpus luteum. pancreatic c., a concretion formed in

BILIARY CALCULI-GALL-STONES. (MOYNIHAN).

1, Almost free cholesterin; 2, cholesterin and bilirubin-calcium; 3, a stone removed from the ampulla of Vater, 4, a stone removed from the common duct, 5, a stone removed from the cystic duct.

the pancreatic duct from calcium carbonate with other salts and organic materials. phosphate c., calculi composed of calcium oxalate and ammonum urate. **pocketed c.** Same as encysted c prostatic c., a concretion formed in the prostate, chiefly of calcium carbonate and phosphate. renal c., a calculus occurring in the kidneys. salivary c. 1. A concretion sometimes formed in a salivary duct, consisting mainly of calcium salts. 2. The tartar formed on neglected teeth. serumal c., a calculus formed about a tooth and caused by the exudation of serous matter of diseased gums. shellac c., a gastrolith caused by drinking shellac varnish. spermatic c., a concretion in a seminal vesicle. stomachic c., a bezoar or other concretion in the stomach: a gastrolith. struvit c., a urinary calculus composed of very pure ammoniomagnesium phosphate, forming the hard crystals known to mineralogists as struvit submorphous c., a calculus made up of molecules of a crystalline salt, together with molecules of the colloid matter in which the salt is contained. tonsillar c., a calcareous concretion in a tonsil urate c., calculi composed of urates, occurring chiefly in newborn or young infants. uric-acid c., hard, yellow or reddish-yellow calculi formed from uric acid. urinary c., a calculus in any part of the urinary tract. It is vesical when lodged in the bladder (stone, gravel), and renal when in the pelvis of the kidney urostealith c., urinary calcult formed of fatty matter. uterine c., an intra-uterine concretion formed mainly by the calcareous degeneration of a tumor; a womb-stone. vesical c., a form found in the urinary bladder vesicoprostatic c., a prostatic calculus extending into the bladder. xanthic c., a urmary calculus composed mainly of vanthin.

calcusol (kal'ku-sol). A proprietary preparation of potassium carbonate and piperidin parasulphamin-benzoate used in gout and rheumatism.

Caldani's ligament (kahi-dah'nēz) [Leopoldo Marco Antonio Caldani, Italian anatomist, 1725-1813]. See under ligament.

Caldwell-Luc operation (kald'wel-lik) [Henry Luc, French laryngologist, born 1855]. See under operation.

Calef. Abbreviation for L calefac'tus, warmed. calefacient (kal-e-fa'shent) [L cal'idus warm + fa'cere to make]. Exciting warmth; causing a sense of warmth.

Calendula (kal-en'du-lah) [L]. A genus of composite-flowered plants. *C officina'lis*, pot-marigold, is stimulant and resolvent, and is used externally as a vulnerary. Dose of tincture, 10 min. (0 6 c c).

calendulin (kal-en'du-lin). A mucilaginous principle from Calen'dula officina'lis.

calentura (kahl-en-too'rah) [Sp. "fever"]. See calenture.

calenture (kal'en-tūr) [Sp calentu'ra]. Sunstroke, or thermic fever, the name is applied also to various tropical fevers

calf (kahf) [L. su'ra] The fleshy mass formed by the gastrocnemius muscles at the back of the leg below the knee. **gnome's c.**, a full rounded calf due to pseudohypertrophic paralysis.

calf-bone. The fibula.

caliber (kal'ib-er). The diameter of a canal or tube.

calibrator (kal'ib-ra-tor) [Fr. calibre, the bore of a gun]. An instrument for dilating the urethra or for measuring the lumen of a passage.

caliculus (kal-ik'u-lus). Calyculus.

caligation (kal-ig-a'shun). Same as caligo.

caligo (kal-i'go) [L]. Dimness of vision. c. cor'-ness, obscurity of vision due to an opacity of the cornea. c. len'tis, cataract. c. pupil'lse, synizesis.

calioben (kal-i'o-ben). See sajodin.

calipeptone (kal-ip-ep'ton). A proprietary preparation of berberin, calisaya, nux vomica, xanthoxylum, and pepsin. used in gastric neuroses.

calipers (kal'1p-erz). Compasses with bent legs. calisaya (kal-is-a'yah) The bark of Cincho'na calisa'ya; yellow Peruvian bark

calisthenics (kal-is-then'ıks) [Gr. καλός beautiful + σθένος strength]. A system of light gymnastics for girls.

calix (ka'liks), pl. ca'lices [L.]. A cup-shaped organ or cavity; especially any one of the recesses of the pelvis of the kidney which inclose the pyramids.

callaquol (kal'ak-wol). A proprietary preparation of oxytricarballyhe acid ester, flavored with oil of thyme used for wet packing in pneumonia, pleurisy, meningitis, peritonitis, etc

Callaway's test (kal'a-waz) [Thomas Callaway, English physician of the nineteenth century]. See under tests.

Calleja's islets (kal-ya'hahz). See under islet callenders (kal'en-ders). Same as mallanders. Calliandra (kal-e-an'drah). Sec pambotano. Callicarpa (kal-e-kar'pah). See matura.

Calliphora (kalif'o-rah). A genus of scavenger flies which deposit their eggs in decaying matter, on wounds, or in the openings of the body. C. vomito'ria, the common blow-fly or bluebottle, whose larvæ may cause intestinal trouble. Other species are C. aza'rea, C. ervthroceph'ala, and C. lionen'-212

Calliphora vomitoria

callisection (kal-is-ek'shun) [L cal'lus insensibility + sec'tto a cutting]. Vivisection of animals that have been anesthetized.

Callisen's operation (kal'is-enz) [Hendrik Callisen, an eminent Danish surgeon, 1740-1824]. See under operation.

Callison's fluid (kal'is-unz) [James S. Callison, physician in New York, born 1873] See under fluid.

callosal (kal-o'sal). Pertaining to the corpus callosum.

callositas (kal-os'it-as) [L.]. Callosity.

callosity (kal-os'it-e) [L. callos'itas, from cal'lus].
A circumscribed thickening of the skin, and hypertrophy of the horny layer, due to friction, pressure, or other irritation.

callosomarginal (kal-o"so-mar'jin-al). ing to the callosal and marginal gyri.

callosum (kal-o'sum). Same as corpus callosum.

callous (kal'us). Hard; like callus.

callus (kal'us) [L]. 1. A callosity. 2. The plastic exudate exuded about the fragments of a broken bone and accomplishing the work of repair. central c., provisional callus formed within the medullary cavity of a bone. definitive c., the exudate formed between the fractured ends of the bone; it is permanent, and becomes changed into true bone. ensheathing c., a variety of callus which is external and temporary, forming a sheath about the seat of fracture after repair it is absorbed. intermediate c. Same as definitive c. permanent c. Same as definitive c. pin c., provisional callus in the medullary canal. provisional c., temporary c., the ensheathing callus plus a temporary plug of similar material within the medullary canal.

camenthol (kam-en'thol). A combination of camphor and Japanese menthol used by inhalation in pulmonary and nasal affections in 3 per cent. solution.

camera (kam'er-ah), pl. cam'era [L. for "chamber"]. 1. A box, chamber, or compartment. 2. Any open space or ventricle. c. lu'cida, a prism so arranged as to throw the reflected image of an object upon paper, so that its outlines may be traced with a pencil. c. obscu'ra, a combined box, lens, and screen, used mainly in photography. c. oc'uli, either one of the chambers of the eye. See chamber. c. sep'ti pellu'cidi, the fifth.ventricle.

Camerer's law (kam'er-erz) [Wilhelm Camerer, German pediatrist, 1842-1910]. See under law.

camiofen (kam-i'o-fen). An ointment composed of iocamphen with an equal weight of a mixture of lard, wax, and oil of theobroma.

camisole (kam'is-ōl, kam-e-zol') [Fr.]. A strait-jacket, sometimes used for the restraint of violently insane persons.

Cammann's stethoscope (lam'anz) [George Philip Cammann, New York physician, 1804–1803]. A binaural stethoscope.

Cammidge reaction (kam'ij) [P. J. Cammidge, contemporary English physician]. See pancreatic reaction, under reaction.

camomile (kam'o-mil) See Anthemis, Calendula. Chamomile, Matricaria, and Tagetes.

campanula (kam-pan'u-lah) [L. campana a bell].
A bell-shaped organ or part c. hal'leri, the swollen end of the falciform process in the eye of fish.

campeachy, campechy (kam-pe'tshe). Hematoxylon.

camp-fever. A popular name for typhus fever.

Camper's angle, ligament, etc. (kam'perz) [Pieter Camper, Dutch physician, 1722-1789]. See angle, ligament, etc

camphacol (kam'fak-ol). A preparation made from camphoric acid, formaldehyd, and guaiacolused in phthisis and other pulmonary affections and in cystitis Dose, 5-20 gr (0.3-1.3 gm.).

camphene (kam-fēn') 1. Any hydrocarbon or volatile oil having the formula C₁₀H₁₆. Certain camphenes are found already formed in plants.

2 A popular name for rectified oil of turpentine.

camphenol (kam-fe'nol). A combination of camphor and the phenols germicide and disinfectant. **camphochol** (kam'fo-kol) An addition product of

camphor and apocholic acid containing 28 per cent. of camphor used as a heart tonic.

camphoid (kam'foid). A thick paste of camphor, 20 parts, and pyroxylin, 1 part, dissolved in alcohol: used as a vehicle for the external application of medicines

campholyptus (kam-fo-lip'tus). A proprietary camphor and eucalyptus remedy.

camphomenthol (kam-fo-men'thol). Menthol camphoratum.

camphophenique (kam"fo-fen-ēk") [Fr.]. A proprietary antiseptic preparation of camphor and phenol

camphopyrazolon (kam"fo-pi-raz'o-lon). Phenylhydrazin in combination with camphocarboxylic acid, of the formula C₁₇H₂₀N₂O, soluble in alcohol. It is used like camphor.

camphor (kam'for) [L. campho'ra; Gr. κάμφορα]. A stearopten, C₁₀H₁₀O, from the wood of Cinnamo'mum cam'phora and other Asiatic lauraceous trees. It is a white, tough, crystalline mass, strongly fragrant, of a cool, pungent taste, inflammable and sublimable. It is a powerful irritant and stimulant, diaphoretic and narcotic; poisonous in overdoses, sedative in small ones. It is used in neuralgia, headache, maniacal attacks, and the typhoid state, in sexual excitement

and genito-urinary irritation. Dose, 1-20 gr (0.06-1.3 gm.). Its principal official preparations are aqua camphoræ; spiritus camphoræ, and linimentum camphoræ; but it also enters, in smaller quantities, into many other preparations. There is a considerable class of stearoptens grouped together as camphors. alant c. See helenin. artificial c., a compound, pinene chlorid, C₁₀H₁·Cl, prepared from oil of turpentine by the action of hydrochloric acid. blumea c., a good and abundant camphor produced in Indochina by the shrub Blu'mea balsamif'era. Borneo c., a peculiar stearopten from Dryobal'anops aromal'ica, a tree of Borneo and Sumatra. carbolated c., a mixture of camphor, 11 parts, with phenol and alcohol, each, 1 part: an antiseptic dressing for wounds. **chloral c.**, equal parts of camphor and chloral hydrate. a sedative for external use. **mace c.**, a camphor, C₁₀H₃₂O₅, derivable from oil of mace. **monobromated c.**, camphor in which one atom of hydrogen is replaced by one atom of bromin, C₁₀H₁₅OBr. Dose, 1-10 gr. (0.066-0.666 gm). naphthol c., beta-naphthol, 1 part, fused with camphor, 2 parts; a syrupy fluid: used externally as an antiseptic. orris c., a fragrant, crystalline body from orris. phenol c., a clear, oily solution of camphor in phenol in various proportions a germicide and toothache remedy. resorcinated c., a mixture of resorcinol and campbor; employed in pediculosis and in pruritus. c. salicylate, a crystalline product of the fusion of camphor, 84 parts, with salicylic acid, 65 parts: used externally in ointments for various skin affections, and internally, as in diarrheas. Dose, $\frac{7}{8}$ -4 gr. (0.05-0.25 gm.). **salol c.**, a clear, oily preparation of camphor, 2 parts, and salol, 3 parts a local antiseptic. **thymol c.**, a mixture of thymol and camphor. applied for lice and to relieve itching. turpentine c. See terpin.

camphora (kam-fo'rah). Latin for camphor.

camphoraceous (kam-fo-ra'shus). Having the taste, smell, or other qualities of camphor.

camphoral (kam'fo-ral). A proprietary remedy for diseases of the mucous membrane.

camphorated (kam'fo-ra-ted) [L. camphora'tus]. Containing or tinctured with camphor.

camphorism (kam'for-izm). Poisoning by camphor, the condition is marked by convulsions, coma, and gastrius.

camphoromania (kam-for-o-ma'ne-ah). A morbid craving for camphor, the camphor habit.

camphoroxol (kam-for-oks'ol). A preparation of camphor, alcohol, and hydrogen dioxid: antiseptic and deodorant in 10 per cent. solution.

camphosal (kam'fo-sal). Neutral camphoric acid ester of santalol, C₈H₁₄(CO₂,C₁₅H₂₃)₂! used in urethral fever, vesical catarrh, etc.

camphossil (kam'fo-sil). A condensation product of camphor and salicylic acid: used as an antipyretic and intestinal antiseptic. Dose, 8 gr. (o.5 gm).

campimeter (kam-pim'et-er) [L. cam'pus field + me'trum measure]. An instrument for measuring or mapping out the field of vision.

camptocormia, camptocormy (kamp-to-kor'-me-ah, kamp-to-kor'me) [Gr. καμπτός bent + κορμος body]. Bent back; a static deformity consisting of forward flexion of the trunk, seen in soldiers. It is probably a functional or simulated condition (Souques).

camptodactylia (kamp"to-dak-til'e-ah) [Gr. καμπτόs bent + δάκτυλος finger]. Permanent and irreducible inflexibility of one or more fingers (Landouzy).

canadin (kan'a-din). An alkaloid, C₂₀N₂₁NO₄, from Hydras'tis canaden'sis.

canadium (kan-ah'de-um). A supposed new element found in metallic form in British Columbia. It resembles platinum in many ways.

- calmative (kahm'at-iv). 1. Sedative; allaying excitement. 2. A sedative medicine.
- Calmette's reaction or test, serum (kal-mets') [Albert Calmette, French bacteriologist, Lille, born 1863]. See under reaction and serum.
- calmin (kahm'in). The proprietary name for the sodium salt of veronal: used as a hypnotic.
- calodal (kal'o-dal). A meat extract used for subcutaneous injection in watery solution.
- calolactose (ka-lo-lak'tōs) A compound of bismuth subnitrate, 1 part; calomel, 1 part; and lactose, 8 parts: it is an intestinal disinfectant.
- calomel (kal'o-mel) [L. calom'elas; Gr. $\kappa \alpha \lambda \delta s$ fair $+ \mu \epsilon \lambda \alpha s$ black]. Mercurous chlorid (hydrar'gyri chlo'ridum m'tle, U. S. P.), HgCl, a white, tasteless, insoluble powder; antisyphilitic, alterant, and purgative. Dose, $\frac{1}{10}-2$ gr. (0.006-0.13 gm.). See mercury.
- calomelol (kal'o-mel-ol). A proprietary colloidal calomel preparation: used as a dusting-powder or in ointment, and internally like calomel.
- calor (ka'lor) [L. for "heat"]. Normal heat of the body; also fever-heat of moderate intensity and lower in degree than fervor and ardor. c. febri'lis, the heat of fever. c. fer'vens, a boiling heat. c. inna'tus, the normal or natural heat of the body. c. inter'nus, fever not appreciable on the surface of the body. c. mor'dax, c. mord'icans, biting or stinging heat; also the hot, burning, reddish-colored skin occurring in scarlet fever.
- calorescence (kal-or-es'enz). The conversion of non-luminous into luminous heat-rays.
- Calori's bursa (kal-o'rēz) [Luigi Calori, Italian anatomist, 1807-1806]. See under bursa.
- caloricity (kal-o-ris'it-e). The power of the animal body of developing and maintaining heat.
- calorie, calory (kah-lor-e', kal'o-re) [Fr.; L. ca'lor heat]. A unit of energy, being the amount of heat required to raise I gm. of water, 1° C i. e., from 15° to 16° C. This is known as the small calorie, gram calorie, and standard calorie. The calorie used in the study of metabolism is the large calorie or kilocalorie, and is the amount of heat required to raise I kilogram of water from 15° to 16° C. mean c., one-one-hundredth of the heat required to raise I gram of water from 0° to 100° C.
- calorifacient (kal"o-rif-a'shent) [L. ca'lor heat + fa'cere to make]. Producing heat: used of certain foods.
- calorific (kal-or-if'ik) [L. ca'lor heat + fa'cere to make]. Producing heat. c. center. See center.
- calorigenetic (kal-o-rij-in-et'ik). Calorigenic.
- calorigenic (kal-o-rij-en'ik) [L. ca'lor heat + Gr. γεν- to produce]. Producing heat; increasing heat production.
- calorimeter (kal''or-im'et-er) [L. ca'lor heat + Gr. μέτρον measure]. An instrument for measuring the heat change in any system. In physiology it is an apparatus for measuring the amount of heat produced by an individual. respiration c., an apparatus for the measurement of the gaseous exchange between a living organism and the atmosphere which surrounds it and the simultaneous measurement of the amount of heat produced by that organism.
- calorimetry (kal-or-im'et-re) [L. ca'lor heat + Gr. μέτρον measure]. Measurement of the amounts of heat absorbed or given out. direct c., measurement of the amount of heat produced by a subject enclosed within a small chamber. indirect c., determination of the heat produced by a subject by measuring the amount of oxygen consumed and the quantity of nitrogen and carbon monoxid eliminated.
- caloripuncture (kal''o-rip-ungk'tur) [L. ca'lor heat + puncture]. Same as ignipuncture.

- caloriscope (kal-or'is-kōp). An instrument for showing the caloric values of mixtures for infantfeeding.
- **caloritropic** (kal-o-rit-rop'ik) [L. ca'lor heat + Gr. τρόπος turn]. Same as thermotropic.
- **calorose** (kal'o-rōs). An invert sugar prepared from cane-sugar by boiling with dilute tartaric acid: used as a substitute for glucose in infusions and nutrient enemas.
- calory (kal'or-e). See calorie.
- Calot's operation, treatment, triangle (kalōz') [François Calot, French surgeon, born 1861]. See under operation, treatment, and triangle.
- Calotropis (kal-ot'ro-pis). See mudar.
- calox (kal'ox). A proprietary dentifrice.
- calsa (kal'sah). A proprietary agar-agar preparation. used in constipation.
- calumba (kal-um'bah) [L.]. A menispermaceous plant, Jateorrhi'za palma'ta, of East Africa; also its root. It is a bitter, stomachic tonic, used in dyspepsia, diarrhea, dysentery, and in the vomiting of pregnancy and of teething. Dose, 10-30 gr. (0.6-2 gm); of the extract, 2-10 gr. (0 13-0.65 gm), of the fluidextract, 1-8 dr. (4-32 c c), of the tincture, 1-2 dr. (4-8 c.c.); of the infusion, 1-2 fl.oz. (30-60 c c). American c. See Frasera.
- **calumbin** (kal-um'bin). A bitter principle, C₂₁-H₂₂O₇, from calumba.
- calvaria, calvarium (kal-va're-ah, kal-va're-um) [L]. The skull-cap, or vault, of the cranium, also, the skull itself.
- calvarial (kal-va're-al). Pertaining to the calvarium.
- Calvé-Perthes disease (kal-va'-per-tās) [Jacques Calvé, French orthopedist; Georg Clemens Perthes, German surgeon, born 1869]. See under disease.
- calvities, calvitium (kal-vish'e-ēz, kal-vish'e-um) [L.]. Baldness; more especially baldness of the sinciput. See acomia, alopecia.
- calx (kalks) [L.]. 1. Lime or chalk 2. [B N A] The heel. 3. Any residue obtained by calcination 4. The U. S. P. name for lime or calcium oxid, CaO; quicklime: alkaline, caustir, and escharotic. The preparations are: liq'uor cal'cis, potas'sa cum cal'ce, syru'pus cal'cis c. chlora'ta, c. chlorina'ta (U S P.), chlorinated lime, a white, pasty substance: used as a bleaching agent and disinfectant; also an alterative, antiseptic, and stimulant. Dose, 3-6 gr. (0.194-0 388 gm.). c. sulphura'ta, a mixture of at least 60 per cent. of calcium sulphid with a variable proportion of calcium sulphate and carbon. It is useful in skin and pustular diseases, and as a depilatory. Dose, 10-1 gr. (0.0064-0.065 gm.). c. us'ta, c. vi'va, quicklime or caustic lime.
- calycanthin (kal-ik-an'thin). An alkaloid, C₁₁H₁₄-N₂ + ½H₂O, from Calycan'thus fer'this, with a strychnin-like action, it is a violent poison.
- calycine (kal'is-In). Pertaining to or resembling a calyx.
- calycle (kal'ik-l). A calyculus.
- calyculus (kal-ik'u-lus) [L. "a little cup"] A budshaped or cup-shaped structure. c. gustato'rius, a taste-bud. c. ophthal'micus [B N A], the optic cup.
- Calymmatobacte'rium granulo'matis. A capsulate, Gram-negative organism, regarded as the causative agent of ulcerating granuloma of the pudenda.
- calyx (ka'liks). See calix.
- cambium (kam'be-um) [L. "exchange"]. I. A juice formerly thought to originate in the blood and to repair tissue loss.
 2. A layer of cells between the bark and the wood.
- cambogia (kam-bo'je-ah) [L]. Gamboge; a yellow gum-resin from Garcin'ia hanbu'ryi and other guttiferous East Indian trees. It is a drastic hydragogue cathartic. Dose, I-5 gr. (0.06-0.3 gm.).

canadol (kan'ad-ol). A volatile petroleum distillate; an impure hexane, C₆H₁₄: used like rhigolene as a local freezing anesthetic for minor surgical operations.

canal (ka-nal') [L. cana'tis]. Any tubular and relatively narrow passage or channel abdominal c., the inguinal canal. accessory palatine c., a channel in the palate bone for branches of the descending palatine artery. accessory posterior palatine c., a passage (sometimes two passages) in the palate bone, with an orifice near that of the posterior palatine canal. adductor c. Same as Hunter's c. Alcock's c., the fascial sheath of the internal pudic artery. alimentary c., the passage made up of the mouth, pharynx, esophagus, stomach, and intestine alisphenoid c., a canal in the alisphenoid bone which in many animals transmits the external carotid. alveolodental c., the dental canal. anal c., a transient lumen in the embryonic anus. anterior alveolar c., in the upper jaw bone, transmits the middle superior dental nerve. terior dental c., canal in the facial portion of the upper jaw bone for the anterior dental nerve and vessels. anterior ethmoid c., a passage in the frontal and ethmoid bones for the nasal branch of the ophthalmic nerve and anterior ethmoid vessels. anterior orbital c., the anterior ethmoid canal. anterior palatine c., the canal which affords passage for the anterior palatine artery in the superior maxillary bone. arachnoid c., an alleged passage beneath the arachnoid membrane of the brain for the vene Galeni c. of Arantius, the ductus venosus. archinephric c., the duct of the archinephron or primitive kidney. Arnold's c., a passage in the petrous portion of the temporal bone for the auricular branch of the pneumogastric nerve. arterial c., the ductus arteriosus. atrial c., the space within the atrium. auditory c., external, the passage from the external meatus of the ear to the membrana tympani. auditory c., internal, a passage in the petrous bone for the auditory and facial nerves and auditory bloodvessels.

auricular c. 1 The external auditory canal 2. The constriction between the auricular and ventricular portions of the fetal heart. avant c., the distal portion of the male urethra. Bartholin's c., the duct of Bartholin's gland. basipharyngeal c., an occasional canal be-tween the vaginal process of the sphenoid and the wing of the vomer on either side. Called also vomerine c. Bernard's c., a supplementary pancreatic duct Bichat's c., the arachnoid canal. biliary interlobular c's, the interlobular network of bile-ducts in and around the hepatic cells birthc., the canal through which the child passes in birth, formed by the cervix uten, vagina, and vulva. blastoporic c., a temporary passage in the embryo at the end of the primitive axis it is a relic of the notochordal canal. c. of bone, a canaliculus in a bone. bony c's (of ear). See canal, semicircular. Braun's c., the neurenteric canal. Braune's c., the uterine cavity and the vagina together after the os is fully dilated in labor Breschet's c., the canal of the diploc. bullular c., the canal of Petit. calciferous c's, canals containing lime salts in cartilage that is undergoing calcification. caroticotympanic c's, two or more short passages from the carotid canal to the tympanum, transmitting branches of the carotid plexus. carotid c., a passage in the petrous bone for the internal carotid artery and the carotid plexus. c's of cartilage, canals in an ossifying cartilage during its stage of vascularization. central c. for chorda tympani, a passage in the petrous bone for the chorda tympani. central c. of the modiolus, runs lengthwise through the modiolus of the cochlea, and transmits the central artery and nerve of that structure. central c. of the myelon, extends the whole length of the spinal cord, and is filled with cerebrospinal fluid. central c. of vitreous

(or of **Stilling**), a passage running from the optic disk to the lens of the eye: in the fetus it transmits the hyaloid artery. cerebrospinal c. 1. The space which contains the brain and spinal cord. 2. The primitive cavity of the brain and spinal cord. cervical c., the canal of the cervix uteri. ciliary c., a ring of spaces in the sclera, in front of its attachment to the iris. Cloquet's c. Same as central c. of vurcous. cochlear c., the scala vestibuli and scala tympani together. condylar c., a passage in the condylar portion of the occipital bone for the hypoglossal nerve it opens into the anterior condyloid foramen. connecting c., the arched or coiled part of a uriniferous tubule, joining it to a collecting tubule. c. of Corti, a space between the outer and inner rods of Corti. c. of Cotunnius, the aqueduct of Cotunnius. craniopharyngeal c., a passage in the embryo and fetus, between the pharyngeal cavity and the anterior lobe of the pituitary body. craniovertebral c., the cerebrospinal canal; also called cranoneural canal. crural c. Same as femoral c. c. of Cuvier, the ductus venosus cystic c., the cystic duct. c. of de Candolle. Same as medullary c. deferent c., the vas defdemicircular c. Same as semicircular c. dentinal c's, minute channels in dentin, extenddescending palatine c., the palatomaxillary canal. digestive c. See alimentary c. diploëtic c's, canals of the diploe for Breschet's veins. drainage-c., a passage formed by perforation, or by the invagination of the skin, for wound drainage. ejaculatory c. See duct, quarter antodermal c. the veil speech that ulatory. entodermal c., the yolk-space that develops into the archenteron. c. of the epididymis, a long, convoluted tube of which the epididymis is made up, it is continuous with the vas deferens. eustachian c., a passage in the petrous bone which lodges the outer part of the eustachian tube. facial c., the aqueduct of Fallopius. fallopian c., the aqueduct of Fallopius. fallopian c., the aqueduct of famoral c., the inner compartment of the sheath of the femoral vessels, situated behind Poupart's ligament and Hunter's canal. Ferrein's c., a canal said to be formed by the edges of the closed eyelids, and to conduct the tears during sleep to the puncta lacrimalia Fontana's c., the ring made up of Fontana's spaces at the junction of the cornea, iris, and sclera the ciliary canal galactophorous C., a lactiferous tubule of the mammary gland. ganglionic c., extends spirally up the modiolus, and contains the spiral ganglion and nerves going to the organ of Corti. Gartner's c., in the female, a tube that is the homologue of the vas deferens a relic of the embryonic wolffian duct. genital c., any canal for the passage of ova or for copulatory service. gubernacular c's, four small openings in young crania, one behind each incisor tooth. c. of Guidi, the vidian canal. Hannover's c., an artificial canal between the anterior and posterior fibers of the zonula of the lens, caused by the injection of some fibrous material. haversian c's, the freely anastomosing canals of the compact osseous tissue they contain blood-vessels, lymph-vessels, nerves, and marrow. hemal c., the space within the hemal arch. Henle's c's, the looped uriniferous tubules. c. of Hensen. Same as canalis reuniens. hepatic c. 1. The excretory duct of the liver; also, any one of its radicles. 2. Any one of the canals in the liver for the veins of that organ. hernial c., the passage which transmits a herma. His' c., the thyroglossal duct. Holmgren-Golgi c's, minute canals in the cytoplasm of cells, particularly of nerve-cells, forming a complex apparatus throughout the cytoplasm Called also intracytoplasmic c's. c. of Hovius, the canal of Fontana. Huguier's c., the iter chordæ anterius: a canal in the temporal bone which transmits the chorda tympani nerve. **Hunter's c.**, the triangular space between the

adductor longus, adductor magnus, and vastus externus muscles: it contains the femoral vessels and the internal saphenous nerve. Called also canalis adductorius [B N A]. Huschke's c., a passage formed by the union of the tubercles of the tympanic ring: it commonly disappears during the years of childhood hyaloid c., the central canal of the vitreous. **incisive c.**, a passage in the upper maxilla from the incisor foramina to the nasal incisor c., the anterior palatine canal. inferior dental c., one passing from the inferior dental foramen through the ramus, and proceeding through the body of the lower jaw bone. infraorbital c., a passage continuous with the infra-orbital groove on the orbital surface of the superior maxillary bone for the infra-orbital nerves and vessels inguinal c., the passage for the spermatic cord (round ligament in the female) from the internal to the external abdominal ring. tinal c., the intestine; that part of the alimentary canal which lies between the pylorus and the anus. intracytoplasmic c's. See Holmgren-Golgi c's. intralobular biliary c. See biliary intra-lobular c. Jacobson's c., one that opens upon the lower surface of the petrosa and contains Jacobson's nerve: called also tympanic c. juice-c's, the minute lymph-spaces which form the origin of the lymph-vessels Kovalevsky's c., the neurenteric canal. lacrimal c. 1. The bony canal in which the nasal duct is lodged 2. Any lacrimal canaliculus. Laurer's C., a passage in trematode worms; extending from the ovain trematode worms; extending from the ovarian duct to the dorsal surface of the body. Loewenberg's c., the part of the cochlear canal above the membrane of Corti. malar c., a channel in the malar bone for the temporomalar branch of the superior maxillary nerve. mandibular c. Same as inferior dental c. maxillary c., the dental canal. median c. The central canal of the spinal dian c. 1. The central canal of the spinal cord. 2. The aqueduct of Sylvius. medullary 1. The central canal of the spinal c., the hollow, marrow-containing cavity of a long bone. membranous c., a canal in the cochlea which follows the turns of the lamina spiralis. membranous semicircular c's, the three membranous canals (external, superior, and posterior) contained within the three bony semicircular canals of the labyrinth. c. of the modiolus, the spiral canal of the cochlea. nasal c. 1. An occasional passage for the nasal nerve, or branches of it, in the nasal bone. 2. The lac-rimal canal. **nasolacrimal c.**, the lacrimal canal. **nasopalatine c.**, a passage in the vomer for the nasopalatine nerve. **nervous c.**, the medullary or cerebrospinal canal. **neural c.**, an end-to-end passage in the epiblastic tissue of the embryo, developing into the cavity of the ventricles and central canal of the cord. neurenteric c. of Kovalevsky, in the embryo, a passage from the posterior part of the medullary tube into the archenteron. notochordal c., the neurenteric canal. c. of Nuck, a tubule of peritoneum in the young female, descending from the uterus into the inguinal canal. sometimes persistent. nutritive c. Same as haversian c. obstetric c. Same as parturient c obturator C., a canal in the ilium which transmits the obturator nerve and blood-vessels. olfactory C., the nasal fossæ at an early stage of their embryonic development. omphalomesenteric c., a passage which connects the cavity of the intestine of the embryo with the umbilical vesicle palpalatine c. See anterior palatine c. and posterior palatine c. parturient c., the space from the fundus uteri to the vulvar outlet. pelvic c., a passage from the superior to the inferior strait of the pelvis. **perivascular c.**, any lymph-space about a blood-vessel. **Petit's c.**, the space which encircles the periphery of the lens. petromas-toid c., an occasional canal containing a vein, in the line of union between the petrous and mastoid bones. petrosal c's, two passages for the large

and small superficial petrosal nerves on the upper and shall superious pone. **pharyngeal c.** Same as ptergopalatine c. **plasmatic c.**, a haversian canal **pore c.**, **porous c.**, an opening in the ovum conjectured to serve for the entrance of spermatozoids. portal c., a space within the capsule of Glisson and liver substance containing the portal veins, branches of the hepatic vessels, and the hepatic duct. posterior alveolar c., one situated in the superior maxillary bone for the anterior superior dental nerve. **posterior dental c's**, two or more canals in the upper maxillary bone for the superior posterior blood-vessels and nerves. posterior ethmoid c., one in the frontal and ethmoid bones for the posterior ethmoid vessels. posterior palatine c., the passage for the descending palatine artery in the superior maxillary and palate bones. primitive c., the neural canal of the embryo. pseudostomatous c., any apparent passage in an endothelial layer terminating in a pseudostoma. **pterygoid c.**, the vidian canal. **pterygopalatine c.**, a passage in the sphenoid and palatine bones for the pterygopalatine vessels and pharyngeal nerve pulmo-aortic c. See ductus arteriosus pulp-c., that part of the pulp-cavity which traverses the root of a tooth. c's of Recklinghausen. 1. Small lymphchannels in the connective tissue which are regarded as ultimate branches of the lymphatic vessels. The canals of the cornea. c. of Reissner, the membranous canal of the cochlea. c's of Rivinus, the excretory ducts of the sublingual glands root-c., the canal in the center of the root of a tooth containing dental pulp Rosenthal's c., the spiral canal of the modiolus. ruffed c. Same as Petit's c. sacculocochlear c., one that connects the sacculus and the cochlea. sacculo-utricular c., one connecting the sacculus and the utricle. sacral c., the continuation of the spinal canal in the sacrum. Santorini's c., the duct of the lesser pancreas. Saviotti's c's, artificially formed slits between glandular cells of the injected pancreas. Schlemm's c., the circular canal at the junction of the sclera and cornea **semicircular c's**, the long canals of the labyrinth, some of them osseous, others membranous. **seminal c.**, a seminiferous tubule. **serous c.**, any minute lymph-vessel. **sheathing c.**, the passage from the peritoneal cavity to the tunica vaginalis testis. small external palatine c., a passage for the external palatine nerve in the pyramidal process of the temporal bone. smaller palatine c., the posterior palatine canal. spermatic c., the inguinal canal of the male. sphenopalatine c. See pterygopalatine c. spinal c., the tube which contains the spinal cord. spinal cord spiral cord spiral cord spiral c., the winding tube which makes two and one-half turns about the modiolus of the cochlea It is divided into two compartments, scala tympani and scala vestibuli, by the lamina spiralis spiroid c., the fallopian canal. c. of Steno, the duct of Steno. c. of Stilling, the hyaloid canal; also the central canal of the spinal cord superior palatine c., a passage in the palatal and upper jaw bones for the palatine nerve and vessels. **supra-optic c.**, a minute canal above the optic chiasm and connected with the third ventricle. supraorbital c., one at the upper margins of the tarsal c., a canal beneath the head of the abductor hallucis. temporal c., the temporomalar canal in the malar bone for the temporomalar branches of the superior maxillary nerve. Theile's c., the space formed by the reflection of the pericardium on the aorta and the pulmonary artery. Tour-tual's c., the pterygopalatine canal. tubo-tympanal c., the inner division of the first gillcleft in the fetus; from it are derived the internal auditory passages. tympanic c., one in the petrous

bone for Jacobson's nerve, the tympanic branch of the glossopharyngeal. urethral c., the urethra or the structure which surrounds it. urogenital c's, the embryonic structures formed by the combined lower ends of the mullerian and wolffian ducts. uterine c., the cavity of the uterus.
uterocervical c., the canal of the cervix uteri.
utriculosaccular c., a canal from the utricle, uniting with a similar canal from the saccule to form the ductus endolymphaticus vaginal c., the space within the vagina. vector c., an oviduct. Verneuil's c's, collateral veins of a venous trunk. vertebral c. 1. The spinal canal. 2. Either passage for a vertebral artery in the transverse processes of the cervical vertebræ. Vestibular c. Same as urogenital sinus. See sinus. vidian c., the passage in the sphenoid bone for the vidian artery and nerve. Volkmann's c's, passages in the subperiosteal layer of bones for the passage of blood-vessels, and communicating with the haversian canals. **vomerine c.**, basipharyngeal canal. vomerobasilar c., the canal at the junction of the vomer and sphenoid vulvo-uterine c., the vestibule of the vagina.
vulvo-uterine c., the vaginal canal. c. of
Wirsung, the pancreatic duct. zygomaticotemporal c., the temporomalar canal.

canalicular (kan-al-ik'u-lar), Resembling or pertaining to a canaliculus.

canaliculization (kan-al-ik"u-liz-a'shun). development of canaliculi, as in bone.

canaliculus (kan-al-ik'u-lus), pl. canalic'uli [L.].

1. Any small canal or channel, especially that from the punctum lacrimale to the lacrimal sac. 2. Any one of the minute canals extending to the lacunæ of a bone. auricular c., a canaliculus which transmits the auricular branch of the vagus nerve. c. bilif'erus, a bile duct. c. carot-icotympan'icus [B N A], a small canal within the opening of the carotid canal, giving passage to branches of the internal carotid artery and carotid sympathetic plexus. c. denta'lis [B N A], dentinal canal. See canal. haversian c., any one of a system of minute channels connected with each haversian canal. c. innomina'tus, the innominate foramen. See foramen. c. lacrima'lis [B N A], lacrimal canal. c. laqueifor'mis, the loop-tubule of Henle. mastoid c., c. mastoi'deus [B N A], a passage from the jugular fossa to the tympanicomastoid fissure for the auricular branch of the vagus. Thiersch's c., one of the small channels in newly formed repair tissue for the circulation of nutritive fluids. c. tympan'icus [B N A], the tympanic canal. See canal.

canalis (kan-a'lis) [L. for "canal"]. A canal. c. adducto'rius [B N A], Hunter's canal. c. alveola'res [B N A], the posterior dental canals. c. auricula'ris. Same as auricular canal (2). C. auricula ris. Same as auricular canal (2). See canal. C. basipharyn'geus [B N A], basipharyngeal canal. C. carot'icus [B N A], carotid canal. C. chor'dæ tym'pani. Same as iter canal. c. chor'dæ tym'pani. Same as iter chordæ posterius. c. condyloi'deus [B N A], posterior condyloid foramen. c. facia'lis [B N A] the aqueduct of Fallopius. c. femora'lis [B N A], the femoral canal. c. hyaloi'deus [B N A], the hyaloid canal. c. hypoglos'si [B N A], the hyaloid canal. c. hypoglos'si [B N A], the anterior condyloid foramen. c. incisi'vus [B N A], the incisive canal. c. infra-orbita'lis [B N A], the infra-orbital canal. c. inguina'lis, the inguinal canal. c. mandib'uli [B N A], the inferior dental canal. c. musculotuba'rius, the comparation of the comparatio bined canals for the eustachian tube and the tensor tympani muscle. c. nasolacrima'lis [BNA], lacrimal canal. c. nutric'ius, the nutrient canal of a bone. c. obturato'rius [B N A], the obturator canal. c. palati'nus [B N A], anterior and posterior palatine canal. c. pharyn'geus [B N A], the pterygopalatine canal. c. pterygoi'deus, the vidian canal. c. reu'niens, a membranous structure beginning at the ductus cochlearis and extending that he sacculi of the ear:

it is filled with endolymph. c. spina'lis [B N A], the spinal canal. c. spira'lis coch'less [B N A], the spiral canal.

canalization (kan"al-iz-a'shun). 1. The formation of canals, natural or morbid. 2. The surgical formation of holes or canals without tubes for wound drainage.

canavallin (kan-av-al'in). A globulin isolated from iack beans.

cancellated (kan'sel-a-ted). Having a lattice-like structure.

cancelli (kan-sel'e). Plural of cancellus.

cancellous (kan'sel-us) Of a reticular, spongy, or lattice-like structure used mainly of bony tissue. cancellus (kan-sel'us), pl. cancel'li [L. "a lattice"].

A malignant

A lattice-like bony structure.

cancer (kan'ser) [L. for "crab"]. A malignant tumor, made up chiefly of epithelial cells; carcinoma. See carcinoma. acinous c. See acinous carcinoma, under carcinoma. adenoid c., malignant tumor made up of or containing cylindric tubes lined with epithelium. **c. & deux** [Fr. "cancer in two"], cancer attacking simultaneously or consecutively two persons who live together. alveolar c., colloma. c. aquat'icus, cancrum oris, or gangrenous stomatitis. Aran's green c., malignant lymphoma of the orbit, with severe leukemia and a tendency to form metastases by the lymphatics. areolar c. Same as colloid carcinoma. See carcinoma. c. atroph'icans, scirrhous cancer which is surrounded by sclerosed and atrophied tissue. black c. Same as melanotic c. branchiogenous c., a cancer originating in the superior cervical triangle, and supposed to be derived from a relic of an embryonal branchial cleft. Butter's c., cancer of the hepatic flexure of the colon. buyo cheek c., cancer of the cheek seen in natives of the Philippine Islands from chewing buyo leaf or betel Cf. betel cellular c. Same as encephaloid c. cerebriform c. Same as encephaloid c. chimney-sweeps' C., soot-wart; cancer of the scrotum due to sootpoisoning; soot-cancer. chondroid c., scirrhous cancer with a cartilage-like texture. claypipe c., epithelioma of the lip due to irritation caused by a pipe-stem. colloid c. See colloma. conjugal c., cancer attacking nearly simultaneously a man and his wife contact contact with a previously existing cancer.

corset c., cancer en cuirasse. cystic c., carcinoma that has undergone cystic degeneration. dendritic c. Same as papilloma. der-moid c., a cancer containing nests and pegs of flat epithelium with colloid masses. duct c., cancer of the epithelium of the mammary ducts. dye workers' c., cancer of the urinary bladder frequently observed among workers in anilin dyes. encephaloid c., a soft cancer of brain-like consistence; encephaloma. c. en cuirasse, a cancer about the skin of the thorax. endothelial c., endothelioma. epidermal c., epithelioma. epithelial c. See epithelioma. fungous c. Same as fungus hamatodes. glandular c., adenocarcinoma and adenosarcoma green c., chloroma. hard c., one containing an excess of fibrous tissue. hematoid c., fungus hæmatodes. jacket c., cancer en cuirasse. kangri c., epithelioma in the thigh or abdomen affecting natives of Kashmir, and attributed to irritation from the kangri or fire basket. Lobstein's c., retroperitoneal sarcoma. medullary c., one made up largely of soft, marrow-like cellular material. melanotic c., a malignant growth of a black or deeply pigmented color. paraffin c., a malignant growth occurring in those who work in paraffin. pitch-workers' c., epithelioma of the face, neck, and scrotum seen in those who work in pitch. retrograde c., a dormant atrophied malignant growth. rodent c. Same as ulcer, rodent. scirrhous c.. a hard or fibroid malignant growth; scirrhus.

221

smokers' c., epithelioma of the lip due to irritation by the pipe-stem; also cancer of the throat, ascribed to excessive smoking. soft c., an encephaloid or colloid cancer. solanoid c., one which resembles a potato in its texture. soot-c. Same as chimney-sweeps' c. spider c. See nævus araneosus. tar c., carcinoma caused by inflammatory irritation of fumes of tar. tubular c., a form of mammary cancer believed to arise from the mammary ducts. villous duct c., cancer developed from a cyst with villous malignant growth. water-c., noma. withering c., scirrhous carcinoma.

canceration (kan-ser-a'shun). The assumption of malignant qualities.

cancerigenic (kan-ser-ij-en'ik). Causing or producing cancer.

cancerin (kan'ser-in). A white, crystalline ptomain, C_aH₃NO₃, from the urine in carcinoma.

cancerism (kan'ser-izm). The cancerous diathesis; a tendency to the development of malignant disease.

canceroderm (kan'ser-o-derm). Numerous angiomata of large size seen on the chest and abdomen of certain patients and thought to be connected with malignant growths. Called also de Morgan spots.

canceromyces (kan"ser-o-mi'sēz). An organism which is considered by Neisser as the causal agent in cancer?

cancerophobia (kan"ser-o-fo'be-ah). Cancerphobia.

cancerous (kan'ser-us). Of the nature of or pertaining to cancer.

cancerphobia (kan-ser-fo'be-ah). A morbid fear of cancer.

canchalagua (kan-shah-lah'gwah). The Erythra'a chilen'sis, a South American tonic herb: used like gentian.

Cancriamoba macroglossa (kang-kri-am-e'bah mak-ro-glos'ah). A form of ameba said to act as a parasite in carcinoma.

cancriform (kan'krif-orm). Resembling a cancer. cancroid (kan'kroid) [cancer + Gr. eldos form].

1. Resembling cancer. 2. A skin cancer of a moderate degree of malignity.

cancroin (kan'kro-in). A substance obtained from cancer, a supposed alexin against cancer poison: used hypodermically for cancer (Adamkiewicz).

cancrology (kang-krol'o-je) [cancer + Gr. λόγος treatise]. The science and study of cancer.

cancrum (kan'krum) [L]. Canker. c. na'si, gangrenous rhinitis of children. c. o'ris, noma of the mouth, or gangrenous stomatitis, a disease of childhood marked by the development of foul ulcers in the mucous membrane of the cheeks and lips. The disease is attended with great exhaustion, and death frequently ensues. c. puden'di, ulceration of the pudenda.

candol (kan'dol). A dry malt extract.

Canella (kan-el'ah) [L.]. I. A genus of trees; order Canella'ceæ. 2. The bark of C. al'ba, a West Indian tree; it is a tonic, stimulant, and stomachic. Dose, 10-40 gr. (0.66-2.5 gm.). Jamaica c., the bark of Cinnamoden'dron cortico'sum and C. macran'thum, which is often substituted for canella bark.

caneotica (ka-ne-ot'ik-ah). An endemic ulcer (oriental sore) of Canea in the Island of Crete.

canescent (kan-es'ent) [L. ca'nus gray]. Grayish. cane-sugar (kān-shug'ar). Ordinary table sugar; a disaccharid, sucrose, or saccharose, C₁₂H₂₂O₁₁, derived from the juice of the sugar-cane and yielding

dextrose and levulose on inversion.

canine (ka'nin) [L. cani'nus]. 1. Of, pertaining to, or like that which belongs to a dog. 2. The single cuspid tooth between the lateral incisor and the premolar tooth.

caninform (ka-nin'if-orm). Resembling a canine tooth.

canities (kan-ish'e-ēz) [L.]. Grayness or whiteness of the hair.

canker (kang'ker). I. Ulceration, chiefly of the mouth and lips. 2. Disease of the keratogenous membrane in horses, beginning at the frog and extending to the sole and wall, marked by a loss of function of the horn-secreting cells and the discharge of a serous exudate in place of normal horn.

cannabene (kan'ab-ēn). A hydrocarbon, $C_{18}H_{20}$: with its hydrid, $C_{18}H_{22}$, it forms the volatile oil of hemp; poisonous.

cannabin (kan'ab-in). (1) A resin; also (2) a hypnotic alkaloid and (3) a glucosid from cannabis. Dose of the alkaloid, 1-4 gr. (0.064-0.26 gm.). c. tannate, a hypnotic compound made by precipitating the glucosid cannabin with tannic acid. Dose, 2-25 gr. (0.13-1.6 gm.).

cannabindon (kan-ab-in'don). A red, syrupy liquid from Cannabis indica: hypnotic. Dose, $\frac{1}{3}-1\frac{1}{2}$ min (0.02-0 og c c.).

cannabinol (kan-ab'in-ol). An oil, $C_{21}H_{24}O_{2}$, derivable from Cannabis indica; said to be its most active principle.

cannabinone (kan-ab'in-ōn). A poisonous alkaloidal resin from hemp used as a hypnotic. Dose, 1-4 gr. (0.064-0 26 gm.).

Cannabis (kan'ab-is) [L.; Gr. κάνναβις]. Hemp; a genus of urticaceous plants; also the U. S. P. name for C. sativa. C. in'dica, a variety of common hemp preferred for medicinal uses. C. sati'va, the species which produces the ordinary hemp. The flowering tops of the pistillate plants contain a resin (cannabin) and a volatile oil. and are narcotic, anodyne, and antispasmodic in large doses, producing intoxication with mental exaltation. It is used in chronic spasmodic affections, such as asthma, whooping-cough, paralysis agitans, migraine, etc. Dose of extract (U. S. P.), 1-5 mm. (0.065-0 3 c.c.); of fluidextract (U. S. P.), 1-5 mm. (0.065-0 3 c.c.); of tincture, 20 min.-1 fldf (1 25 4 c.c.). See hemp.

cannabism (kan'ab-izm). A morbid state produced by misuse of cannabis.

cannabitetanin (kan"ab-it-et'an-in). A powerfully convulsant alkaloid from cannabis.

cannon (kan'un). See canon.

Cannon's ring (kan'unz) [Walter Bradford Cannon Boston physiologist, born 1871]. See under ring.

cannula (kan'u-lah) [L. dim. of can'na "reed"]. A tube for insertion into the body, its caliber being usually occupied by a trocar during the act of insertion. Bellocq's c., a curved cannula for plugging the posterior nares for nose-bleed. Lindermann's c., a form of needle cannula for use with a syringe in the transfusion of unmodified blood. perfusion c., a double tube for running a continuous flow of liquid into and out of a cavity of the body. Soresi c., a double-cylindered instrument for vein-to-vein or artery-to-vein anastomosis. Trendelenburg's c., a cannula covered with a dilatable rubber bag: used for closing the trachea to prevent the entrance of blood after tracheotomy. washout c., a cannula attached to a manometer and inserted into a blood-vessel so that the connection between the artery and the manometer can be washed out in long observations.

canon (kan'un). The metatarsal and metacarpal region of horses and cattle. c. bone, the metacarpal or metatarsal bone of horses and cattle.

can-poisoning (kan). Poisoning from the eating of canned or tinned foods.

Canquoin's paste (kahn-kwahnz') [Alexander Canquoin, French physician, 1795-1881]. See under paste.

Cantani's diet, serum, treatment (kahn-tah'-nēz) [Arnoldo Cantani, Italian physician, 1837-1893]. See diet, serum, treatment.

canthal (kan'thal). Pertaining to a canthus.

canthariasis (kan-thar-i'as-is) [Gr κάνθαρος beetle]. The presence of larvæ of beetles in the body.

cantharidal (kan-tharid-al). Containing or pertaining to cantharides.

cantharidate (kan-thar'id-āt). Any salt of cantharidic acid.

cantharides (kan-thar'id-ēz) [L. pl. of can'tharis]. Spanish flies. See Cantharis.

cantharidin (kan-thar'id-in). The most important active principle, the lactone of cantharadinic acid, C₁₀H₁₂O₄. It occurs in crystalline form, has a bitter taste, and produces blistering of the skin.

cantharidism (kan-thar'id-izm). A diseased condition induced by the misuse of cantharides.

Cantharis (kan'thar-is), pl. canthar'ides [L.; Gr. κάνθαροs beetle]. 1. A genus of beetles 2. The blistering or Spanish fly, Can'tharis vesicato'ria. Cantharides are applied externally as powerful rubefacient and blistering agents; in moderate internal doses they are diuretic and stimulant to the urinary and reproductive organs: they are highly poisonous in large doses. Dose of the tincture, 1-20 min (0 060-1 333 c c)

canthectomy (kan-thek'to-me) [Gr. κανθός canthus + ἐκτομή excision]. Surgical removal of a canthus

canthitis (kan-thi'tis). Inflammation of a canthus or of the canthi.

cantholysis (kan-thol'is-is) [Gr. κανθός canthus + λύσις a loosening]. Surgical division of the canthus of an eye or of a canthal ligament.

canthoplasty (kan'tho-plas-te) [Gr. κανθός canthus + πλάσσειν to form]. Plastic surgery of the palpebral fissure, especially the section of a canthus to lengthen said fissure; also the surgical restoration of a defective canthus (Ammon) **provisional** c., canthotomy when performed as a temporary expedient or for the relief of blepharospasm.

canthoridyl (kan-tho'rid-il). Aurocantan.

canthorrhaphy (kan-thor'af-e) [Gr. $\kappa \alpha \nu \theta \delta s$ canthus $+ \dot{\rho} \alpha \varphi \dot{\eta}$ suture]. The suturation of the palpebral fissure at either canthus.

canthotomy (kan-thot'o-me) [canthus + Gr. τέμνειν to cut] Surgical division of the outer canthus.

canthus (kan'thus), pl. can'thi [L.; Gr. κανθός].

The angle at either end of the slit between the eyelids the canthi are distinguished as an outer or temporal and inner or nasal.

cantus galli (kan'tus gal'i) [L. "cock-crowing"]. Laryngismus stridulus.

canula (kan'u-lah). See cannula.

canutillo (kan-u-tel'yo) [Sp.]. Ephedra antisyphilitica.

CaO. Calcium oxid.

CaOC. Cathodal opening contraction.

Ca(OH)₂. Calcium hydroxid.

caoutchouc (koo'chook) [Fr]. Gum-elastic or india-rubber; the concrete juice of various trees and plants, such as Sipho'nia elas'tica, etc. It is a hydrocarbon, C₂₀H₃₂, soluble in chloroform, ether, and carbon disulphid.

Cap. Abbreviation for L. ca' piat, let him take.

cap (kap). See capping. bishop's c., duodenal c., pilleus ventriculi. enamel c., the enamel organ after it covers the top of the growing tooth papilla. pyloric c. See pilleus ventriculi.

capacity (kap-as'it-e) [L. capa'citas, from ca'pere to take]. I. Power or ability to hold, retain, or contain; ability to absorb; cubic extent. 2. Mental ability to receive, accomplish, endure, or understand. heat c., thermal capacity. respiratory c. 1. The capability of the blood to absorb oxygen from the lungs and carbon dioxid from the

tissues. 2. The space within the lungs for the normal reception of air. thermal c., the amount of heat absorbed by a body in being raised from 15° to 16° C. in temperature. vital c., the number of cubic inches of air a person can forcibly expire after a full inspiration.

capelet, capulet (kap'el-et, kap'u-let) [L. capelle'tum]. A swelling on the point of a horse's hock
or on his elbow.

capeline (kap'e-lin) [Fr.]. A cap-shaped bandage for the head or for the stump of an amputated limb.

capiat (ka'pe-at) [L. "let it take"]. An instrument for removing foreign bodies from a cavity, as of the uterus.

capillaire (kap-il-air') [Fr.; L. capilla'ris]. The maidenhair fern, Adian'tum capil'lus-ven'eris: also a demulcent bechic syrup originally prepared from that fern.

capillarectasia (kap"il-ar-ek-ta'se-ah) [L. capilla'ria capillaries + Gr ἔκτασις distention]. Dilatation of capillaries.

capillariomotor (kap-il-a"re-o-mo'tor). Pertaining to the functional activity of the capillaries.

capillaritis (kap-il-ar-i'tis). Inflammation of the capillaries.

capillaroscopy (kap-il-ar-os'ko-pe) [capillaries + Gr $\sigma \kappa \sigma \pi \epsilon \hat{\imath} \nu$ to examine] Diagnostic examination of the capillaries of the skin with the microscope.

capillary (kap'il-a-re) [L. capilla'ris hair-like].

1. Pertaining to or resembling a hair.

2. Any one of the minute vessels which connect the arterioles and the venules, forming a network in nearly all parts of the body. The walls of the capillaries consist of a single layer of epithelial cells. Through these walls the nutriment and oxygen of the blood pass to the tissues and the tissues discharge their waste into the blood lymph-c's, the most minute branchlets of the lymph-vessels. Meigs's c., capillaries in the heart muscle.

capilliculture (kap-il'e-kul-tūr) [L capil'lus hair + cultu'ra culture] Treatment for the cure of baldness or the preservation of the hair.

capillin (kap-il'in). A preparation of tannin, chloral, and resorcinol. used for seborrhea.

capillitium (kap-il-ish'e-um) [L. "head of hair"] The interlacing, filamentous structure which, with the spores, fills the spore-case of myxomycetes

capillomotor (kap-il-o-mo'tor). Capillariomotor.
capillus (kap-il'us), pl. capil'li [L. "hair"] [B N A].
A hair.

capistration (kap-is-tra'shun). Phimosis.

capital (kap'it-al). Of the highest importance; involving danger to life, as, a capital operation.

capitate (kap'it-āt) [L. cap'ut head]. Head shaped.
 capitatum (kap-it-a'tum). The os magnum of the carpus, the os capitatum

capitellum (kap-it-el'um) [L. dim. of ca'put head]. An eminence on the distal end of the humerus, articulating with the radius.

capitonnage (kap-it-o-nāzh'). The operation of closing a cyst cavity by applying sutures in such a way as to cause approximation of the opposing surfaces of the cavity.

capitulum (kap-it'u-lum) [dim. of ca'put head]. A small head, or small, bony, articular eminence. c. cos'tse [B N A], the head of a rib. c. fib'ulse [B N A], the head of the fibula. c. hu'meri [B N A], the capitellum. c. mal'lei [B N A], the head of the malleus. c. mandib'ulse [B N A], the head of the mandible. c. ra'dii [B N A], the head of the radius. c. sta'pedis [B N A], the head of the stapes. c. ul'nse [B N A], the head of the stapes.

Ca₃(PO₄)₂. Tricalcic phosphate.

capotement (kah-pōt-maw') [Fr.]. A splashing sound heard in the dilated stomach. **cappa** (kap'ah). A superficial layer of gray matter of the quadrigeminal body, situated just beneath the expansion of the optic tracts.

capping (kap'ing). 1. The operation of covering the exposed pulp of a tooth with a cap containing an antiseptic paste or with cement. 2. The substance or structure placed over an exposed pulp.

caprate (kap'rāt). Any salt of capric acid.

caprenalin (kap-re-nal'in) A proprietary preparation from suprarenal capsules: used as a hemostatic, astringent, and cardiac stimulant.

capreolary, capreolate (kap're-o-la-re, kap're-o-lat). Tendril-shaped, like the spermatic vessels.

capric acid (kap'rik). See under acid.

capriloquism (kap-ril'o-kwizm) [L. ca'per goat + lo'qui to speak]. Egophony.

caprin (kap'rin). 1. Any one of the caprates of glyceryl, especially the glyceryl tricaprate, or tricaprin, C₃H₅[CH₂(CH₂)₈COO]₅, from ordinary butter 2 Glycoleucin.

caprizant (kap'ri-zant) [L. cap'rizans, from ca'per a goat]. Leaping or bounding like a goat. See pulse.

caproate (kap'ro-āt). Any salt of caproic acid.

caproic acid (kap-ro'ik). See under acid

caproin (kap-ro'in). Any caproate of glyceryl, especially the tricaproate, $C_1H_5(O_0H_{13}O_2)_{3}$ called also tricaproin: it occurs in butter.

caprokol (kap'ro-kol). A proprietary name for hexylresorcinol

caprone (kap'rōn). A volatile oil, $C_{11}H_{22}O$, derivable from butter.

caproyl (kap-ro'il). The hydrocarbon radical, C_6 - H_{13} , hexyl.

caproylamin (kap"ro-il-am'in). A poisonous ptomain, CH₃(CH₂)₆NH₂, or hexylamin, from spoiled yeast and rancid cod-liver oil.

caprylate (kap'ril-āt). Any salt of caprylic acid.

caprylic acid (kap-rıl'ık). See acid.

caprylin (kap'ril-in). Any caprylate of glyceryl, especially the tricaprylate: called also *tricaprylin*, $C_3H_5(C_7H_{15}CO_2)_3$.

capsaicin (kap-sa'is-in). A crystalline principle, C₁₈H₂₇NO₃, from capsicum: it is a strong irritant

capsicin (kap'sis-in). 1. An acrid resin found in capsicum berries Dose, ½-½ gr. (0.008-0.016 gm.).
2 The camphor of capsicum. 3. A volatile alkaloid of capsicum.

capsicol (kap'sik-ol). The volatile oil of capsicum. Capsicum (kap'sik-um) [L.]. A genus of solanaceous plants of various species; Cayenne or red pepper. The dried fruit of C. frutes'cens is a rubefacient and local stimulant, used in neuralgia and rheumatism, as a gargle in tonsillitis and diphtheria, and internally in delirium tremens, dyspepsia, and malaria. Dose, 5-10 gr. (0.3-0.65 gm.); of the fluidextract, 1-2 min. (0.06-0.13 c.c.); of the olcoresm (U. S. P.), 1 min. (0.065 c.); of the tincture (U. S. P.), 1 dr. (4 c.c.).

capsitis (kap-si'tis). Inflammation of the capsule of the crystalline lens.

capsolin (kap'so-lin). A counterirritant preparation of capsicum, camphor, oil of turpentine, cajuput, and croton oil.

capsotomy (kap-sot'o-me). Same as capsulotomy. **Capsul**. Abbreviation for L. cap'sula, capsule.

capsula. (kap'su-lah) [L.]. The internal capsule.
c. adipo'sa [B N A], the adipose capsule. c.
articula'ris [B N A], a joint capsule. c. exter'na [B N A], external capsule. c. fibro'sa hep'atis [B N A], Glisson's capsule. c. glomer'na [B N A], Bowman's capsule. c. inter'na [B N A], internal capsule. c. len'tis [B N A], crystalline capsule. c. nu'clei denta'ti [B N A], the layer of gray matter surrounding the white substance of the dentate nucleus.

capsular (kap'su-lar). Pertaining to a capsule. capsulation (kap-su-la'shun). The inclosure of a medicine in a capsule.

capsule (kap'sūl) [L. cap'sula a little box]. 1. Any capsular ligament. 2. A soluble case for inclosing a dose of medicine. 3. Any fibrous or membranous a dose of medicine. 3. Any fibrous or membranous envelop, as of the spleen or kidney. adherent c., the condition in which the capsule of a tumor is not readily separated from the tumor. adipose c., the sheath of fat which surrounds and supports the kidney; the perirenal fat anterior c., that part of the capsule of the lens which covers its anterior surface. atrabiliary c's, the suprarenal bodies.
auditory c., the cartilaginous capsule of the embryo which is developed into the external ear. Bonnet's c., the posterior part of the sheath of the eyeball. Bowman's c., the globular dilatation which forms the beginning of a uriniferous tubule within the kidney. c's of the brain, layers of white matter in the cerebrum. The internal c consists chiefly of fibers extending up from the crura cerebri and lying internal to the lenticular nucleus; the external c. lies between the lenticular nucleus and the claustrum. cartilaginous c., any cavity in the matrix of a cartilage which contains cartilage-cells. talline c., the capsule of the eye-lens. devorative c., a soluble capsule for containing a single dose of medicine. external c., the layer of white fibers forming the outer border of the corpus striatum. Gerota's c., the perirenal fascia. Glisson's c., the sheath of connective tissue which envelops the hepatic artery and duct and the portal vein. Hearson's c., a thermostatic chamber for regulating the temperature in incubators internal c., a tract of nerve-fibers passing through the corpus striatum. joint c., a fibrous sac, lined with synovial membrane, inclosing a joint. c. of the lens, a transparent sac which incloses the eye lens. malpighian c. Same as Bowman's c. müllerian c. Same as Bowman's nasal c., a cartilaginous embryonic pouch whence the nose is developed ocular c., Tenon's capsule. optic c., the embryonic structure whence the sclera is developed. perinephric c., the sac or sheath of fascia investing the kidney. periotic c., the tissue surrounding the auditory sacs in the embryo. **poppy c.**, the dried, fully grown, unripe fruit of *Papaver somniferum*. **posterior c.**, that part of the lens-capsule which covers its posterior suprarenal c. See suprarenal gland, under gland synovial c., an articular synovial membrane Tenon's c., the fibrous sheath that envelops either eyeball and forms its socket.

capsulectomy (kap-su-lek'to-me) [L. cap'sula, cap-sule + Gr. ἐκτομή excision]. Excision of a cap-sule, especially a joint capsule.

capsulitis (kap-su-li'tis). The inflammation of a capsule, as that of the lens hepatic c., perihepatitis.
 c. of the labyrinth, otosclerosis.

capsulolenticular (kap"su-lo-len-tik'u-lar). Pertaining to the lens of the eye and its capsule.

capsulorrhaphy (kap-su-lor'af-e) [capsule + Suture of a capsule, especially a joint capsule.

capsulotome (kap-su'lo-tōm). A cutting-instrument used for incising the capsule of the lens.

capsulotomy (kap-su-lot'o-me) [capsule + Gr. τέμνειν to cut]. The slitting of a capsule, especially of that of the eye, as in cataract operation.

captation (kap-ta'shun) [L. capta'tio seizure]. The first stage of hypnotism.

captivitosis (kap-tiv-it-o'sis). A peculiar psychic condition observed in prisoners of war.

captol (kap'tol) [L. cap'ut head + o'leum oil]. Tannochloral; a brown, hygroscopic powder prepared from tannic acid and chloral. It is an antiseptic and astringent: used in scalp diseases.

Capuron's points (kap'u-ronz). See under point. caput (ka'put), pl. cap'ita [L.]. Any head or head-like structure. c. co'li, the cecum, or head of

the colon. c. cor'nu, the expanded continuation of the dorsal horn of gray matter in the spinal cord. c. fem'oris [B N A], the head of the femur. c. gallinag'inis [L. for "woodcock's head"], the verumontanum. c. gelatino'sum. Same as c. cornu. c. hu'meri [B N A], the head of the humerus. c. incunea'tum, impaction of the fetal head during labor. c. medu'sse, a peculiar appearance due to dilatation from stasis of the cutaneous veins around the navel seen mainly in the newborn and in patients suffering with cirrhosis of the liver. c. nu'clei cauda'ti [B N A], the anterior end of the caudate nucleus. c. ob'stipum, torticollis, or wry-neck. c. proge'neum, forward projection of the jaw. c. quadra'tum, the flattened, triangular head of rickets. c. succeda'neum, a swelling formed on the presenting part of the fetus during labor. c. ta'li [B N A], the anterior part of the astragalus.

caraate (kah-rah-aht'a). Mal de los pintos.

Carabelli tubercle (kah-rah-bel'e) [Georg C. Carabelli, dentist in Vienna, 1787-1842]. See under tubercle.

caragheen (kar-ah-ghēn'). See Chondrus.

caramel (kar'ah-mel). Burnt or scorched sugar; a dark brown mass of characteristic odor and taste produced from sugar by the loss of water when the sugar is heated to about 200° C. It is used as a coloring and flavoring agent in pharmacy and in confections.

caramelization (kar-am-el-iz-a'shun). The roasting of sugars or starches so that some of their carbohydrate characteristics are lost.

caranna (kar-an'ah). A resin from various trees of tropical America: now little used in medicine.

Carapa guianensis (kar'a-pah gwe-an-en'sis). A meliaceous tree of tropical America: its bark is an antispasmodic febrifuge its seeds afford a fixed oil, considered to be an insecticide.

carapato disease (kar-ah-pah'to). See under disease.

carapatos (kar-ap-at'os). Ornithodorus moubata. caraway (kar'ah-wā). The umbelliferous plant Ca'rum car'vi; also its fruit or seed, which is aromatic, stimulant, and carminative. c. oil, the volatile oil of the fruit of caraway. Dose, 1-10 min. (0.06-0.65 c.c.). c. water, a mild carminative preparation of caraway oil. Dose, 1 dr. (4 c.c.).

carbamate (kar'bam-āt). Any salt of carbamic acid.

carbamid (kar-bam'id). Urea.

carbamino carboxylic acid. See carbamino reaction, under reaction.

carbasus (kar'bas-us) [L.; Gr. κάρβασα cotton]. 1. An old name for lint, charpie, or cotton. 2. Canvas or surgical gauze. c. carbola'ta, carbolized gauze. C. iodoforma'ta, iodoform gauze.

carbasid, carbaside (kar'baz-īd). A urea derivative, carbodiazid, CO(N₃)₂, in which both the amid groups of urea have been replaced by hydrazin residues.

carbazotate (kar-baz'o-tāt). Any salt of picric acid: a picrate.

carbenzol (kar-ben'zol). A distillate from mineral oils, diphenylen-imid, (C₆H₄)₂NH. used in parasitic skin eruptions.

carbenzym (kar-ben'zīm). A preparation of vegetable charcoal and trypsin, used for its disintegrating action on dead tissue in tuberculous fistulæ and joints; also in gastro-intestinal fermen-

carbid, carbide (kar'bid). A compound of carbon with an element or radical. metallic c., a compound of carbon with a metal.

carbinol (kar'bin-ol). 1. Methyl alcohol. 2. Any aromatic or fatty alcohol formed by substituting one, two. or three hydrocarbon groups for hydrogen

in the methyl radical. dimethyl c., isopropyl alcohol.

carbo (kar'bo) [L. for "charcoal"]. Charcoal. c. anima'lis, a variety prepared from bones and other animal matter: a decolorizing agent. c. anima'lis purifica'tus, purified animal charcoal. c. lig'ni (U. S. P), wood charcoal: deodorant, absorbent, and disinfectant. Dose, 1-2 dr. (4-8 gm.).

carbocyclic (kar-bo-sik'lik). See closed chain, under chain.

carbodiimid (kar-bo-di-im'id). NH · C : NH, a derivative of urea.

carbohemia, carbohæmia (kar-bo-he'me-ah)
[carbon dioxid + Gr. alua blood]. Imperfect
oxidation of the blood.

carbohemoglobin (kar''bo-hem-o-glo'bin). Hemoglobin compounded with carbon dioxid.

carbohydrase (kar-bo-hi'drās). An enzyme which acts on carbohydrate.

carbohydrate (kar-bo-hi'drāt). An aldehyd or ketone derivative of a polyhydric alcohol, particularly of the penta- and hexa-hydric alcohols. They are so named because the hydrogen and oxygen are usually in the proportion to form water, (CH₂O)n. The most important carbohydrates are the starches, sugars, celluloses, and gums. They are classified into mono-, di-, tri-, and polysaccharids.

carbohydraturia (kar"bo-hi"dra-tu're-ah). Excess of carbohydrates in the urine.

carbolate (kar'bo-lāt) 1. Any salt of carbolic acid. 2. To charge with carbolic acid.

carbolfuchsin (kar-bol-fook'sin). A histologic staining-fluid made by dissolving I part of fuchsin in 10 parts of alcohol, and adding 90 parts of 5 per cent. aqueous solution of carbolic acid.

carbolic acid (kar-bol'ik). See acid.

carbolism (kar'bol-izm). Carbolic-acid poisoning.
 carbolize (kar'bol-iz). To treat with carbolic acid.
 carbollysoform (kar-bol-li'so-form). A 3 per cent.
 solution of phenol in lysoform

carboluria (kar-bo-lu're-ah) [carbolic + Gr. οὖρον urine]. The presence of carbolic acid in the urine.

carbolxylene (kar-bol-zi'lēn). A mixture of 1 part of carbolic acid and 3 parts of xylene used for clearing microscopic sections.

carbometer (kar-bom'et-er). An instrument used in determining the proportion of carbon dioxid present.

carbometry (kar-bom'et-re). Carbonometry.

carbon (kar'bon) [L. car'bo, carbo'nium]. A nonmetallic tetrad element, found nearly pure in the diamond, and approximately pure in charcoal, graphite, and anthracite symbol, C; atomic weight, 12. C. dioxid, CO2, carbonic acid gas; it is formed in the tissues by the oxidation of carbon and is excreted by the lungs. CO2 and the carbonates assist in maintaining the neutrality of the tissues and fluids of the body. When breathed nearly pure it causes death, either by a kind of drowning, or perhaps by the poisonous effects of the carbon monoxid which may be present. The gas has been used in whooping-cough and dysentery by injection into the rectum. In the form of carbon dioxid snow (which see under snow) it is used in treating skin diseases.. c. disulphid, a poisonous liquid, CS₂, a counterirritant and local anesthetic: valuable as a solvent. Dose, \(\frac{1}{2}\)-1 min. (0.033-0.066 c.c.). **c. monoxid**, a colorless and very poisonous gas, CO, formed by burning carbon with a scanty supply of oxygen. It is of great inportance as a deoxidizer in metallurgy and the industrial arts. c. oxysulphid, a colorless gas, COS, uniting with air to form an explosive mixture. c. tetrachlorid, a colorless, oily liquid, CCl4: used as an anesthetic and also as an anthelmintic in hookworm infection. Dose, 30-40 min. (2-3

c.c.) for adult; 2 min. (0.13 c.c.) for each year of age in children. **c. trichlorid**, a white solid, hexachlorethan, C_2Cl_6 : a stimulant and local anesthetic.

carbonate (kar'bon-āt). Any salt of carbonic acid.
 carbonemia (kar-bon-e'me-ah) [carbon + Gr. alμa blood]. The presence of carbon dioxid in the blood.

carboneol (kar-bo'ne-ol). A black liquid obtained by dissolving coal-tar in carbon tetrachlorid: used in skin diseases

carbonic acid (kar-bon'ik). See acid.

carbonize (kar'bon-īz). To char, or convert into charcoal.

carbonol (kar'bo-nol). Λ proprietary antiseptic and deodorant.

carbonometer (kar bo-nom'et-er). An apparatus for performing carbonometry.

carbonometry (kar-bon-om'et-re) [carbon + Gr. μέτρον measure] Measurement of the amount of carbon dioxid exhaled with the breath.

carbonuria (kar-bo-nu're-ah) [carbon + Gr. οὖρον urine]. The presence of carbon dioxid or other carbon compounds in the urine. dysoxidative
 c., pathologic increase of carbon compounds in the urine due to deficient oxidation.

carbonyl (kar'bo-nil) [L. car'bo coal + Gr. δλη matter] The hypothetic organic radical C.O. c. chlorid. See phosgene.

carborundum (kar-bo-run'dum). A compound of carbon and silicon, silicon carbid, SiC, a substance which ranks next to the diamond in hardness

carbosant (kar'bo-sant) The carbonic acid ester of santalol, C₁₅H₂₃ O CO O C₁₅H₂₃ used for the internal treatment of gonorrhea

carbosapol (kar-bo-sa'pol). A carbolated soap; a strong disinfectant made of phenol, 50 parts; yellow soda soap and soft potash soap, each, 25 parts

carbostyril (kar-bo-stir'il). Same as oxyquinolin.
carboterpin (kar-bo-ter'pin). A solution of coaltar in terpinol used in psoriasis.

Carboxydomonas (kar-box"e-dom'o-nas). A genus of bacterial organisms capable of growing in the absence of organic matter. They obtain their energy from the oxidation of carbon monoxid to carbon dioxid.

carboxyhemoglobin (kar-boks"e-hem-o-glo'bin). A combination of carbon monoxid and hemoglobin found in the blood after poisoning by carbon monoxid. It cannot be replaced by oxygen, and therefore checks the oxidizing function of the red blood-corpuscles.

carboxyhemoglobinemia (kar-bok s"e-hem-o-globin-e'me ah) [carboxyhemoglobin + Gr. alμa blood]. A condition in which some of the oxygen of the hemoglobin of the red corpuscles is combined with carbon monoxid, carbon monoxid poisoning.

carboxyl (kar-bok'sil). The radical, or group, —COOH, occurring in nearly all organic acids.

carboxylase (kar-bok'il-ās). An enzyme that removes CO₂ from the carboxyl group of organic acids.

carbromal (kar-bro'mal). A white crystalline odorless powder, C(C₂H₆)₂Br.CONH.CONH₂, from diethylacetylurea or brom-diethylacetyl carbamid used as a sedative and hypnotic. Dose, 5-15 gr. (0.3-1.0 gm.). Called also adalin.

carbromalum (kar-bro-mal'um). The U. S. P. name for carbromal.

carbuncle (kar'bun;-kl) [L. carbun'culus little coal]. 1. An inflammation of the subcutaneous tissue, terminating in a slough and in suppuration, and accompanied by marked constitutional symptoms. The swelling is at first covered by a tight, reddened skin, which later becomes thin and perforated by a number of openings dis-

charging pus. This mass finally sloughs away, leaving an ulcerated excavation. 2. A whelk or

Diagram of a carbuncle (Warren).

lump on the face. **malignant c.**, malignant anthrax in man. See under anthrax.

carbuncular (kar-bung'ku-lar). Resembling or of the nature of a carbuncle.

carbunculosis (kar-bung-ku-lo'sis). A condition marked by the development of carbuncles.

carbylamin (kar-bil-am'in). See isocvanid.

Carcassonne's ligament (kar-kas-onz') [Bernard Gauderic Carcassonne, French surgeon, born 1728]. See under ligament.

carciag, carseag (kar'se-ag). A disease of sheep in the Balkan States caused by Babesia (Piroplasma) ous and transmitted by the tick Rhipicephalus

carcinelcosis (kar"sin-el-ko'sis) [Gr. καρκῖνος cancer + ἔλκωσις ulceration]. Malignant or cancerous ulceration.

carcinemia (kar-sin-e'me-ah) [carcinoma + Gr. alua blood] Cancerous cachexia See cachexia.

carcinogenesis (kar"sin-o-jen'es-is) [Gr. καρκῖνος cancer + γένεσις production]. The production of cancer.

carcinogenic (kar-sin-o-jen'ik). Producing cancercarcinoid (kar'sin-oid). A carcinoma having benign clinical symptoms.

carcinolysin (kar-sin-ol'is-in) [carcinoma + λύσις destruction]. A ferment derived from a Chinese variety of pine called "haisung." It is given subcutaneously or intramuscularly for cancer. Dose, 16 min. (τ c c) twice daily.

carcinolytic (kar''sin-o-lit'ik) [carcinoma + Gr. λυτικός destroying]. Destroying cancer cells.

carcinoma (kar-sin-o'mah), pl. carcino'mata [Gr. καρκίνωμα, from καρκίνος crab, cancer] A malignant tumor or cancer; a new-growth made up of epithelial cells tending to infiltrate and give rise to metastases. acinous c., carcinoma having an acinous structure, and including encephaloid and scirrhus. acute c., encephaloid, or soft cancer. See cancer. c. adenomato'sum, a cancer with a disposition to form gland-like acini. alveolar colloid carcinoma. basal-celled c., c. basocellula're, carcinoma developing from the cells of the deepest layer of the superficial epithelium and retaining the character of those cells. chronic c.. scirrhus or hard cancer. See scircolloid c., carcinoma in whi h cells have undergone colloid degeneration. Called also gelatiniform c. c. cuta'neum, epithelioma. cylindric c., carcinoma in which the cells are cylindric or nearly so. c. du'rum, scirrhous carcinoma. encephaloid c., cancer of a soft, brain-like structure, resembling scirrhous carcinoma, but having less connective tissue, larger alveoli, and more cells. epibulbar c., a carcinoma which starts at the edge of the cornea and spreads over the cornea and conjunctiva epidermoid c., carcinoma in which the cells tend to differentiate in the same way that the cells of the epidermis do, that is, they tend to form prickle cells and undergo cornification. epithelial c. See epithelioma. c. epithelia'le adenoi'des, carcinoma forming in epithelial surfaces, but made up of adenoid or gland-like forms. erectile C., an encephaloid containing many bloodvessels: called also hematoid c. c. ex ul'cere, carcinoma of the stomach developed from simple ulcor. C. Shro'sum scripture carcinoma estate. ulcer. c. fibro'sum, scirrhous carcinoma. gelatiniform c. See colloid c. c. gigantocel-

lula're, carcinoma containing many giant-cells. glandular c., carcinoma in which the cells are of the glandular or secreting type; adenocarcinoma. hair-matrix c., basal-celled carcinoma. hema-See erectile c. hyaline c., colloid cartoid c. cinoma lenticular c., c. lenticula're, scirrhous carcinoma of the skin with the formation of flattened papules and nodules which run together, forming fungoid masses. lipomatous c., car-cinoma containing much fat. c. mastitoi'des, a rapidly growing variety of breast cancer which, by setting up violent irritation, produces a roundcell infiltration resembling mastitis. Called also mastitis carcinosa. c. medulla're, medullary mastitis carcinosa. cancer. melantoic c., c. melano'des, encephaloid carcinoma which is blackened with melanin. c. mol'le, medullary cancer. c. mucip'arum, c. muco'sum, colloid carcinoma. c. myxomato'des, colloid cancer in which the stroma has undergone myxomatous degeneration. c. ni'grum, melanotic carcinoma. c. ossif'icans, osteoid c., carcinoma in which there is deposit of bone. periportal c., cancer of the liver, extending along and around the portal vessels. pultaceous c., encephaloid carcinoma whose alveoli have thick walls and a pulpy juice. c. sarcomato'des, carcinoma showing transformation toward sarcoma. **scirrhous c.**, carcinoma with a hard structure composed of connective-tissue alveoli filled with masses of cells which have no vessels or interstitial substance; called also *chronic c*, and *hard c*. **c. scroʻti**, cancer of the scrotum. **c. sim'plex**, carcinoma in which the relative proportion between the stroma and the cells is normal solanoid c., one having the consistence of raw potato. c. spongio'sum, medullary cancer. squamous c., carcinoma developed from squamous epithelium, and having cuboid cells tuberous c., c. tubero'sum, scirrhous carcinoma of the skin with the formation of nodular projections. c. villo'sum, malignant papilloma

carcinomatoid (kar-sin-om'at-oid). Resembling carcinoma.

carcinomatophobia (kar-sin-o"mat-o-fo'be-ah).

Morbid dread of becoming affected with carcinoma.

carcinomatosis (kar-sin-o-ma-to'sis). The condition of wide-spread dissemination of cancer throughout the body.

carcinomatous (kar-sin-om'at-us). Pertaining to or of the nature of cancer, malignant.

carcinomelcosis (kar"sin-o-mel-ko'sis) [Gr. καρκlμωμα cancer + ξλκωσις ulceration]. A malignant or cancerous ulceration.

carcinosarcoma (kar"sin-o-sar-ko'mah). A condition of combined carcinoma and sarcoma.

carcinosis (kar-sin-o'sis). 1. Wide-spread dissemination of cancer throughout the body; carcinomatosis. 2. A cancer or malignant tumor. miliary c., a form of carcinosis marked by the development of numerous nodules resembling miliary tubercles. c. plu'rs, secondary cancer of the pleura in which the membrane is studded with nodules

carcinous (kar'sin-us). Cancerous.

carcoma (kar-ko'mah) [Spanish for the wood dust formed under the bark of trees]. Dark reddish-brown, granular matter occurring in the feces in tropical countries.

cardamom (kar'dam-om) [L. cardamo'mum; Gr. καρδάμωμον]. The seeds of Eletta'ria cardamo'mum, a plant of tropical Asia; a warm aromatic and carminative: used in colic and as a stomach tonic. Dose of the infusion, r fl.oz. (30 c.c.); of tincture (U. S. P.) or compound tincture (U. S. P.), 1-2 fl.dr. (4-8 c c.); of aromatic powder, rogr. (0.6 gm.).

Cardarelli's sign or symptom (kar-dar-el'ēz)
[Antonio Cardarelli, Italian physician, died 1927].
See under sign.

Carden's amputation (kar'denz) [Henry Douglas Carden, English surgeon, died 1872]. See under ambutation.

cardia (kar'de-ah) [Gr. καρδία heart]. The cardiac or esophageal orifice of the stomach.

cardiac (kar'de-ak) [L. cardi'acus, from Gr. καρδιακόs]. 1. Pertaining to the heart. 2. A cordial, or restorative medicine.

cardiagra (kar-de-ag'rah) [Gr. καρδία heart + ἄγρα seizure]. Gout or pain of the heart.

cardialgia (kar-de-al'je-ah) [Gr καρδία heart + ἄλγος pain]. An uneasy or painful sensation in the stomach; heartburn.

cardialgic (kar-de-al'jik). Pertaining to or affected with cardialgia.

cardiameter (kar-de-am'et-er) [cardia + Gr. μέτρον measure]. An apparatus for determining the position of the cardia by measuring the distance between the former and the incisor teeth.

cardiamorphia (kar"de-am-or'fe-ah) [Gr. $\kappa \alpha \rho \delta i \alpha$ heart $+ \alpha$ not $+ \mu \rho \rho \varphi \dot{\eta}$ form]. Deformity or malformation of the heart.

cardianastrophe (kar"de-an-as'tro-fe) [Gr. καρδία heart + ἀναστροφή reversal of position] Congenital dislocation of the heart to the right side.

cardianesthesia (kar"de-an-es-the'ze-ah) [Gr. καρδία heart + άναισθησία anesthesia]. Absence of sensation in the heart.

cardianeuria (kar-de-an-u're-ah) [Gr. καρδία heart + ἄνευρος without nerves]. Deficiency of tone in the heart.

cardiant (kar'de-ant). A drug or agent stimulating the heart.

cardiasthenia (kar''de-as-the'ne-ah) [Gr. καρδία heart + ἀσθένεια weakness]. Neurasthenic weakness of the heart.

cardiataxia (kar"de-at-aks'e-ah) [Gr καρδία heart + ataxia]. Incoordination in the movements of the heart.

cardiazol (kar-di'az-ol). A synthetic product of the action of a hydrazoic acid on cystohexanon: used like camphor as a heart stimulant

cardicentesis (kar-de-sen-te'sis). Same as car-diocentesis.

cardiectasis (kar-de-ek'tas-is) [Gr. καρδία heart + ξκτασις dilatation]. Dilatation of the heart.

cardiectomized (kar-de-ek'to-mīzd). Having the heart removed.

cardiectomy (kar-de-ek'to-me) [Gr. καρδία heart + ἐκτομή excision] 1. Excision of the heart 2. Excision of the cardiac end of the stomach.

cardin (kar'din). An animal extract from ox's heart, prescribed in heart diseases

cardinal (kar'din-al) [L. cardina'lis, from car'do a hinge]. Of primary or preeminent importance.

cardio- (kar'de-o-) [Gr. καρδία heart]. A prefix indicating relation to the heart.

cardio-accelerator (kar"de-o-ak-sel'er-a-tor). Quickening the heart's action.

cardio-aortic (kar"de-o-a-or'tik). Pertaining to the heart and the aorta.

cardio-arterial (kar"de-o-ar-te're-al). Pertaining to the heart and the aorta.

cardiocele (kar'de-o-sēl) [Gr καρδία heart + κήλη tumor]. Protrusion of the heart through a fissure of the diaphragm or through a wound.

cardiocentesis (kar'de-o-sen-te'sis) [Gr. καρδία heart + κέντησις puncture] Surgical puncture of the heart, designed to relieve its enlargement or for the injection of a medicine.

cardiocirrhosis (kar"de-o-sir-o'sis) [Gr. καρδία heart + cirrhosis]. Cirrhosis of the liver associated with heart disease. See Hutinel's disease, under disease.

cardioclasis (kar-de-ok'las-is) [Gr. καρδία heart + κλάσις break]. Rupture of the heart.

cardiodilator (kar''de-o-di'la-tor). An instrument for dilating the cardia in cardiospasm or stricture,

- cardiodynamics (kar"de-o-di-nam'iks) [Gr. καρδία heart + dynamics]. The science of the motions and forces involved in the heart's action.
- cardiodynia (kar"de-o-din'c-ah) [Gr. καρδία heart + δδύνη pain]. Pain in the heart.
- cardiogenesis (kar"de-o-jen'es-is) [Gr. καρδία heart + -γεν to produce]. The development of the heart in the embryo.
- **cardiogenic** (kar''de-o-jen'ik) [Gr. $\kappa a \rho \delta la$ heart $+ \gamma \epsilon \nu \nu \hat{a} \nu$ to produce]. Originating in the heart itself.
- **cardiogram** (kar'de-o-gram) [(ir $\kappa\alpha\rho\delta l\alpha$ heart $+\gamma\rho\delta\mu\mu\alpha$ mark]. A tracing produced by means of the cardiograph. **esophageal c.**, a tracing of the contractions of the left auricle of the heart made by registering the pulsations of a column of air in a stomach-tube. **negative c.**, a cardiogram in which the curve falls below the abscissa instead of rising above it.
- cardiograph (kar'de-o-graf) [Gr. καρδία heart + γράφειν to write]. An instrument placed over the heart to indicate the force and form of the heart's movements.
- cardiographic (kar-de-o-graf'ik). Of, or relating to, cardiography.
- **cardiohepatic** (kar"de-o-he-pat'ik). Pertaining to the heart and the liver.
- cardio-inhibitory (kar"de-o-in-hib'it-o-re). Restraining or inhibiting the movements of the heart.
- cardiokinetic (kar"de-o-kin-et'ık). 1. Exciting the heart. 2. A remedy that excites the heart.
- cardiolith (kar'de-o-lith) [Gr $\kappa \alpha \rho \delta l \alpha$ heart $+ \lambda l \theta o s$ stone] A concretion or calculus within the heart.
- cardiology (kar-de-ol'o-je) [Gr. καρδία heart + λόγος treatise]. The study of the heart and its functions.
- cardiolysin (kar-de-ol'is-in). A cytotoxin which acts on heart muscle.
- **cardiolysis** (kar-de-ol'is-is) [Gr. καρδία heart + λύσις loosening] An operation of freeing the heart and its adherent pericardium from its adhesion to the sternal periosteum in adhesive mediastinopericarditis. It is done by resecting the ribs and the sternum over the pericardium. Called also thoracolysis pracorduaca.
- **cardiomalacia** (kar''de-o-mal-a'se-ah) [Gr. καρδία heart + μαλακία softness]. Morbid softening of the muscular substance of the heart.
- cardiomegaly (kar''de-o-meg'-al-e) [Gr. $\kappa \alpha \rho \delta l \alpha$ heart $+ \mu \epsilon \gamma \alpha s$ large]. Cardiac hypertrophy.
- cardiomelanosis (kar''de-o-mel-an-o'sis). Melanosis of the heart.
- **cardiometer** (kar-de-om'e-ter) [Gr. καρδία heart + μέτρον measure]. An instrument used in estimating the power of the heart's action.
- **cardiometry** (kar-de-om'et-re). The estimation of the force of the heart's action.
- cardiomotility (kar"de-o-mo-til"it-e). The movements of the heart; the motility of the heart.
- cardiomyoliposis (kar"de-o-mi-o-li-po'sis) [Gr. $\kappa a \rho \delta l a$ heart $+ \mu \hat{\nu} s$ muscle $+ \lambda l \pi o s$ fat]. Fatty degeneration of the heart muscle.
- cardionephric (kar"de-o-nef'rik). Pertaining to the heart and the kidney.
- cardioneural (kar"de-o-nu'ral). Pertaining to the heart and nervous system.
- cardioneurosis (kar"de-o-nu-ro'sis) [Gr. καρδία heart + neurosis]. A functional nervous disorder marked by attacks of deranged cardiac action, such as palpitation and irregularity, a feeling of suffocation, hot flushes, and a sensation of impending trouble; called also pseudo-angina pectoris and cardiac neurosthenia.
- cardiopaludism (kar"de-o-pal'u-dizm) [Gr. καρδία heart + paludism]. Heart disease due to malaria. It is marked by gallop-rhythm in the tricuspid area, intermittent heart action, dilatation of the right heart, and reduplication of the diastolic sound.

- cardiopath (kar'de-o-path). A person with heart disease.
- cardiopathia (kar-de-o-path'e-ah). Cardiopathy.
- cardiopathy (kar-de-op'ath-e) [Gr. καρδία heart + πάθος suffering]. Any disorder or disease of the heart. In addition to heart disease of inflammatory origin there are arteriosclerotic cardiopathy, due to arterial sclerosis; fatty cardiopathy, due to growth of fatty tissue, nephropathic cardiopathy, due to kidney disease, thyreotoxic cardiopathy, due to thyroid intoxication
- cardiopericarditis (kar"de-o-per"e-kar-di'tis) [carditis + pericarditis]. Inflammation of the heart and pericardium together.
- cardiophobia (kar"de-o-fo'be-ah) [Gr καρδία heart + φόβοs fear]. Morbid dread of heart disease.
- **cardiophone** (kar'de-o-fōn) [Gr. καρδία heart + φωνή voice] An instrument for making audible the sound of the heart muscle.
- cardiophrenia (kar"de-o-fre'ne-ah). Same as phrenocardia.
- **cardioplasty** (kar'de-o-plas-te) [cardia + Gr. πλάσσειν to form] A plastic operation on the cardia for the relief of cardiospasm.
- **cardioplegia** (kar"dc-o-ple'je-ah) [Gr. καρδία heart + πληγή stroke]. 1. Paralysis of the heart. 2. Direct injury done to the heart, as by a blow.
- cardiopneumatic (kar"de-o-nu-mat'ik) [Gr. $\kappa \alpha \rho$ - δla heart $+ \pi \nu \epsilon \hat{\nu} \mu \alpha$ breath] Of or pertaining to
 the heart and respiration.
- cardiopneumograph (kar''de-o-nu'mo-graf) [Gr. καρδία heart + πνεῦμα breath + γράφειν to record]. A machine which registers the cardiopneumatic movements.
- cardioptosis (kar''de-o-to'sis) [Gr. καρδία heart + πτῶσις falling]. Downward displacement of the heart. Sometimes called Rummo's disease.
- cardiopulmonary (kar"de-o-pul'mon-a-re). Pertaining to the heart and lungs.
- cardiopuncture (kar"de-o-pungk'chur). Same as cardiocentesis.
- cardiopyloric (kar"de-o-pi-lor'ik). Pertaining to the cardia and the pylorus
- cardiorenal (kar"de-o-re'nal). Pertaining to the heart and the kidney.
- cardiorrhaphy (kar-de-or'af-e) [Gr. καρδία heart + ραφή suture]. The operation of suturing the heart muscle.
- **cardiorrhexis** (kar''de-o-reks'is) [Gr καρδία heart + βήξις rupture]. Rupture of the heart.
- cardioschisis (kar-de-os'kis-is). The breaking up of adhesions between the heart and the chest-wall in adhesive pericarditis.
- **cardiosclerosis** (kar"de-o-skle-ro'sis) [Gr. καρδία heart + σκληρός hard]. Fibroid induration of the heart.
- **cardioscope** (kar'de-o-skōp) [Gr. καρδία heart + $\sigma \kappa \sigma \pi \epsilon \hat{\nu}$ to examine]. 1. An instrument for inspecting the interior of the heart. 2. Same as cardiophone.
- cardiospasm (kar'de-o-spazm). Spasm of the cardiac sphincter of the stomach. tropical c. See entalação.
- cardiosphygmogram (kar"de-o-sfig'mo-gram). A tracing made by the cardiosphygmograph.
- cardiosphygmograph (e-kard"o-sfig'mo-graf). A combination of the cardiograph and sphygmograph for recording the movements of the heart and radial pulse.
- cardiosymphysis (kar''de-o-sim'fis-is) [Gr. $\kappa \alpha \rho \delta la$ heart $+ \sigma b \mu \varphi \nu \sigma \iota s$ growing together]. A condition in which the heart has become fixed to the chest by combined adhesion of the visceral and parietal pericardia to each other and by adhesion of the parietal pericardium to the mediastinal structures.

- **cardiotherapy** (kar"de-o-ther'ap-e) [Gr. $\kappa \alpha \rho \delta l \alpha$ heart $+ \theta \epsilon \rho \alpha \pi \epsilon \hat{\iota} \alpha$ treatment]. The treatment of heart diseases.
- cardiotomy (kar-de-ot'o-me) [Gr. καρδία heart + τομή cut]. 1. Incision of the heart. 2. The operation of cutting the cardia for stricture of the esophagus.
- **cardiotonin** (kar-de-o-to'nin). A combination of 'the active principle of convallaria with caffein sodiobenzoate.
- cardiotoxic (kar"de-o-toks'ik). Poisonous to the heart.
- cardiotrophotherapy (kar"de-o-trof"o-ther'ap-e) [Gr $\kappa a \rho \delta (a \text{ heart } + \tau \rho \delta \rho \eta \text{ nutrition } + \theta \epsilon \rho a \pi \epsilon \hat{a} a \text{ treatment}].$ Metabolic treatment of heart disorders.
- **cardiovalvulotome** (kar-de-o-val'vu-lo-tōm) [Gr. καρδία heart + L. valvula valve + Gr. τομή cut] An instrument for excising a portion of the mitral valve.
- cardiovascular (kar"de-o-vas'ku-lar). Pertaining to the heart and blood-vessels.
- cardiovascular-renal (kar"de-o-vas"/ku-lar-re'-nal). Pertaining to the heart, blood-vessels, and kidney.
- carditis (kar-di'tis) [Gr. καρδία heart + -ιτις inflammation]. Inflammation of the heart. Sterges' c., a combination of endo- and pericarditis.
- cardivalvulitis (kar"de-val-vu-h'tis). Inflammation of the heart valves.
- **cardol** (kar'dol). I. An irritant and vesicating oil, $C_{21}H_{30}O_{2}$, from the husks of the cashew-nut, the fruit of *Anacar'dium occidenta'le*. 2. Tribromsalol, $C_{6}H_{4}(OH)CO_{2}.C_{6}H_{2}Br_{3}$: an intestinal antiseptic, hypnotic, and analgesic agent. Dose, 8-30 gr. (0 5-2 gm).
- Carduus benedic'tus (kar'du-us). See Cnicus.
- careotrypanosis (ka"re-o-tri-pan-o'sis). See Chagas' disease, under disease.
- cargentos (kar-jen'tos). A black colloidal silver oxid used as a local germicide in 5 to 50 per cent. solution.
- Cargile membrane (kar'gil) [Charles H. Cargile, American surgeon, born 1853]. See under membrane.
- **caribi** (kah-re'be). Epidemic gangrenous rectitis. See under rectuis
- Carica (kar'ık-ah) [L. " fig "]. See papaw.
- caricin (kar'ıs-in). Same as papain.
- caricous (kar'ik-us) [L. car'ica fig]. Shaped like or resembling a fig.
- caries (ka're-ēz) [L "rottenness"]. The molecular decay or death of a bone, in which it becomes softened, discolored, and porous. It produces a chronic inflammation of the periosteum and surrounding tissues, and forms a cold abscess filled with a cheesy, fetid, pus-like liquid, which generally burrows through the soft parts until it opens externally by a sinus or fistula backward c., dental caries which progresses backward from the dento-enamel juncture into the enamel. central c., a chronic abscess in the interior of a bone. dental c., dissolution and disintegration of the enamel and dentin by the action of acidproducing bacteria and their products. c. of first degree, dental caries in which the enamel alone has become decalcified. c. of second degree, dental caries in which the enamel and dentin are affected, the pulp not yet being involved. c. of third degree, dental caries which has penetrated to the extent of exposing the pulp. c. of fourth degree, dental caries which has penetrated to the pulp so that the latter dry has undergone putrefactive decomposition. c., c. sic'ca, a form of tuberculous caries of the joints and ends of bones; rarefying osteitis c. fungo'sa, a form of tuberculosis of a bone. lateral c., dental caries which extends laterally at the dento-enamel junction. necrotic c., a disease in which pieces of bone lie in a suppurating

- cavity. **spinal c.**, Pott's disease; tuberculous osteitis of the vertebræ and of the intervertebral cartilages.
- **cariesan** (ka're-e-san). A preparation of alkali sulphocyanates and diastase: used to prevent caries of the teeth.
- **cariesin** (kar'e-es-in). A medicinal preparation of carious bone.
- carina (kar-i'nah) [L. "keel"]. Any ridge-like structure. c. for'nicis, a mesial ridge on the under surface of the fornix c. urethra'lis vagi'næ, a median ridge on the anterior wall of the vagina.
- **carinate** (kar'in-āt) [L cari'na a keel] Keel-shaped; having a keel-like process.
- carination (kar-in-a'shun). A ridged condition of a part.
- cariosity (ka-re-os'it-e). The quality of being carious.
- carious (ka're-us) [L. cario'sus]. Affected with or of the nature of caries.
- **carissin** (ka-ris'in). A glucosid from the bark of Caris'sa o'vata: its action is like that of strophanthin.
- Carleton's spots (karl'tonz) [B. G. Carleton, American physician, born 1856]. See under spot.
- Carlsbad salt (kahrlz'bahd). A salt prepared from a mineral spring at Carlsbad or imitative of it.
- **carmalum** (kar-mal'um). A stain: carmin, 1 part; alum, 10 parts; water, 100 parts.
- carmin (kar'min). A red coloring-matter derived from cochineal by the addition of alum: used as a histologic stain. alizarin c., alizarin red. See under red. borax c., an alkaline staining fluid made of borax, carmin, and water: used as a red nuclear stain. See stains, table of. lithium-c. See Orth's lithium-carmin, under stains, table of. c.-red, a stain, C₁₁H₁₂O₇, derived from carmin. Schneider's c., a saturated solution of carmin in concentrated acetic acid.
- carminative (kar-min'ah-tiv) [L. car'men charm].

 1. Relieving flatulence. 2. A medicine which relieves flatulence and assuages pain. The chief carminatives are anise, caraway, cardamom, cajuput, chalk, cinnamon, cloves, cortander, dill, fennel, ginger, juniper, lavender, lime-water, nutmeg, peppermint, pimenta, spearmint, and sodium carbonate. Dalby's c., a mild carminative opiate: used mainly for children in domestic treatment. Dose, ½-1 teaspoonful. Dewees' c., mistura magnesiæ et asafætidæ.
- carminic acid (kar-min'ik). See acid.
- carminophil (kar-min'o-fil) [carmin + Gr. φιλεῦν to love]. 1. Easily stainable with carmin. 2. A cell or other element that readily takes a stain from carmin.
- carminum (kar-mi'num). Carmin.
- carnauba (kar-na-oo'bah) [Braz.]. A South American palm with a medicinal root, Copernic'ia cerif'era. c. wax, a kind of wax largely obtained from the palm.
- **carnaubon** (kar-na-oo'bon). A phospholipin occurring in the kidney.
- carneous (kar'ne-us) [L. car'neus, from ca'ro flesh]. Fleshy.
- carniferrin (kar-nif-er'in) [L. ca'ro, car'nis flesh + fer'rum iron]. 1. A complex body isolated from milk that yields carnic, lactic, succinic, and oxylic acids on decomposition. 2. A preparation of iron, phosphoric, and sarcolactic acids: useful in anemia. Aggregate daily dose, 7 gr. (0.5 gm.).
- carniferrol (kar-ne-fer'ol). A preparation of meat peptone and iron: a diuretic and stimulant.
- **carnification** (kar''nif-ik-a'shun) [L. ca'ro flesh + fa'cere to make]. The change of any other structure into flesh or a substance resembling it.

carnin (kar'nin) [L. ca'ro flesh]. A leukomain, inosin, C₇H₈N₄O + H₂O, derivable from meat extract and from yeast. It is said to be poisonous

carnitin (kar'nit-in) A betain found in the flesh of horses, hogs, and calves, probably trimethyl oxybutyrobetain C-H₂N(). It causes yomiting oxybutyrobetain, C7H15NO3. It causes vomiting, purging, salivation, and mydriasis when injected into animals. Called also novain

carnivorous (kar-niv'or-us) [L. ca'ro flesh + vora're to devour]. Eating flesh.

carnogen (kar'no-jen). A compound of fibrin and red bone-marrow useful in wasting diseases. Dose, 1-2 tablespoonfuls.

carnolin (kar'no-lin). A solution of 1.5 per cent. of formaldehyd in water: a disinfectant and food preservative.

carnophobia (kar-no-fo'be-ah) [L. ca'ro flesh + Gr. φόβοs fear]. Abnormal aversion to meat diet.

carnose (kar'nos). A dietetic meat-preparation: proprietary.

carnosin (kar'no-sin). Ignotin; a base, C9II14N4O3, derived from extract of meat.

carnosity (kar-nos'it-e) [L. carnos'itas fleshiness]. Any abnormal fleshy excrescence.

carnutin (kar-nu'tin). A ptomain, alpha-oxy-gammatrimethyl butyrobetain, found in muscle tissue.

caro (ka'ro) [L.]. Flesh or muscular tissue.

caroba (kah-ro'bah). See Jacaranda.

carobin (kar'o-bin). One of the alkaloids of jacaranda.

caroid (ka'roid) [L. ca'ro flesh]. A digestant preparation of papaw in the form of a white powder said to be a vegetable pepsin.

carolinium (kar-o-lin'e-um). A supposed element obtained from thorium oxid.

carone (kar'ōn). A colorless, oily ketone, $C_{10}H_{10}O$, having an odor of camphor and peppermint and prepared from carvone.

carota (ka-ro'tah), pl. caro'ta. Latin for carrot.

carotene (kar'o-tēn). See carotin.

carotic (kar-ot'ık) [Gr. κάρος torpor]. Pertaining to or of the nature of carus, or stupor.

caroticotympanic (kar-ot"ik-o-tim-pan'ik). Pertaining to the carotid canal and the tympanum.

carotid (kar-ot'id) [Gr. καρωτίς, from κάρος deep The principal artery of the neck. See arteries, table of. 2 Of or pertaining to a carotid artery.

carotin (kar'o-tin). The yellow pigment found in carrots, sweet potatoes, other vegetables, milk-fat, body fat, egg yolk, and other things. It is a chromo-lipoid hydrocarbon of unknown composition. c. group, the carotins; the plant chromolipoids.

carotinemia (kar-o-tin-e'me-ah) [carotin + Gr. αΐμα blood]. Presence of carotin in the blood; it sometimes occurs in sufficient quantities to produce skin pigmentation resembling jaundice, a pseudojaundice.

carotinoid (kar-o'tin-oid). 1. Marked by a yellow color resembling that produced by carotin 2 Any one of a number of chromolipoids closely related to carotin, and including both carotins and xanthophylls.

carpain (kar-pa'in). An alkaloid, C₁₄H₂,NO₂, from papaya: used like digitalis. Hypodermic dose, 10 f gr. (0.006-0 or gm.).

carpal (kar'pal) [L. carpa'lis]. Of or pertaining to the carpus, or wrist.

carpale (kar-pa'le). A carpal bone.

carpectomy (kar-pek'to-me) [carpus + Gr. ἐκτομή excision]. Excision of one or more of the carpal

carpel (kar'pel). A one-celled pistil, or one of the members composing a compound pistil or seedvessel.

carphologia (kar-fo-lo'je-ah). Carphology.

carphology (kar-fol'o-je) [Gr. κάρφος chaff λέγειν to collect] The involuntary picking at the bedclothes seen in grave fevers and in conditions of great exhaustion.

carpitis (kar-pi'tis). Inflammation of the synovial membranes of the bones of the carpal joint of Inflammation of the synovial domestic animals, producing swelling, pain, and

carpocarpal (kar-po-kar'pal). Pertaining to two parts of the carpus.

Carpoglyp'tus passula'rum. A tyroglyphid mite which infests dried fruit.

carpogonium (kar-po-go'ne-um). See ascogonium. carpometacarpal (kar"po-met-ah-kar'pal). taining to the carpus and metacarpus.

carpopedal (kar-po-pe'dal) [carpal bedal 1. Affecting the carpus and the foot.

carpophalangeal (kar"po-fa-lan'je-al). Pertaining to the wrist and the phalanges.

carpoptosis (kar-pop-to'sis) [carpus + ptosis]. See wrist-drop.

 Carpue's operation (kar'pūz) [Joseph C. Carpue, English surgeon, 1764–1846] See under operation.
 carpus (kar'pus) [L for "wrist"; Gr. καρπός]. The wrist, also the eight carpal bones collectively scaphoid, semilunar, cuneiform, pisiform, trapezium, trapezoid, os magnum, and unciform.

carragheen (kar'ah-ghēn). carrageen, moss. See Chondrus.

carreau (kar-o') [Fr] Enlargement and hardening of the abdomen caused by disease of the peritoneum and abdominal walls.

carrefour sensitif (kahr-a-for sen-sit-if') [Fr. "sensitive crossway"]. The last third of the posterior sitive crossway"]. The last third of the posterior limbs of the internal capsule in the lowest part of the optostriate region.

Carrel's method, mixture, treatment (kar-elz') [Alexis Carrel, French surgeon in New York, born 1873]. See under method, mixture, and treat-

Carrel-Dakin fluid. See under fluid.

carrier (kar'e-er). An individual who harbors in his body the specific organisms of a disease without manifest symptoms and thus acts as a carrier or distributor of the infection. active c., a person who harbors a pathogenic organism after recovering from the disease. **chronic c.**, a person in whom the organism of a disease persists after recovery from the disease, or one who, though he may never have had the disease, still carries the organisms in his body. contact c., a person who has been exposed to an infection, and, although healthy, may act as a carrier of the infection. convalescent c., a person convalescent from a disease who may act as a carrier of infection. gamete c., a healthy person who transmits a parasitic disease by parasites undergoing intracapsular conjugation in his body (Craig) healthy c., a person who has never had the disease, but yet carries the infecting organism in his body. incubatory c., an individual who is in the incubation period of an infectious disease and will soon manifest the intermittent c., a carrier who symptoms. discharges the pathogenic organisms from time to intestinal c., a carrier who harbors the infective bacteria in the feces. passive c., a carrier who harbors a pathogenic organism without having had the disease. temporary c., transitory c., a carrier who harbors a pathogenic organism for brief periods of time urinary c., a carrier who discharges infective organisms in his urine.

Carrion's disease (kar-e-onz') [Daniel E. Carrion, a student in Peru who died of the disease in 1886]. Oroya fever

Carron oil (kar'on) [named from Carron iron works in Scotland]. A liniment of linseed oil and limewater: used for burns,

230

carrot (kar'ut) [L. caro'ta]. The umbelliferous plant, Dau'cus caro'ta: its seed is diuretic and stimulant used in dropsy, strangury, and amenorrhea. Dose, 30-60 gr. (2-4 gm.). The root is used in making poultices for ulcers.

carrotene (kar'ot-ēn). Same as carotin.

car-sickness (kar-sik'nes). An attack, not unlike sea-sickness, induced by railway travel.

Carswell's grapes (karz'welz) [Sir Robert Carswell, English physician, 1793-1857]. See grapes.

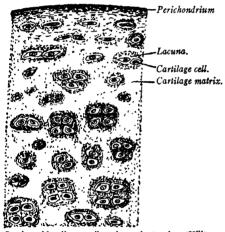

Carter's fever (kar'terz) [Henry Vandyke Carter, Anglo-Indian physician, 1831-1897]. See under

Carter's operation, splint (kar'terz) [William Wesley Carter, New York rhinologist, born 1860]. See under operation (2d def.) and splint.

carthamin (kar'tham-in). A coloring-matter, C14H16O7, from safflower.

Carthamus (kar'tham-us) [L.]. A genus of composite-flowered plants. C. tincto'rius, is the safflower, or bastard saffron, the flowers are diuretic, aperient, and diaphoretic Dose of fluidextract of florets, 5-20 min. (0.3-1.3 c.c).

cartilage (kar'til-āj) [L. cartila'go, pl cartila'-gines]. The gristle or white elastic substance attached to articular bone-surfaces and forming certain parts of the skeleton. Cartilage is a form of connective tissue composed of cells arranged in groups and buried in cavities (c.-capsules) in a homogeneous matrix. **accessory c.** Same as sesamoid c. alar c's, the cartilages of the wings

Section of hyaline cartilage from the trachea (Hill)

alisphenoid c., the embryonic of the nose. cartilage which develops into the great wing of the sphenoid bone. annular c. Same as cricoid c. aortic c., the second costal cardlage on the right side. arthrodial c., articular c., a thin layer of hyaline cartilage on joint surfaces of bones. arytenoid c's, pitcher-shaped cartilages of the back of the larynx at the upper border of the cricoid cartilage. auditory c., the auditory capsule. See under capsule. auricular c. 1. The car-2. An ear-shaped tilage of the external ear. cartilage at the sacro-iliac articulation. bone-c., ossein. c.-bones, those heavy bones which are formed by the ossification of a temporary cartilage. branchial c., one of the rods of cartilage in the branchial arches of the embryo. Brecht's c., suprasternal bone. calcified c., cartilage containing a deposit of calcareous matter in its matrix. c.-capsules, the lining membranes of the lacunæ of cartilage. cariniform c. the cartilaginous prolongation at the anterior end of the sternum of a horse. c.-cells, c.-cor-puscles, connective-tissue cells contained in the lacunæ of cartilage. cellular c., a variety composed almost entirely of cells: in mankind it is

found only in the chorda dorsalis of the embryo. central c., an opacity in the center of the lens. ciliary c. Same as palpebral c. circumferential c., a ring of fibrocartilage forming a border around certain joint cavities. conchal c., the auricular cartilage of the ear. connecting c., the cartilage connecting the surfaces of an immovable joint. corniculate c's. Same as Santorini's c's costal c's, those which connect the true ribs with the sternum. cricoid c., a ring-like cartilage forming the lower and back part of the cavity of the larynx. cuneiform c., a cartilage on either side in the aryteno-epiglottidean fold called also c. of Wrisberg. dentinal c., the substance that remains after the dissolving of the lime-salts of dentin in an acid. diarthrodial c., an articular cartilage. elastic c. Same as reticular c. ensiform c. See aphoid process, under process. epactal c's, nodules of cartilage on the upper edge of the alar cartilages of the nose. epiphyseal c., that which is interposed between the epiphysis and the shaft of the bone: by its growth the bone increases in length. epistapedial **c.**, a cartilage extending from the columella to the eustachian c., the cartilaginous tympanum portion of the eustachian tube. falciform c., semilunar cartilage. fibro-c. See fibrocartilage fibro-elastic c., cartilage composed of elastic fibers embedded in hyaline cartilage. this found in the external ear, the eustachian cartilage, the epiglottis, parts of the arytenoid cartilages, and the cartilages of Wrisberg and Santorini. floating c., a loose piece of articular cincipal c. the tissue that court the cartilage gingival c., the tissue that covers the which contains an unerupted tooth. Huschke's c's, two irregular rods of cartilage at the border of the cartilaginous septum of the nose. hyaline c., cartilage which has a granular or homogeneous matrix with little fibrous tissue. innominate c. Same as critoid c. interarticular c. Same as articular c. interesseous c. Same as connecting c. intervertebral c., an intervertebral disk. intrathyroid c., one conintervertebral c., an necting the ale of the thyroid cartilage in early life. investing c. Same as articular c. Jacobson's c., a hyaline cartilage which supports Jacobson's organ. lateral c., in the horse, one of the cartilages from the end of the third phalanx to the heel of the hoof loose c., a floating cartilage Luschka's c., a small nodule of cartilage in the anterior part of the true vocal cord mandibular c., Meckel's cartilage. meatal c., the cartilaginous part of the external auditory meatus. Meckel's c., that of the first branchial arch. minor c's, sesamoid c's, three or four small plates associated with the lower lateral cartilages of the nose mucronate c., the ensiform cartilage nasal c's are five in number the lower and upper lateral and the septal, besides the minor or sesamoid cartilages. obducent c., an articular cartilage. ossifying c. See temporary c. palpebral c's, the tarsal plates of the eyelids (not composed of true cartilage). parachordal c's, the two cartilages at the sides of the occipital part of the notochord of the fetus. **parenchymatous c.** Same as *cellular c.* **periotic c.**, an oval mass or each side of the upper surface of the fetal chondrocranium. permanent c., any cartilage which does not normally become ossified. plexiform c. Same as hbro-clastic c precursory c., temporary cartilage. primordial c., temporary cartilage. pulmonary c., the third costal cartilage on the left side Reichert's c., the cartilage of the hyoid arch of the embryo, the cartilage of the state whence are developed the styloid process and adjacent structures. **reticular c.** Same as yellow c. **Santorini's c's**, the cornicula laryngis. semilunar c., an interarticular cartilage of the knee-joint. septal c., the cartilage of the nasal septum. sesamoid c's, small cartilages in the lateral part of the wing of the nose. sigmoid c., a semilunar cartilage. sternal c., a costal cartilage of a true rib. stratified c.. fibrocartilage. supra-arytenoid c. Same as corniculum laryngis. Synarthrodial c., a cartilage of a synchondrosis. tarsal c's, the palpebral cartilages (so called). temporary c., any cartilage which is normally destined to become changed into a bone: called also ossifying c. tendon-c., a form of embryonic cartilage by which tendons and bones are united. thyroid c., the large cartilage of the larynx forming the prominence known as the pomum adami. tracheal c., one of the rings of cartilage, 16 to 20 in number, which form the skeleton of the trachea. triquetrous c. 1. The arytenoid cartilage. 2. The articular cartilage of the distal radio-ulnar articulation. **triticeous c.**, a cartilaginous or bony nodule often found in each of the two lateral thyrohyoid ligaments. vomeronasal c. Same as Jacobson's c. Weitbrecht's c., the interarticular fibrocartilage of the acromioclavicular joint. Wrisberg's c. See cuneiform c. xiphoid c. See xiphoid process, under process. **Y**-c., a Y-shaped cartilage in the acetabulum, joining the ilium, ischium, and pubes. yellow c., any cartilage of which the matrix is mainly a network of yellow fibers. For other varieties, see fibrocar-

cartilagin (kar'til-aj-in) A principle found in cartilage, which is changed by boiling into chondrin.

cartilagintfication (kar"til-aj-in"if-ik-a'shun). Change into cartilage.

cartilaginiform (kar-til-aj-in'if-orm). Resembling cartilage.

cartilaginoid (kar-til-aj'in-oid). Resembling cartilage.

cartilaginous (kar-til-aj'in-us). Consisting of or of the nature of cartilage.

cartilago (kar-til-a'go). Latin for cartilage. c. ala'ris ma'jor [B N A], the greater alar cartilage. c. ala'ris mi'nor [B N A], the lesser alar cartilage. c. articula'ris [B N A], articular cartilage. c. articula'ris [B N A], articular cartilage. c. arytænoi'dea [B N A], arytenoid cartilage c. auric'ulæ [B N A], the cartilage of the auricle of the ear. c. cornicula'ta [B N A], the cartilage of Santorini. c. cuneifor'mis [B N A], the cartilage of Santorini. c. cuneifor'mis [B N A], the cartilage. c. na'si latera'lis [B N A], the upper lateral cartilage of the nose. c. sep'ti na'si [B N A], the cartilaginous portion of the masal septum. c. sesamoi'dea laryn'gis [B N A], an occasional cartilaginous node on the external border of the arytenoid cartilage. c. sesamoi'dea na'si [B N A], an mall cartilage in the lateral part of the wing of the nose. c. thyroi'dea [B N A], treacheal cartilage. c. triangula'ris [B N A], treacheal cartilage. c. triangula'ris [B N A], c. triquet'ra carpi, the triquetrous cartilage of the wrist c. tritic'ea [B N A], triticcous cartilage. c. tu'bæ auditi'væ [B N A], the eustachian cartilage. c. vomeronasa'lis, Jacobson's cartilage.

cartilagotropic (kar-til-ag-o-trop'ik) [L cartila'go, cartilage + Gr. τρόπος turning]. Having affinity for cartilage.

carum (ka'rum) Latin and U.S.P. name for caraway.

caruncle (kar'ung-kl) [L. carun'cula, dim. of ca'ro flesh]. Any small fleshy eminence, whether normal or abnormal. lacrimal c., the red eminence at the inner angle of the eye. morgagnian c., the middle lobe of the prostate. urethral c., a small red growth on the mucous membrane of the urinary meatus in women.

caruncula (kar-ung'ku-lah), pl. carun'cula. Latin for carunde. c. hymena'les [B N A]. See c. myrtiformes. c. mammilla'ris, the tuber olfactorium; the gray mass from which the middle root of the olfactory nerve arises. c. myrtifor'-mes, small elevations surrounding the vaginal orifice, supposed to be relics of the ruptured hymen. c. saliva'ris, c. sublingua'lis [B N A],

a little eminence on each side of the frenum of the tongue, at the apex of which is the opening of the duct of the sublingual gland.

Carus, curve of (kah'rus) [Karl Gustav Carus, German obstetrician, 1789-1869]. See under curve.

carvacrol (kar'vak-rol). A stimulant oil, methylisopropylphenol, CH₃.C₆H₃OH C₄H₇, obtainable from camphor, oil of caraway, savory, etc., having the taste and uses of crossote. c. iodid. See indicted.

carvacrolphthalein (kar"vak-rol-thal'e-in). A compound recommended as a non-irritating cathartic.

carvene (kar-vēn') [L. car'vi caraway]. A terpene, $C_{10}H_{16}$, from oil of caraway; limonene.

carvol (kar'vol). A light, fragrant oil, C₁₀H₁₄O, separated from the oil of caraway, cumin, dill, etc. Called also *carvone*.

caryin (ka're-in) [Gr. κάρυον nut]. A crystallizable principle obtainable from the bark of a hickory tree (*Hico'ria* or *Ca'rya tomento'sa*) of North America.

caryochrome, caryocinesis, etc. See karyochrome, karyokinesis, etc.

caryokinesis (kar"e-o-kin-e'sis). See mitosis.

caryophil (kar'e-o-fil). Staining easily with thiazinammonium stains.

caryophyllin (kar"e-o-fil'in). A resin or camphor, $C_{10}H_{10}O$, from oil of cloves.

caryophyllus (kar"c-o-fil'us) [Gr. κάρυον nut + φύλλον leaf]. Latin and U. S. P. name for clove.

caryoplasm (kar'e-o-plazm). See karyoplasm.

caryotin (kar'e-o-tin). Chromatin.

caryozoic (kar-e-o-zo'ik). See karyozoic.

casanthrol (kas-an'throl). A preparation of casein and a coal-tar product, used as a varnish in eczema, prurigo, and other skin diseases.

casca bark (kas'kah). See Erythrophlæum.

cascanata (kas-kan-at'ah). A proprietary laxative preparation.

Cascara (kas-kar'ah). Spanish for bark. c. amar'-ga [Sp for "bitter bark"], Honduras bark; the bark of Puram'nia antides'ma, a tree of tropical America: alterative and tonic. Dose of extract, 5-10 gr. (0.32-0.65 gm); of fluid-extract, 15 min.-2 fldr (1-8 c.c.). c. sagra'da [Sp. for "sacred bark"], the bark of Rham'nus purshna'na, a shrub of the Pacific States of the United States. It is a stimulant laxative and cathartic, recommended for the treatment of chronic constipation. Dose of fluidextract (U. S. P.), 10-20 min. (0.666-1.333 c.c.); of aromatic fluidextract (U. S. P.), 2-8 gr. (0.13-0.52 gm.).

cascarenna (kas-kar-en'ah). A proprietary laxative for children.

cascarilla (kas-kah-ril'ah). 1. The bark of Cro'ton elute'ria, a small tree of tropical America a tonic and aromatic stomachic. Dose in powder, 20-30 gr. (1.3-1.85 gm.). Its tincture and infusion are also prescribed. 2. A genus of rubiaceous trees allied to Cincho'na: the bark of C. hexan'dra is an unofficial cinchona substitute.

cascarillin (kas-kah-ril'in). A bitter, crystallizable principle, C₁₂H₁₈O₄, from cascarilla bark, slightly soluble in water.

cascarin (kas-kar'in). A colorless, crystalline preparation from cascar'a sagra'da. Dose, 13-3 gr. (0090-0.198 gm); more correctly, a glucosid from the same.

case (kās). A particular instance of disease; as a case of typhoid.

caseanic acid (ka-se-an'ık). See acid.

casease (ka'se-ās) [L. ca'seus cheese] A ferment derived from bacterial cultures, capable of dissolving albumin and the casein of milk and cheese.

caseation (ka-se-a'shun) [L. ca'seus cheese]. The precipitation of casein; also, cheesy degeneration; conversion into cheese-like matter.

case-book (kās-book). A book in which a physician enters the records of his cases.

casec (ka'sek). A proprietary name of calcium caseinate.

casein (ka'se-in) [L. ca'seus cheese]. A phosphoprotein, the principal protein of milk, the basis of curd and of cheese. It is precipitated from milk as a white amorphous substance by dilute acids and redissolves on the addition of alkalis or an excess of acid. Rennet changes it to an insoluble curd. Casein is used as a food, being added to other ingredients of the diet, when it is desired to increase the protein content of the diet. c.-dyspepton, a substance formed when milk is digested with pepsin and hydrochloric acid. gluten-c., a form of casein from the seeds of various cereal plants; glutin. c.-mercury, a preparation of casein and mercuric chlorid, soluble in water antiseptic. Panum's c., serum globulin. c. saccharid, a preparation of casein and sugar. used in making emulsions. c.-sodium, a nutrient preparation of casein and sodium hydroxid vegetable c., a protein contained in glutein and resembling casein.

caseinhydrol (ka-se-in-hi'drol). A mixture of equal parts of magnesium perhydrol and casein-calcium, used in diabetes.

caseinic acid (ka-se-in'ik). See acid.

caseinogen (ka-sc-in'o-jen) [casein + Gr. γεννᾶν to produce]. A protein of milk producing casein when acted upon by rennin.

caseinogenate (ka-se-in'o-jen-āt). A salt of case-inogen.

caseogenous (ka-se-oj'en-us). Producing casea-

caseo-iodin (ka"se-o-i'o-din). A white powder prepared from casein and iodin: used for goiter and myxedema.

caseosan (ka'se-o-san). A proprietary purified sterile casein for injection in non-specific protein therapy.

Caseose (ka'se-ōs). A proteose produced during the digestion of casein (Chittenden).

caseoserum (ka"se-o-se'rum). An antiserum produced by immunization with casein.

caseous (ka'se-us). Resembling cheese or curd. See degeneration.

case-taking (kās'tak-ing). The collection of diagnostic, prognostic, and other professional memoranda.

casette (ka-set'). A roentgenographic plate-holder. **cashe** (ka-sha'). Same as *caché*.

cashew-nut (kash'ew). The fruit of Anacar'dium occidenta'le, a tree of tropical America its oil is used for leprosy and is escharotic.

Caso. Calcium sulphate.

casoid (ka'soid). A proprietary flour containing casein, and practically free from carbohydrates

cassareep, **cassaripe** (kas'ar-ēp). A non-poisonous extract made by boiling the poisonous juice from the root of the plant cassava, Jat'ropha man'ihot or Man'ihot utilis'sima, of tropical America, where it is used as a condiment. It is antiseptic, and is used in diseases of the eye, such as corneal ulcers and purulent conjunctivitis.

cassava (kas-ah'vah) [Sp. casabe]. The plants Man'ihot utilis'sima and M. ai'pi; also the starch from their roots, which furnishes tapioca.

Casselberry position (kas'el-ber-e) [William Evans Casselberry, American laryngologist, 1858–1016]. See under position.

casserian (kas-e're-an). Discovered by or named from Giulio Casserio (1556-1616), an Italian anatomist. a term sometimes applied by error to the gasserian ganglion.

Cassia (kash'e-ah) [L; Gr. κασία]. A genus of leguminous trees and herbs. C. acutifo'lia and C. elonga'ta, of North Africa and South Asia, afford senna. C. marilan'dica, a herb of the United

States, gives an inferior kind of senna. c.-bark, trade name of Chinese cinnamon. See Cinnamon. c.-buds, the unripe fruit of various species of Cinnamo'mum. C. fis'tula, the dried fruit of Cathartocarpus fistula, a tree of the East Indies. Dose, I-2 dr (4-8 gm.). purging c. Cassia.

cassiopeium (kas-e-o-pe'um). See lutecium.

Cas'sius Fe'lix. A Latin medical writer who prior to 26 A D. published a work upon specialized pathology and therapeutics which is supposed to be the original of Celsus.

cassumunar (kas-u-mu'nar). The root of Zin'giber cassumu'nar, an East Indian plant closely
allied to ginger: tonic, aromatic, and stimulant.

cast (kast). 1. A mold of a hollow organ, as of a renal tubule or a bronchiole, formed of effused plastic matter. 2. To form an object in a mold. bacterial c., a tube cast made up of bacteria or containing a large number of bacteria blood-c., a filament of coagulated fibrin in the urine, inclosing blood-corpuscles coma c., a renal cast containing strongly refracting granules said to indicate oncoming coma in diabetes Kulz's cylinder. decidual c., th Called also decidual c., the fleshy mass discharged from the uterus at the time of rupture of an ectopic pregnancy epithelial c., a urinary cast made up of columnar renal epithelium or of round cells. false c. See pseudocast. fatty c., any cast made up of material loaded with fat globules. **fibrinous c.**, a cast resembling a waxy cast, but having a distinctly yellow color like beeswax, often seen in acute nephritis granular c., a dark colored renal cast of granular or cell-like substance, it being a degenerated form of a hyaline or waxy cast hair c. See hairball. hyaline c., a nearly transparent urinary cast made up of homogeneous protein, but slightly refractive Külz's c., short hyaline or granular casts seen at the beginning and during the course of diabetic coma mucus-c., a cylindroid. pus-c., a renal cast made up of fibrin containing a cylindroid. c., a renal cast having a spiral or twisted shape. spurious c., spurious tube-c., a cylindroid. tube-c., an albuminous cast of a urinterous tube-c., an albuminous cast of a urinterous tubule occurring in the urme in disease of the kidney. Their presence in the urine is known as cylindruria. Called also renal c and urinary cast. waxy c., one made up of a highly refractive, translucent, amyloid substance.

Castanea (kas-ta'ne-ah) [L, Gr. κάστανον chestnut]. A genus of trees, the chestnuts, also, the leaves of C. denta'ta, the common chestnut tree: used in whooping-cough. Dose of fluidextract, ½-2 dr. (2-8 c.c.).

Cas'tela nicholso'ni. See chaparro amargoso.

Castellanella (kas-tel-an-el'ah) [Aldo Castellani]. A genus of trypanosomes to which some of the old species of Trypanosoma are now referred. C. castellan'i, a trypanosome causing the more acute and violent form of sleeping sickness C. gambien'se. See Trypanosoma gambiense.

Castellani's bronchitis, mixture, test (kastel-an'ez) [Aldo Castellani, Anglo-Indian physician]. See bronchitis, mixture, and tests.

Castellani-Iow symptom [Aldo Castellani; George Carmichael Low, English physician in India]. See under symptom.

casting (kas'ting). A metallic object formed in a mold, the forming of metal in a mold.

castor (kas'tor). See castoreum.

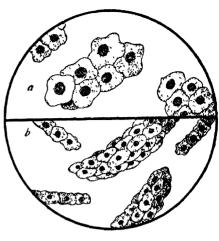

castor oil (kas'tor). See under oil.

castoreum (kas-to're-um) [L]. A strong-smelling, brownish, concrete substance from the preputial follicles of the beaver, Cas'tor ft'ber. It is a stimulant and antispasmodic used in colic, hysteria, and the typhoid state. Dose, 10-30 gr (0 65-2 gm.).

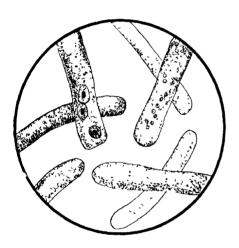

castoria (kas-to're-ah). A proprietary laxative preparation used in infancy and early childhood.

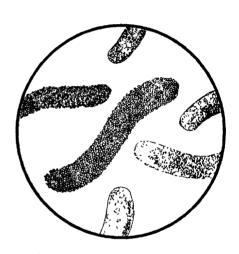

Blood casts (some composed of disintegrated red blood-cells).

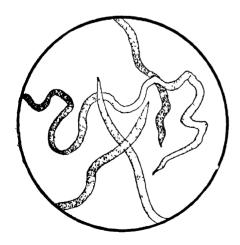

a. Squamous epithelium from the urine.
b. Epithelial casts.

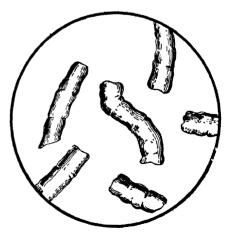

Hyaline casts.

Coarse and fine granular casts.

Cylindroids.

Waxy casts.

VARIOUS FORMS OF URINARY CASTS. (Salinger and Kalteyer.)

- **castorin** (kas'to-rin). A crystalline principle obtainable from castoreum.
- castrate (kas'trāt). 1. A person who has been castrated. 2. To remove the testicles.
- castration (kas-tra'shun) [L. castra'tio]. Removal of the testicles. female c., ovariectomy, or spaying. parasitic c., defective sexual development due to infestion with parasites in early life.
- casual (kaz'u-al) [L. casua'lis]. 1. Pertaining to accidental injuries or to accidents. 2. An occupant of a casual bed in a hospital.
- casualty (kaz'u-al-te). An accident; an accidental wound, death or disablement from an accident.
- casuistics (kaz-u-is'tiks). The recording and study of cases of disease.
- casumen (ka-su'men). A protein food preparation made from casein.
- cat unit. See under unit.
- cata- [Gr κατά down]. Λ prefix signifying down, lower, or under.
- catabasial (kat-ah-ba'ze-al) [Gr. κατά down + basson] Having the basson lower than the opisthion used of certain skulls.
- **catabasis** (kat-ab'as-is) [Gr. κατά down + βαlνειν to go] The stage of decline of a disease.
- **catabatic** (kat-ah-bat'ik), Pertaining to the decline of a disease; abating.
- **catabiosis** ((kat"ab-i-o'sis). That property of living matter by which it causes adjoining tissue to develop in harmony with itself.
- catabiotic (kat"ab-i-ot'ik) [Gr. κατά under + βlos hfe] Dissipated or used up in the performance of function said of the energy obtained from food. Cf bioplastic.
- **catabolergy** (kat-ah-bol'er-je) [catabolic + Gr. ξργον work]. The energy consumed in a catabolic process.
- catabolic (kat-ah-bol'ik). Pertaining to or due to catabolism, retrograde.
- **catabolin, catabolite** (kat-ab'o-lin, kat-ab'o-lit). Any product of a catabolic process.
- catabolism (kat-ab'o-lizm) [Gr. $\kappa \alpha \tau \dot{\alpha}$ down + $\beta \dot{\alpha} \lambda \lambda \epsilon \iota \nu$ to throw] Retrograde metamorphism, or destructive metabolism, passage of tissue material from a higher to a lower plane of complexity or specialization
- catacausis (kat-ah-kaw'sis) [Gr. κατά down + καθσις burning]. Spontaneous combustion.
- catacrotic (kat-ah-krot'ik). Exhibiting or marked by catacrotism
- catacrotism (kat-ak'ro-tizm) [Gr. $\kappa \alpha \tau \acute{\alpha}$ down + $\kappa \rho \acute{\sigma} \tau os$ beat] That irregularity of the pulse in which the beat is marked by two or more expansions of the artery, and indicated on the tracing by one or more secondary elevations on the down-stroke.
- catadicrotic (kat-ah-di-krot'ik). Exhibiting or characterized by catadicrotism.
- **catadicrotism** (kat-ah-dik'ro-tizm) [Gr. $\kappa \alpha \tau \dot{\alpha}$ down + δis twofold + $\kappa \rho \dot{\sigma} ros$ stroke] The occurrence of a double expansion or break in the down-stroke of the sphygmogram.
- catadidymus (kat-ah-did'im-us) [Gr. $\kappa \alpha \tau \dot{\alpha}$ down + $\delta l \delta \upsilon \mu o s$ twin]. A twin monstrosity fused into one in the lower parts.
- catadioptric (kat-ah-di-op'trik). Deflecting and reflecting light at the same time.
- catagenesis (kat-ah-jen'es-is) [Gr. κατά down + γένεσις production] Retrogressive evolution.
- **catagmatic** (kat-ag-mat'ik) [Gr. κάταγμα fracture]. Having the power of consolidating a broken bone.
- catalase (kat'al-ās). An enzyme which decomposes hydrogen peroxid, liberating free oxygen. It exists in many animal and plant tissues. c. index. See under index.

- catalepsy (kat'ah-lep-se) [Gr. κατά down + λαμβάνειν to seize]. A nervous state marked by attacks of total suspension of voluntary motion and of sensibility. The muscles become rigidly fixed, the body is cold and pale, the pulse and respiration are slow. The attacks last from a few minutes to several days.
- cataleptic (kat-ah-lep'tik). Pertaining to or affected with catalepsy; a person so affected.
- **cataleptiform** (kat-al-ep'tif-orm). Resembling catalepsy.
- cataleptoid (kat-al-ep'toid). Resembling catalepsy.
- Catalpa (kat-al'pah). A genus of bignoniaceous trees C bignonioi'des, of the United States, affords seeds used in asthma. Dose of tincture, 2 dr. (7.5 c.c.).
- catalysin (kat-al'is-in). A compound of lecithin bases, used to build up the natural resistance of the body to infectious diseases.
- **catalysis** (kat-al'is-is) [Gr. κατάλνσις dissolution]. A changing of the velocity of a reaction produced by the mere presence of a substance which does not itself enter into the reaction. **contact c.**, catalysis produced by the absorbing power of contact surfaces, e g, catalysis caused by colloidal platinum **negative c.**, a retardation of a reaction produced by the presence of a substance which does not itself enter into the reaction. **positive c.**, catalysis in which the velocity of the reaction is accelerated.
- catalyst (kat'al-ist). Same as catalyzer.
- **catalytic** (kat-al-it'ik) [Gr. καταλύειν to dissolve].

 1 Causing or pertaining to an alterative effect; causing catalysis.

 2. An alterative or specific medicine.
- catalyzator (kat"al-i-za'tor). Same as catalyzer.
- catalyzer (kat'al-i-zer). A substance producing catalysis; a substance which modifies the velocity of a chemic or physical process. **negative c.**, a substance that retards the action of a catalyzer by acting on the substratum. **positive c.**, a catalyzer which accelerates the velocity of a reaction.
- catamenia (kat-ah-me'ne-ah) [Gr. κατά along with + μήν month]. The monthly uterine discharge; menstruation, or the menses.
- catamenial (kat-ah-me'ne-al). Pertaining to the menses or to menstruation.
- **catamnesis** (kat-am-ne'sis) The history of a patient after he is first seen by the physician, including subsequent examinations, observations on the course followed by the disease, etc.
- **catapasm** (kat'ah-pazm) [Gr. κατάπασμα]. A powder to be applied to the surface.
- **cataphasia** (kat-ah-fa'ze-ah) [Gr. κατά over + φάσις speech]. A speech disorder in which the patient constantly or repeatedly utters the same word or phrase.
- cataphora (kat-af'o-rah) [Gr. καταφορά lethargy]. Lethargy with intervals of imperfect waking; coma somnolentium.
- **cataphoresis** (kat"ah-fo-re'sis) [Gr. κατά across + φόρησις bearing]. The introduction of medicines through the unbroken skin, or through the dentinal tubules of the teeth, by means of an electric current **anemic c.**, that in which the drug is confined in any particular part, as by compression with an Esmarch bandage.
- cataphoretic (kat-af-o-ret'ik). Of, or pertaining to, cataphoresis.
- **cataphoria** (kat-af-o're-ah) [Gr. κατά down + φέρειν to bear]. A downward turning of the visual axis.
- **cataphoric** (kat-ah-for'ik). Pertaining to cata phoresis or to cataphora.
- cataphrenia (kat-ah-fre'ne-ah) [Gr. κατά down + φρῆν mind]. A state of mental debility of the dementia type which tends to eventuate in recovery.

cataphylaxis (kat-ah-fil-ak'sis) [Gr. κατά down + φθλαξις guard]. τ. The movement of leukocytes and antibodies to the locality of an infection (Wright). 2 A breaking down of the body's natural defense to infection (Bullock and Cranmer).

cataplasia (kat-ap-la'se-ah) [Gr. κατά down + πλάσσειν to form]. Reversionary metamorphosis; a form of atrophy in which the tissues revert to earlier and more embryonic conditions.

cataplasis (kat-ap'las-is). Cataplasia.

cataplasm (kat'ah-plazm) [L. cataplas'ma; Gr. κατάπλασμα]. A poultice or soft external application, often medicated. emollient c. See species, emollient.

cataplasma (kat-ap-laz'mah). L. for cataplasm.
c. fermen'ti, a poultice containing yeast.
c. kaoli'ni, a preparation of kaolin, glycerin, boric acid, thymol, methyl salicylate, and oil of pepper mint: used as an antiphlogistic poultice and surgical dressing.

cataplexis, cataplexy (kat-ah-pleks'is, kat'ap-leks-e). A state of muscular rigidity produced by sudden shock or extreme fear.

catapophysis (kat-ap-of'is-is). A process of bone or of brain matter.

cataract (kat'ah-rakt) [L. catarac'ta, from Gr. καταρρηγυύναι to rush down]. An opacity of the crystalline eye-lens or of its capsule adherent c., a cataract with adhesion between the iris and the lens-capsule. after-c., a recurrent capsular cataract anterior polar c., one seated at the center of the anterior capsule of the lens arborescent c., one in which the opacity has a branched appearance. aridosiliculose c., aridosiliquate c. Same as siliquose c axial c. Same as nuclear c. axillary c. Same as spindle c. black c., one with a dark-colored opacity. blood c., blocking of the lens by a blood-clot. bottle-makers' c. See glassblowers' c. calcareous c., one containing a chalky deposit. capsular c., one which consists of an opacity in the capsulolenticular c., that which is seated partly in the capsule and partly in the lens. caseous c., cheesy c., a hypermature cataract which has undergone a cheesy degeneration. central c., opacity of the center of the eye-lens com**plete c.**, that form which involves the whole lens. complicated c., cataract due to disease of other parts of the eye. congenital c., one which originates before birth. contusion c., one which is due to shock or to injury of the eyeball. **cortical c.**, a stellate opacity in the cortical layers of the lens. diabetic c., one which occurs as a complication of diabetes. discission of c., the rupturing of the capsule, so that the aqueous humor may gain access to the lens. dry-shelled c. Same as suliquose c. fibroid c., a variety of capsular cataract which does not affect the lens. fluid c., a hypermature cataract in which the lens has become a milky fluid. fusiform c., a spindle-shaped opacity extending from the anterior to the posterior pole of the lens. general c., a cataract in which the opacity affects both the cortex and nucleus of the lens. glassblowers' c., cataract in glassblowers, due to exposure to intense heat and light. glaucomatous c., opacity which is dependent upon an attack of glaucoma. green c., a greenish opacity, sometimes glaucomatous, and sometimes due to a slight lack of transparency in the media. hard c., one with a hard nucleus. hypermature c., one in which the lens has become either solid and shrunken or soft and liquid. immature c., includes the incipient and intercurrent varieties, or any cataract which affects only a part of the lens or capsule incipient c., any cataract in its early stages, or one which has sectors of opacity with clear spaces intervening infantile c., a lamellar cataract of early childhood, commonly associated with rickets or convulsions mescent c., one with an opaque and swollen

lens. juvenile c., a soft cataract in a young person. lacteal c. Same as fluid c. lamellar c., opacity which affects certain layers only between the cortex and nucleus of the lens. lenticular c., opacity of the lens not affecting the mature c., one in which the lens is completely opaque, and is separable from its capsule membranous c., an originally fluid cataract which has become reduced to a pellicle by loss of water. milky c. Same as fluid c. mixed c. Same as general c. morgagnian c., a fluid cataract with a hard nucleus. naphthalinic c., cataract caused by the injection of naphthalin. nuclear c., one in which the opacity nuclear c., one in which the opacity is seated in the central nucleus of the lens. overripe c. Same as hypermature c. partial c., any cataract which affects only a part of the lens: it may be central or fusiform. perinucleus of the lens. polar c. See anterior polar c. and posterior polar c. posterior polar c., a capsular cataract with its seat at the center of the posterior pole. **primary c.**, a cataract developing independently of any other disease. **progressive c.**, one which, if not removed, passes through three stages—the immature, the mature, and the hypermature, and becomes total. punctate c., one made up of a collection of dotlike opacities **pyramidal** c., a conoid anterior polar cataract with its apex pointing forward. **ripe** c. Same as mature c sanguineous c., a blood-clot in the prepupillary opening. secondary c., a cataract that returns after it has once been removed by operation. **sedimentary c.**, a soft cataract in which the denser parts have gravitated downward senile c., a hard opacity of the nucleus of the lens of the eye, occurring in the aged. siliculose c., siliquose c., a cataract in which there is absorption of the lens, with calcareous deposit in the capsule, so that the atrophied lens resembles a silique. Called also dry-shelled c, aridosiliculose c, and cataracta aridosiliquata. soft c., one with no hard nucleus. spindle c., a cataract characterized by a spindle-shaped opacity reaching through the capsule in an anteroposterior direction. stationary c., opacity of the lens which does not increase in extent. **stellate c.** See cortical c. total c., one which involves and finally destroys the entire lens. traumatic c., cataract following an injury. tremulous c., one attended by a tremulous movement of the pupil and iris. unripe c. Same as immature c. zonular c. 1. Same as lamellar c. 2. One which involves the zonula.

cataractous (kat-ar-ak'tus). Of the nature of cataract; affected with a cataract.

cataria (kat-a're-ah) [L for "catnip"]. The leaves and tops of Nep'ela cata'ria, or catnip, a labiate plant: a carminative and mild nerve stimulant. Dose of the infusion, 2 dr. (7.5 c c.).

catarrh (kat-ahr') [L. catar'rhus, from Gr. καταρρείν to flow down]. Inflammation of a mucous membrane, with a free discharge (Hippocrates); especially such inflammation of the air-passages of the head and throat. acute c. is in two stages, the first dry, with a congested and swollen mucous membrane; the second moist, with abnormally free discharge of mucus, which is more or less altered in quality. atrophic c., chronic rhinitis with wasting of mucous and submucous tissues. autumnal c., hay-fever. Bostock's c., hay-fever. bronchial c., acute bronchitis. chronic c. is of two kinds, the atrophic and the hypertrophic dry c. (Fr. catarrhe sec), catarrh with scanty viscid secretion (Laennec). endocervical c., endocervicitis. epidemic c., influenza or grip. Fruehjahr's c., vernal conjunctivitis. gastric c., gastritis. hypertrophic c., chronic catarrh which results in irregular, and sometimes papillary, thickening of the mucous and the submucous tissues. intestinal c., endocenteritis. Laennec's c., a kind of asthmatic bronchitis, with viscous, pearly expectoration.

laryngeal c., laryngitis. lightning c., a rapidly developing and severe catarrh. nasal c., that which affects the nasal passages. pharyngeal c., pharyngitis with a moist or watery dispostnasal c., chronic rhinopharyngitis. Russian c., influenza. spring c., spring conjunctivitis. suffocative c., asthma. uterine vernal c., conjunctivitis prevailing during the spring. vesical c., cystitis with a discharge of mucus from the bladder.

catarrhal (kat-ar'al). Of the nature of or pertaining to catarrh.

cațastaltic (kat-as-tal'tik) [Gr. κατασταλτικός]. 1. Inhibitory; restraining. 2. An agent which tends to restrain or check any process.

catastate (kat'as-tät) [Gr. κατά down + Ιστάναι to stand]. A result of catabolism; any substance or condition resulting from a catabolic process.

catastatic (kat-as-tat'ik). Of the nature of or pertaining to a catastate.

catatasis (kat-at'as-is) [Gr. "stretching"]. tension applied for the reduction of a dislocation or fracture

catathermometer (kat-ah-ther-mom'et-er). Katathermometer See under thermometer.

catatonia, catatony (kat-at-o'ne-ah, kat-at'o-nē) $[Gr. \kappa a \tau \dot{a} \text{ down} + \tau \dot{b} v o_{S} \text{ tension}]$. A form of dementia præcox in which the patient passes from melancholia to mania and thence to dementia and physical decay. The disease is attanded with the sumptoms of these various stages. tended with the symptoms of these various stages.

catatoniac, catatonic (kat-at-o'ne-ak, kat-aton'ik). Pertaining to catatonia.

catatricrotic (kat"ah-tri-krot'ik). Having a second and third expansion after the principal one used of the descending wave of a pulsetracing, or of the pulse itself.

catatricrotism (kat-ah-trik'ro-tizm) [Gr. κατά down + $\tau \rho \epsilon \hat{\imath}$ s three + $\kappa \rho \delta \tau \sigma s$ beat]. The quality of being catatricrotic.

catatropia (kat-at-ro'pe-ah) [Gr. κατά down + τρέπειν to turn]. Same as cataphoria.

cataxia (kat-ak'se-ah) [Gr. καταξια dissociation]. The separation or breaking up of bacterial associations; especially in those cases in which the association is pathogenic, but the individual bacterial species are not

catechin (kat'ek-in). Catechuic acid; a crystalline principle, $C_{19}H_{18}O_8 + 5H_2O$, from catechu.

catechol (kat'ek-ol). Pyrocatechin.

catechu (kat'e-ku). A powerfully astringent extract from the leaves and twigs of the rubiaceous plant, Ourupa'ria gam'bir: used in diarrhea, and locally for sore throat, etc Dose, 1-30 gr. (0 060-2 gm.); of compound tincture, 10-60 min. (0.666-4 c.c); of tincture, 1 dr. (4 c.c.); of compound powder, 20-40 gr. (1.25-2.5 gm).

catelectrotonus (kat"el-ek-trot'o-nus) [Gr. κατά down + electrotonus]. Increase of irritability of a nerve or muscle when near the cathode.

catenating (kat'en-a-ting) [L. cate'na a chain]. Forming part of a chain or complex of symp-

catenoid (kat'en-oid) [L. cate'na chain]. Arranged like a chain; resembling a chain.

catenulate (kat-en'u-lat). Same as catenoid.

catgut (kat'gut). Sheep's intestine prepared as a cord, asepticized, and used as a ligature and in drainage. chromic c., chromicized c., catgut sterilized and impregnated with chromium triformalin c., catgut impregnated with formalin by boiling in an alcohol-formalin solution. i. k. i. c., catgut treated with a solution of 1 part of iodin in 100 parts of a potassium iodid solution. iodin c., catgut that has been immersed in a solution of iodin and iodid of potassium. iodochromic c., catgut treated with a solution of iodin, potassium iodid, and potassium dichromate. silverized c., catgut impregnated with silver to give it increased strength and resisting qualities.

Cath. Abbreviation for L. cathar'ticus, cathartic.

Cath'a ed'ulis. A plant of Arabia and Abyssinia whose leaves and twigs are employed in preparing a stimulating beverage called khat.

catharma (kath-ar'mah) [Gr]. The refuse of sacrifice: used as remedies in Greek medicine.

catharmos (kath-ar'mos) [Gr]. Incantations (hymns) against disease.

catharsis (kath-ar'sis) [Gr κάθαρσις]. 1. A cleansing or purgation. 2 Freud's treatment of psychoneuroses by encouraging the patient to tell every-thing that happens to be associated with a given train of thought, thus securing a "purging" of the mind from the original affect-memory which is the cause of the symptoms. Called also psychocatharsis and abreaction.

cathartic (kath-ar'tik) [Gr. καθαρτικόs]. 1. Purgative or causing purgation. 2. A medicine that quickens and increases the evacuation from the bowels and produces purgation. See purgative. c. method. See catharsis (2d def.).

cathartin (kath-ar'tin). A bitter principle from senna and from jalap, and another from Rham'nus cathar'ticus, or buckthorn.

catheter (kath'e-ter) [Gr. καθετήρ]. A tubular surgical instrument for discharging fluids from a cavity of the body or for distending a passage. Bozeman's c., Bozeman-Fritsch c., a double-current uterine catheter. c. à demeure, a catheter that is held in position in the urethra. elbowed c., one with a sharp bend near the beak: used principally in cases of enlarged prostate. eustachian c., an instrument for extending the eustachian tube and for treating diseases of the middle ear. faucial c., a eustachian catheter to be used through cial c., a eustachian catheter to be used through the fauces. female c., a short catheter for the female urethra. c.-fever, a febrile attack due to injury in passing a catheter. Fritsch's c. Bozeman-Fritsch catheter. c.-gage, a plate with graduated perforations for measuring the diameter of catheters. Gouley's c., a solid, curved instrument to be passed through a urethral stricture. Itard's c., a variety of eustachian catheter. c.-life, the condition in which a patient is more or less dependent on the use of a catheter for the discharge of his urine. lobstertail c., one with three joints at the tip. Mercier's c., a flexible catheter elbowed at the end. used in hypertrophied prostate a catheter of soft india-rubber prostatic c., a catheter having a short angular tip for passing an enlarged prostate. railway-c., a straight elastic catheter with an open end to be introduced with a filiform guide in cases of stricture. Schrötter's c., a hard-rubber catheter of varying caliber, used for dilating laryngeal strictures. self-retaining c., a catheter so constructed as to be retained at will and effect a drainage of the bladder. Squire's c., a vertebrated catheter. two-way c., a form used in irrigation. vertebrated c., a catheter made in small sections fitted together so as to be flexible. winged c., a catheter with two projections on the end to retain it in the bladder.

catheterism, catheterization (kath'et-er-izm, kath"et-er-iz-a'shun). The employment or passage of a catheter.

catheterostat (kath-e'ter-o-stat). A holder for containing and sterilizing catheters.

catheterpin (kath-e-ter'pin) A proprietary prophylactic irrigation for syphilis, consisting of mercury oxycyanate, glycerin, tragacanth, and distilled water.

cathisophobia (kath-is-o-fo'be-ah) [Gr. καθίζειν to sit down + φόβος fear]. See akathisia.

cathodal (kath-o'dal). Of or pertaining to the cathode. c. closure clonus (CCCl), clonic mus-

236

cular contraction occurring at the cathode when the electric circuit is closed. C. Closure contraction, includes cathodal closure clonus and cathodal closure tetanus. C. Closure tetanus (CCTe), tetanic muscular contraction occurring at the cathode when the electric circuit is closed. C. opening clonus (COCl), clonic muscular contraction taking place in the muscles at the cathode when the circuit is opened or broken. C. opening contraction, includes cathodal opening clonus and cathodal opening tetanus. C. opening tetanus (COTe), tetanic muscular contraction taking place at the cathode when the electric current is opened or broken.

cathode (kath'ōd) [Gr. κατά down + ὁδός way]. The negative electrode or pole of a galvanic circuit; the electrode through which a current leaves a nerve or other substance. c.-rays. See under ταν.

cathodic (kath-od'ik).
1. Pertaining to or emanating from a cathode.
2. Centrifugal, as applied to the course of nervous influence.

cathodograph (kath-od'o-graf). A skiagram. catholicon (kath-ol'ik-on) [Gr. "universal"]. panacea or universal medicine.

catholyte (kath'o-līt). That portion of an electrolyte that adjoins the cathode.

cation (kat'e-on) [Gr. κατίων descending]. The element which passes to the cathode in electrolysis; an electropositive element (opposed to anion). Cations include all the metals and hydrogen. In reactions cations are indicated by a dot or a plus sign at the upper right-hand corner of the symbol, as H or H+.

cativi (kat-e've). A parasitic skin disease of Central America, resembling pinta.

catlin, catling (kat'lin, kat'ling). A long, straight, sharp-pointed knife used in amputations.

catmint. See cataria.

catnep, catnip (kat'nep, kat'nip). See cataria. catophoria (kat-o-fo're-ah). See katotropia.

catoptric (kat-op'trik) [Gr κατοπτρικόs]. Pertaining to a mirror or to reflected light. See *test*

catoptrics (kat-op'triks). That branch of physisc treating of reflected light.

catoptrophobia (kat-op-tro-fo'be-ah) [Gr. κάτοπτρον mirror + φόβος fear]. Morbid dread of mirrors

catoptroscope (kat-op'tro-sköp) [Gr. κάτοπτρον mirror + σκοπεῖν to view] An instrument for examining objects by reflected light.

catotropia (kat-o-tro'pe-ah). See katotropia.

catramin (kat-ram'ın). A terebinthinate essential oil: stimulant, diuretic, and expectorant.

cat's-ear (kats'ēr). A deformed ear resembling that of a cat.

cat's-eye, amaurotic. Glioma of the retina.

cat's-purr (kats'pur). A purring heart-sound indicative of valvular disease.

cattle-plague. See under plague.

cattle-tick. See Boophilus

cauda (kaw'dah) [L "tail"]. Any tail-shaped appendage. c. cerebel'li, the vermiform process of the cerebellum. c. epididym'idis, a tail-like part of the epididymis. c. equi'na [L. "horse's tail"], the aboral termination of the spinal cord, consisting of the aggregated sacral and coccygeal nerves. c. hel'icis, the inferior and dorsal parts of the helix of the ear. c. pancreastoward the left. c. stria'ti, the narrow portion of the nucleus caudatus.

caudad (kaw'dad). In a caudal direction; toward a cauda or tail.

caudal (kaw'dal). Of or pertaining to a cauda.

caudalward (kaw'dal-ward). Toward the caudal or posterior end.

Caudamo ba sinen'sis. A species of ameba, found in dysentery stools in China, characterized by its attenuate posterior end drawn out in a tail-like caudostyle.

caudate (kaw'dāt) [L. cauda'tus] Having a tail.
caudatolenticular, caudolenticular (kaw-da"-to-len-tik'u-lar, kaw"do-len-tik'u-lar). Pertaining to the caudate and lenticular nuclei of the striatum.

caudatum (kaw-da'tum) [L.]. The nucleus caudatus.

caudex (kaw'deks), pl. cau'dices [L.]. A stem or stem-like part. c. cere'bri, the crura cerebri.

caudiduct (kaw'de-dukt) [L cau'da tail + du'cere to draw] To draw in a caudal direction.

caudocephalad (kaw-do-sef'al-ad) [L cau'da tail + Gr. $\kappa\epsilon\varphi a\lambda\dot{\eta}$ head + ad toward] Both caudad and cephalad.

caul (kawl) I The great omentum or epiploon.
2. A piece of amnion which sometimes envelops a child's head at birth

cauliflower excrescence (kaw'lif-lowr) A form of epithelioma of the cervix uteri.

caulophyllin (kaw-lo-fil'in). A resinous precipitate obtained from Caulophyl'lum thalictroi'-des. Dose, 2-5 gr (0 13-0.324 gm).

caulophyllum (kaw-lo-fil'um) [Gr. καυλός stem + φύλλον leaf] The rhizome and roots of C. thalictroi'des, a North American berberidaceous plant. It is sedative, diaphoretic, and antispasmodic. Dose, 5-30 gr. (0 324-1 95 gm).

caumesthesia (kaw-mes-the'ze-ah) [Gr καῦμα burn + αἴσθησις sensation] A condition in which, with a low temperature, the patient experiences a sense of burning heat

causal (kaw'zal). Pertaining to a cause, directed against a cause.

causalgia (kaw-zal'je-ah) [Gr. καυσός heat + ἄλγος pain] A neuralgia characterized by intense local sensation as of burning pain

cause (kawz) [L. cau'sa] That which brings about any condition or produces any effect constitutional c., one which resides within the body and is not local exciting c., one which leads directly to an attack of disease. immediate c., an exciting cause that is not remote or secondary, any cause which is operative at the beginning of an attack local c., one which is not general or constitutional. predisposing c., anything which renders a person hable to an attack of disease without actually producing it. primary c., the principal or original cause of an attack. proximate c., that which immediately precedes and produces a disease remote c., any cause which is not immediate in its effect, a predisposing, secondary, or ultimate cause. secondary c., one which helps to bring on an attack of disease. specific c., a cause which will produce some special or specific disease. ultimate c., one which may be considered the original cause in point of time, the most remote cause.

caustic (kaws'tik) [L. caus'ticus; Gr. καυστικόs].

1. Burning or corrosive, destructive to living tissues. 2. Having a burning taste 3 An escharotic or corrosive agent Churchill's iodin C., a caustic solution of iodin and potassium iodid in water. Filhos's C., 5 parts of potassium hydroxid and 1 part of quicklime. Landolfi's C., a compound containing chlorids of antimony, bromin, gold, and zinc Lugol's C., 1 part each of iodin and potassium iodid dissolved in 2 parts of water lunar C., silver nitrate. mitigated C., silver nitrate diluted with potassium intrate. Plunket's C., a caustic paste made of 60 parts of arsenic, 100 of sulphur, and 480 each of Ranunculus acris and Ranunculus flammula. Rousselot's C., a caustic containing red mercuric sulphid, burnt sponge, and arsenous acid. Vienna C., caustic potash with lime. zinc C., a mixture of 1 part of zinc chlorid and 3 parts of flour.

causticize (kaws'tis-iz). To render caustic.

causticum (kaws'tik-um). A homeopathic preparation made by distilling a mixture of slaked lime and potassium disulphate.

cauter (kaw'ter) [Gr. καυτῆρ]. A metallic instrument to be heated and used in actual cautery.

cauterant (kaw'ter-ant). 1. Any caustic material or application. 2 Caustic.

cauterization (kaw"ter-iz-a'shun). The application of a cautery or caustic.

cautery (kaw'ter-e) [L caute'rium; Gr καυτήριον].

1 The application of a caustic substance or of a hot iron 2. A substance or hot iron used in cauterization. actual c. 1. Fire, a lens, a redhot iron, or the moxa, used as a cauterizing agent.
2. The application of an agent that actually burns the flesh. button-c., an iron disk with a handle, to be used as a cautery chemical c., cautery by means of an escharotic chemical substance cold **c.**, cautery produced by the application of carbon dioxid Corrigan's c., a form of button-cautery. dento-electric c., a form of galvanocautery for dentists' use electric c., galvanic c. See galvanocautery gas-c., cauterization by means of a specially arranged jet of burning gas Paquelin's c., a platinum point for use in cauterizing, hollow and filled with platinum sponge, through which a heated hydrocarbon vapor is blown Percy c. an electric cautery introduced into the uterus and maintained at a temperature not sufficient to cause any charring of the tissues but merely to cook the whole area, the heat being sufficient to destroy malignant cells without devitalizing healthy tissue—used in inoperable carcinoma of the cervix Called also cold iron method potential c., cauterization by an escharotic without applying heat solar c., cauterization by means of the rays of the sun concentrated with a lens or mirror steam c. See atmocausis virtual c. Same as potential c.

cava (ka'vah) [L]. A vena cava.

caval (ka'val). Pertaining to a vena cava.

cavalry-bone (kav'al-re) See under bone

cavascope (kav'as-kōp) [L ca'vum hollow + Gr. σκοπείν to view] An instrument for illuminating and examining a cavity.

cavatine (kav'at-ēn) A solution of trinitrocellulose in methyl alcohol, which forms an insoluble varnish used for painting the pulp-cavity of a tooth preparatory to filling it

cavern (kav'ern). A pathologic cavity, such as occurs in the lung in tuberculosis

caverniloquy (kav-er-nil'o-kwē) [L. caver'na cavity + lo'qui to speak]. The low-pitched pectoriloquy indicative of a cavity.

cavernitis (kav-er-ni'tis). Inflammation of the corpus cavernosum

cavernoma (kav-er-no'mah), pl. cavernoma'ta. Cavernous angioma; a vascular tumor with large blood-filled spaces c.lymphat'icum. Same as lymphangioma cavernosum.

cavernous (kav'er-nus) [L. caverno'sus]. Containing caverns or hollow spaces.

caviblen (kav'ib-len). Bougies made of a combination of silver with uranin, used in treatment of gonorrhea.

cavilla (kav-il'ah). The sphenoidal bone.

cavitary (kav'it-a-re). 1. Characterized by the presence of a cavity or cavities. 2. Any ento-zoon with a body-space or alimentary canal.

cav'itas glenoida'lis [L.]. The glenoid cavity.
 cavitation (kav-it-a'shun). The formation of cavities, as in pulmonary tuberculosis.

Cavite fever (kah-ve-ta') [the name of a town on Manila Bay, Philippine Islands]. See fever.

cavitis (ka-vi'tis). Inflammation of a cava; celophlebitis. cavity (kav'it-e) [L. ca'vus hollow] Any hollow place or space; especially a space within the body or in one of its organs. In dentistry, a hollow or hole in a tooth produced by caries. abdominal c., the space within the peritoneum and abdominal walls amniotic c., the closed sac between the embryo and the amnion, containing the liquor amnii. ankyroid c., the descending cornu of the lateral ventricle. arachnoid c., the space be-

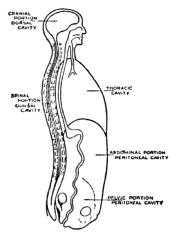

Diagram of the body cavities (Williams).

tween the arachnoid membrane and the dura mater. v. Baer's c., the segmentation cavity of the blastoderm. buccal c. 1. The space between the lips and the gums and teeth, the vestibulum oris. 2 A cavity of decay on the buccal surface of a tooth. **complex c.**, a tooth cavity which involves more than one surface of the tooth **c. of** concha, the hollow portion of the concha forming the vestibule to the external auditory meatus. cranial c., the cotyloid c., the acetabulum. hollow within the skull. cutigeral c., the depression in the inner upper edge of a horse's hoof.

digital c., the posterior cornu of the lateral ventricle. epidural c., the space between the walls of the spinal canal and the dura mater of the cord. **fissure** c., a tooth cavity having its origin in a fissure. **glenoid** c., a cavity in the head of the scapula for articulation with the humerus. hemal c., the coclom. lymph-c's, the larger lymph-spaces and cisterns Some writers regard all the serous and synovial cavities as lymphcavities mastoid c., a large space sometimes formed by the coalescence of the mastoid cells; also Meckel's c., a cavity bethe mastoid antrum tween the two layers of the dura mater at the end of the petrous portion of the temporal bones. nasal c., the nasal fossa occlusal c., a cavity of decay on the occlusal surface of a tooth. oral c., the cavity of the mouth or cavum oris. pelvic c., the space within the walls of the pelvis. pericardiac c., the space between the heart and pericardium. peritoneal c., the space within the parietal peritoneum containing all the abdominal organs except the kidney. pharyngonasal c., the nasopharynx. pit c., a tooth cavity beginning in a pit. pleuroperitoneal c., the cœlom, or body cavity. preperitoneal c., the loose subperitoneal tissue in front of the bladder. proximal c., a cavity of decay on the proximal surface of a tooth. **pulp c.**, the central cavity or chamber in a tooth which contains the dental pulp. The portion of the pulp cavity within the crown is called the *pulp chamber*, and the portion within the root, the *root canal*. **Retzius's c.**, the preperitoneal cavity. Rosenmüller's c., a depression on either side of the pharyngeal opening of the eustachian tube. segmentation c., the cavity formed in a fertilized ovum by segmentation: the blastocele. **serous c.**, any cavity, like that

inclosed by the peritoneum or pleura, not communicating with the external atmosphere, and secreting serum; some writers consider these cavities as large lymph-spaces. **sigmoid c.**, either of the two depressions (greater and lesser) in the head of the ulna for articulation with the humerus and radius; also a depression at the distal end of the radius for its articulation with the ulna. **somatic c.**, the cœlom. **splanchnic c.**, one of the three great cavities of the body—cranium, chest, and abdomen. **subgerminal c.** 1. The yolk-cavity or space beneath the germ in the early ovum. 2. The segmentation cavity, or blastocele. **thoracic c.**, the cavity of the chest; that part of the body cavity situated cephalad from the diaphragm. **visceral c.**, the cavity of the body containing the viscera. **yolk-c.**, the open space found within the yolk.

cavosurface angle (ka-vo-ser'vis). See under angle.

cavovalgus (ka-vo-val'gus). Cavus complicated with valgus.

cavum (ka'vum) [L. "a hollow"]. Any open space or cavity. c. abdom'inis [B N A], the abdominal cavity. c. articula're [B N A], a joint cavity. c. con'chæ [B N A], the cavity of the concha. c. epidura'le [B N A], the epidural cavity. c. meck'lii, Meckel's cavity. c. mediastina'le ante'rius [B N A], the anterior mediastinum. c. mediastina'le poste'rius [B N A], the posterior mediastinum. c. medulla're, the medullary cavity of a bone. c. na'si [B N A], the nasal fossa. c. o'ris [B N A], the cavity or hollow of the mouth. c. pel'vis [B N A], the pelvic cavity. c. peritonæ'i [B N A], peritoneal cavity. c. plu'ræ [B N A], the pleural cavity. c. ret'zii, the space formed when the fold of the peritoneum in front of the bladder is raised by distention of the bladder. c. sep'ti pellu'cidi [B N A], the fifth ventricle. c. subarachnoida'le [B N A], the subarachnoid space c. subdura'le [B N A], the subdural space. c. thora'cis [B N A], the thoracic cavity. c. tym'pani [B N A], the cavity of the tympanum. c. u'teri [B N A], the uterine cavity. cavus (ka'vus). Same as talipes cavus.

cayaponin (ka-yap'o-nin). A purgative alkaloid from Cayapo'na globulo'sa, a cucurbitaceous plant of South America. Dose, 1 gr. (0.06 gm).

Cayonne pepper (kah-yen'). Same as capsicum. cayor-worm. See Ochromyia anthropophaga.

Cazenave's disease (kaz-navs') [P. L. Alphée Cazenave, French dermatologist, 1705-1877]. I Lupus erythematosus. 2. Pemphigus foliaceus. C's lupus, lupus erythematosus. C's vitiligo, area Celsi.

Cb. Chemical symbol of columbium.

C. B. Abbreviation for Chirurgiæ Baccalaureus, Bachelor of Surgery.

c.c., Cc. Abbreviations for cubic centimeter.

CCC. Abbreviation for cathodal closure contraction.
CCCI. Abbreviation for cathodal closing contraction

CCl4. Tetrachlormethane.

CCla.CHO. Chloral.

CCl3.CH(OH)2. Chloral hydrate.

c.cm., Ccm. Abbreviations for cubic centimeter. C.C.S. Abbreviation for casualty clearing station. CCTe. Abbreviation for cathodal closure tetanus.

Cd. Symbol of cadmium; also abbreviation for caudal or coccygeal: used in vertebra! formulas.

C-E mixture or method. See under mixture.

Ce. Symbol of cerium.

ceanothin (se-an-o'thin). A purgative extractive from Ceano'thus america'nus: used in dysentery, syphilis, etc. Dose, 1-2 gr. (0.065-0.13 gm.).

cearin (se'ah-rin) [ceara a place-name]. A mixture of carnauba wax, 25 parts, with ceresin, 75 parts: used in ointments. **ceasmic** (se-as'mik) [Gr. κέασμα chip]. Characterized by the persistence after birth of embryonic fissures.

cebocephalia (se''bo-sef-a'le-ah) [Gr. κῆβος monkey + κεφαλή head]. A monkey-like deformity of the fetal head, with absence of the nose.

cebocephalus (se-bo-sef'al-us). See cebocephalia.

A monster-fetus with defective nose and the eyes close together.

cecal, cæcal (se'kal) [L. cæcal'is]. 1. Ending in a blind passage 2. Pertaining to the cecum.

cecectomy, **cæcectomy** (se-sek'to-me) [ιe'cum + Gr. ξκ out + τομή a cutting]. Surgical removal of a part of the cecum.

cecitis, cæcitis (se-si'tis). Inflammation of the cecum.

cecocoloplicopexy (se"ko-ko"lo-pli'ko-pex-e). An operation for fixing the cecum and ascending colon.

ceco-ileostomy (se"ko-il-e-os'to-me) [cecum ileum + Gr. στόμα mouth or opening]. The operation of making an opening through the abdominal wall into the ileum at the ileocecal valve.

cecopexy (se'ko-peks-e) [$cecum + Gr. \pi \hat{\eta} \xi \iota s$ fixation] The operation of fixing the cecum to the abdominal wall to cure excessive mobility of the part.

cecoplication (se"ko-pli-ka'shun) [L. ca'cum + plu'ca fold]. The operation of taking a fold in the cecum to correct plosis of the part.

cecoptosis (se-kop-to'sis) [cecum + Gr. πτωσις falling] Ptosis or falling of the cecum

cecosigmoidostomy (se"ko-sig-moi-dos'to-me). The surgical formation of an anastomosis between the cecum and the sigmoid.

cecostomy, cæcostomy (se-kos'to-me) [cecum + Gr. $\sigma\tau\delta\mu\alpha$ mouth]. The surgical creation of an artificial anus leading into the cecum.

cecotomy (se-kot'o-me) [cecum + Gr. τομή cut].

The operation of cutting into the cecum.

cecum, cæcum (se'kum) [L. cæ'cum blind, blind gut] r. The dilated intestinal pouch into which open the ileum, the colon, and the appendix vermiformis. 2. Any blind pouch or culdesac. hepatic c., a pouching of the embryonic intestine which develops into the liver c. mo'bile, abnormal mobility of the cecum and lower portion of the ascending colon. c. vestib'uli, the lower blind end of the scala vestibuli

codar (se'dar) [L. ce'drus; Gr. κέδρος]. A name for many trees, principally coniferous trees, of the genera Ce'drus, Junip'erus, and Cupres'sus, etc., but misapplied also to trees of the genus Ced'rela, etc. c.-oil. 1. An oil from Junip'erus oxyce'drus: used by the ancients in embalming and in preserving books. 2. The volatile oil of Junip'erus virginia'na: used in microscopy as a clarifying agent. 3. A volatile oil distilled from the leaves of Cedronel'la triphyl'la, a labiate plant of Europe.

cedar-wood oil (se'dar-). A volatile oil from the wood of Ced'rela odora'ta, a tree of tropical America.

Cedrela (sed'rel-ah). A genus of trees of the order Melia'cee, mostly tropical, and misnamed cedar. C febrif'uga, of Java, and other species, have valuable medicinal qualities.

cedrene (sed'ren). A terpene from the oil of red cedar; also any terpene of the same composition with it.

cedrin (se'drin). A bitter principle, in yellow crystals, from the seeds of Sima'ba ce'dron: febrifuge

cedron (se'dron). A tree of tropical America, Sima'ba ce'dron: the seeds are locally used in medicine and the wood is febrifugal. Dose of rasped wood, 10-30 gr. (0.65-1.04 gm.).

Cedronella (sed-ro-nel'ah). A genus of fragrant labiate plants growing in Europe and North America: antispasmodic and carminative.

- cehasol (se-ha'sol). A dark brown viscous substance obtained by the fractional distillation of shale and used in the treatment of skin diseases.
- **Cel.** Abbreviation for *Celsius*. (The Celsius thermometric scale)
- cel (sel). A unit of velocity, being the velocity of one centimeter per second.
- celandine (sel'an-din). See Chelidonium.
- celarium (se-la're-um). See cælarium.
- celastrin (se-las'trin). A crystalline substance obtainable from Celas'trus scan'dens: said to be poisonous.
- Celastrus scandens (sc-las'trus). The staff-tree, bittersweet, or waxwork; a climbing shrub of the United States; diaphoretic, emetic, and alterative. Dose of fluidextract, 1-2 dr. (3 89-7.8 c.c.)
- celation (se-la'shun) [L. cela're to conceal]. The concealing of pregnancy or of the birth of a child.
- -cele (-sēl) [Gr. κήλη hernia]. A suffix signifying a tumor or swelling.
- celectome (se'lek-tōm) [Gr. κήλη tumor + ἐκτομή excision]. An instrument for removing a piece of tissue from a tumor for examination.
- celenteron (se-len'ter-on). See archenteron.
- celerina (sel-e-ri'nah). A proprietary nerve medicine, said to contain celery, coca, kola, etc.
- celery (sel'er-e). See A pium.
- celiac, cœliac (sc'le-ak) [Gr. κοιλία belly]. Pertaining to the abdomen.
- celialgia, cœlialgia (se-le-al'jc-ah) [Gr. κοιλία belly + ἄλγος pain]. Pain in the abdomen.
- celiectasia (se''le-ek-ta'ze-ah) [Gr. κοιλία belly + ξκτασις distention]. Excessive size of the abdominal cavity.
- celiectomy (se-le-ek'to-me) [Gr. κοιλία belly + ἐκτομή excision]. Surgical removal of any abdominal organ.
- **celiocentesis** (se"le-o-sen-te'sis) [Gr. κοιλία belly + κέντησις puncture] Puncture of the abdomen.
- **celiocolpotomy** (se''le-o-kol-pot'o-me) [Gr. κοιλία belly + κόλπος vagina + τομή cut]. Vaginal celiotomy.
- **celio-elytrotomy** (se''le-o-el-it-rot'o-me) [Gr. κοιλία belly + ξλυτρον sheath + τομή cut]. Vaginal celiotomy.
- **celio-enterotomy** (se"le-o-en-ter-ot'o-me) [Gr. κοιλία belly + enterotomy]. Incision through the abdominal wall into the intestine
- celiogastrotomy (se''le-o-gas-trot'o-me) [Gr. κοιλία belly $+ \gamma a \sigma \tau \dot{\eta} \rho$ stomach]. The opening of the stomach through an abdominal section.
- celiohysterectomy (se"le-o-his-ter-ek'to-me) [Gr. κοιλία belly + hysterectomy]. Excision of the uterus by an abdominal incision; the Porrocesarean section.
- **celiohystero-oöthecectomy** (se"le-o-his"ter-o-o-o-the-sek'to-me). Excision of the uterus and ovaries through an abdominal incision.
- celiohysterosalpingo-oöthecectomy (se"le-o-his"ter-o-sal"pin-go-o o-the-sek'to-me). Excision of uterus, ovaries, and tubes through an abdominal incision
- **celiohysterotomy** (se"le-o-his-ter-ot'o-me) [Gr. κοιλία belly + hysterotomy]. Opening of the uterus by an abdominal incision; cesarean section.
- celiomyalgia (se"le-o-mi-al'je-ah). Same as myo-celialgia.
- celiomyomectomy (se"le-o-mi-o-mek'to-me) [Gr. κοιλία belly + myomectomy]. Myomectomy by an abdominal incision.
- celiomyomotomy (se"le-o-mi-o-mot'o-me) [Gr. κοιλία belly + myomotomy]. Celiomyomectomy. celiomyositis (se"le-o-mi-o-si'tis) [Gr. κοιλία belly

- + myositis]. Inflammation of the abdominal muscles.
- celioparacentesis (se"le-o-par-ah-sen-te'sis) [Gr. κοιλία belly + paracentesis]. Paracentesis of the abdomen.
- celiopyosis (se''le-o-pi-o'sis) [Gr. κοιλία belly + pyosis]. Suppuration in the abdominal cavity.
- celiorrhaphy (se-le or'af-e) [Gr. κοιλία belly + ραφή suture]. Suture of the abdominal wall.
- celiosalpingectomy(se''le-o-sal-pin-jek'to-me)[Gr. κοιλία belly + salpingectomy]. Excision of a fallopian tube by an abdominal incision.
- celiosalpingo-oöthecectomy (se"le-o-sal"pingo-o-o-the-sek'to-me). Excision of the oviduct and ovary through an abdominal incision.
- **celiosalpingotomy** (se''le-o-sal-pin-got'o-me). The operation of incising the oviduct through an abdominal section
- **celioscope** (se'le-o-skōp) [Gr. κοῖλος hollow + σκοπεῖν to examine]. An instrument for illuminating and examining body-cavities.
- celioscopy, cœlioscopy (se-le-os'ko-pe) Examination of the peritoneal cavity by filling it with sterile air through a hollow needle, and passing a cystoscope through a trocar into the distended abdominal wall.
- celiotomy (se-le-ot'o-me) [(ir. $\kappa o \lambda \lambda i a$ belly $+ \tau o \mu \dot{\eta}$ a cut]. Surgical incision into the abdominal cavity vaginal c., the operation of entering the abdominal cavity by an incision through the vagina.
- celitis, cœlitis (se-li'tis). Any abdominal inflammation.
- cell (sel) [L. cel'lula, dim of cel'la]. 1. Any one of the minute protoplasmic masses which make up organized tissue, consisting of a circumscribed mass of protoplasm containing a nucleus. 2. A small, more or less closed space. 3. One of the chambers holding the fluids or elements of a galvanic battery. 4. In microscopy, a chamber used for the examination and preservation of acid c., a large cell of the stomachspecimens glands of a kind believed to secrete the acid of the gastric juice. acidophylic c., a cell having an affinity for acid dyes. acoustic hair-c., any one of the many stiff, cihated bodies in relation to the inner and outer rods of Corti; hence they are grouped as unner and outer hair-cells. adelomorphous c., a variety of columnar cells forming the greater part of the tubules of the gastric glands, the other cells of the tubules being the delomorphous cells They are believed to secrete pepsinogen. Called also chief i's, principal c's, and peptu c's. adipose c., a fat-cell. adventitial c., Marchand's name for a small round endothelial phagocytic cell found in the tissues, especially in the region of the blood-vessels; called also perithelial c. agranulation c's, eosinophil and oxyphil granules in the leukocytes. air-c., an air-vesicle or alveolus of the lungs. albuminous c. See scrous c. algoid c's, cells resembling algae, seen in cases of chronic diarrhea. amacrine c. Same as amacrine. ameboid c., any cell which is able to change its form and move about. antipodal c's, a group of four cells in the early embryo. apolar c., a nerve-cell with no processes or poles. **apoplectic c.**, a cavity in the brain formed by effusion of blood in apoplexy. arkyochrome c., a nerve-cell in which the Nissl bodies are arranged in a network. auditory c's, cells in the internal ear bearing the auditory hairs. balloon c's, peculiar degenerated cells in the vesicles of herpes zoster. banana c's, cells of icles of herpes zoster. banana frequently found in feces and which may be mistaken for cestodes. basal c., basilar c., one of the cells of the deep layer of the epithelium. **basket-c.** 1. A cell of the cerebellar cortex whose axon gives off brushes of fibrils, forming a basketlike nest in which the body of each Purkinje cell 2. A degenerated leukocyte consisting of strands of nuclear substance arranged in a coarse

network. basophilic c., a cell staining readily with basic dyes. **battery-c.**, one of the chambers of a galvanic battery, containing its fluids and essential elements. **beaker-c.** See goblet-c. Beale's ganglion-c's, bipolar cells with one process coiled around the other. Betz's c's, large pyramidal ganglion-cells forming one of the layers of the motor area of the gray matter of the brain; called also giant pyramids and giant pyramidal cells. bichromate c., dichromate c. See Grenet c. bipolar c., a nerve-cell with two processes. blood-c., red, a red blood-corpuscle. blood-c., white, a leukocyte of the blood. c.-body, that portion of a cell which incloses the nucleus. bone-c., a nucleated cell occupying each a separate lacuna of bone. border c's. See delomorphous c's. Böttcher's c's, cells of the cochlea, occurring in a single layer on the basilar membrane. breviradiate c's, neuroglia cells which have short prolongations. c.-bridges, plasmodesma. bristle c's, the hair-cells associated with the auditory and cochlear nerves. bronchic c., an air-cell of the lungs. brood c., mother cell. Cajal c., a form of neuron peculiar to the molecular layer of the cerebral cortex. calciform c. Same as goblet-c. calcigerous c's, osteoblasts containing calcareous deposits, seen during ossification. sule c. See amphicyte. c.-capsule, a thick cell wall. carmin c., an endothelial cell which stains intravitally with carmin cartilage c's, cells embedded in the lacunæ of the cartilages. caudate c's, neuroglia cells of the gray matter having several streaming prolongations like the tail of a comet; called also cometal c's. central c. See adelomorphous c. centro-acinar c's, branching or spindle-shaped cells in the lumina of acini of the pancreas they serve to support the elements of the inner wall. chalice-c. Same as goblet-c chief c. Same as adelomor phous c chromaffin c's. See chromaffin ciliated c., any cell with movable cilia. Claudius's c's, large nucleated cells on each side of the arches of Corti. cochlear c's, specialized cells of the cochlea, some of which are percipient elements connected with the auditory nerve; others, hair-cells associated with the cochlear nerve. **colum**nar c. Same as cylindric c. cometal c's. See caudate c's. commissural c's. Same as heteromeral c's. connective-tissue c's, a general name for the cellular elements of the various forms of connective tissue. See fibroblast contractile fiber-c's, the spindle-shaped and nucleated cells which, collected into bundles, make up unstriped muscular fiber. corneal c., a modified connective-tissue cell occupying each corneal space. c's of Corti, the hair-cells on the outer surface of the organ of Corti counting-c., an apparatus for counting the blood-corpuscles or other cells in a given quantity of fluid. **cover-c.**, any cell which covers and protects other cells; especially any long epithelial cell of the outer layer of the taste-buds. crescent c's. Same as marginal c's. cribrose c., one whose walls are perforated with numerous sieve-like pores. cuboid c., an epithelial cell of which the transverse and vertical diameters are which the transverse and vertical diameters are equal. **cylindric c.**, any epithelial cell of cylindric form. **Daniell c.**, a form of two-fluid cell for the galvanic battery: the collecting plate is of copper, and the fluids (dilute sulphuric acid and copper-sulphate solution) are separated by a porous diaphragm. daughter-c., any cell formed by the division of a mother-cell decidual c's, large nucleated cells with granular contents arising from the connective tissue of the uterine mucous membrane. Deiters's c's. 1. Cells with delicate processes on the basilar membrane of the cochlea. 2. Neuroglia cells. delomorphous c's, the supposed acid-secreting cells of the stomach. They are large cells lying between the basement-membrane of the tubules of the cardiac glands and the adelomorphous cells.

Called also acid c's, oxyntic c's, and parietal c's. demilune c's, the granular protoplasmic cells of mucous glands between the mucous cells and the basement-membrane. dentin-c., a modified connective-tissue cell peculiar to dentin. c.-division, fission of a cell, either direct or indirect: for the latter, see karyokinesis. Direct cell-division is either segmentation or gemmation. dome-c's, the large cells which compose the epitrichium of the fetus. dust c's, endothelial leukocytes which contain carbon or dust particles. ectoplas-tic c's, those in which the processes of metamorphosis occur upon the surface or in the ectoplasm. egg-c., the immature ovum while it is embedded within the ovary. elementary c's, embryonal c's, small round cells produced by the segmentation of the ovum. emigrated c., a leukocyte which has passed through the wall of a c. Same as ameloblast. encasing c. Same as cover-c. endothelial c., a form of flat cell lining all serous cavities and blood-vessels. endothelioid c's, large protoplasmic cells frequently seen in disease of the blood-making organs and believed to be derived from the endothelial lining of the blood- and lymph-vessels; called also epithehoid c's. entoplastic c's, those in which the processes of metamorphosis take place within their substance and not on their surface ependymal c's, the cells of the ependyma. epidermic c's, the cells of the epidermis. epithelial c's, cells which cover the surface of the body and line the almentary, genito-urinary, respiratory, lacrimal, and tympanic tracts. **epithelioid c.**, a cell that resembles an epithelial cell in shape. See endothelioid c's. ethmoid c's, large cavities, mainly in the lateral masses of the ethmoid bone. fat-c's, nucleated vesicles formed of protoplasmic membrane filled with fatty matter. forment c., a cell which secretes a ferment. Forrata's c. See hemohistioblast fiber c., any clongated and linear cell. flagellate c., any motile cell having long cilia for propulsion. floor-c's, the cells of the floor of the arch of Corti. foam c's. 1. Peculiar foamy-looking cells, due to the presence in the cell of cholesterin fat. Such cells are seen notably in xanthoma and have, therefore, been termed xanthoma c's. 2 Same as Mikulicz's c's. follicle c., one of the cells which make up a follicle. foot c's. See Sertoli's c's. formative c., an embryonal cell. Foulis's c's, large nucleated epithelial cells seen in fluids from malignant ovarian cysts. Fuller c., a battery-cell resembling the Grenet cell, but employing a mixture of mercury and water as an amalgamating agent. fusiform c. Same as spindle-c gametoid c's, cancer cells resembling reproductive cells. ganglion-c., a form of large nerve-cell, found especially in the spinal ganglia. Gaucher's c's. See Gaucher's disease, under disease. germ c's, the cells of an organism whose function it is to reproduce the kind. **germinal c.**, one of the cells in the brain and spinal cord of the embryo which divide to form the primitive ganglion-cells or neuroblasts. **giant-c.**, a very large cell frequently having several nuclei. The name is applied especially to the largest cells of bone-marrow, which may be either mono- or multinucleate, and which are also known as myeloplaxes. giant pyramidal c's. See Betz's c's. c's of Giannuzzi, the demilune cells. gitter c., a large cell having a honeycomb appearance and containing many lipoid granules. Gley's c's, cells in the interstitial tissue of the testicle. glia-c., a cell of the neuroglia. goblet-c., a form of epithelial cell containing mucin and bulged out like a goblet. Cf. ptyocrinous. Golgi's c's, nerve-cells with very short processes in the nosterior horns of the spinal cord. In Golgi cells of posterior horns of the spinal cord. In Golgi cells of Type I the axons pass out of the gray matter, in those of Type II the axons do not pass out of the gray matter. gravity-c., a battery-cell like the Siemen and Halske, but the fluids are superim-

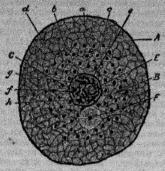

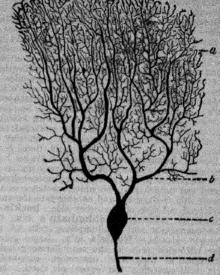

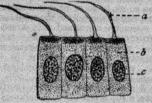

Diagram of a typical cell: A, cell-wall; B, cell-body: C, nucleus; E, nucleous; F, centrosome: a, spongioplasm; b, hyaloplasm; c, metaplasm or microsomes; d, exoplasm; e, nuclear membrane; f, nuclear network or chromatin filaments; g, nuclear matrix; h, nodal enlargements or net knots. (Leroy.)

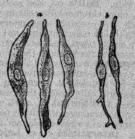

Purkinje's cell from the cerebellar cortex of the rabbit: a, telodendron: b, dendrite; c, cell-bedy; d, neuraxis.

Cylindric ciliated cells: a, cilia; b, cell-body; c, nucleus.

Three cells of Deiters, showing the phalangeal processes, each expanding to form a phalanx of the reticular lumina, and also the spirally running nerve-fibrils.

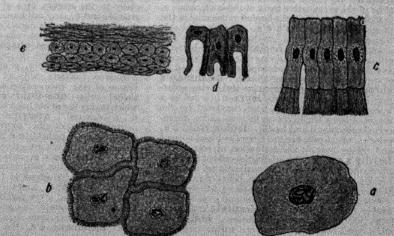

Taste-cells: a, cover-cells; b, taste-cells proper.

A neuroglia-cell (glia-cell or spiderell) from the white matter of the spinal ord.

Olfactory cells.

Epithelial cells from various localities: a, squamous cells: b, prickle-cell from sking e, columnar ciliated cell; d, goblet-cells; e, stratified epithelium. (Leroy.)

posed upon each other with no intervening diaphragm, being kept partly separate by the force of gravity. Grawitz c's. Same as slumber c's. gravity. Grawitz c's. Same as slumber c's. Grenet c., a battery-cell with a carbon-collecting plate, the fluid and depolarizer being a solution of potassium dichromate. Grove c., a two-fluid galvanic cell charged with dilute sulphuric and nitric acids, containing respectively an element of zinc and of platinum. guanin-c., a small oval variety of cell filled with white, refracting granules of guanin. guard-c's, endothelial cells which line the stomata of serous membranes. gustatory c's, the taste-cells. gyrochrome c. See gyrochrome. hair-c's, epithelial cells with hair-like processes. heart-disease c's, epithelial cells containing granules of hematoidin occurring in the sputum in chronic bronchitis from heart disease. hecatomeral c's [Gr. ἐκάτερον both + μέρος part], those cells of the gray matter of the gray m the spinal cord whose axis-cylinder processes divide, send one branch into the white substance of the same side of the cord, and another into the anterolateral columns of the other side. heckle-c.
Same as prickle-c. Heidenhain's c's, the Same as prickle-c. Heidenhain's c's, the adelomorphous and delomorphous cells of the gastric glands. Henle's c's, large granular nucleated cells in the seminiferous tubules. Hensen's c's, the outermost sustentacular cells covering the organ of Corti. hepatic c's, liver-c's, polygonal epithelial cells forming the substance of an acinus of the liver. heteromeral c's, nerve-cells of the gray matter of the spinal cord whose axis-cylinder processes pass to the white matter of the opposite side. Hill's c. See gravity-c. Hofbauer C's, large chromophilic cells in the chorionic villi which are probably clasmatocytes. horn-c's. 1. Epithelial cells that have lost their protoplasm, have sharp edges, and look horny. 2. Any ganglion-cell of the horns of the spinal cord. hyper**chromatic c.**, any cell that contains more than the average number of chromosomes. **ichthyoid** c's. See megaloblast. incasing c's, a single layer of fusiform cells around the gustatory cells of the tongue. indifferent c., a cell which has no characteristic structure, or which is not an essential part of the tissue in which it is found. initial c's, germcells. interstitial c's of Leidig. See Leydig's interstitial c's. Kupffer's c's, large star-shaped or pyramidal cells lying along the walls of the venous capillaries of the liver. They form a part of the reticulo-endothelial system (q v.). Called also stellate c's. lacrimo-ethmoid c's, the ethmoid cells situated under the lacrimal bone Langerhans's c's. 1. Star-shaped cells in the deeper portions of the germinative layer of the epidermis. 2. Spindle-shaped cells in the lumina of the acini of the pancreas. Langhans's c's. 1. Polygonal epithelial cells constituting Langhans's layer. 2. The giant-cells of tubercle. Leclanché c., a battery-cell having a carbon collecting plate and employing as a fluid a solution of ammonium chlorid, and as a depolarizer manganese dioxid. Leishman's chrome c's, basophil granular leukocytes occurring in black-water fever lepra-c., a cell in a leprous nodule which has been converted by the action of lepra bacilli into a sac containing degenerated protoplasm and bacilli. leukocytoid c's, colorless blood-cells derived from the blood-current and taking part in the formation of scar tissue. Leydig's c's. 1. The interstitial cells of the seminiferous tubules and of the mediastinum and connective-tissue septa of the testes, believed to furnish the internal secretion of the testicle. 2. Mucous cells which do not pour their secretion out over the surface of the epithelium. longiradiate c's, neuroglia cells having long prolongations. lymphoid c., a small connective-tissue cell with a large nucleus, found in lymphoid tissue, such as lymph-nodes, spleen, tonsils, etc. Marchand's c. See adventitial c. marginal c's, the granular cells occurring next to the basement-membrane of mucous glands; parietal cells. Marié-Davy c.,

battery-cell with a carbon-collecting plate, the fluid, depolarizer, and amalgamator being a paste of mercuric or mercurous sulphate and water. marrow-c., a large ameboid cell characteristic of the marrow. Martinotti's c's, fusiform cells with ascending axis-cylinder processes in the polymorphic layer of the cerebral cortex. mast-c's [Ger. Mastrellen], large cells containing coarse basophil granules. They occur normally in connective tissue and are found in the blood, where they constitute one of the varieties of polymorphonuclear leukocytes. They are especially numerous in leukemic blood and in the foci of chronic inflammation. mastoid c's, the sinuses of the mastoid bone. memory c., a cell of the cerebral cortex thought to be the seat of the memory of sensations. Meynert's c's, solitary pyramidal cells in cerebral cortex about the calcarine fissure migratory c's, the lymphocytes and white corpuscles of the blood so called from their ameboid movements. Mikulicz's c's, the cells in rhinoscleroma which contain the bacillus of the disease. mitral c's, the pyramidal cells forming one of the layers of the olfactory bulb. monoplastic c., a cell composed of a single substance. mossy c., a neuroglia cell having a large body and many short processes. mother-c., a cell that divides so as to form new or daughtercells. motor c., one of the cells of the spinal cord which has its neuraxon continued into a motor nerve-fiber. **mucous c's**, cells which secrete mucus or mucin. **muscle-c**., an elongated and nucleated contractile fiber-cell peculiar to unstriped muscle. myeloid c., an osteoclast or giant-cell of bone-marrow myoid c., cells resembling striated muscle-fibers, found in the thymus. Nageotte's c., a cell of the cerebrospinal fluid which becomes greatly increased in number in disease. nerve-c., a neuron or ganglion-cell, a special cell of the nervous system. See nervecell c.-nest, any mass of closely packed epi-thelial cells surrounded by a stroma of connective tissue. Neumann's c's, nucleated red cells in the bone-marrow developing into erythrocytes. neuroglia c's, the cells of the neuroglia. They are of two kinds, the spider-cells and the mossy cells neuromuscular c., a form of cell chiefly or always seen in the lower animals, of which the outer part receives stimuli and the inner part is contractile. noble c's, the differentiated cells of the organs and tissues of the body. **normal c.**, any cell found naturally in any part or organ free from disease. **nuclear** c., a nerve-cell consisting of a nucleus surrounded by a layer of branching protoplasm seen especially in the sensory area of the cerebral cortex. nucleated c., any cell having a nucleus nurse c., nursing c. See Sertoli's c's. Nussbaum's c's, small, functionless cells of the pyloric glands of the stomach. oat-shaped c's, cells shaped like oat grains, seen in some varieties of sarcoma. olfactory c's, a set of specialized and nucleated fusiform cells of the mucous membrane of the nose embedded among the epithelial cells. one-fluid c., any battery-cell which makes use of but one kind of fluid. osseous c., a bone-cell. overripe c's, polynuclear or neutrophil blood-cells. oxyntic c's. See delomorphous c's. palatine c's, those parts of the ethmoid cells which are extended into the palatine bone. Paneth's c's, cells in the fundus of the cysts of Lieberkuhn, containing eosinophil granules, and probably concerned in the elaboration of an enzyme. **parent c.**, a mother-cell. **parietal c's**. See *delomorphous c's*. **pathologic c.**, any cell which results from a disease-process or which belongs to or arises from a pathogenic microörganism. pavement c's, the flat cells composing pavement epithelium. pediculated c's, neuroglia cells which possess a pedicle implanted into a capillary wall. peptic c's, a name sometimes given to the adelomorphous cells of the stomach. pericellular c's, neuroglia cells which surround a

neuron. **perichrome c.** See *perichrome*. **perithelial c.** See *adventitial c.* **perithral c's**, plasma-cells surrounding the walls of bloodvessels. **perivascular c's**, neuroglia cells which are in contact with a capillary. persensitized c., a cell which has been sensitized by union with the mid-piece of complement so that it will be dissolved when the end-piece is added. pessary c., an erythrocyte from the center of which the hemo-globin has disappeared. **pheochrome c's**, cells of the medulla of the embryonic suprarenal body which stain dark with chromium salts. pigmentc., any cell containing pigment-granules. pitcher-c's, cells found in the normal conjunctiva. plasma-c's, peculiar cells of lymphadenoid origin occurring normally in various mucous membranes and in lymphoid tissue generally, and frequently occurring in pathologic states They stain deeply with basic dyes The protoplasm is not granular, and is denser in the peripheral portion than in the center; the nuclei have a large amount of chromatin, which is arranged in a characteristic wheellike manner; called also plasmacyte, stimulation cells, and phlogocytes. c.-plate. Same as midbody. pluricordonal c's, stellate embryonal cells found in the posterior cornu of the myelon, hitherto found in the embryonic pigeon only. polar c's. See globules, polar. polychromatic, polychromatophil c's, non-nucleated erythrocytes staining with acid and basic stains. polyhedral c's, cells having a polyhedral shape. polyplastic c., a cell made up of various struc-tural elements, also one which passes through various modifications of form. **prickle c.**, a cell provided with delicate radiating processes which connect with similar cells; found chiefly in the deep layers of stratified pavement epithelium. primitive wandering c., a small mononuclear cell of the embryo which arises from the mesoderm and subsequently by differentiation gives rise to wanderming cells of the body (Saxer, Maximow) primordial c's, embryonal cells. principal c's, adelomorphous cells prop c's, Purkinje's cells pseudoplasma c's, cells having staining properties like plasma-cells, but differing in structure. psychic c's, the cells of the cerebral cortex. pulpar c., the typical cell of the spleen substance. Purkinje's c's, large branching neurons in the middle layer of the cortex cerebelli nuramidal middle layer of the cortex cerebelli. pyramidal c., one of the large multipolar pyramid-shaped ganglion cells of the cerebral cortex which, with their attached fibers, constitute the pyramidal neurons pyrrol c., a cell of the reticulo-endothelial system, so called because it takes up and stains with pyrrol resting c., a cell that is not undergoing karyokinesis. resting wandering c. See clasmatocyte. reticular c's, the cells of the reticular tissue which forms the framework of lymph-glands, red bone-marrow, and the spleen. reticulo-endothelial c. See reticuloendothelial system, under system. retinal c's, specialized cells of various kinds, found especially in the vesicular, molecular, nuclear, and pig-mentary layers of the retina. Rieder c., a lymphoblast having a nucleus which is divided into two or more lobes. Rindfleisch's c's, granular cosinophil leukocytes. ripe c's, a form of large mononuclear blood-cells; myelocytes or marrow-cells in the blood. Rolando's c's, the ganglion-cells of Rolando's gelatinous substance. Rouget c's, contractile cells found upon the walls of the capillaries in the frog and salamander. Krogh supposes that by their contraction they control the size of the capillaries. round c., any cell having a spheric shape. c.-sap, hyaloplasm. sarcogenic c's, the cells which are developed into muscle-fiber. 'satellite c's, free nuclei which accumulate around cells in certain diseases. roid c's. See normoblast. scavenger c's, lymph-cells of the neuroglia said to assist in removing effete material. Schwann's c., one of the cells composing the sheath of Schwann. seminal c's, epithelial cells within the tubuli seminiferi. sensa-

tion c., a cortical cell which receives peripheral stimulations by direct conduction and is thus the seat of sensation. sensory c., one of the nervecells of the peripheral sense organs. serous c., a cell concerned in the secretion of an albuminous fluid, like the saliva, an essential cell of a serous or albuminous gland. Sertoli's c's, elongated cells in the tubules of the testes to the ends of which the spermatids become attached apparently for the purpose of nutrition until they become transformed into mature spermatozoa; called also sustentacular c's, nurse c's, foot c's, and trephocytes. sexual c's, the larger cells in the fetal testis. sickle c., a crescentic or sickle-shaped red blood-corpuscle. Siemen and Halske c., a battery-cell with a copper collecting plate the fluids are water and solution of copper sulphate, separated by a porous diaphragm with a papier-mâché packing. **skeletogenous c.**, an osteoblast. **sleeping c.** Same as slumber c. **slumber c.**, a cell believed to exist in connective tissue and to be undifferentiable by any known methods **Smee c.**, an electric battery-cell consisting of a plate of zinc and one of platinized silver in a dilute solution of sulphuric acid. Snell c., a one-fluid battery-cell having a collecting plate of platinized silver, its fluid is dilute sulphuric acid. platinized silver, its fluid is dilute sulphuric acid. somatic c's, the cells of the somatoplasm, undifferentiated body-cells. sperm-c. 1. A spermatozoon. 2. A spermatoblast. sphenoid c's, two large cavities or sinuses of the sphenoid bone. spider-c. See astrocyte. spindle-c., a fusiform or spindle-shaped cell. squamous c., a flat, scale-like epithelial cell. stellate c., a star-shaped cell, particularly a neuroglia cell having a large number of filaments extending from it in all directions. number of filaments extending from it in all directions stichochrome c. See stichochrome. stickle c's. Same as prickle-c. stipple c's, red blood-cells showing granulations. See granulation. supporting c's, Deiters' cells of the organ of Corti: long, fusiform cells between the outer rods of Corti and the acoustic hair-cells. sustentacular c's. 1. Delicate stellate corpuscles, forming with the intercellular substance the splenic pulp. 2 See Sertolt's c's. syncytial c., a syncytium or a component of it. taste c's, the cells of the interior of a taste-bud hidden by the tautomeral c's [Gr. τὸ αὐτό μέρος cover-cells the same sidel, nerve-cells of the gray substance of the spinal cord whose axis-cylinders pass into the white substance of the same side of the cord. tegmental c's, cells which cover any delicate structure. tendon c's, flattened tissue-cells of connective tissue occurring in rows between the primary bundles of the tendons c.-theory, the doctrine that all organic matter consists of cells, and that cell activity is the essential process of life. totipotential c., a cell which is capable of developing into every variety of body cell. tubal airc's, small cavities sometimes seen in the lower wall of the eustachian tube near the tympanic orifice. Türck's c's. See Türck's irritation leukocyte, under leukocyte tympanic c's, the depressions in the walls of the tympanic cavity. Unna's plasma-c., a fibroblast. vacuolated c., a cell whose protoplasm contains vacuoles. vasofactive c's, vasoformative c's, cells which join with other cells to form blood-vessels. Vignal's c's, embryonal connective-tissue cells secreting myelin and associated with the forma-tion of the axis-cylinders of nerves in the fetus. visual c's, the neuro-epithelial elements of the retina, the outer specialized segments of which are the rods and cones von Kupffer's c's. See Kupffer's c's. c.-wall, the membranous investment of a cell. wandering-c., a leukocyte or motile cell. xanthoma c. See foam c. Zehbe's c., a connective-tissue cell found in organs of patients who died of cancer.

cella (sel'ah) [L. "compartment"]. The central part of the lateral ventricle. c. latera'lis, the lateral ventricle of the brain. c. me'dia, the central part of the lateral ventricle of the brain: called also pars centralis.

cellase (sel'ās). A ferment which acts upon cell-

sllasin (sel'as-in). A proprietary sugar, starch, fat, and peptone-splitting ferment derived from cellasin (sel'as-in). fungi: used in malnutrition.

cell-bridges. See intercellular bridges, under bridge.

cell-color ratio. See under ratio.

Cellia (sel'e-ah). A genus of anopheline mosquitos, several species of which act as malaria carriers.

cellicolous (sel-ik'o-lus) [L. cel'la cell + col'ere to dwell]. Inhabiting cells.

celliferous (sel-if'er-us). Producing or bearing cells.

celliform (sel'if-orm). Cell-like.

cellifugal (sel-if'u-gal). Same as cellulifugal.

cellipetal (sel-ip'et-al). Same as cellulipetal.

cellobiose (sel-o-bi'os). A disaccharid, C12H22O11, which can be prepared from cellulose.

celloidin (sel-oi'din). A concentrated preparation of pyroxylin, employed in microscopy for embedding specimens for section-cutting.

cellon (sel'on). Acetylene tetrachlorid, CHCl2 -CHCl2, or tetrachlorethane.

cellophan (sel'o-fan). A cellulose product used as a filtering medium, and for bandages, compresses, etc.

cellosan (sel'o-san). An anhydrid of cellobiose. cellose (sel'os). A substance formed by the hydrol-

ysis of cellulose. cellotropin (sel-o-tro'pin). Monobenzoyl-arbutin.

C6H4O.C6H5.CO.O C6H11O5: used in scrofula and tuberculosis. Dose, 5-7 gr. (0.33-0.46 gm).

cellufor (sel'u-flor). A proprietary cellulose flour.
cellula (sel'u-lah), pl. cel'lulæ [L. "little cell"]. A
small cell. c. ethmoida'lis [B N A], ethmoidal cell. c. mastoi'dea [B N A], mastoid cell. c. pneumat'ica tuba'ria [B N A], tubal air-cell. See under cell. c. tympan'icæ [B N A], tubal aircells. See under cell

cellular (sel'u-lar). Pertaining to or made up of

cellularity (sel-u-lar'it-e). Same as cellulosity.

cellulase (sel'u-las). An enzyme that hydrolyzes cellulose.

cellule (sel'ūl) [L. cel'lula]. A minute cell.

cellulicidal (sel-u-lis'id-al) [L. cel'lula a cell + cæ'dere to kill]. Destroying cells.

cellulifugal (sel-u-lif'-u-gal) [L cel'lula cellule + fu'gere to flee]. Directed away from a cell-body.

cellulin (sel'u-lin). A principle of animal origin much resembling cellulose.

cellulipetal (sel-u-lip'et-al) [L. cel'lula cellule + pel'ere to seek]. Directed toward a cell-body.

cellulitis (sel-u-li'tis). Inflammation of cellular tissue; especially purulent inflammation of the loose subcutaneous tissue. orbital c., inflammation of the cellular tissue within the orbit. pelvic c., inflammation of the connective tissue around the uterus; parametritis. phlegmonous c. See phlegmona diffusa. streptococcus c., erysipelas.

cellulo (sel'u-lo). A preparation of glycerin, oxychlorin, cellulose, and an earthy base: used as an absorbent dressing.

cellulocutaneous (sel"u-lo-ku-ta'ne-us). posed of loose connective tissue and skin.

cellulofibrous (sel"u-lo-fibrus). Partly cellular and partly fibrous.

celluloid (sel'u-loid). A substance composed largely of pyroxylin and camphor used in the arts and to some extent in dentistry and surgery.

Cellulomonas (sel-u-lo'mo-nas). A genus of Bacteriaceæ; they are saprophytic and have the property of digesting cellulose.

celluloneuritis (sel"u-lo-nu-ri'tis). Inflammation of nerve cells. acute anterior c., Raymond's name for acute anterior poliomyelitis, polyneuritis, and Landry's paralysis, which he considered one disease.

cellulose (sel'u-los). A carbohydrate forming the skeleton of most plant structures and of plant-cells. It is a colorless, transparent solid, insoluble in water, alcohol, etc., but soluble in Schweitzer's reagent. It is used mainly in the arts, as in making c., any combination of cellulose with carboxyl groups, such as pectinic acid. They are mostly gelatinous bodies. starch c., the outer portion of the starch grain. See amylopectin.

cellulosity (scl-u-los'it-e). The condition of being composed of cells.

cellulotoxic (sel"u-lo-toks'ik). 1. Toxic to cells. 2. Produced by cell toxins.

cellulous (sel'u-lus). Made up of cells.

celology (se-lol'o-je) [Gr. κήλη hernia + λόγος The science or study of hernia. treatisel.

celom, cœlom, cœloma (se'lom, se-lo'mah) [Gr. κοίλωμα]. See cælom.

celonychia (se-lo-nik'e-ah). Same as koilonychia.

celophlebitis (se"lo-fle-bi'tis) [Gr. κοΐλος hollow + phlebitis]. Inflammation of a vena cava.

celoschisis (se-los'kis-is) [Gr. κοῖλος belly $+ \sigma \chi l \sigma \iota s$ fissure]. Fissure of the abdominal wall.

celoscope (se'lo-skōp) [Gr. κοίλος hollow + σκοπείν to examine]. An instrument for illuminating and examining a cavity.

celoscopy (se-los'ko-pe). Examination of a bodycavity, use of the celoscope.

celosomia (se-lo-so'me-ah) [Gr. κήλη hernia + σωμα body]. Hernial protrusion of the fetal viscera.

celosomus (sel-o-so'mus). A monster with eventration, fissure, or absence of the sternum, with more or less protrusion of the thoracic or abdominal organs.

celothel (se'lo-thel). See calothel.

celotomy (se-lot'o-me). See kelotomy.

celozoic, **cœlozoic** (se-lo-zo'ik) [Gr κοιλία belly + ζφον animal]. Inhabiting the intestinal cavities of the body, said of parasites.

Celsius scale or thermometer (sel'se-us) [Anders Celsius, Swedish astronomer, 1701-1744]. See under thermometer.

Celsus (sel'sus), Aurelius Cornelius. brated Roman physician and writer who lived about 25 A.D. Of his numerous writings, only one has been preserved, namely, the treatise "De Medicina," in eight books.

celtium (sel'te-um). A chemic element of atomic number 72.

cement (se-ment') [L. cæmen'tum]. I. Any substance that serves to mend something which is broken. 2. Same as comentum. 3. An adhesive filling material, such as zinc oxychlorid used in dentistry. adamantine c., a dental filling material composed of powdered punice-stone mixed with an amalgam of mercury and silver. muscle c., myoglia. nerve c., the neuroglia. silicate c., a filling material for tooth cavities containing magnesium phosphate and calcium phosphate, carbonate, and fluorid. tooth c., cement (2d def)

cementicle (se-men'tik-el). See cemento-exostosis. cementification (se-ment-if-ik-a'shun). The formation of cementum of a tooth.

cementin (se-men'tin). The material that sometimes unites the margins of squamous endothelial ceils.

cementitis (se-men-ti'tis). Inflammation of the cementum of a tooth.

cementoblast (se-men'to-blast) [L. camen'tum Gr. βλαστός germ]. One of the cells from which the cementum of the tooth is developed.

cementoclasia (se-men-to-kla'sc-ah) [L. cemen'tum + Gr. κλάσις breaking]. Disintegration or destruction by disease of the cementum of a tooth root.

cemento-exostosis (se-men"to-ex-os-to'sis) [ce-mentum + exostosis]. A rounded formation of cementum tissue developing on the periodontal membrane and the cementum of a tooth as a result of periodontitis. Called also cementicle.

cementoma (se-men-to'mah). A tumor composed of cement like that of the teeth.

cementoperiostitis (se-men"to-per-e-os-ti'tis). Same as pyorrhwa alveolaris.

cementosis (se-men-to'sis). The development of a cementoma.

cementum (se-men'tum). The layer of bony tissue covering the root of a tooth. It differs in structure from ordinary bone in containing a greater number of Sharpey's fibers. Called also cement.

cenadelphus (sen-ad-el'fus) [Gr. κοινός common + άδελφός brother]. A double monster fetus with the two individuals equally developed.

cenencephalocele (sen-cn-sel'al-o-sēl). An encephalocele or protrusion of the brain without cystic condition.

cenesthesia, conesthesia (sen-es-the'ze-ah) [Gr. κοινός common + αἴσθησις feeling]. The general feeling or sense of conscious existence; the sense of normal functionating of the organs of the body.

cenesthesic, cenesthetic (sen-es-the'sik, -thet'-ik). Pertaining to cenesthesia.

cenesthopathia (sen-es-tho-path'e-ah) [cenesthesia + Gr $\pi \dot{\alpha} \theta os$ disease]. Any morbid perversion of the consciousness.

cenobium, conobium (sen-o'be-um). A colony of independent cells or organisms held together by a common investment.

cenogenesis, conogenesis (se-no-jen'es-is) [Gr. κοίνος common + γένεσις production] That form of development in which there is not repeated the phylogeny of the group to which the individual belongs Opposed to palingenesis.

cenophobia (sen-o-fo'be-ah). Same as kenophobia. cenopsychic (sen-o-si'kik) [Gr. καινός new + ψυχή mind]. Of recent appearance in mental development.

cenosis (se-no'sis) [Gr.] A morbid discharge.

cenosite (se'no-sit) [Gr κοίνος common + σίτος food]. A parasite which is able to live apart from its host.

cenotic (se-not'ik). Pertaining to a morbid discharge.

cenotype (sen'o-tīp) [Gr. κοινός common + type].

The original type from which all forms have arisen.

censor (sen'sor). 1. A member of a committee on ethics or for critical examination and supervision of a medical or other society. 2. In Freudian terminology, the psychic influence which prevents certain unconscious thoughts and wishes coming into consciousness unless they are disguised so as to be unrecognizable.

Cent. Abbreviation for centigrade and centimeter.

centaurea (sen-taw're-ah). The plant, Cni'cus benedic'tus, or blessed thistle used in hepatic congestion and atonic dyspepsia; also a genus of composite-flowered medicinal plants.

centaurium (sen-taw're-um) Centaury.

centaury (sen'taw-re) [L. centau'rium; Gr. κενταβρειον]. A popular name for various gentiansceous plants of the genera Erythra'a, Centau'rea, Sabba'tia, etc., having in general the tonic properties of gentian.

center (sen'ter) [Gr. κέντρον, L. cen'trum] 1. The middle point of a body. 2 A collection of nervecells which is concerned with a particular function abdominal c., epigastric c., a cutaneous reflex center in the gray matter of the cord said to be between the sixth and eleventh dorsal vertebræ. accelerating c., a center in the oblongata which sends accelerating fibers to the heart. acoustic c., the auditory center. ankle-clonus c., a cutane-

ous reflex center in the gray matter of the cord: said to be between the fifth lumbar and first sacral vertebræ. anospinal c's, the centers for contracting the sphincter ani, that for relaxing it (defecation center), and that for the anal reflex: all are in the lumbar enlargement. arm-c., a cortical center at the middle third of the fissure of Rolando, controlling the arm-movements. association-c., any portion of the cerebral cortex which, though not itself functionally differentiated, is connected with the cortical centers by association fibers. auditopsychic c., a center dealing with the interpretation of sounds situated in the first temporal convolution. auditory c., the center for hearing in the first temporosphenoid convolution. automatic c., a group of cells in the spinal cord producing motion independently of volition or reflection. brain-c. An area of the cerebral cortex having a specialized structure or function. 2. A group of cells in the brain having a special function. **Broca's** c., the speech-center. **Budge's** c. 1. The ciliospinal center. 2 See genital c. calorific c., a center in the caudate nucleus of the spinal cord which controls heat production. cardio-ac-celerating c. See accelerating c. cardioinhibitory c., a center in the oblongata which sends inhibitions to the heart by way of the vagus. cardiomotor c., Tawara's name for the auriculoventricular node, on the theory that the heart's impulse arises there cerebrospinal c., the brain and spinal cord. cheirokinesthetic c., the center in the posterior part of the left second frontal gyrus, controlling movements concerned in writing. ciliospinal c., a center in the lower cervical and upper dorsal portions of the spinal cord, connected with the dilatation of the pupil color-c., the center for the perception of color said to be situated in the occipital cortex. convulsion c., a center in the oblongata, at the floor of the fourth ventricle. its stimulation causes convulsions. coordination c., a nerve center serving the function of coordination. See coordination. correlation c., a nerve center serving the function of correlation. See correlation. cortical c., any portion of the cerebral cortex which can be differentiated functionally from its neighbors. Such a center is sometimes called area, field, or zone. coughing-c., a center in the oblongata, situated above the respiratory center, which presides over the act of coughing cremasteric c., a cutaneous reflex center in the cord: said to be above the level of the second lumbar vertebra. cutaneous reflex c's, a set of centers in the gray matter of the spinal cord: these, with the musculotendinous centers, embrace nearly all the reflex centers of the cord. defecation c., the anospinal deglutition c., a nerve-center in the oblongata which controls the function of swallowdentary c., an ossification center of the mandible, giving origin to the lower border and outer plate. deputy c., any secondary or association-center; also any center of origin for a spinal nerve diabetic c., a center situated in the posterior part of the floor of the fourth ventricle if tampered with, diabetes mellitus follows. dominating c., the principal or controlling center of a group having a common function. ejaculation c., the center which controls the erection of the penis and the normal discharge of semen: it is in the lumbar region of the spinal cord, and is itself regulated from the oblongata. epi-See abdominal c. epiotic c., a gastric c. center of ossification which forms the lower part of the mastoid bone erection c. ejaculation c. euproxic c., any cerebral center which controls the proper performance of any action or set of actions. **facial c.**, a center for face movements. in the lower part of the ascending frontal convolution. **foot-clonus c.**, a musculotendinous reflex center of the cord, situated between the fifth lumbar and first sacral vertebræ. ganglionic c., any mass of gray matter between

the lateral ventricles and the decussation of the and other basal ganglia. **genital** c., genito-spinal c., the erection center of the male or the parturition center of the female: said to be in the cord, near the second lumbar vertebra. germinal c., the area in lymphoid tissue in which most of the leukocytes are formed. glossokinesthetic c., the center in the posterior part of the left second frontal gyrus which controls movements concerned in articulate speech. gluteal c., a cutaneous reflex center of the cord said to be at the level of the fourth lumbar vertebra. glycogenic c. Same as diabetic c. gustatory c., the cerebral center supposed to control taste: situated in the cortex of the uncinate convolution. health c., a community health organization for creating health work and co-ordinating the efforts of all health agencies. heat-c's, centers in the brain which regulate heat production and heat elimination heat-regulating c's. Same as thermotaxic c's. high-level c., a center controlling thought, reason, etc. idea c., the name center. ideomotor c's, brain centers that preside over ideomotion. independent c. Same as parenchymatous c inhibitory c., any nerve-center which restrains any function or process or controls other centers. ki**netic c.**, the centrospheres of a fertilized ovum. knee-jerk c., a musculotendinous reflex center in the cord, at the level of the third and fourth lumbar vertebræ. Kronecker's c., the inhibitory center of the heart. Kupressoff's c., the spinal center for the sphincter of the bladder. language c., any center controlling the understanding or use of language. leg-c., a motor center for the legs, in the ascending frontal convolution. low-level c., a center concerned in any sort of automatic action. mastication c., a part of the facial center. micturition c., a center controlling the bladder and inhibiting the tension of the vesical sphincter situated in the lumbar enlargement. mid-level c., any center which acts as an association-center or in controlling muscular movement artion-center or in controlling muscular movement or storing up memories **motor c.**, any center which originates, controls, inhibits, or maintains a motor impulse. **musculotendinous c's**, the centers for foot- and ankle-clonus, the kneejerk, and for the reflexes of the flexors and extensors of the upper extremity they are all situated in the cord. name-c., an area in the upper temporal lobe which controls the remembrance of names. nerve-c., a collection of nerve-cells in the central nervous system which are associated together in the performance of some particular function olfactory c., the center for smell, probably in the hippocampal gyrus optic c., the point in a lens where the rays cross each other. Rays passing through the optic center have an angle of refraction of o° ossification c., any point at which the process of ossification begins in a bone. **oval c**. Same as centrum ovale. **panting c**., a center in the tuber cinereum which accelerates the rate of breathing. parenchymatous c., a nerve-center situated in the substance of a viscus. parturition c., the center for the contraction of the uterus and fetal expulsion: it corresponds with the erection center of the male. phrenic c., the central aponeurosis of the diaphragm. plantar reflex c., a cutaneous reflex center in the gray matter of the cord: said to be at the level of the second sacral vertebra. **polypneic c.** Same as panting c. **projection c.**, any center in the cerebral cortex which gives rise to projection fibers. **proportionizing c.**, a center in the certex. cortex, on the motor side, corresponding to the name-center. **psychocortical c.**, the center in the cerebral cortex concerned in voluntary muscular movement. It is located around the central fissure. **psychomotor c.** Same as psychocortical c. **pteriotic c.**, a center of ossification from which are developed the tegmen tympaniand the contract of the and the covering of the semicircular canals.

pupillary c's, the ciliospinal center, which dilates the pupil; also one in the corpus quadrigeminum for contracting the pupil. rectovesical c., a reflex center in the cord for the rectum and bladder. reflex c., any center in the brain or cord in which a sensory impression is changed into a motor impulse: the reflex centers already discovered are numerous. reserve c., a nerve center which is normally unused, but which can come into action in an emergency. respiration c., that which coordinates the respiratory movements. it is situated in the oblongata. c. of rotation, the point about which the eye revolves in fixing objects. salivary c., salivation c., the center, situated in the floor of the fourth ventricle, which controls salivary secretion. scapular c., a cutaneous reflex center of the cord said to be between the fifth cervical and first dorsal vertebræ Sechenoff's c's, Setschenow's c's, reflex inhibitory centers in the cord and oblongata. semioval c., the centrum ovale. sensory c., any center which receives or appreciates a sensory impulse. smell C., the olfactory center. **sneezing** c., the respiration center or a portion of it. **somatic** c., the pituitary body. so called from the belief that it influences the growth of the whole body. spasm-c., one in the oblongata, at its junction with the pons. speech-c., one in the third left (or right) frontal convolution. sphenotic c., a center of ossification in the sphenoid bone for the lingula. splenial c., one of the ossification centers of the mandibles, forming a part of its inner plate. splenic c., a splenocyte. spoken-word c., a center in the third left frontal convolution. sudorific c's, sweat-c's, centers in the spinal cord controlling diaphoresis, with a dominant center in the oblongata. suprasegmental c., one of the centers of the prosencephalon controlling the correlation of the higher functions swallowing c., a center that controls the act of swallowing on the floor of the fourth ventricle. tactile c., one for the sense of touch: situated in the hippocampal region. taste-c., the gustatory center thermoregion. tasce-c., the gustatory center infilmogenic c. 1. See calorific c. 2. A center for the physiologic production of heat: in the cord, with higher ones, probably in the striatum and thalamus. thermo-inhibitory c's, those for inhibiting the production of heat probably in the tuber cinereum and in the gray matter near the fissure of Sylvius. thermolytic c's, those for the discipation of heat thought to be in the obleanate. dissipation of heat thought to be in the oblongata and tuber cincreum. thermotaxic c's, the cerebral centers which maintain a balance between the production and dissipation of heat. thumb-c., a center in the cerebral cortex controlling movements of the thumbs. It is situated in the lowest part of the center for movements of the upper limb. trophic c., any nerve-center which regulates or influences nutrition. VASOwhich regulates or influences nutrition. vasoconstrictor c., a center which controls contraction of the blood-vessels. vasodilator c.,
one for dilating the blood-vessels: supposed
to be in the oblongata, with dependent centers in the spinal cord. vasomotor c's,
centers in the tuber cinereum, oblongata, and cord, believed to regulate the caliber of the bloodvessels, and to cause their contraction and dilatation. vasotonic c., any vasomotor center: there is said to exist also a higher center in the thalami, regulating vascular tension. **vesical** c., **vesicospinal** c., the micturition center or rectovesical center. **visual** c's, centers which regulate the power of vision: probably situated in the cuneus of the occipital lobes. **vomiting** c., one in the oblongata. its stimulation causes vomiting. Wernicke's c., the chief speech-center, situated in the cortex of the left temporo-occipital convolution. Called also Wernicke's area and Wernicke's zone. winking-c., a reflex center in the oblongata which controls winking. word-c., and its word-c., a context in the left surgice temporary. auditory, a center in the left superior temporosphenoid convolution which controls the per247

- ception of words that are heard. word-c., visual, one in the posterior part of the left parietal lobe: it appears to govern the perception of printed or written words. written-word c., a center in the second left frontal convolution.
- centesimal (sen-tes'im-al) [L. centes'imus hundredth]. Divided into hundredths or based upon divisions into hundredths.
- centesis (sen-te'sis) [Gr. κέντησις]. Perforation or tapping, as by the aspirator, trocar, or needle.
- centi-. A prefix indicating a hundred or a hundredth part.
- centibar (sen'tib-ar). The one-hundredth part of a bar, a unit of atmospheric pressure.
- centigrade (sen'tig-rād) [L. cen'tum hundred + gra'dus a step]. Having one hundred degrees or grades. See thermometer.
- centigram (sen'tig-ram) [Fr. centigramme]. hundredth part of a gram, or 0.1543 grain (Troy).
- centiliter (sen'til-e-ter) [Fr. centilitre]. hundredth part of a liter, or 0.6102 of a cubic inch.
- centimeter (sen'tim-e-ter) [Fr. centimètre]. One-hundredth part of a meter, or 0.3937 of a lineal cubic c., a cube with an edge 1 centimeter One cubic centimeter of water is practically equivalent to 1 milliliter and is usually abbreviated to c.c.
- centinem (sen'tin-em). Pirquet's term for one-onehundredth of a nem.
- centinormal (sen-tin-or'mal) [L. cen'tum hundred + nor'ma rule]. Having 100 part of the normal or standard strength.
- centipede (sen'tip-ēd). An arthropod of the order Chilopoda characterized by having one pair of legs to each body segment. The bite of some large tropical centipedes frequently produces a severe local inflammation which is often attended with vomiting, headache, and fever.
- centrad (sen'trad). 1. Toward the center or a center, especially toward the center of the body. 2 A measure of the angle of deviation, being 0.57°, or one-hundredth part of a portion of the arc of a circle equal in length to the radius of the circle.
- centrage (sen'trāj). The condition in which the centers of the various refracting surfaces of the eye are in the same straight line.
- central (sen'tral). Situated at or pertaining to a center; not peripheral.
- centraphose (sen'traf-ōz). entraphose (sen'traf-ōz). Any aphose, or sensation of darkness, originating in the optic or visual centers.
- centraxonial (sen-traks-o'ne-al). Having the axis in a median line.
- centre (sen'ter). See center.
- centric (sen'trik). Pertaining to a center; not acentric or peripheral.
- centriciput (sen-tris'ip-ut) [L. cen'trum center + ca'put head]. That part of the head which is situated between the occiput and sinciput; the
- centrifugal (sen-trif'u-gal) [L. cen'trum center + fu'gere to flee! Moving away from a center; efferent or exodic.
- centrifugalization (sen"trif-u-gal-iz-a'shun) [see centrifuge]. The process of separating the more solid portions of a liquid from the more fluid ones by centrifugal force.
- centrifugation (sen"trif-u-ga'shun). Same as centrifugalization.
- centrifuge (sen'trif-ūj) [L. cen'trum center + fu'gere to flee]. A machine for separating the more solid constituents of a fluid by rotation.
- centriole (sen'tre-ol). A supposed minute body within the centrosome.
- centripetal (sen-trip'et-al) [L. cen'trum center +

- pet'ere to seek]. Moving toward a center; esodic or afferent.
- centrocinesia (sen"tro-sin-e'se-ah) [Gr. κέντρον center + κίνησις movement]. Movement originating from central stimulation.
- centrocinetic (sen"tro-sin-et'ik). Pertaining to centrocinesia; excitomotor.
- centrodesmose (sen-tro-des'mōs). Centrodesmus.
- centrodesmus (sen-tro-des'mus) [Gr. κέντρον center + δεσμός a band]. The matter connecting the centrosomes of a cell and forming the beginning of the central spindle.
- centrolecithal (sen-tro-les'ith-al) [Gr. center + λέκιθος yolk]. Having the yolk in the center and surrounded by a peripheral layer of egg protoplasm, as in the arthropods.
- centromere (sen'tro-mër). The neck region of the spermatozoon.
- centronucleus (sen-tro-nu'kle-us). Same as amphinucleus
- centrophose (sen'tro-foz). Any phose, or sensation of light, originating in the visual centers
- centroplasm (sen'tro-plazm). The protoplasm of the centrosphere.
- centrosclerosis, centro-osteosclerosis (sen"-tro-skle-ro'sis, sen"tro-os"te-o-skle-ro'sis) [center + osteosclerosis]. The filling of the marrow-cavity of a bone with osseous material.
- centrosome (sen'tro-som) [Gr. κέντρον center - $\sigma \hat{\omega} \mu a$ body]. 1. A minute, deeply staining granule in the cytoplasm or in the nucleus of a cell which takes an important part in mitosis, being regarded as the center of activity for that process. 2. Same as centrosphere. pleuricorpuscular c., a centrosome divided into several parts.
- centrosphere (sen'tro-sfer) [Gr. κέντρον center + $\sigma\varphi\alpha\hat{\imath}\rho\alpha$ sphere]. A hyaline mass of material forming the central mass of the aster from which the rays proceed, and containing the centrosome, called also attraction sphere, astrosphere, and hyaloplasm sphere. See mitosis.
- centrostaltic (sen-tro-stal'tik) [Gr. κέντρον center + στέλλειν to send]. Pertaining to a center of motion.
- centrotherapy (sen-tro-ther'ap-e). Externally applied treatment designed to act upon the nerve-
- centrum (sen'trum), pl. cen'tra [L.; Gr. κέντρον].

 1. Any anatomic or other center. 2. The body of a vertebra. c. commu'ne, common center; the solar plexus c. media'num, a cluster of cells in the nucleus medialis of the thalamus. c. ova'le, the mass of white matter seen on removing the upper portion of the cerebrum at the level of the corpus callosum (c. ova'le ma'jus), or half an inch above that level (c. ova'le m's us).

 c. semiova'le [B N A]. Same as c. ovale. c.
 tendine'um [diaphrag'matis] [B N A], the central tendon of the diaphragm.
- Cenu'rus cerebra'lis. A cestode parasite which is found in the brains of sheep.
- ceolat (se'o-lat). A cerium salt of fatty acids: used in the treatment of wounds.
- cephaëlin (sef-a'el-in). An alkaloid, C₁₄H₁₀NO₂, one of the active principles of ipecac. It is said to be nearly twice as powerful as emetin.
- Cephaëlis (sef-a-e'lis). A genus of plants. See ibecac.
- cephalad (sef'al-ad) [Gr. κεφαλή head]. Toward the head.
- cephalagra (sef-al-ag'rah) [Gr. κεφαλή head + äγρα seizure]. Severe gouty pain in the head.
- cephalalgia (sef-al-al'je-ah) [Gr. κεφαλή head + άλγος pain]. Pain in the head; headache. pharyngotympanic c., Legal's disease. See under discase.
- cephalanthin (sef-al-an'thin). A poisonous glucosid from Cephalan'thus.

- Cephalanthus occidentalis (sef-al-an'thus) [Gr. κεφαλή head + ἄνθος flower]. A rubiaceous shrub, locally a tree, of North America: the root-bark is a laxative tonic: known as button-bush.
- cephaldol (sef-al'dol). A proprietary antipyretic and analgesic; a bitter powder made of phenetidin, citric and salicylic acids, and quinin, neutralized with sodium carbonate.
- cephalea (sef-al-e'ah). Cephalalgia. c. agita'ta, c. atton'ita, severe headache in the early stages of infectious diseases.
- cephaledema, cephalædema (sef"al-e-de'mah) [Gr. κεφαλή head + οἴδημα swelling]. Edema of the head.
- cephalematocele (sef"al-e-mat'o-sēl) [Gr. κεφαλή head + α $I\mu\alpha$ blood + κήλη tumor]. A bloody tumor under the pericranium, communicating with one or more sinuses of the dura through the cranial bones. Stromeyer's c., a subperiosteal cephalematocele which communicates with veins and becomes filled with blood during strong expiratory efforts.
- cephalematoma (sef'al-em-at-o'mah) [Gr κεφαλή head + hematoma] 1 A tumor or swelling filled with blood beneath the pericranium. 2. Caput succedaneum.
- cephalemia (sef-al-e'me-ah). Congestion of the brain or of the head.
- cephalhematocele. See cephalematocele.
- cephalhematoma (sef"al-he-mat-o'mah). See cephalematoma.
- cephalhydrocele (sef-al-hi'dro-sēl) [Gr. κεφαλή head + hydrocele]. A serous or watery accumulation outside of the cranium.
- cephalic (sef-al'ik) [L. cephal'icus; Gr. κεφαλικόs].

 1. Pertaining to the head, or directed toward the head end of the body.

 2. A medicine for the head.
- cephalin (sef'al-in) [Gr κεφαλή head]. I. A monamino-monophosphatid derived from brain substance. It has a hematostatic action by accelerating the clotting of blood 2. A proprietary headache remedy of coffee and antipyrin, each, 2 parts; sodium salicylate and caffein, each, 2 parts.
- cephalitis (sef-al-i'tis). Same as encephalitis.
- **cephalocathartic** (sef''al-o-kath-ar'tik)[Gr. κεφαλή head + καθαρτικός purgative]. Cleansing or clearing the head.
- **cephalocaudal** (sef''al-o-kaw'dal) [Gr. κεφαλή head + L. cau'da tail]. Cephalocercal.
- **cephalocele** (sef-al'o-sel) [Gr. κεφαλή head + κήλη hernia]. A protrusion of a part of the cramal contents.
- **cephalocentesis** (sef''al-o-sen-te'sis) [Gr. κεφαλή head + κέντησιs puncture] The surgical puncture of the head.
- cephalocercal (sef"al-o-ser'kal) [Gr. κεφαλή head + κέρκος tail]. Pertaining to the long axis of the body.
- cephalochord (set'al-o-kord) [Gr. κεφαλή head + χορδή cord]. The intracranial portion of the embryonic chorda dorsalis.
- cephalocyst (sef'al-o-sist). A cestode worm.
- cephalodymia (sef"al-o-dim'e-ah). The condition of a cephalodymus.
- cephalodymus (sef-al-od'im-us) [Gτ. κεφαλή head + δύμεναι to mingle]. A twin monstrosity with a single or united head.
- cephalodynia (sef'al-o-din'e-ah) [Gr. κεφαλή head + δδύνη pain]. Pain in the head; headache.
- cephalogaster (sef"al-o-gas'ter) [Gr κεφαλή head + γαστήρ belly] The anterior portion of the enteric canal of the embryo.
- **cephalogenesis** (sef"al-o-jen'es-is) [Gr. κεφαλή head +-γε to produce]. The development of the head in the embryo.
- cephalogyric (sef"al-o-ji'rik) [Gr. κεφαλή head + γύρος a turn]. Causing turning of the head.

- cephalohematocele (sef"al-o-hem-at'o-sēl). Cephalematocele.
- cephalohemometer (sef''al-o-he-mom'et-er) [Gr. κεφαλή head + αlμα blood + μέτρον measure]. An instrument for ascertaining changes in the intracranial blood-pressure.
- **cephaloma** (sef-al-o'mah). An encephaloid or soft cancer.
- cephalomelus (sef-al-om'el-us) [Gr. κεφαλή head + μέλος limb]. A fetal monster with an accessory limb growing from the head.
- cephalomenia (sel''al-o-me'ne-ah) [Gr. κεφαλή head + μήν month]. Metastasis of the menses to the head, as in a nasal discharge at the menstrual period.
- **cephalomeningitis** (set''al-o-men-in-ji'tis) [Gr. κεφαλή head + meningitis]. Inflammation of the membranes of the brain.
- cephalometer (scf-al-om'et-er) [Gr. κεφαλή head + μέτρον measure] 1 An instrument for measuring the head in craniometry. 2. An instrument for measuring the fetal head at birth.
- **cephalometry** (sef-al-om'et-re). Measurement made on the head,
- **cephalomotor** (sef-al-o-mo'tor) [Gr. κεφαλή head + L mo'tus motion] Moving the head, pertaining to motions of the head.
- Cephalomyia (sef"al o-mi'yah) Same as Estrus. cephalone (sef'al-on). A large-headed idiot.
- cephalont (sef'al-ont) [Gr. κεφαλή head + συτος being] That stage of a developing gregarine protozoon in which it is attached to the epithelial host cell. Cf. sporont.
- cephalopagus (sef-al-op'a-gus). Same as crantopagus
- cephalopathy (sef-al-op'ath-e) [Gr $\kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head $+ \pi \dot{\alpha} \theta \sigma s$ disease] Any disease of the head.
- cephalopharyngeus (sef"al-o-fa-rin'je-us). See muscles, table of.
- cephalopin (sef'al-o-pin) An oily substance extracted from brain tissue.
- cephaloplegia (sef''al-o-ple'je-ah) [Gr. κεφαλή head + πλήγη stroke] Paralysis of the muscles about the head and face.
- cephalorachidian (sef"al-o-ra-kid'e-an). Pertaining to the head and the spinal column.
- cephalostyle (sef'al-o-stil). The cranial end of the notochord.
- cephalothoracic (sef"al-o-tho-ras'ik). Pertaining to the head and thorax,
- cephalothoracopagus (sef"al-o-tho-rak-op'ag-us). A double monster consisting of two fetuses joined by the head and thorax.
- **cephalotome** (sef'al-o-tom). An instrument for cutting the fetal head.
- cephalotomy (sef-al-ot'o-me) [Gr. κεφαλή head + τέμνειν to cut]. I. The cutting up of the fetal head to facilitate delivery. 2. Dissection of the fetal head.
- cephalotractor (sef"al-o-trak'tor) [Gr. κεφαλή head + tractor]. An obstetric forceps.
- cephalotribe (sef'al-o-trib) [Gr. κεφαλή head + τρίβειν to crush]. An instrument for use in cephalotripsy.
- cephalotripsy (sel'al-o-trip-se) [Gr. κεφαλή head + τρίψις a rubbing]. The crushing of the fetal head in order to facilitate delivery.
- cephalotrypesis (sef''al-o-tri-pc'sis) [Gr. κεφαλή head + τρύπησις a boring]. The trephination of the cranium.
- ceptor (sep'tor). 1. See Ehrlich's side-chain theory, under theory. 2. Any one of the nervous apparatus for, or organs which, receive external stimuli or impressions and transfer them to the nerve-centers. Cf. beneceptor and nociceptor. chemical c., a ceptor which transforms proper stimuli into chemical reactions in the body. contact c., a

ceptor which receives stimuli of direct physical contact. distance c., the nervous apparatus through which an individual perceives or is affected by his distant environment. effector c., a ceptor in the brain which receives impulses of special actions and becomes so trained for them that subsequent similar impulses are much facilitated. nerve

c. Same as ceptor, 2d def. cera (se'rah) [L. for "wax"]. Wax. c. al'ba (U. S. P.), white, or bleached, beeswax. c. fla'va (U. S. P.), yellow, or unbleached, beeswax.

ceraceous (se-ra'shus) [L. ce'ra wax]. Wax-like in appearance.

ceral (se'ral) [L. ce'ra wax]. Pasta cerata, a proprietary vehicle for the external application of medicines it contains wax, potash, and water

ceramic dentistry (se-ram'ik) [Gr. κέραμος pot-

ters' clay]. See under dentistry.
ceramics, dental (se-ram'iks) The art of employing porcelain and similar materials in dental work.

ceramodontia (se-ram-o-don'she-ah) [ceramics + Gr. δδοῦς tooth]. Ceramic dentistry or dental ceramics

ceramuria (ser-am-u're-ah) [Gr. κέραμος potters' clay + οὖρον urine]. Phosphaturia.

corasein (se-ra'se-in). orașein (se-ra'se-in). A diuretic, sedative, and antipyretic resın from the bark of Cer'asus (now Prun'us) virginia'na, or wild cherry. Dose, 5-10 gr. (0 324-0.65 gm.).

cerasin (ser'as-in). 1. A substance from the gum of cherry, plum, and other trees said to be a carbohydrate charged with a lime-salt. 2. A compound, $C_{70}H_{138}N_2O_{12}$, formed by treating brain tissue with barium hydroxid. 3. A red azo dye, $C_{10}H_{17}N:N.C_{10}H_{4}(SO_{2}ONa)_{2}OH$: used as a cytoplasmic stain.

cerasinose (se-ras'in-os). A carbohydrate from cherry-gum.

cerasus (ser'as-us). Latin for cherry or cherry tree. See Prunus.

cerate (se'rāt) [L cera'tum, from ce'ra wax]. medicinal preparation for external application, made with a basis of fat or wax, or both. A cerate is softer than a plaster, and can be spread on the skin without melting. The cerates of the U. S. P. are cantharides cerate, rosin cerate, and simple cerate. blistering c. See cantharides c. camphor c. (cera'tum cam'phora, U. S. P.), simple cerate, 85 parts, camphor liniment, 3 parts, olive oil, 12 parts used in skin diseases. cantharides c. (U.S.P.), a preparation of cantharides, 350 gm; glacial acetic acid, 25 c c.; oil of turpentine, 150 c.c.; yellow wax, 175 gm.; rosin, 175 gm.; benzoinated lard, 200 gm Goulard's c., cerate of lead subacetate (cera'tum plum'bi subaceta'tis, U. S. P). Hufeland's c., simple cerate, 30 parts; lycopodium and zinc oxid, each, 2 parts for sore nipples. rosin c. (U. S. P.), rosin, 350 gm.; yellow wax, 150 gm. lard, 500 gm. simple c., a mixture of 8 parts of lard and 4 parts of white wax, melted together. spermaceti c., a mixture of spermaceti, white wax, and olive oil. Turner's c., a salve containing wax, oil, and calamin.

Same as keraceratectomy (ser-at-ek'to-me). tectomy.

ceratiasis (ser-at-i'as-is). Same as keratiasis.

ceratin (ser'ah-tin). Same as keratin.

ceratine (ser'at-ēn). A proprietary ointment for skin diseases.

ceratitis (ser-at-i'tis). Same as keratitis.

cerato-. For words beginning thus, see those beginning kerato-.

ceratocele (ser'at-o-sel). Same as keratocele.

ceratocricoid (ser"at-o-kri'koid). The posterior cricothyroid muscle

ceratoglossus (ser"at-o-glos'us). See muscles, table of.

ceratohyal (ser"at-o-hi'al). Pertaining to a fornu of the hyoid bone.

ceratonosus (ser-at-on'o-sus) [Gr. Képas cornea + voos disease]. Any disease of the cornea.

Ceratophyllus (ser-at-of'il-us). A genus of fleas of the order Siphonaptera. C. acu'tus is the squirrel flea. C. fascia'tus, the rat-flea, which is believed to transmit plague and also Trypano-soma lewisi from rat to rat. It serves as the intermediate host of the tapeworm Hymenolepis diminuta. C. galli ne, a species which attacks chickens and man. c. punjaben'sis, a rat flea of India. C. silantiew'i, a flea which infests the Manchurian marmot and transmits plague.

ceratoplasty (ser'at-o-plas-te). Same as keratoplasty.

ceratotomy (ser-at-ot'o-me). See keratotomy.

ceratum (se-ra'tum). Latin and U. S. P. name for cerate See cerate.

cerberin (ser'be-rin). A poisonous alkaloid, C27H40-Os, from Cer'bera odal'lam, a tree of Asia.

cercaria (ser-ka're-ah), pl. cerca'riæ [Gr. κέρκος tail]. One of the larval stages of trematode worms, consisting of a body and tail.

cerclage (sār-klazh') [Fr. an encircling]. Binding together of the ends of a fractured bone by a metal ring or wire loop.

cercocystis (ser-ko-sis'tis). A form of larval tapeworm resembling cysticercus, but provided with a caudal appendage.

cercomonad (ser-kom'o-nad). Any monad or protozoon of the genus Cercom'onas.

Cercomonas (ser-kom'o-nas) [Gr. κέρκος tail + μονάς monad] Α genus of flagellate protozoa found in the stools of man and other animals. C. hom'inis, the name formerly given to the organisms now known as Truchomonas hominis and Chilomastiv mesnili. C. intestinal'is. See Guardia intestinalis. C. longicau'da, a species found in human feces, probably coprozoic.

cercomoniasis (ser-ko-mo-ni'as-is). Infestation with Cercomonas.

Cercosphæ'ra addiso'ni. Same as Microsporon audouini

Cercosporal'la vex'ans. A mold that has been known to cause skin eruptions.

cercus (ser'kus), pl. cer'ci [Gr. keokos tail]. A bristle-like structure.

cereal (se're-al) [L. cerea'lis]. 1. Pertaining to edible grain. 2. Any graminaceous plant bearing an edible seed; also the seed or grain of such a plant.

cerealin (se-re'al-in). A ferment contained in brain extract and capable of converting starch into glucose.

cerealose (se're-al-ōs). A substance containing maltose and glucose, obtained by the action of enzymes on grains.

cerebellar (ser-e-bel'ar). Pertaining to the cerebellum.

cerebellifugal (ser"e-bel-if'u-gal). Tending or proceeding from the cerebellum.

cerebellipetal (ser"e-bel-ip'et-al) [cerebellum + L. pet'ere to seek]. Tending or moving toward the cerebellum.

cerebellitis (ser"e-bel-i'tis). Inflammation of the cerebellum.

cerebellofugal (ser-e-bel-of'u-gal). Cerebellifugal. cerebello-olivary (ser"e-bel-o-ol'iv-a-re). necting the cerebellum and olivary body.

cerebellopontile (ser"e-bel-o-pon'til). Pertaining to the cerebellum and the pons varolii.

cerebellopontine (ser-e-bel-o-pon'tin). Cerebellopontile.

cerebellorubral (ser"e-bel-o-ru'bral). Pertaining to the cerebellum and the red nucleus.

- **cerebellorubrospinal** (ser"e-bel-o-ru-bro-spi'nal). Pertaining to the cerebellum, the red nucleus, and the spine.
- **cerebellospinal** (ser"e-bel-o-spi'nal). Pertaining to the cerebellum and spinal cord.
- cerebellum (ser-e-bel'um) [L. dim. of cer'ebrum brain] That division of the brain behind the cerebrum and above the pons and fourth ventricle. It consists of a median lobe and two lateral lobes, connected with the other portions of the brain by three pairs of peduncles, the superior connecting it with the cerebrum, the middle with the pons, and the inferior with the medulla. The cerebellum is concerned in the coordination of movements.
- cerebral (ser'e-bral). Pertaining to the cerebrum.
- cerebralgia (ser-e-bral'je-ah) [cerebrum + Gr ἄλγος pain]. Headache.
- corebrasthenia (ser'e-bras-the'ne-ah, ser'e-bras-the-ni'ah) [cerebrum + asthenia]. Debility, mental or other, associated with brain lesions.
- **cerebration** (ser-e-bra'shun) [L. cerebra'tio]. Functional activity of the cerebrum. **unconscious c.**, mental action of which the subject has no consciousness.
- **cerebriform** (ser-eb'rif-orm) [L. cer'ebrum brain + for'ma form]. Resembling the brain or brain substance.
- **cerebrifugal** (ser-e-brif'u-gal) [L. cer'ebrum brain + fu'gere to flee] Conveying impulses away from the brain, centrifugal or exodic.
- cerebrin (ser'e-brin). 1. A colorless, fatty principle, C₁₇H₃₃NO₃, from brain tissue; also any one of a group of such principles found in nerve tissue, yolk of egg, spleen, etc. 2 A remedy prepared from brain substance. alpha-c. See cerebrinin.
- **cerebrinin** (ser-eb'rin-in). A fluidextract of the brain of the calf, for therapeutic use.
- **cerebripetal** (ser-e-brip'et-al) [I. cer'ebrum brain + pel'ere to seek]. Conducting or proceeding toward the cerebrum; afferent or centripetal.
- cerebritis (ser-e-bri'tis). Inflammation of the cerebrum. saturnine c., brain inflammation due to lead-poisoning.
- **cerebrocardiac** (ser"c-bro-kar'de-ak) [L. cer'-ebrum + car'dia heart]. Pertaining to the brain and heart.
- cerebrogalactose (ser"e-bro-gal-ak'tōs). Cerebrose.
- cerebrogalactosid (ser''e-bro-gal-ak'to-sid). Same as cerebrosid.
- cerebrohyphoid (ser'e-bro-hi'foid) [cerebrum + Gr. ὑφή tissuc + είδος form]. Resembling brain tissuc.
- **cerebroid** (ser'e-broid). Resembling the brain substance.
- cerebrol (ser'eb-rol). An oily substance from the
- brain.

 cerebrolein (ser-e-bro'le-in). An olein obtainable from the brain.
- **cerebrology** (ser-e-brol'o-je) [L. cer'ebrum brain + Gr. λόγοs word]. The sum of knowledge regarding the brain,
- **cerebroma** (ser-e-bro'mah). Any abnormal mass of brain substance outside the cranium.
- **cerebromalacia** (ser"e-bro-mal-a'se-ah) [L. cer'e-brum brain + Gr. μαλακός soft]. Abnormal softness of the brain.
- cerebromedullary (ser"e-bro-med'u-la-re). Cerebrospinal.
- **cerebromeningeal** (ser''e-bro-me-nin'je-alj. Pertaining to the brain and its membranes.
- **cerebromeningitis** (ser"e-bro-men-in-ji'tis). In flammation of the brain and its membranes.
- cerebrometer (ser-e-brom'e-ter). An instrument for registering the pulsatory movements of the brain.

- **cerebron** (ser'eb-ron). A crystalline cerebrosid from brain tissue; probably a mixture of phrenosin and kerasin.
- cerebronic acid (ser-e-bron'ik). See under acid. cerebro-ocular (ser"e-bro-ok'u-lar). Pertaining to the brain and the eye.
- cerebropath'ia psy'chica toxe'mica. Korsakoff's psychosis.
- **cerebropathy** (ser-e-brop'ath-e) [L. cer'cbrum brain + Gr. πάθος disease]. Any disorder of the brain, especially one due to overwork.
- **cerebrophysiology** (ser"e-bro"fiz-e-ol'o-je). The physiology of the cerebrum.
- **cerebropontile** (ser"e-bro-pon'til). Pertaining to the cerebrum and pons.
- cerebropsychosis (ser"e-bro-si-ko'sis) [L. cer'ebrum brain + Gr. ψύχωσις life]. Any mental disorder due to disease of the psychic centers.
- cerebrorachidian (ser"e-bro-ra-kid'e-an). Cerebrospinal.
- **cerebrosclerosis** (ser"e-bro-skle-ro'sis) [cerebrum + sclerosis]. Morbid hardening of the substance of the cerebrum.
- **cerebroscope** (ser-e'bro-skōp). An ophthalmoscope for diagnosing brain disease.
- cerebroscopy (ser-e-bros'ko-pe) [L. cer'ebrum brain + Gr σκοπεῦν to inspect]. 1. The diagnostic examination of the brain, often performed by examining the eye with an ophthalmoscope. 2. Postmortem examination of the brain.
- **cerebrose** (ser'e-brōs). Brain-sugar, C₆H₁₂O₆; a principle derivable from the brain substance, and sometimes found in diabetic sugar: called also *cerebrogalactose*.
- cerebrosid, cerebroside (ser'c-bro-sid). Any one of a class of phosporus-free lipoid compounds, existing in the brain and nervous tissue. They are compounds of a sugar group with a fat-like complex, and are, therefore, also called glycolipins. Cerasin and phrenosin are typical members of this class.
- cerebrosis (ser-e-bro'sis). Any disease of the cerebrum.
- **cerebrospinal** (ser"e-bro-spi'nal). Pertaining to the brain and spinal cord.
- cerebrospinant (ser"e-bro-spi'nant). Any medicine or agent that affects the brain and spinal cord.
- cerebrospinase (ser''e-bro-spī'nās). An oxidizing ferment occurring in the cerebrospinal fluid.
- **cerebrosuria** (ser"e-bro-su're-ah) [cerebrose + Gr οὖρον urine] The occurrence of cerebrose in the urine; cerebral diabetes.
- **cerebrotomy** (ser-e-brot'o-me) [cerebrum + Gr. τέμνειν to cut]. The anatomy or dissection of the brain
- cerebrum (ser'e-brum or ker'e-brum) [L]. The main portion of the brain, occupying the upper part of the cranium, and consisting of two equal portions, called hemispheres, which are united at the bottom by a mass of white matter, called the corpus callosum. c. abdomina'le, the celiac plexus. c. exsicca'tum, the gray substance of the brain of calves, freed from fats, dried, and pulverized: used therapeutically in brain and nervous diseases. Daily dose, 30-60 gr. (2-4 gm.).
- cerecloth (ser'kloth). Cloth impregnated with wax and made antiseptic used in dressings.
- **cereo** (se're-o). A proprietary agent for predigesting starchy foods.
- cereoli (se-re'o-li) [L. "wax tapers"]. Medicated bougies.
- ceresin (ser'e-sin) [I.. ce'ra wax]. A mineral wax from ozocerite: used as a substitute for beeswax. Called also ozokerste and earth wax.
- Cereus (se're-us) [L. "waxen"]. A genus of cactaceous plants. C. grandiflo'rus. See Cactus grandiflorus. C. pec'ten contains pectenin.

cerevisia (ser-e-viz'e-ah) [L.]. Beer, ale, porter, or other brewed malt liquor.

cerevisiæ fermentum (ser-e-viz'i-e fer-men'tum)
[L.]. Brewers's yeast c. fermen'tum compres'sum, compressed yeast.

cerevisin (ser-e-vis'in). Dried brewer's yeast, used internally in furunculosis and externally in vaginitis.

ceridin (ser'id-in). A proprietary preparation said to be the active principle of yeast. It is aperient and is used internally in acne. Dose, 1½ gr. (0.1 gm.) twice a day.

cerin (se'rin). Same as cerotic acid.

cerium (se're-um) [L.]. A metallic element: symbol, Ce; atomic weight, 140 25. C. oxalate (ce'rii ox'alas) is a white, insoluble powder, a mixture of the oxalates of cerium, didymium, lanthanum, and other elements sedative, tonic, and nervine; used in gastric irritability, vomiting of pregnancy, and reflex cough. Dose, 1-5 gr. (0.066-0333 gm.). The nitrate has similar qualities and is given in the same doses.

cerolin (se'ro-lin). A proprietary preparation from yeast used as a purgative, and also in acne, furunculosis, and other skin diseases, and in gynecology in the form of bougies and vaginal suppositories in leukorrhea, pruritus, etc. Dose, 13-5 gr. (0.1-0.3 gm), three times a day.

cerolipoid (se-ro-li'poid). A waxy substance existing in plants.

cerolysin (se-rol'is-in) [L. ce'ra wax + lysin]. A lysin which decomposes wax

ceroma (se-ro'mah) [Gr κήρωμα waxy mass]. A tumor of tissue which has undergone a waxy degeneration.

ceromel (se'ro-mel) [L ce'ra wax + mel honey]. A mixture of wax and honey sometimes used as a cerate and wound dressing.

ceroplasty (se'ro-plas-te) [Gr. κηρός wax + πλάσσειν to mold]. The making of anatomic models in wax

cerotic acid (se-rot'ik). See acid.

certifiable (ser'tif-i-ab-l). Capable of being certified, said of infectious diseases, cases of which must by law be reported to the health officers

cerumen (se-ru'men) [L]. The wax-like secretion found within the external meatus of the ear; ear-wax inspissated c., dried ear-wax in the external canal of the ear.

ceruminal, ceruminous (se-ru'min-al, se-ru'min-us) Of or pertaining to the cerumen.

ceruminosis (se-ru"min-o'sis). Excessive or disordered secretion of cerumen.

ceruse (se'rūs) [L. cerus'sa]. The basic carbonate of lead, white lead.

cervanthropy (ser-van'thro-pe) [L. cer'vus deer + Gr. ἄνθρωπος man]. Insanity in which the patient thinks he has been turned into a deer.

cervical (ser'vik-al) [L. cervica'lis, from cer'vix neck] Pertaining to the neck or to any cervix.

cervicalis ascendens (ser-vik-a'lis). See muscles, table of.

cervicectomy (ser-vis-ek'to-me) [cervix + Gr. ἐκτομή excision]. Excision of the cervix uteri. cerviciplex (ser-vis'ip-leks). The cervical plexus

of nerves.

cervicitis (ser-vis-i'tis). Inflammation of the cervix uteri; trachelitis.

cervico-axillary (ser"vik-o-aks'el-a-re). Pertaining to the neck and axilla.

cervicobrachial (ser"vik-o-bra'ke-al). Pertaining

to the neck and the arm. cervicobuccal (ser"vik-o-buk'al). Noting the buc-

cal surface of the neck of a molar tooth.

cervicodorsal (ser"vik-o-dor'sal). Pertaining to the neck and the back.

cervicodynia (ser"vik-o-din'e-ah) [L. cer'vix neck + Gr. δδύνη pain]. Pain in the neck.

cervicofacial (ser'vik-o-fa'she-al). Pertaining to the neck and face.

cervicolabial (ser"vik-o-labe-al). Noting the labial surface of the neck of a canine or incisor tooth.

cervicolingual (ser"vik-o-ling'wal). Pertaining to the lingual surface of the neck of a tooth.

cervicolumbar phenomenon (ser"vik-o-lum'-bar). See under phenomenon.

cervico-occipital (ser''vik-o-ok-sip'et-al). Pertaining to the neck and occiput.

cervicoscapular (ser"vik-o-skap'u-lar). Pertaining to the neck and the scapula.

ing to the neck and the scapula. cervicothoracic (ser"vik-o-tho-ras'ik). Pertaining

to the neck and the thorax.

cervicovesical (ser"vik-o-ves'ik-al).

Pertaining

to the cervix uteri and bladder

cervimeter (ser-vim'et-er) [cervix + Gr. μέτρον measure]. An apparatus for measuring the cer-

cervix (ser'viks) [L]. The neck or any neck-like part. The cervix of a tooth is the portion of the tooth grasped by the gum between the crown and root. c. of axon, the constricted part of an axon before the myelin sheath is added to the axis-cylinder. c. colum'næ posterio'ris [B N A]. Same as c. cornu. c. cor'nu, the constricted part of the dorsal horn of gray matter in the spinal cord. tapiroid c., a uterine cervix with a peculiarly clongated anterior lip c. u'teri, the lower and narrow end of the uterus, between the os and the body of the organ. c. vesi'cæ, the neck of the urinary bladder.

Cervus brasiliensis (ser'vus bra-zil-e-en'sis) [L.]. A Brazilian deer its skin and hair afford a homeopathic remedy.

ceryl (se'ril). A univalent hydrocarbon radicle of the fatty series, having the formula C₂₇H₅₅.

cesarean section (se-za're-an) [L. sec'tto cæsa'rea; named from Julius Cæsar, who is said to have been thus born]. Delivery of the fetus by an incision through the abdominal and uterine walls.

cesareanized (se-za're-an-izd). Having been subjected to cesarean section.

cesarotomy (se-zar-ot'o-me). The cesarean section.

cesium (se'ze-um) [L. cœ'sium, from cœ'sius blue]. A rare univalent metallic element with an alkaline oxid; atomic weight, 132.81; symbol, Cs. Some of its salts and binary compounds are used like those of potassium. c. bitartrate, a salt, Cs₂C₄H₄O₆, in colorless, soluble, prismatic crystals: recommended for nervous heart palpitation. Dose, 2-5 gr. (0.13-0.3 gm.). c. bromid, a white, soluble, granular powder, CsBr: used in nervous heart palpitation. Dose, 2-5 gr. (0.13-0.3 gm.). c. carbonate, a white, granular, hygroscopic salt, Cs₂CO₃ used as a nervine. c. hydroxid, a grayish, hygroscopic substance, CsOH antiepileptic and nervine. c. sulphate, a colorless, soluble salt, Cs₂SO₄, in stable prisms: antiepileptic.

cesspool (ses'pool). A pit into which household sewage or other liquid waste is discharged.

Cestan-Chenais syndrome (ses-tan-shen-āz'). See syndrome.

Cestoda (ses-to'dah). An order of Platyhelminthes which includes the tapeworms which have a head or scolex and segments or proglottides. There are five families Trypanorhynchidæ or Tetrarhynchidæ, Tetraphyllidæ, Diphyllidæ, Pseudophyllidæ or Bothriocephalidæ, and Cyclophyllidæ or Teniidæ

Cestodaria (ses-to-da're-ah). An order of Platyhelminthes which includes the forms made up of a single segment. There are two families: Caryophyllidæ, found in fish, and Ligulidæ, found in fish and in birds. 252

cestode, cestoid (ses'tŏd, ses'toid) [Gr. κεστόs girdle + είδος form]. 1. Resembling a tapeworm. 2. Any tapeworm or platyhelmian of the group to which the tapeworms belong.

cestus (ses'tus) [L. "a belt"]. A fold of the metatela surrounding the dorsal portion of the braintube.

cetaceum (se-ta'se-um). See spermaceti.

Ceterach (set'er-ak) [Arabic]. A genus of ferns. C. officina'rum was formerly much used as a mucilaginous astringent.

cethal (se'thal). A mixture of cinnamyl methyl with 10 per cent. thymol: used as an inhalant in lung diseases.

cetiacol (se-ti'ak-ol). See palmiacol.

cetosan (se'to-san). A mixture of the higher alco-hols of spermaceti with soft paraffin: used as an ointment-base.

etraria (se-tra're-ah). r. A genus of lichens. 2. The official name of C. islan'dica, the so-called Iceland moss. It is nutritious and useful in lung and bowel affections. Dose of decoction Cetraria (se-tra're-ah). (decoc'tum cetra'ria), 2-4 fl.oz. (60-120 c c.).

cetrarin (se-tra'rin). A bitter, crystallizable principle, C₃₀H₃₀O₁₁, from Cetra'ria islan'dıca, or Iceland moss. It stimulates peristalsis and the secretions of the digestive tract. Dose, 1½-3 gr. (0.099-0.2 gm.).

cetyl (se'til). A univalent alcohol radicle, C16H33. cetylid (set'il-id). A compound formed by boiling cerebrin with water.

cevadilla (sev-ad-il'ah). Same as sabadilla.

cevadillin (sev-ad-il'm). An uncrystallizable alkaloid, C34H63O8N, from sabadılla.

cevadin (sev'ad-in). A crystalline alkaloid, C₃₂-H₄₉NO₉, from sabadilla.

cevin (sev'in). A crystalline alkaloid, C₂₂H₄₃NO₈.-3½H2O, from various species of veratum.

Ceylancyclostoma (se-lan-si-klos'to-mah). Ankylostoma ceylanicum.

Ceylon moss (se'lon). A seaweed, Gracila'ria lichenoi'des: one of the sources of agar.

ceyssatite (sēs'ah-tīt) [Ceyssat, a village of France]. A white earth from France useful as an absorbent powder in eczema and hyperidrosis, and in preparing ointments and medicated pastes.

C. F. Abbreviation for carbol fuchsin.

Cg. Abbreviation for centigram.

Cgm. Abbreviation for centigram.

C. G. S. An abbreviation for centimeter gram-second system, that system of measurement in which the unit of length is the centimeter, that of weight, the gram, that of time, the second.

C_H. The symbol for hydrogen-ion concentration. (CH₂)₂. Ethylene.

CH4. Methane.

C₂H₂. Acetylene.

C. H. Benzene.

Chabert's disease (shab-arz') [Philebert Chabert, French veterinarian, 1737-1814]. Symptomatic

Chad'dock's sign [Charles Gilbert Chaddock, St. Louis neurologist]. See under sign.

Chadwick's sign (tshad'wiks) [James Read Chadwick, American gynecologist, 1844-1905]. Jacquemier's sign. See under sign.

Chagas's disease (tshag'as) [Carlos Chagas, physician in Brazil]. See under disease.

Chagasia (tshag-as'e-ah) [Carlos *Chagas*]. A genus of South American anopheline mosquitoes.

Chagres fever (chag'res). See under fever.

Challetia (ka-il-e'she-ah). A genus of trees and shrubs, nearly all tropical. C. toxica'ria, of West Africa, bears poisonous fruit and seeds.

chain (tshān). In chemistry, a method of linking together the atoms of a compound. closed c.,

several atoms linked together so as to form a ring. Such compounds are derived from benzol, CaHa. and are known as aromatic, cyclic, carbocyclic, or

coal-tar compounds. open c., several atoms united to form an open chain. Compounds of this series are related to methane and are also called fally, aliphatic, acyclic, or paraffin compounds. side-c. theory. See under theory. sympathetic c., the sympathetic trunk. See trunk.

chairamidin (tshi-ram'id-in). An alkaloid, C22H26-.N₂O₄, from cinchona and isomeric with chairamin.

chairamin (tshi-ram'in). An alkaloid, C₂₂H₂₆N₂O₄, from cuseo bark.

chalamydospore (kal-am'id-o-spōr). See *spore*.

Chalara (kal-ar'ah). A genus of fungi which produce the infection chalarosis

chalarosis (kal-ar-o'sis) The state of being infected by the fungus Chalara. It is attended by the development of nodules beneath the skin which degenerate into ulcers.

chalastodermia (kal-as-to-der'me-ah). dermia.

chalaza (kal-a'zah) [Gr. for "hail"] A spiral band of albumin joining either end of the yolk of a bird's egg to the shell.

nalazion (ka-la'ze-on) [Gr. "hailstone"]. A small tumor of the eyelid, formed by the distenchalazion (ka-la'ze-on) tion of a meibomian gland with secretion.

chalazodermia (kal-az-o-der'me-ah) [Gr χάλαζα hailstone + δέρμα skin]. Same as dermatolysis.

chalcitis (kal-si'tis). Same as chalkitis.

chalcosis (kal-ko'sis) [Gr χαλκός copper]. The presence of copper deposits in the tissues.

chalice-cell (kal'ıs-). See cell

chalicosis (kal-ik-o'sıs) [Gr. χάλιξ gravel]. A disorder of the lungs or bronchioles (chiefly among stonecutters), due to the inhalation of fine particles of stones; a form of pneumoconiosis.

chalinoplasty (kal'in-o-plas-te) [Gr. χαλινός bridle, also a corner of the mouth + πλάσσειν to mold]. Plastic surgery of the angle of the mouth.

chalk (chawk) [L. calx or cre'ta]. Amorphous calcium carbonate; a white, lusterless, insoluble earth: slightly alkaline. See creta. French c., magnesium silicate. prepared c. See creta praparata. c.-stone, a gouty concretion, usually of the hands and feet mainly composed of sodium urate, sometimes combined with various lime-salts.

chalkitis (kal-ki'tis) [Gr. χαλκός made of metal]. Inflammation of the eyes caused by rubbing the eyes after the hands have been used on brass. Called also brassy eye.

chalone (kal'on) [Gr. χαλοῦν to relax]. Same as colvone.

chalonic (kal-on'ik). Same as colyonic.

chalybeate (kal-ib'e-āt) [L cha'lybs; Gr. χάλυψ steel]. Containing or charged with iron ferruginous or martial.

Chamælirium (kam-el-ir'e-um) [Gr. xaµal ground + λείριον lily]. A genus of liliaceous plants. C. lu'teum is a uterine tonic and diuretic. Dose of its aqueous infusion (1 ounce to 1 pint), a wineglassful.

chamseprosopic, chameprosopic (kam'e-proso'pic). Characterized by chamæprosopy.

chamæprosopy (kam''e-pro-so'pe) [Gr. χαμαί low + πρόσωπον face]. The condition of having a low, broad face, i. e., a facial index of 90 or less.

chamber (chām'ber) [L. cam'era; Gr. καμάρα]. An inclosed space or antrum. aqueous c., the space in the eye inclosing the aqueous humor, and divided by the iris into the anterior chamber and posterior chamber. counting c., a space of definite thickness and provided with a ruled base into which blood dilutions may be placed for counting the number of blood-corpuscles under the microscope. c's of the eye, the spaces containing the humors of the eye c's of the heart, the cavities of the auricles and ventricles. lethal c., a chamber for killing small animals (dogs, cats, etc) with gas. pulp c., that part of the pulp cavity in which the body of a tooth is contained vacuum c., in dentistry, the depression in a denture which helps to retain it in place. vitreous c., the space in the eye inclosing the vitreous Zappert's c., a form of counting chamber.

Chamberland filter (shahm-ber-lah') [Charles Edouard *Chamberland*, French bacteriologist, 1851–1908]. See under *filter*.

chamecephalous (kam-e-sef'al-us) [Gr. $\chi \alpha \mu \alpha i$ low + $\kappa \epsilon \varphi \alpha \lambda \dot{\eta}$ head]. Having a low, flat head.

chamelirin, chamælirin (kam-e-lir'in) A poisonous glucosid from Chamælir'ium lu'teum; a heart depressant and uterine tonic.

chameprosopic, chameprosopic (kam"e-proso'pik) [Gr $\chi \alpha \mu \alpha t$ low $+ \pi \rho b \sigma \omega \pi \sigma \nu$ face]. Having a broad face.

chamois-skin (sham'wah-, sham'e-). A soft wash-leather of sheepskin: used in surgery.

chamomile (kam'o-mīl) [I.. chamomil'la; Gr. χαμαl ground + μῆλον apple]. A popular name for composite-flowered plants of the genera An'the-mis, Calen'dula, Matrica'ria, and Tage'tes. The common or Roman chamomile is An'thems nob'-ths a useful tonic and febrifuge. The German or wild chamomile is Matrica'ria chamomilla It is used in dyspepsia and as a diaphoretic, and locally in fomentations for relieving pain. Dose of powder, ½-1 dr. (195-39 gm); of extract, 2-10 gr. (0.13-065 gm.); of infusion, 2-4 floz (60-120 cc) oil of c., the volatile oil of An'themis nob'ilis Dose, 2-10 min (0.13-065 cc.).

nob'ilis Dose, 2-10 min (0 13-0 65 c c.). **champacol** (sham'pak-ol). The camphor, C₁₅H₂₆O, of the wood of the champak tree, Michel'ia cham'-paca: in white, soluble needles.

champagne (sham-pān') [Fr]. An effervescent French wine, with from 5 to 13 per cent. of alcohol· a diffusible stimulant, soothing in certain cases of irritable stomach.

Champetier de Ribes' bag (shahmp-te-a de rēbz')
[Camille Champetier de Ribes, French obstetrician, born 1848]. See under bag.

champignon (shawm-pēn-yaw') [Fr. "mush-room"]. Suppurative inflammation of the sper-matic cord of a horse sometimes following castration.

chancre (shang'ker) [Fr.]. The primary lesion of syphilis fungating c., soft chancre, characterized by fungoid granulations. hard c., Hunterian c., indurated c., true c., a constitutional venereal sore, followed by true syphilis Its base and sides are distinctly hard, and it gives off a thin secretion that produces syphilis when inoculated upon another person. mixed c., an alleged form of soft chancre which is followed by constitutional syphilis. Nisbet's c., nodular abscesses in the penis after acute lymphangitis from soft chancre. non-infecting c., simple c., soft c. See chancroid. Ricord's c., the parchment-like initial lesion of syphilis Rollet's c., mixed chancre. sporotrichosic c., the first developing sore at the site of sporotrichic infection.

chancriform (shang'krif-orm). Resembling a chancre.

chancroid (shang'kroid). A soft or non-syphilitic

venereal sore. It begins as a pustule on the genitals, forming soon after inoculation: it grows rapidly, and finally breaks down into a virulent ulcer, discharging pus. The secretion of a chancroid is contagious, but does not produce constitutional syphilis. phagedenic c., chancroid with a tendency to slough. serpiginous c., a variety which tends to spread in curved lines.

chancroidal (shang-kroi'dal). Pertaining to chancroid.

chancrous (shang'krus). Of the nature of chancre. chandu (tshan-du'). A preparation of opium used in opium smoking.

change of life (chānj). The menopause, or normal and final cessation of the menses, often attended with various constitutional disturbances.

change of sound, Biermer's or Gerhardt's. A change of percussion-note according to the patient's position: an indication of pneumothorax,

channel (chan'el) [L. cana'lis a water-pipe]. That through which anything flows; a cut or groove. auriculoventricular c., the auricular canal of the heart. See canal. blood-c's, narrow passages with no distinct walls, but containing blood: they are found in fresh granulation tissue. lymph-c's, the smaller lymph-sinuses, irregular spaces in and about the lymphatic glands and around lymphatic vessels. perineurial c., a lymph-channel which surrounds a nerve-trunk.

Channing's solution (tshan'ingz) [William Channing, American physician of 19th century]. See under solution.

Chantemesse's reaction, serum (shant-mes') [André Chantemesse, French bacteriologist, 1851-1919]. See under reaction and serum.

Chap'arro amargo'so. A Mexican plant, Castela nicholsani, said to be useful in amebic dysentery. Dose of fluidextract, 30-60 min. (2-4 c.c).

Chapman's dinner pill, mixture [Nathaniel Chapman, American physician, 1780–1853]. See under pill and mixture.

chappa (tshap'ah). A disease of West Africa somewhat resembling syphilis or yaws. It is characterized by the formation of marble-sized nodules beneath the skin which degenerate and give off a flat-like material.

Chaput's method, operation (shap-ooz') [H. Chaput, French surgeon, died 1919]. See method and operation.

character (kar'ak-ter). In heredity, one of the separate and distinct traits that are exhibited by an animal or plant. acquired c., a character developed by an animal during its life and not due to heredity. compound c., a character which is dependent on two or more genes for its production. dominant c., a character which can develop through the agency of a single gene. It thus appears in the first filial generation and in three-fourths of the members of the second filial generation. recessive c., a character which requires two genes for full development. Thus it often fails to appear (is recessive) in the first filial generation, but reappears in part in the second filial generation. unit c., a trait which is transmitted from parent to offspring intact, that is, without blending or mixing, though it may be either dominant or recessive.

charbon (shar-bon') [Fr. for "coal"]. Malignant pustule; true or contagious anthrax. c. symptomatique. See symptomatic anthrax, under anthrax.

charcoal (tshar'kōl). Carbon prepared by charring organic material. See carbo. animal c., carbo animalis: a variety obtained by roasting bones, blood, and other animal matter. It is used as a decolorizing agent. Called also bone-black and ivory-black. bone-c., animal charcoal. vegetable-c., wood-c., is used as a deodorizer, absorbent, and antifermentative in dyspepsia,

diarrhea, and dysentery. It is also used as a dentifrice and in making poultices for foul ulcers.

Charcot's disease, etc. (shar'köz) [Jean Martin Charcot, French neurologist, 1825-1893]. See disease, etc.

Charcot-Leyden crystals (shar-ko-li'den) [see Charcot and Leyden]. See under crystal.

Charcot-Marie type (shar-ko'-mar-e') [See Charcot and Marie]. See under type.

Charcot-Neumann crystals (shar-ko'-noy'mahn). See under crystal.

Charcot-Robin crystals (shar-ko'-ro-baa'). See under crystal.

Charcot-Vigouroux sign (shar-ko'-ve-goo-roo') [See Charcot; Romain Vigourous, French physician of nineteenth century]. See under sign

charlatan (shar'lat-an) [Fr] A quack or medicaster, a pretender to medical skill.

charlatanism, charlatanry (shar'lat-an-izm, Quackery, or pretense in the shar'lat-an-re). practice of medicine.

charlevhorse (char'le-hors). Stiffness of the arms and legs in baseball players.

Char'mis. A physician born at Massilia, who practised in Rome in the time of Nero. He advocated the use of cold baths.

charpie (shar-pe') [Fr.]. Scraped lint; a preparation of spun linen, used in dressing wounds,

Charrière scale (shar-e-air') [Joseph Frédéric Benoit Charrière, French instrument maker, 1803-1876]. See scale.

Chart. Abbreviation for L. char'ta, paper.

charta (kar'tah), pl. char'tæ [L.; Gr. χάρτης]. Paper. 2. A piece of paper, medicated or otherwise. c. atropina ta, paper charged with atropin and cut into small bits, each containing a milligram of the drug. c. canthar'idis, c. epispas'tica, cantharidal or blistering paper c. cera'ta, wax-paper. c. explorato'ria cœru'lia et ru'bra, blue and red litmus paper c. explorato'ria lu'tea, turmeric paper; paper stained with turmeric for use as a test-paper. c. potas'sii nitra'tis, niter paper, paper medicated with potassium nitrate. when burned its fumes relieve the paroxysms of asthma. c. sina'pis, mustard-paper, paper with a preparation of powdered mustardseed: used as a rubefacient and derivative.

chartreuse (shar-truz') [Fr]. A cordial liqueur from the southeast of France: prepared with brandy and various tonic and aromatic simples.

chartula (kart'u-lah), pl. chart'ulæ [L. dim. of char'ta paper]. A small piece of paper, as for containing a dose of a medicinal powder.

Chase's sign [Ira C. Chase, American physician, born 1868]. See under sign.

Chassaignac's tubercle (shas-ān-yahks') [Charles Marie E Chassaignac, French surgeon, 1805-1879]. See tubercle.

chaude-pisse (shod-pēs') [Fr.]. A burning sensation experienced during micturition.

Chauffard's syndrome (sho-farz') [A. Chauffard, contemporary French physician]. See syndrome.

Chauliac, Guy de (sho'le-ak). An eminent French surgeon who practised in Avignon between 1340 and 1370. He wrote in Latin a treatise on surgery entitled, "Inventa'rium Par'tis Chirurgica'lis Medici'næ," which was long regarded as a standard

chaulmestrol (tshaul-mes'trol). Same as moogrol. chaulmoogra, chaulmugra (tchawl-moo'grah).
A bixaceous tree of southern Asia, Taraklogenus kurzii, its seeds afford an oil used in cases of leprosy, rheumatism, syphilis, and skin diseases. Dose, 2-10 min. (013-0.6 cc.). c. oil. See under oil.

chaulmoograte (tshal-moo'grāt). A salt of chaulmoogric acid.

Chaussier's areola, line, sign, tube (sho-seaz') [François Chaussier, Parisian physician, 1746–1828]. See under areola, line, sign, and tube.

chavibetol (tshav-ib-e'tol). An isomer of eugenol found in oil of betel leaves.

chavicol (tshav'ik-ol). An odorous volatile oil, para-allyl phenol, C₃H₅.C₆H₄OH, from Chavica betle. methyl c., C₃H₅.C₆H₄OCH₃, from oil of anise.

chavosot (tshav'o-sōt). Parallylphenol, a bactericide used in dental work.

chawstick (tchaw'stik). A creeping shrub of Florida and tropical America, Gouan'ia domingen'sis; an aromatic tonic used as a dentifrice.

chaya (tcha'yah). The chenopodiaceous plant, Aer'va lana'la: used in Asia as a resolvent medicine.

chaya-var (tcha'yah-var). A rubiaceous plant, Oldenlan'dia umbella'ta: cultivated in India, and used like madder as a dye-stuff; it contains alizarin.

Ch. B. Abbreviation for Chirur'giæ Baccalau'reus, Bachelor of Surgery.

C₂H₅Br. Ethyl bromid.

CH.Cl₃. Chloroform.
C₂H₄Cl₂. Ethylene chlorid.
C₂H₅Cl. Ethyl chlorid.

C2HCl3(OH)2. Chloral hydrate. C2H5CO2NH2. Ethyl carbamate.

(CH₃.CO)₂O. Acetic anhydrid.

CH3.COOH. Acetic acid.

C, Ho. COOH. Valerianic acid.

Ch. D. Abbreviation for Chirur giæ Doc'tor, Doctor of Surgery.

Cheadle's disease (tshe'delz) [Walter Butler See un-Cheadle, London pediatrist, 1835-1910] der disease.

chebule (keb-yūl'). The dried fruit of Termina'lia cheb'ula, an East Indian tree; chebulic myrobalan: it is used as an astringent.

A sheet of hard wax of modeling check-bite. compound placed between the teeth in central, lateral, or protrusive occlusion, as a check on the teeth in the articulator.

check-experiment. See control-experiment, under control

checkerberry (chek'er-ber-e). See Gaultheria. cheek-bone (chēk-bon). The malar bone.

cheese (chēz) [L. ca'seu]. A well-known food. It is prepared from milk by curdling it with rennet, discarding the whey, and then submitting the curd to some ripening or fermentative process.

cheesy (che'ze). Caseous, resembling cheese.

cheilectomy (ki-lek'to-me) [Gr. χείλος lip + εκτομή excision] The operation of chi-eling off the irregular bony edges of a joint cavity which interfere with motion.

cheilectropion (ki-lek-tro'pe-on) [Gr. χείλος lip + ectropion]. Eversion of the lip.

cheilitis (ki-li'tis) [Gr. χείλος lip + ιτις inflammation]. Inflammation of the lip. c. exfoliati'va, seborrheic dermatitis affecting the vermilion of the lips. c. glandula'ris, chronic swelling and hardening of the lip due to inflammation of its Called also cheilitis glandularis aposteglands. matosa and myxadenitis labialis.

cheiloangioscopy (ki''lo-an-je-os'ko-pe) χείλος lip + $\dot{\alpha}\gamma\gamma$ είον vessel + $\sigma\kappa\sigma$ πείν to see]. Microscopic observation of the circulation in the blood-vessels of the lip.

cheilognathopalatoschisis (ki"lo-na"tho-pal-atos'kis-is) [Gr. $\chi\epsilon\lambda$ os lip + $\gamma\nu\delta\theta$ os jaw + L. ρ alo'-tum palate + Gr. $\sigma\chi$ i σ ts cleft]. A malformation marked by cleft of the lip, upper jaw, and hard and soft palates.

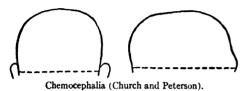

cheilognathoschisis (ki''lo-na-thos'kis-is) [Gr. $\chi \epsilon \lambda \delta s$ lip $+ \gamma \nu \hat{a} \theta \delta s$ jaw $+ \sigma \chi l \sigma \iota s$ cleft]. Harelip in which the labial cleft extends into the jaw.

- cheilognathouranoschisis (ki"lo-na"tho-u-ranos'kis-is) [L. cheulognathus + Gr. οδρανος palate]. Harelip combined with cleft-palate.
- cheilognathus (ki-log'na-thus) [Gr. χείλος lip + γνάθος jaw]. Harelip.
- cheilopalatognathus (ki"lo-pal-at-og'na-thus)
 [Gr. χείλος lip + L. pala'tum palate + Gr. γνάθος jaw]. Cleft-palate combined with fissure of the alveolar process of the jaw.
- cheilophagia (ki-lo-fa'je-ah) [Gr. χείλος lip + φαγείν to eat] Biting of the lips.
- cheiloplasty (ki'lo-plas-te) [Gr χείλος lip + πλάσσειν to form]. Surgical repair of a defect of the lip by a plastic operation.
- cheilopodiasis (ki''lo-po-di'as-is) [Gr χείλοs lip + ποῦs foot] The presence of a centipede of the genus Cheilopoda in a body cavity.
- **cheiloschisis** (ki-los'kis-is) [Gr $\chi \epsilon \hat{\imath} \lambda$ os lip $+ \sigma \chi l \sigma \iota$ s cleft]. Same as harelip.
- **cheilostomatoplasty** (ki"los-to-mat'o-plas-te) [Gr. χείλος lip $+ \sigma \tau \dot{\rho} \mu a$ mouth $+ \pi \lambda \dot{a} \sigma \sigma \epsilon \mu \nu$ to form]. Plastic surgery or restoration of the lips and mouth, as after the removal of a cancer.
- cheilotomy (ki-lot'o-me) [Gr. χείλος lip + τομή cut]. 1. Excision of a part of the lip. 2 Excision of an overgrowth of bone at the articular end of a long bone which impedes movement of the joint, seen in hypertrophic arthritis.
- Cheiracan'thus (ki-rak-an'thus). Same as Gnathostoma
- cheiragra (ki-ra'grah, ki'rag-rah) [Gr. χείρ hand
 + ἄγρα seizure] Gout of the hand.
- cheiralgia. See chiralgia.
- cheirocinesthesia (ki"ro-sin-es-the'ze-ah). Cheirokinesthesia.
- **cheirognostic** (ki-rog-nos'tik) [Gr. $\chi \epsilon l \rho$ hand + $\gamma \nu \omega \sigma \tau \iota \kappa \dot{o}s$ knowing]. Able to distinguish the right hand from the left.
- **cheirokinesthesia** (ki"ro-kin-es-the'ze-ah). Perception of movements of the hand.
- cheirokinesthetic (ki"ro-kin-es-thet'ik) [Gr. χείρ hand + kinesthetic]. Pertaining to the subjective perception of the movements of the hand, especially in writing.
- cheirolein (ki-ro'le-in). An alkaloid, CH₃.SO₂-(CH₂)₃NCS, from *Cheiran'thus chei'ri*, or wall-flower, having antipyretic properties
- **cheiromegaly** (ki-ro-meg'al-e). Pseudo-acromegaly in which the swelling affects the hands, wrists, and ankles.
- cheiropodist. See chiropodist.
- cheiropompholyx (ki-ro-pom'fo-liks) [Gr. χείρ hand + πομφόλυξ a water-bubble]. A skin disease with peculiar vesicles on the palms and soles.
- cheiropractic, cheiropraxis. See chiropractic. cheirospasm (ki'ro-spazm) [Gr. χείρ hand + σπασμός spasm]. Writers' or telegraphers' cramp or other similar spasm affecting the hand.
- **cheken** (che'ken). A South American plant, Euge'nia che'ken: its leaves have properties like those of eucalyptus. Dose of fluidextract, 1-3 fl.dr. (3.75-11.25 cc).
- **chekenin** (chek'en-in). A yellowish, crystalline principle, C₁₂H₁₁O₃, from cheken leaves.
- **chekenone** (chek'en-on). A crystalline principle, $C_{40}H_{14}O_{8r}$ from cheken leaves.
- chelen (ke'len). Same as ethyl chlorid.
- **chelerythrin** (ke-ler'ith-rin). An alkaloid, $C_{21}H_{17}NO_4$, from *Chelido'nium ma'jus*: like sanguinarin, except that it has yellowish salts.
- chelidonin (kel-id-o'nin). A bitter alkaloid, C₂₀-H₁₈NO₅ + H₂O, from Chelido'nium ma'jus and Stylopho'rium diphyl'lum: its phosphate, sulphate, and tannate are mildly narcotic. Dose of sulphate, 1½-3 gr. (0.09-0.2 gm.); of tannate, 3 gr. (0.2 gm).
- Chelidonium (kel-id-o'ne-um) [L.; Gr. χελιδών a swallow]. A genus of papaveraceous plants;

- celandine. C. ma'jus is purgative, cholagogue, narcotic, and expectorant, and is used in whooping-cough, jaundice, pneumonia, etc. Dose, 15-60 gr. (0.95-3 9 gm); of iuice, 5-10 min. (0.32-0.6 c.c.).
- cheloid (ke'loid) [Gr. χηλή claw + είδος form]. See keloid.
- Chelone (ke-lo'ne) [Gr. tortoise] A genus of scrophulariaceous plants. C. gla'bra (balmony, or snakehead) is a bitter tonic and aperient. Dose of decoction (2 ounces to a pint), 1-2 fl.oz. (30-60 c.c.).
- **chelonian** (ke-lo'ne-an) [Gr. χελῶνη tortoise]. Pertaining to the tortoise
- **chelonin** (ke-lo'nin). A dry preparation from *Chelo'ne gla'bra*: aperient, tonic, and anthelmintic. Dose, 1-4 gr. (0.060-0 264 gm)
- Chelsea pensioner (tshal'se). Confectio guaiaci composita.
- **chemasthenia** (kem-as-the'ne-ah). An asthenic condition of the chemical processes of the body.
- chemesthesis, chemæsthesis (kem-es-the'sis). The sensation of matter.
- chemiatric (kem-e-at'rik). Pertaining to chemiatry
- **chemiatry** (kem'e-at-re) [Gr. χημεία chemistry + iaτρεία treatment]. Treatment based upon the theory of Paracelsus that diseases are due to chemic processes in the body.
- **chemic, chemical** (kem'ik, kem'ik-al). Of, or pertaining to chemistry.
- **chemicobiologic** (kem"ik-o-bi-o-loj'ik). Pertaining to the chemistry of living matter.
- chemicocautery (kem"ık-o-kaw'ter-e). Cauterization by chemic means.
- chemicogenesis (kem''ik-o-jen'is-is) [chemic + Gr γένεσις production]. Fertilization of an ovum by chemic action
- chemicophysical (kem"ik-o-fiz'ik-al). Pertaining to chemistry and physics; pertaining to physical chemistry
- **chemicophysiologic** (kem"ik-o-fiz-e-o-loj'ik). Pertaining to physiologic chemistry.
- chemicovital (kem"ik-o-vi'tal). Pertaining to the chemistry of living things.
- chemiluminescence (kem"e-lu-min-es'ens). Lu-minescence from the direct transformation of chemical energy.
- cheminosis (kem-in-o'sis) [chemistry + Gr. νόσος disease]. Any disease due to chemic agents.
- chemiotaxis (kem"e-o-taks'is). See chemotaxis.
- **chemiotherapy** (kem"e-o-ther'ap-e). Same as *chemotherapy*.
- **chemise** (shem-ēz') [Fr. "shirt"]. A muslin dressing for use mainly in rectal and vesical surgery.
- **chemism** (kem'izm). Chemic activity; chemic property or relationship.
- **chemist** (kem'ist). An expert in chemistry: incorrectly, a druggist or apothecary.
- chemistry (kem'is-tre) [Gr. χημεία]. The science which treats of the elements and atomic relations of matter, and of the various compounds of the clements. analytic c., chemistry which deals with analysis of substances. applied c., the application of chemistry to inclustry and the arts. biologic c., physiologic chemistry. colloid c., the chemistry of colloids. forensic c., use of chemical knowledge in the solution of legal problems. industrial c., applied chemistry. inorganic c., that branch of the science of chemistry which deals with bodies which do not contain carbon. medical c., chemistry as it relates to medicine. metabolic c., physiologic chemistry. mineral c., inorganic c., that branch of chemistry which deals with substances that contain carbon. pharmaceutical c., chemistry which deals with the composition and

preparation of medicinal materials. physical c., that branch of chemistry which deals with the relationship of chemical and physical properties and relationships. physiologic c., that branch of chemistry which deals with chemical processes that take place in animals and plants. structural c., chemical study of the structure of molecules. synthetic c., that branch of chemistry which deals with the building up of substances from their constituents.

chemocephalia (ke-mo-sef-a'le-ah). Flatness of the head.

chemocephalus (ke"mo-sef'a-lus) A person with a flat head.

chemoceptor (kem'o-sep-tor). Same as *chemore-ceptor*.

chemocoagulation (kem"o-ko-ag-u-la'shun). Coagulation or destruction of growths by the application of chemicals.

chemo-immunity (kem"o-im-u'nit-e). Immunochemistry

chemo-immunology (kem"o-im-u-nol'o-je). The study of the chemic processes involved in immunity.

chemokinesis (kem"o-kin-e'sis) [Gr. $\chi\eta\mu\epsilon la$ chemistry + $\kappa l\nu\eta\sigma\iota s$ motion]. Increased activity of an organism due to the presence of a chemic substance.

chemokinetic (kem"o-kin-et'ik). Pertaining to or exhibiting chemokinesis.

chemolysis (ke-mol'is-is) [chemistry + Gr. λύσις solution] Chemic decomposition.

chemomorphosis (kem-o-mor-fo'sis) [Gr. $\chi\eta\mu\epsilon la$ chemistry $+\mu\rho\rho\varphi\eta$ form]. Change of form due to chemic action.

chemophysiology (kem"o-fiz-e-ol'o-je). Physiological chemistry.

chemoreceptor (kem-o-re-sep'tor). 1. A receptor adapted for excitation by chemical substances, e. g., olfactory and gustatory receptors. See receptor. 2. A supposed group of atoms in cell protoplasm having the power of fixing chemicals, in the same way as bacterial poisons are fixed.

chemoreflex (kem-o-re'fleks). Reflex, and resulting from chemic action.

chemoresistance (kem-o-re-sis'tans). Specific resistance acquired by cells to the action of chemicals.

chemoserotherapy (kem"o-se-ro-ther ap-e). The treatment of bacterial infections with immune serum and chemotherapy.

chemosis (ke-mo'sis) [Gr. from χήμη cockleshell]. Excessive edema of the ocular conjunctiva, whether inflammatory or not.

chemosmosis (kem-os-mo'sis). Chemical action taking place through an intervening membrane.

chemosynthesis (kem-o-sin'the-sis) [Gr. χημεία chemistry + σύνθησις putting together]. The synthesis or formation of organic chemic compounds by energy derived from chemic reactions.

chemotactic (kem-o-tak'tik). Of or pertaining to chemotaxis.

chemotaxis (kem-o-take'is) [Gr. $\chi\eta\mu\epsilon ia$ chemistry $+ \tau \dot{a}\xi_i s$ arrangement]. The phenomenon shown by certain living cells of moving toward (positive c.) or away from (negative c.) certain other cells or substances which exert a chemical influence.

chemotherapeutic (kem-o-ther-ap-u'tik). Pertaining to chemotherapy. chemotherapeutics (kem"o-ther-ap-u'tiks). Same as chemotherapy.

chemotherapy (kem-o-ther'ap-e). Treatment of disease by chemical compounds that have a specific and selective effect on the microorganisms which cause the disease, without injuring the tissues of the patient; that is, the chemicals are parasitotropic, but not organotropic.

chemotic (ke-mot'ik). Pertaining to or affected with chemosis

chemotropism (ke-mot'ro-pizm) [Gr. $\chi\eta\mu ela$ chemistry $+ \tau\rho\sigma\pi\dot{\eta}$ a turn]. The tendency of cells to turn or move in a certain direction under the influence of chemical stimuli. When the movement is toward the substance exerting the chemical influence, it is termed positive c; when away from the influence it is negative c. Cf. chemotaxis.

chenocholic (ken-o-kol'ik). See under acid.

Chenopodium (ken-o-po'de-um) [L., from Gr. χήν goose + πούs foot]. A genus of chenopodiaceous plants. The fruit of C. ambrosioi'des or C. anthelmin'ticum, or American wormseed: it is anthelmintic, and is used for round-worms and for hookworm Dose of powder, 20-40 gr. (1.3-2.6 gm.), of volatile oil, 5-10 min (0 333-0 666 c c).

cheoplastic (ke-o-plas'tik) [Gr. $\chi \epsilon \hat{\imath} \nu$ to pour + $\pi \lambda \dot{\alpha} \sigma \sigma \epsilon \iota \nu$ to form]. Designating a method of molding artificial teeth with an alloy of tin, silver, and bismuth.

cheoplasty (ke'o-plas-te). See cheoplastic

Cherchevski's disease (sher-shev'skēz) [Michael Cherchevski, contemporary Russian physician] See under disease

cheromania (ke-ro-ma'ne-ah) [Gr χαlρειν to rejoice + μανία madness]. Mania characterized by evaltation and cheerfulness

cherophobia (ke-ro-fo'be-ah) [Gr. $\chi \alpha l \rho \epsilon \nu$ to rejoice $+ \varphi \delta \beta \sigma$ fear]. Morbid dislike or fear of gaiety.

cherry (cher'e) [L. cer'asus] The name of various rosaceous trees and species of the genus Pru'nus. See Prunus virginuana. c.-laurel, an old-world evergreen cherry-tree, Pru'nus laurocer'asus: from its leaves a water (a'qua laurocer'asu) is distilled, having the properties of hydrocyanic acid. Dose, 5-30 min. (0 33-2 c c). choke c. See Prunus virginuana rum c. See Prunus serotina wild c. See Prunus serotina

chervil (chervil) [L. cærefo'lium, chærophyl'lum; Gr. χαιρέφυλλον]. A cultivated umbelhferous plant, Chærophyl'lum sati'vum: the leaves are used in cookery; the plant is aromatic and diuretic, with the properties of celery.

chest (chest). The popular term for the thorax.

alar c., phthinoid chest. barrel-c., a rounded, bulging chest, showing little movement on respiration seen in emphysema. cobbler's c., a chest showing a sinking in at the lower end of the sternum. flat c., deformity of the chest in which it is flattened from before back. foveated c., funnel-chest. funnel-c., pigeon-breast, in which the lower end of the sternum is retracted and variously deformed. keeled c., pigeon-breast. phthinoid c., the same as flat chest: so called as indicating a tubercular diathesis. pterygoid c., phthinoid chest. tetrahedron c., a chest which suggests a solid with four sides, each an equilateral triangle, the chest projecting in a peak between the nipples.

chestnut (tshest'nut). I. See Castanea. 2. One of the masses of horn on the medial surface of the forearm and on the distal part of the medial surface of the tarsus of horses.

chétevism (sha'tev-izm). Arrest of development affecting the mass of the individual rather than any special organ or part.

Cheyne-Stokes' nystagmus, respiration, etc. (tsha'ne-stoks) [John Cheyne, a Scottish physician, 1777–1836; William Stokes, Irish physician, 1804–1878]. See nystagmus and respiration.

C₂H₅HSO₄. Ethyl sulphonic acid.

CHI₃. Iodoform.

C2H5I. Ethyl iodid.

Chian (ki'an). Pertaining to the island of Chios. See turpentine.

Chiari's network (ke-ar'ēz) [Hans Chiari, German physician, 1851-1916]. See under network.

chiasm (ki'azm) [L. chias'ma; Gr. χίασμα]. A decussation or X-shaped crossing. Camper's c. Same as chiasma lendinum. optic c., the decussation or crossing of the fibers of the optic nerve on the ventral surface of the brain.

chiasma (ki-az'mah). See chiasm. c. op'ticum, the optic chiasm. See chiasm. c. ten'dinum, the crossing of the tendons of the flexor digitorum profundus through the tendons of the flexor digitorum sublimis.

chiasmal, chiasmic (ki-az'mal, ki-az'mik). Resembling a chiasm; crosswise.

chiasmatypy (ki-az'mat-i-pe) [Gr. χlασμα a crossing + type]. Same as crossing-over.

chiastometer (ki-as-tom'et-er) [Gr. χιαστός crossed + μέτρον measure]. An apparatus for measuring any deviation of the optic axes from their normal parallelism

chibou, **cachibou** (se-boo', kash'e-boo). A resin like elemi, from *Bur'sera gummıf'era*, a tree of tropical America and southern Florida: not used in official medicine.

chichiko dyspepsia (tshe-tshe'ko). See under dyspepsia

chicken-breast (chik'en-brest). Undue prominence of the sternum, caused by some obstruction of infantile respiration, and possibly, in some cases, by rickets.

chicken-cholera (chik"en-kol'er-ah). See under

chicken-fat clot (chik"en-fat klot'). A yellowish blood-clot

chickenpest (chik'en-pest). See fowl plague, under plague

chickenpox (chik'en-poks). See varicella.

chicle (che'kla) [Sp]. The gum of A'chras sa-po'la, a tree of tropical America used in the manufacture of chewing-gum.

Chiene's operation (shēnz) [John Chiene, Scotch surgeon, 1843-1923] See operation.

chigger, chigo, chigre, jigger (chig'er, che'go, che'grā jig'er) t The Sarcopsyl'la (Dermatoph'ilus, Tun'ga) pen'elrans, a sand-flea of tropical regions: it often burrows in the hands and feet, causing great distress, and sometimes having even a fatal result. 2. A harvest-mite, Lep'lus (Trombucula) ir'rulans, of the southern United States, which sometimes becomes an annoying semiparasite.

chignon fungoid (shēn-yaw'). See fungoid.

chilblain (chil'blan) [L. per'nio]. Inflammation and swelling of the toes, feet, or fingers, due to the influence of cold.

childbed (child'bed) [L puerpe'rium]. The puerperal state, condition, or season; lying in.

childhood (child'hud). The period of life before puberty, especially that which follows infancy.

chill (chil). A shivering or shaking; an attack of involuntary contractions of the voluntary muscles, accompanied by a sense of cold and pallor of the skin. congestive c., pernicious malaria with gastro-intestinal congestion and diarrhea, preceded by a chill. creeping c., a chilly sensation, without any definite tremor or chattering of the teeth. c's and fever, a popular name for intermittent fever. nervous c., a tremor due to some form of excitement and unaccompanied by alteration of temperature. **shaking c.**, a chill in which there is a definite tremor. **spelter c's**, chills occurring in persons employed in brass foundries, zinc smelters, and in places where zinc is poured. urethral c., a chilly sensation, with or without tremor, sometimes following the passage of a catheter.

chillies (tshil'ez). See capsicum.

chilo-. For words thus beginning, see cheilo-.

Chilodon (ki'lo-don). A genus of ciliates. C. denta'tus has been found in the feces in a case of dysentery. C. uncina'tus was found in the feces in a case of schistosomiasis.

Chilognatha (ki-lo-na'tha). An order of the class Myriapoda embracing the millipedes.

Chilomas'tix mesnil'i. A minute flagellate protozoan, with a cystostome and three anterior flagellæ, which is a frequent parasite of the human intestine. Called also Tetramitus mesnili and Microstoma mesnili.

chilomastixiasis (ki-lo-mas-tix-i'as-is). Infestation with Chilomastix.

Chilopoda (ki-lop'o-dah). An order of the class Myriapoda embracing the centipedes.

Chimaphila (ki-mal'il-ah) [Gr. χείμα winter + ωιλείν to love]. A genus of ericaceous plants. The leaves of C. umbella'ta, or pipsissewa, are tonic and diuretic, astringent, and irritant. used in scrofula, nephritis, and cystitis. Dose of fluid-extract, 1-2 dr. (4-8 c.c.).

chimaphilin (ki-maf'il-in). A crystalline principle, $\hat{C}_{10}H_{10}O$, from Chimaph'ila umbella'ta; also a dry preparation of the same: vaunted as a cancer remedy and as a diuretic. Dose, 2-3 gr. (0.13-02 gm).

chimatlon (ki-mat'lon) [Gr. χειαα winter]. An injury by frost, mild c. is chilblain. severe c. is frost-hite.

chimogene (ki'mo-gēn) [Gr. χεῖμα winter + γεννᾶν to produce]. An extremely volatile liquid used in producing local anesthesia by cold.

chimpanzee (chim-pan'ze). One of the anthropoid apes, *Anthropopithecus troglodytes*, used for experimental purposes because of its susceptibility to some of the diseases of man.

chin (chin). The anterior prominence of the lower jaw, the mentum. galoche c., a chin that is congenitally thrust forward.

china (ki'nah). Cinchona, or Peruvian bark.

chinaphenin (kin-af-e'nin). The quinin carbonic acid ester of phenetidin, C₂₀H₂₃N₂O₂.CO.NH.C₆-H₄ OC₂H₅: antipyretic and antineuralgic. Dose, 5-20 gr. (0 33-1.32 gm).

chinaphthol (ki-naf'thol). A bitter, yellow, crystalline substance, quinin beta naphthol monosulphonate, C₂₀H₂₄N₂O₂(OH.C₁₀H₈SO₂OH)₂, converted in the intestine into quinin and naphtholsulphonic acid. an intestinal antiseptic and tonic. Daily dose, 7½-15 gr (0.5-r gm). China-root (chi'nah-root). The rhizome of Smi'-

china-root (chi'nah-root). The rhizome of Smi'-lax chi'na, a plant of southeastern Asia, much

resembling sarsaparilla.

chinaseptol (kin-as-ep'tol). Same as diaphtol.

chin-cough (chin'kawf). Whooping-cough.

chineonal (kin-e'o-nal). A compound of veronal and quinin, quinin diethyl barbiturate: used in febrile septic processes, such as typhoid, influenza, whooping-cough, etc Dose, 10-15 gr. (o 6-1 gm.).

chinin (ki'nin) Same as quinin.

chinoform (ki'no-form). A cinchotannic acid and formaldehyd compound: useful in chronic enteritis and typhoid fever.

chinoidin (kin-oi'din). An amorphous commercial mixture of the cinchona alkaloids, of which it has the general properties. Dose, r-60 gr. (0.066-4 gm.).

chinol (ki'nol). A white, powdery antipyretic and analgesic coal-tar derivative, C₉H₆NClO, or chinolin monohypochlorite. Dose, 3-5 gr. (0.19-0.33 gm.).

chinolin (kin'o-lin). See quinolin.

chinone (kin'on). See quinone.

chinopyrin (kin-o-pi'rin) A combination of quinin hydrochlorid (50 per cent.) and antipyrin (33½ per cent.): used hypodermically in malarial disorders. Hypodermic dose, 15 min. (1 c.c.).

258

chinoral (kin-o'ral). An oleaginous, bitter compound containing quinin and chloral: antiseptic and hypnotic. Dose, 5-15 gr. (0.3-1 gm.). Called also quinochloral.

chinosol (ki'no-sol). A yellow powder, oxyquinolin sulphate, [C₆H₃(OH)(CH)₃N]₂H₂SO₄ antiseptic, antipyretic, astringent, and styptic. It is used externally in solutions of from 1:5000 to 1:500; internally, dose, 1-5 gr. (0.06-0 3 gm.).

chinothein (ki-no-the'in). An antipyretic compound of quinin, antipyrin, and caffein.

chinotoxin (ki-no-toks'in). Quinotoxin; a poisonous artificial compound, dichinolin dimethyl sulphate, with properties resembling those of curare.

chinotropin (ki-no-tro'pin). Urotropin quinate: used as a urinary disinfectant and a solvent for uric acid. Dose, 5-20 gr. (0.33-1.32 gm.).

chinovin (kin'o-vin). A bitter glucosid from cinchona bark.

chiolin (ki'o-lin). A proprietary antipruritic and antiseptic remedy: used for pruritus, neuralgia, neuritis, and rheumatism.

chionablepsia (ki"o-nah-blep'se-ah) [Gr. χιών snow + ἀβλεψία blindness]. Snow-blindness.

chionanthin (ki-o-nan'thin). A resinoid from Chionan'thus virgin'ica: tonic, aperient, and sedative. Dose, 1-3 gr. (0.065-0.19 gm.).

Chionanthus (ki-o-nan'thus) [Gr. χιών snow + Δνθος flower]. A genus of oleaceous shrubs; C. virgin'ica, the fringe-tree of North America, is tonic, diuretic, and aperient. Dose of fluidextract of the bark, ½-1 fl.dr. (1.8-3.7 c.c.).

Chionyphe carteri (ki-on'if-e kar'ter-i). A fungus at one time considered to be the cause of Madura foot.

chip-blower. A metal tube attached to a rubber bulb for blowing particles from a tooth cavity which is being excavated.

chiragra (ki-ra'grah) [Gr. χείρ hand + ἄγρα seizure]. Pain in the hand.

chiralcol (ki-ral'kol). A proprietary alcohol soap for disinfecting the hands.

chiralgia (ki-ral'je-ah). Same as chiragra.

chirality (ki-ral'it-e) [Gr. χείρ hand + al]. The power of turning the plane of polarization of light to the right or left hand.

chirapsia (ki-rap'se-ah). Massage; hand-friction.
chirarthritis (ki-rar-thri'tis) [Gr. χείρ hand + arthritis]. Inflammation of the joints of the hand and fingers.

chirata, chiretta (ki-ra'tah, ki-ret'ah) [Hind chirāetā]. The plant Ophe'lia chira'ta (Swer'tia chiray'ita), a gentianaceous herb of India. It is a bitter tonic and cholagogue. Dose of tincture, 15-60 min. (1-4 c.c.), of fluidextract, 15-30 min. (1-2 c.c.).

chiratin (ki-ra'tin). A bitter principle, C₂₀H₄₅O₁₅, from chirata.

chirayta (ki-ra'tah). See chirata.

chirettin (ki-ret'in). A dry, saccharated, proprietary preparation of chirata.

chirognomy (ki-rog'no-me) [Gr. χείρ hand + γνώμων judge]. The study of the hand as a guide to character.

chirognostic (ki-rog-nos'tik) [Gr. χείρ hand + γνωστικός knowing]. Capable of distinguishing the right and left sides of the body. c. feeling, the power to distinguish by the feeling which side of the body has been touched.

chirol (ki'rol). A solution of resins and fatty oils in ether and alcohol, used for sterilizing the hands before surgical operations.

chiromegaly (ki-ro-meg'al-e) [Gr. χείρ hand + μεγαλία bigness]. Enlargement of the hands.

Chironomidæ (ki-ro-nom'id-e). A family of Diptera which comprises the true midges.

chiroplasty (ki'ro-plas-te) [Gr. χείρ hand + πλάσσειν to form]. A plastic operation on the hand. chiropodalgia (ki-ro-po-dal'je-ah) [Gr. χείρ hand + πούs foot + ἄλγος pain]. Pain in the hands and feet.

chiropodist (ki-rop'o-dist) [Gr. χείρ hand + πούς foot]. One who treats corns, bunions, and other affections of the hands and feet.

chiropody (ki-rop'o-de). The art, business, or profession of a chiropodist.

chiropractic (ki-ro-prak'tik) [Gr. $\chi \epsilon l \rho$ hand $+ \pi \rho \dot{\alpha} \sigma \sigma \epsilon \iota \nu$ to do]. A system of adjustment consisting of palpation of the spinal column to ascertain vertebral subluxations, followed by the adjustment of them by hand, in order to relieve pressure upon nerves at the intervertebral foramina so that nerve force may flow freely from the brain to the rest of the body (Palmer).

chiropractor (ki-ro-prak'tor). One who practises

chiropraxis (ki'ro-praks-is). Same as chiropractic.
 chirosoter (ki-ro-so'ter). A proprietary preparation for treating burns.

chirospasm (ki'ro-spazm) [Gr. $\chi \epsilon l \rho$ hand + s pasm]. Writers' cramp.

chirurgeon (ki-rur'jun) [antiquated] A surgeon.
 chirurgery (ki-rur'jer-e) [L. chirur'gia, from Gr. χείρ hand + ξργον work] Same as surgery.

chirurgic (ki-rur'jik). Pertaining to surgery.

chitenin (ki'ten-in). An oxidation product of quinin, used in malaria.

chitin (ki'tin) [Gr. χιτών tunic] A white, insoluble, horny polysaccharid which is the principal constituent of the shells of crabs and lobsters and the shards of beetles It is found also in certain fungi, Boletus edulis, Agaricus campestris, et al, and yields an acetyl-glucosamin on hydrolysis

chitinous (kit'in-us). Composed of or of the nature of chitin.

chitonitis (ki-to-ni'tis) [Gr χιτών tunic]. Inflammation of any investing membrane.

chitosamin (ki-to-sam'in). Same as glucosamin.

chitosan (ki'to-san). A product obtained from chitin. It is probably an acetyl glucosamme.

chitose (ki'tōs). A sugar, C₀H₁₂O₆, formed by the reduction of chitonic acid.

Chittenden's diet (tshit'en-denz) [Russell Henry Chittenden, American physiologic chemist, born 1856]. See diet.

chittim (chit'im). The shrub, Rham'nus purshi'-ana, which affords cascara sagrada.

Chlamydobacteria (klam"id-o-bak-te're-ah) [Gr. χλαμός cloak + bacteria]. A division of bacteria, including those species that are surrounded by a thick sheath or capsule. It includes Cladothrix, Crenothrix, Phragmidothrix, and Thiothrix.

Chlamydobacteriales (klam"id-o-bak-te-re-a'-lēs). A systematic order under the class Schizomycetes. The members are water forms whose cells unite into elongated filaments often with a well-marked sheath and often show false branching, but never true branching. Iron is often present.

Chlamyd'ophrys anchelys, C. sterco'rea. A protozoön found in the feces of man and various animals. Called also *Platoum stercoreum*.

chlamydospore (klam'id-o-spōr) [Gr. χλαμύs cloak + spore].
 1. The reproductive organ of certain fungi, so named because of its being inclosed by two envelops.
 2. A spore that is covered.

Chlamydozoa (klam-id-o-zo'ah) [Gr. χλαμύς cloak + ζωον animal]. Minute intracellular organisms which appear as mere specks of chromatin or may be invisible. Some are filter passers. It is thought that some or all of the following diseases may be caused by Chlamydozoa: fowl plague, foot-and-mouth disease, hydrophobia, jaundice of silkworms, molluscum contagiosum, scarlatina variola, trachoma, and vaccinia.

chloasma (klo-az'mah) [Gr. χλοάζειν to be green].

A cutaneous discoloration occurring in yellow-

ish-brown patches and spots. The term is applied vaguely to various pigmentary skin discolorations. c. bronzi'num, bronze colored pigmentation of the face, neck, and chest from constant exposure to the sun in the tropics. Called also tropical mask. c. cachectico'rum, chloasma due to cachectic conditions of tuberculosis, syphilis, malaria, etc. c. calo'ricum, chloasma produced by exposure to the sun or to heat. c. gravida'rum, chloasma occurring in pregnant women. c. hepat'icum, the so-called liver-spot; a skin discoloration following dyspepsia. c. phthisico'rum, brown patches on the cheeks and forehead of tuberculous patients. symptomatic c., chloasma symptomatic of some other disease, as syphilis. c. tox'icum, cloasma due to use of certain drugs. c. traumat'icum, dis-coloration of the skin from pressure, friction, or other traumatic agencies c. uteri'num, a skin discoloration due to disturbance of the uteroovarian system.

chloracetic acid (klo-ras-e'tik). See acid.

chloracetization (klo"ras-et-iz-a'shun). The production of local anesthesia by the application of equal parts of chloroform and glacial acetic acid.

- chloral (klo'ral) [chloral + alcohol]. A color-less, oily liquid, trichloracetic aldehyd, Cl₂C CHO (also called anhydrous c. and hydrated c., U. S. P.), prepared by the mutual action of alcohol and chlorin. Combined with water it forms ordinary chloral (called c. hydrate), CCl₃CH(OH)₂, a deliquescent, crystalline substance having an aromatic, penetrating odor and a bitter, caustic taste. Chloral hydrate is an anodyne, hypnotic, and antispasmodic in insomnia, mania, dehrium tremens, hysteria, tetanus, labor, puerperal and other convulsions, chorea, spasmodic croup, asthma, laryngismus stridulus, hiccough, etc. It is used locally in neuralgia, and is applied to foul sores and ulcers. Dose, 15-30 gr. (1-2 gm) c.-ammonium, a substance, trichloramino-ethyl alcohol, CCl₃ CH(NH₂)OH, resembling chloral, but more stimulating to the circulation Dose, 5-20 gr. (0333-1.3 gm.). butyl-c., an oily, pungent liquid, CH₃CHCl.CCl₂CHO, whose hydrate, butyl-c hydrate, a crystalline compound, is used like chloral hydrate. Dose, 15 gr. (1 gm.). c.-caffein, an antispasmodic and anodyne combination of caffein and chloral, C₈H₁₀N₄O₂.CCl₃-CHO, soluble in water. Dose (hypodermic), 3-43 gr (0 194-0.293 gm). **c. carbamid**, a milky hypnotic preparation: little used. **c.-carbol**, chloral hydrate, 1 part, and phenol, 1.4 parts locally anesthetic and counterirritant. c.-carmin, a staining-fluid made of carmin, 0.05 gm.; hydrochloric acid, 30 mm.; alcohol, 20 c c.; and chloral hydrate, 25 gm. c. cyanhydrate, a white, crystalline substance, CCl₃ CH(OH) CN: recommended for use in the place of bitter-almond water; called also c. hydrocyanate. c. formamid. See chloralamid. hydrated c., the U.S. P. name for chloral. insoluble c. See metachloral. c.menthol, a liquid composed of equal parts of chloral and menthol. It is locally anesthetic and counterirritant.
- chloralacetophenonoxim (klo"ral-as"et-o-fe"no-noks'im). An agent in colorless prismatic crystals: used for tetanus and epilepsy.
- chloralacetoxim (klo"ral-as-et-oks'im). A hypnotic of the class called chloraloxims.
- chloralamid (klo-ral-am'id). Chloralformamid, a crystalline compound, CCl₈ CHOH.NH.COH, slowly soluble in water: a somnifacient slower, but probably safer, than chloral. Dose, 20–60 gr. (1.29–3.88 gm.).
- chloralantipyrin (klo-ral-an-te-pi'rin). See hypnal.
- chloralbacid (klo-ral-bas'id). A chlorin and albumin compound: for use in stomach disorders. Dose, 7½-15 gr. (0.5-1 gm.).
- chloralcaffein (klo-ral-kaf'e-in). A compound of chloral and caffein employed in rheumatism.

- **chloralcamphoroxim** (klo"ral-kam-for-oks'im). A compound of camphor belonging to the group of chloraloxims: hypnotic.
- chloralformamid (klo-ral-for-mam'id). Chloralamid.
- chloralimid (klo-ral'im-id). A tasteless and odorless crystalline substance, (CCl₃CH = NH); used as a substitute for chloral. Dose, 3-7 gr. (0.19-0.45 gm.).
- **chloralin** (klo'ral-in). An antiseptic fluid derived from chlorin and phenol.
- chlora'lis hy'dras. Chloral hydrate.
- chloralism (klo'ral-izm). The habitual use of chloral; also the depraved state of body and mind which follows such misuse.
- chloralization (klo-ral-iz-a'shun). 1. Same as chloralism. 2 Anesthesia by the use of chloral.
- chloralnitrosobetanaphthol (klo-ral-ni-tro-sobe-tah-naf tol). A white, crystalline powder, C₁₂H₈-Cl₃NO₃C₁₀H₃(OH) NOCH(OH)CCl₃, having hypnotic and antiseptic properties.
- chloralose (kloʻral-oz). A crystalline hypnotic substance, C₈H₁₂Cl₃O₆, a compound of chloral and glucose. Soluble in alcohol and hot water; sparingly soluble in cold water. Dose, 3-14 gr. (0.194-0.907 gm.).
- chloraloxim (klo-ral-oks'im). Any one of a group or series of compounds of chloral hydrate with oxims They are medicinally active, but are not employed as hypnotics.
- chloralum (klo-ral'um). A commercial name for various disinfectant mixtures of aluminum chlorid.
 c. hydra'tum, the U. S. P. name for chloral.
- chloralurethan (klo-ral-u're-than). Same as ural.
 chloramin (klor-am'in). A compound containing chlorin attached to nitrogen in the form of NCl groups.
- **chloramin-B** (klo-ram'in-be). Sodium benzene sulpho chloramid, C_6H_5 .SO₂.NaNCl.2H₂O. used in place of chloramin T.
- **chloramin-T** (klo-ram'in-te). Sodium para-tolu-enesulphochloramid, CH₃.C₆H₄SO₂NaNCl + ₃H₂O, a white crystalline powder used in 0 5 to 4 per cent solution as an irrigating fluid in the treatment of wounds, as a mouth-wash, and for irrigating the bladder and uterus. It is an active germicide
- chloramyl (klo-ram'il). 1. Amyl in which the hydrogen is replaced by chlorin. 2. Chloroform, 1 pound, mixed with 2 drams of amyl nitrite: anesthetic.
- chloranemia (klo-ran-e'me-ah). Same as chlorosis. chloranemic (klo-ran-e'mik). Chlorotic.
- chloranodyne (klo-ran'o-dīn). An anodyne mixture. contains morphin, cannabis, hydrocyanic acid, chloroform, peppermint, and capsicum. Dose, 15 min (1 c.c.).
- Chloranthus (klo-ran'thus) [L.; Gr. χλωρόs green + ἄνθοs flower] A genus of piperaceous plants. C officina'lis, of southeastern Asia, has a cam phory smell, and is highly valued as a stimulant in low fevers.
- chlorate (klo'rāt). Any salt of chloric acid.
- **chlorazene** (klo'raz-ēn). A proprietary name for *chloramin-T*.
- chloragol (klo'ra-zol). A highly poisonous, oily liquid obtained by treating albumin, glutin, or dried muscle with nitric and hydrochloric acids.
- chlorbutanol (klör-bu'tan-ol). Same as chloretone.
 chlorcamphor (klor-kam'for). A name given to various compounds of camphor and chlorin: several have had a limited use in medicine.
- chlorcosane (klor'ko-săn). A proprietary liquid chlorinated paraffin: used as a solvent of dichloramine-T.
- chloremia, chloræmia (klo-re'me-ah) [Gr. χλωρόs green + αΐμα blood]. A disease marked by a depraved condition of the blood, with decrease in the red corpuscles and in the amount of hemoglobin.

chlorenchyma (klor-en'kim-ah). The chlorophylbearing tissue of plants.

chlorephidrosis (klo"ref-id-ro'sis) [Gr χλωρόs green + **ξ**φίδρωσις perspiration]. Green perspiration

chlorethyl (klo-re'thil). Ethyl chlorid.

chloretone (klo're-tōn) [chloroform + acetone]. A white, crystalline compound, trichlor tertiary butyl alcohol, CCl₃(CH₃)₂C.OH, having a camphoraceous odor, formed when caustic potash is added to equal weights of acetone and chloroform. It is sparingly soluble in water, but very soluble in chloroform, alcohol, and ether. It is a local anesthetic and internally a hypnotic, antiseptic, and antinauseant: used in scasickness. Dose, 5-20 gr. (0 333-1 333 gm).

chloric (klo'rik) [L. chlo'ricus]. Derived from or containing chlorin; a term used to distinguish those chlorin compounds which contain a smaller proportion of chlorin than the chlorous compounds

chlorid, chloride (klo'rid, klo'rid). A salt of hydrochloric acid; any binary compound of chlorin. **acid c.**, a substance formed by substituting chlorin for hydroxyl in an acid molecule.

chloridemia (klo-rid-e'me-ah) [chlorid + Gr $al\mu a$ blood]. The retention of chlorids in the blood.

chloriden (klo'rid-en). Ethylidene chlorin.

chloridimeter (klo-rid-im'et-er) [chlorid + Gr. μέτρον measure]. An instrument for measuring the chlorid content of the urine or other fluid.

chloridimetry (klo-rid-im'et-re). The determination of the chlorid content of fluids.

chloridion (klo-rid-i'on) Negatively ionic chlorin, the anion of hydrochloric acid and the chlorids.

chloridrometer (klo-rid-rom'et-er). An apparatus for estimating the amount of chlorids in the urine.

chloriduria (klo-rid-u're-ah) [chlorid + Gr. οὐρον urine] Excess of chlorid in the urine.

chlorin (klo'rin) [L chlo'rum or chlori'num, from Gr. χλωρόs green] A yellowish-green, gaseous element, of suffocating odor; symbol, Cl; atomic weight, 35.4, specific gravity, 2.45 It is disinfectant, decolorant, and an irritant poison It is used for disinfecting, fumigating, and bleaching, either in an aqueous solution or in the form of chlorinated lime. c.-water [L. a'qua chlo'ri], water charged with chlorin antiseptic and cleansing. Dose, 10-20 min (0.660-1.333 c c).

chlorinated (klo'rin-a-ted) Charged with chlorin.
chlorisol (klo'ris-ol) A trade name for Dakin's solution of hypochlorite.

chlorite (klo'rīt). A salt of chlorous acid.

chlorlyptus (klör-lip'tus). A synthesized chlorinated compound oil of eucalyptus containing 25 per cent. of chlorin. used as an antiseptic.

chloro-acetone (klo"ro-as'et-ōn) CH₂Cl CO CH₃, a lacrimating war gas

chloro-acetophenone (klo"ro-as-et-o-fe'nōn). C₆-H₅ CO CH₂Cl, a lacrimating war gas

chloro-anemia (klo"ro-an-e"me-ah). 1. Same as chlorosis. 2 Anemia associated with rickets, tuber-culosis, cancer, syphilis, etc.

colorobrightism (klo-ro-brīt'izm). Chlorosis with albuminuria.

chlorobrom (klo'ro-brōm) A mixture of potassium bromid and chloralamid in licorice water: used as a hypnotic and in sea-sickness.

Chloroc'odon wheit'eii. An asclepiadaceous plant of subtropical Africa the root of which is alterative.

chlorocruorin (klo-ro-kru'o-rin). The green coloring-matter of worms.

chlorodyne (klo'ro-din) [chloroform + Gr. δδυνη pain]. A proprietary anodyne containing chloroform, hydrocyanic acid, capsicum, and cannabis. Dose, 5-10 min. (0 33-0.66 c.c.).

chlorodynomania (klo"ro-di-no-ma'ne-ah). Habitual use of chlorodyne as an intoxicant.

chloroform (klo'ro-form) [L. chlorofor'mum; from chlorin + formyl]. A colorless, volatile liquid, CHCl₃, of a strong ethereal smell and a sweetish, burning taste. It is formed by the action of chlorinated lime on methyl alcohol, It is a strong anesthetic, anodyne, and antispasmodic, and a good counterirritant. It is usually administered by inhalation. As an anodyne it may be given in small doses by the mouth It is also used in the form of a limment in rheumatism, headache, and neuralgia. acctone c. See chloroform and alcohol. Anschitts's c., a crystalline substance: called also salicylid-chloroform; gentle heat liberates a vapor of pure chloroform from it. colloidal c. See desalgin. methyl c., an anesthetic. CH₃CCl₃ said to be safer than ordinary chloroform. Pittet's c., chloroform purified by congelation at a very low temperature.

chloroformin (klo-ro-for'min). A poison (like etherin, benzenin, and xylenin) extractable by chloroform from tubercle bacilli: called also chloroformobacullin.

chloroformism (klo'ro-form-izm). 1 The habitual use of chloroform for its narcotic effect. 2. The anesthetic effect of the vapor of chloroform.

chlorogenin (klo-ro-jen'in). Same as alstonin.

chloroglobin (klo-ro-glo'bin) [Gr. χλωρόs green + L glo'bus globe] A protein substance in the form of green, oily globules, derived from plant leaves by the action of resorcinol.

chloroiodolipol (klo"ro-i"o-dol'ip-ol) A disinfectant and antiseptic mixture of creosote and chlorinated phenol.

chlorol (klo'rol) A solution of common salt, hydrochloric acid, and mercuric bichlorid, each, 1 part, in a 3 per cent. copper sulphate solution in water, 100 parts.

chloroleukemia (klo"ro-lu-ke'me-ah). Chloromatous leukemia. See *chloroma*.

chlorolin (klo'ro-lin). An antiseptic and disinfectant solution of the chlorphenols.

chlorolymphosarcoma (klo"ro-lim"fo-sar-ko'-mah). A form of chloroma attended by the presence of lymphocytes in the blood.

chloroma (klo-ro'mah) [Gr χλωρόs green + -ωμα tumor] A disease marked by the formation of greenish growths on the periosteum of the bones of the face and skull, and attended by a blood-picture closely resembling leukemia. Called also chlorosarcoma, chloroleukemia, and green cancer.

chloromethylchloroformate (klo-ro-meth"ılklo-ro-for'mat). Palite, ClCO₂.CH₂Cl, a lethal war gas.

chloromorphin (klo-ro-mor'fin). A morphin product.

chloromyeloma (klo"ro-mi-el-o'mah). Chloroma attended with growths in the bone-marrow.

chloropercha (klo-ro-per'chah). A solution of gutta-percha in chloroform. It forms an insoluble, transparent, and non-conducting varnish, and is used as a filling for fine root-canals.

chlorophane (klo'ro-fān) [Gr. χλωρός green + φαίνειν to show]. A greenish-yellow chromophane or pigment obtainable from the retina.

chlorophenol (klo-ro-fe'nol). See chlorphenol. chlorophenylmethylketone (klo''ro-fen-il-methil-ke'tōn). See chloro-acetophenone.

chlorophyl, chlorophyll (klo'ro-fil) [Gr. χλωρόs green + φύλλον leaf]. The green coloring-matter of plants.

chloropia, chloropsia (klo-ro'pe-ah, klo-rop'seah) [Gr. χλωρός green + δψις vision]. A visual defect in which all objects appear green.

chloropicrin (klo-ro-pik'rin). Trichloronitromethane, CCl₂NO₂. A war gas that causes lacrimation and vomiting.

chkoroplast, chloroplastid (klo'ro-plast, klo-ro-plas'tid) [Gr. χλωρός green + πλαστός form]. Any

one of the chlorophyl-bearing bodies of plants and animal cells.

chloropsia (klo-rop'se-ah). See chloropia.

chloroquinone (klo-ro-kwin'ōn). Any one of a series of compounds formed by the action of chlorin on quinone.

chlorosalol, **chlorsalol** (klo"ro-sal'ol, klor-sal'ol). Chlorphenol salicylate, C₀H₄(OH)CO.OC₀H₄Cl, an antiseptic used mainly in external applications. See *parachlorosalol*.

chlorosan (klo'ro-san). Same as phyllosan.

chlorosarcolymphadeny (klo"ro-sar"ko-limfad'en-e). Same as *chlorolymphosarcoma*.

chlorosarcoma (klo"ro-sar-ko"mah). Chloroma.
chlorosin (klo-ro'sin). An antiseptic chlorin and albumin compound: used in catarrh and cancer of the stomach.

chlorosis (klo-ro'sis) [Gr χλωρός green]. Greensickness; a peculiar anemia mostly affecting girls about the age of puberty: so called from the greenish pallor of the skm. It is an anemia of defective blood formation characterized by a great decrease of hemoglobin (achromia) accompanied by a slight decrease in number of red corpuscles. The disease is marked by perverted appetite, digestive impairment, debility, dysmenorrhea, amenorrhea, and nervous disturbance. Egyptian c., ankylostomiasis. c. gigan'tea, congenital chlorosis with obesity (Schonlein). c. ru'dra, chlorosis in which the skin reddens after evertion.

Chlorostig'ma stuckertia'num. A plant of the Argantine: used as a galactagogue

chlorotic (klo-rot'ik). Pertaining to or affected with chlorosis.

chlorous (klo'rus) Containing chlorin in a larger proportion than the chloric compounds.

chlorovinyldichloroarsin (klo"ro-vin"il-di-klo"-ro-ar'sin). CHCl CH AsCl₂ A vesicating and lethal war gas.

chloroxyl (klo-rok'sil). A proprietary name for cinchophen hydrochlorid, C₆H₅.C₉H₅ N CO₂H -HCl, a yellow crystalline powder used like atophan.

chloroxylonin (klo-roks-il'o-nin) An alkaloid, C₂₂H₃₁NO₇, from East Indian satinwood, Chlorox'ylon swiete'nia It is a local irritant.

chlorozone (klo'ro-zōn) [chlorin + ozone]. A yellow, disinfectant liquid obtained by the action of nascent chlorin upon a solution of caustic soda.

chlorphenol (klor-fe'nol) A substance, C₀H₄Cl.-OH, prepared by the action of chlorin on phenol: antiseptic and antituberculotic, used by inhalation and as a local application. There may be mono-, di-, or trichlorphenols according as one, two, or three atoms of chlorin are joined to the molecule. The monochlorphenols may be ortho-, meta-, or para-, according to the position of the chlorin in the molecule. **c. red.** See under *rcd*

chloropicrin (klor-pik'rin). Chloropicrin.

chlorsalol (klor-sal'ol) Salol with its hydrogen replaced by chlorin. See chlorosalol.

chlorsulphonic acid (klo"ro-sul-fon'ik). See under acid.

chlorum (klo'rum). Latin for chlorin.

chloruremia (klo-ru-re'me-ah) [chlorid + Gr ovpov urine] Presence of urinary chlorids in the blood, chloridemia.

chloruria (klo-ru're-ah) [chlorid + Gr. oùpov urine]. Presence of chlorids in the urine.

chloryl (klo'ril). A mixture of ethyl and methyl chlorids used as a local and general anesthetic.

Ch. M. Abbreviation for Chirurgiæ Magister, Master of Surgery.

C₆H₅NH₂. Anilin.

CH3NO2. Carbamic acid.

 $C_3H_5(NO_3)_3$. Nitroglycerin.

C, H, N, O3. Uric acid.

C₅H₁₁NO₂. Amyl nitrite.

C₈H₉NO. Acetanilid. C₉H₉NO₃. Hippuric acid.

C₆H₂(NO₂)₃OH. Pieric acid.

CH₂O. Formaldehyd.

CH₂O. Formaldenyd **CH₂O₂.** Formic acid.

CH4O. Methyl alcohol.

C₂H₂O₄. Oxalic acid.

C2H4O2. Acetic acid.

C₃H₆O. Acetone.

C3H6O3. Lactic acid.

C₃H₈O₃. Glycerol.

C₄H₆O₂. Crotonic acid. C₄H₆O₅. Malic acid.

C.H.O. Tartaric acid.

CHO. Tartaric acid.

C₄H₈O₂. Isobutyric acid. C₄H₉O₂. Butyric acid.

C₄H₁₀O₂. Butylic acid. C₄H₁₀O. Sulphuric ether.

 $\mathbf{C}_{5}\mathbf{H}_{10}\mathbf{O}_{2}$. Valerianic acid

 $\mathbf{C}_{5}\mathbf{H}_{12}\mathbf{O}$. Amyl alcohol.

C₆H₆O. Carbolic acid.

C₆H₈O₇. Citric acid.

C6H10O5. Starch.

C₆H₁₂O₆. Grape-sugar.

 $\mathbf{C}_{7}\mathbf{H}_{4}\mathbf{O}_{7}$. Meconic acid.

C. H.O. Saliculic acid.

 $\mathbf{C}_7\mathbf{H}_6\mathbf{O}_3$. Salicylic acid. $\mathbf{C}_7\mathbf{H}_6\mathbf{O}_5$. Gallic acid.

 $\mathbf{C}_{7}\mathbf{H}_{6}\mathbf{O}_{5}$. Gallic acid. $\mathbf{C}_{12}\mathbf{H}_{22}\mathbf{O}_{11}$. Cane-sugar.

 $\mathbf{C}_{14}\mathbf{H}_{10}\mathbf{O}_{0}$. Tannic acid.

C₁₅H₁₀O₄. Chrysophanic acid

 $C_{18}H_{34}O_2$. Oleic acid.

 $\mathbf{C}_{18}\mathbf{H}_{36}\mathbf{O}_{2}$. Stearic acid.

choana (ko'a-nah), pl choa'næ [L; Gr. χοάνη funnel]. Any funnel-shaped cavity or infundibulum. c. cer'ebri, the infundibulum of the cerebrum. c. na'rium, the posterior nares.

choanal (ko'an-al). Pertaining to a choana.

choanoid (ko'an-oid) [Gr. χοάνη funnel + είδος form]. Funnel-shaped.

Choanotæ'nia infundibulifor'mis. The most important tapeworm of fowls.

choc en dome (shok an dom) [Fr] The dome-like, heaving impulse of the heart in aortic insufficiency.

choc en retour (shok an ret-oor') [Fr. "return-shock"]. 1. The impulse of the descending fetus against the finger in ballottement. 2. The alleged infection of a pregnant woman with syphilis derived through the fetus.

chocolate (chok'o-lāt) [L. chocola'ta, from Mexican chocolatl]. A dried paste prepared from the kernels of the cacao, Theobro'ma caca'o, with sugar and flavoring substances. With hot water or hot milk it forms a nutritious table beverage: it is extensively used in confectionery. C. Cyst. See under cyst.

C2H5.OH. Ethyl alcohol.

C₆H₅OH. Carbolic acid.

C₆H₄.OH.COOH. Salicylic acid.

choke, cerebral (chōk). An obstruction of the esophagus with a foreign body in animals. oph-thalmovascular c., interference with the blood-supply of the retina due to pressure of the retinal vessels against one another. thoracic c., obstruction of the thoracic part of the esophagus with a foreign body.

choke cherry. See Prunus virginiana.

choked disk (chokt). See under disk.

choking (cho'king). Mechanic obstruction of the glottis, larynx, or trachea.

cholæmia (ko-le'me-ah). See cholemia.

cholagogia (ko-la-go'je-ah) [See cholagogue]. Expulsion of bile from the gall-bladder.

- cholagogue (ko'la-gog) [Gr. χολή bile + ἄγειν to lead].
 1. Causing increased evacuation of bile.
 2. A medicine which increases the flow of bile. The most important cholagogues are aloes, calomel, colocynth, jalap, rhubarb, podophyllum, and sodium phosphate.
- cholalic acid (ko-lal'ik). See acid.
- cholaligenic (ko-lal-ij-en'ik) [cholalic acid + Gr. γεν- to produce]. Forming cholalic acid from cholesterol—one of the functions of the liver.
- cholangeitis (ko-lan-ji'tis)[Gr. χολή bile + άγγεῖον vessel]. Inflammation of the bile-ducts. c. len'-ta, chronic infectious cholangeitis without stones.
- cholangiogastrostomy (ko-lan"je-o-gas-tros'to-me) [Gr χολή bile + άγγεῖον vessel + γαστήρ stomach + στόμα mouth]. Operative formation of an anastomosis between one of the bile ducts and the stomach.
- cholangiostomy (ko"lan-je-os'to-me) [Gr. χολή bile + ἀγγείον vessel + στόμα mouth]. The formation of a fistula into the gall-bladder.
- cholangiotomy (ko"lan-je-ot'o-me) [Gr. χολή bile + άγγεῖον vessel + τομή a cutting]. The incision of an intrahepatic bile-duct for the removal of gall-stones.
- cholangitis (ko-lan-ji'tis). See cholangeitis.
- cholascos (ko-las'kos) [Gr. χολή bile + ἀσκόs bag]. Effusion of bile into the peritoneal cavity (Ponfick).
- cholate (ko'lāt). A salt or ester of cholic acid.
- cholauxanol (kol-oks'an-ol). A proprietary mixture of non-alcoholic fluidextract of taraxacum, rheum, cheledonium, etc., for gall-stones and digestive disorders.
- cholecyanin (ko-le-si'an-in). Bilicyanin.
- **cholecyst** (ko'le-sist) [Gr. $\chi o \lambda \dot{\eta}$ bile $+ \kappa b \sigma \tau \iota s$ cyst]. The gall-bladder.
- cholecystalgia (ko"le-sis-tal'je-ah) [cholecyst + Gr. άλγος pain] Biliary colic.
- cholecystectasia (ko"le-sis-tek-ta'ze-ah) [Gr. χολή bile + κύστις cyst + ἔκτασις distention]. Distention or stretching of the gall-bladder.
- **cholecystectomy** (ko"le-sis-tek'to-me) [cholecyst + Gr. ἐκτομή excision]. Surgical removal of the gall-bladder.
- Gr. &ρδυσις entrance] The operation of excising a gall-stone from the gall-bladder, followed by suturing the opening in the gall-bladder and anchoring it to the abdominal incision, which is closed over it.
- cholecystentero-anastomosis (ko"le-sist-en"-ter-o-an-as-to-mo'sis). Same as cholecystenteros-tomy.
- **cholecystenterorrhaphy** (ko"le-sis-ten-ter-or'af-e) [cholecyst + enterorrhaphy]. The operation of suturing together the gall-bladder and the small intestine in cases of biliary fistula, etc.
- cholecystenterostomy (ko"le-sis-ten-ter-os'to-me) [Gr. χολή bile + κύστις cyst + ἔντερον bowel + στόμα mouth]. The making of an artificial opening from the gall-bladder to the intestine.
- **cholecystgastrostomy** (ko-le-sist-gas-tros'to-me). Cholecystogastrostomy.
- cholecystic (ko-le-sis'tik). Pertaining to the gallbladder.
- cholecystitis (ko"le-sis-ti'tis) [Gr. χολή bile + κύστις bladder + -ιτις inflammation]. Inflammation of the gall-bladder.
- cholecyst-nephrostomy (ko"le-sist-nef-ros'to-me) [cholecyst + nephrostomy]. The operation of forming anastomosis of the gall-bladder into the pelvis of the right kidney, for the purpose of excluding the bile from the intestines.
- cholecystocolostomy (ko-le-sis'to-ko-los'to-me)
 [cholecyst + colostomy]. The surgical formation of a passage from gall-bladder to colon.
- cholecystocolotomy (ko-le-sis"to-ko-lot'o-me)

- [cholecyst + colotomy]. Surgical incision of the gall-bladder and colon.
- cholecystoduodenostomy (ko-le-sis"to-du-o-den-os'to-me) [cholecyst + duodenostomy]. Surgical formation of a communication between the gall-bladder and the duodenum.
- cholecystogastrostomy (ko-le-sis"to-gas-tros'to-me) [cholecyst + gastrostomy]. The operation of forming a communication between the gall-bladder and the stomach.
- **cholecystography** (ko"le-sis-tog'-raf-e) [cholecyst+Gr. γράφειν to write] Examination of the gall-bladder which has been made opaque to the Roentgen ray by the injection into the blood-stream of substances which are excreted into the bile.
- **cholecysto-ileostomy** (ko-le-sis"to-il-e-os'to-me) [cholecyst + ileostomy] The establishment of an opening between the gall-bladder and the ileum.
- **cholecystojejunostomy** (ko-le-sis"to-je-ju-nos'-to-me) [cholecyst + jejunostomy]. Surgical formation of an artificial communication between the gall-bladder and the jejunum.
- **cholecystolithiasis** (ko-le-sis"to-lith-i'as-is) [cholecyst + lithiasis]. Presence of gall-stones in the gall-bladder.
- cholecystolithotripsy
 se) [cholecyst + lithotripsy]. (ko-le-sis"to-lith'o-tripsylestones in the cholecyst.
- cholecystomy (ko-le-sis'to-me). Cholecystotomy. cholecystonephrostomy (ko-le-sis"to-nef-ros'to-me). Cholecyst-nephrostomy.
- **cholecystopexy** (ko-le-sis'to-peks-e) [cholecyst + Gr $\pi \hat{\eta} \hat{\xi}_{15}$ fixation]. The operation of suturing the gall-bladder to the abdominal wall.
- **cholecystorrhaphy** (ko"le-sis-tor'af-e) [cholecyst + Gr $\partial a \varphi \dot{\eta}$ suture]. The suturation of the gall-bladder.
- cholecystostomy (ko"le-sis-tos'to-me) [cholecyst + Gr στόμα mouth] The surgical creation of a permanent opening into the gall-bladder through the abdominal wall
- **cholecystotomy** (ko"le-sis-tot'o-me) [cholecyst + Gr. $\tau o \mu \dot{\eta}$ cut]. The surgical incision of the gall-bladder.
- **choledochectomy** (ko-led-o-kek'to-me) [choledochus + Gr. $\dot{\epsilon}$ κτομή excision]. Excision of a portion of the common bile-duct.
- choledochendysis (ko"led-ok-en'dis-is) [choledo-chus + Gr. ἔνδυσις entrance]. Same as choledo-chotomy.
- **choledochitis** (ko-led-o-ki'tis). Inflammation of the common bile-duct, or ductus choledochus.
- choledochoduodenostomy (ko-lcd"o-ko-du-o-den-os'to-me) [choledochus + duodenostomy] The surgical formation of an opening between the bileduct and the duodenum
- **choledocho-enterostomy** (ko-led"o-ko-en-teros'to-me) [choledochus + enterostomy]. The surgical creation of a passage from the bile-duct to the intestine.
- **choledocholithiasis**[choledochus + lithiasis]. The occurrence of calculi in the biliary ducts.
- choledocholithotomy (ko-led"o-ko-lith-ot'o-me)
 [choledochus + litholomy]. The operation of incising the common bile-duct for the removal of stone.
- choledocholithotripsy (ko-led"o-ko-lith'o-tripse) [choledochus + luhotripsy]. The crushing of a gall-stone within the bile-duct.
- choledochoplasty (ko-le-do'ko-plas-te). The performance of a plastic operation on a bile-duct, as for biliary fistula.
- choledochorrhaphy (ko''led-o-kor'af-e) [choled-ochus + Gr. ραφή suture]. The operation of suturing the incised common duct
- choledochostomy (ko"led-o-kos'to-me) [choledochus + Gr. στόμα mouth]. The surgical formation of an opening into the bile-duct.

choledochotomy (ko"led-o-kot'o-me) [choledo-chus + Gr. τέμνειν to cut]. Surgical incision for suturation of the gall-duct.

choledochus (ko-led'o-kus) [Gr. χολή bile + δέχεσθαι to receive]. The ductus choledochus, or common bile-duct.

choleglobin (ko-le-glo'bin). The supposed antecedent of bile-pigment resulting from decomposition of blood-pigment.

cholehematin (ko-le-hem'at-in). A red pigment found in the bile of herbivorous animals. It is derived from chlorophyl and is the same as phylloerythrin and bilipurpurin.

cholehemia (ko-le-he'me-ah). Same as cholemia.
 choleic (ko-le'ik). Pertaining to or derived from the bile.

choleic acid (ko-le'ik). See under acid.

cholelith (ko'le-lith) [Gr. $\chi o \lambda \dot{\eta}$ bile $+ \lambda l \theta o s$ stone]. A gall-stone, or biliary calculus.

cholelithiasis (ko"le-lith-i'as-is) [Gr. χολή bile + lthiasis]. A diathesis favoring the formation of biliary calculi; the presence or formation of biliary concretions.

cholelithic (ko-le-lith'ik). Pertaining to or caused by gall-stones.

cholelithotomy (ko"le-lith-ot'o-me) [Gr. χολή bile + luthotomy] Removal of gall-stones by means of an incision.

cholelithotripsy (ko-le-lith'o-trip-se). Same as
 cholelithotrity

cholelithotrity (ko"le-lith-ot'rit-e) [choleluh + Gr $\tau \rho l \beta \epsilon \iota \nu$ to crush]. The crushing of biliary calculi.

cholelithurin (ko"le-lith-u'rin). A preparation of fresh bile employed in the treatment of cholelithiasis.

cholemia, cholemia (ko-le'me-ah) [Gr. χολή bile + αζμα blood] The presence of bile or bile-pigments in the blood.

choleperitoneum (ko"le-per-it-o-ne'um) [Gr. χολή bile + perstoneum]. The presence of bile in the peritoneum resulting from rupture of the bile passages called also biliary peritonitis.

cholepoetic, cholepoietic (ko-le-po-et'ik, -poiet-ik) [Gr. χολή bile + ποιείν to make]. Secreting

choleprasin (ko-le-pra'sin). One of the pigments of bile

cholepyrrhin (ko-le-pir'in) [Gr. χολή bile + πυρρός yellowish-red] Same as biliphein.

cholera (kol'er-ah) [Gr. χολέρα, from χολή bile]. An acute infectious disease, chiefly epidemic, marked by copious watery alvine discharges, cramps, prostration, and suppression of the urine. The contagion of the disease is due to the Spiril'lum '(Vibrio) chol'eræ asiat'icæ, which is contained in the discharges from the bowels, and becomes disseminated by means of drinking-water. The disease is very fatal, death resulting from convulsions and exhaustion or from congestion of the lungs. Called also Asiatic c., Indian c, algid c, asphyctic c., epidemic c., malignant c., and pestilential c. automatic c., cholera characterized by movements which appear to be intentional, but which can be proved to be entirely independent of the patient's volition. bilious c., European c., a less dangerous cholera, characterized by violent and painful vomiting and by copious bilious stools. Called also c. nostras, simple c, sporadic c., etc. chicken-c., a fatal epidemic disease of fowls, with inflammation of the lymphatic glands and digestive organs, caused by the Pasteurella aviseptica. English c., cholera morbus. epidemic c., Asiatic cholera. fowl-c. See chickenc. hog-c., an infectious communicable disease of swine occurring in epizootics and caused by a filterable virus. It is marked by fever, loss of appetite, emaciation, ulceration of the intestines, diarrhea and ecchymosis in the kidney and on the skin of

the ventral surface of the body. Cf. swine-plague and salmonellosis. c. infan'tum, a common, and often fatal, non-contagious diarrhea of young children prevailing in the summer months. malignant c., Asiatic cholera. c. morbus, acute gastro-enteritis, with diarrhea, cramps, and vomiting, occurring in summer or autumn, and usually caused by improper food. c. nos'tras. Same as caused by improper 100d. C. 108 tras. Same as c. morbus. C. 108 tras paratypho'sa. See gastro-enteritis paratyphosa. pandemic c., Asiatic cholera. C. red, a red pigment, obtainable from the cholera spirillum. See cholera red test, under tests. C. Of sheep, an epizootic and enzootic disease of sheep of Scotland occurring in August and September and affecting lambs of that year. It is marked by swelling of the head in the parotid region and sometimes by jaundice. Called also jaundice, yellows, headgrit, and plocach. c. sic'ca, cholera in which death takes place before diarrhea has occurred. spasmodic c., Asiatic cholera. sporadic c., a disease with symptoms like Asiatic cholera, produced by the Vibrio massowah. summer c., cholera morbus. ty-phoid c., a malignant form of Asiatic cholera marked by extreme depression. water-borne c., cholera disseminated by drinking-water. winter c., a mild diarrheal disease of unknown cause.

cholera reaction, cholera red reaction. See under reaction.

choleraic (kol-er-a'ik). Of, pertaining to, or of the nature of, cholera.

cholerase (kol'er-ās). An enzyme developed by the spirillum of cholera and capable of destroying it.

choleresis (ko-ler-e'sis) [Gr. $\chi o \lambda \dot{\eta}$ bile $+ \dot{\epsilon} \rho \eta \sigma \iota s$ removal]. The excretion of bile by the liver, as distinguished from cholagogia, the expulsion of bile from the gall-bladder (Brugsch and Horsters).

choleretic (ko-ler-et'ik). An agent which stimulates excretion of bile by the liver.

choleriform (ko-ler'if-orm) [cholera + L. for'ma form]. Resembling cholera.

cholerigenous (kol-er-ij'en-us). Causing cholera. cholerine (kol'er-in). 1. The earliest stage of epidemic cholera. 2. A comparatively mild form of sporadic cholera, sometimes closely simulating Asiatic cholera, but not often of a fatal issue.

cholerization (kol-er-iz-a'shun). Protective inoculation with cholera.

choleroid (kol'er-oid). Like cholera.

cholerol (kol'er-ol). A proprietary preparation said to be the same as *enteronol*.

choleromania, cholerophobia (kol"er-o-ma'-ne-ah, kol"er-o-fo'be-ah) [Gr. χολέρα cholera + μανία madness or φόβος fear]. Morbid dread of cholera.

cholerophobia (kol-er-o-fo'be-ah) [cholera + Gr. φόβος fear]. An abnormal dread of cholera.

cholerrhagia (kol-er-a'je-ah) [Gr. χολή bile + ραγία flow]. A flow of bile.

cholerythrin (kol-er'ith-rin) [Gr. χολή bile + έρυθρός red]. Same as bilirubin.

cholerythrogen (kol-er'ith-ro-jen). A substance which is split up into cholerythrin.

cholesteatoma (ko"les-te-at-o'mah) [Gr. χολή bile + στέαρ fat]. 1. A fatty cystic tumor, of a crystalline structure, occurring mainly in the brain. 2. A tumor of the middle ear the mucous membrane of which assumes a skin-like character, becomes inflamed, and degenerates.

cholesteatomatous (ko"les-te-at-o'mat-us). Relating to or of the nature of cholesteatoma.

cholesterase (ko-les'ter-ās). A ferment which splits up cholesterol.

cholesteremia, cholesteræmia (ko-les-ter-e'-me-ah) [cholesterin + Gr. alµa blood]. Excess of cholesterol in the blood.

cholesterin (ko-les'ter-in). Same as choiesterol. cholesterinemia (ko-les"ter-in-e'me-ah). Cholesteremia.

cholesterinic acid (ko-les-ter-in'ik). See under acid.

nolesterinuria (ko-les"ter-in-u're-ah) [cholesterin + Gr. οὐρον urine]. The presence of chocholesterinuria lesterol in the urine.

cholesterohydrothorax (ko-les"ter-o-hi-dro-tho'-Hydrothorax, the fluid of which contains cholesterol crystals.

cholesterol (ko-les'ter-ol) [Gr. χ ολή bile $+ \sigma \tau \epsilon \rho \epsilon \acute{o}$ s solid]. A fat-like, pearly substance, a monatomic alcohol, C₂₇H₄₅OH, crystallizing in the form of acicular crystals, and found in all animal fats and oils, in bile, blood, brain tissue, milk, yolk of egg, the medullated sheaths of nerve-fibers, the liver, kidneys, and suprarenal bodies. It constitutes a large part of the most frequently occurring type of gall-stones and occurs in atheroma of the arteries, in tuberculous cysts, and in carcinomatous tissue. It is said to have the power of neutralizing snakevenoms and of immunizing against them

cholesterolemia (ko-les"ter-ol-e'me-ah) [cholesterol + Gr. alμa blood]. Same as cholesteremia.

cholesteroluria (ko-les-ter-ol-u're-ah) [cholesterol + Gr. ovpov urine]. Presence of cholesterol in the urine; cholesterinuria.

cholesterone (ko-les'ter-on). A ketone produced by the oxidation of cholesterol

choletelin (ko-let'e-ln) [Gr χολή bile + τέλος end]. A yellow pigment, C₁₆H₁₈N₂O₆, the final result of the oxidation of bilirubin, bilixanthin.

choletherapy (ko-le-ther'ap-e) [Gr. χολή bile therapy]. Treatment by the administration of bile.

choleuria (ko-le-u're-ah) [Gr. χολή bile + οὐρον urine]. The presence of bile in the urine, choluria.

choleval (ko'le-val). A 10 per cent colloidal silver preparation containing sodium cholate

choleverdin (ko-le-ver'din). Bilicyanin.

cholic acid (ko'lik). See *cholalic acid*, under *acid*. **cholin** (ko'lin) [Gr. χολή bile] A ptomain, hydroxyethyl trimethyl ammonium hydroxid, HO(CH₂)₂N-(CH₃)₃OH, derivable from many animal and some vegetable tissues. It is somewhat poisonous. In a 5 per cent. solution it has proved serviceable in diphtheria. Called also amantin, bilineurin, and sincalin. c. borate. See enzylol.

cholochrome (kol'o-krōm) [Gr. χολή bile + χρ $\hat{\omega}$ μα color] Any biliary pigment.

cholocyanin (kol-o-si'an-in) [Gr. χολή bile + κύανος blue]. Bilicyanin.

chologen (kol'o-jen). A remedy for gall-stones, consisting of a preparation of mercury, podophyllin, melissa, camphor, and caraway.

chologenetic (kol-o-jen-et'ik) [Gr. χολή bile + γεννῶν to produce]. Producing bile. chologestin (ko-lo-jes'tin). A proprietary intes-

tinal antiseptic and hepatic stimulant.

cholohematin, cholohematin (kol-o-hem'at-in). Same as cholehematin

(ko''lo-hem-o-tho'rax) cholohemothorax - [Gr. χολή bile + alμα blood + θ ωραξ chest]. Presence of bile and blood in the thorax.

chololith (kol'o-lith) [Gr. $\chi o \lambda \dot{\eta}$ bile $+ \lambda i \theta o s$ stone]. A biliary calculus or gall-stone.

chololithiasis (kol"o-lith-i'as-is). Cholelithiasis. chololithic (kol-o-lith'ik) Pertaining to gall-stones.

choloplania (kol-o-pla'ne-ah) [Gr. χολή bile + πλάνη wandering]. Bile in the blood and tissues; jaundice.

cholorrhea (kol-o-re'ah) [Gr. χολή bile + ροία flow]. Profuse secretion of bile

choloscopy (ko-los'ko-pe) [Gr. χολή bile + σκοπεῖν Examination of the biliary system or to see]. testing of the biliary function.

choluria (ko-lu're-ah) [Gr. χολή bile + οδρον urine].
The presence of bile in the urine; discoloration of the urine with bile.

chondral (kon'dral). Pertaining to cartilage.

chondralgia (kon-dral'je-ah) [Gr. χόνδρος cartilage + αλγος painl. Pain in the cartilages.

chondralloplasia (kon-dral-o-pla'se-ah) [Gr. χόνδρος cartilage + ἄλλος other + πλάσσειν to form]. Chondrodysplasia

chondrectomy (kon-drek'to-me) [Gr. χόνδρος cartilage + ἐκτομή excision]. Surgical removal of a cartilage.

chondric (kon'drik) [Gr. χόνδρος cartilage]. Cartilaginous, of or relating to cartilage.

chondrification (kon"drif-ik-a'shun) [Gr. χόνδρος The formation cartilage + L fa'cere to make] of cartilage; transformation into cartilage.

chondrigen (kon'drij-en) See chondrogen

chondriglucose (kon-dri-glu'kõs) [Gr. n**ondriglucose** (kon-dri-glu'kōs) [Gr. χόνδρος cartilage + glucose]. A glucose prepared from cartilage by boiling in acidulated water.

chondrin (kon'drin) [Gr χόνδρος cartilage] protein, resembling gelatin, from cartilage (John Muller, 1837). It is considered to be a mixture of gelatin and mucin.

chondrioconte, chondriokonte (kon'dre-okont) A rod-shaped chondriosome.

chondriome (kon'dre-ōm). Same as mitochondria. chondriomere (kon'dre-o-mēr). Same as cytomere

chondriomite (kon'dre-o-mīt). A thread-shaped chandriosome.

chondriosome (kon'dre-o-sōm) [Gr. χόνδρος car-Any one of the structures tilage $+ \sigma \hat{\omega} \mu a$ body] occurring in the cytoplasm of cells in the form of minute granules, rods, and threads and regarded as important organs of the cell. Cf. mitochondria.

chondriosphere (kon'dre-o-sfēr). A spherical chondriosome.

chondritis (kon-dri' is) [Gr χόνδρος cartilage + -ιτις inflammation]. Inflammation of cartilage.

chondro-adenoma (kon"dro-ad-en-o'mah). adenoma containing cartilaginous elements.

chondro-angioma (kon"dro-an-je-o'mah). A tumor containing the tissues of a chondroma and an angioma

chondroblast (kon'dro-blast) [Gr χόνδρος cartilage $+ \beta \lambda \alpha \sigma \tau \delta s$ germ]. An embryonic cell of the tissue whence cartilage is developed

chondroblastoma (kon"dro-blas-to'mah) [chondroblast + Gr. -ωμα tumor]. A tumor the cells of which tend to differentiate into cartilage cells. The term includes chondroma and chondrosarcoma.

chondrocarcinoma (kon"dro-kar-sin-o'mah). carcinoma containing cartilaginous elements in its stroma.

chondroclast (kon'dro-klast) [Gr. χόνδρος cartilage + κλάειν to break] Any giant-cell of the class concerned in the absorption of cartilage.

chondroconia (kon-dro-ko'ne-ah) [Gr. cartilage + κόνις dust]. Schridde's granules. See under granule.

chondrocostal (kon-dro-kos'tal) [Gr. χόνδρος cartilage + L. cos'ta rib]. Of or pertaining to the ribs and costal cartilages.

chondrocranium (kon-dro-kra'ne-um) [Gr. χόν- $\delta \rho os$ cartilage + $\kappa \rho a \nu lo \nu$ head]. The cartilaginous cranial structure of the embryo.

chondrocyte (kon'dro-sīt) [Gr. χόνδρος cartilage + κύτος cell]. A cartilage cell.

Chondrodendron (kon-dro-den'dron).). A genus of C. tomento'climbing menispermaceous shrubs. sum affords pareira.

chondrodermati'tis nodula'ris chron'ica hel'icis. A condition marked by the formation of a round nodular growth on the helix of the ear.

chondrodynia (kon-dro-din'e-ah) [Gr. χόνδρος cartilage + δδύνη pain]. Pain in a cartilage.

- **chondrodysplasia** (kon"dro-dis-pla'se-ah) [Gr. $\chi \delta \nu \delta \rho \sigma s$ cartilage $+ \delta \nu s$ bad $+ \pi \lambda \dot{\alpha} \sigma \epsilon \iota \nu$ to form] Abnormality of cartilage growth with the formation of cartilaginous growths in the skeletal system.
- chondrodystrophia (kon"dro-dis-tro'fe-ah) [Gr. χόνδρος cartilage + δυς- ill + τροφή nutrition]. Kaufmann's term for fetal rickets, or achondroplasia. See achondroplasia.
- chondrodystrophy (kon-dro-dis'tro-fe). Chondrodystrophia hereditary deforming c. Same as exostosis multiplex cartilagmea hyperplastic c., chondrodystrophy with excessive growth of the epiphyses hypoplastic c., chondrodystrophy in which the bone is spongy and the epiphyses are irregularly developed.
- **chondro-endothelioma** (kon"dro-en-do-the-le-o'-mah). An endothelioma containing cartilaginous tissue.
- **chondrofibroma** (kon"dro-fi-bro'mah) [chondroma + fibroma] Chondroma with fibrous elements.
- **chondroform** (kon'dro-form). A preparation of chondrus with antiseptics, used as an antiseptic lubricant.
- **chondrogen** (kon'dro-jen) [Gr. χόνδρος cartilage + γεννῶν to produce] A substance regarded as the basis of cartilage and of the corneal tissue, boiling turns it into chondrin.
- **chondrogenesis** (kon-dro-jen'es-is) [Gr. χ όνδρος cartilage $+ \gamma$ ένεσις development] The formation of cartilage.
- chondroglossus (kon-dro-glos'us). See muscles, table of
- chondroglucose (kon-dro-glu'kōs) A sugar formed by the action of hydrochloric acid on chondrin.
- **chondrography** (kon-drog raf-e) [Gr. $\chi \delta \nu \delta \rho \sigma \sigma$ cartilage $+ \gamma \rho \dot{\alpha} \varphi \epsilon \nu$ to write]. A description or account of the cartilages.
- chondroid (kon'droid) [Gr. χόνδρος cartilage + elδος form]. 1. Resembling cartilage. 2. Same as amyloid.
- chondroin (kon'dro-in). An amorphous alkaloid, C₁₉H₂₁NO₄, from the bark of *Nectandra rodiæi*.
- **chondroitic** (kon-dro-it'ik). Pertaining to, derived from, or resembling cartilate. **c. acid.** See under *acid*
- **chondroitin** (kon-dro'it-in). A substance resembling gum arabic, C₁₈H₂₇NO₁₄, formed, together with sulphuric acid, by the decomposition of chondroitic acid. Upon hydrolysis it yields glucuronic acid and glucosamin
- **chondroituria** (kon"dro-it-u're-ah). The presence of chondroitic acid in the urine.
- **chondroline** (kon'dro-lin) A proprietary antiseptic and lubricant preparation of chondrus.
- **chondrolipoma** (kon''dro-lip-o'mah). A tumor containing cartilaginous and fatty tissue.
- chondrology (kon-drol'o-je) [Gr. χόνδρος cartilage + λόγος discourse]. The sum of knowledge in regard to the cartilages.
- chondroma (kon-dro'mah) [Gr. χόνδρος cartilage + -ωμα tumor]. A cartilagmous tumor of slow growth c. sarcomato'sum, chondrosarcoma.
- chondromalacia (kon"dro-mal-a'se-ah) [Gr. χόνδρος cartilage + μαλακία softness]. Preternatural softness of the cartilages. c. foota'lis, a condition in which the limbs of the fetus are soft and pliable.
- **chondromatous** (kon-dro'mat-us). Pertaining to or of the nature of cartilage.
- chondromitome (kon-dro-mi'tōm) [Gr. χόνδρος cartilage + μίτος thread]. The paranucleus.
- chondromucin (kon-dro-mu'sin). A dense homogeneous intercellular substance in cartilage, being a compound of a protein with chondroitic acid.
- chondromucoid (kon-dro-mu'coid). Chondromu-

- chondromyoma (kon"dro-mi-o'mah). Myoma with cartilaginous elements.
- chondromyxoma (kon"dro-miks-o'mah). Myxoma containing cartilaginous elements.
- chondromyxosarcoma (kon"dro-miks-o-sar-ko'-mah). A sarcoma containing cartilaginous and mucous tissues.
- **chondro-osseous** (kon"dro-os'e-us). Composed of cartilage and bone.
- chondropharyngeus (kon"dro-far-in'je-us). The middle constrictor muscle of the pharynx. See muscles, table of.
- chondrophyte (kon'dro-fit) [Gr. χόνδρος cartilage + φυτόν a growth]. A cartilaginous growth at the articular extremity of a bone.
- chondroplast (kon'dro-plast) [Gr. χόνδρος cartilage + πλάσσειν to mold]. Same as chondroblast.
- **chondroplastic** (kon-dro-plas'tik). Pertaining to plastic operations on cartilage.
- **chondroplasty** (kon'dro-plas-te) [Gr. χ δυδρος cartilage $+ \pi \lambda \dot{\alpha} \sigma \sigma \epsilon \iota \nu$ to form]. Plastic surgery on cartilage, repair of lacerated or displaced cartilage.
- **chondroporosis** (kon"dro-po-ro'sis) [Gr. χόνδρος cartilage + πόροs a passage]. The formation of spaces or sinuses in the cartilages: it occurs normally during ossification.
- chondroprotein, chondroproteid (kon-droprotein, -pro'te-id) One of a series of glucoproteins, comprising lardacein and chondromucoid. They furnish chondrottic acid on decomposition.
- chondrosamin (kon-dro'sam-in). Galactosamin.
- chondrosarcoma (kon"dro-sar-ko'mah) [chondro-ma + sarcoma]. Sarcoma with cartilaginous elements; a cartilaginous tumor characterized by rapidity of growth.
- **chondroseptum** (kon-dro-sep'tum) [Gr. χόνδρος cartilage + septum]. The cartilaginous part of the nasal septum.
- **chondrosin** (kon'dro-sin). A gummy substance with reducing properties, C₁₂H₂₁NO₁₁, formed by the hydrolysis of chondrontin.
- **chondrosis** (kon-dro'sis) [Gr. χόνδρος cartilage]. The formation of cartilaginous tissue.
- chondroskeleton (kon"dro-skel'et-on). A cartilaginous skeleton.
- chondrosome (kon'dro-sōm) [Gr. χόνδρος cartilage
 + σῶμα body] Same as mitochondria.
- chondrosternal (kon-dro-ster'nal). Pertaining to the costal cartilage and the sternum.
- **chondrotome** (kon'dro-tōm). An instrument for cutting the cartilages
- **chondrotomy** (kon-drot'o-me) [Gr. χόνδροs cartilage + τέμνειν to cut]. The dissection or surgical division of cartilage.
- **chondroxiphoid** (kon-dro-zi'foid) [Gr. χόνδρος cartilage + xiphoid]. Pertaining to the ensiform cartilage.
- Chondrus (kon'drus) [L.; Gr. χόνδρος gristle]. A genus of seaweeds, Chon'drus cris'pus and Gigarti'na mamillo'sa, algæ known as carragheen, or Irish moss. It is demulcent and nutritive, and is used in chronic bronchial affections, and in diarrhea, dysentery, and renal disorders.
- Chopart's amputation, etc. (sho-parz') [Francois Chopart, French surgeon, 1743-1795]. See amputation, etc.
- chord (kord). See cord.
- chorda (kor'dah), pl. chor'dæ [Gr. χορδή cord].
 Any cord or sinew. c. dorsa'lis, the notochord.
 c. obli'qua [B N A], the round ligament of the forearm.' c. spermat'ica, the spermatic cord.
 c. spina'lis, the myelon, or spinal cord. c. tendin'es, the tendinous strings which connect the columnæ carneæ of the heart-ventricles with the auricular valves. c. tym'pani. See nerves, table of. c. umbilica'lis. See umbilical cord. c. voca'les, the vocal cords. See cord. c. willis'-ii, Willis' cords: small white bands which cross

the lumen of the superior longitudinal sinus of the brain.

chordal (kor'dal). Pertaining to any chorda (chiefly used of the notochord).

chordate (kor'dāt). An animal which possesses a notochord.

chordee (kor-dee') [Fr. cordée corded]. Painful curved erection of the penis in gonorrhea.

chorditis (kor-di'tis) [Gr. χορδή cord] Inflammation of a vocal or spermatic cord. c. canto'rum, inflammation of the vocal cords in professional singers. C. fibrino'sa, acute laryngitis marked by the deposition of fibrin and the formation of erosions on the vocal cords. c. nodo'sa, c. tubero'sa, a disease marked by the formation of a small whitish nodule on one or both vocal cords. c. voca'lis, inflammation of the vocal cords. c. voca'lis infe'rior, chronic subglottic laryngitis.

chordoblastoma (kor"do-blas-to'mah) [Gr. $\chi o \rho \delta \dot{\eta}$ cord + $\beta \lambda \dot{\alpha} \sigma \tau o s$ germ + - $\omega \mu \alpha$ tumor]. A tumor the cells of which tend to differentiate into cells like those of the notochord.

chordoid (kor'doid). Resembling the notochord of the embryo.

chordoma (kor-do'mah) [Gr. χορδή cord + -ωμα tumor] A form of chondroma of the body of a vertebra or of the sphenoid bone: apparently originating in persistent remains of the embryonic notochord. Called also ecchondrosis physaliformis.

chordopexy (kor'do-pek-se). Cordopexy.

chordoskeleton (kor-do-skel'et-on) [chorda + skeleton]. That portion of the bony skeleton which is formed around the notochord.

chordotomy (kor-dot'o-me). Surgical division of the anterolateral columns of the spinal cord.

chorea (ko-re'ah) [L.; Gr. χορεία dance]. St. Vitus' dance a convulsive nervous disease, with involuntary and irregular jerking movements, it is attended with irritability and depression, and with mental impairment. It occurs especially in early life, affecting girls more frequently than boys. It is often hereditary, and sometimes occurs in epidemics. automatic c., a disease characterized by the performance of actions characterized by the performance of actions which seem to be intentional, but which are really performed independently of the will in response to some impulse or external stimulus.

Bergeron's c., a disease characterized by violant shuthering account of the statement of the sta lent rhythmic spasms, but running a benign course buttonmakers' c., an occupation neurosis observed in buttonmakers. chronic c., a hereditary affection of adults marked by irregular movements, speech disturbances, dementia; called also Huntington's c. c. cor'dis, chorea with great irregularity of the heart's action. dancing c., saltatory chorea. degenerative c. Same as chronic c. diaphragmatic c., the utterance of a peculiar cry in cases of painless tic. c. dimidia ta, hemichorea. electric c., a variety with violent and sudden movements, progressing, as a rule, from bad to worse, and often characterized by atrophy and muscular paralysis Called also Dubini's disease. epidemic c., dancing mania. c. fes'tinans, c. procursi'va, old names for ataxia with festination; paralysis agitans. fibrillary c., fibrillary contractions of various muscles; paramyoclonus. c. gravida'rum, chorea with symptoms similar habit c., tic. hemilateral c. See hemichorea.

Henoch's c., spasmodic tic. hereditary c. See chronic c. Huntington's c. See chronic c. hysteric c. Same as c. major. imitative c., a pseudochorea, or hysteric affection; a kind of habit-spasm due to imitation. c. insa/niens, chorea with symptoms of insantive chiefly seen in preg-nant women. laryngeal c. Same as dia-phragmatic c. limp c., a condition in which chorea is associated with paralysis; called also c. mollis. local c., occupation neurosis. c.

ma'jor, hysteria with continuous and somewhat regular oscillatory movements. malleatory c., rhythmic chorea in which the patient performs persistent movements of hammering. maniacal c., chorea insaniens. methodic c., a variety in which the movements take place at regular intervals. called also rhythmic c. mimetic c., that which is caused by imitation. c. mi'nor, the ordinary chorea with comparatively moderate convulsive movements (Sydenham, 1680). c. mol'lis. See limp c. Morvan's c., fibrillary contractions of the muscles of the calves and posterior part of the thighs, sometimes extending to the trunk, but never affecting the neck and face. c. noctur'na, chorea in which the movements continue during sleep c. nu'tans, nodding spasm, or chorea with nodding head movements. one-sided c. Same as hemichorea. paralytic c., local clonic spasm associated with a paralysis. posthemiplegic c., a form which affects partially paralyzed muscles after hemiplegia athetosis. prehemiplegic c., choreic movements which may precede an attack of hemiplegia. procursive c., paralysis agitans. rhythmic c., hysteric chorea in which the patient performs persistent rhythmic movements. rotary c., hysteric chorea in which the patient performs persistent rhythmic movements. rotary c., hysteric chorea in which the patient performs persistent rhythmic movements. school-made c., chorea from overstimulation at school. Schrötter's c., diaphragmatic chorea. c. scripto'rum, write's cramp. senile c. I. An affection resembling chorea, coming on in old age. 2. Paralysis agitans. Sydenham's c., ordinary chorea; chorea minor. tetanoid c., progressive lenticular degeneration (Gowers, 1888). tic c. See tic.

choreal, choreic (ko're-al, ko-re'ik). Pertaining to or of the nature of chorea.

choreatic (ko-re-at'ik). Pertaining to or caused by chorea

choreiform (ko-re'if-orm) [chorea + L. for'ma form]. Resembling chorea.

choreo-athetoid (ko"re-o-ath'et-oid). Pertaining to or resembling chorea and athetosis.

choreo-athetosis (ko"re-o-ath-e-to'sis). A condition marked by choreic and athetoid movements.

choreoid (ko're-oid). Resembling chorea.

choreomania (ko"re-o-ma'ne-ah) [Gr. χορεία dance + μανία madness]. Dancing mania, or epidemic chorea.

chorial (ko're-al). Of or relating to the chorion.

chorio-adenoma (ko''re-o-ad-en-o'mah). Adenomatous tumor of the chorion.

chorio-angioma (ko"re-o-an-je-o'mah). An angiomatous tumor of the chorion.

choriocapillaris (ko"re-o-kap-il-a"ris) [chorioid
 + L. capillaris capillary]. The capillary or second layer of the choroid coat of the eye.

choriocarcinoma (ko''re-o-kar-sin-o'mah). Carcinoma developed from the chorionic epithelium. See syncytioma malignum.

choriocele (ko're-o-sēl) [chorion + Gr. κήλη hernia]. Protrusion of the eye through an aperture in the choroid.

chorio-epithelioma (ko"re-o-ep-e-the-le-o'mah). See syncytioma malignum.

chorioid (ko're-oid). The more correct form of the word choroid.

chorioido-. For words beginning thus, see those beginning choroido-.

chorioma (ko-re-o'mah) [chorion + Gr. -ωμα tumor]. A tumor developed from the chorionic epithelium and including chorio-adenoma, chorio-epithelioma, choriosarcoma, and choriocarcinoma. c. malig'num. Same as syncytioma malignum.

chorion (ko're-on) [Gr. χόριον skin]. The more external of the two fetal membranes, formed by

the outer portion of the allantois pushing in between the amnion and vitelline membrane, and uniting with the latter to envelop the ovum. c. frondo'sum, the part of the chorion that is covered with villi. c. leg've, the smooth and membranous part of the chorion. primitive c., that stage of the zona pellucida during which it develops many small villi. shaggy c. Same as c. frondosum.

chorionepithelioma (ko"re-on-ep-e-the-le-o'mah). See syncytioma malignum.

chorionic (ko-re-on'ik). Pertaining to the chorion.
chorionin (ko-re-on'in). A preparation from sheep's placenta: said to have galactagogue properties.

chorionitis (ko"re-on-i'tis) [Gr χόριον skin]. Inflammation of the corium of the skin, which becomes hard and thick; scleroderma.

Chorioptes (ko-re-op'tez). A genus of parasitic mites infesting the skin and hair of domestic animals and causing a sort of mange (chorioptic itch).

chorioretinal (ko"re-o-ret'in-al). Pertaining to the choroid and retina.

chorioretinitis (ko"re-o-ret-in-i'tis). Inflammation of the choroid and retina.

choriotrope (ko're-o-trop). A preparation of colloidal lead (05 per cent.) for the treatment of malignant disease.

chorista (ko-ris'tah) [Gr. χωρίστος separated]. Defective development due to, or characterized by, displacement of the anlage.

choristoblastoma (ko-ris"to-blas-to'mah) [Gr. χωρίστος split + βλάστος germ + -ωμα tumor]. Choristoma.

choristoma (ko-ris-to'mah) [Gr. $\chi\omega\rho l\sigma\tau\sigma$ separated $+ -\omega\mu\alpha$ tumor]. A new growth developed from a displaced anlage.

from a displaced amage.

choroid (ko'roid) [Gr. χοριοειδής skin-like]. 1.

Resembling the chorion or the corium 2 The dark-brown, vascular coat of the eye, between the sclera and the retina, whose function it is to nourish the retina and lens.

choroidal (ko-roi'dal). Pertaining to the choroid. choroidea (ko-roi'de-ah). Same as choroid (2d def.).

choroideremia (ko"roi-der-e'me-ah) [choroid + έρημία destitution]. Absence of the choroid.

choroiditis (ko-roid-i'tis). Inflammation of the choroid. anterior c., that in which there are points of exudation at the periphery. areolar c., that which starts around or near the macula lutea and progresses toward the periphery central c., a variety in which the exudation is in the region of the macula lutea. diffuse c., disseminated c., that which is characterized by spots scattered over the fundus. exudative c., that which is characterized by scattered patches of an exudate. c. gutta'ta seni'lis. See Tay's c. metastatic c., a form due to metastasis in pyemia, meningitis, etc. c. myop'ica, choroiditis due to eye-strain from defective vision. c. sero'sa. Same as glaucoma. suppurative c., that which leads to the formation of pus. Tay's c., degeneration of the choroid, marked by irregular yellow spots around the macula lutea, and believed to be due to an atheromatous state of the arteries. It is seen in advanced life, and is called also choroiditis guttata senilis.

choroidocyclitis (ko-roi"do-sik-li'tis). Inflammation of the choroid and ciliary processes.

choroido-iritis (ko-roi"do-i-ri'tis). Inflammation of the choroid coat and the iris.

choroidoretinitis (ko-roi"do-ret-in-i'tis). Inflammation of the choroid and retina.

chorology (ko-rol'o-je) [Gr. $\chi \hat{\omega} \rho \sigma$ place $+ \lambda \delta \gamma \sigma$ treatise]. The science of the laws of distribution of organisms over the earth.

choromania (ko-ro-ma'ne-ah) [Gr. χορός dance + μανία madness]. The dancing mania.

chortosterol (kor-tos'ter-ol). The sterol of grass.

Christian's syndrome (kris'tshanz) [Henry Christian, contemporary Boston physician]. See under syndrome.

Christison's formula (kris'tis-onz) [Sir Robert Christison, Scotch physician, 1797-1882]. See formula.

christopathy (kris-top'ath-e). The so-called Christian Science.

chroatol (kro'a-tol) [Gr. χρόα skin + L. o'leum oil]. Terpene iodohydrate, C₁₀H₁₀-2HI, a green, oily preparation formed by the action of iodin on turpentine: used externally in skin diseases.

chromæsthesia. See chromesthesia.

chromaffin (kro-maf'in) [Gr. χρῶμα color + L. affinis having affinity for]. Taking up and staining strongly with chrome salts: said of certain cells occurring in the adrenal, coccygeal, and carotid glands, along the sympathetic nerves, and in various organs. Tissue composed of such cells is called c. lissue. Small capsulated masses of such tissue are known as c. bodies, or paraganglia. The whole system of such tissue throughout the body is termed c. system.

chromaffinopathy (kro"maf-in-op'ath-e) [chromaffin + Gr. πάθος disease]. Any disease of the chromaffin system.

chromaphil (kro'maf-il) [chrome + Gr. φιλείν to love] Same as chromaffin.

chromate (kro'māt). Any salt of chromic acid.

chromatelopsia (kro"mat-el-op'se-ah) [Gr. χρωμα color + ἀτελής imperfect + ὄψις sight]. Imperfect perception of colors.

chromatic (kro-mat'ik). 1. Pertaining to color; stainable with dyes. 2. Pertaining to chromatin.

chromatin (kro'mat-in) [Gr. χρῶμα color]. The more stainable portion of the cell-nucleus, forming a network of nuclear fibrils within the achromatin of a cell-called also chromoplasm. distributedc., extranuclear c., chromidia. c. dust. Minute red granules seen near the periphery of red blood-corpuscles stained by Giemsa's stain. They are probably minute particles of nuclear chromatin

chromatinic (kro-mat-in'ik). Of or pertaining to the chromatin.

chromatinolysis (kro"mat-in-ol'is-is) [chromatin + Gr. λύσις solution]. Chromatolysis.

chromatinorrhexis (kro'mat-in-o-reks'is) [chromatin + $\dot{\rho}\dot{\eta}\xi\iota_s$ rupture]. Splitting up of the chromatin.

chromatism (kro'mat-izm). Abnormal pigmentation.

chromatize (kro'mat-īz). To charge with some chromium compound.

chromatocinesis, chromatokinesis (kro"matosin-e'sis, -kın-e'sis) [chromatin + Gr. κίνησις movement]. Movement of chromatin.

chromatodermatosis (kro"mat-o-der-mat-o'sis) [Gr. $\chi\rho\hat{\omega}\mu\alpha$ color + dermatosis]. Any skin disease with pigmentation.

chromatodysopia (kro"mat-o-dis-o'pe-ah) [Gr. χρωμα color + δυς- ill + δψις sight]. More or less complete color-blindness

chromatogenous (kro-mat-oj'en-us) [Gr. χρῶμα color + γεννῶν to produce]. Producing color or coloring-matter.

chromatoid (kro'mat-oid). Staining deeply with dyes.

chromatology (kro-mat-ol'o-je) [Gr. χρῶμα color + λόγος treatise]. The science of colors.

chromatolysis (kro-mat-ol'is-is) [Gr. χρῶμα color + λύσις loosening]. The solution and disintegration of the chromatin of cell-nuclei; also the solution and disappearance of the chromophilic substance (Nissl body) from a neuron when the axon of the neuron is divided; called also axon treation

chromatolysm (kro-mat'o-lism). Chromatolysis.

268

- **chromatolytic** (kro"mat-o-lit'ik). Pertaining to chromatolysis.
- chromatometer (kro-mat-om'et-er) [Gr. χρῶμα color + μέτρον measure]. An instrument for measuring color or color-perception.
- chromatopathy (kro-mat-op ath-c) [Gr. $\chi\rho\hat{\omega}\mu a$ color + $\pi a\theta$ os disease]. Any skin disease characterized by pigmentation.
- chromatopectic (kro"mat-o-pek'tik). Chromopectic.
- **chromatopexis** (kro"mat-o-pek'sis). Chromopexis.
- chromatophagus (kro-mat-of'a-gus) [Gr χρῶμα color + φαγεῖν to devour]. Destroying pigments.
- chromatophil, chromatophile, chromatophile (kro'mat-o-fil, kro'mat-o-fil'ik) [Gr. χρῶμα color + φιλεῖν to love] Staining easily
- **chromatophilia** (kro''mat-o-fil'e-ah) [Gr. χρῶμα color + φιλεῖν to love]. The condition of being chromatophilic.
- chromatophilous (kro-mat-of'il-us). Chromatophil.
- **chromatophobia** (kro"mat-o-fo'be-ah) [Gr. $\chi\rho\hat{\omega}\mu\alpha$ color + $\varphi b\beta$ os fear]. Aversion to certain colors.
- chromatophore (kro-mat'o-fōr) [Gr χρῶμα color + φέρειν to bear]. Any pigmentary cell or color-producing plastid, such as those of the cutis or deep layers of the epidermis.
- chromatophoroma (kro-mat"o-fo-ro'mah). A tumor made up of chromatophores.
- chromatoplasm (kro-mat'o-plazm). The colored portions of the protoplasm of a cell.
- **chromatopseudopsis** (kro''mat-o-su-dop'sis) [Gr. χρωμα color + ψευδής false + δψις vision]. Abnormal color perception.
- chromatopsia (kro-mat-op'se-ah) [Gr. χρωμα color + όψις vision]. 1. Colored vision. 2 Partial or approximate color-blindness.
- chromatoptometer (kro'mat-op-tom'et-er) [Gr. χρώμα color + ὅπτειν to see + μέτρον measure]. A device used in measuring color perception.
- **chromatoptometry** (kro''mat-op-tom'et-re). The testing of the power of discriminating colors.
- **chromatosis** (kro-mat-o'sis). Pigmentation. especially pigmentation of the skin.
- **chromatoskiameter** (kro"mat-o-ski-am'et-er). An instrument for measuring the color sense.
- **chromatotaxis** (kro-mat-o-taks'is) [chromatin + Gr. $\tau \dot{\alpha} \xi_{1}$ s turning]. The attraction or influence of certain substances on the chromatin of a cell-nucleus, causing destruction of the chromatin, while the cell-body remains intact.
- chromaturia (kro-mat-u're-ah) [Gr. χρῶμα color + οὖρον urine]. Abnormal coloration of the urine.
- **chromesthesia** (kro-mes-the'ze-ah) [Gr. $\chi\rho\hat{\omega}\mu a$ color + ala $\theta\eta\sigma\iota s$ sensation]. The association of imaginary sensations of color with actual sensations of hearing, taste, or smell. See *photism*.
- chrome green. 1. Chromium sesquioxid, Cr₂O₃.
 2. A mixture of chrome yellow and Prussian bluc.
 chrome yellow. See *lead chromate*.
- chromhidrosis (krom-hid-ro'sis). Chromidrosis. chromic acid (kro'mik). See acid. c. anhy-
- drid, chromic acid.
 chromicize (kro'mis-īz). To treat with a chromium
- compound.
 chromidia (kro-mid'e-ah). See chromidium.
- chromidial (kro-mid'e-al). Pertaining to or composed of chromidia.
- chromidiation (kro"mid-e-a'shun). Chromidiosis.
 chromidien (kro-mid'e-en) [Ger.]. That part of the extranuclear chromatin not concerned in the reproduction of the cell.
- chromidiosis (kro-mid-e-o'sis). The outpouring of nuclear substance and chromatin from the nucleus into the cytoplasm of a cell.

- **chromidium** (kro-mid'e-um), pl. *chromid'ia*. Any one of the granules of extranuclear chromatin seen in the cytoplasm of a cell, and staining deeply with basic stains.
- **chromidrosis** (kro-mid-ro'sis) [Gr. χρῶμα color + ἰδρώς sweat]. A condition in which the sweat is colored.
- chromiole (kro'me-ol). One of the minute granules of chromatin composing the chromosomes (Eisen, 1800)
- chromium (kro'me-um) [L.; Gr. χρῶμα color]. A whitish, brittle metal: atomic weight, 52; specific gravity, 65; symbol, Cr; several of its salts are pigments c. sulphate, Cr₂(SO₄)3, a green, amorphous compound, soluble in water: used in various nervous diseases. Dose, 1-4 gr (0 065-0 266 gm) c. trloxid, chromic acid. See acid.
- Chromobacterium (kro'mo-bak-te're-um) A tribe of the Bacteriaceæ. They are water and soil bacteria and produce red, yellow, violet, or bluishgreen pigments. It includes the following genera Seratia, Flavobacterium, Chromobacterium, and Pseudomonas. C. viola/ceum, Bacillus violaceus. a well-known organism which produces a deep violet-colored pigment.
- **chromoblast** (kro'mo-blast) [Gr. χρῶμα color + βλαστόs germ]. An embryonic cell which develops into a pigment-cell.
- **chromocholoscopy** (kro"mo-ko-los'ko-pc) [Gr. $\chi \rho \dot{\omega} \mu a$ color + $\chi o \lambda \dot{\eta}$ bile + $\sigma \kappa o \pi \epsilon \hat{\iota} \nu$ to see] Testing the bihary function by a pigment excretion test (methylene-blue).
- **chromocrater** (kro-mo-kra'ter). A blood-corpuscle shaped like a crater.
- **chromocrinia** (kro-mo-krin'e-ah) [Gr. $\chi\rho\hat{\omega}\mu a$ color $+ \kappa\rho l\nu\epsilon_{l}\nu$ to separate]. The secretion or exerction of coloring-matter.
- **chromocystoscopy** (kro"mo-sis-tos'ko-pe). [Gr. $\chi \rho \hat{\omega} \mu \alpha$ color + cystoscopy] Cystoscopy after the administration of a coloring-matter that will stain the urine or bladder tissue.
- **chromocyte** (kro'mo-sit) [Gr $\chi \rho \hat{\omega} \mu a$ color + $\kappa \nu \tau \sigma s$ cell]. Any colored cell or pigmented corpuscle.
- **chromocytometer** (kro"mo-si-tom'et-er) [Gr. χρῶμα color + κύτος cell + μέτρον measure]. An instrument for measuring the amount of hemo-globin in the red corpuscles of the blood.
- **chromocytometry** (kro"mo-si-tom'et-re) Measurement of the hemoglobin or counting of the red corpuscles of blood.
- chromodermatosis (kro"mo-der-mat-o'sis). Chromatodermatosis.
- chromodiagnosis (kro"mo-di-ag-no'sis) [Gr. χρῶμα color + diagnosis] 1. Diagnosis by change of color 2. Diagnosis of functional derangements by observing the rate at which coloring-matters, such as methylene-blue, are excreted. 3 Diagnosic examination made through colored glass or sheets of colored gelatin.
- **chromogen** (kro'mo-jen). Any principle which may give origin to a coloring-matter.
- chromogenesis (kro-mo-jen'es-is) [Gr. χρῶμα color + genesis]. The formation of pigments or colors, as by bacterial action.
- **chromogenic** (kro-mo-jen'ik). Producing a pigment or coloring-matter.
- chromo-isomerism (kro"mo-i-som'er-izm) [Gr. $\chi \rho \hat{\omega} \mu a$ color + isomerism]. Isomerism in which the isomers have different colors
- chromolume (kro'mo-lūm) [Gr $\chi\rho\hat{\omega}\mu\alpha$ color + L. lu'men light]. An apparatus for producing colored light-rays for therapeutic purposes.
- chromolysis (kro-mol'is-is). Same as chromatol-
- **chromomere** (kro'mo-mēr) [Gr. $\chi\rho\tilde{\omega}\mu\alpha$ color + $\mu\epsilon\rho\sigma$ part]. Any one of the granules of chromatin composing a chromosome (Fot, 1891). By some the chromomeres are believed to have a special significance in heredity.

- **chromometer** (kro-mom'et-er) [(ir. χρῶμα color + μέτρον measure]. An instrument for determining the proportion of coloring-matter in a substance.
- chromoparic, chromoparous (kro-mo-par'ik, kro-mop'ar-us) [Gr $\chi\rho\tilde{\omega}\mu\alpha$ color + L. par'ere to produce]. Producing or giving birth to color said of chromogenic bacteria which secrete a coloring-matter, but which themselves remain colorless. Cf. chromophoric and parachromophoric
- **chromopathy** (kro mop'ath-e). Chromatopathy **chromopexic** (kro-mo-pek'sik) [Gr. $\chi\rho\hat{\omega}\mu\alpha$ color +
 - $\pi \hat{\eta} \hat{\xi}_{is}$ (ixation]. Fixing pigment a term applied to the function of the liver to form bilirubin.
- chromophag, chromophage (kro'mo-fāj) [Gr. $\chi \rho \hat{\omega} \mu a \operatorname{color} + \varphi a \gamma \epsilon \hat{\imath} \nu$ to eat]. Same as pigmentophage.
- chromophane (kro'mo-fān) [Gr. $\chi\rho\hat{\omega}\mu\alpha$ color + $\varphi\alpha l\nu\epsilon\iota\nu$ to show]. Any retinal pigment.
- chromophil, chromophile (kro'mo-fil) [Gr. $\chi\rho\hat{\omega}\mu a$ color + $\varphi\iota\lambda\hat{\epsilon}\iota\nu$ to love]. Any easily stainable cell, structure, or tissue used also adjectively.
- chromophilic, chromophilous (kro-mo-fil'ik, kro-mof'il-us) [see chromophil] Readily or easily stained used especially of certain leukocytes and other histologic elements
- **chromophobe, chromophobic** (kro'mo-fōb, kro-mo-fo'bik) [Gr. $\chi \rho \hat{\omega} \mu \alpha$ color $+ \varphi b \beta o s$ fear]. Staining very poorly or not at all said of cells.
- **chromophore** (kro'mo-for). Any chemic group whose presence gives a decided color to a compound and which unites with certain other groups (auxochromes) to form dyes Called also *color radical*.
- chromophoric (kro-mo-for'ık) [Gr. χρῶμα color + φέρειν to bear] 'Bearing color' said of chromogenic bacteria when the pigment is a component of the bacterial cell itself. Cf. parachromophoric.
- chromophorous (kro-mof'o-rus). Chromophoric.
 chromophose (kro'mo-föz) [Gr χρῶμα color + phose] A subjective sensation of color
- **chromophytosis** (kro"mo-fi-to'sis) [Gr χρῶμα color + φυτόν plant] Skin discoloration due to a vegetable parasite.
- **chromoplasm** (kro'mo-plazm) [Gr. $\chi\rho\hat{\omega}\mu\alpha$ color + $\pi\lambda\hat{\alpha}\sigma\mu\alpha$ something formed]. The easily staining network of a cell-nucleus.
- chromoplast (kro'mo-plast). Same as chromoplastid.
- **chromoplastid** (kro-mo-plas'tid) [Gr. χρῶμα color + plastid]. Any pigment-producing plastid other than a chloroplast
- chromoprotein (kro-mo-pro'te-in) [Gr. $\chi\rho\omega\mu\alpha$ color + protein] A colored conjugated protein. Examples are. the red hemoglobin of the higher animals, the blue hemocyanin of many lower animals, and the red and blue pigments of seaweeds Chromoproteins have respiratory functions and are closely related to the green chlorophyll of the higher plants.
- chromopsia (kro-mop'se-ah). Same as chromatopsia.
- **chromoptometer** (kro-mop-tom'et-er) [Gr. χρῶμα color + ὅπτειν to see + μέτρον measure]. A device for estimating the acuteness of the power of discriminating colors
- chromoradiometer (kro"mo-ra-de-om'et-er) [Gr. $\chi\rho\tilde{\omega}\mu\alpha$ color + L. ra'dius ray + Gr. $\mu^2r\rho\nu$ measure]. An apparatus for measuring x-ray dosage by means of the color changes produced in slides placed next the skin. **Holzknecht's c.**, an apparatus for measuring x-ray dosage, consisting of a capsule which contains a substance color-sensitive to the x-ray. This capsule is placed near the part treated by the rays, and its color is then compared with a color scale whose colors are numbered from 3 to 24 These numbers are known as Holzknecht's units
- chromorhinorrhea (kro"mo-rin-or-e'ah) [Gr. χρώμα color + ρίς nose + ροία a flow]. The discharge of a pigmented secretion from the nostrils.

- chromosantonin (kro"mo-san'to-nin). Yellow santonin; an isomeric form produced when santonin is exposed to sunlight.
- chromoscope (kro'mo-skōp) [Gr χρῶμα color + σκοπεῖν to see]. An instrument for testing color perception.
- **chromoscopy** (kro-mos'ko-pe) [Gr. χρῶμα color + σκοπεῖν to examine]. Diagnosis of renal function by the color of the urine following the administration of dyes.
- chromosomal (kro-mo-so'mal). Pertaining to chromosomes.
- **chromosome** (kro'mo-sōm) [Gr. $\chi \rho \hat{\omega} \mu a$ color + $\sigma \hat{\omega} \mu a$ body]. One of the small bodies into which the chromatin of a cell-nucleus divides at the time of the mitotic division of the cell (Waldeyer, 1888). The chromosomes of the cells of a given species of animal are constant in number. accessory c., an unpaired chromosome which passes entire into one of the daughter-cells instead of being divided between the two; such a chromosome is thought to carry sexual characters; called also heterotropic c., idiochromosome, monosome, heterochromosome, allosome, odd chromosome, special chromosome, x-chromosome, and sex chromosome. bivalent c., a pair of chromosomes temporarily united. heterotypical c. See allosome. x-c. See accessory c. y-c., an accessory chromosome sometimes occurring along with the x-chromosome in male cells, and supposed to represent the male determining factor in fertilization.
- **chromosot** (kro'mo-sōt). A disinfectant containing sodium sulphite and other active ingredients.
- chromotherapy (kro-mo-ther ap-e) [Gr. $\chi \rho \hat{\omega} \mu a$ color $+ \theta \epsilon \rho a \pi \epsilon i a$ treatment] Treatment of disease by variously colored lights.
- **chromotoxic** (kro-mo-toks'ik) [Gr. χρῶμα color + τόξον poison]. Destructive to hemoglobin or due to the destruction of hemoglobin.
- **chromo-ureteroscopy**(kro"mo-u-re-ter-os'ko-pe). Ureteroscopy after the administration of a coloring-matter that will stain the ureter tissue.
- chronaxia (kron-ak'se-ah) [Gr. χρόνος time + ἄξια value]. The duration of passage of a constant current of abrupt start and attaining double the threshold of voltage (L. Lapicque, 1909).
- chronaximeter (kron-ak-sim'et-er). An instrument for measuring chronaxia in nerve lesions.
- chronaxy (kron'ak-se) Chronaxia.
- chrondriosome (kron'dre-o-sōm). A minute body found in numbers in the cytoplasm of the cells of embryonic tissues It has been suggested that they may be concerned in heredity.
- chronic (kron'ik) [L. chron'icus, from Gr. χρόνος time]. Long-continued; not acute.
- chronicity (kro-nis'it-e). The quality of being chronic.
- **chronobiology** (kron"o-bi-ol'o-je) [Gr. $\chi\rho\delta\nu\sigma$ s time $+\beta los$ life $+\lambda\delta\gamma\sigma$ s science]. The science or study of the duration of life.
- chronograph (kron'o-graf) [Gr. χρόνος time + γράφειν to write]. An instrument for recording small intervals of time.
- chronophotograph (kron-o-fo'to-graf) [Gr. χρόνος time + photograph]. One of a series of photographs of a moving object taken for the purpose of showing successive phases of the motion.
- chronoscope (kron'o-skōp) [Gr. χρόνος time + σκοπεῖν to view]. An instrument for measuring minute intervals of time.
- chronosphygmograph (kron-o-sfig'mo-graf). Jaquet's instrument for reading the rhythm as well as the character of the pulse.
- chronotropic (kron-o-trop'ik) [Gr. $\chi \rho \dot{\rho} \nu \sigma_s$ time + $\tau \rho \dot{\epsilon} \pi \epsilon \iota \nu$ to turn]. Affecting the time or rate, especially the rate of contraction: said of nervefibers that affect the rate of cardiac contraction.
- **chronotropism** (kro-not'ro-pizm). Interference with the regularity of the heart's action.

chrotoplast (kro'to-plast) [Gr. χρῶs skin + πλάσσειν to form]. A dermal cell; a skin cell.

chrysalis (kris'al-is) [L.]. The second, or caterpillar, stage in the development of an insect.

chrysarobin (kris-ah-ro'bin) [L. chrysarobi'num, from Gr. χρυσός gold + araroba]. A mixture of neutral principles obtained from goa powder, a substance deposited in the wood of a Brazilian tree, Vouacapoua (Andi'ra) araro'ba. It is used in skin diseases, locally and internally, acting in the latter case as an irritant and purgative. Dose, \(\frac{1}{64} \) 12 gr. (0.001-0.0054 gm.). The ointment, unguen'tum chrysaro'bini (U. S. P.), is of 6 per cent. strength.

Chrysippus (krī-sip'us), of Cnidos, a Greek physician who lived in the fourth century B. C.

chrysocreatinin (kris"o-kre-at'in-in) [Gr. χρυσόs gold + creatinin]. A yellow, crystalline leukomain, C₅H₃N₄O, from muscle tissue.

chrysoform (kris'o-form). A fine yellowish powder, dibromodiiodohexamethylene tetramin, resembling iodoform.

chrysoidin (kris-oi'din). A reddish, crystalline disinfectant powder, diamino-azobenzol hydrochlorid, C₆H₅N·N·C₆H₅(NH₂)₂·HCl· used in washes and gargles. It also coagulates the vibrio of cholera, and is used as a test for the latter.

chrysolgan (kris-ol'gan) A preparation of goldused in treatment of gonorrhea by intravenous injection.

Chrysomyia (kris-o-mi'e-ah). A genus of Old World flies of the family Muscidæ. C. al'biceps, an Australian species whose larvæ (wool maggots) live in the soiled wool of sheep. C. bezzia'na, a species widely distributed in Asia and frequently found in wounds of man and animals. C. macella'ria. See Cochliomyia macellaria.

chrysophanic acid (kris-o-fan'ik). See acid.

Chrysophyllum (kris-o-fil'um). See monesia.

Chrysops (kris'ops). A genus of tropical tabanid flies. C. cecu'tiens inflicts bites about the eyes on men and animals. C. dimidia'tus, or mango-fly, is believed to be the intermediate host of Filaria loa C. disca'lis is the deer fly which probably is one of the transmitters of tularemia C. sila'cea is an intermediate host of Loa loa

chrysotoxin (kris-o-toks'in) [Gr. χρυσόs gold + τοξικόν poison]. A yellowish principle obtainable from ergot it forms sphacelotoxin by union with ergochrysin; it is a central paralyzant. Dose, ½-½ gr (0011-003 gm) daily.

C2H5SH. Ethyl mercaptan.

chthonophagia (thon-o-fa'je-ah) [Gr. $\chi\theta\dot{\omega}\nu$ earth $+\varphi\alpha\gamma\dot{\epsilon}\dot{\nu}$ to eat]. The morbid habit of eating clay or other earth, geophagy.

chthonophagy (thon-of'aj c). Chthonophagia.

Chvostek's sign or symptom (vos'teks) [Franz Chvostek, Austrian surgeon, 1835-1884]. See sign.

chylangioma (ki"lan-je-o'mah) [chyle + angioma]. A tumor made up of intestinal lymph-vessels distended with chyle.

chylaqueous (ki-la'kwe-us) [Gr. $\chi v \lambda \delta s$ chyle + L. a'qua water]. Both chylous and watery.

chyle (kīl) [Gr. χυλός juice] The milky fluid taken up by the lacteals from the food in the intestine after digestion. It consists of lymph and emulsified fat. It passes into the veins by the thoracic duct, becoming mixed with the blood.

chylemia (ki-le'me-ah) [Gr. $\chi \nu \lambda \delta s$ chyle + $a l \mu \alpha$ blood]. The presence of chyle in the blood.

chylidrosis (ki-lid-ro'sis) [Gr. $\chi \nu \lambda \delta s$ chyle $+ l \delta \rho \omega s$ sweat]. Chylous perspiration.

chylifacient (ki-lif-a'shent). Forming chyle.

chylifaction (ki-lif-ak'shun) [L. chy'lus chyle + fa'cere to make]. The formation of chyle.

chylifactive (ki-lif-ak'tiv) [chyle + L. fa'cere to make]. Forming or making chyle.

chyliferous (ki-lif'er-us) [L. chy'lus chyle + fer're to bear]. 1. Forming chyle. 2. Conveying the chyle.

chylification (ki"lif-ik-a'shun) [L. chy'lus chyle + fa'cere to make]. The formation of chyle.

chyliform (ki'lif-orm). Resembling chyle.

chylocele (ki'lo-sēl) [Gr. χυλός chyle + κήλη tumor]. A chylous effusion into the tunica vaginalis of the testis. **parasitic c.**, lymph-scrotum as an expression of filariasis.

chylocyst (ki'lo-sist) [Gr. χυλός chyle + κύστις bag]. The receptaculum chyli.

chyloderma (ki-lo-der'mah) [Gr. χυλός chyle + δέρμα skin]. Lymph-scrotum.

chyloid (ki'loid). Resembling chyle.

chylology (ki-lol'o-je). The study of chyle.

chylomicron (ki-lo-mi'kron). A particle of emulsified fat, about 1 micron in diameter, found in the blood during the digestion of fat.

chylopericarditis (ki"lo-per-e-kar-di'tis). The presence of chyle in the pericardial sac.

chylopericardium (ki''lo-per-e-kar'de-um) [chyle + pericardium]. The presence of chyle in the pericardium.

chyloperitoneum (ki"lo-per-it-o-ne'um). The presence of effused chyle in the peritoneal cavity.

chylophoric (ki-lo-for'ik) [Gr. $\chi v \lambda \delta s$ chyle $+ \varphi \delta \rho o s$ bearing] Conveying the chyle.

chylopleura (ki-lo-plu'rah). The presence of chyle within the pleura.

chylopoiesis (ki"lo-poi-e'sis) [Gr. χυλός chyle + ποίησις formation] Chylification.

chylopoietic (ki"lo-poi-et'ik). Concerned in the formation of chyle.

chylorrhea (ki-lor-e'ah)
i. Chylous diarrhea, due to rupture of lymphatics in the small intestine.
2. An excessive flow of bile.

chylosis (ki-lo'sis). The process of conversion of food into chyle and of absorption of the latter into the tissues.

chylothorax (ki-lo-tho'raks) [Gr. χυλός chyle + βώραξ chest] The effusion of chyle into the thoracic cavity.

chylous (ki'lus). Pertaining to, mingled with, or of the nature of, chyle.

chyluria (ki-lu're-ah) [Gr. χυλός chyle + οὖρον urine]. The existence or presence of fat in the urine, giving it a milky appearance. One form is due to the presence of a nematode parasite, the Fila'ria san' guinis hom' inis.

chymase (ki'mās). A ferment of the gastric juice the action of which is to accelerate the action of the pancreatic juice.

chyme (kīm) [Gr. χυμός juice]. The thick, grayish, liquid mass into which the food is converted by gastric digestion.

chymification (kim"if-ik-a'shun) [L. chy'mus chyme + fa'cere to make]. The formation of chyme, gastric digestion.

chymosin (ki-mo'sin). Same as rennin.

chymosinogen (ki-mo-sin'o-jen). See renninogen.

C. I. An abbreviation for color index.

Ciaccio's glands (tshah'tshōz) [Giuseppe Vincenzo Ciaccio, Italian anatomist, 1824–1901]. The accessory lacrimal glands.

Ciaccio's method (tshah'tshōz) [Carmelo Ciaccio, Italian pathologist]. See under method.

Ciaglinski's tract (tshahl-yin'skiz). See under tract.

Cib. Abbreviation for I. ci'bus, food.

cibalgin (sib-al'jin). A proprietary analgesic and hypnotic preparation, dimethylaminophenyldimethyl-pyrazolon-dial.

cibisotome (sib-is'o-tōm) [Gr. κίβισις pouch + τομή cut]. An instrument for opening the capsule of the lens in removing cataract.

cibophobia (si-bo-fo'be-ah) [L. ci'bum food + Gr. φόβος fear]. Abnormal loathing of food.

Cibotium (sib-o'te-um). A genus of tree-ferns of East India. One species furnishes soft hairs which are used as a styptic.

cicatricial (sik-at-rish'al). Pertaining to or of the nature of a cicatrix.

cicatricin (sik-at'ris-in). A preparation of thiosinamin and phenazone for the treatment of cicatricial tissue.

cicatricotomy (sik"at-tri-kot'o-me) [cicatrix + Gr. τομή cut] Incision of a cicatrix.

"scar"]. A scar; the mark left by a sore or wound. filtering c., a cicatrix following glaucoma operation through which the aqueous humor escapes. hypertrophic c., a hard, rigid tumor formed by hypertrophy of the tissue of a cicatrix. manometric c., a cicatrix of the drum membrane of the ear that moves in and out with variations of the intratympanic pressure. vicious c., a cicatrix which causes deformity or impairs the function of a part.

cicatrizant (sik-at'riz-ant). 1. Causing or promoting cicatrization 2. An agent which promotes cicatrization

cicatrization (sik"at-riz-a'shun). A healing process which leaves a scar or cicatrix.

cicatrize (sik'at-riz). To heal or skin over so as to leave a scar.

cicraticine (sik-rat'is-īn). An aqueous solution of thiosinamin and antipyrin, used hypodermically.

Cicuta (si-ku'tah) [L]. A genus of poisonous umbelliferous plants C. macula'ta and C. bulbif'era, plants of North America, also C viro'sa, water-hemlock, of the Old World, have the properties of conium, but are not used in official medicine

cicutin (sik'u-tin). A liquid alkaloid, C₈H₁₅O, from Cicu'ta viro'sa: medicinally active.

cicutism (sik'u-tizm). Poisoning with Cicu'ta

cicutoxin (sik-u-toks'in). A poisonous active principle, C₁₂H₂₂()₅, from Cicu'ta viro'sa.

cignolin (sig'no-lin) Dioxyanthranol, a yellow crystalline powder, used in skin diseases like chrys-

arobin **ciguatera** (sig-wah-ta'rah). A disease of Central and South America, thought to be caused by eating poisoned fish.

cilia (sil'e-ah) [L. pl. of cilium]. 1. The eyelashes.
2. Minute lash-like processes.

ciliariscope (sil-e-ar'is-kōp) [ciliary + Gr. σκοπείν to view]. An instrument for examining the ciliary region of the eye.

ciliarotomy (sil-e-ar-ot'o-me). Surgical division of the ciliary zone for glaucoma.

ciliary (sil'e-a-re) [L. cilia'ris, from cil'ium]. Pertaining to or resembling the eyelashes.

Ciliata (sil-e-a'tah). A class of infusoria characterized by the presence of cilia. Three species are parasitic in man: Balantidium coli, B. minutum, and Nyctotherus faba.

ciliated (sil'e-a-ted). Provided with cilia or with a fringe of hairs.

ciliectomy (sil-e-ek'to-me) [cilia + Gr. ἐκτομή excision]. 1. Excision of a portion of the ciliary body. 2. Excision of a portion of the ciliary margin of the eyelid with the roots of the lashes.

cilioretinal (sil"e-o-ret'in-al). Pertaining to the retina and the ciliary body.

cilioscleral (sil"e-o-skle'ral). Pertaining to the ciliary apparatus and to the sclera.

ciliospinal (sil"e-o-spi'nal). Pertaining to the ciliary body and the spinal cord.

ciliotomy (sil-e-ot'o-me). Surgical division of the ciliary nerves.

cilium (sil'e-um) [L.; pl. cilia]. 1. An eyelid or its outer edge. 2. An eyelash. 3. A minute vibratile, hair-like process attached to a free cell-surface.

cillo, cillosis (sil'o, sil-o'sis) [L.]. A spasmodic quivering of the eyelid.

cimatoxyl (sim-at-oks'il). A proprietary atoxyl preparation, used hypodermically in syphilis and tuberculosis.

cimbia (sim'be-ah) [L.]. A white band running across the ventral surface of the crus cerebri.

across the ventral surface of the crus cerebri.

Cimex (si'meks), pl cimi'ces [L. "bug"]. A genus of insects. C. boue'ti, the tropical bedbug of Africa and South America. C. hemip'terus. Same as C rotundatus. C. lectula'rius, the bedbug: used homeopathically. C. pilosel'lus, an American species found in bats. C. pipistrel'la, a species which transmits a trypanosome disease of bats. C. rotunda'tus, a tropical species of bedbug which acts as the host of Leishmania donovani, the parasite of kala azar, and by its bite transmits that disease to man.

Cimicifuga (sim-is-if'u-gah) [L ci'mer bug + fu-ga're to put to flight]. A genus of ranuncu-laceous plants C. racemo'sa, black snakeroot, or cohosh, a plant whose rootlets are tonic and antispasmodic. used in rheumatism, chorea, amenorrhea, and uterine congestion. Dose of tincture, 15-60 min. (1-4 cc), of fluidextract, 3-30 min. (0.19-2 c.c.); of extract, 4 gr (0 25 gm.).

cimicifugin (sim-is-if'u-jin). A resinous concentration from cimicifuga antispasmodic, narcotic, diaphoretic Dose, 1-3 gr. (0.06-0 19 gm.).

cina (si'nah) [I.]. The plant, Artemis'ua santon'ica, and its seed; European wormseed: anthelmintic; also its homeopathic preparations. Dose of fluidextract, 15-60 min (1-4 c.c.).

cinæsthesia (sin-es-the'ze-ah). Kinesthesia.

cinanæsthesia (sin-an-es-the'ze-ah). See kin-anesthesia.

cinchain (sin-ka'in). An anesthetic; it is isopropylhydrocuprein, (CH₃)₂CHO C₆H₅N CHOH C₇H₁₁N,-C₂H₅. It is used in urologic practice in o.1 per cent. solution.

cinchamidin (sin-kam'id-in). Hydrocinchonidin.

Cinchona (sin-ko'nah) [named from a countess of Chinchon]. 1. A genus of rubiaceous trees, all natives of South America. 2. The bark of any of the numerous officially recognized species of the genus, such as C. ledgeria'na, C. calisa'ya, and hybrids of these with other species. Of the many alkaloids of these barks, quinin, quinidin, cinchonin, and cinchonidin are the most important. The bark has the same tonic, antiseptic, and febrifugal properties as the alkaloid quinin (q. v.). Dose of tincture and compound tincture, \(\frac{1}{2}-1\) dr. (2-4 c.c.); of fluidextract, 10-60 min. (0.666-4 c.c.); of extract, 1-5 gr. (0.066-0.333 gm.), of decoction, 2 fl.oz. (60 c c); of infusion, 2 fl oz. (60 c.c.). red c., the bark of C. succiru'bra or of its hybrids yellow c., cinchona.

cinchonamin (sin-kon-am'in). One of the cinchona alkaloids, C₁₀H₂₄N₂O, from cuprea bark, Remi'jia purdica'na; it is isomeric with cinchotin and is a powerful toxic agent and an antipyretic. Dose, 4-0 gr. (0.26-0.6 gm.).

cinchonate (sin'ko-nāt). A salt of cinchonic acid; a quinate.

cinchonicin (sin-kon'is-in). An amorphous cinchona alkaloid, C₁₉H₂₂N₂O, isomeric with cinchonin.

cinchonidin (sin-kon'id-in). A cinchona alkaloid, $C_{19}H_{22}N_2O$, isomeric with cinchonin. Its hydrobromate, sulphate, and salicylate are used like quinin. Dose of the latter for chronic rheumatism, 15-20 gr. (1-1 29 gm.) in a day. C. salicylate, a compound, $C_{19}H_{22}N_2OC_7H_6O_3$, used as an antiperiodic and in chronic rheumatism. Dose, 15-20 gr. (1-1.3 gm.). C. sulphate, an official salt of cinchonidin, ($C_{19}H_{22}N_2O)_2H_2SO_4 + 3H_2O$. Dose, 3-30 gr. (0.19-1.05 gm.).

cinchonifin (sin-kon'if-in). Cinchotin.

cinchonin (sin'ko-nin) [L. cinchoni'na]. A white, crystalline alkaloid, C₁₉H₂₂N₂O, with a bitter taste, from cinchona bark. It is used like quinin and in the same dose. c. iodosulphate, a reddish-brown powder used as a substitute for iodoform. called also antiseptol. c. sulphate, a white, crystalline salt, (C₁₉H₂₂N₂O)₂.H₂-SO₄ + 2H₂O, with properties like quinin sulphate. Dose, 5-15 gr. (o.3-1 gm.).

cinchonism (sin'ko-nism). The morbid or injurious effect of the injudicious use of cinchona bark or its alkaloids. It is attended by headache, tinnitus aurium, deafness, and symptoms of cerebral congestion.

cinchonize (sin'ko-niz). To bring under the influence of cinchona or of any of its alkaloids.

cinchonology (sin-ko-nol'o-je) [cinchona + Gr. λόγος discourse]. The sum of what is known regarding the botany and culture of cinchona and of its alkaloids and their effects.

cinchophen (sin'ko-fen). Phenylcinchoninic acid or phenylchinolin carboxylic acid, C₆H₅.C₉H₅N - COOH: used as a diuretic in gout and acute articular rheumatism. Dose, 7⅓-15 gr. (05-1 gm.). Called also atophan.

cinchotin (sin'ko-tin). An alkaloid, C₁₉H₂₄ON₂, from cinchona.

cinclisis (sing'klis-is) [Gr. κίγκλισις a wagging]. Rapid winking, also rapid breathing.

cincture sensation (sink'tchur). See zonesthesia.
cinemascopia (sin'e-mas-ko'pe-ah). The use of moving picture records for the study of movements of the body.

cinemascopy (sin-e-mas'ko-pe). Cinemascopia. cinematics (sin-e-mat'iks). See kinematics.

cinematization (sin-e-mat-iz-a'shun) Kineplasty. cinematography (sin"e-mat-og'ra-fe). The taking of moving pictures: used for the registration of the mode of performance of surgical operations. cineol (sin'e-ol). See eucalyptol.

cineplastics (sin-e-plas'tiks). Kineplasty.

cineplasty (sin'e-plas-te). See kineplasty.

Cinera'ria mariti'ma. A plant growing in tropical America: its juice, instilled into the eye, is said to cure cataract.

cinerea (sin-e're-ah) [L. cine'reus ashen-hued]. The gray matter of the nervous system.

cinereal (sin-e're-al). Pertaining to the gray matter of the brain or nervous system.

cineritious (sin-er-ish'us) [L. cineri'tius]. Ashengray; of the color of ashes

cinesalgia (sin-es-al'je-ah) [Gr. κίνησις motion + άλγος pain]. Pain in a muscle when it is brought into action.

cinesi-. See under kinesi-.

cinetographic (sin-et-o-graf'ik). Kinetographic. cingulum (sin'gu-lum), pl. cin'gula [L. "girdle"]. [B N A]. 1. A bundle of association fibers which partly encircles the corpus callosum not far from the median plane. It begins ventral to the rostrum of the corpus callosum, curves around the genu and over the dorsal surface of that commissure to the splemum, and then bends ventrally to terminate near the temporal pole. It is closely related to the callosal gyrus and the hippocampal gyrus and is composed for the most part of short fibers which connect the various parts of these convolutions.

2. The basal ridge of a tooth.

Ciniselli's method (tshe-ne-sel'lēz) [Luigi Ciniselli, Italian surgeon, 1803-1878]. See under method.

cinnabar (sin'ab-ar) [L. cinnab'aris; Gr. κιννάβαρι]. Red mercuric sulphid, HgS; vermilion.

cinnabarsana (sin-ab-ar-san'ah). A cancer remedy, said to contain 11.5 per cent, arsenic tri-

oxid, 24.5 per cent. cinnabar, 24 per cent. powdered charcoal, and 40 per cent. water.

cinnaldehydum (sin-al-de-hi'dum). The old U. S. P. name for cinnamic aldehyd. See under aldehyd. cinnamate (sin'am-āt). A salt of cinnamic acid. cinnamein (sin-am-e'in). Benzyl cinnamate, an olly liquid, C₀H₇O₂.C₇H₇, from the balsams of tolu and Peru.

cinnamene (sin'am-ēn). Styrol.

cinnamic acid (sin-am'ik). See acid.

cinnamol (sin'am-ol). Highly rectified oil of cinnamon.

Cinnamomum (sin-am-o'mum). A genus of lauraceous trees. See *cinnamon* and *melabathrum*.

cinnamon (sin'am-on) [L.; Gr. κίναμον]. The dried inner bark of various species of Cinnamo'mum (C. lourev'rii, U. S. P.). C. saigon'icum is Saigon cinnamon, and C. zeylan'icum, Ceylon cinnamon of the old Pharmacopeia. It is an agreeable aromatic and cordial, carminative, and astringent. Dose in powder, 10-20 gr. (0.65-1.3 gm.); of cinnamonwater, 1-2 floz. (32-64 c.c.), of tincture, ½-2 fl.dr. (2-8 c.c.); of oil, 1-5 min. (0.065-0.33 c.). oil of c. See under oil. white c., wild c. See Canella.

cinnamyl-eugenol (sin"am-il-u'je-nol). An antiseptic eugenol derivative, $C_5H_3(C_3H_5)(OCH_3)-O-CO.C_2H_2$, C_0H_5 , in colorless needles; used like eugenol in lung diseases. Dose, 4½-9 gr. (0.3-0 6 gm.).

cinology (sin-ol'o-je). Kinesology.

cinometer (sin-om'et-er). Kinesimeter.

cinoplasm (sin'o-plazm). Same as kinoplasm.

cionectomy (si-o-nek'to-me) [Gr κίων uvula + έκτομή excision]. Excision of the uvula or of a part of it.

cionitis (si-o-ni'tis) [Gr. κίων uvula + ιτις inflammation]. Inflammation of the uvula.

cionoptosis (si"on-op-to'sis) [Gr. κίων uvula + πτῶσις a falling]. Undue elongation of the uvula.

cionotome (si-on'o-tom) [Gr. κίων uvula + τέμνειν to cut]. A cutting instrument for amputating the uvula.

cionotomy (si-o-not'o-me) [Gr. κίων uvula + τέμνειν to cut]. The surgical removal of a part of the uvula.

ciose (si'ōs). A proprietary dry protein product of beef used to add protein to the diet.

circel'lus veno'sus hypoglos'si [L]. A venous plexus which surrounds the hypoglossal nerve in the anterior condyloid foramen.

circinate (ser'sin-āt). Having circular or ringlike lesions.

circle (ser'kl) [L. cir'culus]. A ring or other part of the body which is round or circular. defensive c., the coexistence of two diseases which exert an antagonistic influence on each other. diffu-sion c., a confused image formed on the retina when the latter is not at the focus of the eye. c. of dispersion, c. of dissipation, the circular space on the retina within which the image of a luminous point is formed. c. of Haller. 1. A circle of small arteries in the sclera, surrounding the entrance of the optic nerve. 2. A circle of veins beneath the areola of the nipple. 3. See circulus callosus hallers. Huguier's c., the circle formed about the junction of the cervix with the body of the uterus by the uterine arteries. **Latham's c.**, a circle 2 inches in diameter covering the area of pericardial dulness and situated midway between the left nipple and the lower end of the sternum. Pagen-Pagenstecher's c., the circle formed on the abdominal wall by joining the points marking the positions occupied by a movable abdominal tumor which has been moved over its entire range. The center of such a circle indicates the point of attachment of the tumor. Robinson's c.. an arterial circle

formed by anastomoses between the abdominal aorta, common iliac, hypogastric, uterine, and ovarian arteries. **sensory c.**, an area on the body within which it is impossible to distinguish two impressions. **vascular c.**, the ring formed by the two inferior and two superior coronary arteries of the lips. **vicious c.**, a sequence of events in which the cause and effect react on each other, producing a greater effect, as the coexistence of two diseases which exert an increasing effect on each other. **c. of Willis**, the circular system formed by the internal carotid, the anterior and posterior cerebral arteries, and the posterior communicating arteries.

circuit (ser'kit) [L. circu'itus]. The round or course traversed by an electric current. The circuit is said to be closed when it is continuous, so that the current may pass through it; it is open, broken, or interrupted when it is not continuous and the current cannot pass through it.

Koch's c., a series of conditions which must be fulfilled by a bacterium before it is proved pathogenic. The organism must always be found with the disease; it must be capable of forming pure cultures outside the body; these cultures must be capable of reproducing the disease, and the microbes must again be found with the artificially produced morbid process. organic c. See reflex c. reflex c., a chain of neurons which function in a reflex act. short c., a current developed between two branches of another circuit at a point short of the terminals, so that the current does not reach the latter.

circular (ser'ku-lar) [L. *circula'ris*]. Shaped like a circle; occurring in a circle.

circulation (ser-ku-la'shun) [L. circula'tio]. Movement in a regular or circuitous course, as, the circulation of the blood. allantoic c., circulation in the fetus through the umbilical vessels. collateral c., that which is carried on through secondary channels after stoppage of the principal course. compensatory c. Same as collateral c. coronary c., the circulation within the muscular tissues of the heart cross c., the circulation in a portion of the body of one animal of blood supplied from another animal. derivative c., the passage of blood from arteries to veins without going through capillaries. fetal c., that which is carried on in the fetus, umbilical cord, and placenta. first c., primitive c., that which conveys nutriment and oxygen to the emgreater c. Same as systemic c. lesser **c.** See pulmonary c lymph c., the passage of the lymph through lymph-vessels and glands. placental c. Same as fetal c. portal c., the passage of the venous blood from the gastro-intestinal tract and spleen through the liver and out by the hepatic vein. pulmonary c., the circulation of the blood through the lungs for the purpose of oxygenation: called also lesser c. sinusoidal c., the flow of blood through passages in the tissues which are lined only with endothelium and have not the structure of arteries systemic c., the general circulation as distinguished from the pulmonary. vitelline c., the circulation through the blood-vessels ramifying upon the yolk.

circulatory (ser'ku-la-to-re). Pertaining to the circulation.

circulus (ser'ku-lus), pl. cir'culi [L. "a ring" or "circle"]. A circle or circuit, mostly arterial, sometimes venous, etc. C. arterio'sus, the circle of Willis. C. arterio'sus hal'leri [B N A], a circle of arteries in the sclera and around the entrance of the optic nerve called also circulus zinnii. C. arterio'sus ir'idis, two arterial rings in the iris. The c. arterio'sus ir'idis ma'jor surrounds the circumference of the iris; the c. arterio'sus ir'idis mi'nor surrounds the pupil. C. arterio'sus willis'ii. See circle of Willis. C. artic'uli vasculo'sus, the vascular anastomosis which runs about a joint. C. callo'sus

hal'leri, the ring of fibrocartilage to which the mitral and tricuspid valves of the heart are attached. c. tonsilla'ris, a plexus of branches of the glossopharyngeal nerve near the tonsil. c. umbilica'lis, an arterial plexus in the subperitoneal tissue surrounding the navel. c. vasculo'sus ner'vi op'tici [halle'ri]. Same as c. arleriosus halleri. c. veno'sus halle'ri, a circle of veins beneath the areola of the nipple. c. veno'sus ho'vii, a venous circuit in the ciliary region of the eye. c. veno'sus rid'leyi, a circle of veins around the sella turcica. c. willis'ii, the circle of Willis. c. zinn'ii. See c. arleriosus halleri.

circumanal (ser-kum-a'nal). Surrounding the anus.

circumarticular (ser"kum-ar-tik'u-lar). Around a joint.

circumaxillary (ser-kum-aks'il-a-re). Around the axilla.

circumbulbar (ser-kum-bul'bar). Surrounding the eyeball.

circumcallosal (ser-kum-kal-o'sal). Surrounding the corpus callosum.

circumcision (ser-kum-sizh'un) [L. circumcis'io a cutting around]. The removal of all or a part of the prepuce, or foreskin.

circumclusion (ser-kum-klu'shun) [L. circumclu'-dere to shut in]. The compression of an artery by a wire and pin.

circumcorneal (ser-kum-kor'ne-al). Around the

circumcrescent (ser-kum-kres'ent) [L. cir'cum around + cres'cere to grow]. Growing around and over.

circumduction (ser-kum-duk'shun) [L. circumdu'-cere to draw around]. The active or passive circular movement of a limb or of the eye.

circumferen'tia articula'ris [B N A]. An articular circumference.

circumferential (ser"kum-fer-en'shal). Forming a circumference.

circumflex (ser'kum-fleks) [L. circumflex'us bent about]. Curved like a bow.

circumgemmal (ser-kum-jem'al) [L. cir'cum around + gem'ma bud]. Surrounding a bud; a term applied to that form of nerve-ending in which an end-bud is surrounded by fibrils.

circuminsular (ser-kum-in'su-lar) [L. cir'cum around + in'sula island]. Surrounding, situated, or occurring about the island of Reil.

circumintestinal (ser'/kum-in-tes'tin-al). Surrounding the intestine.

circumlental (ser-kum-len'tal) [L. cir'cum around + lens lens]. Situated or occurring around the lens.

circumnuclear (ser-kum-nu'kle-ar) [L. cir'cum around + nu'cleus nucleus]. Surrounding or occurring near the nucleus.

circumocular (ser-kum-ok'u-lar) [L. cir'cum around + oc'ulus eye]. Surrounding or occurring around the eye.

circumorbital (ser-kum-or'bit-al) [L. cir'cum around + or'bita orbit]. Situated around or occurring near an orbit.

circumpolarization (ser"kum-po-lar-iz-a'shun) [L. cir'cum around + polarization]. The rotation of a ray of polarized light to the right or left.

circumrenal (ser-kum-re'nal) [L. cir'cum around + ren kidney]. Situated or occurring near a kidney.

circumscribed (ser'kum-skribd) [L. cir'cum around + scri'bere to write]. Bounded or limited; confined to a limited space.

circumscriptus (ser-kum-skrip'tus). Circumscribed

circumstantiality (ser-kum-stan-she-al'it-e). A mental symptom marked by the introduction into

the conversation of unimportant details unrelated to the main subject of conversation.

circumvallate (ser-kum-val'āt) [L. cir'cum around + valla're to wall]. Surrounded by a trench or by a ridge. See papilla.

circumvascular (ser-kum-vas'ku-lar) [L. cir'cum around + vas'culum vessel]. Situated or occurring about the vessels.

circumvolute (ser''kum-vo'lūt) [L. cir'cum around + volu'tus rolled]. Twisted about.

circus movement. See under movement.

cirrholysin (sir-ol'is-in). A compound of thiosinamin and bismuth triodid, used for ankylosed joints, visceral adhesions, etc. Dose, 10 gr. (0.0065 gm.).

cirrhonosus (sir-on'o-sus) [Gr. κιρρόs tawny + νόσος disease]. A fetal disease characterized by a golden-yellow appearance of the pleura and peritoneum.

cirrhosis (sir-o'sis) [Gr. κιρρός orange-yellow].

1. A disease of the liver, marked by thickening of the elements of the stroma, which afterward contracts, producing atrophy and degeneration, and giving the organ a granular, yellow appearance, due to the coloring of the acini by bile-2. Chronic interstitial inflammation of any organ. alcoholic c., that which is due to the habitual or excessive use of alcoholic drinks. atrophic c., a form characterized by shrinkage in size and shriveling. It is frequently seen in hard drinkers. bacterial c., a variety said to be of microbic origin. biliary c., that which is caused by chronic retention of bile from obstruction of the bile-ducts (obstructive biliary c) or chronic cholangitis (hypertrophic biliary c.). It is marked by jaundice, pain in the abdomen, and enlargement of the liver and spleen biliary c. of **children**, a disease of children in India consisting of a fibrous connective-tissue growth within the lobules of the liver; called also infantile liver. **Budd's c.**, chronic hepatic enlargement caused by intestinal intoxication. calculus c., cirrhosis due to the presence of gall-stones capsular c., cirrhosis due to lesions of Glisson's capsules, especially chronic perihepatitis; called also Glisson's c. and lymphatic c. cardiac c., chronic myocarditis with cirrhosis of the liver. cardiotuberculous c. See Hutinel's disease, under disease. Charcot's c., hypertrophic cirrhosis of the liver. fatty c., a form in which the liver-cells become infiltrated with fat. Glisson's c. See capsular c. Hanot's c., hypertrophic cirrhosis. hypertrophic c., a variety in which the liver becomes enlarged by overgrowth of the connective tissue. c. of kidney, granular kidney. Laën-nec's c. Same as alrophic c c. of liver. See biliary c. c. of lung, interstitial pneumonia. See under pneumonia. malarial c., a form due to malaria, with lesions similar to those of alcoholic c. mam'mæ, chronic interstitial mascirrhosis. titis. multilobular c., atrophic cirrhosis. periportal c. Same as atrophic c. pigmentary c., pigmentation of the liver seen in bronze diabetes. portal c., a chronic degenerative and inflammatory disease of the liver marked by recurring degeneration and regeneration of the parenchyma of the liver and by fibrosis in and about the interlobar and portal spaces, leading eventually to obstruction of the portal circulation. stasis c., cirrhosis due to obstruction of the outflow of the hepatic vein. The condition produced is called cyanotic induration of the liver and cardiac liver. c. of stomach, sclerotic gastritis. syphilitic c., cirrhosis due to syphilis. Todd's c., hypertrophic cirrhosis of the liver. toxic c., cirrhosis of the liver from chronic poisoning. unilobular c., hypertrophic cirrhosis. **vascular c.**, cirrhosis following upon obstruction of the hepatic vein, portal vein, or general hepatic circulation.

cirrhotic (sir-ot'ik). Of the nature of or affected with cirrhosis.

cirrus (sir'us). The sexual orifice of a segment of the tapeworm Tania solium.

cirsectomy (ser-sek'to-me) [Gr. κιρσός varix + έκτομή excision]. Excision of a portion of a varicose vein.

cirsocele (ser'so-sēl) [Gr. κιρσός varix + κήλη tumor]. The same as varicocele.

cirsoid (ser'soid) [Gr. κιρσός varix]. Resembling a varix.

cirsomphalos (ser-som'fal-os) [Gr. κιρσός varix + ομφαλός navel] A varicose state of the navel.

cirsophthalmia (ser-sof-thal'me-ah) [Gr. κιρσός varix + ὀφθαλμός eye]. A varicose state of the conjunctival vessels.

cirsotome (ser'so-tōm) [Gr. κιρσός varix + τέμνειν to cut]. A cutting instrument for use in operating on varicosities.

cirsotomy (ser-sot'o-me) [Gr. $\kappa\iota\rho\sigma\dot{o}s$ varix $+\tau\dot{\epsilon}\mu$ - $\nu\epsilon\iota\nu$ to cut]. Extirpation of a varix by the knife.

cismatan (sis'ma-tan). The seeds of Cas'sia ab'-sus: used in Egypt as a cure for ophthalmia.

cissa, citta (sis'ah, sit'ah) [Gr. κίσσα, κίττα].
The longing of pregnant women.

Cissampelos (sis-am'pel-os) [Gr. κισσός ivy + ἄμπελός vine]. A genus of menispermaceous climbing plants. C. capen'sis, of Africa, is emetic and purgative. C. pare'ira, of tropical America, is a spurious variety of pareira.

cistern (sis'tern) [L. cister'na].
1. A lymph-space.
2. Any reservoir or open space.
c. of Pecquet, the receptaculum chyli.

cisterna (sis-ter'nah) [L]. Latin for cistern. c. basa'lis, a part of the subarachnoid space situated on the basal surface of the brain and continuous with the cisterna pontis and the cisterna magna c. cerebromedulla'ris [B N A], one of the subarachnoid spaces. c. chiasmatica, c. chiasmatis [BNA], a subarachnoid space between the optic chiasm and the rostrum of the corpus callosum. c. chy'li [B N A]. Same as receptaculum chyli. c. fos'sæ latera'lis cer'ebri [B N A], c. fos'sæ syl'vii, the space between the arachnoid and the fossa of Sylvius. c. intercrura'lis profun'da, the space between the cerebral peduncle and the arachnoid. c. inter-crura'lis superficia'lis, the space between the arachnoid, optic commissure, and pons. c. interpeduncula/ris [B N A], a dilatation of the subarachnoid space in front of the pons varolii. c. mag'na, a space between the arachnoid and the transverse fissure of the cerebellum. c. perilymphat'ica, a space near the foot-plate of the stapes. c. pon'tis, a portion of the subarachnoud space close to the pons varolii. c. subarachnoida'les, the various subarachnoid spaces containing the cerebrospinal fluid. c. ve'næ mag'næ cer'ebri [B N A], cistern of the great vein of the cerebrum, an expansion of the subarachnoid space below and behind the trunk of the corpus callosum and above the quadrigeminal bodies.

Cistus (sis'tus) [L; Gr. κίστος, κίσθος] A genus of cistaceous plants. C. cret'icus and C. ladanif'erus afford ladanum.

citarin (sit'ar-in). Sodium anhydromethylene citrate, CH₂(CO)₂ O (CH₂.COONa)₂, a white, crystalline powder, soluble in water. It is said to set free formaldehyd into the blood, and is used in gout. Dose, 15–30 gr. (1–2 gm.).

Citel'lus beech'eyi. The ground squirrel of California. It is one of the natural reservoirs of Bacterium tularense and has recently become extensively infected with plague. C. mol'lis, the ground squirrel of Utah; also a natural reservoir for Bacterium tularense.

citral (sit'ral) [L. cit'rus lemon tree]. Geranial; an odorous aldehyd, C₉H₁₈COH, from oil of lemon and other essential oils.

citramin (sit'ram-in). See helmitol.

citrate (sit'rat). Any salt of citric acid.

citrated (sit'ra-ted). Containing a citrate, especially potassium citrate.

citresia (sit-re'se-ah). A white, crystalline powder, magnesium acid citrate, MgHC₆H₅O_{7.5}H₂O: laxative and purgative. Dose, 6 dr. to 1½ oz. (25–50 gm.).

citric acid (sit'rik). See acid.

citrine ointment (sit'ren). See ointment.

citrocoll (sit'ro-kol). Phenocoll citrate. used as an antineuralgic.

citrol (sit'rol). Citrate of itrol: a silver preparation used in gonorrhea

Citromyces (sit-ro-mi'sēz) [citric acid + Gr. μbκηs fungus]. A genus of fungi, species of which change sugar into citric acid.

citron (sit'ron) [L. cit'ro] The orange-like tree, Cit'rus med'ica, and its fruit.

citronella (sit-ron-el'ah). A fragrant grass. c. oil, the fragrant volatile oil of Andropo'gon nar'dus and other southern Asiatic grasses: antirheumatic.

citronellal (sit-ro-nel'al). The aldehyd of citro-nellol.

citronellol (sit-ro-nel'ol). An olefinic terpene alcohol, (CH₃)₂C·CH(CH₂)₃ CH(CH₃) CH₂ CHO, and found in oil of rose and oil of geranium

citrophen (sit'ro-fen). Paraphenetidin citrate, C₃H₄(OH)(CO NH.C₆H₄ OC₂H_b)3, a white, powdery or crystalline, sourish compound of paraphenetidin and citric acid antipyretic and antineuralgic. Dose, 3-15 gr. (ο 2-1 gm).

citrophosphate (sit-ro-fos'fāt). A compound of a citrate and a phosphate.

citrospirin (sit-ro-spi'rin). A proprietary antiseptic and antineuralgic.

citrullin (sit-rul'in). A yellow purgative resin from colocynth

Citrullus (sit-rul'us). See colocynth.

citrurea (sit-ru're-ah) An antilithic preparation containing citric acid, urea, and lithium bromid.

Citrus (sit'rus) [L]. A genus of rutaceous trees: C. ac'ıda, the lime; C. auran'tium, the orange; C. berga'mia, the bergamot. C. decuma'na. See naringin C. limo'num, the lemon, C. med'ica, the citron.

civet (siv'et) [L. civet'ta]. A substance with the general properties of musk, collected from Viver'ra civet'ta and other viverrine mammals used as a perfume and locally as a medicine.

Civiale's operation (se-ve-alz') [Jean Civiale, French physician, 1792-1867]. See under operation

Civinini's process or **spine** (tshe-ve-ne'nēz) [Filippo *Civinini*, Italian anatomist of the nineteenth century]. See under *spine*.

C1. The symbol for chlorin; also abbreviation for closure of an electric circuit.

Clado's band, ligament, point (klah'dōz). See band, ligament, point.

Cladonia (kla-do'ne-ah) [Gr. κλάδος branch]. A genus of lichens. C. rangiferi'na, reindeer moss, was formerly used as a stomachic and pectoral. alcohol is distilled from it.

Cladorchis watsoni (kla-dor'kis wat-so'ni). An amphistome parasite found in the small intestine of a negro in German West Africa.

cladosporiosis (klad"o-spo-re-o'sis). Infection with Cladosporium

Cladosporium (klad-o-spo're-um). A genus of fungi. C. cancrog'enes. Same as canceromyces. C. herba'rum produces "black spot" on meat in cold storage. It will grow at a temperature of 18° F. (-8° C.). C. madagascarien'se causes a condition marked by gummatous nodules. C. manso'ni causes tinea nigra.

cladothricosis (klad-o-thrik-o'sis). Infection with cladothrix.

Cladothrix (klad'o-thriks) [Gr. κλάδος branch + θρlξ hair]. A genus of Chlamydobacteriales. It is thread-like in form with false branching. C. asteroi'des, a species found in an old abscess of the brain: believed to cause a disease called pseudo-tuberculosis cladothricia. See Streptothrix farcinica. C. dichot'oma, a species causing skin lesions in tanners, butchers, cooks, etc. C. foers'teri, occurs in lacrimal concretions. C. ochra'cea, a species occurring in water that contains ferrous carbonate, which it oxidizes to ferric hydrate

clair-sentience (klār-sen'te-ens). The perception of that which is not perceptible to the natural senses

clam-bouillon (klam-boo-yaw'). A concentration of the juice of the quahaug, or round clam.

clamp (klamp). A surgical device for effecting compression. Gant's c., a right-angled clamp used in operating for piles. Gussenbauer's c., a bar of metal for joining the fragments in ununited fracture. Michel's c's, a metallic clip used for fastening together the edges of a wound. pedicle c. See clamp forceps, under forceps.

clang (klang). The quality of a sound or of the voice. c.-deafness, inability to perceive the more delicate qualities of tone.

clap (klap). Gonorrhea. c.-threads, slimy and stringy matter in gonorrheal urine.

clapotage, clapotement (klap-o-tahzh', klah-pawt-maw') [Fr.]. A splashing sound heard on succussion.

clarificant (klar-if'ik-ant). An agent which clears liquids of turbidity.

clarification (klar-if-ik-a'shun) [L da'rus clear + fa'cere to make]. The clearing of a liquid from turbidity

clarify (klar'if-i) [L. clarifica're to render clear].
To clear of turbidity or of suspended matter.

Clark's sign [Alonzo Clark, physician in New York, 1807-1887]. See sign.

Clarke's column, bundle, nucleus (klarks)
[Joseph Lockhart Clarke, English physician, 1817–
1880] See column, bundle, nucleus.

Clarke's tongue, ulcer (klarks) [Sir Charles Mansfield Clarke, English physician, 1782–1857]. See under tongue and ulcer.

clasmatoblast (klas-mat'o-blast) [Gr. κλάσμα piece + βλατόs germ] A mast-cell.

clasmatocyte (klaz-mat'o-sīt) [Gr. κλάσμα piece broken off + κύτος cell] Ranvier's name (1900) for certain branched cells in connective tissue which detached portions of their processes as a means of discharging their secretions. As now used the term is equivalent to the cell described under endotheliocyte. See endotheliocyte.

clasmatocytosis (klaz-mat"o-si-to'sis). The division of clasmatocytes.

clasmatosis (klaz-mat-o'sis) [Gr. κλάσμα a piece broken off]. The breaking up into pieces, as in cell changes.

clasp-knife rigidity. See rigidity.

class (klas). I. A group of plants or animals standing above an order. 2. In statistics, a group of variables all of which show a particular value or a value falling between certain limits. The frequency of class is the number of variables which it contains.

Class's coccus (klas'ez) [W. J. Class, Chicago physician, 1874-1906]. See coccus.

clastic (klas'tik) [Gr κλαστός broken]. 1. Causing or undergoing a division into parts. 2. Separable into parts.

clastothrix (klas'to-thriks) [Gr. κλαστός broken + θρίξ hair]. Trichorrhexis nodosa.

Clathrocystis (klath-ro-sis'tis) [Gr. κληθρα lattice + κβστις cyst]. A genus of schizomycetic microorganisms: some are parasitic on fish.

276

- claudication (klaw-dik-a'shun) [L. claudica'tio]. Limping or lameness intermittent c., a complex of symptoms characterized by absence of pain or discomfort in a limb when at rest, the commencement of pain tension, and weakness after walking is begun, intensification of the condition until walking becomes impossible, and the disappearance of the symptoms after a period of The condition is seen in vascular diseases of rest. the limbs. Called also dysbasia angiosclerotica intermittens and angina cruris.
- Claudius's cell, fossa (klaw'de-us) [Friedrich Matthias Claudius, Austrian anatomist, 1822-1860]. See cell and fossa.
- claustral (klaws'tral). Pertaining to or of the nature of a claustrum.
- claustrophobia (klaws-tro-fo'be-ah) [L. clau'dere to shut + Gr. $\varphi \delta \beta$ os fear]. Morbid dread of being shut up in a confined space.
- claustrum (klaws'trum) [L. "a barrier"]. The thin layer of gray matter outside the external capsule of the brain, dividing it from the white matter of the insula. It is mainly composed of spindle-cells.
- clausura (klaw-su'rah) [L. "closure"]. Atresia.
- clava (kla'vah) [L. "stick"]. An enlargement of the funiculus gracilis in the oblongata, forming the lower lateral border of the posterior part of the fourth ventricle.
- claval (kla'val). Pertaining to the clava. clavate (kla'vat) [L. clava'tus]. Pertaining to the clava; club-shaped.
- clavelization (klav"el-iz-a'shun) [Fr. clavelée sheeppox]. Ovination, or inoculation with the virus of sheep-pox.
- Claviceps (klav'is-eps) [L. cla'va club + ca'put head]. A genus of parasitic fungi which infest the seeds of various plants. C. purpu'rea is the essential element of the common ergot.
- clavicepsin (klav-is-ep'sin). A glucosid, C₁₈H₃₄O₁₆.-2H2O, from ergot.
- clavicle (klav'ik-l) [L. clavic'ula, dim. of cla'vis key]. The collar-bone; a bone curved like the letter f, which articulates with the sternum and the scapula.
- clavicotomy (klav-ik-ot'o-me) [clavicle + Gr. τομή a cutting]. The operation of cutting through the clavicle.
- clavicular (klav-ik'u-lar). Pertaining to the clav,
- claviculus (klav-ik'u-lus), pl. clavic'uli [L. dim. of cla'vus nail]. Any one of Sharpey's fibers (a set of fibers which hold together the laminæ of a bone).
- clavin (kla'vin). A physiologically inert mixture of leucin and aspartic acid
- clavipectoral (klav-ip-ek'to-ral) [L. cla'vis clavicle + pec'tus breast]. Pertaining to the clavicle and thorax.
- clavus (kla'vus) [L. "nail"]. A corn, or horny tubercle of the skin. See corn. c. hyster'icus, a sensation as if a nail were being driven into the head. c. secali'nus, ergot of rye. c. syphilit'icus, a flat, horny growth on the hand or the footbelieved to be due to syphilis.
- claw-foot (klaw-fut'). Atrophy and distortion of the foot.
- claw-hand (klaw-hand'). Flexion and atrophy of the hand and fingers.
- clear (klēr). To remove cloudiness from microscopic specimens by the use of a clearing agent.
- clearer (klēr'er). A clearing agent; an agent used in microscopy to remove the cloudiness from a specimen.
- cleavage (klē'vāj). See segmentation.
- cleavers (kle'verz). The Ga'lium apari'ne, a rubiaceous herb: diuretic. Dose of juice, 5 fl.oz. (148 c.c.); of fluidextract, 1-2 fl.dr. (4-8 c.c.).

- left (kleft). A fissure; especially one occurring in the embryo. branchial c. See under visceral c. cholesterin c., a cleft in a section of tissue cleft (kleft). embedded in paraffin, due to the dissolving of cholesterin crystals. corneal c., a groove in the sclera into which the cornea is fitted genital c., a depression of the external genital regions of the fetus which develops into the cloaca. Larrey's C., the sternocostal triangle. Maurer's C's. Same as Maurer's dots. See under dot. visceral c's, the clefts between the visceral arches of the embryo. They are the hyoid or hyomandibular clefts, between the hyoid and mandibular arches; the hyobranchial or posthyoidean cleft, between the hyoid and first branchial arches; and the branchial clefts, between the branchial arches.
- cleft-palate (kleft-pal'at). Congenital fissure of the palate and roof of the mouth.
- eidagra, cleisagra (kli-dag'rah, kli-sag'rah) [Gr. κλείς clavicle + ἄγρα seizure]. Gouty pain in the clavicle.
- cleidarthritis (kli-dar-thri'tis) [Gr. κλείς clavicle + $\delta \rho \theta \rho \rho \nu$ joint]. Gout in the clavicular region.
- cleidocostal (kli-do-kos'tal). Pertaining to the clavicle and the ribs.
- cleidocranial (kli-do-kra'ne-al) [Gr. κλείς clavicle - κρανίον head]. Pertaining to the clavicles and the head. c. dysostosis. See dysostosis.
- cleidocranialiasis (kli"do-kra-ne-al-i'as-is). Cleidocranial dysostosis. See under dysostosis.
- **cleidotomy** (kli-dot'o-me) [Gr. κλείς clavicle + τομή cut]. The operation of dividing the clavicle of the child in difficult labor, in order to permit of the passage of the shoulders.
- cleidotripsy (kli'do-trip-se) [Gr. κλείς clavicle + τρίβειν to rub] Crushing of the fetal clavicle in order to aid delivery.
- cleisiophobia (kli"se-o-fo'be-ah) [Gr. κλείσις closure $+ \varphi \delta \beta$ os fear]. Claustrophobia.
- cleithrophobia (kli-thro-fo'be-ah). Same as claustrophobia.
- Clematis (klem'at-is) [Gr. κληματίς]. A genus of ranunculaceous plants, many of them active poisons. not now used in medicine except in homeopathic preparations.
- cleoid (kle'oid) [Anglo-Saxon cle, claw + Gr. είδος A dental instrument, shaped like a claw, forml for excavating cavities.
- cleptomania (klep-to-ma'ne-ah). See kleptomania.
- cleptophobia (klep-to-fo'be-ah). See kleptophobia. clergyman's sore throat (kler'je-manz). Pharyngitis with dysphonia.
- clid-. For words beginning thus, see those beginning cleid-.
- clidorrhexis (kli-do-reks'is) [Gr. κλείς clavicle + δηξις rupture]. Fracture of the clavicles of the fetus in order to facilitate delivery.
- clier (kli'er). A glandular swelling or tumor of the skin occurring in cattle.
- climacteric (kli-mak-ter'ik) [Gr. κλιμακτήρ round of the ladder]. A particular epoch of the ordinary term of life at which the body is believed to undergo a radical change. The time of puberty and the menopause are climacteric. grand c., occurs at the age of sixty-three. menstrual c., the time of the beginning of menstruation.
- climatology (kli-ma-tol'o-je) [Gr. κλίμα climate + λόγος treatise]. The sum of knowledge in regard to climates.
- climatotherapeutics (kli"mat-o-ther-ap-u'tiks). Same as climatotherapy.
- climatotherapy (kli"mat-o-ther'ap-e) [climate + Gr. θεραπεία treatment]. The treatment of disease by means of a favorable climate.
- climax (kli'maks) [Gr. κλίμαξ ladder]. The acme, or period of greatest intensity, in the course of an attack of disease.

- climograph (kli'mo-graf) [climate + Gr. γράφειν to write]. A diagram representing the effect of climate on man.
- clinic (klin'ik) [Gr. κλινικός pertaining to a bed].

 r. A clinical lecture; examination of patients before a class of students; instruction at the bedside.

 2. A class of students assembled to witness the examination and treatment of patients.

 ambulant c., one for patients not confined to the bed.
- clinical (klin'ik-al). Pertaining to a clinic or to the bedside.
- clinician, clinicist (klin-ish'an, klin'is-ist). An expert clinical physician and teacher.
- clinicopathologic (klin"ik-o-path-o-loj'ik). Pertaining both to the symptoms of disease and to its pathology.
- clinocephalism, clinocephaly (kli-no-sef'al-izm, kli-no-sef'al-e) [Gr. κλίνειν to bend + κεφαλή head]. Congenital flatness or hollowness of the vertex of the head.
- **Clinocoris** (klin-ok'o-ris) [Gr. κλίνη bed + κόρις bug]. Same as Cimex
- clinodactyly (kli-no-dak'til-e) [Gr. κλίνειν to bend + δάκτυλος finger]. Permanent bending or deflection of the fingers.
- clinography (kli-nog'raf-e) [Gr. $\kappa\lambda l\nu\eta$ bed + $\gamma\rho\dot{\alpha}\varphi\epsilon\nu$ to write]. A term used by Pensuti to express his method of bedside annotations, consisting of a system of graphic representations of the temperature, symptoms, and pathologic manifestations exhibited by a patient.
- clinoid (kli'noid) [Gr. $\kappa\lambda l\nu\eta$ bed $+\epsilon l\delta os$ form]. Resembling a bed; bed shaped.
- **clinology** (kli-nol'o-je) [Gr. κλίνειν decline + λόγος discourse]. The science of the decline or retrogression of an animal organism.
- clinometer, clinoscope (kli-nom'et-er, kli'no-skōp] [Gr. $\kappa\lambda l r \epsilon \iota \nu$ to decline $+ \sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. An instrument for measuring an angle of deviation, as the torsion of the eyes when gazing at a fixed object. It is used for measuring paralysis of the ocular muscles.
- Clinophilus (kli-nof'il-us). Same as Cimex.
- clinostatic (kli-no-stat'ik). Occurring when the patient lies down.
- clinostatism (kli'no-stat-izm) [Gr. κλίνη bed + στάσις position]. A lying down position of the body.
- cliseometer (klis-e-om'et-er) [Gr. $\kappa\lambda l\sigma\iota s$ inclination + $\mu\dot{\epsilon}\tau\rho\sigma\nu$ measure]. An instrument for measuring the angle which the pelvic axis makes with the spinal column.
- **clithridium** (klith-rid'c-um) [Gr. κλειθρία a keyhole] Any bacterium having a shape like a keyhole or figure of 8.
- clithrophobia (klith-ro-fo'be-ah). Same as claustrophobia.
- **clition** (klit'e-on) [Gr. κλιτύς slope, clivus]. The midpoint of the anterior border of the clivus.
- clitoridauxe (klit"or-id-awks'e) [Gr. κλειτορίς clitoris + αυξη increase]. Enlargement of the clitoris.
- clitoridean (klit-o-rid-c'an). Pertaining to the
- clitoridectomy (klit"or-id-ek'to-me) [Gr. κλειτορls clitoris + ἐκτομή excision]. Excision of the clitoris (Baker Brown).
- clitoriditis (kli-tor-id-i'tis). Inflammation of the clitoris.
- clitoridotomy (kli-tor-id-ot'o-me) [clitoris + Gr. τομή a cut]. Female circumcision.
- clitoris (klit'o-ris) [Gr. κλειτορίs]. An organ of the female homologous with the penis in the male. It is a small, elongated, erectile body, situated at the anterior angle of the vulva.
- clitorism (klit'o-rizm). 1. Hypertrophy of the clitoris. 2. Persistent erection of the clitoris.

- clitoritis (klit-o-ri'tis). Inflammation of the clitoris.
- clitoromania (klit"or-o-ma'ne-ah). See nymphomania.
- clitorotomy (klit"o-rot'o-me) [Gr. κλειτορίς clitoris + τέμνειν to cut]. Surgical incision of the clitoris.
- clival (kli'val). Pertaining to the clivus.
- clivis (kli'vis). Same as declivis cerebelli.
- clivus (kli'vus), c. blumenbachii (bloo-menbak'e-i) [L. "Blumenbach's slope"]. The bony surface which slopes down from the pituitary fossa. c. montic'uli. Same as declivis cerebell.
- cloaca (klo-a'kah) [L. "drain"]. 1. An opening or cavity at the posterior end of the body of a vertebrate into which the intestinal, urinary, and reproductive ducts open. 2. An opening in the involucrum of a necrosed bone.
- cloacal (klo-ak'al). Pertaining to the cloaca.
- Cloetta's digitoxin (klo-et'az) [Max Cloetta, Swiss pharmacologist, born 1868]. See digitoxin.
- clone (klön) A group of individuals of like hereditary constitution, traceable through asexual reproductions to a single ancestral zygote.
- **clonic** (klon'ık) [Gr. κλόνος turmoil]. Pertaining to or of the nature of clonus.
- clonicity (klon-is'it-e). The condition of being clonic.
- clonicotonic (klon"ik-o-ton'ik). Both clonic and tonic.
- clonism, clonismus (klon'izm, klo-nis'mus) [Gr. κλόνος clonus]. A succession of clonic spasms.
- clonograph (klon'o-graf) [clonus + Gr γράφειν to write]. An instrument for recording spasmodic movements of parts and tendon reflexes.
- clonorchiasis (klo-nor-ki'as-is). Same as clonor-chiosis.
- clonorchiosis (klo-nor-ke-o'sis). Infestation of the bile passages with Clonorchis.
- Clonorchis (klo-nor'kis). A genus of liver flukes of Asia. C. endem'icus, C. sinen'sis, one of the most common parasitic trematodes infesting the liver of man, especially in China and Japan. They have two intermediate hosts; the first is a molluscan (Bythinia striatula) and the second is some edible fish from which man becomes infected.
- **clonospasm** (klon'o-spazm) [Gr. κλόνος clonus + σπασμός spasm]. Clonic spasm.
- clonus (klo'nus) [Gr. κλόνος turmoil]. Spasm in which rigidity and relaxation succeed each other. ankle-c., foot-c., a series of convulsive movements of the ankle, induced by suddenly pushing up the foot while the leg is extended. toe-c., rhythmic contraction of the great toe, induced by suddenly extending the first phalanx. wrist-c., spasmodic contraction of the hand muscles, induced by forcibly bending the hand backward.
- Cloquet's canal, ganglion, hernia, etc. (klokāz) [Hippolyte Cloquet, French surgeon, 1773-1843, and his brother, Jules Germain Cloquet, French surgeon, 1790-1883]. See canal, ganglion, hernia. etc.
- **clostridial** (klos-trid'e-al). Pertaining to or caused by clostridia.
- Clostridium (klos-trid'e-um) [Gr. κλωστήρ spindle]. A genus of Bacillaceæ which are anaerobic or micro-aerophilic and which form clostridial or plectridial spore forms. C. ærofe'tidum, an anaerobic, Gram-positive, slightly motile, rod-shaped organism which forms oval subterminal spores. It is saccharolytic and proteolytic, but is not pathogenic. It has been found only in war wounds. C. aërog'enes capsula'tum, a Grampositive, rod-shaped organism which forms oval subterminal spores. It produces "stormy fermentation" in milk and is the organism most commonly found in cases of gas gangrene. Called also Achalme's bacillus, Bacillus aërogenes capsulatus,

B. enteritidis sporogenes, B. perfringens, B. phleg-monis emphysematosæ, B. saccharobutyricus im-mobilis, B. welchii, Clostridium welchii, gas bacillus, and Vallon-Zaber bacillus. C. bifermentans, an anaerobic organism closely resembling C. sporogenes, but it ferments mannose. Called also Bacillus bijermentans sporogenes. C. botuli'num, a rather large, stout, motile rod resembling Clostridium septique. It forms a toxin in food materials which causes botulism. Called also bacillus of allantiasis, Bacillus botulinus, and van Ermengen's bacillus. C. butyr'icum, a short, Gram-positive rod that forms small oval and chiefly central spores. The cultures smell strongly of butyric acid. Called also Baculus actinobacter, B. amylobacter, B. butyricus, mobile buttersauer bacillus, and C. pasteurianum. C. chau'vei, a strictly anaerobic, Gram-positive, motile, sporogenic, rod-shaped organism which causes symptomatic anthrax in cattle, sheep, and goats. It is saccharolytic, but not proteclytic and is not proteclytic and is not proteched. not proteolytic and is not pathogenic for man. Called also Baculus anthracis symptomatici, ba-cillus of black leg or of black quarter, B carbonis, B. chauvæi, B. feseri, rauschbrand bacillus. C. cochlea'rium, a slender, actively motile, Gramnegative rod, forming oval terminal spores. It is frequently found in war wounds, but is probably not pathogenic. It is saccharolytic, but not proteolytic. Called also Bacullus cochlearius. C. edem'atis, C. edem'atiens, a strictly anaerobic organism isolated from war wounds in about 40 per cent of the cases. It is Gram-positive and forms large subterminal spores. It is saccharolytic, but not proteolytic. It forms a soluble toxin and is pathogenic for laboratory animals. C. histolyt'icum, a Gram-positive, motile, saccharolytic, and proteolytic organism which forms oval terminal spores In conjunction with other organisms it digests living tissues very rapidly without producing general symptoms C. multi-fermen'tans, an anaerobic, Gram-positive organism which forms oval subterminal spores not proteolytic, but it ferments eight different sugars. C. cdema'tiens. See C edematis. C. paraputrif'icum, an anaerobic organism closely resembling C. putrificum except that it ferments several sugars and is found normally in the digestive tract. C. parasporo'genes, an anaerobic organism closely resembling C. sporogenes except that it does not produce a woolly colony and that it differs in its agglutination reactions. C. pasteuria'num. See C. butyruum. C. putrif'icum, an anaerobic, Gram-positive, motile organism forming round terminal spores resembling tetanus. It is proteolytic, but neither saccharoicus and b. of Bienstock C. "Reading bacil-lus," this is practically identical with C. sporogenes except that this one seems to have the power to destroy certain toxins. Wounds infected with this organism either naturally or therapeu-tically heal rapidly. It is both saccharolytic and proteolytic. C. septique, a moderately large, motile, Gram-positive, rod-shaped organism with rounded ends and oval subterminal spores It is not proteolytic, but is saccharolytic and pathogenic for several species of animals, but infectious for man only through wounds. Called also Bacillus ædematis maligni, B septique, B III of von Hibler, Gohn-Sachs bacillus, and Vibrion septique. C. sphenoi'des, a small, motile, anaerobic, Grampositive organism which forms round, terminal spores which in old cultures become wedge shaped. It is saccharolytic and is found in cases of gas gangrene, but is neither proteolytic nor pathogenic. C. sporo'genes, a widely disseminated anaerobic organism found in war wounds and giving them a foul odor. It is Gram-positive, motile, and forms oval subterminal spores. It is intensely proteolytic, but not pathogenic. It ferments dextrose, maltose, levulose, and glycerol. C. ter'-tium, a slender, sluggishly motile, micro-aerophilic, rod-shaped organism which forms oval, terminal

spores. It is saccharolytic, but neither proteolytic nor pathogenic. It is the third most frequently found anaerobe in war wounds. C. tet'ani, a slender, motile, Gram-positive, anaerobic rodshaped organism found in garden soil and in the feces of horses, cows, and human beings. It forms round, terminal spores and produces a powerful toxin which causes tetanus. Called also Nicolaier's bacillus and Bacillus tetani. C. tetanoi'des, a long, motile, Gram-positive, anaerobic organism which forms round terminal spores. It greatly resembles C tetani, but does not form tetanus toxin. Called also Bacillus tetanomorphus and B. anaerobicus alkaligenes. C. wel'chii. See Clostridium aerogenes capsulatus.

clot (klot). A soft, semisolidified mass of coagulum, as of blood or lymph agony c., a clot formed in the heart during the death agony. antemortem c., a blood-clot formed in the heart or in a large vessel before death. blood-c., a coagu-lum formed of blood, either in or out of the body. chicken-fat c., a yellow-colored blood-clot looking like a mass of chicken-fat. currant-jelly c., a fibrin clot of reddish color and of a jelly-like consistence. distal c., a clot formed in a vessel on the distal side of a ligature. external c., a couvercle, or clot formed outside a blood-vessel. heart-c., a thrombus formed within the heart. internal c., a clot formed by solidification of blood within a vessel laminated c., a clot formed in layers filling the interior of an aneurysm. marantic c., a blood-clot due to enfeebled circulation and general malnutrition. muscle c., a clot formed in the coagulation of muscle plasm. passive c., a clot formed in the sac of an aneurysm as a result of cessation of the circulation through the aneurysm. plastic c., a clot formed from the intima of an artery at the point of ligation, forming a permanent obstruction of the artery. **postmortem c.**, a blood-clot formed in the heart or in a large blood-vessel after death. **proximal c.,** a clot formed in a vessel on the proximal side of a ligature. **Schede's c.** See Schede's treatment, under treatment. stratified c., a thrombus made up of layers of different colors. washed c., a blood-clot composed of fibrin and colorless corpuscles. white c., a decolorized blood-clot.

clotbur (klot'bur). The composite-flowered plant, Xan'thium spino'sum: astringent. Dose of fluid-extract, 1-2 dr. (4-8 c.c); in substance, 10-20 gr. (0.666-1.333 gm).

clottage (klot'āj). The artificial or pathologic closure of a passage, as a ureter, by a blood-clot.

cloudy swelling (klow'de). See swelling.

clove (klöv) [L. cla'vus a nail or spike]. An aromatic spice, the dried flower-bud of Euge'nia aromat'ıca (Jambo'sa caryophyl'lus): used as a carminative and for the relief of nausea, also externally as an anodyne in toothache and colic. Dose, 5-10 gr. (0.33-0.65 gm.); of the oil, 1-5 min. (0.060-0.333 c.c.). c. bark, the aromatic bark of Dicypel'lium caryophylla'tum.

clove-hitch. See under knot.

clownism (klown'izm). The hysteric performance of grotesque actions.

club-foot (klub'fut). See talipes.

club-hand (klub'hand). A hand deformity analogous to club-foot; talipomanus.

clubbing (klub'ing). See clubbed fingers, under finger.

clump (klump) An aggregation of bacteria due to the action of agglutinins.

clumping (klump'ing). See agglutination and Widal's test, under tests.

clupein (klu'pe-in) [L. clu'pea herring]. A protamin obtainable from the spermatozoa of the herring.

cluttering (klut'er-ing). Hurried nervous speech, marked by the dropping of syllables.

clyer (kli'er). A scrofulous tumor in the ox due to tuberculous infection.

clyers (kli'erz). Actinomycosis.

clymene (kli-mēn'). An odoriferous substance used in testing the power of smell.

clysis (kli'sis) [Gr. κλύσις]. A clyster, or the administration of a clyster.

clysma (kliz'mah), pl. clys'mata [Gr. κλύσμα]. A clyster or enema.

clyster (klis'ter) [Gr. κλυστήρ]. An injection into the rectum; an enema.

clysterium (klis'te-re-um), pl. clyste'ria [L.; Gr. κλυστήριον]. A clyster.

clysterize (klis'ter-īz) [L. clysteriza're]. a clyster to; to treat with enemata.

C. M. An abbreviation for Chirur'giæ Magis'ter, Master in Surgery; also for L. cras ma'ne, tomorrow morning.

cm. Abbreviation for centimeter

C. M. B. Abbreviation for carbolic methylene-blue. An abbreviation for L. cras ma'ne sumen'c. m. s. dus, to be taken to-morrow morning.

CN. Cynnogen.

C. N. Abbreviation for L. cras noc'te, tomorrow night.

cnemial (ne'me-al). Pertaining to the shin.

Cnemidocoptes (ne"mid-o-kop'tēz). A genus of sarcoptid mites C. galli'næ causes the depluming of fowls C. mu'tans causes scaly-legs in fowls and cage birds.

cnemis (ne'mis) [Gr κνημίς]. The lower leg, shin, or tibia.

cnemitis (ne-mi'tis). Inflammation of the tibia.

cnemoscoliosis (ne"mo-sko-le-o'sis) [Gr. κνήμη $\log + \sigma \kappa o \lambda l \omega \sigma is$. A lateral bending of the leg.

cnicin (ni'sin). A bitter, crystalline principle, $C_{42}H_{50}O_{15}$, from Cni'cus benedic'tus and other plants antiperiodic, diaphoretic, and tonic.

Cnicus (ni'kus) [L, from Gr kulter to prick]. genus of thistles, old world composite-flowered plants. C. benedic'tus, "blessed thistle," is a useful tonic. Dose of decoction, I dr.-½ floz. (3 9-15 5 cc), of tincture, 10-20 min. (0.666-1.333 c.c).

Cnidian school (ni'de-an). An early school of medicine in Greece, preceding that of Hippocrates. cnidosis (ni-do'sis) [Gr κνιδή nettle]. Urticaria.

CNOH. Cyanic acid.

CNS. Chemical symbol for sulphocyanate.

C. n. s. Abbreviation for L. cras noc'te sumen'dus, to be taken tomorrow night.

CO. Carbon monoxid.

CO₂, Carbon dioxid. Co. Symbol for cobalt.

coadunation, coadunition (ko-ad-u-na'shun--nish'un) [L. co together + ad to + a'nus one] Union of dissimilar substances in one mass.

coagglutination (ko-ag-lu-tin-a'shun). The agglutination by an antigen and the homologous antibody of the corpuscles of another animal.

coagglutinin (ko-ag-lu'tin-in). Partial agglutinin. See under agglutinin.

coagula (ko-ag'u-lah). Plural of coagulum.

coagulable (ko-ag'u-la-bl). Susceptible of being coagulated.

coagulant (ko-ag'u-lant) [L. coag'ulans]. 1. Causing coagulation. 2. An agent that causes coagulation.

coagulase (ko-ag'u-lās). An enzyme which produces coagulation.

coagulate (ko-ag'u-lāt) [L. coagula're]. 1. To cause to clot. 2. To become clotted.

coagulation (ko-ag-u-la'shun) [L. coagula'tio]. 1. The process of changing into a clot or of being changed into a clot. 2. A clot. 3. In colloid chemistry, the solidification of a sol into a gelatinous mass; the degree of dispersion of the disperse phase from the continuous phase is lessened, thus resulting in the complete or partial separation of this phase which appears as a non-rigid, insoluble, continuous mass, called the clot or curd. Coagulation is usually irreversible. **electric c.**, the effect produced on tissues by the application of a bipolar current delivered by a needle point the tissue is broken down and condensed into a necrotic mass. massive c., coagulation of the spinal fluid so as to form an almost solid clot; a condition seen in some cases of From's syndrome in meningomyelitis or tumor of the cord.

coagulation-time. See under time.

coagulative (ko-ag'u-la-tiv). Associated with coagulation or promoting a process of coagulation; of the nature of coagulation.

coagulen (ko-ag'u-len). A hemostatic preparation, in the form of a granular brown powder, consisting of dried animal blood-platelets mixed with grapesugar, used in a 5 to 10 per cent, solution in distilled water.

coagulin (ko-ag'u-lin). 1. An antibody formed in the blood-serum on injection of various substances into the body of an animal and capable of coagulating the substance by whose injection it was formed. 2. Thromboplastin.

coagulinoid (ko-ag'u-lin-oid). A coagulin, the active coagulating portion of which has been de-A coagulin, the stroyed by heating.

coagulometer (ko-ag-u-lom'et-er) [coagulation + Gr. μέτρον measure] An apparatus for determining the coagulability of the blood.

coagulose (ko-ag'u-lōs). A proprietary preparation made by precipitating blood-serum, used subcutaneously for arresting hemorrhage.

Daguloviscosimeter (ko-ag''u-lo-vis-ko-sim'-et-er). An instrument for determining the coagucoaguloviscosimeter lation-time of the blood.

coagulum (ko-ag'u-lum), pl. coag'ula. [L.]. A clot or curd.

Coakley's operation (kōk'lēz) [Cornelius G. Coakley, laryngologist in New York, born 1862]. See oberation

coalescence (ko-al-es'ens) [L. coales'cere to grow together]. The fusion or blending of parts.

coal-tar (köl'tahr). A dark, semiliquid product of the dry distillation of bituminous coal, from which many valuable dyes, medicines, and other useful commodities are derived.

coaptation (ko-ap-ta'shun) [L coapta're to fit together]. The fitting together or adjustment of displaced parts, as of the ends of a fractured bone.

coarctate (ko-ark'tāt) [L. coarcta're to straighten or tighten]. Pressed close together; contracted.

coarctation (ko-ark-ta'shun) [L. coarcta'tio, from cum together + arcta're to make tight]. A straightening or pressing together; a condition of stricture or contraction.

coarctotomy (ko-ark-tot'o-me) [L. coarc'tus pressed together + Gr. τομή a cut]. The cutting of a stricture.

coarse (kōrs). Not fine, not microscopic.

coarticulation (ko"ar-tik-u-la'shun) [L. con together + articula're to join]. A synarthrosis.

coat (kōt) [L. cot'tus a tunic]. A membrane or other structure which lines or covers a part or organ. adventitial c., the external coat or covering. buffy c. See crusta phlogistica. fibrous c., the sclera and cornea together. starting c., a dry condition of the skin of horses and cattle, with stiff rough bair and cattle, with stiff, rough hair.

cobalt (ko'bawit) [L. cobal'tum]. A metal, atomic weight 58.97, symbol Co, whose compounds afford pigments, but are seldom used as medicines. salipyrin, a salicylate of cobalt and antipyrin, forming a pale red powder.

Cobb's pigmentary fever. See under fever.

cobra (ko'brah). A poisonous snake, cobra di capello, Na'ja tripu'dians, of India. By inoculating animals with the cobra venom a serum is obtained which is used in counteracting the effect of bites by the snake. See also Ophiophagus. c.-lecithid, the hemolytic compound formed by cobra toxin and the lecithin of the blood.

cobraism (ko'brah-izm). Poisoning by cobravenom.

cobralysin (ko-bral'is-in). A hemolytic substance derived from the poison of the cobra.

cobweb (kob'web) [L. ara'neum; te'la ara'nea]. The web of various kinds of spider; sometimes used as a styptic, in the moxa, and as a domestic remedy: a febrifuge and antispasmodic. Dose, 5-30 gr. (0.333-2 gm).

COC. Abbreviation for cathodal opening contraction.

coca (ko'kah). The leaves of Erythrox'ylon co'ca, a South American plant nervine and stimulant. Dose of extract, 2-15 gr. (0.13-1 gm); of fluid-extract, 30-120 min. (2-8 c.c). c.-ethylin, a white powder, C₁₈H₂₃NO₄, nearly insoluble in water, but soluble in ether and alcohol. It is a mild local anesthetic. Called also homococain.

cocain (ko'ka-in). A crystalline alkaloid, methyl benzoyl ecgonin, C₆H₅ CO O.C₆H₉(CO O CH₃) N-CH₃, from coca leaves It is a local anesthetic, narcotic, and mydriatic. Its hydrochlorid and many others of its compounds are employed in medicine and surgery. The salts are used to produce local anesthesia and local anemia in painful conditions and for minor operations; also as mydriatics, and internally in gastric irritability and nausea. Dose, $\frac{1}{8}$ -2 gr. (0.008-0.133 gm); of the hydrochlorid, $\frac{1}{8}$ -1 gr. (0.011-0.066 gm.); of the phenate, $\frac{1}{10} - \frac{1}{6}$ gr. (0 0054-0 011 gm). **c.** aluminum citrate, a crystalline salt: an astringent and local anesthetic. c. aluminum sulphate, a crystalline double salt an astringent and local anesthetic. c. borate, employed in eye-washes and in hypodermic injections: it is regarded as one of the most serviceable of the cocain salts. c. cantharidate, a white powder: recommended for hypodermic use in nasal catarrh and in tuberculosis of the larynx. c. carbolate, a viscid, yellowish mass: used as a local anesthetic, analgesic, etc, in rheumatism and in catarrhal inflammations. Dose, $\frac{1}{12}$ - $\frac{1}{6}$ gr. (0.005-0.011 gm); locally, in 1-3 per cent. solution. c. lactate is recommended for injection into the bladder in cystitis. Dose, 15 gr. (1 gm.). c. nitrate is used in the treatment of gonorrheal and bladder troubles. c. saccharate, a salt in moist, crystalline plates: used principally in throat and mouth operations. c. salicylate, a salt in thick flakes used hypodermically for asthma. Dose, 5 gr. (0.333 gm.). c. stearate, a compound used like cocain oleate in suppositories and ointments.

cocaina (ko-ka-i'nah). Cocain.

cocainidin (ko-ka-in'id-in). An alkaloid, methyl cocain, $C_{18}H_{23}NO_4$, from coca.

cocainin (ko'kān-in). Truxillin.

cocainism (ko-ka'in-izm). The morbid habit of mind and body caused by prolonged misuse of cocain as a stimulant or a narcotic.

cocainist (ko-ka'in-ist). A person addicted to the habitual use of cocain.

cocainization (ko-ka"in-iz-a'shun). The act of putting under the influence of cocain. spinal c., the injection of cocain into the subdural space at the base of the spinal cord by a puncture through the fourth or fifth lumbar interspace. This produces analgesia of the lower limbs and body as high up as the thorax, the tactile, muscular, and temperature sensibility being retained. Called also rachiococainization.

cocainize (ko-ka'in-Iz). To put under the influence of cocain.

cocainomania (ko-ka"in-o-ma'ne-ah). Persistent or excessive use of cocain as a stimulant.

cocainomaniac (ko-ka"in-o-ma'ne-ak). A victim of the cocain habit.

cocamin (ko-kam'in). An alkaloid from coca.

co-capsulin (ko-kap'su-lin). A proprietary preparation of supracapsulin and cocain hydrochlorid.

cocapyrin (ko-kah-pi'rin). A compound of cocain, 1 part, and antipyrin, 99 parts: used as an analgesic and antipyretic. Dose, 3½ gr. (0.22 gm.).

Coccaces (kok-ka'se-e). A family of the order Eubacteriales including all true bacteria whose cells are spheric. It comprises the genera Streptococcus, Staphylococcus, Diplococcus, Neisseria, Micrococcus, Rhodococcus, and Leuconostoc.

cocci (kok'si). Plural of coccus.

280

coccidial (kok-sid'e-al). Pertaining to Coccidium. coccidioidal (kok-sid-e-oi'dal). Caused by coccidioides.

Coccidioides (kok"-sid-e-oi'dēz). A genus of parasitic molds. C immu'is, C pyo'genes are said to be the cause of pseudotuberculosis of the skin and coccidioidal granuloma.

coccidiosis (kok"sid-e-o'sis). A morbid state caused by the presence of coccidia which form

Coccidioides (Rivas).

nodular or suppurative foci in various parts of the body, most frequently in the bones, joints, lymphnodes, lungs, and skin. See Coccidium.

Goccidium (kok-sid'e-um), pl. coccid'ia [L.; dim. of Gr. κόκκος berry]. A class of the Sporozoa They go through a complicated life-history both in schizogony and in sporogony resembling that of the malarial parasites. There are two genera parasitic in man, the Isospora and the Eimeria. C. bigem'inum, a parasite found abundantly in dogs and cats and rarely in man. C. cunic'uli, the organism causing coccidiosis in rabbits and sometimes found in man. C. hom'inis, a parasite frequently found in rabbits and sometimes in man. C. ovifor'me, a minute elliptic parasite found commonly in rabbits and mice, and rarely in man, in the interior of the columnar epithelial cells of the intestines or bile-ducts, where it slowly increases in size until it exceeds the size of the cells. The parasite causes proliferation and obstruction of the bile-ducts, which often end in cysts of the liver. C. syphil'idis. Same as Leukocytozoon syphilidis. C. tenel'lum, a species causing coccidiosis in fowls, blackhead in turkeys, and white diarrhea in chicks.

coccigenic (kok-sij-en'ik). Caused by a micro-coccus.

coccillana (kok-se-yah'nah). See cocillana.

coccinella (kok-sin-el'ah). Latin for cochineal. coccinellin (kok-sin-el'in) [L. coccinelli'num]. Carmin; the coloring principle of cochineal.

coccobacillus (kok"o-bas-il'us). A microorganism intermediate in form between a bacillus and a micrococcus. C. fœt'idus ozæns, a microorganism said by Perez to be the cause of ozena, or fetid rhinitis. c. verodunen'sis, an organism found in gunshot gangrene (Besredka, 1915).

coccobacteria (kok"o-bak-te're-ah) [Gr. κόκκοs berry + βακτήριον rod]. A common name for the spheroid bacteria, or for the various bacterial cocci.

coccode (kok'od). A globular granule.

coccogenous (kok-oj'en-us) [L. cocci + Gr. γεννᾶν to produce]. Caused by cocci.

coccoid (kok'oid). Resembling a coccus; globose.

Coccoloba (kok-ol'o-bah) [L. coccol'obis]. A genus of polygonaceous trees and shrubs. C. uvif'era, the seaside grape of tropical America, has an edible fruit, and affords an astringent extract called Jamaica kino.

coccomelasma (kok-o-me-las'mah) [Gr. κόκκος grain + μέλας black]. Granular melanosis of the skin.

cocculin (kok'u-lin). A crystalline compound, $C_{19}H_{26}O_{10}$, from cocculus.

Cocculus (kok'u-lus) [L.; dim. of coc'cus berry]. A genus of menispermaceous plants, many of which are medicinal, and some actively poisonous. C. cac'tl yields cochineal. C. i'licis yields kermes. C. in'dicus, the dried berry or fruit of Anamir'ia coc'culus; very poisonous; sometimes used in brewing, and useful externally in certain skin diseases and to destroy lice. it is sparingly used in night-sweats, chorea, and sick headache. Dose of tincture, 2-15 min. (0.133-1 c.c.); of fluid-extract, 1-3 min. (0.066-0.2 c.c.). C. lac'tis yields lac.

Coccus (kok'us), pl. coc'ci (kok'si) [L.; Gr. κόκκοs berry] 1. An individual of the Coccaceæ. When fully developed and free they are spheric; when two or more are in apposition they may be flattened along the plane of contact. 2. A genus of hemipterous insects: they produce cochineal, kermes, and lac. See cochineal, kermes, and lac. 3. The C. cac'ti, the cochineal insect. Class's c., a microorganism discovered by Class in the blood, epidermis, and throat of scarlet fever patients. Fehleisen's c., the Streptococcus erysipelatis.

coccyalgia, coccydynia (kok-se-al'je-ah, kok-sidin'e-ah) [Gr. κόκκυξ coccyx + ἄλγος or ὁδύνη pain]. Pain in the coccyx.

coccydinia (kok-sid-in'e-ah). Same as coccygo-dynia.

coccygalgia (kok-sig-al'je-ah). Same as coccy-

godynia.
coccygeal (kok-sij'e-al). Of or pertaining to the

coccygectomy (kok-sij-ek'to-me) [Gr. κόκκυξ coccyx + ἐκτομή excision]. Surgical removal of the coccyx.

coccygerector (kok"sij-e-rek'tor). The extensor coccygis muscle.

coccygeus (kok-sij'e-us). See muscles, table of.

coccygodynia (kok"sig-o-din'e-ah) [Gr. κόκκυξ coccyx + όδύνη pain]. Pain in the coccyx and neighboring region, due to rheumatism, neural-gia, or injury of the bone.

coccygotomy (kok-sig-ot'o-me) [Gr. κόκκυξ coccyx + τομή a cut]. Removal of the coccyx.

coccyodynia (kok"se-o-din'e-ah). See coccygo-dynia.

coccyx (kok'siks) [Gr. κόκκυξ cuckoo, whose bill it is said to resemble]. The small bone situated caudad to the sacrum; in man, the caudal end of the spinal column.

Coch. Abbreviation for L. cochlea're, spoonful.

cochia pills (kok'e-ah or ko'che-ah) [L.; Gr. κοκκίον pill]. Pills of aloes and colocynth.

cochineal (koch-in-ēl') [L. coccinel'la; U. S. P., coc'cus]. The dried female insect, Coc'cus cac'ti, native in tropical America, and exported as a dyestuff; also an aqueous extract of the insect; it affords carmin, and is used in pharmacy. It is used as an indicator and has a PH range of from 4.8 to 6 2, being yellowish red at 4.8 and violet at 6.2. It is considered to be antispasmodic and anodyne, and has been used in nervous affections and in whooping-cough. Dose in powder, $\frac{1}{2}$ gr. (0.02 gm.); of tincture, 20-30 min. (1.25-2 c.c.).

cochl. An abbreviation for L. cochlea're, a spoonful. cochl. amp., L. cochlea're am' plum, heaping spoonful. cochl. infant., L. cochlea're infan'tis,

a child's spoonful. **cochl. mag.**, L. cochlea're mag'num, tablespoonful. **cochl. med.**, L. cochlea're me'dium, dessert spoonful. **cochl. parv**. L. cochlea're par'vum, teaspoonful.

cochlea (kok'le-ah) [L. for "snail-shell"]. 1. Anything of a spiral form. 2. The conic cavity of the internal ear which contains the essential organs of the auditory sense.

cochlear (kok'le-ar). Of or pertaining to the

cochleare (kok-le-a're). L. for "spoon" or "spoonful." c. am'plum, "large spoon"; a table-spoonful. c. mag'num, tablespoon or table-spoonful abbreviated to cochl mag. c. me'-dium, dessertspoon or dessertspoonful; literally, middle-sized spoon: abbreviated to cochl. med. c. par'vum, a teaspoon.

Cochlearia (kok-le-a're-ah) [L.]. A genus of cruciferous plants. C. armora'cia is the horse-radish. Its root is a stimulant condiment and a stomachic. Dose of fluidextract, 1-2 fl dr (4-8 c.c.). The fresh leaves are used in domestic medicine and as a pot-herb. C. officina'lis, scurvygrass, is diuretic, antiscorbutic, and stimulant.

cochleariform (kok"le-ar'if-orm) [L. cochlea're spoon + for'ma form]. Shaped like a spoon.

cochleate (kok'le-āt) [L. cochlea snail]. Shaped like a snail shell said of bacterial cultures.

cochleitis (kok-le-i'tis). Inflammation of the cochlea.

cochleovestibular (kok"le-o-ves-tib'u-lar). Pertaining to the cochlea and vestibule of the ear.

Cochliomyia (koklc-o-mi'e-ah). Α genus of American flies of the family Muscidæ. macella'ria (formerly called Chrysomyia macellaria), a bluish-green fly which deposits its eggs during the warmest hours of the day on wounds or in body cavi-ties, from which the larvæ, known as screw-worms. hatch and burrow into the skin.

Cochliomyia macellaria, screwworm fly A, Adult; B, maggot. $(\times 3)$.

cochlitis (kok-li'- (×3). tis). See cochleitis.

cocillana (ko-se-yah'nah). The bark of Gua'rea swari'zii (rus'byi), emetic, expectorant, and cathartic. Dose of fluidextract, 10-30 min. (0.666-2 c c).

cockle (kok'el). See A grostemma.

cockroach (kok'rotch). See Blatta.

Cock's operation (koks) [Edward Cock, English surgeon, 1805-1892]. Sec operation.

COCI. Abbreviation for cathodal opening clonus.

cocoa (ko'ko). See cacao and chocolate. c.-butter. See under butter.

cocoanut (ko'ko-nut). The fruit of Co'cos nucif'era, a palm-tree whose sap affords palm-wine or toddy, while the nut is an important article of food, and supplies great quantities of a valuable oil.

coco-olein (ko-ko-o'le-in) A proprietary substitute for cod-liver oil: said to be an olein from cocoanut oil.

Coct. Abbreviation for coc'tio, boiling.

coction (kok'shun) [L. coc'tio a cooking]. 1. The process of boiling.2. Digestion.

coctolabile (kok-to-la'bil) [L. coc'tus cooked + la'bilis perishable]. Destroyed or altered by heating to the boiling-point of water.

coctoprecipitin (kok-to-pre-sip'it-in) [L. coc'tus cooked + precipitin]. A precipitin produced by injecting a heated serum or other antigen (thermo-precipitinogen). It reacts not only with the heated antigen, but with the unheated one also.

coctostabile, coctostable (kok-to-sta'bil, -bil) [L. coc'tus cooked + sta'bilis resisting]. Not altered by heating to the temperature of boiling water.

codamin (ko'dam-in). An alkaloid, C₂₀H₂₅NO₄, from opium.

code of medical ethics. A set of rules adopted by the American Medical Association for the guidance of physicians in their professional relations.

codein (ko-de'in) [L. codei'na]. A white or whitish, crystalline alkaloid, morphin methyl ether, C₁₈H₂₁-NO₃ + H₂O, from opium; soluble in 80 parts of cold water and 17 parts of boiling water, and easily soluble in alcohol and ether, it is narcotic, but less so than morphin used as a substitute for morphin in severe cough, diabetes mellitus, and pain in the intestines. Dose, ½-2 gr. (0.03-0.13 gm.). C. hydroiodate, a salt, C₁₈H₂₁NO₃.HI + H₂O, anodyne and hypnotic: recommended for use in children's diseases. C. methyl bromid, a sedative, C₁₈H₂₁NO₃(Br.CH₃), known also as sucodein. C. phosphate, a salt, in colorless needles, C₁₈H₂₁NO₃H₃PO₄ + 2H₂O: a good substitute for morphin. Dose, ½-½ gr. (0.025-0.05 gm). C. sulphate, a white. crystalline powder, (C₁₈H₂₁O₃N)₂ - H₂SO₄ 5H₂O. Dose, ½-1 gr. (0-03 006 gm.). C. valerianate, an antispasmodic and hypnotic salt. Dose, ½ gr. (0.015 gm).

codeonal (ko-de'o-nal). A preparation of codein diethylbarbiturate and sodium diethylbarbiturate: used as a sedative and hypnotic.

codex (ko'deks), pl. cod'ices [L.]. An authorized medicinal formulary; especially the French Pharmacopoeia.

cod-liver oil (kod-liv'er). See oil.

codol (ko'dol). Same as retinol.

codrenin (köd-re'nin). A proprietary preparation of cocain hydrochlorid, adrenalin chlorid, and chloretone dissolved in physiologic salt solution: used as a local anesthetic and hemostatic.

coefficient (ko-ef-ish'ent). In chemistry, a number or figure put before a chemic formula to indicate how many times the formula is to be multiplied. c. of absorption, a number indicating the volume of a gas absorbed by a unit volume of a liquid at o° C. and a pressure of 760 mm.; called also Bunsen c. Amann's c., the normal proportion between the quantities of ethereal sulphates and the total nitrogen in the urine. It is expressed as follows:

 $\frac{\text{Eth. S.} \times 100}{\text{IV. Urine}}$

Ambard's c. See Ambard's formula, under formula Baumann's c., the ratio of the ethereal to the total sulphates in the urine. biologic c., the amount of potential energy consumed by the body when at rest. Bouchard's c. 1. The ratio between the amount of urine and the total solids of the urine. 2. See urotoxic c. Bunsen c., coefficient of absorption. c. of conductivity, a number indicating the quantity of heat that passes in a unit of time through a unit thickness of a substance when the difference in temperature is 1° C. creatinin c., the figure is obtained by dividing the total of milligrams of creatinin in the day's urine by the body weight expressed in kilograms. distribution c. Same as partition c. c. of expansion, a number indicating the amount a substance expands when heated 1° C. c. of extinction, that dilution of an antibody at which the specific activity is no longer manifest. Falta's c., the percentage of ingested sugar eliminated from the system. Haeser's c., a coefficient used for estimating the amount of total solids in urine from the specific gravity. It is similar to Long's coefficient, but smaller—2.33. hygienic laboratory

c., a number representing the disinfecting value of a substance obtained by dividing the weakest solution of the disinfectant that will kill typhoid bacilli by the weakest solution of carbolic acid that will kill the bacilli in the same length of time isometric c. of lactic acid, the ratio of the total isometric tension a muscle can produce before fatigue to the milligrams of lactic acid is produced. **isotonic** c., a number showing the quantity of salt which should be added to distilled water to prevent its destroying the erythrocytes when added to blood. **Lancet c..** a number representing the disinfecting value of a substance as compared with carbolic acid. lethal c., that concentration of a disinfectant that will kill sporeless bacteria (inferior lethal c.) or bacteria spores (superior lethal c) in water at a temperature of 20°-25° C. in the shortest time. Long's c., a figure, 26, used to obtain the number of grams of solids in 1000 c.c. of urine by multiplying the last two figures of the specific gravity. c. of partage, a number indicating the ratio between the amount of an acid absorbed by ether from an aqueous solution of the acid and the amount remaining in solution. partition c., the proportion of a given substance that is distributed between two or more different solvents used at the same time. Called also distribution c. phenol c. See Rideal-Walker c. respiratory c., respiratory quotient. See quotient. Rideal-Walker c., a number indicating the disinfecting value of a substance; it is the quotient obtained by dividing the number representing the dilution of a disinfectant which kills an organism in a fixed time by the number representing the degree of dilution of carbolic acid which kills the organism in the same time Called also phenol c. temperature c., the effect of temperature upon chemical reactions; a number indicating the change of the reaction velocity constant with the temperature. Cf. van't Hoff's law, under law. Trapp's c. See Trapp's formula, under formula. urohemolytic c., the smallest degree of dilution necessary to render a specimen of urine hemolytic. **urotoxic c.**, a number expressing the toxicity of the urine it is the quantity of urotoxic units produced per unit weight and eliminated in unit time (Bouchard). c. of variability, the ratio of the standard deviation to the mean. velocity c., a number expressing the rate of a reaction; the rate of transformation of a unit mass of a substance in a chemical reaction. Yvon's c., the ratio between the quantity of urea and the phosphates of the urine.

coslarium, celarium (se-la re-um) L., from Gr. κοίλος a hollow]. The membrane that lines the body-cavity, or cœlom: it consists of a parietal layer, the exocalarium, and a visceral layer, or endocalarium It is also called mesothelium or cælom-epithelium.

coelectron (ko-c-lek'tron) [L. con together + clectron]. The atomic core; the core which, with the electron attached, forms an atom of matter.

Coelenterata (se-len-ter-a'tah). A phylum of invertebrates including the corals, jelly-fishes, and hydroids.

colenterate (se-len'ter-āt). Belonging to the Colenterata; one of the Colenterata.

colenteron (se-len'ter-on). Same as archenteron.

coeliac, etc. For words beginning with $c\alpha$, see those beginning ce.

colom, celom (se'löm) [Gr. κοίλωμα, from κοίλος hollow]. The body-cavity of the embryo, situated between the somatopleure and the splanch-nopleure; from it arise the principal cavities of the trunk. The word is also written caloma.

coelothel (se'lo-thel) [Gr. κοιλος hollow + θηλή nipple]. The mesoblastic epithelium lining the true body-cavity of the embryo.

colozoic (se-lo-zo'ik). See celozoic.

conesthesia (sen-es-the'ze-ah). See cenesthesia.

conesthopathia (sen-es-tho-path'e-ah). See cenesthopathia.

conobium. See cenobium.

coenurosis (se-nu-ro'sis). Infection of sheep with the Cænurus cerebralis. See staggers.

Conurus cerebralis (se-nu'rus ser-e-bra'lis) [Gr. κοινός common + οὐρά tail]. The larva of the Ta'nia ca'nurus, found in the brain of sheep.

which combines with an inactive enzyme to produce activation of the enzyme. It differs from activators of the inorganic and colloidal variety in that its combination with the enzyme is dissociable instead of permanent. Called also coferment.

coetaneous (ko-c-ta'ne-us) [L. co with + atas age]. Having the same age.

coexcitation (ko-ek-si-ta'shun). Simultaneous excitation

coferment (ko-fer'ment). See coenzyme.

coffee (kof'e) [L. cof'fea, caf'fea]. The dried seeds of Cof'fea arab'ica, a tree believed to have originated in Africa, but now growing in nearly all tropical regions. the infusion is invigorating, tonic, and conservant; it is useful in chronic asthma, headache, and opium-poisoning.

coffeinism (kof'e-in-izm). A morbid condition resulting from excessive use of coffee.

coffer-dam (kof'er-dam). See dam.

coffeurin (kof-e-u'rin). A substance said to be present in the urine after the free use of coffee.

coffin-bone (kof'in-bon). The third, or distal, phalanx in the foot of the horse.

coffin-joint (kof'in-joint). The second interphalangeal joint of the foot of a horse.

cognac (kon'yahk). See brandy.

cognition (kog-nish'un) [L. cogni'tio, from cognos' cere to know]. That operation of the mind by which we become aware of objects of thought or perception.

cogwheel phenomenon or sign. See under phenomenon

cohabitation (ko''hab-it-a'shun) [L co- together + habita're to dwell]. The dwelling together of a man and woman, with habitual coition, whether married or not.

COH.CCl3. Chloral.

cohesion (ko-he'zhun) [L. cohæ'sio, from con together + hæ'rere to stick]. The force which unites the particles of a body.

cohesive (ko-he'siv). Adhering together.

C4O6H4K(SbO). Tartar emetic.

Cohn's test (konz) [Hermann Ludwig Cohn, German oculist, born 1838]. See under tests.

C₄O₆H₄NaK. Potassium and sodium tartrate.

Cohnheim's areas, field, frog, theory, etc. (kōn'hīmz) [Julius Friedrich Cohnheim, German pathologist, 1839–1884]. See area, field, frog, theory, etc.

Cohnistrep'tothrix isra'eli. Same as Actinomvees bovis.

cohobation (ko-ho-ba'shun). The repeated distilling of a liquid from the same material, redistillation.

cohosh (ko-hosh'). A North American (Algonkin) name for various medicinal plants, as Acta'a spica'ta, or red cohosh; Caulophyl'lum thalictroi'des, or blue cohosh; and Cimicif'uga racemo'sa, or black cohosh.

coil (koil). Anything wound in a spiral. induction c., an apparatus for inducing an electric current. It consists of a coil of coarse wire (primary coil), which contains an iron core and is surrounded by a long coil of fine wire (secondary coil). When a galvanic current is passed through the primary coil, a faradic current is induced in the secondary coil. Leiter's c., a coil of thin metal tubing wound round a part of the body,

through which hot or cold water is passed for the purpose of varying the temperature of the part. **Ruhmkorff c.**, an induction coil in which the secondary coil is not movable. **Tesla c.**, an induction coil without an iron core, used for the production of a Tesla discharge.

coin-catcher (koin-katch-er). An instrument for catching and removing a coin or similar object

lodged in the esophagus.

coin-counting (koin-kown'ting). A movement of the tips of the thumb and index-finger over each other, seen in paralysis agitans.

coin-test. See under tests.

coinosite (koi'no-sīt). A free or unfixed commensal organism.

coition (ko-ish'un) [L. coi'tio a going together]. Sexual commerce; copulation.

coitophobia (ko''it-o-fo'be-ah) [coitus + Gr. φόβοs fear]. Morbid dread of coitus.

coitus (ko'it-us) [L]. Sexual intercourse; copulation. c.-disease, a venereal disease of horses resembling syphilis.

Coix (ko'iks) [L; Gr. κόιξ a palm]. A genus of grasses. C lac'ryma, an Asiatic species, bears large seeds called Job's-tears, which are often strung as beads for infants' use in teething said to be anodyne and diuretic.

coko (ko'ko). A Fijian disease resembling yaws.

Col. Abbreviation for L. co'la, strain.

cola (ko'lah). See kola.

colalgia (ko-lal'je-ah) [Gr. κόλον colon + ἄλγος pain]. Pain in the colon.

colalin (ko-lal'in). A yellow powder, slightly soluble in water, said to represent the active principle of bile. It is a mixture of hyoglycocholic and hyotaurocholic acids from hog bile used as a digestive and intestinal antiseptic and to relieve gallstone colic Dose, 1-1 gr. (0016-003 gm.).

colasaya (ko-las-a'ah). A tonic preparation of cola, calisaya bark, cocoa, iron, and phosphates.

Colat. Abbreviation for L. cola'tus, strained.

colatein (ko-lah-te'in). A crystalline phenolic derivative of kola nut

colation (ko-la'shun) [L. cola'tio]. The process of straining or filtration.

colatorium (kol-at-o're-um), pl. colato'ria [L., from cola're to strain]. 1. A strainer or colander; a sieve. 2. The pituitary body.

colature (ko'lāt-ūr) [L. colatu'ra, from cola're to strain]. A liquid obtained by straining.

colauxe (ko-lawks'e) [Gr. κόλον colon + αὔξη increase]. Dilatation of the colon.

colchicein (kol-chis-e'in). A crystalline alkaloid, aceto-trimethyl-colchicinic acid, $C_{21}H_{28}NO_6 + \frac{1}{2}H_{2}O$, from colchicum by heating with sulphuric acid, and more active than colchicin. Hypodermic dose, $\frac{1}{30} - \frac{1}{64}$ gr. (0.0006-0.001 gm.); to be given with caution.

colchicin (kol'chis-in). An alkaloid, C₂₂H₂₅O₆N, from colchicum. Dose, $\frac{1}{100}$ - $\frac{1}{20}$ gr. (0.00066-0.0032 gm.).

Colchicum (kol'che-kum or kol'ke-kum) [L.]. A genus of liliaceous plants. The corm and seed of C. autumna'le, a European and Asiatic plant, are cathartic, emetic, and locally irritant, and in large doses poisonous. They are used in gout, rheumatism, and rheumatic affections, such as tonsillitis, pharyngitis, etc. Dose of powdered root, 2-8 gr. (0.13-0.52 gm.); of powdered seeds, 1-5 gr. (0.065-0.32 gm.); of fluidextract of seed, 1-5 min. (0.060-2 c.c.); of tincture of seed, 10-30 min. (0.060-2 c.c.); of extract of root, \(\frac{1}{2}-1\frac{1}{2}\) gr. (0.033-0.09 gm.); of fluidextract of root, 2-5 min. (0.133-0.333 c.c.); of wine of root, 5-15 min. (0.333-1 c.c.);

colchisal (kol'chis-al). Colchicin salicylate; an amorphous yellow powder: a remedy for gout and rheumatism. Dose, $\frac{1}{100}$ gr. (0.00065 gm.).

colcothar (kol'ko-thar) L.]. Fe₂O₃, red oxid of iron: tonic and styptic.

cold (köld). 1. Privation or relatively low degree of heat. 2. A catarrhal or other disorder due to exposure to cold and wet. rose c. See under rose.

coldsore (köldsör). Herpes labialis.

colectomy (ko-lek'to-me) [colon + Gr. ἐκτομή excision]. Excision of a portion of the colon.

coleocele (ko'le-o-sēl) [Gr. κολεός sheath + κήλη hernia]. Vaginal hernia.

coleocystitis (ko"le-o-sis-ti'tis) [Gr. κολεός sheath, vagina + cystitis]. Inflammation of the vagina and bladder.

Coleoptera (ko-le-op'ter-ah) [Gr. κολεός sheath + πτερόν wing]. An order of insects comprising the beetles.

coleospastia (ko-le-o-spas'te-ah) [Gr. κολεός sheath + σπαστία spasm]. Vaginismus.

coleotomy (ko-le-ot'o-me) [Gr. κολεόs sheath + τομή cut]. A cutting operation upon the vagina.

coles (ko'lēz). The penis. c. femini'nus, the clitoris.

Cole's sign (kölz) [Lewis Gregory Cole, New York roentgenologist]. See under sign.

Colet. Abbreviation for L cole'tur, let it be strained. Coley's fluid, toxin (ko'lēz) [William B. Coley,

surgeon in New York, born 1862]. See under fluid. colibacillary (ko-li-bas'il-a-re). Produced by the Bacillus coli.

colibacillemia (ko''li-bas-il-e'me-ah). The presence of Bacillus coli in the blood.

colibacillosis (ko-li-bas-il-o'sis). Infection with the Bacillus coli.

colibacilluria (ko-li-bas-il-u're-ah). Presence of the colon bacillus in the urine.

colibacillus (ko''li-bas-il'us). The Bacillus coli.

colibacterin (ko-li-bak'ter-in). See bacterial vaccine, under vaccine.

colic (kol'ik) [Gr. κωλικός]. 1. Pertaining to the appendicular colon. 2. Acute abdominal pain c. Same as vermicular c. biliary c., paroxysms of pain and other severe symptoms due to the passage of gall-stones along the bile-duct. Called also hepatic c. bilious c., abdominal pain accompanied by the vomiting of bile and the passage of bilious stools. copper c., a severe colic common among workers in copper. crapulent c., that which is due to excess in eating and drinking. **Devonshire** c., lead-colic. endemic c., a dangerous form of colic peculiar to hot countries. **gastric c.**, gastralgia. **he-patic c.** See biliary c. **hill-c.**, a febrile diarrhea prevalent in the hill tracts of India. intestinal c., acute abdominal pain. lead-c., painters' c., that which is due to leadpoisoning. mecontal c., colic of new-born infants. menstrual c., severe abdominal pain at the menstrual period. mucous c., pseudomembranous c., pseudomembranous enteritis. nephritic c., pain in the kidney from either acute inflammation. ovarian stone or ovarian pain from disease of the organ. paint-ers' c. See lead-c. pancreatic c., abdominal pain caused by obstruction of the excretory duct of the pancreas. Poitou c., lead-colic. renal c., pain produced by the passage of stone along the ureter. saburral c., colic from intestinal indigestion. sailors' c., a painful colic prevalent among marines. salivary c., pain in the region of the salivary gland occurring in cases of salivary cal-culus. sand c., chronic indigestion in horses and cattle due to the presence in the stomach or intestine of sand taken in with food or drink. saturnine c., lead-colic. stereoral c., intestinal colic due to accumulation of feces. tubal c., painful spasmodic contraction of the fallopian tube. ureteral c., colicky pains due to obstruction of the ureter. uterine c., severe abdominal pain from some uterine disease or at the menstrual epoch. **vermicular c.**, a condition of colic in the vermiform appendix occasioned by a catarrhal inflammation resulting from blocking of the outlet of the appendix. **wind c.**, pain in the bowels due to their distention with air or gas. **zinc c.**, colic resulting from chronic zinc poisoning.

colica (kol'ik-ah). Latin for colic. c. dex'tra, the right colic artery. See arteries, table of. c. me'dia, the middle colic artery. See arteries, table of. c. muco'sa, mucous enteritis. c. pas'sio, colic. c. pic'tonum, colic of Poitou; lead-colic. c. scorto'rum, severe colicky pain in the region of the fallopian tubes; seen in salpingitis. c. sinis'tra, the left colic artery. See arteries, table of.

colicolitis (ko"le-ko-li'tis). Colitis caused by Bacil-

colicoplegia (kol''ik-o-ple'je-ah) [Gr. κωλικός colic + πλήσσειν to strike]. Lead-colic and lead paralysis together.

colicystitis (ko"le-sis-ti'tis). Cystitis dependent upon the presence of the colon bacillus.

colicystopyelitis (ko-le-sis"to-pi-el-i'tis) [colon + Gr. $\kappa b \sigma \tau \iota s$ bladder + $\pi b \epsilon \lambda o s$ pelvis]. Inflammation of bladder and kidney pelvis due to the colon bacillus.

coliform (kol'if-orm) [L. co'lum a sieve]. 1. Cribriform. 2. Resembling the Bacillus coli.

coli-group. A group of bacteria, including the Bacillus coli, the paracolon bacillus, typhoid bacillus, paratyphoid bacillus, and bacillus of psittacosis.

colilysin (ko-lil'is-in). A lysin formed by Bacillus coli.

colinephritis (ko-le-nef-ri'tis). Nephritis due to the presence of colon bacillus.

coliplication (ko-lip-lik-a'shun). Coloplication. colipuncture (ko'le-punkt-ūr). Colocentesis.

colipyelitis (ko"le-pi-el-i'tis). Pyelitis due to the

colipyuria (ko-le-pi-u're-ah) [colon bacillus + Gr. πύον pus + οὖρον urine]. Pus in the urine due to infection with *Bacillus coli*.

colisepsis (ko-le-sep'sis). Infection with Bacıllus coli.

colitis (ko-li'tis). Inflammation of the colon. amebic c., colitis due to Amæba coli mucous c., a chronic disease, affecting chiefly neurotic subjects, characterized by the excessive secretion of mucus in the colon and marked by colic, constipation, or diarrhea, and the passage of mucus and membranous shreds Called also mucous colic, myxomembranous colitis, mucocolitis, membranous enteritis, colic or intestinal myxoneurosis, and tubular diarrhea. myxomembranous c. See mucous c. ulcerative c., ulceration in the colon.

colitoxemia (ko-le-toks-e'me-ah). Toxemia due to infection with the colon bacillus.

coliuria (ko-le-u're-ah). Presence of the Bacillus coli in the urine.

collæmia (kol-e'me-ah). Colemia.

collætina (kol-et'in-ah). A proprietary adhesive plaster containing lanolin and caoutchouc.

collagen (kol'aj-en) [Gr. κόλλα glue + γεννᾶν to produce]. The main organic constituent of connective tissue and of the organic substance of the bones: changeable by boiling into glue or gelatin.

collagenic (kol-a-jen'ik). Forming or producing collagen

collapse (kol-aps') [L. collap'sus]. 1. A state of extreme prostration and depression, with failure of circulation. 2. Abnormal falling in of the walls of any part or organ. c. of the lung, an airless or fetal state of all or a part of a lung. c. therapy. See under therapy.

collar, Casal's. A band-like arc of pellagrous eruption about the neck. c. of Stokes, an edematous thickening of the neck and soft parts of the thorax associated with dilatation of the veins from the neck to the diaphragm, seen in

cases of obstruction of the superior vena cava. venereal c., c. of Venus. See melanoleuko-derma colli.

collar-bone (kol'ar-bon). The clavicle.

collar-crown (kol'ar-krown). In dentistry, a form of collar for an artificial tooth which is fastened to a natural root.

collargol, collargolum (kol-ar'gol, kol-ar-go'-lum). A form of colloidal silver, soluble in water and in albuminous fluids: it is a germicide and antiseptic, and is used in gonorrheal ophthalmia, etc.

collasan (kol'as-an). A preparation of colloidal kaolin: used as a laxative.

collateral (kol-at'er-al) [I. con together + la'tus side]. 1. Not direct or immediate; secondary or accessory. 2. A paraxon; a small side branch of an axon.

collaurum (kol-aw'rum). A form of colloidal gold. collemia, collemia (kol-e'me-ah) [Gr. κόλλα glue + αΙμα blood]. A glutinous or viscid condition of the blood.

Colles's fascia, fracture, law, etc. (kol'ēz) [Abraham Colles, an Irish surgeon, 1773-1843]. See fascia, fracture, law, etc.

Colles-Baumès law (kol'ēz-bo-māz'). Colles's law. colliculectomy (kol ik-u-lek'to-me) [colliculus + Gr. ἐκτομή excision]. The operation of excising the colliculus seminalis.

colliculitis (kol-ik-u-li'tis). Urethral inflammation about the colliculus or verumontanum.

colliculus (kol-ik'u-lus) [L. collic'ulus mound]. A small elevation. c. facia'lis, a thickening of the medial eminence above the medullary striæ in the rhomboid fossa, caused by the internal genu of the facial nerve. inferior c., c. infe'rior [B N A], the posterior pair of corpora quadrigemina. c. semina'lis [B N A], the verumontanum. superior c., c. supe'rior [B N A], the anterior larger pair of corpora quadrigemina.

collidin (kol'id-in) [Gr. κόλλα glue]. r. An oily base or ptomain, trimethyl-pyridin, C₆H₂N(CH₃)₅, from decaying animal matter: probably poisonous. 2. Any member of the group of which the normal collidin is the type aldehyd c., a collidin obtained by the distillation of aldehyd.

collifixation (kol-e-fik-sa'shun). Same as collopexia.

colliform (kol'if-orm). A proprietary wound-dressing material containing formaldehyd and gelatin.

colligamen (kol-ig-a'men) [L.]. A form of medicated surgical bandage.

Collinsonia (kol-in-so'ne-ah) [after Peter Collinson, 1604-1768]. A genus of labiate herbs. C. canaden'sis, stone-root or richweed, is tonic and diuretic Dose of herb (in decoction), 15-60 gr. (1-4 gm.); of fluidextract, 10-40 min. (0.65-2.5 c.c.); of tincture, \frac{1}{2}-2 fl dr. (2-8 c.c.).

collinsonin (kol-in-so'nin). A dry preparation of Collinso'nia canaden'sis diuretic and diaphoretic. Dose, 2-4 gr. (0.133-0.266 gm).

colliquation (kol-ik-wa'shun) [L. con together + liqua're to melt]. Liquefactive degeneration. ballooning c., liquefaction of cell protoplasm attended by edematous swelling. reticulating c., liquefaction of cell protoplasm with the formation of reticulations.

colliquative (kol-ik'wah-tiv) [L con together + liqua're to melt]. 1. Characterized by an excessive fluid discharge. 2. Marked by liquefaction of tissues.

collobiase (kol-o-bi'as). A turpentine preparation in colloidal form for intravenous or intramuscular injection.

collochemistry (kol-o-kem'is-tre). The chemistry of colloids.

collodion (kol-o'de-on) [L. collo'dium, from Gr. κολλώδης glutinous]. A solution of gun-cotton

(pyroxylin) in ether and alcohol. It is a syrupy liquid, evaporating to form a contractile film: used as a protective covering for wounds, burns, ulcers, etc. For varieties, see collodium. blistering c. Same as collodium cantharidatum. flexible c. See collodium flexile. hemostatic c. See collodium stypticum.

ollodium (kol-o'de-um) [L.]. Collodion. c. bitu'minis sulphona'ti, a 10 per cent. solucollodium tion of sulphonated bitumin in flexible collodion. c. cantharida'tum, cantharidal collodion: a vesicant preparation composed of an acetone extract of cantharides dissolved in flexible collodion. c. flex'ile (U. S. P.), flexible collodion; collodion to which has been added 2 per cent. of camphor and 3 per cent. of castor oil. It does not dry down as hard and stiff as collodium, nor does it contract as much in drying. c. ioda'tum, iodized collodion: a collodion charged with iodin; a resolvent for application to tumors, etc. c. salicyla/tum compos'itum, collodion with 2 per cent. of extract of cannabis indica, 10 per cent. of alcohol, and 11 per cent. of salicylic acid useful in treating corns and bunions. c. styp'ticum, styptic collodion; collodion prepared with tannic acid, ether, and alcohol: an astringent for external use.

colloid (kol'oid) [Gr. κολλώδης glutinous]. 1. Glutinous or resembling glue. 2. A fourth state of matter, neither gaseous, liquid, nor solid, in which the matter is dispersed in or distributed throughout some medium called the dispersion medium. matter thus dispersed is called the disperse phase of the colloid system. The particles of the disperse phase are larger than an ordinary crystalloid molecule, but are not large enough to settle out under the influence of gravity; they range in size from 10 micron to 1 micromicron. There are two from 10 micron to 1 micromicron, kinds of colloids: first, the suspension colloids, in which the disperse phase consists of particles of any insoluble substance, as a metal, and the dispersion medium may be gaseous, liquid, or solid; and second, the emulsion colloids, in which the dispersion medium is usually water and the disperse phase consists of highly complex organic substances, such as starch or glue, which absorb much water, swell, and become uniformly distributed throughout the dispersion medium in a manner not well understood. The former tend to be less stable than the latter. 3. The translucent, yellowish, gelatinous substance resulting from colloid degeneration. amyl c., anodyne c., a local anodyne preparation containing I ounce each of amyl hydrid and absolute alcohol, 1 gr. aconitin, 6 gr. veratrin, and 2 oz. of collodion. bovine c. See conglutinin. dispersion c. See under colloid. emulsion c., a colloid solution in which the matter is in the form of extremely small particles, which absorb some of the liquids in which they are suspended. Called also *cmulsoid* and *hydrophil* c. **hydro- phil** c. See *emulsoin* c. **hydrophobic** c., a suspension colloid. irreversible c., a colloid which is not reversible. lyophilic c., emulsion colloid. lyophobic c., suspension colloid. lyo-tropic c., emulsion colloid. protective c., one which is able to prevent the precipitation of another colloid. reversible c., a colloid which can be dispersed after having been precipitated or a gel which can be converted into a sol. **stable** c., a reversible colloid. **styptic** c. Same as c., a reversible colloid. styptic c. Same as collodium stypticum. suspension c. See colloid.

colloidal (kol-oi'dal). Of the nature of a colloid. colloidin (kol-oi'din). A jelly-like substance, Colloid, one of the products of colloid degeneration.

colloidoclasia, colloidoclasis (kol-oi-do-kla'seah, kol-oi-do-kla'sis) [colloid + Gr. κλάσις breaking up]. A breaking up of the physical equilibrium of the colloids of the body, producing an anaphylactoid crisis (colloidoclastic shock) attributed to absorption into the blood of unchanged colloids.

colloidogen (kol-oi'do-jēn). A substance assumed to be present in the body for the purpose of keeping

the inorganic elements of the body in a colloid solution.

colloidopexy (kol-oi'do-pek-se) [Gr. κολλώδης glutinous + πηγνύναι to fix]. Metabolic fixation of colloids within the organism, a function ascribed to the liver.

colloma (kol-o'mah) [Gr. κόλλα glue + -ομα tumor].

A colloid cancer; carcinoma whose degenerated substance has assumed a glue-like character.

collo nema (kol-o-ne'mah) [Gr. κόλλα glue]. A tumor produced by the diffuse mucinous degeneration of a lipoma (Muller).

collopexia (kol-o-peks'e-ah) [L. col'lum neck + Gr. πηξις fixing]. The surgical fixation of the uterine neck.

collosin (kol'o-sin). A compound of collodion and traumaticin: used in skin diseases.

collosol (kol'o-sol). A proprietary colloidal solution of a drug, such as silver (c. argen'tum) or of mercury (c. hydrargyra'tum): used as antiseptics.

Collosphæria (kol-o-sfe're-ah) [Gr. κόλλα glue + σφαῖρα ball]. A genus of schizomycetes composed of cylindric cells in glairy fomites, divided by constriction and forming a curved surface.

collothiol (kol-o-thi'ol). A proprietary colloidal solution of sulphur.

colloxylin (kol-oks'il-in) [Gr. κόλλα glue + ξύλινος woody]. A variety of soluble gun-cotton, or pyroxylin.

collum (kol'um), pl. col'ta [L.]. The neck; also any neck-like part or structure. c. anatom'-icum. See anatomic neck, under neck. C. Chirur'gicum, the surgical neck of a bone. c. cos'tse [B N A], the neck of a rib. c. den'tis [B N A], the neck of a tooth. c. distor'tum, torticollis. c. fem'oris [B N A], the neck of the femur. c. glan'dis [B N A], the neck of the glans penis. c. ra'dii [B N A], the neck of the radius. c. scap'ulse [B N A], the neck of the scapula. c. ta'li [B N A], the constriction between the head and body of the astragalus. c. val'gum. Same as coxa valga. c. vesi'cse fel'lese [B N A], the neck of the gall-bladder.

Collut. Abbreviation for L. colluto'rium, a mouthwash.

collutory (kol'u-to-re) [L. colluto'rium]. A wash; chiefly a mouth-wash or gargle.

Collyr. Abbreviation for L. colly'rium, an eye-wash.
collyrium (kol-ir'e-um), pl. colly'ria [L; Gr. κολλύριον eye-salve]. A lotion for the eyes; an eye-wash. Beer's c., lead acetate, rose water, and spirit of rosemary.

coloboma (kol-o-bo'mah), pl. colobo'mata [L; Gr. κολόβωμα]. A mutilation or defect, especially a congenital fissure of any part of the eye. bridge C., a variety of coloboma of the iris in which a strip of iris tissue bridges over the fissure. c. of choroid, fissure in the choroid coat due to persistence of a fetal fissure and causing a scotoma on the retina. Fuchs' C., a small, crescent-shaped defect of the choroid, at the lower edge of the optic disk. c. l'ridis, a fissure of the iris, usually of the lower portion. c. lob'uli, a congenital fissure of the ear-lobe. c. palpebra'le, a vertical fissure of the eyelids. c. of vitreous, a notch in the lower border of the vitreous.

colocentesis (ko"lo-sen-te'sis) [Gr. κόλον colon + κέντησις puncture]. Puncture of the colon, mostly for the purpose of relieving its distention with air or gases.

colocholecystostomy (ko"lo-ko"le-sis-tos'to-me). Same as cholecystocolotomy.

coloclysis (ko-lok'lis-is) [Gr. κόλον colon + κλύσις injection]. Irrigation of the colon.

coloelyster (ko-lo-klis'ter). An enema thrown into the rectum.

color-lie (ko-lo-kol'ik). Relating to two portions of the colon.

colocolostomy (ko"lo-ko-los'to-me) [colon + co-lostomy]. The operation of forming an anasto-mosis between two portions of the colon.

colocynth (kol'o-sinth) [L. colocyn'this; Gr. κολοκόνθη]. The fruit of Citrul'lus colocyn'this; the dried pulp of the unripe fruit is a poisonous hydragogue cathartic, and is used as an ingredient in cathartic pills. Dose of extract, ½-2 gr. (0.032-0.13 gm.). compound extract of c. contains extract of colocynth (16 parts), aloes (50 parts), cardamom (6 parts), alcohol (10 parts), soap (14 parts), and resin of scammony (14 parts). Dose, 5-20 gr. (0 32-1.3 gm.).

colocynthidism (kol-o-sin'thid-izm). Poisoning by colocynth.

colocynthin (kol-o-sin'thin). A bitter, purgative glucosid, $C_{50}H_{84}O_{23}$, from colocynth. Dose, $\frac{1}{20}$ - $\frac{1}{8}$ gr (0.003-0 013 gm.).

colocynthis (kol-o-sin'this), gen. colocyn'thidis. See colocynth.

colodyspepsia (ko"lo-dis-pep'se-ah). Dyspepsia due to reflex disturbance set up by the constipated colon.

colo-enteritis (ko"lo-en-ter-i'tis) [colitis + enter-itis]. Inflammation of the small intestine and colon.

Cologne water (kol-on'). See under water.

colohepatopexy (ko"lo-hep'a-to-peks-e) [Gr. κόλον colon + $\tilde{\eta}\pi\alpha\rho$ liver + $\pi\tilde{\eta}\xi\iota_5$ fixation] The suturing of the colon to the liver to take the place of adhesions between the liver and the stomach which form after gall-stone operations.

colomba (ko-lom'bah). Same as calumba.

colon (ko'lon) [L.; Gr. κόλον, κῶλον]. That part of the large intestine which extends from the cecum to the rectum. ascending c., the portion of the colon on the right side, going cephalad from the descending c., a part of the colon on the left side, between the transverse colon and the sigmoid flexure. giant c., abnormally large size of the colon. See megacolon iliac c., the part of the sigmoid flexure of the colon which is situated in the left iliac fossa. irritable c., a condition marked by abdominal pain or distress, gas, and tenderness along the colon, sometimes seen in nervous persons who have abused the use of cathartics. **pelvic c.**, that part of the sigmoid flexure which is situated in the pelvis. **sigmoid** c. [B N A], the sigmoid flexure of the colon. See under flexure transverse c., that part which runs transversely across the upper part of the abdomen from right to left.

colonalgia (ko-lon-al'je-ah) [colon + Gr. άλγος pain]. Pain in the colon.

colonic (ko-lon'ik). Pertaining to the colon.

colonitis (ko-lo-ni'tis). Inflammation of the colon; colitis.

colonization (kol-o-niz-a'shun). See innidiation.

colonometer (kol-on-om'et-er) [colony + Gr. μέτρον measure]. An apparatus for counting the colonies of bacteria on a culture-plate.

colonopathy (ko-lon-op'ath-e) [colon + Gr. πάθος disease]. Any disease or disorder of the colon.

colonopexy (ko-lon'o-pek-se). Same as colopexy.

colonoscope (ko-lon'os-kōp) [Gr. κόλον colon + σκοπείν to view]. A speculum for examining the lower part of the bowel.

colonoscopy (ko-lon-os'ko-pe). Examination of the rectum with the colonoscope.

colony (kol'o-ne) [L. colo'nia]. A collection or group of bacteria in a culture derived from the increase of a single organism.

colopathy (ko-lop'ath-e). Same as colonopathy.

colopexia, colopexy (ko-lo-pek'se-ah, kol'o-pek-se) [Gr. $\kappa\delta\lambda o\nu$ colon $+\pi\tilde{\eta}\xi\iota_{S}$ fixation]. Fixation of the sigmoid flexure to the abdominal wall by suturation.

colopexostomy (ko-lo-peks-os'to-me) [Gr. κόλον colon + πῆξις fixation + στόμα mouth]. Resec-

tion of the colon with cecostomy or appendicostomv.

colopexotomy (ko"lo-peks-ot'o-me) [Gr. κόλον colon $+ \pi \hat{\eta} \xi_{is}$ fixation $+ \tau_{0} \mu h$ a cutting]. Fixation and incision of the colon.

colopexy (ko'lo-pek-se). See colopexia. colophene (kol'o-fēn). A colorless hydrocarbon, C₂₀H₃₂, derivable from turpentine.

colophony (ko-lof'o-ne) [L. colopho'nia; Gr. Κολοφών, Colophon, a city of Asia Minor]. Common resin, or rosin, derived from various species of pine.

coloplication (ko-lo-pli-ka'shun) [L. co'lon colon + pli'ca fold] The operation of unfolding or taking a reef in the colon in cases of dilatation.

coloproctia (ko-lo-prok'she-ah) [Gr. κόλον colon + πρωκτός anus]. Same as colostomy.

coloproctitis (ko"lo-prok-ti'tis). Inflammation of the colon and rectum.

coloproctostomy (ko"lo-prok-tos'to-me) [colon + Gr. $\pi \rho \omega \kappa \tau \delta s$ anus $+ \sigma \tau \delta \mu a$ mouth]. Colorectostomy.

coloptosis (ko-lop-to'sis) [Gr. κόλον colon $+ \pi \tau \hat{\omega} \sigma \iota s$ fall]. Prolapse or falling of the colon.

colopuncture (ko'lo-punk-tur). Same as colocentesis.

Color. Abbreviation for L. colore'tur, let it be colored.

color (kul'or) [L. co'lor, co'los] The tint or hue of any object c.-blindness (Dalton, 1704), dimin-The tint or hue of ished ability to perceive differences of color, seldom or perhaps never amounting to a complete disability **c.-b.**, **amnesic**, inability to recognize or to name a color, although it is correctly perceived. complementary c's, two colors which produce white light when mixed together. confusion c., a color which appears the same as some other color to a color-blind person. c.-gustation. See pseudogeusesthesia. c.-hearing. See pseudochromes-thesia. inc'dental c., the impression of a color which is retained by the retina after the object causing it has been removed. saturated c., a spectrum color which cannot be further decomposed.

color index. See under index.

color radical. See chromophore.

colorectitis (ko"lo-rek-ti'tis). Inflammation of the colon and rectum together.

colorectostomy (ko"lo-rek-tos'to-me) [colon + rectum + Gr. $\sigma\tau\dot{\rho}\mu$ a mouth]. The surgical formation of a new passage between the colon and the rectum.

colorimeter (kul-or-im'et-er) [color + Gr. μέτρον measure]. An instrument for measuring color; especially one for measuring the color of the blood in order to determine the proportion of hemoglobin.

colostomy (ko-los'to-me) [Gr. κόλον colon + στόμα mouth]. The formation of a permanent artificial opening (artificial anus) into the colon.

colostration (ko-los-tra'shun) [L. colostra'tio]. Illness of a new-born infant caused by the colos-

colostric (ko-los'trik). Pertaining to colostrum.

colostrorrhea (ko-los-tro-re'ah) [L. colostrum + Gr. poid flow]. Spontaneous discharge of colostrum.

colostrous (ko-los'trus) [L. colostro'sus]. taining or filled with colostrum.

colostrum (ko-los'trum) [L.]. The fluid secreted by the mammary gland a few days before or after parturition. It is characterized by containing many colostrum corpuscles and usually will coagulate on boiling due to a large amount of lactalbumin. c. gravida'rum, the colostrum secreted before parturition. c. puerpera'rum, the colostrum secreted after parturition.

colotomy (ko-lot'o-me) [Gr. κόλον colon + τομή a The creation of an artificial opening cutting].

into the colon: variously distinguished as abdominal, iliac, inguinal, lateral, or lumbar, according to the location of the opening. Littré's c., inguinal colotomy.

colotyphoid (ko-lo-ti'foid). Typhoid in which there is follicular ulceration of the colon, with extensive lesions in the small intestine.

colpalgia (kol-pal'je-ah) [Gr. κόλπος vagina + äλγοs pain]. Pain in the vagina.

colpatresia (kol-pat-re'ze-ah) [Gr. κόλπος vagina + atresia]. Atresia or occlusion of the vagina.

colpectasia, colpectasis (kol-pek-ta'se-ah, kol-pek'tas-is) [Gr κόλπος vagina + ἔκτασις distention]. Distention or dilatation of the vagina.

colpeurynter (kol'pu-rin-ter) [Gr. κόλπος vagina εὐρύνειν to dilate]. A dilatable bag, used to distend the vagina.

colpeurysis (kol-pu'ris-is) [Gr. κόλπος vagina + εὐρύνειν to widen]. Operative dilatation of the vagina.

colpismus (kol-piz'mus) [Gr. κόλπος vagina]. Vaginitis.

colpitis (kol-pi'tis) [Gr. κόλπος vagina]. Inflammation of the vagina. c. emphysemato'sa, colpitis characterized by the formation of small blebs on the mucous membrane c. granulo'sa. See vaginitis verrucosa. c. mycot'ica, colpitis due to the presence of molds, such as Oldium.

colpocele (kol'po-sēl) [Gr. κόλπος vagina + κήλη hernia] Hernia into the vagina

colpoceliotomy (kol"po-se-le-ot'o-me) [Gr. κόλπος vagina + κοιλία belly + τομή cut]. Incision into the abdomen through the vagina.

colpocleisis (kol-po-kli'sis) [Gr. κόλπος vagina + κλείσις closure]. Surgical closure of the vaginal canal.

colpocystitis (kol"po-sis-ti'tis) [Gr. κόλπος vagina + κύστις bladder + ιτις inflammation]. Inflammation of the vagina and of the bladder.

colpocystocele (kol-po-sis'to-sel) [Gr. κόλπος vagina + $\kappa \dot{\nu} \sigma \tau \iota s$ bladder + $\kappa \dot{\eta} \lambda \eta$ hernia]. Hernia of the bladder into the vagina, of which the anterior wall becomes prolapsed.

colpocystoplasty (kol"po-sis'to-plas-te) [Gr. κόλπος vagina + κύστις bladder + πλάσσειν to form] Plastic operation for the repair of the vesicovaginal wall.

(kol"po-sis-to-si'rinks) colpocystosyrinx κόλπος vagina + κόστις bladder + σῦριγξ fistula]. Vesicovaginal fistula.

colpocystotomy (kol"po-sis-tot'o-me) [Gr. $\kappa\delta\lambda\pi$ os vagina + $\kappa\delta\sigma\tau\iota$ s bladder + $\tau o\mu\dot{\eta}$ a cutting]. Incision of the bladder through the vaginal wall.

colpocysto-ureterocystotomy (kol-po-sis"to-u-re"ter-o-sis-tot'o-me) [Gr κόλπος vagina + κύστις bladder + οδρητήρ ureter + cystotomy]. The operation of exposing the ureteral orifices by incising the will of the bladder and weighted. the walls of the bladder and vagina.

Colpoda cucullus (kol-po'dah ku-kul'us). infusorian parasite found in 1899 by Schulz in the feces of a man suffering from diarrhea.

(kol"po-des-mor-a'fe-ah) colpodesmorrhaphia [Gr. κόλπος vagina + δεσμός band + ραφή suture]. The suturation of a ruptured sphincter vaginæ.

colpodesmorrhaphy (kol"po-des-mor'af-e). Colpodesmorrhaphia.

colpodynia (kol-po-din'e-ah) [Gr. κόλπος vagina + όδύνη pain]. Pain in the vagina.

colpohyperplasia (kol"po-hi-per-pla'ze-ah) [Gr. κόλπος vagina + hyperplasia]. Excessive growth of the mucous membrane and wall of the vagina. c. cys'tica, a variety characterized by the presence of gas-cysts, due to a bacillus.

colpohysterectomy (kol"po-his-ter-ek'to-me) [Gr. κόλπος vagina + hysterectomy]. Surgical removal of the uterus by a vaginal operation.

colpohysteropexy (kol-po-his'ter-o-peks-e) [Gr. κόλπος vagina + ὑστέρα uterus + πῆξις fixation]. Vaginal hysteropexy.

- colpohysterorrhaphy (kol"po-his-ter-or'af-e) [Gr. κόλπος vagina + ὑστέρα uterus + ῥαφή suture]. Vaginal hysteropexy.
- colpohysterotomy (kol"po-his-ter-ot'o-me) [Gr. κόλπος vagina + hysterotomy]. Surgical incision of the vagina and uterus.
- **colpomycosis** (kol"po-mi-ko'sis) [Gr. κόλπος vagina + μύκης fungus]. Colpitis mycotica.
- colpomyomectomy (kol"po-mi-o-mek'to-me) [Gr. κόλπος vagina + myomectomy]. Myomectomy performed by vaginal incision.
- **colpomyomotomy** (kol"po-mi-o-mot'o-me). Colpomyomectomy.
- **colpomyotomy** (kol"po-mi-ot'o-me) [Gr. κόλπος vagina + myotomy] Excision of a myoma of the uterus through the vagina.
- colpoparovariocystectomy (kol"po-par-o-va"-re-o-sis-tek'to-me) [Gir. κόλπος vagina + parovarium + cystectomy]. Excision of a cystic tumor of the parovarium through the vagina.
- **colpopathy** (kol-pop'ath-e) [Gr. κόλπος vagina + πάθος disease]. Any vaginal disease.
- **colpoperineoplasty** (kol"po-per-in-e'o-plas-te) [Gr. κόλπος vagina + περίνεον perineum + πλάσσειν to form]. Plastic surgery of the vagina and perineum.
- **colpoperineorrhaphy** (kol"po-per"in-e-or'a-fe) [Gr. $\kappa\delta\lambda\pi$ os vagina $+\pi\epsilon\rho$ ($\nu\epsilon$ o ν perineum $+\delta\alpha\varphi\hat{\eta}$ suture]. Suturation of the ruptured vagina and perineum.
- **colpopexy** (kol'po-peks-e) [Gr. κόλπος vagina + πηξις fixation]. Suture of a relaxed vagina to the abdominal wall.
- **colpoplasty** (kol'po-plas-te) [Gr. κόλπος vagina + πλάσσειν to shape]. Plastic surgery involving the vagina.
- **colpopolypus** (kol-po-pol'ip-us) [Gr. κόλπος vagina + polypus]. Polypus of the vagina.
- **colpoptosis** (kol-pop-to'sis) [Gr. κόλπος vagina + πτῶσις prolapse]. Prolapse or falling of the vagina.
- **colporectopexy** (kol-po-rek'to-pek-se) [Gr. $\kappa\delta\lambda\pi$ os vagina + rectum + Gr $\pi\eta\xi\iota$ s fixation]. The operation of suturing a prolapsed rectum to the vaginal wall.
- **colporrhagia** (kol-por-a'je-ah) [Gr. κόλπος vagina + ἡηγνύναι to burst out]. Vaginal hemorrhage.
- **colporrhaphy** (kol-por'ah-fe) [Gr. κόλπος vagina + ραφή stitch]. The operation of denuding and suturing the vaginal wall for the purpose of narrowing the vagina.
- **colporrhexis** (kol-po-rek'sis) [Gr. κόλπος vagina + βήξις rupture]. Laceration of the vagina.
- **colposcope** (kol'po-skōp) [Gr. κόλπος vagina + σκοπεῖν to view]. An instrument for inspecting the vagina.
- **colpospasm, colpospasmus** (kol'po-spazm, kol-po-spaz'mus) [Gr κόλπος vagina + σπασμός spasm]. Vaginal spasm.
- **colpostenosis** (kol"po-sten-o'sis) [Gr. κόλπος vagina + στένωσις stricture]. Contraction or narrowing of the vagina.
- **colpostenotomy** (kol"po-sten-ot'o-me) [Gr. κόλπος vagina + στένωσις stricture + τομή a cutting]. A cutting operation for stricture or atresia of the vagina.
- **colpotherm** (kol'po-therm) [Gr. κόλπος vagina + θέρμη heat]. An electric apparatus for applying heat within the vagina.
- **colpotomy** (kol-pot'o-me) [Gr. κόλπος vagina + τέμνειν to cut] Any surgical cutting operation upon the vagina.
- **colpo-ureterocystotomy** (kol"po-u-re"ter-o-sistot'o-me) [Gr. $\kappa\delta\lambda\pi\sigma_0$ vagina + ureter + cystotomy]. The exposure of the orifices of the ureters by cutting through the walls of the vagina and bladder.

- **colpo-ureterotomy** (kol"po-u-re-ter-ot'o-me). Incision of the ureter through the vagina, performed for the relief of ureteral stricture.
- colpoxerosis (kol-po-ze-ro'sis) [Gr. κόλπος vagina + ξήρωσις dryness]. Abnormal dryness of the vulva and vagina.
- colt-ill (kolt-il). An infectious catarrhal fever of young horses. See strangles.
- coltsfoot (költs'fut). See Tussilago.
- columbin (ko-lum'bin). An active principle from calumba; calumbin.
- columbium (ko-lum'be-um). A hypothetized element in the mineral samarskite, having an atomic weight of 93.1. Its symbol is Cb. It is also called niobium.
- columbo (ko-lum'bo). See calumba.
- columella (kol-u-mel'ah) [L.]. 1. A little column.
 2. In molds, the central axis of the spore-case, around which the spores are arranged. c. coch'-less, the modiolus of the cochlea. c. for'nicis, the anterior pillars of the fornix. c. na'si, the septum of the nose.
- column (kol'um) [L. colum'na] An anatomical part in the form of a pillar-like structure. The name column is now used specifically for the gray column of the spinal cord, though formerly it was used for the white columns which are now called funiculi. See illustration under funiculus c's of abdominal ring, thickened fibers of the aponeurosis of the external oblique muscle around the external abdominal ring. **anterior c.** 1 See gray c. 2 Same as ventral funiculus. **anterolateral** c., white matter between the anterior median fissure and the dorsal horn of gray matter of the spinal cord. c's of Bertin (colum'næ bertin'i), inward extensions of the cortical structure of the kidney, between the malpighian pyramids. of Burdach. See fasciculus cuneatus. Clarke's c., a tract of nerve-cells occupying the inner angle of the dorsal horn of gray matter of the spinal cord. direct cerebellar c., a tract outside of the lateral pyramidal tract. dorsal c. Same as posterior c. enamel-c., any member of the series of fibers which make up the enamel of a tooth. Called also enamel-rod. fat-c's [L colum'na the cutaneous connective tissue extending from the cutaneous connective tissue to the hair-follicles and sweat-glands Flechsig's c., Flechsig's tract. See tract. fornix c., c. of fornix. See columnæ fornicis. fundamental c. See fasciculus proprius c. of Goll. See fasciculus gracilis c. of Gowers, a mass of fibers in front of the direct cerebellar tract gray c., one of the longitudinal masses of neurons which form the gray matter of the spinal cord. There are three columns, dorsal or posterior, ventral or anterior, and lateral, middle, or intermediate These columns were formerly called horns (cornua). See illustration under funiculus. lateral c. 1. See gray c. 2. Old name for lateral funiculus. c. of Lissauer, a slender column of white matter between the posterior cornu and the periphery of the spinal cord. Its fibers arise from the spinal ganglia to pass to higher levels of the cord. mixed lateral c., the internal part of the lateral column next the gray substance. c's of Morgagni, folds of mucous membrane at the anal termination of the rectum. muscle-c., a bundle of muscle-rods or caskets filling a muscle compartment. **positive c.**, a pinkish stream of light seen when a current of high potential is passed through a tube from which the air has been partly exhausted. **posterior c.** 1. See gray c. 2. Old name for dorsal funiculus. **postero-external c.**, the outer and wider portion of the posterior column of the spinal cord. posteromedian c., the middle portion of the dorsal column of the spinal cord. posterovesicular c., the column of Clarke. Rathke's c's, ular c., the column of Clarke. Rathke's c's, two cartilages at the anterior end of the notochord. rectal c's. Same as c's of Morgagni respiratory c., the solitary fasciculus. c. of Rolando.

an eminence on the lateral edge of the oblongata. C. of Sertoli, an elongated sustentacular cell in the parietal layer of the seminiferous tubules, holding together the spermatogenic cells. spinal C., the backbone formed by the assemblage of the vertebræ. C. of Spitzka-Lissauer, a group of nerve-fibers of the cord in front of and behind the posterior cornua. Stilling's C. Same as Clarke's c. Türck's C. 1. The ventral corticospinal tract. See cerebrospinal tract, under tract. 2. The sensory bundles occupying the outer part of the crusta of the cerebral peduncle. c's of the vagina. See columnæ vaginæ. ventral C. Same as anierior c. vertebral C. See spinal c. vesicular C., a column of nerve-cells in the dorsal gray horn of the spinal cord.

columna (ko-lum'nah), pl. colum'næ [L.]. A column or pillar c. ante/rior [B N A], anterior column. c. adipo'ss. See jat-columns, under column. c. car'ness [L. "fleshy columns"], muscular projections inside the ventricles of the heart. c. extremita'tis inferio'ris, a column of intercalated nuclei in the lumbar enlargement of the ventral cornu of the spinal cord. c. extremita' tis superiò'ris, a column of intercalated nuclei in the cervical enlargement of the ventral cornu of the spinal cord c. for'nicis [B N A], either of the two columnar masses of fibers diverging from the anterior end of the body of the fornix to descend into the diencephalon; called also fornix column, anterior pillar of fornix. c. intermediolatera'lis, a longitudinal column of motor cells in the ventral horn of the spinal cord. c. latera'lis [B N A], lateral column c. media'lis. Same as colum'næ recta'les, the columns of Morgagni colum'næ rena'les | berti' ni]. See columns of Bertin, under column. col-um'næ ruga'rum, c. ruga'rum vagi'næ [B N Al, the folds on the internal surface of the vagina. colum'næ vagi'næ, the longitudinal ridges along the walls or inner surface of the vagina. c. vertebra'lis, the vertebral column.

columnella (kol-um-nel'ah) [L.]. Same as col-umella.

columning, columnization (kol'um-ing, kol'um-iz-a-shun) The supporting of the prolapsed uterus with tampons.

colyone (ko'le-ōn) [Gr. κωλύειν to hinder]. A substance produced in an organ which, being carried to other organs by the blood-stream, produces in the latter a diminution or inhibition of function. Cf. hormone.

colyonic (ko-le-on'ik). Having the inhibitory effect of a colyone.

colypeptic (ko-lip-ep'tik). See kolypeptic. colyseptic (ko-lis-ep'tik). See kolyseptic.

colytic (ko-lis-ep tik). See *kolytepiic*. **colytic** (ko-lit'ik) [Gr. κολύειν to hinder]. Inhibitory.

coma (ko'mah) [L.; Gr. κῶμα] A state of complete loss of consciousness from which the patient cannot be aroused even by the most powerful stimulation alcoholic c., stupor following an alcoholic debauch. apoplectic c., the stupor which accompanies apoplexy. diabetic c., the coma of fatal cases of diabetes. Kussmaul's c., the coma and air-hunger of diabetic acetonuria (1874). trance-c., lethargic hypnotism. uremic c., lethargic state due to uremia. c.-vigil, stupor with delirium, wakefulness, and semiconsciousness.

comain (ko'ma-in). A product of the action of camphor and iodin on sesame oil: used in tuberculosis.

comatose (ko'mat-ōs). Pertaining to or affected with coma.

comb disease (kom). See under disease.

Combretum (kom-bre'tum). A genus of tropical plants. C. pilo'sum, a shrub from the plains district of Cachar: a decoction of the leaves is used as an anthelmintic. C. sundi'acum, the

jungle plant, a shrub of the Malay States: said to be useful as a cure for the opium habit.

combustion (kom-bust'yun) [L. combus'tio]. Burning; rapid oxidation with emission of heat. spontaneous c., the alleged ignition and destruction of the living body of an alcoholic subject.

Comby's sign (kom'bez) [Jules Comby, contemporary pediatrist in Paris]. See under sign.

comedo (kom-e'do), pl. comedo'nes. 1. A black-head, a plug of dried sebum in an excretory duct of the skin, sometimes containing Dem'odex folliculo'rum. 2. A skin disease due to the presence of comedones.

comes (ko'mēz), pl. com'ites [L. "companion"].
An artery or vein which accompanies a nervetrunk.

comfimeter (kum-fim'et-er). An apparatus devised by Leonard Hill to measure the cooling power of the atmosphere at body temperature. It is used as a guide to keeping comfortable conditions in rooms. comfrey (kom'fre). See Symphytum.

comma-bacillus (kom"ah-bas-il'us) [named from its shape]. The spirillum of Asiatic cholera. See bacillus.

comma-tract (kom'ah-trakt). A comma-shaped tract in the middle of the dorso-external column of the spinal cord.

commensal (kom-en'sal) [L. com- together + men'sa table]. An organism living on or within another, but not as a parasite: used also adjectively.

commensalism (kom-en'sal-izm). Symbiosis in which one of the associates is benefited without either benefit or injury to the other.

comminuted (kom'in-u-ted) [L. comminu'tus, from com- together + minu'ere to diminish]. Broken or crushed into small pieces.

comminution (kom-in-u'shun) [L. comminu'tio]. The act of breaking, or condition of being broken, into small fragments.

Commiphora (kom-if'o-rah). See myrrh.

commissura (kom-is-u'rah) [L. "a joining to-gether," "conjunction"]. That which joins cor-responding parts to each other. c. ansa'ta, fibers which pass across the optic chiasm between the tuber cinereum and the lamina terminalis cinerea. c. ante'rior al'ba, a layer of white matter which conjoins the ventral columns of the spinal cord. c. bre'vis, the posterior part of the inferior vermiform process of the cerebellum. c. cerebel'li, the pons c. cer'ebri ante'rior, a round bundle of white fibers in the forepart of the third ventricle, in front of the crura of the fornix. c. for nicis. See c. hippocampi. c. hippocam'pi [B N A], a band of fibers connecting the hippocampi of the two sides through the body of the fornix; called also c. for nicis and fornix commissure. c. labio rum o'ris, the corners of the mouth. c. labio rum puden'di, the junction of the labia minora c. mag'na, the corpus callosum. c. me'dia [L. "middle commissure"] or c. mol'lis [L. "soft commissure"] See massa intermedia. c. oliva'rum, the transverse fibers which connect the olivary bodies to each other. c. palpebra'rum latera'lis [B N A], the external canthus of the eye. c. palpebra'rum media'lis [B N A], the internal canthus of the eye. c. poste'rior cine'rea or gris'ea, the "gray commissure" at the bottom of the posterior median fissure of the spinal cord; it connects the lateral crescents of gray matter. c. tec'ti. See commissure of tectum.

commissural (kom-is'ur-al). Pertaining to or acting as a commissure.

commissure (kom'is-ūr) [L. commissu'ra]. The band of fibers which joins corresponding right and left parts, mainly of the brain and spinal cord. ansate c. See commissura ansata, under commissura. anterior c., the band of fibers passing

transversely through the lamina terminalis and connecting the basal portions of the two cerebral hemispheres. arcuate c., the inner and upper fibers of the optic tract. Called also Gudden's c. basal c. Same as Meynert's c basal gray c., a thin sheet of gray matter which closes in the floor of the third ventricle. dorsal c., fibers crossing the midplane of the spinal cord dorsally of the ventricles. Forel's c., a structure of fibers extending across the posterior prefrontal space and joining the body of Luys of each side c. of fornix. Same as commissura hippocampi Gudden's c. See arcuate c. habenular c., a band of fibers connecting the two habenulæ just in front of the pineal body Called also superior c. inferior c. Same as postoptic c Meynert's c., nerve-fibers which extend from the floor of the third ventricle through the optic tracts to the subthalamic body. middle c. See massa intermedia. optic c., the crossing of the two optic nerves. **posterior c.**, the white band which joins the optic thalami. **postoptic c.**, a band of fibers passing transversely across the floor of the hypothalamus associated with the optic chiasm. soft c. See massa intermedia. spinal c., the transverse portion connecting the lateral halves of the spinal cord superior c. See Meynert's c. c. of tectum, a band of fibers passing transversely across the roof of the midbrain, continuing backward to the posterior commissure. ventral c., a band of fibers crossing the midplane of the nervous system ventrically of the ventricle **Wernekinck's c.**, a decussation within the pons in the middle line between the fibers of the tegmentum of the cerebral peduncles white c., the anterior commissure of the spinal cord.

commotio (kom-o'she-o) [L. "disturbance"]. A concussion; a violent shaking, or the shock which results from it c. cer'ebri, concussion of the brain. c. ret'inæ, impairment of vision following a blow on or near the eye. c. spina'lis, concussion of the spine.

communicable disease. See under disease.

communicans (kom-u'nik-anz) [L. "communicating"]. A communicating nerve. See table of nerves, under nerve.

communis (kom-u'nis) [L] Common; belonging to several, also not rare.

commutator (kom'u-ta-tor). A device for reversing or interrupting electric currents.

Comp. Abbreviation for L. compos'itus, compound. **compact** (kom-pakt'). Dense; having a dense structure.

comparator (kom'par-a-tor). A simple colorimeter consisting of a block of wood with holes in which to place the test-tubes which are to be compared, and transverse holes through which to view the colors.

comparoscope (kom-par'o-skōp). A device attached to a microscope for the purpose of comparing two slides.

compatibility (kom-pat-ib-il'it-e) [I. compatib'-ilis accordant] Suitableness for administration with another specified medicine.

compatible (kom-pat'ib-l). Suitable for administration along with some other medicine.

compensation (kom-pen-sa'shun) [L. compensa'tio, from cum together + pensa're to weigh]. The
counterbalancing of any defect of structure or
function. broken c., inability of the heart to
maintain sufficient velocity of the blood through
the arteries, so that the latter becomes stagnated,
producing symptoms of stasis.

compensator (kom'pen-sa-tor). An appliance for regulating compensating currents.

compensatory (kom-pen'sa-to-re). Making good a defect or loss; restoring a lost balance.

complaint (kom-plant'). A disease or disorder.

complaster (kom'plas-ter). A proprietary gypsum preparation for investments in dental work.

complement (kom'ple-ment). A thermolabile. ferment-like body existing normally in many serums and in cell-protoplasm. The complement is the active element in lysis, but can act only in conjunction with the amboceptor, which serves as an intermediary for fastening the complement to the cell on which it acts. The complement is to the cell on which it acts. made up of two groups, a haptophore group, by which it is attached to the complement, and a toxophore or zymophore group, which is the active portion of the complement. The complement is called also alexin, cytase, and end-body. See Ehrlich's side-chain theory, under theory. c. deflection, c. deviation. See deviation of the complement. dominant c., that one of several complements which exerts the specific action. endocellular c. See endocomplement. c. fixation. See fixation of the complement. c. inhibition. See inhibition of the complement. insulin c., the unknown substance in muscle tissue which together with insulin is able to transform ordinary alpha-beta-glucose into new glucose c. splitting, the inactivation which occurs when an active lytic serum is dialysed so that globulin is precipitated. Both the precipitate and the filtrate are inactive, but if they are combined and brought into solution by adding salt the original activity returns.

complemental, complementary (kom-ple-men'-tal, kom-ple-men'ta-re) [L. comple're to fill]. Supplying a defect, or helping to do so, making complete; accessory.

complemented (kom'ple-men-ted) Joined with complement so as to be active.

complementoid (kom-ple-men'toid). A complement that has lost its activity, the zymotoxic group being destroyed, without affecting its binding property with amboceptors. A complementoid is produced by heating a complement, and is capable of producing an anticomplement when injected into serum.

complementophil (kom-ple-men'to-fil) [L. complement + Gr. φιλεῖν to love]. Possessing an affinity for a complement, a term applied to that element of the amboceptor which becomes attached to the complement. See Ehrluh's sidechain theory, under theory.

complex (kom'pleks) [L complex'us woven together].

1. Complicated, not simple. 2. The sum or combination of various things, like or unlike, as, a complex of symptoms. See syndrome. 3. The Freudian term for a series of emotionally accentuated ideas in a repressed state (Brill) 4 That portion of an electrocardiographic tracing which represents the systole of an auricle or ventricle. anomalous c., an electrocardiographic complex which varies from the normal type. auricular c., the P wave of the electrocardiogram. See electrocardiogram. calcarine c., the hippocampus minor. Electra c., a series of symptoms attributed to suppressed sexual love of a woman for her father. father c., electra complex. Friedmann's c. See Friedmann's syndrome, under syndrome. mother c., Edipus complex. Edipus c., a scries of symptoms attributed to suppressed sexual desire of a person for his mother. sex c., the correlation between the internal secretions and the sex functions. urobilin-c., a hypothetic substance consisting of a number of urobilinogen molecules linked together, which is the form in which urobilinogen exists in the blood and tissues. ventricular c., the Q, R, S, T waves of the electrocardiogram. See electrocardiogram

complexion (kom-plek'shun) [L. complex'io combination]. 1. Physical constitution or bodily habit [old]. 2. The color and appearance of the skin of the face.

complexus (kom-pleks'us) [L.]. See table of muscles, under muscle.

complicated (kom'plik-a-ted) [L complica're to infold]. Involved; associated with other injuries, lesions, or diseases. complication (kom-plik-a'shun) [L. complica'tio, from cum together + plica're to fold]. I. A disease or diseases concurrent with another disease.

2. The concurrence of two or more diseases in the same patient.

compluetic reaction (kom-plu-et'ik). See under reaction.

component (kom-po'nent). A constituent element or part; specifically in neurology, a series of neurons forming a functional system for conducting the afferent and efferent impulses in the somatic and splanchnic mechanisms of the body active c., the component of an alternating current which is in phase with the electromotive force somatic motor c., the system of neurons which conduct impulses to the somatic effectors of the body. somatic sensory c., the system of neurons conducting impulses from the somatic receptors. splanchnic motor c., the system of neurons conducting impulses to the splanchnic receptors. splanchnic sensory c., the system of neurons conducting impulses from the system of neurons conducting impulses from the system of neurons conducting impulses from the splanchnic receptors.

compos mentis (kom'pos men'tis) [L]. Of sound mind

composition, c. powder (kom-po-zish'un). The compound powder of hayberry.

compound (kom'pownd) [L. compo'nere to place t. Made of two or more parts or intogether 2. Any substance made up of two or more kinds of materials. 3. In chemistry, a substance which consists of two or more chemical elements in union. acyclic c., an open-chain compound See under chain addition c., a compound formed by the immediate union of two or more elements aliphatic c., an open-chain compound See under chain aromatic c., a closed-chain compound See under chain. closedchain c. See under chain coal-tar closed-chain compound. See under chain. coal-tar c., a densation c., a compound which is formed by union of substances with the loss of one or more molecules. cyclic c., a closed-chain compound. diazo-c., a compound containing the group $-N_2$ — endothermic c., one whose formation is attended with absorption of heat exothermic c., a compound which is formed from its elements with evolution of heat fatty c., an open-chain heterocyclic c., a chemical subcompound stance which contains a ring-shaped nucleus composed of dissimilar elements. isocyclic c., a chemical substance which contains a ring-shaped nucleus composed of the same elements throughout. open-chain c. See under chain. paraffin c., an open-chain compound. saturated c., paraffin a chemic compound in which the combining capacities of all the elements are satisfied. sub**stitution c.**, a compound formed by the replacement of elements of a molecule by other elements. unsaturated c., a compound in which the combining capacities of all the elements are not satisfied.

compress (kom'pres) [L. compres'sus] A pad or bolster of folded linen or other material, applied so as to make pressure upon any particular part it is sometimes medicated cribriform c., one perforated with holes, like a sieve, for the escape of fluids from a wound. fenestrated c., one pierced with a hole for the discharge of matter or to admit of inspection of a sore or wound. graduated c., one made up of layers of a gradually decreasing size. Preissnitz c., a cold wet compress.

compression (kom-presh'un) [I.. compressio, from comprim'ere to squeeze together]. The act of compressing or pressing together; an action exerted upon a body by an external power which tends to diminish its volume and augment its density. c. of the brain, a condition in which the brain is compressed by fractures, tumors, blood-clots, abscesses, etc. digital c., compression of a blood-vessel by the fingers for the purpose of checking hemorrhage or of curing aneurysm. in-

strumental c., compression of a blood-vessel by instruments.

compressor (kom-pres'or) [L.]. 1. A surgical instrument for making compression upon a part. 2. A muscle which compresses any part. See muscles, table of. Deschamp's C., an instrument for the direct compression of an artery.

compressorium (kom-pres-o're-um), pl. compresso'ria [L.]. A device for making graduated pressure upon objects under microscopic examination.

Compsomy'ia macella'ria. Cochleomyia macellaria.

compulsion (kom-pul'shun). An irresistible impulse to perform some act contrary to one's better judgment or will.

compulsive (kom-pul'siv). Done under the influence of compulsion.

conalbumin (kon-al-bu'min). A non-crystalline nitrogenous substance formed during the purification of egg albumen.

conarial (ko-na're-al). Pertaining to the conarium.

conarium (ko-na're-um) [L.; Gr. κωνάριον]. The pineal body; so called from its conic shape. See *pineal body*, under *body*.

conation (ko-na'shun). In psychology, the act or power which impels to effort of any kind.

conative (kon'at-iv). Pertaining to the will power. concameration (kon-kam-er-a'shun). An arrangement in the form of connecting cavities.

concassation (kon-kas-a'shun). The act of breaking up roots or woods into small pieces in order that their active principles may be more easily extracted by solvents.

concatenate (kon-kat'en-āt) [L con together + cate'na chain] Chained together: applied to glands in the neck of children

concatenation (kon-kat-in-a'shun). A series of associated nerve-cells forming a nerve or nerve tract.

Concato's disease (kon-kah'tōz) [Luigi Maria Concato, an Italian physician, 1825-1882]. See disease. concave (kon'kāv) [L. conca'vus]. Presenting a depressed or hollow surface.

concavity (kon-kav'it-e) [L. concav'itas, from con together + ca'rus hollow]. A hollowed-out space on the surface of an organ; the hollow side, or inside, of a curved surface, organ, or line.

concavoconcave (kon-ka"vo-kon'kāv). Concave on either side.

concavoconvex (kon-ka"vo-kon'veks). Having one concave and one convex side.

concentrate (kon'sen-trāt or kon-sen'trāt) [L. con together + cen'trum center]. 1. To bring to a common center; to gather together at one point. 2. To increase the strength by diminishing the bulk of, as of a liquid, to condense.

concentration (kon-sen-tra'shun) [L. concentra'-t10]. 1. Increase in strength by evaporation. 2. A medicine which has been strengthened by the evaporation of its non-active parts. 3. The number of gram atoms or gram equivalents of the dissolved substance which are contained in a unit volume of the solution, the unit volume being either the liter or cubic centimeter. hydrogenion c., the degree of concentration of hydrogenions (the acid element) in a solution, used to indicate or express the reaction of that solution. It is usually expressed in terms of the logarithm of the figure giving the concentration, which logarithm is known as the hydrogen exponent, Ph. ionic c., the number of gram atoms or gram equivalents of an ion which are contained in the unit volume of a solution.

concentric (kon-sen'trik) [L. concent'ricus, from con together + cen'trum center]. Having a common center; extending out equally in all directions from a common center. concept (kon'sept). Same as conception (2d def.).
conception (kon-sep'shun) [L. concep'tio]. 1.
The fecundation of the ovum. 2. The image of a

thing in the mind. **imperative c.**, a false idea which dominates a person's actions.

conceptive (kon-sep'tiv). Able to conceive.

conceptus (kon-sep'tus) [L.]. The whole product of conception throughout the entire period of gestation.

concha (kong'kah), pl. con'chæ [L.; Gr. κόγχη shell]. 1. A shell; oyster-shell. 2. The hollow of the external ear. c. auric'ulæ, the hollow of the external ear. nasal c., c. nasa'lis, a turbinate bone. c. santori'ni, the fourth turbinate bone (in most cases the posterior part of the superior turbinate). c. sphenoida'lis [B N A], one of the sphenoid turbinate bones.

conchairamidin (kong-ki-ram'id-in). A crystalline alkaloid, C₂₂H₂₆O₄N₂ H₂O, isomeric with chairamin from the bark of *Remijia purdieana*.

conchairamin (kong-ki'ram-in). A crystalline alkaloid, C₂₂H₂₆O₄N₂,H₂O, isomeric with chairamin, from the bark of *Remijia purdieana*.

conchiform (kon'kif-orm) [L. con'cha shell + for'ma shape]. Shaped like one-half of a bivalve shell.

conchinin (kon'kin-in). Same as quinidin.

conchiolin (kong-ki'o-lin) [Gr. κόγχη shell]. A substance, isomeric with ossein, from the shells of certain mollusks.

conchitis (kong-ki'tis). An inflammation of the concha.

conchoidal (kong-koi'dal). Like a shell.

conchoscope (kong'ko-skōp) [Gr. κόγχη shell + σκοπείν to inspect]. A speculum for exploring the interior of the nose.

conchotome (kong'ko-tōm) [Gr. κόγχη shell + τομή a cut]. An instrument for the surgical removal of the turbinate bones.

Concis. Abbreviation for L. conci'sus, cut.

concoction (kon-kok'shun) [L. concoc'tto]. 1. A mixture of medicinal substances usually prepared by the aid of heat. 2. The digestive process.

concomitant (kon-kom'it-ant) [L. concom'itans, from cum together + co'mes companion]. Accompanying; accessory; joined with another.

conconscious (kon-kon'shus). Prince's term used to denote dissociated mental processes of which the subject is not aware.

concrement (kon'kre-ment) [L. concremen'tum]. A deposit of lime-salts in a tissue, chiefly as a result of a tubercular necrosis or of an abscess formation.

concrescence (kon-kres'ens) [L. con together + cres'cere to grow]. A growing together; a union of parts originally separate. In dentistry, the union of the roots of two approximating teeth by a deposit of cementum.

concrete (kon-krēt') [L. concre'tus]. Solidified or hardened after having been more or less fluid.

concretion (kon-kre'shun) [L. concre'tio, from cum together + cres'cere to grow]. 1. A calculus or inorganic mass in a natural cavity or in the tissues of an organism. 2. Abnormal union of adjacent parts. 3. A process of becoming harder or more solid. alvine c., a bezoar, or calculus, in the stomach or intestine. calculous c. Same as calculus, arthritic. cutaneous c., a concretion in the subcutaneous tissue preputial c., a concretion formed beneath a tight foreskin through deposit of urinary salts on the accumulated smegma.

concusconin (kon-kus'ko-nin). An alkaloid, C₂₃-H₂₆O₄N₂, from cinchona, isomeric with cusconin.

concussion (kon-kush'un) [L. concus'sio]. A violent jar or shock, or a condition which results from it. c. of the brain, a condition caused by violent blows upon the head, attended with vertigo, loss of consciousness, nausea, weak pulse, and slow respiration. c. of the labyrinth, deaf-

ness with tinnitus, resulting from a blow on or explosion near the ear. c. of the retina, impairment of vision from a blow near the eye. c. of the spine, a condition resulting from blows and shocks affecting the cord, attended by muscular weakness and atrophy, pains in limbs and back, anesthesia, and mental and physical deterioration.

concussor (kon-kus'or) [L.]. An instrument for applying gentle strokes in massage

condensation (kon-den-sa'shun) [L. condensa'tio, from con together + densa're to make thick].
 The act of rendering, or process of becoming, more compact.
 A Freudian term for a fusion of events, thoughts, and mental images.

condenser (kon-den'ser). 1. A vessel or apparatus for condensing gases or vapors. 2. A device for condensing the light upon the object which is to be examined with the microscope. Abb6's c., an attachment to a microscope consisting of a mirror and a series of wide-angled, achromatic lenses placed beneath the stage to give strong illumination. cardioid c., a special substage condenser that gives dark-field illumination for ultramicroscopic vision

condiment (kon'dim-ent) [L. condimen'tum, from conde're to pickle] A sauce or relish for food.

condom (kon'dum, kun'dum) [a corruption of Condon, the inventor]. A sheath or cover for the penis worn during coitus to prevent impregnation or infection.

conductance, conductivity (kon-duk'tans, konduk-tiv'it-e). Capacity for conducting or ability to convey.

conduction (kon-duk'shun) [L. conduc'tio] The transfer of sound-waves, heat, nerve influence, or electricity. aërial c., the passing of sound-waves to the ear through the air. aërotympanal c., the conduction of sound to the sensorium through the air and tympanum. avalanche c., the conduction of nerve-currents which takes place when the terminals of one neuron come in contact with the bodies of several neurons. bone-c., the conduction of sound to the sensorium through the bones of the skull. osteotympanic c. Same as bone-c.

conductor (kon-duk'tor) [L.]. 1. A substance or part that possesses conductivity. 2. A grooved director for surgeons' use.

condurangin (kon-du-rang/gin). Either of two poisonous glucosids from condurango.

condurango (kon-du-rang'go) [Spanish American] The bark of Condurango blanco Marsde'nia conduran'go (Gonol'obus conduran'go), a South American asclepiadaceous plant, formerly used for cancer: a bitter tonic and stomachic. Dose of wine, ½-1 floz (15-30 c c.); of tincture, 1-2 dr. (4-8 c c.); of fluidextract, 20-30 min. (1.333-2 c.c.).

Condy's fluid (kon'dēz) [Henry Bollmann Condy, English physician of the nineteenth century]. See fluid.

condylar (kon'dil-ar). Pertaining to a condyle.

condylarthrosis (kon"dil-ar-thro'sis) [Gr. κόνδυλος knuckle + ἄρθρωσις joint]. Articulation by means of a condyle.

condyle (kon'dil) [L. con'dylus; Gr. κόνδυλος knuckle]. The rounded eminence at the articular end of a bone. external c., lateral c. 1. The outer condyle of the femur. 2. The external tuberosity of the tibia. medial c. 1. The inner condyle of the femur. 2. The internal tuberosity of the tibia. occipital c., one of two oval facets on the under surface of the occipital bone, one on each side of the foramen magnum, for articulation with the atlas.

condylectomy (kon-dil-ek'to-me) [condyle + Gr. εκτομή excision]. Surgical removal of a condyle.

condylion (kon-dil'e-on) [Gr. κονδύλιον knob]. The point at the lateral tip of the condyle of the lower faw.

condyloid (kon'dil-oid) [Gr. κόνδυλος knuckle + είδος form]. Resembling a condyle or knuckle.

condyloma (kon-dil-o'mah), pl. condylo'mata [Gr. κονδύλωμα wart]. 1. A wart-like excrescence near the anus or vulva; especially the flat, moist papule of secondary syphilis. 2. In veterinary medicine, a hyperplasia of the papillary layer of the skin in cloven-hoofed animals, forming in the interdigital spaces and resulting from chronic inflammation. c. acumina'tum. See verruca acuminata. flat c. Same as c. latum. c. la'tum, a broad and flat syphilitic condyloma, often with a yellowish discharge. Called also flat c., mucous patch, and plaque muqueuse. pointed c. See verruca acuminata c. subcuta'neum. Same as molluscum epith liale.

condylomatoid (kon-di-lo'mat-oid). Resembling a condyloma.

condylomatous (kon-dil-o'mat-us). Of the nature of a condyloma.

condylotomy (kon-dil-ot'o-me) [Gr. κόνδυλος condyle + τέμνειν to cut]. Excision or division of a condyle or of condyles.

condylus (kon'dil-us) [L.]. Condyle. c. latera'-lis [B N A], lateral condyle c. media'lis [B N A], median condyle. c. occipita'lis [B N A], occipital condyle.

cone (kōn) [Gr κωνος; L. co'nus]. A solid figure adjusting c's, or body tapering to a point. adjusting c's, a pair of hollow cones used in measuring the distance between the axes of the eyes when they are parallel. antipodal c., the cone of rays opposite the spindle-fibers of the amphiaster. attraction c., a small cone-shaped projection from the surface of the ovum at the point where the spermatozoon attaches itself. bifurcation c., the cone-shaped structure at the bifurcation of a ndrite fertilization c. Same as attraction fibrous c. Same as corona radiata Haldendrite ler's c's, the coni vasculosi. implantation c., the cone-shaped insertion of a neuraxon in its neuron. keratosic c's, horny elevations on the hands and feet in gonorrheal rheumatism. c. of light, the triangular reflection of light seen on the membrana tympani; called also Politzer's c ocular c., a cone of light in the eye, the base being on the cornea, the apex on the retina. Politzer's c. Same as c. of light. primitive c., the cone-like arrangement of the collecting tubules in the kidney. retinal c's, the specialized outer ends of the visual cells; these with the rods form the second of the ten layers of the retina. visual c. Same as ocular c.

cone nose. See Lamus.

conephrin (ko-nef'rin). A proprietary local anesthetic containing cocain hydrochlorid, paranephrin, and sodium chlorid.

conessi (ko-nes'i). The bark of Wright'ia (Holar-rhena) antidysenter'ica, an Asiatic apocynaceous tree largely used locally in treating dysenteries.

conessin (ko-nes'in). A white, poisonous alkaloid, C₂₄H₄₀N₂, from various species of *Holarrhena* It is a cardiac poison and is said to have amebacidal properties

confabulation (kon-fab-u-la'shun). A symptom of certain forms of insanity consisting in making ready answers and reciting experiences without regard to truth.

confectant (kon-fek'tant). A proprietary disinfectant prepared from phenols.

confectio (kon-fek'she-o) [L.]. See confection.
c. o'pii, confection of opium; prepared from opium, aromatic powder, and honey: narcotic. Dose, 5-20 gr. (0.325-1.3 gm.).
c. ro'sse, confection of rose; prepared from red-rose petals, sugar, rose-water, and honey: used as a vehicle.
c. scammo'nii, confection of scammony; prepared with aromatics and honey: purgative. Dose, 10-30 gr. (0.666-2 gm.).
c. sen'nse, confection of senna, cassia

fistula, tamarind, coriander oil, prune, and fig: laxative. Dose, 2 dr. (8 gm.). c. sul'phuris, confection of sulphur: a laxative. Dose, 1-2 dr. (4-8 gm.). c. terebin'thinæ, a carminative and styptic preparation of oil of turpentine. Dose, 1-2 dr. (4-8 gm.).

confection (kon-fek'shun) [L. confec'too]. Any medicated conserve, sweetmeat, or electuary. See confectio. Damocrates's c., a confection of some thirty ingredients, the chief of which were agaric, frankincense, galbanum, cinnamon, garlic, gentian, ginger, opium, etc.

confertus (kon-fer'tus) [L.]. Close together; confluent.

configuration (kon"fig-u-ra'shun). The general form of a body, in chemistry, the arrangement in space of the atoms of a molecule.

confinement (kon-fin'ment). Childbed, or the puerperal condition.

con'fluens sin'uum [B N A]. Same as torcular herophili.

confluent (kon'fluent) [L. con'fluens running together]. Becoming merged; not discrete.

conformator (kon'for-ma-tor) [L]. A device for determining the outlines of the head.

confrication (kon-frik-a'shun) [L. confrica'tio]. The rubbing of a drug to the condition of a powder.

confrontation (kon-frun-ta'shun) [L. con together + frons face]. The bringing of two patients together for diagnostic purposes.

confusion (kon-fu'zhun). See amentia, 2d def.

cong. An abbreviation for L con'gius, a gallon.

congelation (kon-jel-a'shun) [L. congela'tio]. Frost-bite or freezing.

congener (kon'jen-er). A congenerous muscle.

congenerous (kon-jen'er-us) [L. con together + ge'nus race]. Having a common action or function: applied mainly to certain muscles.

congenital (kon-jen'it-al) [L. congen'itus born together]. Born with a person; existing at or before birth.

congested (kon-jes'ted). Overloaded, as with blood, in a state of congestion.

congestin (kon-jes'tin). A poisonous principle from Anemone sculta'tus, causing irritation of the skin.

congestion (kon-jest'yun) [L. conges'tto, from conge'rere to heap together]. Excessive or abnormal accumulation of blood in a part. active c., determination of blood to a part on account of the dilatation of the lumen of its blood-vessels. fluctionary c., active congestion. functional c., increased flow of blood to an organ during the performance of its function. hypostatic c., congestion of the lowest part of an organ by reason of the action of gravity when the circulation is much enfeebled. neuroparalytic c., that which results from paralysis of the constrictor fibers of the vasomotor nerves. neurotonic c., that which is due to irritation of the vasodilator nerves. passive c., the congestion of a part due to the obstruction to the escape of blood from the part. physiologic c., the congestion that occurs in secreting glands during their functional activity. venous c. Same as passive c.

congestive (kon-jes'tiv). Associated with or caused by congestion.

congius (kon'je-us) [L. for "gallon"]. A gallon: abbreviated to cong.

conglobate (kon'glo-bāt) [L. congloba'tus]. Neither conglomerate nor compound: used of certain glands.

conglomerate (kon-glom'er-āt) [L. con together + glomera're to heap]. Heaped together. See gland. conglutin (kon-glu'tin). A protein from almonds and from seeds of various leguminous plants A similar substance from goat serum is called auxylisin.

- conglutinant (kon-glu'tin-ant) [L. conglutina're to glue together]. Promoting union, as of the lips of a wound.
- conglutination (kon"glu-tin-a'shun) [L. conglutina'lio]. 1. The abnormal adherence of parts to each 2. Agglutination in which the action of agglutinating sera is augmented by a substance existing in the ox serum.
- conglutinin (kon-glu'tin-in). A colloidal sub-stance in beef-serum which has the property of causing a characteristic clumping and increased lysis of red blood-cells when treated with a heated specific hemolytic serum and fresh complement.
- Congo-red (kon'go-red). A red dye, [C₆H₄ N₂ C₁₀-H₆(NH₂) SO₂ ()Na₂, the sodium salt of diphenyl-diazo-binaphthionic acid, turned blue by HCl. used in the study of the gastric juice. It is used as an indicator and has a PH range of 3 to 5, being blue at 3 and red at 5.

CON, H. Urea.

- conhydrin (kon-hi'drin). A poisonous crystallizable alkaloid, C₆H₉NH.CHOH CH₂.CH₃, from Coni'um macula'tum.
- coni vasculo'si (ko'ni vas-ku-lo'si) [L.]. The conic masses which make up the globus major of the epididymis.
- coniasis (ko-ni'as-is) [Gr. κόνις dust]. Dust in the gall-bladder or bile-ducts, in contradistinction to calculus (Merle).
- conic, conical (kon'ik, kon'ik-al). Cone-shaped. conicein (kon-is-e'in). Any one of a series of artificial alkaloids with the formula C₈H₁₅N.
- conidia (ko-nid'e-ah). Plural of conidium.
- conidial (ko-nid'e-al). Pertaining to, or of the nature of, conidia; bearing conidia.
- conidiophore (ko-nid'e-o-fōr) [L. conidium + Gr. φόρος bearing]. The branch of the mycelium of a fungus which bears conidia.
- Conidiospora'les. An order of fungi.
- conidiospore (ko-nid'e-o-spōr) [Gr. κονίδιον a particle of dust + spore]. Same as conidium.
- conidium (ko-nid'e-um), pl conid'ia. An asexual spore formed by splitting off from the summit of a conidiophore. See spore.
- coniferin (ko-nif'er-in). The glucosid of the fir It yields glucose and coniferyl altree, C₁₆H₂₂O₈ cohol. From it vanillin is prepared.
- coniin, conin (ko'ne-in, ko'nin). A liquid alkaloid from conium, C₈H₁₇N. It is narcotic, and is sometimes used locally for relieving pain. is sometimes used locally for relieving pain. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ min. (0 015-0.03 c c.). c. hydrobromid, a salt in colorless crystals: $C_8H_{17}N$ HBr. Dose in cardiac asthma, $\frac{1}{20} - \frac{1}{12}$ gr. (0.003-0.005 gm.).
- coniism (ko'ne-izm). Poisoning by conium
- coniology (ko-ne-ol'o-je) [Gr. κόνις dust + λόγος treatise]. The scientific study of dust, its influence, The scientific study of dust, its influence, and effects.
- coniometer (ko-ne-om'et-er). Same as konometer. coniosis (ko-ne-o'sis) [Gr. κόνις dust]. A diseased state caused by the inhalation of dust.
- Conium (ko-ne'um) [L; Gr. κώνειον]. A genus of umbelliferous plants: the hemlocks. The dried unripe fruit of *C. macula'lum*, poison hemlock, is a narcotic and sedative, used mainly as a palliative in neuralgia and cancerous sores; also in chronic rheumatism, asthma, and phthisis. Dose of alcoholic extract, $\frac{1}{2}$ -2 gr. (0.033-0.133 gm); of fluidextract, 2-5 min. (0.133-0.333 c.c.); of tincture, 5-30 min. (0.333-2 c.c.)
- conjugata (kon-ju-ga'tah) [B N A]. The conjugate diameter of the pelvis. See diameter. The conjuve'ra, the diameter of the pelvis measured from the upper and posterior part of the pubic symphysis to the second sacral ligament.
- conjugate (kon'ju-gāt) [L. conjuga'tus yoked to-gether]. 1. Paired, or equally coupled. 2. The conjugate diameter. See diameter. external c., internal c. See under diameter.

- conjugation (kon-ju-ga'shun) [L. conjuga'tio a blending]. The union of one organism with another for the exchange of nuclear material.
- conjunctiva (kon-junk-ti'vah) [L.]. The delicate membrane that lines the eyelids (palpebral conjunctiva) and covers the eyeball (bulbar or ocular conjunctiva) in front.
- conjunctival (kon-junk-ti'val). Pertaining to the conjunctiva
- conjunctivitis (kon-junk-tiv-i'tis). Inflammation of the conjunctiva. acute contagious or epidemic c., a mucopurulent inflammation of the conjunctiva occurring in epidemic form and caused by the Koch-Weeks bacillus. Called also pink-eye. atropin c., follicular conjunctivitis from continued use of atropin. catarrhal c., a mild form due to cold or irritation. croupous c., a variety associated with the formation of a whitish-gray membrane. diphtheric c., a purulent form due to the Klebs-Loffler bacıllus. Egyptian c. (Larrey, 1802) See trachoma follicular c., a form characterized by the round or pinkish bodies in the retrotarsal fold. gonorrheal c., a severe form caused by infection with gonococci granular c. See trachoma mem-branous c. croupous conjunctivitis Moraxbranous c., croupous conjunctivitis Morax-Axenfeld's c., a form of conjunctivitis due to the diplococcus of Morax and Axenfeld molluscum c., conjunctivitis due to molluscum con-Parinaud's c., infectious conjunctagiosum tivitis of animal origin c. petrif'icans, a variety of conjunctivitis marked by the formation of deposits of chalky matter and attended with necrosis. phylctenular c., a variety marked by small vesicles or ulcers, each surrounded by a red-dened zone. **prairie c.**, chronic conjunctivitis marked by white spots on the conjunctiva of the lids. purulent c., a variety characterized by a creamy discharge spring c., a form that recurs every spring, and sometimes lasts until late in the autumn. Called also vernal c. vernal c. See spring c Widmark's c., congestion of the inferior tarsal conjunctiva, with occasionally slight stippling of the cornea
- conjunctivoma (kon-junk-tiv-o'mah). of the eyelid made up of conjunctival tissue.
- conjunctivoplasty (kon-junk-ti'vo-plas-te) [conjunctiva + Gr πλασσειν to form]. Repair of a defect of the cornea by means of flaps from the bulbar conjunctiva; conjunctival keratoplasty.
- connectivum (kon-ek-ti'vum) [L.]. The connective tissue.
- Connell's suture (kon'elz) [F. Gregory Connell, American surgeon, born 1864]. See suture.
- Connellan-King diplococcus [John J. nellan, New York pathologist, and James Joseph King, New York laryngologist]. See diplococcus.
- conoid (ko'noid) [Gr κωνοειδής] 1. Shaped like a cone; coniform. 2. A proprietary cone of cotton-1. Shaped like a wool impregnated with volatile oils for insertion into the nostrils.
- Conolly's system (kon'ol-ēz) [John Conolly, English alienist, 1705-1866]. The system of non-restraint for treating the insane.
- conomyoidin (ko"no-mi-oi'din) [Gr κῶνος cone + μῶς muscle + είδος form]. A protoplasmic material within the rods of the retina which expands and contracts under the influence of light, causing the cones to shift.
- conophthalmus (kon-of-thal'mus) [Gr κωνος cone + δφθαλμός eye]. Staphyloma of the cornea.
- Conorhinus (ko-no-ri'nus) [Gr. κῶνος cone + ¡ols nose]. A genus of hemipterous insects, now known as Lamus.
- conquinamin (kon-kwin'am-in). An alkaloid, C19-H₂₄O₂N₂, from cinchona bark, isomeric with quin-
- conquinin (kon-kwin'in). Quinidin.
- Conradi's line, medium (kon-rah'dez) [Andrew

295

Christian Conradi, Norwegian physician of the nineteenth century]. See line and medium.

Cons. Abbreviation for L. conser'va, keep.

consanguinity (kon-san-gwin'it-e) [L. consanguin-itas]. Kinship: relationship by blood.

consciousness (kon'shus-nes) [L. con'scius aware]. Responsiveness of the mind to the impressions made by the senses. double c., a hypnotic or somnambulistic condition in which the patient seems to lead two lives, completely forgetting in one state the experiences of the other.

consensual (kon-sen'shu-al) [L. consen'sus agreement]. Excited by reflex stimulation.

conservancy (kon-ser'van-se). The sum of hygienic and preservative legislation, the care of things that tend to restore and maintain public

conservation (kon-ser-va'shun) [L. conserva're to keep]. Preservation, as of drugs and medicines, from injury, or of the health and strength of a patient c. of energy, the principle that the total of energy is constant, none being created or lost in conversion from one form to another.

conservative (kon-ser'vat-iv) [L. conserva're to Aiming at the preservation of health preservel or at the restoration and repair of parts.

conserve (kon'serv) [L. conser'va]. A confection, electuary, or medicated sweetmeat.

consilia (kon-sil'e-ah). Letters published by physicians of the 15th to 17th centuries, outlining the semeiology and treatment of diseases under their observation.

consolidant (kon-sol'id-ant) [L. consolida're to 1. Promoting the healing or union make firm]. of parts. 2. A healing medicine or application.

consolidation (kon-sol-id-a'shun) [L. consolida'tio]. Solidification, as of a lung in pneumonia.

consolute (kon'so-lūt). Perfectly miscible.

consonant (kon'so-nant) [L. con with + sona're to soundl. Any vocal sound other than a vowel sound

constant (kon'stant) [L. con'stans standing together]. 1. Not failing; remaining unaltered. 2. A datum, fact, or principle that is not subject to change. Ambard's c. See Ambard's formula, under formula. Avogadro's c., the number of molecules in one gram molecule, $N = 6.062 \times 10^{-23}$. dielectric c., the dielectric value of any substance compared with air, which is taken as 1. Planck's c., h = 6557 × 10⁻²³ erg sec Called also quantum constant

constellation (kon-stel-a'shun). A term used by Prof. N. O Lendeloo, of Leiden, to indicate all the factors, with their mutual influences upon one another, that determine any particular action or effect.

constipated (kon'stip-a-ted). Affected with constipation: costive

constipation (kon-stip-a'shun) [L. constipa'tio a crowding together]. Infrequent or difficult evacuation of the feces; retention of the feces. atonic c., constipation due to intestinal atony. gastro-jejunal c., constipation due to reflex inhibition from some disease of the gastro-intestinal tract. **proctogenous c.**, constipation due to some abnormality of the defecation reflex owing to which fecal masses in the rectum do not excite expulsion. spastic c., constipation marked by spasmodic constriction of a portion of the intestine: seen in neurasthenia.

constitution (kon-sti-tu'shun) [L. constitu'tio].

The make-up or functional habit of the body. In chemistry, the arrangement of atoms in a molecule. arterial c., that bodily constitution in which the blood contains much fibrin and a large proportion of red corpuscles. **carbonitrogen c.**, in homeopathy, a constitution marked by slow oxidation of the blood. Carolina criminal c. (Constitutio crimina'lis Caroli'na). An ordinance issued by Charles

V in 1533 authorizing judges to summon physicians and midwives as expert witnesses in medicolegal cases. The earliest important document in forensic medicine. epidemic c., that peculiar constitution of the air which causes epidemics. hydrogenoid c., a temperament in which the subject cannot tolerate moisture. ideo**obsessional c.**, a peculiar psychic constitution marked by a tendency to worrying, fretting, exaggerated doubts, and excessive introspection. lymphatic c., a condition of hyperplasia of the lymphatic system. neuropathic c., that quality of mind and body which predisposes to nervous disease. **vasoneurotic c.**, a constitution characterized by instability of the vasomotor mechanism.

constitutional (kon-sti-tu'shun-al). 1. Affecting the whole constitution of the body; not local. 2. Pertaining to the constitution.

constriction (kon-strik'shun) [L con together + strin'gere to drawl. 1. A constricted part or place; a stricture. 2. A morbid sensation, as of tightness.

constrictor (kon-strik'tor) [L]. 1. Any muscle which draws together or contracts any part. See muscles, table of. 2. An instrument used in compression.

constructive (kon-struk'tiv) Pertaining to any process of construction, anabolic.

consult (kon-sult') [L consul'tus]. A skilled adviser or practitioner.

consultant (kon-sul'tant) [L consulta're to counsell A consulting physician or surgeon.

consultation (kon-sul-ta'shun) [L. consulta'tio].

A deliberation of two or more physicians with respect to the diagnosis or treatment of any particular case.

consumption (kon-sump'shun) [L. consump'tio a wasting]. A wasting away of the body, espevasting. A wasting away of the body, especially phthisis or pulmonary tuberculosis. See phthisis galloping c., phthisis which runs an exceptionally rapid course. luxus c., the eating or digestion of food in excess of the real needs of the body.

consumptive (kon-sump'tiv). 1. Of the nature of consumption. 2 Affected with consumption.
3 A person who is affected with tuberculosis of the lungs.

Cont. Abbreviation for L. coniu'sus, bruised.

contact (kon'takt) [L. contac'tus a touching together]. I A mutual touching of two bodies or persons. 2. The completing of an electric circuit. balancing c., the contact of the disto-buccal cusp of a lower second molar with the mesiolingual cusp of an upper second molar when the jaw is moved laterally. **complete c.**, contact of the entire proximal surface of one tooth with the entire proximal surface of the adjoining tooth. direct c., immediate c., the touching by a healthy person of a diseased body, whereby a contagious disease may be communicated. indirect c., mediate c., the propagation of a contagious disease by the air, by fomites, or by some other medium, with no direct touch of the sick by the infected person. proximal c., proximate c., touching of the adjoining surfaces of two teeth. weak c., contact in which one tooth barely touches its neighbor.

contagion (kon-ta'jun) [L. conta'gio contact, infection]. 1. The communication of disease by mediate or immediate contact or by effluvia. See insection. 2. A contagious disease 3. A contagium. direct c., immediate c., contagion from direct contact with a sick person. mediate c., contagion conveyed by a person or object from the sick to the well. psychic c., contagion of a nervous disorder through mental influence, as of imitation.

contagiosity (kon-ta-je-os'it-e). The degree of contagiousness of a disease.

contagious (kon-ta'jus) [L. contagio'sus]. Propagated by contagion; transmitted from one person to another. Cf. infectious.

contagium (kon-ta'je-um) [L.]. Any virus or morbific matter which may transmit a disease.
 c. vi'vum, any living organism, animal or vegetable, which is or may become the germ of any communicable disease.

contamination (kon-tam-in-a'shun) [L. contamina'tio, from con together + tan'gere to touch].
I. Infection of the person or of matter by contact.
The Freudian term for a fusion of words.

contemplative (kon-tem'pla-tiv). A pervert who produces a sexual orgasm by an act of the imagination.

content (kon'tent). That which is contained within a thing. latent c., the thing signified in a dream. manifest c., the outward form of a dream.

contiguity (kon-tig-u'it-e) [L. contig'uus in contact]. 1. Contact or close proximity. 2. A joint as contrasted with a continuous bone. 3. Continuity. solution of c., separation of parts which are normally in contact, dislocation.

contiguous (kon-tig'u-us) [L. contig'uus]. In contact or nearly so.

Contin. Abbreviation for L. continue'tur, let it be continued.

continence (kon'tin-ens) [L. continen'tia]. Self-restraint, especially with respect to sexual indulgence.

continued (kon-tin'ūd). Having no remission, intermission, nor interruption.

continuity (kon-tin-u'it-e) [L. continu'itas, uninterrupted succession]. The quality of being continuous; a union of parts so complete that they cannot be separated without laceration or fracture. amputation in c., amputation through a bone and not through a joint. solution of c., separation by fracture, rupture, or division of parts normally continuous.

continuous (kon-tin'u-us) [L. contin'uus]. Not interrupted; having no interruption.

contour (kon-toor') [Fr]. The normal outline or configuration of the body or of a part.

contoured (kon'toord). Having an irregularly undulating outline or surface, said of bacterial colonies.

contouring (kon-toor'ing). The restoration of a lost form to a part.

contra-angle (kon'trah-ang'l). A double angle in the shank of an instrument by which the edge or the point is brought into the axis of the handle.

contra-aperture (kon-trah-ap'er-tūr) [L. con'tra against + apertu'ra opening]. A second opening made in an abscess to facilitate the discharge of matter.

contraception (kon-trah-sep'shun). The prevention of conception or impregnation.

contraceptive (kon-trah-sep'tiv) [L. con'tra against + conception]. Anything used to prevent conception.

contractile (kon-trak'tīl) [L. con together + lra'-here to draw]. Having the power or tendency to contract in response to a suitable stimulus.

contractility (kon-trak-til'it-e). Capacity for becoming short in response to a suitable stimulus. galvanic c. See galvanocontractility. idiomuscular c., a contractility peculiar to wasted or degenerated muscles. neuromuscular c., normal, as distinguished from idiomuscular, contractility.

contractio prævia (kon-trak'she-o pre've-ah) [L.]. Contraction of the lower segment of the uterus in front of the presenting part of the fetus.

contraction (kon-trak'shun) [L contrac'tio]. 1. A shortening, as of a muscle in the normal response to a nervous stimulus. 2. A morbid or pathologic shortening or shrinkage. anodal closure

c., clonic contraction of muscles at the anode when the electric circuit is closed. anodal opening c., clonic contraction of muscles at the anode when the electric circuit is broken. automatic **ventricular c.**, a ventricular contraction caused by an impulse formed in the auriculoventricular node. **carpopedal c.**, a kind of tetany of infants, with flexing of the fingers, toes, elbows, and knees, and a general tendency to convulsions. **cathodal closure c.**, clonic contraction of muscles at the cathode on the closure of an electric circuit. **cathodal opening** c., clonic muscular contraction at the cathode on the opening of an electric circuit. cicatricial c., the shrinkage of a cicatrix or a deformity due thereto. clonic c., one in which the muscle is alternately contracted and relaxed. closing c. See under clonus. Dupuytren's c., a contracted condition of the fingers and palm due to inflammatory hyperplasia of their tissues **Dupuytren's c.**, false, a contracted state of the palm and fingers due to injury of the palmar fascia. escaped ventricular c. Same as automatic ventricular c. fibrillary c's, abnormal spontaneous contractions occurring successively in different bundles of the fibers of a diseased muscle. fixation-c. Same as Westphal's c. front-tap c., a contraction of the gastrocnemius on tapping the muscles of the leg. galvanotonic c., a tonic muscular contraction produced by a continuous electric current. Gowers's c. Same as front-tap c. hour-glass c., contraction of an organ (as the stomach or uterus) at or near the idiomuscular c., a contraction promiddle duced by direct stimulation of a wasted muscle. isometric c., change in tension of a muscle whose extremities are fixed, upon the application of a stimulus. **isotonic** c., contraction of a muscle with approximation of its extremities. **myotatic** c., contraction or irritability of a muscle brought into play by sudden passive stretching or by tapping on its tendon. opening c. See under clonus. paradoxic c., the contraction of a muscle caused by the passive approximation of its extremities. rheumatic c. Same as telany. c.-ring of Bandl. See ring of Bandl, under ring. tetanic c., tonic c., one during which the muscle remains tense for some time. tone c., muscular contraction developing slowly and a muscular contraction developing slowly and phase of relaxation. **West**showing a prolonged phase of relaxation. phal's c., involuntary (reflex) contraction of a muscle caused by approximating its extremities; observed in paralysis agitans and in various spinal affections.

contracture (kon-trakt'yur) [L. contractu'ra]. A contraction. a shortening or distortion. It may be permanent, as from shrinkage of muscles or scars; or spasmodic, from a sudden stimulus. functional c., one that disappears during unconsciousness. nurses' c., tetany in women who are giving suck. organic c., one that is permanent and continuous. veratrin c., a peculiar type of muscular contraction produced by injecting a muscle with veratrin. It is marked by prolongation of the relaxation phase of the contraction Volkmann's c., a contraction of the fingers and sometimes of the wrist, with loss of power, developing rapidly after a severe injury in the region of the elbow-joint.

contradolin (kon-trah-do'lin). A combination of acetamid, phenol, and salicylic acid antiseptic and analgesic. Dose, 4-8 gr. (0.25-0 5 gm.).

contrafissura, contrafissure (kon-trah-fish-u'-rah, kon-trah-fish'ur). A fracture in a part opposite from that in which the blow is received.

contra-indicant (kon-trah-in'dik-ant). Rendering any particular line of treatment undesirable or improper.

contra-indication (kon"trah-in-dik-a'shun). Any condition, especially any condition of disease, which renders some particular line of treatment improper or undesirable.

- contralateral (kon-trah-lat'er-al) [L. con'tra opposite + la'tus side]. Associated in action with a similar part on an opposite side.
- contraluesin (kon-trah-lu'es-in). 1. A mixture of sozoidolate of mercury, quinin, and salicylic acid, given intramuscularly in syphilis. 2. An emulsoid, containing in each cubic centimeter 0.1 gm. mercury amalgamated with gold, 0.01 gm. iodin, and 0.001 gm. arsenic: used for the treatment of syphilis.
- contramin (kon'trom-in). Diethyl-dithio-carbamate, dietyl-ammonium, SNH₂(C₂H₅)₂CSN(C₂-H₅)₂, a white, crystalline, powder, soluble in water used intravenously and intramuscularly in syphilis, and locally in chronic ulcerations.
- contrastimulant (kon-trah-stim'u-lant) [I. con'-tra against + stimulant] I Counteracting or opposing stimulation. 2. A depressant medicine.
- contrastimulism (kon-trah-stim'u-lizm). The systematic use of contrastimulant medicines or appliances.
- contrastimulus (kon-trah-stim'u-lus) [I.. con'tra against + stimulus]. A remedy, force, or agent which opposes stimulation.
- contrast-stain (kon'trast-stan). See counter-stain.
- contratoxin (kon-trah-toks'in) [L. con'tra against + toxin]. A proprietary name for one of several normal serums derived from animals possessing natural immunity to the particular diseases for which the serum is to be used.
- contratussin (kon-trah-tus'in). A proprietary whooping-cough preparation.
- **contravolitional** (kon"trah-vo-lish'un-al). Done in opposition to the will; involuntary
- contrayerva (kon-trah-yer'vah) [Port.]. The root of *Dorste'nua brasilien'sis*: tonic, stimulant, and diaphoretic. Dose in powder, 30 gr. (2 gm).
- contrecoup (kontr-koo') [Fr.]. Injury resulting from a blow on a remote part
- contrectation (kon-trek-ta'shun) [L. contrecta're to handle] The fondling of a person of the opposite sex, "spooning" (Moll).
- Cont. rem. Abbreviation for L. continue'tur remc'-dia, let the medicine be continued.
- control (kon-trol') [Fr. contrôle a register]. An experiment or other standard by which to test the correctness of observations. c.-animal, an animal not immune, which is exposed to the effects of a virus, an immune animal being submitted to the same treatment at the same time. associative automatic c., nerve impulses which arise in the corpus striatum and act upon the final common pathway, and thus upon the muscles. birth c., control or regulation of childbearing, especially by the use of contraceptives. c.-experiment, any experiment made under standard conditions by which to test the correctness of other observations. idiodynamic c., nerve impulses from the cells of the ventral gray column and the motor nuclei of the brain which maintain the muscles in their normal trophic condition. reflex c., the nerve impulses transmitted to the muscles by one of the reflex arcs by which reflex action is maintained. sex c., the deliberate determination of the sex of future offspring by artificial means. **synergic c.**, the nerve impulses transmitted to the common pathway from the cerebellum for the regulation of the muscular activity of the synergic units of the body. tonic c., the nerve impulses transmitted to the final common pathway through the reflex arc for the maintenance of the muscle tone. **Vestibulo-** equilibratory c., nerve impulses from the semicircular canals, saccule, and utricle in order to maintain body equilibrium. voluntary c., volitional c., impulses from the motor area of the cerebral cortex which direct muscular action under the influence of the will.

- contrude (kon-trūd'). To crowd or push together; said of teeth.
- contrusion (kon-tru'zhun). A condition in which teeth are crowded.
- contunding (kon-tun'ding). Producing a contusion.
 contuse (kon-tūz') [L. contun'dere to bruise]. To bruise or wound by bruising.
- contusion (kon-tu'zhun) [L. contu'sio, from contun'dere to bruise]. A bruise; the act of bruising.
 conular (kon'u-lar). Cone-shaped.
- conus (ko'nus), pl. co'ni [L; Gr. κῶνος a cone].

 1. Posterior staphyloma of the myopic eye. 2.
 The rounded anterior portion of the striatum.

 c. arterio'sus, the upper and anterior angle of the right ventricle of the heart. c. elas'ticus [B N A], the cone-shaped lower part of the submucous membrane of the larynx, from the vocal cords to the cricoid cartilage; the cricothyroid membrane c. medulla'ris, c. termina'lis, the conoid distal end of the spinal cord. c. vasculo'sus. See coni vasculosi.
- convalescence (kon-val-es'ens) [L. convalescen'-tia]. The return to health, the stage of recovery following an attack of disease.
- convalescent (kon-val-es'ent) [L. convales'cens].
 1. Returning to health after an illness.
 2. Pertaining to the recovery of health.
 3. A patien. who is in the stage of recovery.
- convallamarin (kon-val-am'ar-in) [convallaria + L. ama'rus bitter]. A poisonous glucosid, C₂,H₄₄O₁₂, from Convalla'ria maja'lis: emetic, diuretic, and cardiant. Dose, ½-1 gr. (0 013-0 065 gm).
- convallaretin (kon-val-ar-o'tin) [convallaria + Gr. $\rho\eta\tau\iota\nu\eta$ resin]. A poisonous resin, $C_{14}H_{26}O_{3}$, derivable from convallarin.
- Convallaria (kon-val-a're-ah) [L]. 1. A genus of liliaceous plants. 2. The dried inflorescence and dried rhizome and root of C. maja'lts, lily-of-the-valley; a diuretic heart stimulant, used like digitalis Dose of extract, 2-10 gr (0.133-0.666 gm); of fluidextract, 2-10 min. (0.133-0.666 c.c.); of infusion, \frac{1}{2}-2 fl oz. (16-64 c.c.).
- convallarin (kon-val-a'rin). A purgative glucosid, $C_{34}H_{62}O_{14}$, from convallaria. Dose, 2-4 gr. (0.133-0 266 gm.).
- convection (kon-vek'shun) [L. convec'tio, from conve'here to convey]. Transmission of heat in liquids or gases carried on by the heated particles below rising and the cold particles above descending and in turn becoming heated and rising.
- convergence (kon-ver'jens). 1. Inclination toward a common point. 2. The point of meeting of convergent lines. negative c., divergence of the visual axes.
- convergent (kon-ver'jent) [L. con together + ver'gere to incline]. Meeting at or tending toward
 a common point.
- conversion (kon-ver'shun). A Freudian term for the process by which emotions become transformed into physical manifestations.
- convex (kon'veks) [L. convex'us] Having a rounded and somewhat elevated surface.
- convexity (kon-veks'it-e) [L. convex'itas]. 1. The condition of being convex. 2. The outer or convex part of a curved surface.
- convexoconcave (kon-veks"o-kon'kāv). Convex on one side and concave on the other.
- convexoconvex (kon-veks"o-kon'veks). Convex on each of the two faces.
- convicin (kon'vis-in). A base, $C_{20}H_{22}N_6O_{16}$. $2H_2O$, found in *Vicia sativa* and other species of vetch. It yields on hydrolysis alloxantin, ammonia, and a hexose.
- convolute, convoluted (kon'vo-lūt, kon'vo-luted) [L. convolu'lus]. Rolled together or coiled.
- convolution (kon-vo-lu'shun) [L. convolu'tus rolled together]. Any elevated part of the brain surface

more or less marked off by fissures; a gyrus. abrupt c., a small convolution at the end of the occipital lobe of the brain. angular c., the posterior part of a convolution between the intraparietal fissure and the horizontal limb of the sylvian fissure annectent c's, small convolutions which connect the occipital with the temporosphenoid and parietal lobes Arnold's c., the inferior posterior convolution of the cerebrum. ascending frontal c., a convolution in front of the fissure of Rolando. ascending parietal c., a convolution just behind the fissure of Rolando. Broca's c., the inferior or third frontal convolution. callosal c., a convolution on the mesial surface of the cerebrum, curving around the corpus callosum and separated from it by the callosal fissure. Called also gyrus fornicatus. central c's, the convolutions of the brain which lie along the central sulcus. cuneate c., the occipital lobule of the inner surface of the cerebral hemisphere. den-tate c., a cerebral convolution in the hippocampal fissure. Ecker's c., the posterior occipital convolution. external occipitotemporal c., a gyrus between the collateral fissure and the inferior temporosphenoid sulcus fornicate c., a long convolution on the mesial surface of the brain, above the callosum frontal c's, the convolutions of the frontal lobe. hippocampal c., that part of the fornicate convolution which winds around the splenium of the corpus cal-losum. inframarginal c., superior temporal c., superior temporosphenoid c., a part of the sphenotemporal lobe between the sylvian and the superior temporal fissures. insular c's, the small convolutions which make up the island of Reil. marginal c., the mesial surface of the first frontal convolution. occipital c's, the convolutions which make up the occipital lobe. orbital c's, three gyri (internal, anterior, and posterior) of the under surface of the frontal lobe. paracentral c., a convolution of the mesial surface, representing the junction of the upper ends of the ascending frontal and ascending parietal lobes parietal c's, the convolutions of the parietal lobe retro-insular c's, a group of small convolutions behind the central lobe, bridging over the temporal and parietal lobes. subcallosal c., a convolution on the mesial surface of the cerebrum, running from the chiasm to the rostrum. Called also Zuckerkandl's c subcollateral c., a convolution on the temporal lobe of the brain connecting the occipital and temporal lobes, and bounded above by the collateral fissure and below by the subtemporal fissure. subtemporal c., the inferior temporal convolution. supercallosal c., a rudimentary convolution on the upper surface of the corpus callosum, represented by the longitudinal striæ and their anterior and posterior prolongations. superfrontal c., the superior frontal convolution. supertemporal c., the inframarginal convolution. supramarginal c., the angular convolution. temporal c's, the convolutions of the temporal lobe. temporoparietal c's, the retro-insular convolutions. temporosphenoid c's, three convolutions (superior, middle, and inferior) of the temporosphenoid lobe. transisthmian c., the isthmus of the gyrus fornicatus. transitional c., a small convolution beautiful to the first transitional c. tion bounded anteriorly by the fissure of Sylvius. uncinate c., the hook-like end of the fornicate convolution. Wernicke's c., the first temporosphenoid convolution. Zuckerkandl's c. See $subcallosal\ c.$

convolutional, convolutionary (kon-vo-lu'shun-al, kon-vo-lu'shun-a-re). Of or pertaining to a convolution or convolutions.

convolvulin (kon-vol'vu-lin). A purgative glu-cosid, C₃₁H₅₀O₁₆, from jalap. Dose, 1-2 gr. (0.06-0.13 gm.).

Convolvulus (kon-volvu-lus) [L.]. A genus of

twining, convolvulaceous plants called bindweed. C. pandura'lus, man-root, of North America, is diuretic and laxative. Dose, 40 gr. (2.59 gm.). See also scammony.

convulsant (kon-vul'sant). 1. Producing or causing convulsions. 2. A drug or agent that causes convulsions.

convulsibility (kon-vul-sib-il'it-e). Capability of being convulsed.

convulsin (kon-vul'sin). A eucalyptus preparation used in treating disease of the respiratory organs. convulsion (kon-vul'shun) [L. convul'sio, from convel'lere to pull together]. A violent involuntary contraction or series of contractions of the voluntary muscles. central c., essential c., spontaneous c., one which is entirely dependent upon some lesion of a nerve-center. reic c., any convulsion or spasm of the kind characteristic of chorea. clonic c., a convulsion marked by alternating contracting and relaxing of the muscles coordinate c., a convulsion marked by clonic movements similar to natural, purposeful movements. crowing c., laryngismus stridulus. epileptiform c., any convulsion attended with loss of consciousness. external c., spasmodic contraction of the voluntary muscles. hysteric c., any spasmodic movement attendant upon a hysteric disorder. hysteroid c., hystero-epilepsy. infantile c., the eclampsia of early infancy. internal c., a slight involuntary spasmodic movement with no loss of consciousness. local c., any minor spasm affecting but one muscle or only one part or member. mimetic c., mimic c., facial spasm or tic puerperal c., spasm or eclampsia occurring just before or just after childbirth salaam c., nodding spasm. spontaneous c., a convulsion not excited by any external cause, but due to a lesion of the central nervous system. static c., palmar or saltatory spasm. tetanic c., any form of spasm characteristic of tetanus, a tonic convulsion without loss of conretains, a tonic convision without loss of consciousness. tonic c., persistent contraction of a muscle or set of muscles, not atrophic or due to muscular shrinkage. uremic c., one due to uremia, or retention in the blood of matters that should have been expelled by the kidneys

convulsive (kon-vul'siv). Pertaining to, characterized by, or of the nature of, convulsion.

-COOH. Carboxyl.

Coolidge tube (koo'lij) [William David Coolidge, American physicist, born 1873]. See under tube.

Cooper's disease, fascia, hernia, ligament, etc. [Sir Astley Paston Cooper, English surgeon, 1768-1841]. See disease, fascia, hernia, ligament, etc.

Coope'ria puncta'ta. A worm parasitic in the intestinal canal and intestinal mucosa of cattle.

Coopernail's sign (koo'per-nālz) [George P. Coopernail, American physician, born 1876]. See sign.

coördination (ko-or'din-a'shun). The harmonious working together of parts and the normal sequence of functions. Specifically, the process of the motor apparatus of the brain which provides for the co-working of particular groups of muscles for the performance of definite adaptive useful responses

coössification (ko-os"if-ik-a'shun). The action of, or state of being, joined together by ossification.

coössify (ko-os'i(-i). To grow together by ossification.

cootie (koo'te). Soldier's name for body louse.

copaiba (ko-pa'ib-ah). The resinous juice (balsam) of various leguminous trees of tropical America, especially Copaifera officina'lis and C. langsdorff'ii: it is diuretic and laxative, and is much used for gonorrhea and chronic disease of mucous membranes. Dose, 10 min.-1 fl.dr. (0.666-4 c.c.); of massa copaiba, 5-30 gr. (0.333-2 gm.); of mistura copaiba composita, 1-4 dr. (4-16 c.c.). The oil

200

(o'leum copai'bæ) is given in doses of 10-15 min. (0.666-1 c.c.); the resin (res'ina copa'iba), in doses of 1-5 gr. (0.066-0.333 gm.).

copal (ko'pal) [Mex.]. The commercial name of many resinous substances of extremely various origin and character; the original copals came from trees of tropical America, chiefly of the leguminous genus Hymena'a. The best copals come from Africa, and some are obtained in Asia. they are mostly used in the arts, and are little employed in medicine and surgery at present.

copalchi (ko-pal'she). The febrifugal bark of Strych'nos pseudo-qui'na, of South America, and also of Cro'ton niv'eus, of Mexico.

cope (kop). A plate of metal for covering the root of a tooth preparatory to attaching an artificial

copiopsia (ko-pe-o'pe-ah, ko-pe-op'se-ah) [Gr. $\kappa \delta \pi os$ fatigue + $\delta \psi \iota s$ sight]. Eyestrain; a worn-out condition of the eye.

copodyskinesia (ko"po-dis-kin-e'ze-ah) [Gr. κόπος fatigue + δvs - difficult + $\kappa t \nu \eta \sigma ts$ motion]. Any occupation-neurosis; difficulty of movement due to fatigue from the habitual performance of some particular action. See neurosis.

copper (kop'er) [L. cu'prum; Gr. Κύπρος]. reddish, malleable metal, atomic weight, 53.57; symbol Cu, with poisonous salts. **c. abietinate**, a copper salt in green scales, soluble in oil used as an anthelmintic and vermifuge in veterinary practice c. acetate, Cu(C₂H₃-O₂)₂,H₂O, a green copper salt. used internally and externally as an astringent in conjunctivitis, gonorrhea, and skin diseases, and internally in phthisis and anemia Dose, 10-1 gr. (0 006-0 016 gm). aluminated c., a mixture of 16 parts each of copper sulphate, potassium nitrate, and alum, with 1 part of camphor used as an astringent in conjunctivitis. **ammoniated c.**, a compound, Cu(NH₃)₄SO₄ + H₂O used like copper sulphate, and internally in chorea, epilepsy, and neuralgia. Dose, $\frac{1}{2}$ -2 gr. (0.03-0 13 gm.). c. ammonio-sulphate, Cu(NH₃)4SO₄, a salt of copper. used outwardly as an astringent, and inwardly as an antispasmodic. Dose, $\frac{1}{2}$ -1 gr. (0.011-0.066 gm.). c. arsenite, a highly poisonous green pigment, CuHAsO₃. used in diarrhea, dysentery, cholera morbus, etc. in frequent minute doses. Dose, 3000-100 gr c. citrate, a bluish-green crystalline powder, Cu₃(C₆H₅O₇)₂. Called also cuprocitral and cusylol. **c. iodid**, cuprous iodid, Cu₂I₂. **c. nitrate**, crystals of a deep blue color, Cu(NO₃)₂-3H₂O. c. phenolsulphonate, green prismatic crystals, (Oll.C₆H₄ SO₂O)₂Cu 6H₂O. c. sulphate, CuSO₄, a crystalline salt of copper, popularly called blue-stone and blue vitriol it is used mainly as an external styptic and astringent. Dose, as astringent, 1 gr. (0.016 gm), as an emetic, 5 gr. (0.33 gm.).

opperas (kop'er-as). Green vitriol, or ferrous sulphate, FeSO₄ 7H₂O: a tonic, astringent, and deodorizer. Dose, 1-5 gr. (0.066-0.333 gm.). copperas (kop'er-as).

Coppet's law (kop-az') [Louis Cas de Coppet, French physicist, 1841-1911]. See under law.

copracrasia (kop-rah-kra'se-ah) [Gr. κόπρος dung + ἀκρασία loss of power]. Loss of ability to retain the feces.

copragogue (kop'rag-og) [Gr. κόπρος dung + άγωγός leading]. Cathartic.

copraol (ko'prah-ol) [East Indian ko'pra cocoanut]. A fat from cocoanut oil: used in preparing suppositories.

coprecipitin (ko-pre-sip'it-in). A precipitin which has an affinity for two or more organisms.

copremesis (kop-rem'es-is) [Gr. κόπρος dung + Execus vomiting). The vomiting of fecal matter; stercoraceous vomiting.

copremia (kop-re'me-ah) [Gr. κόπρος dung + αΐμα Blood-poisoning from the retention of blood). fecal matters in the blood.

coprolagnia (kop-ro-lag'ne-ah) [Gr. κόπρος dung + λαγνεία lust]. Sexual perversion in which the subject receives pleasure from the sight or thought of human excrement.

coprolalia (kop-ro-la'le-ah) [Gr. κόπρος dung + λαλιά babble]. The insane utterance of filthy words.

coprolith (kop'ro-lith) [Gr. κόπρος filth + λίθος a stone]. A hard fecal concretion.

coprology (kop-rol'o-je) [Gr. κόπρος dung + λόγος treatise]. The study of the feces.

Copromas'tix prowazek'i. A minute flagellate organism with four anterior flagella, found in feces in Brazil.

Coprom'onas subti'lis. An oval caprozoic flagellate found in the feces of frogs and sometimes in the human stool.

coprophagous (kop-rof'ag-us). Feeding on dung. coprophagy (kop-rof'aj-e) [Gr. κόπρος dung + φαγείν to eat]. The eating of dung.

coprophil, coprophile, coprophilous (kop'rofil, kop-rof'il-us) [Gr. κόπρος dung + φιλείν to love]. Inhabiting dung said of bacteria.

coprophilia (kop-ro-fil'e-ah) [Gr. κόπρος dung + φιλία affection]. A morbid liking for filth, especially for feces and for things connected therewith.

coproplanesis (kop"ro-plan-e'sis) [Gr. κόπρος dung + πλάνησις wandering]. Escape of feces from the bowel through a wound or fistula.

coprostasis (kop-ros'tas-is) [Gr. κόπρος dung + στάσις stoppage]. Impaction of the feces in the intestine.

coprosterin (kop-ro-ste'rin) [Gr. κόπρος dung + sterin]. A reduction product of cholesterin occurring in human feces.

coprosterol (kop-ro-ste'rol). Coprosterin.

coprozoa (kop-ro-zo'ah) [Gr. κόπρος dung + ζφον animal]. Protozoa which are found in fecal matter outside the body, but which do not inhabit the intestine.

coprozoic (kop-ro-zo'ik). Living in fecal material; found in fecal material.

Coptis (kop'tis) [L]. A genus of ranunculaceous plants. C. tee'ta is an Asiatic species tonic of root, 5-10 gr. (0 333-0.066 gm.). C. trifo'lia (goldthread), of North America, is a tonic and astringent used for sore mouth. Dose of root, 10-20 gr. (0.666-1.333 gm.)

coptosapelta (kop-to-sap-el'tah). See prual.

copula (kop'u-lah) [L]. 1. Any connecting part or structure. 2 A name for amboceptor.

copulation (kop-u-la'shun) [L. copula'tio]. Sexual congress; coitus.

Coq. Abbreviation for L co'que, boil.

Coq. in s. a. Abbreviation for L co'que in sufficien'te a'qua, boil in sufficient water.

Abbreviation for L. co'que secun'dum Coq. s. a. ar'tem, boil properly.

coquille (ko-kel') [Fr.]. A glass or lens shaped like a watch-crystal.

cor (kor). Latin for heart. c. adipo'sum, fatty heart; a heart which has undergone fatty degeneration or which has an accumulation of fat around it. c. arterio'sum, the left side of the heart, containing arterial blood. c. biatria'tum tri-locula're, a three-chambered heart. c. bilocula're, a heart with a congenital defect of the septa of the auricles and ventricles. c. bovi'num, ox-heart; greatly enlarged heart. c. dex'trum. Same as c. venosum. c. hirsu'tum, c. tomento'sum. The same as hairy heart. See heart. c. ju'venem, a condition of arhythmia, palpitation, tachycardia, and systolic murmur seen in orthostatic albuminuria. c. mo'bile, an abnormally movable heart. c. pen'dulum, a heart so movable that it seems to be hanging by the great blood-vessels. c. sinis'trum. Same as c. arteriosum. c. trilocula're, a heart with one

ventricle and two auricles. c. veno'sum, the right half of the heart, which contains venous blood. c. villo'sum, a roughened state of the pericardium caused by exudate on its surface, occurring in pericarditis.

coraco-acromial (kor"ak-o-ak-ro"me-al). Per taining to the coracoid and acromion processes.

coracobrachialis (kor"ak-o-bra-ke-a'lis). Semuscles, table of.

coracoclavicular (kor"ak-o-klav-ik'u-lar). Attached to the coracoid process and the clavicle.

coracohumeral (kor"ak-o-hu'mer-al). Attached to the coracoid process and the humerus.

coracoid (kor'ak-oid) [Gr. κορακοειδής crow-like].

1. Like a raven's beak.

2. The coracoid process.

coracoradialis (kor"ak-o-ra-de-a'lis). The short head of the biceps muscle.

coraco-ulnaris (kor"ak-o-ul-na"ris). The fibers of the biceps muscle attached to the fascia of the forearm.

corallin (kor'al-in). A lipochrome pigment found in Streptothrix corallinus. red c., peonin. yellow c., the sodium salt of rosolic acid.

Corallorhiza (kor"al-o-ri'zah) [Gr. κοράλλιον coral + βίζα root]. A genus of orchidaceous plants. The root of C. odontorhi'za, coralroot or crawley, is antipyretic and diaphoretic. Dose, 30 gr. (2 gm); of fluidextract, 15-30 min. (1-2 c c).

coramin (ko'ram-in). A proprietary 25 per cent. solution of pyridin betacarbonic acid diethylamin, used as a substitute for camphor by intravenous, subcutaneous, and peroral administration for the treatment of shock, collapse, and cardiac decompensation.

corasthma (kor-as'mah). Hay-fever.

cord (kord) [L. chor'da; Gr. χορδή]. rounded, and flexible body or organ. Any long Braun's c's, strings of cells which have been observed in the kidney of the early embryo. **dental c.**, a cord-like mass of cells from which the enamel organ develops. **Ferrein's c.**, the lower, or true vocal cords. **gangliated c.**, the trisplanchnic nerve. genital c., a structure in the embryo formed by the union of the two wolffian and the two mullerian ducts. gubernacular c. Same as gubernaculum testis. lumbosacral c., a nerve-trunk from the branches of the fourth and the fifth lumbar nerves it extends to the sacral plexus. **nerve-c.**, any nerve-trunk or bundle of nerve-fibers. **psalterial c.** Same as stria vascularis. sexual c's, the seminiferous tubules during the early fetal stage. spermatic c., the structure by which the testicle is suspended. spinal c., the myelon; that part of the central nervous axis which is lodged in the vertebral canal. umbilical c., the flexible structure which extends from the placenta to the fetal umbilicus. vocal c's, the membranous bands in the larynx by which the sounds of the voice are produced. They consist of the *superior* or *false* cords, and the *inferior* or *true* cords. The latter extend from the injerior of true coids. The latter extend from the wings of the thyroid cartilage to the arytenoid cartilage. Weitbrecht's c., the annular ligament of the elbow. Wilde's c's, the transverse strike of the corpus callosum. Willis's c., cords of fibrous tissue running transversely across the lower angle of the superior longitudinal sinus.

cordate (kor'dāt) [L. cor heart]. Heart shaped. cordein (kor'de-in). Methyltribromsalol, an antiseptic and analgesic agent in white needles.

cordial (kord'yal) [L. cordia'lis]. I. Stimulating the heart; invigorating. 2. An aromatized alcoholic liqueur. Godfrey's c., mixture of sassafras and opium. Warner's gout c., tincture of rhubarb and senna.

Cordiceps (kor'dis-eps). A genus of fungi; certain species produce fatal disease of caterpillars.

cordiform (kor'dif-orm) [L. cor heart + for'ma form]. Heart shaped.

corditis (kor-di'tis). Inflammation of the spermatic cord.

cordol (kor'dol). Tribromsalol, C₆H₄(OH)COO.-C₆H₂Br₃; an antiscretic and hemostatic agent in long white needles. Dose, 8-20 gr. (0.5-1.3 gm.).

cordopexy (kor'do-pek-se) [cord + Gr. $\pi \hat{\eta} \xi \iota_s$ fixation]. The operation of displacing outward the vocal cord for laryngeal stenosis.

cordyl (kor'dil). Acctyltribromsalol; an analgesic and antispasmodic agent in fine white needles: used like cordol, as hypnotic, analgesic, and internal antiseptic. Dose, 8-30 gr. (0.5-2 gm.).

Cordylo'bia anthropoph'aga. The tumbu fly; a fly of Africa the larvæ of which burrow under the skin of man and animals, causing a myiasis.

core (kōr). 1. The central part of anything. 2. A disease of sheep caused by worms in the liver. 3. A disease of cows marked by the formation of lumps in the udder. atomic c. See coelectron.

coreclisis (kor-ek-li'sis) [Gr. κόρη pupil + κλείσις closure]. The obliteration or closure of the pupil.

corectasis (kor-ek'tas-is) [Gr. κόρη pupil + ἔκτασις a dilatation]. Morbid dilatation of the pupil.

corectome (kor-ek'tōm) [Gr κόρη pupil + τομή a cutting] A cutting instrument used in performing corectomy.

corectomedialysis (ko-rek"to-me-de-al'is-is) [Gr. κόρη pupil + ἐκτέμνειν to excise + διαλύειν to set free]. The operation of forming an artificial pupil by detaching the iris from the ciliary ligament.

corectomy (kor-ek'to-me) [Gr. κόρη pupil + ἐκ out + τομή a cutting]. Same as *iridotomy*.

corectopia (kor-ek-to'pe-ah) [Gr. κόρη pupil + ἐκ out + τόπος place]. Abnormal situation of the pupil.

coredialysis (ko"re-di-al'is-is) [Gr. κόρη pupil + διάλυσις separation] The separation of the external margin of the iris from the ciliary body.

corediastasis (ko"re-di-as'tas-is) [Gr. κόρη pupil + διά a part + στάσις standing]. The dilatation or a dilated state of the pupil.

coregonin (ko-reg'o-nin). A protamin obtained from the sperm of the white fish.

corelysis (ko-rel'is-is) [Gr. κόρη pupil + λύσις a loosing] The operation of detaching adhesions of the pupil from margins of the lens.

coremorphosis (kor"e-mor-fo'sis) [Gr. κόρη pupil + μόρφωσις formation]. The formation of an artificial pupil.

corenclisis (kor-en-kli'sis) [Gr. κόρη pupil + εγκλεῖν to inclose]. Same as iridenclessis.

coreometer (ko-re-om'et-er) [Gr. κόρη pupil + μέτρον measure]. An apparatus used in measuring the pupil.

coreometry (ko-re-om'et-re) The measurement of the pupil.

coreoplasty (ko're-o-plas-te) [Gr. κόρη pupil + πλάσσειν to form]. Plastic surgery of the pupil.

corestenoma congenitum (ko"re-sten-o'mah kon-jen'it-um) [Gr $\kappa \delta \rho \eta$ pupil $+ \sigma \tau \epsilon \nu \omega \mu \alpha$ contraction]. A congenital condition in which the pupil is partially occluded by excrescences which meet, leaving small openings here and there.

Corethra (ko-re'thrah). A genus of short-beaked, non-blood-sucking mosquitos.

coretomedialysis (ko"re-to-me-di-al'is-is) [Gr. κόρη pupil + τέμνειν to cut + διάλυσις division]. The formation of an artificial pupil by a combined cutting and tearing operation upon the iris.

coretomy (ko-ret'o-me) [Gr. κόρη pupil + τέμνειν to cut]. Same as iridotomy.

coriaceous (ko-re-a'shus) [L co'rium leather]. Resembling leather; leathery, tough: said of bacterial cultures.

coriamyrtin (ko"re-am-er'tin). A glucosid, C₃₀-H₃₆O₁₀, from the leaves of *Coria'ria myrtifo'lia*: possessing tetanic properties like those of picro-

toxin. Recommended as a circulatory and respiratory stimulant. Dose, f_0 gr. (0.00108 gm.).

coriander (ko-re-an'der) [L. corian'drum]. The umbelliferous plant, Corian'drum sati'vum; also its aromatic carminative fruit. Dose, 20-60 gr. (1.333-4 gm.); of volatile oil (o'leum corian'dri), 2-5 min. (o 133-0.333 c.c.).

coriandrol (ko-re-an'drol). A fragrant, colorless liquid, $C_{10}H_{18}O$, from oil of coriander.

Coriaria (ko-re-a're-ah) [L.]. A genus of old-world poisonous coriariaceous plants of various species: sparingly used in medicine. C. myrtifo'lia affords coriamyrtin.

coriariamyrtin (ko-re-a"re-am-er'tin). Same as coriamyrtin.

coriin (ko're-in). A substance formed by treating fibrous connective tissue with alkalis.

corium (ko're-um) [L.]. The true skin, or dermis; the vascular layer beneath the epidermis. c. phlogis'ticum. See buffy coat, under coat.

Corlett's pyosis (kor'lets) [William Thomas Corlett, American dermatologist, born 1854]. Impetigo contagiosa bullosa.

corm (korm) [L. cor'mus]. A solid bulb-like expansion of a plant stem below the surface of the ground.

corn (korn) [L. cor'nu horn]. 1. A clavus; a horny induration and thickening of the skin, produced by friction and pressure. It forms a conic mass extending down into the derma and producing pain and irritation. 2 A swelling on the bottom of a horse's foot between the wall of the heel and the bar. soft c., a soft thickening of the epidermis between the toes, which is kept softened by moisture, and often leads to painful inflammation beneath the corn.

cornage (kor-nahzh') [Fr.]. Roaring in horses.

cornea (kor'ne-ah) [L cor'neus horny] The transparent structure forming the anterior part of the external layer of the eyeball. It is composed of five layers—an epithelial layer, an anterior limiting membrane, the substantia propria, the membrane of Descemet, and a layer of endothelial cells. conic c. See keraloconus c. globo'sa. Same as buphthalmua. c. opa'ca, the sclerotic coat of the eye. c. pla'na, congenital flatness of the cornea. sugar-loaf c. Same as keraloconus.

corneal (kor'ne-al) [L. cornea'lis]. Pertaining to the cornea.

corneitis (kor-ne-i'tis). Inflammation of the cor-

corneoblepharon (kor'ne-o-blef'ar-on) [cornea + Gr. βλέφαρον eyelid]. Adhesion between the eyelid and cornea.

corneo-iritis (kor''ne-o-i-ri'tis). Inflammation of the cornea and iris.

corneosclera (kor''ne-o-skle'rah). The cornea and sclera regarded as forming one organ.

corneous (kor'ne-us) [L. cor'neus]. Horn-like, or horny.

corner, corner-tooth (kor'ner, kor'ner-tooth).
The lateral incisor of a horse.

cornesin (kor'ne-sin). A proprietary fish-oil, vaunted as a cure for cataract: supposed to be cod-liver oil.

corneum (kor'ne-um). The stratum corneum of the skin. See skin.

corniculum laryngis (kor-nik'u-lum lar-in'jis)
[L] A cartilaginous nodule on the arytenoid cartilage.

cornification (kor"nif-ik-a'shun) [L. cor'nu horn + fa'cere to make]. Conversion into horn.

cornified (kor'nif-id). Converted into horny tissue. cornin (kor'nin). 1. A concentration prepared from the bark of Cor'nus flor'ida: tonic and antiperiodic. Dose, 2-4 gr. (0.133-0.266 gm.). 2. A crystalline principle said to be obtainable from Cor'nus flor'ida. 3. A preparation from the bark

of Cor'nus nuttal'lii, a tree of western North America.

Corning's anesthesia or method (kor'nings) [James Leonard Corning, New York neurologist, 1855-1923]. See under anesthesia.

corn-silk (korn-silk) [L. stig'mata may'dis]. The diuretic stigmas, or silk, of the maize, Ze'a ma'ys. Dose of infusion, ad libitum; of fluidextract, 1-2 dr. (4-8 c.c.). See Zea.

cornu (kor'nu), pl. cor'nua [L. "horn"]. Any horn-like excrescence or projection. c. ammo'nis [L. "horn of Ammon"]. I. An appearance as of a ram's horn, seen on cutting transversely through the pes hippocampi. 2. The hippocampus major c. cer'vi, the horn of a stag or deer; hart's horn. c. cuta'neum, c. huma'num, a horny excrescence of the skin, mostly seen on the scalp and face. eth'moid c., the middle turbinate bone. c. infe'rius [B N A], the inferior horn of the lateral ventricle of the brain. c. me'dium. See medicornu. c. occipita'le. See postcornu. c. os'sis hyoi'dei, the cornu of the hyoid bone. cornua sacra'lia, the two hookshaped processes extending downward from the arch of the last sacral vertebra. c. of spinal cord. See crescents of spinal cord. c. us'tum [L. "burnt horn"], the ashes or the burnt or charred horn of the deer or stag, formerly used in medicine as an antacid.

cornua (kor'nu-ah). Plural of cornu.

cornual (kor'nu-al). Pertaining to a cornu or to cornua.

cornucommissural (kor"nu-kom-is'u-ral). **Per**taining to a cornu and to a commissure.

cornucopia (kor-nu-ko'pe-ah) [L. cor'nu co'pia horn of plenty]. An extension of the choroid plexus into each of the lateral recesses of the fourth ventricle.

Cornus (kor'nus) [L]. A genus of cornaceous trees and shrubs of both hemispheres; the cornels or dogwoods. The root-bark of many is astringent, tonic, and antiperiodic, especially that of C. flor'ida, the common dogwood of North America. Dose of bark, 15 gr. (1 gm.); of fluid-extract, 10-60 min. (0.666-4 c.c.).

cornutin (kor-nu'tin). A poisonous alkaloid of ergot. Dose (per diem), $\frac{1}{6} - \frac{1}{4}$ gr (0.011-0.016 gm.); of citrate (for spermatorrhea), $\frac{1}{20} - \frac{1}{10}$ gr. (0.003-0.006 gm.).

cornutol (kor'nu-tol). A concentrated preparation of ergot.

corodiastasis (ko"ro-di-as'tas-is). Same as core-

corolla (ko-rol'ah) [L. "little crown"]. The inner set of leaves of a floral envelop the individual portions of which are called *petals*.

corometer (ko-rom'et-er). Same as coreometer.

corona (ko-ro'nah), pl. coro'næ [L. "crown"; Gr. κορώνη]. A crown or crown-like eminence. c. ciliar'is. See zona ciliaris. c. den'tis, the crown of a tooth. c. glan'dis, the rim which surrounds the base of the glans penis. c. radia'ta, the radiating crown of projection fibers which pass from the internal capsule to every part of the cerebral cortex. c. seborrhœ'ica, a red line or band along the upper border of the forehead and temples sometimes seen in severe cases of dermatitis seborrhœ'ica or pityriasis capitis. c. ven'eris, a ring of syphilitic sores around the forehead, sometimes deeply affecting the bones of the head. Zinn's c. Same as circulus arteriosus halleri.

coronad (kor'o-nad). Toward the crown of the head or any corona.

coronal (kor'o-nal) [L. corona'lis]. Pertaining to the crown of the head or to any corona.

coronale (kor-o-na'le). The point on the coronal suture at the end of the maximum frontal diameter.

coronamen (kor-o-na'men). The coronet of a horse.

coronaria ventriculi (kor-o-na're-ah ven-trik'uli) [L.]. An artery on the lesser curvature of the stomach, formed by an anastomosis between the gastric artery and the superior pyloric branch of the hepatic artery.

coronary (kor'o-na-re) [L. corona'rius]. Incircling in the manner of a crown a term applied to vessels, nerves, ligaments, etc

corone (ko-ro'ne) [L.; Gr. κορώνη apophysis]. The coronoid process of the lower jaw-bone.

coroner (kor'o-ner) [L. corona'tor]. An officer who holds inquests in regard to violent and sudden deaths.

coronet (kor'o-net). The lower part of the pastern of a horse, where the horn joins the skin

Coronilla (kor-o-nil'ah) [L] A genus of poisonous leguminous herbs of many species. C. scorpioi'des and other European species are purgative, diuretic, and cardiant Dose in powder (per diem), 15-30 gr. (1-2 gm.); of tincture (per diem), 1-1 dr. (2-4 c.c.).

coronillin (kor-o-nil'in). A pale-yellow, bitter glucosid, $C_7H_{12}O_5$, from the seeds of Coronil'la scorpioi'des, a European leguminous plant: a diuretic and heart stimulant. Dose, 1-2 gr. (0.06-0.13 gm).

coronion (kor-o'ne-on). The tip of the coronoid process of the jaw.

coronitis (kor-o-ni'tis). Inflammation of the coronary cushion of the horse.

coronium (ko-ro'ne-um). An unknown substance which produces the line at wave length 5303 in the spectrum of the sun's corona.

coronoid (kor'o-noid) [Gr. κορώνη crow, crown].
1. Shaped like a crow's beak 2. Crown-shaped.

coroparelcysis (ko"ro-par-el'sis-is) [Gr. κόρη pupil + παρέλκειν to draw aside] The drawing aside of the pupil in partial corneal opacity in order to bring it over a transparent portion.

coroplasty (ko'ro-plas-te). Same as coreoplasty.

coroscopy (ko-ros'ko-pe) [Gr. κόρη pupil + σκοπεῖν to view]. The shadow-test for determining the refractive powers of the eye.

corotomy (ko-rot'o-me) [Gr. κόρη pupil + τέμνειν to cut]. Any cutting operation upon the pupil; coretomy.

corpora (kor'po-rah). Latin for bodies; plural of corpus. c. albican'tia. See corpus albicans. c. amyla'cea, "starchy bodies", small, starchlike masses found in the prostate, neuroglia, etc. c. aran'tii, small tubercles, one in each of the semilunar valves of the aorta and pulmonary arteries; called also bodies of Arantius c. arena'cea, grains of a sand-like substance sometimes found in the masses of papillomata Called also sand-bodies. c. can'dicans. See mammillary bodies, under body. c. caverno'sa, "cavernous bodies" the two erectile columns of the dorsum of the penis (c caverno'sa pe'nis) or clitoris (c. caverno'sa clitor'idis). c. fla'va, waxy bodies found in the central nervous system and elsewhere, and thought to be formed by the transformation of nerve-cells. c. malpighia'na. See malpighian body, under body. C. mammilla're [B N A]. See mammillary bodies, under body. c. oliva'ria, two oval masses behind the pyramid of the oblongata. c. oryzoi'dea, rice bodies. See under body. c. quadrigem'ina [B N A], "fourfold bodies"; the four oval masses (two nates and two testes) behind the third ventricle of the brain, forming the dorsal part of the mesencephalon.
c. restifor'mia [B N A], "rope-like bodies"; the two cord-like columns of the oblongata which are continuous with the inferior peduncle of the cerebellum. c. santoria'na. Same as cornicula laryngis. c. stria'ta, "striped bodies." See corpus striatum. c. versicolora'ta. Same as c. amvlacea.

corps, medical (kör). The surgeon officers of the navy, comprising a surgeon-general, medical directors, medical inspectors, surgeons, passed assistant-surgeons, and assistant-surgeons.

corpse (korps) [L. cor'pus body]. A cadaver; a lifeless body.

corpulency (kor'pu-len-se) [L. corpulen'tia]. Undue fatness or obesity. polysarcia.

corpus (kor'pus), pl. eor'pora [L. for "body"].

1. The body. 2. The main part of any organ.

3. Any mass of specialized tissue. c. adipo'sum buc'es. See pad, sucking. c. adipo'sum or'bitæ [B N A], a mass of fat in the orbit. c. albi'cans. 1. The mass of fibrous scar tissue replacing the corpus hemorrhagicum within the graafian follicle. 2. See mammillary bodies, under body. c. alie'num, a foreign body. c. aran'-tii. See corpora arantii c. bigem'inum. 1. Either one of the optic lobes of a fish or bird. 2. Less correctly, a corpus quadrigeminum of the mammalian brain c. calca/nei, the body of the calcaneum. c. callo'sum, the callosum, or great commissure, of the brain it is an arched mass of white matter, situated at the bottom of the longitudinal fissure, and is made up of transverse fibers connecting the cerebral hemispheres. c. can'-dicans. See mammillary bodies, under body. c. caverno'sum. See corpora cavernosa C. Caverno'sum ure'three [B N A]. Same as c. spongiosum. c. cilia're. See ciliary body, under body. c. denta'tum, "toothed body"; a small oval mass of gray substance on the section of either hemisphere of the cerebellum. c. denta'tum oli'væ, an oval mass of gray matter in the olivary body; the olivary nucleus. c. fibro'-• **sum**, a hard mass projecting from the surface of an inflamed ovary **c. fimbria/tum**, "fringed body"; a narrow band of white matter bordering the lateral edge of the lower cornu of the lateral ventricle c. for nicis, the middle part of the fornix. c. genicula tum, "knee-like body", either one of a pair of tubercles on the inferior part of the optic thalami. c. genicula tum latera le [B N A], the external geniculate body, bulling if the potential part and the latera le the latera la termina a bulging of the posterior portion of the thalamus, external to the pulvinar. c. genicula'-tum media'le [B N A], the internal geniculate body, an elevation on the thalamus behind the pulvinar. c. glandulo'sum, a spongy eminence which surrounds the orifice of the female urethra. c. hæmorrhag'icum, a blood-clot formed within the empty graafian follicle after ovulation has taken place. c. highmoria'num, the mediastinum of the testis. c. hypothalam'-icum, a mass of gray matter stuated in the subthalamus c. interpeduncula're, a small mass of gray matter just in front of the pons varohi, between the peduncles of the brain. Called also gang-lion interpedunculare. c. lu'teum, "yellow body"; a yellow mass in the ovary in the place of an ovisac which has discharged its ovum; if the ovum has been impregnated, the corpus luteum grows and lasts for several months (true c luteum, or c. luteum of pregnancy); if impregnation has not taken place, the corpus luteum degenerates and shrinks (false c. luteum, or c. luteum of menstruation).
c. mammilla/re [B N A], pl cor'pora mammilla'ria. See mammillary bodies, under body. c. medul-la're cerebel'li [B N A], the white substance of the cerebellum. c. muco'sum. Same as rete mucosum c. ni'grum, the menstrual corpus luteum after it has become blackened. c. oliva're, the olivary body. See under body. c. oryzoi'deum, a rice body. See under body. c. oryzoi'deum, a rice body. C. ory pampinifor'me, the parovarium. c. papilla're [B N A], the papillary body. c. pinea'le
[B N A], the pineal body. See under body. c.
pontobulba're, a ridge running obliquely across the restiform body just caudal to the ridge formed by the cochlear nuclei. c. pyramida'le, the pyramid of the medulla. c. restifor'me [B N A], the restiform body. See under body. c. rhomboida'le, the corpus dentatum of the cerebellum. c. spongio'sum, the mass of erectile tissue in the

303

lower part of the penis; it contains the urethra. c. spongio'sum ure'three [B N A], the submucous layer of the female urethra. c. ster'ni, the gladiolus. c. stria'tum [B N A], a subcortical mass of gray and white matter in front of the thalamus in each cerebral hemisphere. The gray matter of this structure is arranged in two principal masses, the caudate nucleus and the lentiform nucleus; the striate appearance on section of the area being produced by connecting bands of gray matter passing from one of these nuclei to the other through the white matter of the internal capsule. c. subthalam'icum, the subthalamus. c. trapezoi'deum [B N A], a mass of transverse fibers extending through the central part of the pons and forming a part of the path of the cochlear nerve. c. triti'ceum, a nodule of cartilage on the posterior thyroid ligament; from it the triticoglossus muscle (when present) takes its origin. c. u'teri, the body of the uterus. c. ver'tebræ [B N A], the centrum of a vertebra. c. vit-reum, the vitreous body of the eye. c. wolffia'num, the wolffian body. See under body.

corpuscle (kor'pus-l) [L. corpus'culum little body] Any small mass, organ, or body. otic c's, corpora amylacea. amy amnic's, amyloid c's. See corpora amylacea. axile c., axis c., the central part of a tactile corpuscle Babes-Ernst c. See under body. Bennett's small c's. Same as Drysdale's c's Bizzozero's c's, the blood-platelets. blood-c's. See blood bone-c., a bone-cell. Burckhardt's c's, peculiar yellowish bodies found in trachoma secretion calcareous c., one of the dentinal cells of a tooth containing lime or calcium. cancroid c's, the small nodules characteristic of epithelioma of the skin. cartilage c. See cartilage-cell, under cell cement c's. osteogenic corpuscles occurring in the lacunæ of tooth-cement. chorea c's, peculiar round hyaline bodies, concentrically laminated and strongly refractile, found in the perivascular sheaths of the vessels of the corpora striata and internal See body, capsule in chorea. chromophil c. chyle c's, white corpuscles found in chyle, and not differing from the white corpuscles the blood. colloid c's, corpora amylacea. colostrum-c's, large granular cell in the colostrum. concentric c's. Same as Hassall's c's. corneal c's, star-shaped corpuscles within the corneal spaces. Dogiel's c., a complex form of Krause's corpuscle found in the mucous membrane of the external genitals **Donné's c's**, colostrum-corpuscles. **Drysdale's c's**, transcolostrum-corpuscles. parent microscopic cells seen in the fluid of ovarian cysts. dust-c's. See hemokonia. educated c., a body-cell, especially a leukocyte, derived from a mother-cell which has successfully battled with the bacteria or toxins of a disease. By this experience of the mother-cell the daughtercell is, as it were, educated to withstand the attacks of such bacteria in future. Eichhorst's c's, a peculiar variety of microcytes seen in the blood of patients with pernicious anemia. genitalc's, the end-buds and other forms of special nerveendings occurring in the external genital organs. Same as Phantom c. Gierke's ghost c. c's, the roundish bodies found in the nervous system; probably identical with Hassall's corpuscles Gluge's c's, granular corpuscles in diseased nervous matter. Golgi's c's, small, spindle-shaped corpuscles found in tendons at the junction of the tendon with the muscular Called also tendon-spindles. Golgi-Mazzoni c's, tactile corpuscles found in the subcutaneous tissue of the finger-tips, resembling pacinian corpuscles, but differing from the latter in the possession of fewer lamellæ and a relatively larger cone, and in having the contained nerve-fibers more extensively branched. Grandry's c's. Same as Merkel's c's. Grandry-Merkel c's, Merkel's corpuscles. Hassall's c's, small, concentrically striated bodies in the thymus,

being the remains of epithelial tissue found in early stages of development of the gland. Hayem's elementary c's, the blood-plaques. Herbst's elementary c's, the blood-plaques. C's, peculiar sensory end-organs in the skin of the bill and in the mucous membrane of the tongue of the duck. Jaworski's c's, spiral mucous bodies seen in the secretion of the stomach in hyperchlorhydria. Krause's c's, round end-bulbs or nerve-endings in the mucous membrane of the mouth, nose, eyes, and genitals. They consist of a spheroid capsule enclosing a granular mass in which is a neurofibril of the nerve termination. Called also Krause's end-bulb and corpusculum bulboideum [B N A]. Langerhans's stellate c's, terminations of nerve-fibers seen in the rete mucosum of the epidermis. Laveran's c., Laverania. Leber's c's. Same as Hassall's c's. Lostorfer's c's, granular bodies from the blood in syphilis. lymph-c's, the corpuscular elements of the lymph; not distinguishable from the white corpuscles of the blood. lymphoid c's, ameboid protoplasmic masses found in the tissue and lymph-spaces a form of leukocyte. malpighian c's. 1. Any lymphoid nodule of the spleen. 2. A tuft of blood-vessels surrounded by the expanded portion of the uriniferous tubule of the kidney. Mazzoni's c's, sensory nerve-endings resembling Krause's end-bulbs. Meissner's c's, tactile corpuscles in the dermal papillæ of the tips of the fingers and toes, in the skin over the lips, in the mamma, and in the external genitals. They consist of a thick fibrous capsule, a granular central substance, and a terminal arborization of neurofibrils. Called also tactile c's and corpusculum tactus [BNA]. Merkel's c's, tactile corpuscles in the submucosa of the tongue and mouth. corpuscle consists of a sheath which is continuous with the sheath of Henle of the nerve. Enclosed within the sheath are two flattened epithelial cells between the opposed surfaces of which is a biconvex disk continuous with the end of the neurofibrils. Miescher's c's. Same as Rainey's c's. milk-c's, delicate drops of fat suspended in the serum of the milk molluscous c's. See molluscous bodies, under body. mucous c's, bodies resembling leukocytes occurring in mucus. muscle-c., a muscle nucleus, especially of striated muscle. nerve-c's, the nucleated corpuscles lying between the neurilemma and medullary sheath. Norris's c's, certain colorless, transparent, and invisible disks in the blood-serum. Nunn's gorged c's, epithelial cells found in ovarian cysts which have undergone a mgn degree of fatty degeneration. Called also Bennett's large corpuscles. Pacini's c's, pacinian c's, the largest of the end-organs of the skin, scattered throughout the subcutaneous tissues. They are ovarian cysts which have undergone a high degree ovoid in form and are made up of a granular central bulb which encloses a single terminal neurofibril and which is surrounded by a series of con-centric capsules. They occur in the pulp of the fingers, along the course of nerves, in interosseous membranes, in the perimysium of muscles, and in the mesentery and mesocolon. Called also corpusculum lamillosum [BNA]. Patterson's c's. Same as molluscous bodies. See body. phantom c., an erythrocyte from which the hemoglobin has been dissolved. Called also shadow-c, blood-shadow, and achromacyte. Purkinje's c's, large branched nerve-cells composing the middle layer of the cortex of the cerebellum. pus-c., one of the cells of pus, chiefly polymorphonuclear leukocytes. Rainey's c's, Rainey's tubes; encapsulated, ovoid, sporiferous bodies found in the muscles of various animals. red blood-c's, the erythrocytes; biconcave circular disks of the blood, containing hemoglobin; in man they are about 3200 inch in diameter and 12400 inch thick. There are normally about five millions in each cubic millimeter of blood. renal c's. Same as malpighian c's. reticulated c's, red blood-corpuscles which on proper staining show filamentous reticulations filling a greater part of the cell. Ruffini's c's,

904

nerve-endings in the skin having a branched form, and inclosed in connective tissue instead salivary c's, swollen spheric of epithelium. leukocytes found in the saliva. Schwalbe's c's, taste-buds. sensitized c., a given kind of ery-throcyte laden with an amborceptor specific for that variety of corpuscle. If such corpuscles are brought into contact with complement, hemolysis takes place. shadow-c. See phantom c. tille c., a rounded or elliptic body contained in a tactile papilla of the corium. See Meissner's c's. tendon-c's, flattened cells of connective tissue occurring in rows between the primary thymus c. Same as *Hassall's c's*. Timo-feew's c's, a specialized form of pacinian corpuscle found in the submucosa of the membranous and prostatic portions of the urethra. touch-c. See tactile c. Toynbee's c's, corneal corpuscles. **Traube's c's,** phantom corpuscles; decolorized red blood-corpuscles. **typhic c's,** epithelial cells of Peyer's patches which have undergone degeneration in typhoid fever. Valentin's c's, small amyloid bodies found in nerve-tissue. Vater's c's. Same as pacinian c's. Virchow's c's. c's. Same as pacinian c.'s. Virchow's c's. Same as corneal c's. von Troeltsch's c's, connective-tissue spaces lined with flattened endo-thelial cells, and appearing like corpuscular bodies among the radial fibers of the membrana tympani Wagner's c's, Meissner's corpuscles. washed c's, the isolated red blood-corpuscles of an animal which have been suspended in a 0.8 per cent. saline solution and separated by centrifugalization to free them from serum or plasma constituents. weber's c., the sinus pocularis. white blood-c's, colorless blood-c's, flattened leukocytes of the blood: each about 2,100 inch in diameter. Wris-berg's c's, the cuneiform cartilages. Zimmermann's c. Same as phantom c.

corpuscular (kor-pus'ku-lar). Pertaining to or of the nature of corpuscles.

prpusculum (kor-pus'ku-lum), pl. corpus'cula. Latin for corpuscle. c. bulboi'deum [B N A]. corpusculum (kor-pus'ku-lum), See Krause's corpuscles, under corpuscle. lamello'sum [B N A], Pacini's corpuscle under corpuscle. c. nervo'rum articula're [B N A], an articular nerve corpuscle. c. nervo'rum genita'le, a genital corpuscle. c. nervo'-rum termina'le, any one of the dermal corpuscles, such as those of Krause, Meissner, Pacini, c. c. re'nis [B N A], a malpighian corpuscle. tac'tus [B N A], a tactile corpuscle. See Meissner's corpuscle, under corpuscle.

correctant, corrective (kor-ek'tant, kor-ek'tiv). Same as corrigent.

correlation (kor-rel-a'shun). In neurology, those combinations of the afferent impulses within the sensory centers which provide for the integration of the impulses into appropriate responses (Her-

Corrigan's disease, pulse, etc. (kor'ig-anz) [Sir Dominic John Corrigan, physician in Dublin, 1802-1880]. See disease, pulse, etc.

corrigent (kor'ij-ent) [L cor'rigens correcting]. 1. Amending or rendering milder 2. Any agent which favorably modifies the action of a drug which is too powerful or harsh.

corrosion (kor-o'zhun) [L. corro'sio]. The slow destruction of a tissue by the action of a corrosive.

corrosive (kor-o'siv) [L. con with + ro' dere to gnaw]. Destructive to the texture or substance of the tissues. c. sublimate. See mercuric chlorid.

corrosol (kor'oz-ol). A mercurial preparation for hypodermic use: said to be non-irritating and

A South American arrowcorroval (kor'o-val). poison; a heart paralyzant.

corrovalin (kor-o'val-in). A poisonous alkaloid from corroval.

corrugator (cor'u-ga-tor) [L. con together + ru'ga wrinkle]. That which wrinkles; a muscle which wrinkles. c. supercil'ii. See muscles, table of.

Cort. Abbreviation for L. cor'tex, bark.

cortex (kor'teks), gen. cor'ticis [L.]. 1. The bark of a tree or root. 2. The rind of a fruit. 3. The outer layers of an organ as distinguished from its inner substance. cerebellar c., the superficial gray matter of the cerebellum. cerebral c., c. cer'ebri, the cortex of the brain, composed mainly of gray or cineritious substance. Called also pallium and mantle. c. re'nis, the cortical substance of the kidney, made up of urinary tubes and bloodvessels, supported by a stroma or matrix. somatic C., the neopallium.

cortiadrenal (kor-te-ad-re'nal). Pertaining to the cortex of the adrenal gland.

cortical (kor'tik-al) [L. cortica'lis]. or of the nature of a cortex or bark.

corticifugal (kor-tis-if'u-gal) [L. cor'tex cortex + fu'gere to flee]. Proceeding, conducting, or moving away from the cortex.

corticipetal (kor-tis-ip'et-al) [L. cor'tex cortex + pe'tere to seek]. Moving, progressing, or conducting toward the cortex.

cortico-afferent (kor"tik-o-af'er-ent). Conveying impressions from the lower levels inward and upward to the cerebral cortex.

cortico-efferent (kor''tik-o-ef'er-ent). Carrying impressions outward and downward from the cerebral cortex said of certain nerve-fibers

corticofugal (kor-tik-of'u-gal) [cortex + L. fu'-gere to flee]. Passing away from the cortex

(kor''tik-o-pe-dung'ku-lar). corticopeduncular Pertaining to the cortex and the peduncles of the

corticospinal (kor"tik-o-spi'nal). Pertaining to the cortex of the brain and the spinal cord.

Corti's arch, canal, organ, etc. [Alfonso Corti, Italian anatomist, 1822-1876]. See arch, canal, organ, etc.

corundum (ko-run'dum). Native aluminum oxid, Al₂O₃. It is used as an abrasive in dentistry.

coruscation (kor-us-ka'shun). A glittering sensation, as of flashes of light before the eyes

Corvisart's disease, facies (kor-ve-sarz') [Jean Nicolas de Corvisart, French physician, 1755-1821]. See disease and facies.

corybantism, corybantiasm (kor-ib-an'tizm, kor-ib-an'te-azm) [Gr. κορύβας a reveller]. frenzied, and sleepless delirium.

corybulbin (ko-re-bul'bin). A colorless crystalline alkaloid, C21H25NO4, from commercial corydalin.

corydalin (kor-id'al-in). An alkaloid, C22H27NO4, from Coryd'alis tubero'sa; also a concentration from the same. diuretic and tonic. Dose, 1-5 gr. (0.066-0.333 gm.).

Corydalis (kor-id'al-is) [L., from Gr. κόρυς helmet]. A genus of fumariaceous herbs, of which various species are actively medicinal. The root of C bulbo'sa and C. tubero'sa is emmenagogue and vermifuge. C. formo'sa is considered a good antiperiodic and diuretic. Dose of fluidextract, 10-40 min. (o 666-2.666 c.c.).

corydin (ko'rid-in). A crystalline alkaloid, C₂₀H₂₃-NO4, from the roots of Coryd'alis tubero'sa.

coryfin (kor'if-in). A colorless liquid, the menthol ester of ethylglycolic acid, CH₂(O C₂H₅) COO- $(C_{10}H_{19})$. used externally as an anesthetic and analgesic.

coryl (kor'il). A mixture of methyl and ethyl chlorids. a local anesthetic.

coryleur (kor-il-ur') [Fr.]. An instrument used in spraying with coryl.

corylin (ko-ril'in). A protein obtained from the hazelnut.

coryloform (ko-ril'o-form). An anesthetic mixture of ethyl and methyl chlorids and ethyl bromid.

corynanthin (ko-rin-an'thin). A crystalline alkaloid, C₂₁H₂₆N₂O₃, from the bark of *Pseudocin*chong africans.

Corynebacterium (ko-ri"ne-bak-te're-um) [Gr. κορύνη club + bacterium]. A genus of Mycobacteriaceæ of which C. diphtheriæ is the type organism. They are slender, Gram-positive, nonmotile, rod-shaped organisms with a tendency to form club-shaped and pointed forms and to show uneven staining. C. commu'ne. Same as C. hoffmanni. C. diphthe'riæ, a pathogenic species found in the false membrane of diphtheria which shows a characteristic pleomorphism and produces diphtheria toxin. Called also diphtheria bacillus, Löffler's bacillus, Klebs-Löffler bacillus, and Mycobacterium diphtheriæ C. granulo'matis malig'ni, a species found in cases of Hodgkin's disease. C. hodg'kini, a bacillus in Hodgkin's disease (Bettencourt). C. hoffman'ni, a bacterial organism found in throat cultures and much resembling C. diphtheriæ. It is somewhat shorter, thicker, more uniform in size and shape, and produces no toxin. It produces an alkaline reaction in both dextrose and saccharose bouillon. Called also Bacillus clavatus, Bacillus pseudodiphthericus, Bacillus hoffmanni, Hoffmann's bacillus. C. lym'phæ vaccina'lis, a species discovered in lymph of calves and said to be present on the skin of man, C. mallei. Same as Pfeifferella mallei. C. pseudodiphthe'riæ. See C hoffmanni. C. segmento'sum, an organism resembling C. diphtheriæ which is found in the nose and thought at one time to be concerned in the production of common colds **C**. xero'sis, a non-motile rod-shaped organism re-sembling C. diphtheriæ which is found in cases of xerosis and at one time was thought to be the cause of the disease. It is frequently found in normal eyes. It produces acid in both dextrose and saccharose bouillon.

corypalmin (ko-re-pal'min). A crystalline alkaloid, C₂₀H₂₂NO₄, from the roots of Coryd'alis tubero'sa.

corytuberin (ko-re-tu'ber-in). A crystalline alkaloid, C₁₉H₂₁NO_{4.5}H₂O, from commercial coryd-

coryza (ko-ri'zah) [L.; Gr. κόρυζα]. Cold in the head; an acute catarrhal affection of the nasal mucous membrane, attended with a ropy discharge from the nostrils. c. foo'tida, ozena. c. oedemato'sa, a serous inflammation of the inferior and middle turbinate bones.

coryzol (ko-ri'zol). A proprietary coryza preparation containing formaldehyd and eucalyptus

cosaprin (kos'ap-rin). A white, crystalline compound, sodium acetsulphanilate, CH₃.CO.NH.C₆-H₄.SO₂ ONa, soluble in water it is used as an antipyretic and antirheumatic in doses of from 5-8 gr. (0.33-0.52 gm.) three times daily.

Coschwitz's duct (kosh'vits) [Georgius Daniel Coschwitz, German physician, 1679-1729]. See duct.

cosensitize (ko-sen'sit-iz). To sensitize to two or more infections.

cosmesis (koz-me'sis) [Gr. κόσμησις]. The art of increasing and preserving beauty.

cosmetic (koz-met'ik) [Gr. κοσμητικόs]. 1. Beautifying; tending to preserve or restore comeliness. 2. A beautifying substance or preparation

cosmetology (koz-met-ol'o-je). The study of the proper care of the body from the point of view of cleanliness and comeliness.

cosmin (koz'min). See agathin.

cosmolin (koz'mo-lin). A trade-name for a variety of petrolatum, like vaselin; there are also liquid cosmolins: used chiefly in external applications. See petrolatum.

cosotoxin (ko-so-tok'sin). Same as kosotoxin.

costa (kos'tah), pl. cos'tæ [L. for rib]. A rib. c. fluc'tuans, a floating rib. c. fluc'tuans dec'-

ima. See Stiller's sign, under sign. cos'tes spu'-ries, false ribs. cos'tes ve'res, true ribs.

costal (kos'tal) [L. costa'lis]. Pertaining to a rib or ribs.

costalgia (kos-tal'je-ah) [L. cos'ta rib + Gr. άλγος pain]. Pain in the ribs.

costectomy (kos-tek'to-me) [L. cos'ta rib + Gr. εκτομή excision]. The operation of excising a rib. costicartilage (kos-te-kar'til-ej) [L. cos'ta rib + cartilage]. The cartilage of a rib.

costicervical (kos-te-ser'vik-al). Pertaining to or connecting the ribs and the neck.

costiferous (kos-tif'er-us) [L. cos'ta rib + fer're to carry]. Bearing a rib, as the dorsal vertebræ of man.

costiform (kos'tif-orm). Shaped like a rib.

costispinal (kos-te-spi'nal). Pertaining to or connecting the ribs and spine.

costive (kos'tiv). Affected with constipation.

costiveness (kos'tiv-nes). Constipation of the bowels.

costo-. A prefix denoting relation to the ribs.

costocentral (kos-to-sen'tral). Pertaining to a rib and the centrum of a vertebra.

costochondral (kos-to-kon'dral). Pertaining to a rib and its cartilage.

costoclavicular (kos"to-klav-ik'u-lar). Pertaining to the ribs and clavicle.

costocolic (kos-to-kol'ik). Joining the ribs and the colon.

costocoracoid (kos-to-kor'ak-oid). Pertaining to the ribs and coracoid process.

costodiaphragmitis (kos"to-di-af-rag-mi'tis). Inflammation of the costodiaphragmatic sinus.

costogenic (kos-to-jen'ik) [L. cos'ta, rib + γεννῶν to produce]. Arising from a rib, especially from defect of the bone-marrow of the ribs.

costo-inferior (kos-to-in-fe're-or). Pertaining to the lower ribs.

costopleural (kos-to-plu'ral). Pertaining to the ribs and the pleura.

costopneumopexy (kos-to-nu'mo-pek-se) [L. cos'ta rib + Gr. $\pi \nu \epsilon \nu \mu \omega \nu \text{ lung } + \pi \hat{\eta} \xi \iota s \text{ fixing}$]. The operation of anchoring the lung to a rib.

costoscapular (kos-to-skap'u-lar). Pertaining to the ribs and the scapula.

costoscapularis (kos"to-skap-u-la'ris). The serratus magnus muscle.

costosternal (kos-to-ster'nal). Pertaining to a rib and to the sternum.

costosuperior (kos"to-su-pe're-or). Pertaining to the upper ribs.

costotome (kos'to-tōm) [L. cos'ta rib + Gr. τέμνειν to cut]. A knife for dividing the costal cartilages.

costotomy (kos-tot'o-me) [L. cos'ta rib + Gr. τομή a cut]. Resection of a rib.

costotransverse (kos"to-trans-vers'). Lying between the ribs and transverse processes of the vertebræ.

costotransversectomy (kos"to-trans-ver-sek'tome). Excision of a part of a rib with the transverse process of a vertebra.

costovertebral (kos-to-ver'te-bral). Pertaining to a rib and a vertebra.

costoxiphoid (kos-to-zi'foid). Connecting the ribs and the xiphoid cartilage.

Cotard's syndrome (cot-arz') [Jules Cotard, French neurologist, 1840-1887]. See syndrome.

cotargit (ko-tar'jit). The double salt of cotarnin hydrochlorate and ferric chlorid: used as a hemostatic.

cotarnin (ko-tar'nin). A yellow crystalline bitter alkaloid deliquescent in moist air. It is quarternary oxymethyl-oxymethylene-dihydroxy-isoquinolin, (CH₃O)(CH₂O₂)C₈H₆N(CH₃)Cl: astringent and sedative. c. hydrochlorate. See stypticin. c. phthalate, styptol.

COWL

COTe. An abbreviation for cathodal opening telanus.

coto (ko'to). 1. The bark of an unknown Bolivian tree: useful in diarrheas and in intestinal troubles. Dose of fluidextract, 1-15 min. (0.066-1 c.c.); of powder, 1-15 gr. (0.066-1 gm.); of tincture, 10-30 min. (0.066-2 c.c.). 2. See paracoto.

cotoin (ko-to'in). A crystalline principle from coto. It is irritant to the skin and mucous membranes: it has been used in cholera and dysentery: to be used with caution. Dose, \(\frac{1}{2}-1\) gr. (0.03-0.06 gm.). c. formaldehyd, fortoin.

cotonetin (ko-to-ne'tin). A principle, C₂₀H₁₀O₅, in white scales, from coto: it is similar in its effects

o cotoin

cotton (kot'n) [L. gossyp'ium]. A textile material derived from the seeds of one or more of the cultivated varieties of Gossyp'ium herba'ceum. absorbent c., cotton that has been rendered absorbent by removal of its fatty matter. gun c., pyroxolon. c.-oil, c.-seed oil [L. o'leum gossyp'ii sem'inis], a fixed oil from the seed of the cotton plant: much used in pharmacy. purified c., absorbent cotton. c.-root, the root of Gossyp'iium herba'ceum, the cotton plant. The rootbark (gossyp'ii cortex, U. S. P.) is diuretic and emmenagogue. Dose, 30 gr. (2 gm); of fluid-extract, 15-45 min. (1-3 c c.). salicylated c., purified cotton charged with salicylic acid an antiseptic dressing. styptic c., cotton impregnated in a styptic solution and dried.

cottonoid (kot'n-oid). A felt of absorbent cotton for surgeons' use.

Cotton-process ether (kot'on) [James H. Cotton, Canadian physician]. See ether.

cottonwood (kot'un-wood). See Populus.

Cotugno (ko-toon'go). Same as Cotunnius.

Cotunnius' aqueduct, nerve, etc (ko-tun'e-us) [Domenico Colugno, Italian anatomist, 1736-1822]. See aqueduct, nerve, etc.

cotyledon (kot-il-e'don) [Gr. κοτυληδών]. 1. The seed-leaf of the embryo of a plant. 2. Any one of the subdivisions of the uterine surface of the placenta.

Cotylogonimus (kot-il-o-gon'im-us). A genus of flukes infesting dogs and cats in Egypt

cotyloid (kot'il-oid) [G-. κοτυλοειδής cup-shaped].
1. Cup-shaped. 2. Pertaining to the cotyloid cavity or acetabulum.

cotylopubic (kot"il-o-pu'bik). Relating to the acetabulum and the os pubis.

cotylosacral (kot"il-o-sa'kral). Relating to the acetabulum and the os pubis.

couch-grass (kowtch'gras). The perennial grass, Agropy'rum (Trit'icum) re'pens. Its long roots (trit'icum, U. S. P.) are diuretic and are useful in cystitis. It is given in decoction ad libitum. Dose of fluidextract, 1-4 dr. (4-16 c.c.).

couching (kowtch'ing). Displacement of the lens in cataract.

sion of air from the lungs. aneurysmal c., a variety of cough commonly associated with aneurysm, and often with paralysis of one vocal cord. Balne's c., cough on lying down, seen in obstruction of the nasopharynx. compression c., a deep resonant cough caused by compression of the bronchi. It resembles in character the cough of a dog and is sometimes called dog-c. dog-c. See compression c. dry c., one which is not accompanied with expectoration. ear-c., a reflex cough caused by disease of the ear. extrapulmonary c., a cough due to causes outside the lungs. hacking c., a short, frequent, and feeble cough. hebetic c., the dry barking of puberty: cynobex hebetica. minute-gun c., whooping-cough with the paroxysms occurring close together. Morton's c., a persistent cough in pulmonary tuberculosis which brings on vomiting and

thus causes loss of nourishment. reflex c., a cough due to the irritation of some remote organ. stomach c., a cough attended by reflex irritation from stomach disorder. tea-tasters' c., cough in tasters of tea, due to inhaling fungi, such as Monilia, Aspereillus, etc., from tea leaves. trigeminal c., a cough due to irritation of the fibers of the trigeminal nerve distributed to the throat, nose, and external meatus of the ear. wet c., one which is attended with expectoration. whooping-c. See whooping-cough. winter c., chronic bronchitis recurring in the winter.

coulomb (koo'lom) [after C. A. de Coulomb, French physicist, 1736-1806]. The unit of quantity in current electricity; the quantity afforded by an ampere of current in one second flowing against one ohm of resistance with a force of one volt.

coumarin (koo'mah-rin) Fragrant colorless crystals, the anhydrid of ortho-oxycinnamic acid, C₀-H₄(CH)₂O.CO, from tonka bean, sweet clover, other plants, and also prepared synthetically.

Councilman'ia lafleu'ri. A species of ameba resembling *Endamæba coli*, but distinguished by multiplying during its encystment.

counterextension (kown"ter-eks-ten'shun). Traction in a proximal direction coincident with traction in the opposite direction.

counterirritant (kown-ter-ir'it-ant). 1. Producing a counterirritation. 2. A derivative agent.

counterirritation (kown"ter-ir-it-a'shun). A superficial irritation, an irritation which is intended to relieve some other irritation.

counteropening (kown-ter-o'pen-ing). A second opening, as in an abscess, made to facilitate drainage.

counterpoison (kown'ter-poi-zn). A poison given to counteract another poison.

counterpuncture (kown'ter-punkt-ur). A second opening made opposite to another.

counterstain (kown'ter-stān) A stain applied to render the effects of another stain more discernible.

countersuggestion (kown"ter-sug-jes'chun). A suggestion opposed to another suggestion.

counting-cell (kown'ting-sel). See under cell. coup (koo) [French for "stroke"]. c. de fouet (koo-de-foo-a') ["stroke of the whip"]. Rupture of the plantaris muscle accompanied by a sharp disabling pain; whip-lash injury; lawn-tennis leg c. de soleil (koo'deh so-lal') [Fr]. A sunstroke.

courap (koo-rap'). A disease of the skin occurring in India, with eruption and itching of the armpits, groin, breast, and face.

courbature (koor'bah-tūr) [Fr.]. 1. Aching of the muscles. 2. Caisson disease.

courses (kor'sez). Menses; the monthly illness of a woman.

court-plaster (kort'plas-ter). A silk plaster spread with isinglass.

Courvoisier's law, sign (koor-vwah-ze-āz') [Louis G. Courvoisier, a French surgeon, 1843-1918]. See law and sign.

coussein (koo'se-in). Same as koussein.

coussin (koo'sin). See koussin.

cousso (koo'so). See kousso.

couvade (koo-vad'). An ethnic custom, in which the husband feigns illness during his wife's parturient and puerperal periods.

couvercle (koo'ver-kl) [Fr]. A blood-clot formed outside a vessel.

couveuse (koo-vuz') [Fr]. See incubator.

cover-glass (kov'er-glas). A thin glass plate which covers a mounted microscopic object or a culture.

cowage, cowhage (kow'edj). See Mucuna.

cow-hocked (kow-hokt). Having hocks like a cow: said of horses whose hocks are abnormally close to each other.

cowl (kowl). See pilleus.

Cowper's cyst, gland (kow'perz) [William Cowper, English surgeon, 1666-1709]. See cyst and gland.

cowperian (kow-pe're-an). Pertaining to William Cowper or to Cowper's cyst or gland.

cowperitis (kow-per-i'tis). Inflammation of Cowper's glands.

cowpox (kow'poks). See vaccinia.

coxa (koks'ah) [L.]. The hip or hip-joint. c. pla'na, osteochondritis deformans juvenalis. c. val'ga, deformity of the neck of the femur, the opposite of coxa vara, producing in the limb marked external rotation, increased abduction, and decreased adduction. Called also collum valgum. c. va'ra, "bent hip," bending downward of the neck of the femur without hip-joint disease. It is usually due to rickets.

coxalgia, coxalgy (koks-al'je-ah, kok'sal-je) [L. cox'a hip + Gr. ἄλγος pain]. 1. Hip-joint disease; tuberculosis of the hip-joint. 2. Pain in the hip

coxankylometer (kok-sang-kil-om'et-er) [L. cox'a hip $+ \dot{a}\gamma\kappa\dot{\nu}\lambda$ os bent $+ \mu\dot{\epsilon}\tau\rho\sigma\nu$ measure]. An instrument for measuring the deformity in hip disease.

coxarthritis (koks-ar-thri'tis) Same as coxitis.

coxarthrocace (koks-ar-throk'as-e). Fungous disease of the hip-joint.

coxarthropathy (koks-ar-throp'ath-e) [L. cox'a hip + Gr $\alpha\rho\theta\rho\rho\nu$ joint + $\pi\alpha\theta\sigma$ disease]. Hipjoint disease.

coxitis (koks-i'tis). Inflammation of the hip-joint. senile c., rheumatoid arthritis of the hip-joint.

coxodynia (koks-o-din'e-ah). See coxalgia.

coxofemoral (koks-o-fem'or-al) [L. cox'a hip + fe'mur thigh]. Pertaining to the hip and thigh.

coxotuberculosis (kok"so-tu-ber-ku-lo'sis) [L. cox'a hip + tuberculosis]. Tuberculous disease of the hip-joint.

C. P. Abbreviation for chemically pure.

Cr. The symbol for chromium

crab, crab-louse (krab, krab'lows). A louse, Philm'rus inguina'lis, that infests the pubic region, crabs'-claws, crabs'-eyes. Concretions from the stomach of craw-fish.

crachotement (krah-shot-maw') [Fr.]. Inability to spit, even with a strong desire to do so.

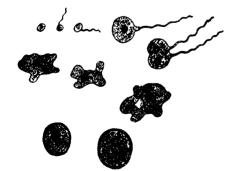

crack (krak) See sand-crack.

cracked-pot sound (krakt-pot'). A percussion-sound indicative of a pulmonary cavity into which the breath may pass.

cradin (kra'din) [Gr. κράδη fig-bough] A peptic ferment from the twigs and leaves of the fig-tree; ficoin.

cradle (kra'dl). A frame for keeping bed-clothes from a wounded limb. ice-c., a device for refrigerating fever patients

Crafts's test (krafts) [Leo M. Crafts, American neurologist, born 1863]. See under tests.

Craigia hominis (Barlow).

Craigia (kra'ge-ah) [Charles F. Craig, U. S. Army surgeon, born 1872]. A genus of flagellate protozoans, two species of which, C. hom'inis and C. mi'grans, inhabit the intestine and cause dysentery-like symptoms. This genus was originally named Paramaba by Craig.

craigiasis (kra-gi'as-is). A diseased condition produced by infection of the intestine with Craigia. It is marked by lassitude, mild headache, abdominal discomfort, and moderate diarrhea.

cramp (kramp). A painful spasmodic muscular contraction, especially a tonic spasm. accessory c., spastic torticollis due to a lesion of the accessory nerve. auctioneers' c., a professional neurosis affecting mainly the left side of the orbicularis oris muscle. compositors' c., an occupation neurosis of the thumb and fingers of compositors recombling writers' cramp. dactules compositors, resembling writers' cramp. dactylographers' c., an occupation neurosis similar to writers' cramp affecting typewriters. hammermen's c., a spasmodic affection of the muscles of the entire arm. heat-c., muscular spasms attended by pains, dilated pupils, and weak pulse: seen in those who labor in intense heat. hephestic c., hammermen's cramp. intermittent c. See tetany. musicians' c., a neurosis c., a neurosis seen in musicians and named from the instrument used. occupation c. Same as pro-fessional c. professional c., a spasm of a group of muscles, due to excessive use in one's daily occupation. seamstresses' c., a neurosis of sewing-women, resembling writers' cramp. shaving c., a neurosis of the hands of barbers resembling writers' cramp. telegraphers' c., a neurosis resembling writers' cramp, seen in telegraphers. violinists' c., an occupation neurosis peculiar to violin players. waiters' c., spasm and pain in the muscles of the back and arms of table-waiters. watchmakers' c., a spasm of the finger muscles peculiar to watchmakers. peculiar to watchmakers. writers' c., an occupation neurosis due to excessive writing. It is marked by spasmodic contraction of the muscles of the fingers, hand, and forearm, together with neuralgic pain therein. It comes on whenever an attempt is made to write.

cramp-bark. The bark of Vibur'num oxycoc'cus: antispasmodic. Dose of fluidextract, ½-2 dr. (2-8 c c) See Viburnum.

Crampton's line, muscle (kramp'tonz) [Sir Philip Crampton, Irish surgeon, 1777-1858]. See line and muscle.

cram-stunt (kram'stunt). A mental defect due to overstudy.

cranesbill (krānz'bil) See Geranium.

cranial (kra'ne-al) [L. crania'lıs]. Pertaining to the cranium.

craniamphitomy (kra"ne-am-fit'o-me) [cranium + Gr. $\delta\mu\varphi i$ around + $\tau o\mu\dot{\eta}$ cutting] Division of the entire circumference of the skull for securing decompression

craniectomy (kra-ne-ck/to-me) [Gr κρανίον skull + έκτομή excision]. Excision of a part of the skull. linear c., excision of a strip of the skull, done for the relief of microcephalus.

cranio-acromial (kra"ne-o-ak-ro'me-al). Pertaining to the cranium and acromion.

cranio-aural (kra''ne-o-aw'ral). Pertaining to the cranium and the ear.

craniocele (kra'ne-o-sēl) [Gr. κρανίον cranium + κήλη tumor]. A protrusion of any part of the encephalon from the cranial cavity.

craniocerebral (kra"ne-o-ser'e-bral). Pertaining to the cranium and the cerebrum.

cranioclasis (kra-ne-ok'la-sis) [Gr. κρανίον skull + κλάσις fracture]. The crushing of the fetal head.

cranioclast (kra'ne-o-klast) [Gr. κρανίον skull + κλαστός broken]. An instrument for use in performing cranioclasis.

cranioclasty (kra'ne-o-klas-te). Same as cra-

craniocleidodysostosis (kra"ne-o-kli"do-disos-to'sis) [Gr. κρανίον skull + κλείς clavicle +

- δυs- bad + όστέον bone]. Cleidocranial dysostosis. See under dysostosis.
- craniodidymus (kra"ne-o-did'im-us) [Gr. κρανίον skull + δίδυμος twin]. A monster with two heads.
- craniofacial (kra"ne-o-fa'shal). Pertaining to the cranium and the face.
- **craniognomy** (kra-ne-og'no-me) [Gr. κρανίον head + γνώμων an interpreter or judge]. The study of the shape of the head.
- **craniograph** (kra'ne-o-graf) [cranium + Gr. γράφειν to write]. An instrument for outlining the skull.
- craniology (kra-ne-ol'o-je) [Gr. κρανίον head + λόγος treatise]. The scientific study of skulls.
- craniomalacia (kra"ne-o-mal-a'se-ah) [Gr. κρανίον skull + μαλακία softness]. Abnormal softness of the skull; craniotabes.
- **craniometer** (kra-ne-om'et-er) [Gr. κρανίον head + μέτρον measure]. An instrument for use in craniometry.
- craniometric (kra-ne-o-met'rik). Pertaining to craniometry.
- **craniometry** (kra-ne-om'et-re) [Gr. κρανίον head + μέτρον measure]. The scientific study of the proportions of the human head.
- **craniopagus** (kra-ne-op'ag-us) [Gr. κρανίον head + πηγνύναι to fix]. A twin monster united at the head.
- **craniopathy** (kra-ne-op'ath-e) [Gr. $\kappa \rho \alpha \nu i \sigma \nu$ skull + $\pi \dot{\alpha} \theta \sigma s$ disease]. Any disease of the skull.
- **cranioplasty** (kra'ne-o-plas-te) [Gr. κρανίον skull + πλάσσειν to mold]. Plastic surgery of the skull; surgical correction of defects of the skull.
- **craniopuncture** (kra'ne-o-punk-tūr). Puncture of the brain for exploratory purposes in cranial disease.
- **craniorachischisis** (kra"ne-or-ah-kis'kis-is) [Gr. κρανίον cranium + βάχις spine + σχίζειν to split]. Congenital fissure of the skull and spinal column.
- craniosacral (kra"ne-o-sa'kral). Pertaining to the skull and the sacrum.
- **cranioschisis** (kra-ne-os'kis-is) [Gr. $\kappa \rho \alpha \nu l o \nu$ skull $+ \sigma \chi l \sigma \iota s$ fissure]. Congenital fissure of the cranium.
- **cranioscopy** (kra-ne-os'ko-pe) [Gr. κρανίον skull + σκοπεῖν to view]. Diagnostic examination of the head.
- **craniospinal** (kra''ne-o-spi'nal). Pertaining to the cranium and spine.
- **craniostenosis** (kra"ne-o-ste-no'sis) [Gr. κρανίον skull + στένωσις narrowing] Hyperostosis cranii, producing contraction of the cranial fissures and foramina.
- **craniostosis** (kra"ne-os-to'sis) [Gr. κρανίον skull + δοτέον bone]. Congenital ossification of the cranial sutures.
- craniotabes (kra"ne-o-ta'bēz) [L. cra'nium skull + ta'bes a wasting]. Thinning of spots in the infantile skull, chiefly in cases of rickets and syphilis.
- **craniotome** (kra'ne-o-tōm) [Gr. κρανίον skull + τομή a cut]. An instrument for use in performing craniotomy.
- craniotomy (kra-ne-ot'o-me) [Gr. κρανίον head + τομή a cut]. The cutting in pieces of the fetal head to facilitate delivery.
- craniotonoscopy (kra"ne-ot-o-nos'ko-pe) [Gr. κρανίον head + τόνος tone + σκοπεῖν to view]. The auscultatory percussion of the head.
- **craniotopography** (kra"ne-o-to-pog'raf-e) [Gr. κρανίον skull + topography]. The study of the relations of the surface of the skull to the various parts of the brain beneath.
- craniotrypesis (kra"ne-o-trip-e'sis) [Gr. κρανίον head + τρύπησις a piercing]. The trephination of the skull.
- craniotympanic (kra"ne-o-tim-pan'ik). Pertaining to the skull and its tympanum.

- cranitis (kra'ni-tis). Inflammation of the cranial bones.
- cranium (kra'ne-um), pl. cra'nia [L.; Gr. κρανίον].
 The skull or brain-pan.
- crapulent, crapulous (krap'u-lent, krap'u-lus)
 [L. crapulen'tus, crapulo'sus drunken]. Due to excess in eating or drinking.
- crasis (kra'sis) [L., Gr. κρᾶσις mixture]. The individual temperament or constitution. parasitic
 c., a weakened state due to the presence of parasites or favorable to infestation by them.
- crassamentum (kras-am-en'tum) [L.]. A clot, as of blood.
- Crast. Abbreviation for L. crasti'nus, for tomorrow.
- crategin (krat-e'jin). A bitter crystalline compound from the bark of the twigs of Crategus.
- **Crategus** (kra-te'gus). A genus of trees and shrubs. C oxyacan'tha is the hawthorn of Europe; from its fruit are obtained a tincture and a fluidextract that have been used in cardiac neuroses.
- crateriform (kra-ter'if-orm) [L. cra'ter bowl + for'ma shape]. Depressed or hollowed, like a bowl.
- craunology (kraw-nol'o-je). Same as crenology.
- craunotherapy (kraw-no-ther'ap-e). Same as crenotherapy.
- cravat (krav-at') [Fr. cravate]. A form of bandage made by folding a triangular piece of cloth from its apex toward the base.
- craw-craw (kraw'kraw). An obstinate form of skin disease occurring in West Africa, and affecting chiefly the thighs and genitals, though it may spread over the whole body. It is caused by Onchocerca volvulus.
- crawley (kraw'le). See Corallorhiza.
- crealbin (kre-al'bin). A dry powder of creolin and albumin an antiseptic for internal use.
- cream (krēm) [L. cre'mor]. The oily or fatty part of milk whence butter is prepared. aluminum hydroxid c., precipitate a 1 per cent. solution of ammonium alum with a slight excess of 1 per cent. ammonium hydroxid and wash the precipitate. cold-c., ointment of rose water. leukocytic c., the more or less concentrated layer of leukocytes supposed to remain on the surface of a corpuscular mixture after centrifugalization in the determination of the opsonic index. Moynihan's c., a mixture consisting of as much bismuth carbonate in 1: 1000 aqueous solution of HgI2 as will make a thick paste: used as a wound dressing. c. of tartar. See potassium bitartrate.
- **creamometer** (kre-mom'et-er) [cream + Gr. μέτρον measure]. An instrument for the determination of the percentage of cream in milk.
- creasote (kre'as-ōt). See creosote.
- creatin (kre'at-in) [Gr. κρέας flesh]. A crystallizable nitrogenous principle, NH.C(NH₂).N(CH₃).-CH₂.COOH, or methyl-guanidin-acetic acid, derivable from the juice of muscular tissue. It is an opaque white and bitter solid; sometimes seen in transparent prisms. Therepeutically it is a cardiac, muscular, and digestive tonic. Dose, 1½ gr. (0.1 gm.). Called also kreatin.
- **creatinase** (kre-at'in-ās). An enzyme which transforms creatin into creatinin.
- creatinemia (kre''at-in-e'me-ah) [creatin + Gr. alμa blood]. Excess of creatin in the blood.
- creatinin (kre-at'in-in). A basic substance, C₄-H₇N₃O; creatin anhydrid: procurable from creatin and from urine.
- creatininase (kre-at-in'in-ās). A ferment which decomposes creatinin into urea and methyl glycocol.
- creatorrhea (kre-at-o-re'ah) [Gr. κρέας flesh + βοιά flow]. The presence of muscle-fibers in the feces.
- **creatotoxism** (kre"at-o-toks'ism). Meat-poisoning. **creatoxicon** (kre-at-oks'ik-on). See kreatoxicon.

creatoxin (kre-at-oks'in). See kreotoxin.

crèche (krāsh) [Fr.]. A day-nursery for infants. credargan (kre-dar'gan). A proprietary form of colloidal silver.

Credé's antiseptic, ointment (kra-dāz') [Benno C. Credé, German surgeon, born 1847]. See anti-

Credé's method, etc. (kra-dāz') [Karl Sigmund Franz Credé, German gynecologist, 1819-1892]. See method.

An obsolete equivalent to ventricle creek (krek). (of the brain or of the heart).

creeping eruption. See under eruption.

cremaster (kre-mas'ter) [L.; Gr. κρεμᾶν to suspend]. See muscles, table of.

cremasteric (kre-mas-ter'ik). Pertaining to the cremaster.

cremation (kre-ma'shun) [L. crema'tio a burning]. The burning or incineration of dead bodies.

crematorium (krem-at-o're-um). Crematory. crematory (krem'at-o-re). A furnace or establishment for the burning up of dead bodies.

cremnocele (krem'no-sēl). Labial hernia.

cremnophobia (krem-no-fo'be-ah) [Gr. κρημνός cliff $+\varphi \delta \beta$ os fear]. Insane dread of precipices.

cremo-bismuth (kre-mo-biz'muth). A mixture of bismuth subcarbonate suspended in water in a finely divided state. Dose, 1-4 fl.dr. (4-16 c.c.).

cremor (kre'mor). Latin for cream. c. tar'tari, cream of tarta; potassium bitartrate.

cremule (krem'ūl) A small chocolate cream: used as a vehicle for medicines.

crena (kre'nah) [L.]. A notch or cleft. c. a'ni [B N A], the anal cleft. c. che'nium, crena ani. c. cor'dis, the longitudinal sulcus of the heart.

crenasol (kren'as-ol). A disinfectant prep-

aration of paracresol, metacresol, pyridin compounds, etc. crenate, crenated (kre'nāt, kre'na-ted)

[L. crena'tus]. Scal-

Crenated red blood-corpuscles (Hill)

loped or notched. crenation (kre-na'shun). An abnormal notched appearance, as of the margins of the red bloodcorpuscles.

crenic acid (kre'nik). See acid.

crenilabrin (kren-il-a'brin). A protamin obtained from the sperm of the cunner (fish)

crenology (kren-ol'o-'e) [Gr. κρήνη spring + λόγοs treatise]. The science of therapeutic springs; craunology.

crenotherapy (kren-o-ther'ap-e) [Gr. κρήνη spring + θεραπεία treatment]. Treatment by water from mineral springs.

Crenothrix (kren'o-thriks) [L.; Gr. κρήνη spring + θρίξ hair]. A genus of Chalmydobacteriales. They consist of long, stiff, unbranched filaments which have a deposit of iron in the sheath. C. polys'pora, the only species It occurs abundantly in the reservoirs and conduits of public water supplies where it forms brownish masses which may obstruct the flow of water and often imparts an unpleasant taste to the water.

creoform (kre'o-form). Same as guaiaform. creolalbin (kre-ol-al'bin). Same as crealbin.

creolin (kre'o-lin). A thick, blackish, liquid preparation, saponified coal-tar creosote; it is a deodorizer, antiseptic, and hemostatic; used in surgical dressings, in obstetric cases, and in gastric and urinary disorders in 2 per cent. solution. Dose, ½-5 min. (0.033-0.32 c.c.). Artmann's C., a local antiseptic and disinfectant consisting of a compound of phenols and sulphuric acid.

creophagism, creophagy (kre-of'a-jism, kre-of'a-je) [Gr. κρέας flesh + φαγεῖν to eat]. The use of flesh food.

creophen (kre'o-fen). A proprietary disinfecting fluid derived from coal-tar.

creosal (kre'o-sal). Tannosal; a proprietary combination of tannic acid and the phenols of creosote: it is a dark-brown powder, antiseptic and astringent, and is recommended for local and internal use in laryngismus.

creosin (kre'o-sin). A patented mixture of creosote, iodin, calcium hypophosphite, and balsam of Peru: used like creosote.

reosoform (kre-os'o-form). A greenish powder composed of formic aldehyd and creosote: anticreosoform (kre-os'o-form). septic.

creosol (kre'o-sol) [creosote + L. o'leum oil]. A colorless, oily liquid, C₆H₃CH₃(OH)(O.CH₃), from potassium creosotate: it is an antiseptic. Dose, 1-2 min. (0.025-0.1 c.c.).

creosolid (kre-o-sol'id). Magnesium creosotate; magnesia and creosote in equal parts: a non-irritant antiseptic. Dose, 8 gr. (0.5 gm.)

creosomagnesol (kre"o-so-mag'ne-sol). A dry compound of creosote, magnesia, and potassium hydroxid antiseptic. Dose, 2 gr. (0.13 gm.), in a pill with honey.

creosotal (kre-o-so'tal). A thick, brown oil, creo-sote carbonate, from beechwood creosote safer than creosote for use as an internal antiseptic. Dose, 3-15 min. (0.199-1 c.c.).

creosote (kre'o-sot) [L. creoso'tum, from Gr. κρέας flesh $+ \sigma \omega \zeta \epsilon \nu$ to preserve]. An oily, transparent, poisonous distillate from wood-tar; it is a local anesthetic, escharotic, and powerful antiseptic: used as a caustic for warts, etc.; externally, in skin diseases and unhealthy ulcers; internally, to arrest vomiting, and internally, hypodermically, and by inhalation, in pulmonary phthisis. Dose, 1-3 min. (0.065-0.18 c.c.); of a'qua creoso'ti, 1-4 dr. (4-16 c.c.); of mis'tura creoso'ti, 1 fl.oz. (30 c.c.).
The unguen'tum creoso'ti and va' por creoso'ti are also used c. calcium chlorhydrophosphate, a syrupy, white substance containing creosote carbonate and calcium hydrophosphate: used in tuberculosis as an antiseptic. Dose, 5-15 gr. (0.333-1 gm.). c. carbonate. See creosolal. c. formaldehyd, creosoform. methylene c. See pneumin. c. oleate, a yellowish, antiseptic Dose, 3-10 min. (0 2-0.6 c.c.). c. phenylpro'prionate. See proposole. c. phosphate, phosote. c. phosphite. See phospholal. c. valerianate. See eosole.

creotoxin (kre-o-tok'sin). See kreotoxin.

creotoxism (kre-o-tok'sizm). See kreotoxism.

crepitant (krep'it-ant) [L. crepita're to rattle]. Rattling or crackling.

crepitation (krep-it-a'shun) [L. crepita're crackle]. 1. A sound like that made by rubbing the hair between the fingers, or like that made by throwing fine salt into a fire. 2. The noise made by rubbing together the ends of a fractured bone.

crepitin (krep'it-in). An albumoid from the juice of Hura crepitans. It has an action like abrin.

crepitus (krep'it-us) [L.]. 1. The discharge of flatus from the bowels. 2. Crepitation in either sense; a crepitant rale. articular c., joint sense, a crepitant rale. articular c., joint crepitus. bony c., the crackling sound produced by the rubbing together of fragments of fractured bone. false c., joint c., the grating sensation caused by rubbing together. grating sensation caused by rubbing together of the dry synovial surfaces of joints. c. in'dux, a crepitant râle, or crackling sound, heard in pneumonia at the beginning of the process of solidification of the lung. c. re'dux, crepitus heard in the resolving stage of pneumonia. silken c., a sensation as of two pieces of silk rubbed between the fingers, felt on moving a joint affected with hydrarthrosis.

crepuscular (kre-pus'ku-lar) [L. crepus'culum twilight]. Referring to twilight, as a twilight cresalol (kres'al-ol). Any one of the three isomeric salicylic esters of the cresols; distinguished as orthocresalol, metacresalol, and paracresalol; they are milky-white powders, of the formula OH.C₆H₄.CO₂C₆H₄ CH₃ antiseptic, mainly for external use. The cresalols are also used internally for rheumatism. Dose, 4-15 gr. (o 26-1 gm.).

for rheumatism. Dose, 4-15 gr. (o 26-1 gm.).

cresamin (kres-am'in). An antiseptic and germicide mixture of ethylendiamin and tricresol.

cresapol (kres'a-pol). A solution of crude cresols in potash soap: used as a disinfectant.

cresaprol (kres'ap-rol). See cresin.

cresatin (kres'at-in). Meta-cresyl acetate, CH₃-C₆H₄.O(CH₃CO), a colorless oily liquid, used as an antiseptic and analgesic in diseases of the nose, throat, and ear.

crescent (kres'ent) [L. cres'cens]. 1. Shaped like a new moon. 2. Either of the two lateral bands of gray matter in the spinal cord, each made up of a ventral and a dorsal cornu. articular c., a crescent-shaped articular fibrocartilage. c's of Gianuzzi, crescent-shaped groups of granular cells in the acini of mucous glands also called demilunes of Heidenham. malarial c's, the sausage-shaped sporonts of the parasite of pernicious malarial fever. See murogametocyte. myopic c., a crescentic posterior staphyloma in the fundus of the eye in myopia. c's of the spinal cord, the cornua, or horns, of gray matter in the spinal cord, distinguished as anterior and posterior, or ventral and dorsal.

crescentic (kres-en'tik). Shaped like a crescent or new moon.

crescograph (kres'ko-graf) [L. cre'cere to grow + Gr. γράφειν to record]. An instrument which magnifies movements and demonstrates the growth of plants.

cresegol (kres'e-gol). A parasulphonic derivative of cresol, mercury, and potassium. a reddishbrown powder, antiseptic and emetic.

cresin (kres'in). A brown liquid containing cresol and sodium cresoxyl acetate. antiseptic; its weak solutions are used externally.

cresochin (kres'o-kin). A somewhat soluble mixture of chinolin, tricresol, and chinolin-tricresol sulphonate: used in washes as a disinfectant.

cresoform (kre'so-form). Any oily fluid containing creosote and formaldehyd. It is used as an antiseptic for ulcers and tuberculous lesions, and internally in tuberculous enteritis. Dose, 10-40 min. (0.65-2.6 c.c.).

cresol (kre'sol). Cresylic acid, methyl-phenol, CH₃-C₆H₄.OH, a phenol from coal-tar or wood-tar; there are three varieties—orthocresol, metacresol, and paracresol—the second of which is a liquid all are antiseptic. c.-anitol, a solution of metacresol in anitin: a remedy in erysipelas c. iodid, an ill-smelling, resinous, light yellow powder: antiseptic. c.-naphthol, a viscous brown liquid a germicide. c. phthalein, an indicator, orthocresol-phthalein, used in determination of hydrogen-ion concentration. c. red, an indicator, orthocresol-sulphonphthalein used in the determination of hydrogen-ion concentration. It has a P_H range of 7.2 to 8 8, being yellow at 7.2 and red at 8.8.

cresolene (kres'o-lēn). Same as anisol.

cresolin (kres'o-lin). A proprietary antiseptic resembling creolin.

cresorcin (kre-sor'sin). A crystalline derivative from cresol, C₇H₈O₂; ditoluene.

cresosulphuric acid (kre"so-sul-fu'rik). See

cresotate (kres'o-tāt). Same as cresylate.

cresotic acid (kre-so'tik). See acid.

crest (krest) [L. cris'la a crest]. A projecting ridge, especially one which surmounts a bone or its border. acustico-facial c., the embryonic structure from which develop the ganglia of the

seventh and eighth nerves. buccinator c., a ridge running from the base of the coronoid process of the mandible to a point near the last molar tooth and giving attachment to the buccinator muscle. cross c., a fold of enamel extending across the face of a tooth. **deltoid c.**, a rough elevation on the humerus where the deltoid muscle is attached. dental c., the maxillary ridge passing along the alveolar processes of the fetal maxillary bones. frontal c., a ridge in the middle line of the internal surface of the frontal bone. **gluteal c.**, the gluteal ridge. **c. of the ilium**, the thickened and expanded upper border of the ilium **infratem**c. See interosseous ridge, under ridge. inter-trochanteric c. See intertrochanteric line, under line. lacrimal c., a vertical ridge on the outer surface of the lacrimal bone. malar c., the anterior edge of the sphenoid bone. nasal c., a crest on the internal border of the nasal bone. neural c., the ridge-like dorsal part of the neural tube of the embryo, giving rise to the spinal ganglia. obturator c., a ridge of bone extending from the spine of the os pubis to the anterior extremity of the condyloid notch. occipital c., a vertical ridge on the external surface of the oc-cipital bone. orbital c., the lower edge of the orbital surface of the sphenoid bone. c. of the pubes, a crest from the spine to the inner extremity of the pubes. **sphenofrontal c.**, that edge of the malar bone which articulates with the sphenoid below and the frontal above. **sphe**noid c., the median ridge on the anterior surface of the sphenoid bone, running down from the ethmoid spine and forming a part of the nasal plate. **sphenomaxillary c.**, a bony ridge along the edge of the sphenomaxillary fissure. **supra**mastoid c., a ridge on the temporal bone above the auditory meatus temporal c., a ridge on the temporal bone c. of the tibia, the prominent ridge on the patellar side of the tibia. trigeminal c., the embryonic structure from which the gasserian ganglion develops. turbinated c., a horizontal ridge on the internal surface of the palate bone c. of the urethra. Same as verumontanum.

cresyl (kres'ıl) An antiseptic ester, OH.C₆H₄ CO₂ - C₆H₄ CH₃, consisting of salicylic acid and cresol.

cresylate (kres'il-āt). A cresol compound in which the hydrogen of the hydroxyl is replaced by a base.

cresylone (kres'il-ōn). A proprietary preparation similar to the liquor cresolis compositus of the

creta (kre'tah) [L. for "chalk"]. Chalk. c. prepara'ta (U. S. P.), prepared chalk; elutriated calcium carbonate. It is an antacid remedy; often useful in diarrhea Dose, 5-40 gr. (0.333-2.666 gm.). pul'vis cre'tæ compos'itus, compound chalk powder: chalk, 30 parts, sugar, 50 parts; and gum arabic, 20 parts. Dose, 5-60 gr (0.333-4 gm)

cretaform (kre'taf-orm). Oxymethylcresoltannin, a brownish-white powder: used in treatment of wounds.

cretin (kre'tin) [Fr.]. A person affected with cretinism.

cretinin (kre'tin-in). A compound found in the thyroid gland.

cretinism (kre'tin-izm). A chronic condition, congenital or developed before puberty, marked by arrested physical and mental development with dystrophy of the bones and soft parts. Cretinism is regarded as a form of myxedema and is probably due to deficient thyroid activity. It is associated with disease of the thyroid body, and is endemic in Switzerland. fetal c., achondroplasia. spontaneous c., sporadic c., cretinism in a person not descended from cretins, and who has not lived in a region where cretinism prevails.

cretinistic (kre-tin-is'tik). Pertaining to cretinismcretinoid (kre'tin-oid). Resembling a cretin; resembling cretinism. cretinous (kre'tin-us). Affected with cretinism.

crevice, gingival (krev'is). The space between the surface of the cervical enamel of a tooth; and the overlying unattached gingiva; called also subgingival space.

crevicular (krev-ik'u-lar). Pertaining to a crevice, especially the gingival crevice.

crib (krib). In dentistry, a removable anchorage for orthodontic appliances.

cribbing (krib'ing). A bad habit of some horses in which the animal grasps the manger or other object with the incisor teeth, arches the neck, makes peculiar movements with the head, and swallows quantities of air. Called also crib-biting and wind-sucking.

cribral (krib'ral). Pertaining to a cribrum, or sievelike structure.

cribrate (krib'rāt) [L. cribra'tus]. Pitted with depressions like the holes in a sieve.

cribration (krib-ra'shun). 1. The quality of being cribrate. 2. The process or act of sifting or passing through a sieve.

cribriform (krib'rif-orm) [L. cri'brum a sieve + for'ma form]. Perforated with small apertures like a sieve.

cribrum (kri'brum) [L. a "sieve"]. The lamina cribrosa.

Crichton-Browne's sign (kri'ton-brownz) [Sir James Cruhton-Browne, English physician, born 1810] See under sign.

crico-arytenoid (kri"ko-ar-it-e'noid). Pertaining to or extending between the cricoid and arytenoid cartilages.

cricoderma (kri-ko-der'mah) [Gr. κρίκος ring + δέρμα skin] A disease of the skin with ring-shaped linear infiltration surrounding a similar but darker central area of infiltration

cricoid (kri'koid) [Gr. κρίκος ring + είδος form].
1. Resembling a ring, ring-shaped.
2. The cricoid cartilage.

cricoidectomy (kri-koid-ek'to-me). Excision of the cricoid cartilage.

cricoidynia (kri-koi-din'e-ah) [Gr. κρίκος cricoid + οδυνη pain] Pain in the cricoid cartilage.

cricopharyngeal (kri"ko-far-in'je-al). Pertaining to the cricoid cartilage and the pharynx.

cricothyreotomy (kri"ko-thi-re-ot'o-me) [Gr. $\kappa\rho l$ - $\kappa\sigma_s$ a ring $+\theta\nu\rho\epsilon\dot{\sigma}$ shield $+\tau o\mu\dot{\eta}$ a cut]. Incision through the cricoid and thyroid cartilages.

cricothyroid (kri-ko-thi'roid). Pertaining to or connecting the cricoid and thyroid cartilages.

cricotomy (kri-kot'o-me) [Gr. κρίκος ring + τομή a cut]. The surgical cutting of the thyroid cartilage.

cricotracheotomy (kri"ko-tra-ke-ot'o-me). Cricotomy and tracheotomy together; incision of the cricoid and trachea.

criminaloid (krim'in-al-oid). 1. Like a criminal.
2. A person belonging to the criminal type of physique.

criminology (krim-in-ol'o-je) [L. cri'men crime + Gr λόγος treatise]. The scientific study of crime and criminals.

crinin (krin'in) [Gr. κρίνειν to separate]. A substance which stimulates glandular secretion.

crinis (kri'nis), pl. cri'nes. [Latin for hair]. c. cap'itis, the hair of the head. c. pu'bis, the pubic hair.

crinogenic (krin-o-jen'ik) [Gr. κρίνειν to secrete + γενᾶν to produce]. Stimulating secretion.

crinosin (kri'no-sin) [L. cri'nis hair]. A substance occurring in hair-like filaments, derivable from brain tissue.

Crinum (kri'num). A genus of amaryllidaceous plants; the root of C. asiat'icum, of India, has properties like those of squill.

Cripps's obturator, operation (crips) [William Harrison Cripps, 1850-1923]. See obturator and operation.

crisis (kri'sis), pl. cri'ses (L.; Gr. κρίσις). 1. The turning-point of a disease for good or evil. 2. A painful paroxysm, with functional disturbance, occurring in the course of tabes dorsalis. blood c., a sudden temporary appearance of great numbers of nucleated red cells (erythroblasts) in the blood. bronchial c., a paroxysm of dyspnea in the course of a case of locomotor ataxia. cardiac c., a severe paroxysm of palpitation of the heart occurring in tabes dorsalis. cerebral c., a severe and sudden attack of hemiplegia, apoplexy, or other cerebral disorder. clitoris c., an attack of sexual excitement in women in a case of tabes dorsalis. Dietl's c., sudden severe attacks of nepnralgic or gastric pain, chills, fever, nausea and vomiting, and general collapse: said to be due to partial turning of the kidney upon its pedicle. febrile c., an attack of chilliness, fever, and sweating. gastric c., a paroxysm of intense abdominal pain in a case of locomotor ataxia. hematic c., a crisis in the course of a fever characterized by a sudden increase in the blood-plates. hemoclastic c., a temporary leukopenia, with a relative lymphocytosis, associated with a lowered blood-pressure and changes in blood coagulability. It occurs in anaphylactic shock after a meal of albuminoids in persons whose liver function is disordered. hepatic c., an attack of intense pain in the region of the liver intestinal c., a sharp attack of pain in the intestine in a case of tabes dorsalis laryngeal c., paroxysmal spasm of the larynx in the earlier course of locomotor ataxia. Lundvall's bloodc., an alteration in the state of the blood from leukopenia to leukocytosis in dementia præcox. nephralgic c., a paroxysm of pain in the course of the ureter in a case of tabes dorsalis. nitritoid c., a group of symptoms sometimes following the injection of arsphenamin, consisting of redness of the face, dyspnea, a feeling of distress, cough, and precordial pain The condition is named from its resemblance to the symptoms of amyl-nitrite poisoning ocular c., a sudden attack of intense pain in the eyes, with lacrimation, photophobia, etc. pharyngeal c., a sudden attack occurring in tabes dorsalis marked by peculiar sensations in the pharynx and involuntary swallowing movements. rectal c., a severe seizure of rectal pain in locomotor ataxia. renal c., an attack of pain resembling renal colic, occurring in tabetic c. See crisis, 2d def. thoracic tabes c., an attack of pain resembling angina pectoris, but with spasmodic contracture of the muscles of the chest and arms in tabes dorsalis vesical c., a severe seizure of pain in the bladder in cases of locomotor ataxia. visceral c., a paroxysm of shooting pain in any viscus occurring in a case of locomotor ataxia.

Crismer's test (kris'merz) [Leon Crismer, Belgian chemist, born 1858]. See under tests.

crispation (kris-pa'shun) [L. crispa're to curl] Slight convulsive or spasmodic muscular contractions producing a creepy sensation.

crista (kris'tah) [L. for "crest"]. A crest or ridge.
c. acus'tica, a localized thickening of the membrane lining the ampullæ of the semicircular canals: it is covered with neuro-epithelium containing auditory cells. c. ampulla'ris [B N A], crista acustica. c. ante'rior tib'iss [B N A], the crest of the tibia. c. arcus'ta, a ridge on the external surface of the arytenoid cartilage between the fovea triangularis and the fovea oblongata. c. buccinato'ria [B N A], buccinator crest. c. concha'lis [B N A], the inferior turbinal crest. c. cu'tis [B N A], any one of the ridges of skin on the palms and soles. c. ethmoida'lis [B N A], the superior turbinal crest. c. falcifor'mis, a ridge separating the macula cribrosa superior above from the other maculæ cribrosa below. c. fem'-oris. Same as linea aspera. c. gal'li [B N A], the "cock's-comb"; a ridge on the ethmoid bone to which the falx cerebri is attached. c. hel'cis, a projection on the helix above the external meatus

of the ear. c. il'ii, c. ili'aca [B N A], the crest of the ear. C. 11'11, C. 111 BUS ID IN A., the of the ilium. C. infratempora'lis [B N A], the pterygoid ridge. c. interos'sea [B N A]. interosseous ridge, under ridge. c. intertro-chanter'ica [B N A]. See intertrochanteric line, See intertrochanteric line, under line. c. lacrima lis poster for, the lac-rimal crest. See crest. c. pu'bis, the crest of the pubes. c. reiss neri, a crista in the pelvis of the fenestra rotunda, forming the outer boundary of the recessus anterior. c. sphenoida'lis [B N A]. See sphenoid crest, under crest.
c. spina'rum. Same as c. tympanica. c. spira'lis, a ridge on the spiral lamina of the cochlea.
c. supraventricula'ris [B N A], a ridge on the inner wall of the right ventricle, marking off the conus arteriosus. c. teg'minis tym'pani, a ridge along the roof of the tympanum. c. termina'lis [B N A], a ridge marking the upper termination of the pectinate muscles in the right auricle. c. transver'sa, a ridge dividing the surface of the cribriform plate into two fossæ. c. tuber'culi majo'ris [B N A], the posterior bicipital ridge. c. tuber'culi mino'ris [B N A], the anterior bicipital ridge. c. tympan'ica, one of two ridges on the anterior arm of the annulus tympanicus. c. ul'næ, the external border of the ulna. c. urethra'lis [B N A], the verumontanum. c. vestib'uli, a ridge on the floor of the vestibule between the vestibular aqueduct and fossa hemisphærica.

cristal (kris'tal) [L. cris'ta crest]. Pertaining to a crest or ridge.

Cristispira (kris-tis-pi'rah). A genus of spiral organisms (Spirochætes) which are characterized by the presence of a membranous structure which runs spirally along the body. They infest the runs spirally along the body. great crystal styles of certain mollusks.

Critchett's operation (krit'shets) [George Critchett, oculist in London, 1817-1882]. See oberation.

crith (krith) [Gr. κριθή barleycorn]. The unit of weight for gases, being the weight in a vacuum of a liter of hydrogen gas at o° C.

Crithidia (krith-id'e-ah). 1. A genus of protozoan organisms resembling trypanosoma; found as parasites in the intestines of certain insects. 2. One of the developmental forms assumed by a trypanosome during its life in its insect host.

critical (krit'ik-al). Of the nature of a crisis.

CrO₃. Chromic anhydrid.

crocated (kro'ka-ted) [L. croca'tus]. with or containing saffron.

crocein (kro'se-in). Any one of a series of brightred stains.

crocidismus (kro-sid-iz'mus) [Gr. κροκή a tuft of wool]. Carphology.

crocin (kro'kin). A derivative of Crocus sativus, C₁₆H₁₈O₆.

crocose (kro'kōs). A white, crystalline sugar, C₆H₁₂O₆, formed by the decomposition of crocin.

Crocq's serum (kroks) [Jean Crocq, a Belgian physician, 1868-1925]. See under serum.

Crocus (kro'kus) [L.; Gr. κρόκος]. 1. A genus of iridaceous plants. 2. The dried stigmas of Cro'cus sativus, or tree safiron: stimulant and emmenagogue. Dose, 10-30 gr. (0.666-2 gm.); of tincture, 1-2 dr. (4-8 c.c.).

crooked foot. See under foot.

Crookes's space, tube [Sir William Crookes, English physicist, 1832-1919]. See under space and tube.

cross. Any figure or structure in the shape of a cross. Ranvier's c's, dark, cross-shaped markings at the nodes of Ranvier, seen on longitudinal section after staining with silver nitrate. silver c., a cross-like marking seen at the nodes of certain bundles of medullated nerve-fibers.

cross-birth (kros'berth). Any abnormal presentation requiring a version.

cross-fire (kros'fir). Application of radiationtreatment from different points on the exterior, but with the rays directed toward the same internal point, so that the rays cross one another.

crossed (krost). Shaped or arranged like a cross: decussating.

crossing-over. An interchange of factors or genes between the chromosomes.

crossway, sensory (kros'wā). The posterior part of the internal capsule of the brain.

Crotalaria (krot-al-a're-ah) [L., from Gr. κρόταλον a rattle]. An extensive genus of leguminous plants, of which many are poisonous.

crotalic (kro-tal'ik). Pertaining to the genus Crotalus, or to the poison of snakes of that genus.

crotalin (kro'tal-in). A protein found in the venom of rattlesnakes and certain other serpents. It has been used hypodermically in the treatment of epilepsy.

crotalism (kro'tal-izm). A disease of horses caused by eating rattlebox, Crotala'ria sagitta'lis. Called also bottom disease.

crotalotoxin (kro-tal-o-toks'in). A poisonous substance from rattlesnake venom.

Crotalus (kro'tal-us) [L., from Gr. κρόταλον rattle]. A genus of rattlesnakes; also a homeopathic preparation of the virus of the rattlesnake.

crotaphion (kro-ta'fe-on) [Gr. κρόταφος the temple]. A craniometric point at the tip of the great wing of the sphenoid.

crotchet (krot'chet) [Fr. crochet]. A hook used in delivering the fetus after craniotomy.

crotin (kro'tin). A mixture of crotonallin and crotonglobulin. It resembles a bacterial toxin in that an antibody results when it is injected into an animal.

Croton (kro'ton) [L.; Gr. κρότων tick]. A large genus of euphorbiaceous trees, shrubs, and herbs, many of them poisonous and medicinal. C. tig'lium furnishes castor-oil bean.

1. See butylchloral. c. oil [L. o'leum] Cascarilla c.-chlo'ral. tig'lui], the fixed oil of the seeds of Cro'ton tig'lium, an Asiatic plant. a drastic purgative; externally, a vesicant. Dose, $\frac{1}{2}$ -2 min. (0.033-0.132 c.c.).

cortonallin (kro-ton-al'in). A toxic albuminoid from the seeds of Cro'ton tig'lium.

crotonarin (kro-ton-a'rin). A solid part from croton oil.

crotonglobulin (kro-ton-glob'u-lin). A toxic albuminoid from the seeds of Cro'ton tig'lium.

crotonism (kro'ton-izm). Poisoning by croton oil.

crotonol (kro'ton-ol). Crotonolic acid; a vesicant, toxic, oily principle, C₀H₁₄O₂, from croton oilpurgative. Drastic dose, 1½-2½ dr. (5-10 gm.), in a keratin-coated pill.

crounotherapy (kru-no-ther'ap-e) [Gr. κρουνός spring + θεραπεία treatment]. Treatment of disease by mineral waters.

croup (kroop). A disease characterized by laborious and suffocative breathing, laryngeal spasm, and sometimes with a local membranous deposit. catarrhal c., a croupous affection with paroxysms of dyspnea and a ringing, metallic cough. diphtheria of the larynx. diphtheric c., false c., spasmodic c. Same as laryngismus stridulus. fibrinous c., true croup. membranous c., laryngitis with formation of a pseudomembrane. It may be diphtheric (laryngeal diphtheria) or a simple plastic inflammation. also pseudomembranous c and true c. uterine c., croupous inflammation of the lining of the uterus.

croupous (kroo'pus). Of the nature of croup, or attended with an exudation like that of croup.

croupy (kroop'e). Affected with or resembling croup.

crown (krown) [L. coro'na]. 1. Same as corona. 2. The portion of a tooth which projects from the tissues in which the root is fixed and which is cov-

ered with enamel. Alexander's c., a tooth cap of metal employed as a pier for a bridge. arti-ficial c., a crown of metal or of porcelain to be fitted upon the root of a natural tooth. bell c., a bell-shaped tooth crown having its broad end at the occlusal surface. Bischoff's c., the inner layer formed from the duplication of the epithelial capsule of the ovum. Bonwill c., an artificial tooth crown fastened to a root by a metal pin and nut. cap c., an artificial tooth crown fitted like a cap over the remains of a natural root. collar c., an artificial crown attached by a metal ferrule to a natural root. Called also Richmond c. Davis c., an artificial tooth crown attached by a pin which is inserted into both the crown and the natural root. half-cap c., an artificial tooth crown attached by a metal band which covers only the lingual surface of the tooth which supports it. jacket c., an artificial crown slipped over the remains of a natural tooth. Morrison c., a cap crown of gold made in two pieces, a band and a swaged occluded surface. openface c. Same as half-cap c. pivot c., an artificial crown to a natural root by a post filled into the root canal. Richmond c. See collar c. shell c. See cap c. window c., a cap crown which has no outer surface.

crownwork (krown'wurk). The application of artificial crowns to teeth; also a piece of such work. crucial (kru'shal) [L. crucia'lis]. 1. Shaped like a

cross 2. Severe, searching, and decisive. crucible (kru'sib-l) [L crucib'ulum]. A vessel for

melting refractory substances. cruciform (kru'sif-orm) [L. crux cross + for'ma form]. Shaped like a cross.

crude (krūd) [L. cru'dus raw]. Raw or unrefined. cruentation (kroo-en-ta'shun) [L. cru'or, blood]. In medieval jurisprudence, the supposed bleeding of the corpse in the presence of the murderer

cruor (kru'or), pl. cruo'res [L.]. A blood-clot that contains red corpuscles.

crupper (krup'er). The rump of a horse, or the part behind the saddle.

crura (kru'rah) [L.]. The plural of crus. c. cerebel'li, the peduncles of the cerebellum. c. cer'ebri, a pair of bands which connect the pons and oblongata with the cerebrum. c. of the diaoblongata with the cerebrum. c. of the dia-phragm, the two pillars which connect the diaphragm to the spinal column c. of the fornix, the arches formed by the division of the extremities of the fornix. c. of the penis, the backward extensions of the corpora cavernosa of the penis.

cruræus (kru-re'us). See muscles, table of.
